THE CENTURY DICTIONARY

PREPARED UNDER THE SUPERINTENDENCE OF
WILLIAM DWIGHT WHITNEY, PH. D., LL. D.

PROFESSOR OF COMPARATIVE PHILOLOGY AND SANSKRIT IN YALE UNIVERSITY

THE plan of "The Century Dictionary" includes three things: the construction of a general dictionary of the English language which shall be serviceable for every literary and practical use; a more complete collection of the technical terms of the various sciences, arts, trades, and professions than has yet been attempted; and the addition to the definitions proper of such related encyclopedic matter, with pictorial illustrations, as shall constitute a convenient book of general reference.

About 200,000 words will be defined. The Dictionary will be a practically complete record of all the noteworthy words which have been in use since English literature has existed, especially of all that wealth of new words and of applications of old words which has sprung from the development of the thought and life of the nineteenth century. It will record not merely the written language, but the spoken language as well (that is, all important provincial and colloquial words), and it will include (in the one alphabetical order of the Dictionary) abbreviations and such foreign words and phrases as have become a familiar part of English speech.

THE ETYMOLOGIES.

The etymologies have been written anew on a uniform plan, and in accordance with the established principles of comparative philology. It has been possible in many cases, by means of the fresh material at the disposal of the etymologist, to clear up doubts or difficulties hitherto resting upon the history of particular words, to decide definitely in favor of one of several suggested etymologies, to discard numerous current errors, and to give for the first time the history of many words of which the etymologies were previously unknown or erroneously stated. Beginning with the current accepted form of spelling, each important word has been traced back through earlier forms to its remotest known origin. The various prefixes and suffixes useful in the formation of English words are treated very fully in separate articles.

HOMONYMS.

Words of various origin and meaning but of the same spelling, have been distinguished by small superior figures (1, 2, 3, etc.). In numbering these homonyms the rule has been to give precedence to the oldest or the most familiar, or to that one which is most nearly English in origin. The superior numbers apply not so much to the individual word as to the group or root to which it belongs, hence the different grammatical uses of the same homonym are numbered alike when they are separately entered in the Dictionary. Thus a verb and a noun of the same origin and the same present spelling receive the same superior number. But when two words of the same form and of the same radical origin now differ considerably in meaning, so as to be used as different words, they are separately numbered.

THE ORTHOGRAPHY.

Of the great body of words constituting the familiar language the spelling is determined by well-established usage, and, however accidental and unacceptable, in many cases, it may be, it is not the office of a dictionary like this to propose improvements, or to adopt those which have been proposed and have not yet won some degree of acceptance and use. But there are also considerable classes as to which usage is wavering, more than one form being sanctioned by excellent authorities, either in this country or Great Britain, or in both. Fa-

miliar examples are words ending in *or* or *our* (as *labor, labour*), in *er* or *re* (as *center, centre*), in *ize* or *ise* (as *civilize, civilise*); those having a single or double consonant after an unaccented vowel (as *traveler, traveller*), or spelled with *e* or with *æ* or *æ* (as *hemorrhage, hæmorrhage*); and so on. In such cases both forms are given, with an expressed preference for the briefer one or the one more accordant with native analogies.

THE PRONUNCIATION.

No attempt has been made to record all the varieties of popular or even educated utterance, or to report the determinations made by different recognized authorities. It has been necessary rather to make a selection of words to which alternative pronunciations should be accorded, and to give preference among these according to the circumstances of each particular case, in view of the general analogies and tendencies of English utterance. The scheme by which the pronunciation is indicated is quite simple, avoiding over-refinement in the discrimination of sounds, and being designed to be readily understood and used. (See Key to Pronunciation on back cover.)

DEFINITIONS OF COMMON WORDS.

In the preparation of the definitions of common words, there has been at hand, besides the material generally accessible to students of the language, a special collection of quotations selected for this work from English books of all kinds and of all periods of the language, which is probably much larger than any which has hitherto been made for the use of an English dictionary, except that accumulated for the Philological Society of London. Thousands of non-technical words, many of them occurring in the classics of the language, and thousands of meanings, many of them familiar, which have not hitherto been noticed by the dictionaries, have in this way been obtained. The arrangement of the definitions historically, in the order in which the senses defined have entered the language, has been adopted wherever possible.

THE QUOTATIONS.

These form a very large collection (about 200,000), representing all periods and branches of English literature. The classics of the language have been drawn upon, and valuable citations have been made from less famous authors in all departments of literature. American writers especially are represented in greater fullness than in any similar work. A list of authors and works (and editions) cited will be published with the concluding part of the Dictionary.

DEFINITIONS OF TECHNICAL TERMS.

Much space has been devoted to the special terms of the various sciences, fine arts, mechanical arts, professions, and trades, and much care has been bestowed upon their treatment. They have been collected by an extended search through all branches of literature, with the design of providing a very complete and many-sided technical dictionary. Many thousands of words have thus been gathered which have never before been recorded in a general dictionary, or even in special glossaries. To the biological sciences a degree of prominence has been given corresponding to the remarkable recent increase in their vocabulary. The new material in the departments of biology and zoölogy includes not less than five thousand words and senses not recorded even in special dictionaries. In the treatment of physical and mathematical sciences, of the mechan-

ical arts and trades, and of the philological sciences, an equally broad method has been adopted. In the definition of theological and ecclesiastical terms, the aim of the Dictionary has been to present all the special doctrines of the different divisions of the Church in such a manner as to convey to the reader the actual intent of those who accept them. In defining legal terms the design has been to offer all the information that is needed by the general reader, and also to aid the professional reader by giving in a concise form all the important technical words and meanings. Special attention has also been paid to the definitions of the principal terms of painting, etching, engraving, and various other art-processes; of architecture, sculpture, archaeology, decorative art, ceramics, etc.; of musical terms, nautical and military terms, etc.

ENCYCLOPÆDIC FEATURES.

The inclusion of so extensive and varied a vocabulary, the introduction of special phrases, and the full description of things often found essential to an intelligible definition of their names, would alone have given to this Dictionary a distinctly encyclopedic character. It has, however, been deemed desirable to go somewhat further in this direction than these conditions render strictly necessary.

Accordingly, not only have many technical matters been treated with unusual fullness, but much practical information of a kind which dictionaries have hitherto excluded has been added. The result is that "The Century Dictionary" covers to a great extent the field of the ordinary encyclopedia, with this principal difference—that the information given is for the most part distributed under the individual words and phrases with which it is connected, instead of being collected under a few general topics. Proper names, both biographical and geographical, are of course omitted, except as they appear in derivative adjectives, as *Darwinian* from *Darwin*, or *Indian* from *India*. The alphabetical distribution of the encyclopedic matter under a large number of words will, it is believed, be found to be particularly helpful in the search for those details which are generally looked for in works of reference.

ILLUSTRATIONS.

The pictorial illustrations have been so selected and executed as to be subordinate to the text, while possessing a considerable degree of independent suggestiveness and artistic value. To secure technical accuracy, the illustrations have, as a rule, been selected by the specialists in charge of the various departments, and have in all cases been examined by them in proofs. The cuts number about six thousand.

MODE OF ISSUE, PRICE, ETC.

"The Century Dictionary" will be comprised in about 6,500 quarto pages. It is published by subscription and in twenty-four parts or sections, to be finally bound into six quarto volumes, if desired by the subscriber. These sections will be issued about once a month. The price of the sections is \$2.50 each, and no subscriptions are taken except for the entire work.

The plan for the Dictionary is more fully described in the preface (of which the above is in part a condensation), which accompanies the first section, and to which reference is made.

A list of the abbreviations used in the etymologies and definitions, and keys to pronunciations and to signs used in the etymologies, will be found on the back cover-lining.

smash

see *smack*², and cf. *smatter*. Cf MHG. *smatzen*, kiss, smack; MHG. *smackzen*, G. *schmatzen*, fell a tree, *schmatz*, a smack; see *smack*¹. The word *smash* has been more or less associated with the diff. word *smash*¹. I. *trans.* 1. To break in pieces utterly and with violence; dash to pieces; shatter; crush.

Here every thing is broken and *smashed* to pieces.

A pasteboard cuckoo, which . . . would send forth a sound, . . . my little brother *smashed* the next day, to see what made the noise.

Grace Greenwood, Recoll. of Childhood, Torn Frock.

2. To render insolvent; bankrupt. [Slang.] —3. To dash violently; fling violently and noisily; as, he *smashed* it against the wall. [Vulgar.]—4. In lawn-tennis, to strike with much strength; but very swiftly.

He told them where to stand so as not to interfere with each other's play, when to *smash* a ball and when to lift it high in the air.

St. Nicholas, XVII. 921.

=Syn. 1. *Shatter*, etc. See *dash*.

II. *intrans.* 1. To act with a crushing force; produce a crushing or crushing.

The 500 Express, of exactly 1/4-inch bore, is considered by most Indian sportsmen the most effective all-round weapon for that country; it has great *smashing* power, good penetration, and it is not too cumbersome to cover moving game.

W. W. Greener, The Gun, p. 171.

2. To be broken or dashed to pieces suddenly and roughly; go to pieces by a violent blow or collision.—3. To be ruined; fail; become insolvent or bankrupt; generally with *up*. [Slang.] —4. To dash violently; as, the locomotives *smashed* into each other. [Colloq.]—5. To utter base coin. [Slang.]

smash (smash), *n.* [*smash*, *v.*] 1. A violent dashing or crushing to pieces: as, the lurch of the ship was attended with a great *smash* of glass and china.—2. Destruction; ruin in general; specifically, failure; bankruptcy: as, his business has gone to *smash*. [Colloq.]

It ran thus:—"Your hellish machinery is shivered to *smash* on Stillbro' Moor, and your men are lying bound hand and foot in a ditch by the roadside."

Charlotte Brontë, Shirley, II.

I have made an awful *smash* at the Literary Fund, and have tumbled into 'Evins knows where.

Thackeray, Letters, 1847-55, p. 120.

3. A drink composed of spirit (generally brandy), cut ice, water, sugar, and sprigs of mint: it is like a julep, but served in smaller glasses.—4. A disastrous collision, especially on a railroad; a smash-up. [Colloq.]

smasher (smash'er), *n.* [*smash* + *-er*]. 1. One who or that which smashes or breaks.—2. A pitman. *Halliwel*. [Prov. Eng.]—3. Anything astounding, extraordinary, or very large and unusual; anything that decides or settles a question; a settler. [Slang.]—4. One who passes counterfeit money. [Slang.]—5. A counterfeit coin. [Slang.]

Another time I found 16s. 6d., and thought that was a haul; but every bit of it, every coin, shillings and sixpences and joes, was bad—all *smashers*.

Mayhew, London Labour and London Poor, II. 488.

6. A small gooseberry pie. *Halliwel*. [Local, Eng.]

smashing (smash'ing), *p. a.* 1. Crushing; also, slashing; dashing.

Never was such a *smashing* article as he wrote.

Thackeray, Philip, xvi.

2. Wild; gay. *Halliwel*. [Prov. Eng.]

smashing-machine (smash'ing-ma-shēn'), *n.* A heavy and quick press used by bookbinders to flatten and make solid the springy folds of books before they are sewed.

smashing-press (smash'ing-pres), *n.* 1. A smashing-machine.—2. An embossing-press.

smash-up (smash'up), *n.* A smash; a crash; especially, a serious accident on a railway, as when one train runs into another. [Colloq.]

There was a final *smash-up* of his party as well as his own reputation.

St. James's Gazette, Jan. 22, 1887. (Encyc. Dict.)

In the *smash-up* he broke his left fore-arm and leg.

Allen and Neurol., X. 440.

smatch¹ (smach), *v.* [*ME. smachen, smeechen*, an assimilated form of *smack*¹.] I. *intrans.* To have a taste; smack.

II. *trans.* To have a taste of; smack of.

Nevertheless ye haue yet two or three other figures that *smatch* a spice of the same false semblant, but in another sort and manner of phrase.

Puttenham, Arte of Eng. Poesie, p. 159.

smatch¹ (smach), *n.* [*smatch*¹, *v.*] Taste; tincture; also, a smattering; a small part.

Or whether some *smatch* of the fathers blood,
Whose kinne were neuer kinde, nor neuer good,
Mooned her thereto.

Puttenham, Arte of Eng. Poesie, p. 189.

Thou art a fellow of a good respect;
Thy life hath had some *smatch* of honour in it.

Shak., J. C., v. 5. 46.

'Tis as good, and has all one *smatch* indeed.

Middleton (and others), The Widow, i. 1.

smatch² (smach), *n.* [Also *smitch*; origin obscure.] The wheatear, a bird. See the quotation under *arling*.

To perceive through the nose, by means of the olfactory nerves; perceive the scent of; scent; nose.

Anon ther com so swete a smul as thei hit from heuene were.
That al hit *smulde* with gret ioye that in the cuntre weren there. *Holy Rood* (E. E. T. S.), p. 57.

I *smell* sweet savours and I feel soft things.
Shak., T. of the S., Ind., ii. 73.

Vespers are over, though not so long but that I can *smell* the heavy resinous incense as I pass the church. *Dickens*, Uncommercial Traveller, xxviii.

2. To perceive as if by smell; perceive in any way; especially, to detect by peculiar sagacity or a sort of instinct; smell out.

From that time forward I began to *smell* the word of God, and forsook the school-doctors and such fooleries. *Latimer*, Sermons, p. 335.

Come, these are tricks; I *smell* 'em; I will go.
Fletcher (and another), Noble Gentleman, ii. 1.

I like this old Fellow, I *smell* more Money.
Steele, Grief A-la-Mode, iv. 1.

3. To inhale the smell or odor of; test by the sense of smell; oftener intransitive, with *of* or *at*.—To *smell* a rat. See *rat*.—To *smell* out, to find out by prying or by minute investigation.

What a man cannot *smell* out he may spy into.
Shak., Lear, i. 5. 22.

To *smell* the footlights. See *footlights*.

II. intrans. 1. To give out an odor; affect the olfactory sense: as, the rose *smells* sweet.

A swote smell ther com a-non out of, that *smelde* in-to al that lond.
Holy Rood (E. E. T. S.), p. 27.

The King is but a man as I am; the violet *smells* to him as it doth to me; . . . all his senses have but human conditions.
Shak., Hen. V., iv. 1. 106.

And now look about you, and see how pleasantly that meadow looks; nay, and the earth *smells* as sweetly too.
I. Walton, Complete Angler, p. 107.

2. Specifically, to give out an offensive odor: as, how the place *smells*!

Ham. Dost thou think Alexander looked o' this fashion i' the earth?
Hor. E'en so.
Ham. And *smelt* so? pah!
[Puts down the skull.
Shak., Hamlet, v. 1. 221.

3. To have an odor (of a specified kind); be scented with: with *of*: as, to *smell* of roses.

A dim shop, low in the roof and *smelling* strong of glue and footlights.
R. L. Stevenson, A Penny Plain, 2d. Coloured.

4. Figuratively, to appear to be of a certain nature or character, as indicated by the smell: generally followed by *like* or *of*.

"Thou *smells* of a coward," said Robin Hood,
"They words do not please me."
Robin Hood and the Golden Arrow (Child's Ballads, V. 385).
What say you to young Master Fenton? he capers, he dances, he has eyes of youth, he writes verses, he speaks holiday, he *smells* April and May.

Shak., M. W. of W., iii. 2. 69.
These are circumstances which *smell* strongly of imposture and contrivance. *Bp. Atterbury*, Sermons, II. 1.

5. To inhale a smell or odor as a gratification or as a test of kind or quality, etc.: colloquially with *of*, formerly sometimes with *to* or *unto*.

To pull a rose of all that route, . . .
And *smellen* to it where I wente.
Rom. of the Rose, i. 1669.

Smell to this flower; here Nature has her excellence.
Fletcher (and another?), Prophetess, v. 3.

I'm not nice, nor care who pincks the Rose I *smell* to, provided it has not lost its Sweetness.
Mrs. Centlivre, Platonick Lady, i.

A young girl's heart, which he held in his hand, and *smelled* to, like a rosebud.
Hawthorne, Blithedale Romance, ix.

6. To snuff; try to smell something; figuratively, to try to smell out something: generally with *about*: as, to go *smelling* about.—A **smelling committee**, an investigating committee. [Colloq., U. S.]—To **smell** of the footlights, of the lamp, of the roast, etc. See *footlights*, etc.

smell (smel), *n.* [< ME. *smel*, *smil*, *smul*, *sméal*, *sméol* (not found in AS.): see the verb.] 1. The faculty of perceiving by the nose; sense-perception through the olfactory nerves; the olfactory faculty or function; the physiological process or function whereby certain odoriferous qualities of bodies, as scent or effluvium, are perceived and recognized through sensation; olfaction; scent: often with the definite article, as one of the special senses: as, the *smell* in dogs is keen. The essential organ of smell is located in a special part or lobe of the brain, the rhinencephalon, or olfactory lobe, whence are given off more or fewer olfactory nerves, which pass out of the cranial cavity into the nasal organ, or nose, in the mucous or Schneiderian membrane of the interior of which they ramify, so that air laden with odoriferous particles can affect the nerves when it is drawn into or through the nasal passages. In man the sense of smell is very feeble and imperfect in comparison with that of many animals, especially of the carnivora, which pursue their prey by scent, and ruminants, which escape their enemies by the same means. Smell in the lower animals seems to be the guiding sense in determining their choice of food.

Memory, imagination, old sentiments and associations, are more readily reached through the sense of *smell* than by almost any other channel. *O. W. Holmes*, *Autocrat*, iv.

Smell is a sensation excited by the contact with the olfactory region of certain substances, usually in a gaseous condition and necessarily in a state of fine subdivision.
Encyc. Brit., XXII. 165.

It will be observed that sound is more promptly reacted on than either sight or touch. Taste and *smell* are slower than either. *W. James*, *Prin. of Psychology*, I. 96.

His [Thoreau's] *smell* was so dainty that he could perceive the factor of dwelling-houses as he passed them by at night.
R. L. Stevenson, *Thoreau*, i.

2. That quality of anything which is or may be smelled; an odoriferous effluvium; an odor or scent, whether agreeable or offensive; a fragrance, perfume, or stench; aroma: as, the *smell* of thyme; the *smell* of bilge-water.

These men lyven be the *smelle* of wyldle Apples.
Manderly, Travels, p. 297.

Swetfere *smul* ne myzte be then the smoke smulde.
Holy Rood (E. E. T. S.), p. 42.

And there came a *smell* off the shore like the *smell* of a garden.
Winthrop, Hist. New England, I. 27.

Impatient of some crowded room's close *smell*.
Mrs. Browning, Aurora Leigh, iv.

3. A faint impression; a subtle suggestion; a hint; a trace: as, the poem has a *smell* of the woods.—4. An act of smelling: as, he took a *smell* at the bottle. = **Syn.** *Smell*, *Scent*, *Odor*, *Savor*, *Perfume*, *Fragrance*, *Aroma*, *Stench*, *Stink*. *Smell* and *scent* express the physical sense, the exercise of the sense, and the thing which appeals to the sense. The others have only the last of these three meanings. Of the nine words the first four may express that which is pleasant or unpleasant, the next three only that which is pleasant, the last two only that which is very unpleasant. *Smell* is the general word; the others are species under it. *Scent* is the *smell* that proceeds naturally from something that has life: as, the *scent* of game; the *scent* of the tea-rose. *Odor* is little more than a Latin substitute for *smell*: as, the *odor* of musk, of decaying vegetation; it may be a dainty word, as *smell* cannot be. *Savor* is a distinctive smell, suggesting taste or flavor, proceeding especially from some article of food: as, the *savor* of garlic. *Perfume* is generally a strong or rich but agreeable smell. *Fragrance* is best used to express fresh, delicate, and delicious odors, especially such as emanate from living things: as, the *fragrance* of the violet, of new-mown hay, of the breath of an infant. *Aroma* should be restricted to a somewhat spicy smell: as, the *aroma* of roasted coffee, or of the musk-rose. *Stench* and *stink* are historically the same word, in different de-

grees of strength, representing a strong, penetrating, and disgusting odor; *stink* is not for polite use.

smellable (smel'ā-bl), *a.* [< *smell* + *-able*.] Capable of being smelled. [Rare.]

An apple is a complex of visible, tangible, *smellable*, tastable qualities. *Science*, VIII. 377.

smeller (smel'ēr), *n.* [< *smell* + *-er*.] 1. One who or that which smells or perceives the smell of anything; also, one who tests anything by smelling.—2. One who or that which smells of anything, is scented, or has odor.

Such nasty *smellers*
That, if they'd been unfurnished of club-truncheons,
They might have cudgell'd me with their very stink,
It was so strong and sturdy.
Fletcher (and another?), Nice Valour, v. 1.

3. The nose; in the plural, the nostrils. [Slang.]

For he on *smellers*, you must know,
Receiv'd a sad unlucky blow.
Cotton, Scarronides, p. 64. (Davies.)

4. Familiarly, a feeler; a tactile hair or process; especially, a rectal vibrissa, as one of a cat's whiskers.—5. A prying fellow; one who tries to smell out something; a sneaking spy. [Slang.]

smell-feast (smel'fēst), *n.* [< *smell*, *v.*, + *obj.*, *feast*. In def. 2 < *smell*, *n.*, + *feast*.] 1. One who finds and frequents good tables; an epicure. [Low.]

No more *smell-feast* Vitellio
Smiles on his master for a meal or two.
Bp. Hall, Satires, VI. 1. 47.

2. A feast at which the guests are supposed to feed upon the odors of the viands. *Imp. Dict.*

smelling (smel'ing), *n.* [< ME. *smellinge*, *smell-yngc*; verbal *n.* of *smell*, *v.*] The sense of smell; olfaction.

If the whole body were an eye, where were the hearing?
If the whole were hearing, where were the *smelling*?
1 Cor. xii. 17.

smelling-bottle (smel'ing-bot'el), *n.* A small portable bottle or flask, usually of fanciful form or decorated, (a) for containing smelling-salts, or (b) for containing an agreeable perfume.

Handkerchiefs were pulled out, *smelling* bottles were handed round; hysterical sobs and screams were heard.
Macauley, Warren Hastings.

smelling-salts (smel'ing-salts), *n. pl.* A preparation of ammonium carbonate with some agreeable scent, as lavender or bergamot, used as a stimulant and restorative in faintness and for the relief of headache.

At this point she was so entirely overcome that a squadron of cousins and aunts had to come to the rescue, with perfumes and *smelling-salts* and fans, before she was sufficiently restored.
Harper's Mag., LXXIX. 547.

smell-less (smel'les), *a.* [< *smell* + *-less*.] 1. Having no sense of smell; not olfactory.—2. Having no smell or odor; scentless.

smell-smock (smel'smok), *n.* [< *smell* + *obj.*, *smock*.] 1. One who runs after women; a licentious man. [Low.]

If thou dost not prove as arrant a *smell-smock* as any the town affords in a term-time, I'll lose my judgment.
Middleton, More Dissemblers Besides Women, i. 4.

2. The lady's-smock, *Cardamine pratensis*; rarely, the wind-flower, *Anemone nemorosa*. *British and Holland*, Eng. Plant Names. [Prov. Eng.]

smell-trap (smel'trap), *n.* A drain-trap (which see); a stink-trap.

"Where have you been staying?" "With young Lord Vieuxbois, among high art and painted glass, spade farms, and model *smell-traps*."
Kingsley, *Yeast*, vi.

smelly (smel'i), *a.* [< *smell* + *-y*.] Having an odor, especially an offensive one. [Colloq.]

Nasty, dirty, frowzy, grubby, *smelly* old monks.
Kingsley, *Water-Babies*, p. 186.

smelt¹ (smelt), *v.* [Formerly also *smilt*; not found in ME.; < MD. *smelten*, *smilten*, D. *smelten* = MLG. *smelten*, LG. *smulten* = OHG. *smelzen*, *smelzan*, *smalzan*, MHG. *smelzen*, G. *schmelzen* = Icel. *smelta* = Sw. *smälta* = Dan. *smelte*, fuse, melt; causal of G. *schmelzen* = Sw. *smälta* = Dan. *smelte*, melt, dissolve, become liquid; cf. Connection with *melt* is doubtful.] **I. trans.** To fuse; melt; specifically, to treat (ore) in the large way, and chiefly in a furnace or by the aid of heat, for the purpose of separating the contained metal. Metallurgical operations carried on in the moist way, as the amalgamation of gold and silver ores in pans, treatment by lixiviation, etc., are not generally designated by the term *smelting*. Establishments where this is done are more commonly called mills or reduction-works, and those in which iron is smelted are usually designated as blast-furnaces or iron-furnaces. The vari-

ous smelting operations differ greatly from each other, according to the nature of the combinations operated on. Simple ores, like galena, require only a very simple series of operations, which are essentially continuous in one and the same furnace; more complicated combinations, like the mixtures of various cupiferous ores smelted at Swansea by the English method, require several successive operations, entirely disconnected from each other, and performed in different furnaces. In the most general way, the essential order of succession of the various processes by which the sulphureted ores (and most ores are sulphureted) are treated is as follows: (1) calcination or roasting, to oxidize and get rid (as far as possible) of the sulphur; (2) reduction of the metal contained in the oxidized combinations obtained; (3) refining, or getting rid of the last traces of deleterious metals associated in the ores with the useful metal, to obtain which is the essential object of the operation.

II. intrans. To fuse; melt; dissolve.

Having too much water, many corns will *smelt*, or have their pulp turned into a substance like thick cream.

Mortimer, Husbandry.

smelt² (smelt), *n.* [ME. *smelt*, < AS. *smelt* = Norw. *smelta* = Dan. *smelt*, a smelt (applied to various small fishes); perhaps so called because it was 'smooth'; cf. AS. *smoelt*, *smylt*, serene, smooth (as the sea); see *smolt*.] 1. Any one of various small fishes. (a) A small fish of the family *Argentiniidae* and the genus *Osmerus*. The common European smelt is the sparring, *O. eperlanus*; it becomes about 10 to 12 inches long, and is of an olive-green above and a silvery white below, with a silver longitudinal lateral band. It exhales when fresh a peculiar scent suggesting the cucumber. This fish is prized as a delicacy. The corresponding American smelt is *O. mordax*, of the Atlantic

coast from Virginia northward, anadromous to some extent, and otherwise very similar to the sparring. There are several true smelts of the Pacific coast of North America, as *O. thaleichthys*, the Californian smelt, and *O. dentex*, the Alaska smelt. Hence—(b) Any other species of the family *Argentiniidae* related to the smelt, such as the *Hypomesus pretiosus* or *oidus*, also called *surf-smelt*, which is distinguished from the true smelts by having the dorsal fin mostly advanced beyond the ventrals and by the much smaller mouth and weak teeth. It inhabits the Pacific coast of the United States from California northward, reaches a length of about 12 inches, and is highly esteemed as a food-fish. (c) In California, any species of the family *Atherinidae*, resembling the true smelt in general appearance, but provided with an anterior spinous and a posterior branched dorsal fin, and having the ventrals not far behind the pectorals. The common Californian smelt, *Atherinopsis californiensis*, reaches a length of about 18 inches, and its flesh is fine, firm, and of excellent flavor, though a little dry. It is one of the most important food-fishes of California, never absent from the markets. Other species are *Atherinopsis affinis*, the little smelt, and *Leuresthes tenuis*. (d) A freshwater cyprinoid, *Hypogonathus regius*, which somewhat resembles the true smelt in form, translucency, and color; also, one of other cyprinoids, as the spawn-eater and the silversides. [Eastern U. S.] (e) A gadoid fish, *Microgadus proximus*, the tom-cod of the Pacific slope. [San Francisco.] (f) The smolt, a young salmon before its visit to the sea. [Eng.] (g) The lance or lan. See *sand-eel*, and cut under *Ammodytidae*.

2†. A gull; a simpleton.

These direct men, they are no men of fashion;
Talk with you will, this is a very smelt.

Fletcher (and another), Love's Pilgrimage, v. 2.

Cup. What's he, Mercury?

Mer. A notable smelt. B. Jonson, Cynthia's Revels, II. 1.

Mullet-smelt, *Atherinopsis californiensis*. See def. 1 (c).
—**New Zealand smelt**. See *Retropinna*.

smelter (smel'tér), *n.* [ME. *smelt* + *-er*.] 1. One who is engaged in smelting, or who works in an establishment where ores are smelted.—2. In the Cordilleran region, smelting-works. [Recent.]

At Denver is made much of the machinery used at the various camps, and to its furnaces and smelters is shipped a large proportion of the precious ores.

Harper's Mag., LXXVI. 950.

smeltery (smel'tér-i), *n.*; pl. *smeltries* (-iz). [ME. *smelt* + *-ery*.] An establishment or place for smelting ores.

The product of the smeltery in 1886 had a money value of \$1,105,190.76.

Harper's Mag., LXXVII. 592.

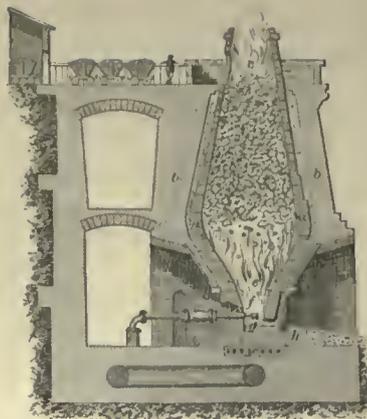

smeltie (smel'ti), *n.* [Dim. of *smelt*.] A kind of codfish, the bib. [Scotch.]

smelting-furnace (smel'ting-fér'nās), *n.* A furnace in which metals are separated from their ores. See *blast-furnace*, *reverberatory furnace* (under *reverberatory*, 2), and cut in next column.

smelting-house (smel'ting-hous), *n.* In metal, a building erected over a smelting-furnace; smelting-works.

smelting-works (smel'ting-wérks), *n. pl.* and *sing.* A building or set of buildings in which the business of smelting ore is carried on. Compare *smelter*, 2.

smereht, *v.* An obsolete spelling of *smirch*.

Smelting-furnace.

a, fire-brick lining; b, masonry; c, opening in the side of the upper part of the furnace through which it is charged; e, bushes; f, throat; g, hearth or crucible; A, dam-stone; i, twyer. That part lying below the widest diameter, above the bushes, is called the *shaft*.

smereht, *n.* and *v.* An obsolete spelling of *smear*.
smere-gavelt, *n.* Same as *smear-gavel*.

Smerinthus (smē-rin'thus), *n.* [NL. (Latreille, 1802), < Gr. *σμήριθος*, *μήριθος*, a cord, lino.] 1. A genus of sphinx-moths, of the family *Sphingidae*, having the antennæ serrate. *S. ocellatus* is the eyed sphinx; *S. populi*, the poplar-sphinx; and *S. tilix*, the lime-sphinx or hawk-moth.—2. [l. c.] A moth of this genus: as, the lime-*smerinthus*, whose larva feeds on the lime-tree or linden.

smert, *n.* and *v.* An old spelling of *smirk*.
smert, *n.*, *v.*, and *a.* An old spelling of *smirt*.

smethe^{1†}, *a.* A Middle English form of *smooth*.

smethe², *n.* 1. Same as *smew*.—2. Same as *smee*, 4.

smew (smū), *n.* [Prob. a var. (simulating *mew*?) of *smee*, ult. of *smeth*: see *smee*, *smeth*.] The conjecture that *smew* is a contraction of **icmew* is untenable, even if such a name as *icmew* existed.] A small merganser or fishing-duck, *Mergellus albellus*, the white nun, or smee, of the family *Anatidae* and subfamily *Merginae*,

Smew (*Mergellus albellus*), adult male.

inhabiting northerly parts of the eastern hemisphere. The male in adult plumage is a very beautiful bird, of a pure white, varied with black and gray, and tinged with green on the crested head; the length is about 17 inches. The female is smaller, with reddish-brown and gray plumage, and is called the *red-headed smew*. Also *smeth*.—**Hooded smew**, the hooded merganser, *Lophodytes cucullatus*, resembling and related to the above, but of another genus. See cut under *merganser*.

smickert (smik'ér), *a.* [ME. *smiker*, < AS. **smicor*, **smicer*, *smieere*, *smiere* = OHG. *smehhar*, *smehar*, MHG. *smecker*, neat, elegant; perhaps related to MHG. *smicke*, *sminke*, G. *schminke*, paint, rouge; but the Sw. *smickra* = Dan. *smigre*, flatter, Sw. *smicker* = Dan. *smiger*, flattery, belong to a prob. different root, MHG. *smeicheln*, G. *schmeicheln*, flatter, freq. of MHG. *smeichen*, flatter, MLG. *smeken*, *smieken* = D. *smeecken*, supplicate; OHG. *smeth*, *smiech*, MHG. *smeich*, flattery. Cf. *smug*.] 1. Elegant; fine; gay.

He fell off heffne dun . . .
And warth illi attel defel ther
Off shene and *smickerr* eungell.

Ormulum, l. 13679.

Herdgroom, what gars thy pipe to go so loud?
Why bin thy looks so *smicker* and so proud?

Peete, An Eclogue.

2. Amorous.

smickert (smik'ér), *v. i.* [ME. *smicker*, *a.*] To look amorously. *Kersey*.

smickeringt (smik'ér-ing), *n.* [Verbal n. of *smicker*, t.] An amorous inclination.

We had a young Doctor, who rode by our coach, and seem'd to have a *smickering* to our young lady of Pilton.

Dryden, Letters, p. 88 (To Mrs. Steward, Sept. 28, 1699).

smicket (smik'et), *n.* [ME. *smock* (with usual variation of the vowel) + *-et*.] A smock. [Prov. Eng.]

Wide antlers, which had whilom grac'd
A stag's bold brow, on pitchforks plac'd,
The roaring, dancing bumpkins show,
And the white *smickets* wave below.

Combe, Dr. Syntax's Tours, II. 5. (Davies.)

smickly (smik'li), *adv.* [ME. *smick*, var. of *smug* (or apparent base of *smicker*), + *-ly*.] Neatly; trimly; amorously.

Ita. What's hee that looks so *smickly*!

Fol. A Flounder in a frying-pan, still skipping; . . . hee's an Italian dancer.

Dekker and Ford, Sun's Darling, II.

Smicra (smik'rā), *n.* [NL. (Spinola, 1811), < Gr. *σμίκρος*, var. of *μικρός*, small; see *micron*.] A genus of parasitic hymenopterous insects, of the family *Chalcididae*, having enlarged hind femora, armed with one or two large teeth followed by numerous smaller ones. Most of the American species which have been placed in this genus belong to the allied genus *Spilochalcis*.

smiddum-tails (smid'um-tālz), *n. pl.* [ME. *smiddum*, var. of *smeddum*, + *tail* (pl. *tails*, ends, 'foots').] In mining, the sludge or slimy part deposited in washing ore. *Simmonds*.

smiddy (smid'ī), *n.*; pl. *smiddies* (-iz). A dialectal variant of *smithy*.

smidgen (smij'en), *n.* [Origin obscure; perhaps for orig. **smitching*, < *smitch* + *-ing*.] A small piece; a small quantity.

Smidgen, "a small bit, a grab," as "a *smidgen* of meal," is common in East Tennessee.

Trans. Amer. Philol. Ass., XVII. 43.

smift (smift), *n.* [Origin obscure.] A bit of touchwood, touch-paper, greased candle-wick, or paper or cotton dipped in melted sulphur, used to ignite the train or squib in blasting. This old method of setting off a blast has been almost entirely done away with by the introduction of the safety-fuse. Also called *smuff*.

smight, *v.* An obsolete erroneous spelling of *smite*.

Smilacæ (smī-lā'sē-ē), *n. pl.* [NL. (R. Brown, 1810), for **Smilacacæ*, < *Smilax* (*Smilac-*) + *-acæ*.] A group of monocotyledonous plants, by many regarded as a distinct order, but now classed as a tribe of the order *Liliacæ*. It is characterized by a sarmentose or climbing stem, three- to five-nerved leaves, anthers apparently of a single cell, the inner cell being very narrow, and ovules solitary or twin. It includes the typical genus *Smilax*, and 2 small genera of about 5 species each, *Heterosmilax* of eastern Asia, and *Rhipogonum* of Australia and New Zealand.

Smilacina (smī-lā-sī'nā), *n.* [NL. (Desfontaines, 1807), < *Smilax* (-ac-) + *-ina*.] A genus of liliaceous plants, of the tribe *Polygonaceæ*. It is characterized by flowers in a terminal panicle or raceme with a spreading six-parted perianth, six stamens, and a three-celled ovary which becomes in fruit a globose pulpy berry, often with but a single seed. There are about 20 species, all natives of the northern hemisphere; 3 occur in the eastern and 5 in the Pacific United States—only one, *S. stellata*, being common to both; 7 species are natives of Mexico and Central America, and others are found in Asia. They are somewhat delicate plants, producing an erect unbranched leafy stem from a creeping rootstock, and bearing alternate short-petioled leaves and small usually white or cream-colored flowers. They are known by the name of *false Solomon's-seal*, especially *S. racemosa*, the larger Eastern species, the rhizome of which is said to be diuretic, diaphoretic, and a mild alterative.

Smilax (smī'laks), *n.* [NL. (Tournefort, 1700), < L. *smilax*, < Gr. *σμίλαξ*, the yew (also *μύλαξ*), also a kind of evergreen oak; *σμίλαξ κηπία*, 'garden smilax,' a leguminous plant, the fruit of which was dressed and eaten like kidney-beans; *σμίλαξ λεία*, 'smooth smilax,' a kind of bindweed or convolvulus.] 1. A genus of liliaceous

plants, type of the tribe *Smilacæ*. It is characterized by diceleous flowers in umbels, with a perianth of six distinct curving segments, the fertile containing several, sometimes six, thread-shaped staminodes, three broad recurved stigmas, and a three-celled ovary which becomes in fruit a globose berry usually containing but one or two seeds. There are about 200 species, widely scattered through most tropical and temperate regions; 11 occur in the northeastern United States. They are usually woody vines from a stout rootstock, bearing alternate two-ranked evergreen leaves with retic-

ulated veins between the three or more prominent nerves. The petioles are persistent at the base, and are often furnished with two tendrils, by which some species climb to great heights, and others mat into densely tangled thickets. Various tropical American species yield sarsaparilla. (See *sarsaparilla* and *china-root*.) *S. aspera* of the south of Europe, called *rough bindweed* or *prickly ivy*, is the source of Italian sarsaparilla. Other species are used medicinally in India, Australia, Mauritius, and the Philippines. One of these, *S. glycyphylla*, an evergreen shrubby climber of Australia, is there known as *sweet tea*, from the use of its leaves. The rootstocks of many species are large and tuberiferous; those of *S. Pseudo-China* are used in the southern United States to fatten hogs, and as the source of a domestic beer; those of *S. China* yield a dye. The stems of some plant species, as *S. Pseudo-China*, are used in basket-making, and the young shoots of a Persian species are there used as asparagus. *S. Pseudo-China* and *S. bona-nox* are known as *bullbrier*, and several others with prickly stems as *cat-brier* and *greenbrier*. See also *carrion-flower*.

2. [L. c.] (a) A plant of the genus *Smilax*. (b) A delicate greenhouse vine from the Cape of Good Hope, best known as *Myrsiphyllum asparagoides*, now classed under *Asparagus*. Its apparatus (really expanded branches) are bright-green on both sides, with the aspect of those of *Smilax*, but finer. The plant grows to a length of several feet, festooning beautifully. It is much used in decoration, and forms the leading green constituent in bouquets. It is sometimes called *Boston smilax*.

3. In entom., a genus of coleopterous insects. Laporte, 1835.

smile (smil), *v.*; pret. and pp. *smiled*, ppr. *smiling*. [ME. *smilen*, *smylen*, < Sw. *smila*, smile, smirk, simper, fawn, = Dan. *smile* = MHG. *smielen*, *smieren*, G. dial. *schmieren*, *schmielen*, smile; cf. To show a change of the features such as characterizes the beginning of a laugh; give such an expression to the face: generally as indicative of pleasure or of slight amusement, but sometimes of depreciation, contempt, pity, or hypocritical complaisance.

Seldom he smiles; and smiles in such a sort
As if he mock'd himself, and scorn'd his spirit,
That could be moved to smile at anything.
Shak., J. C., I. 2. 205.

All this while the guide, Mr. Great-heart, was very much pleased, and smiled upon his companions.
Bunyan, Pilgrim's Progress, II.

Smile us sae sweet, my bonnie babe,
And ye smile sae sweet, ye'll smile me dead.
Fine Flowers in the Valley (Child's Ballads, II. 265).

'Twas what I said to Craggs and Child,
Who prais'd my modesty, and smiled.
Pope, Imit. of Horace, I. vii. 68.

From you blue heavens above us bent
The gardener Adam and his wife
Smile at the claims of long descent.
Tennyson, Lady Clara Vere de Vere.

2. To look gay or joyous, or have an appearance such as tends to excite joy; appear propitious or favorable: as, the *smiling* spring.

Then, let me not let pass
Occasion which now smiles. *Milton*, P. L., IX. 480.

The desert smiled,
And Paradise was open'd in the wild.
Pope, Eloisa to Abelard, I. 133.

What I desire of you is, that you, who are courted by all, would smile upon me, who am shunned by all.
Steele, Spectator, No. 456.

3. To drink in company. [Slang, U. S.]

There are many more fast boys about—some devoted to "the sex," some to horses, some to *smiling*, and some to "the tiger."
Baltimore Sun, Aug. 23, 1858. (*Bartlett*.)

4. To ferment, as beer, etc. *Hallivell*. [Prov. Eng.]

II. trans. 1. To express by a smile: as, to smile a welcome; to smile content.—2. To change or affect (in a specified way) by smiling: with a modifying word or clause added.

He does smile his face into more lines than is in the new map.
Shak., T. N., III. 2. 84.

Dryden, tr. of Juvenal's Satires, x. 491.

smock-frock (smok'frok), n. A garment of
coarse linen, resembling a shirt in shape, worn
by field-laborers over their other clothes; simi-
lar to the French *blouse*. The yoke of this gar-
ment at its best is elaborately shirred or pucker-
ered. See *smocking*.

A clothes-line, with some clothes on it, striped blue and
red, and a smock-frock, is stretched between the trunks of
some stunted willows. *Ruskin, Elements of Drawing, iii.*

smocking (smok'ing), n. [*< smock + -ing.*] An
ornamental shirring, recently used, intended to
imitate that on the smock-frocks of field-lab-
orers. The lines, instead of being horizontal,
form a honeycomb, the material being puckered
diagonally.

This shirt was a curious garment, of the finest drawn
hair, and exquisitely wrought in a kind of *smocking*, with
each little neck caught together by tiny bows of red and
blue ribbon. *The Critic, XI. 147.*

from which smock-frocks are made, especially
in England.

smock-mill (smok'mil), n. A form of wind-
mill of which the mill-house is fixed and the
cap only turns round as the wind varies. It
thus differs from the post-mill, of which the whole fabric
is movable round a vertical axis. It is also called the
Dutch mill, as being that most commonly employed in
the Netherlands for pumping.

smock-race (smok'rās), n. A race for which
a smock is the prize.

Smock Races are commonly performed by the young
country wenchies, and so called because the prize is a
holland smock, or shift, usually decorated with ribbands.
Strutt, Sports and Pastimes, p. 476.

smock-racing (smok'rā'sing), n. The running
of a smock-race or of smock-races.

Among other amusements, *smock-racing* by women was
kept up there [Pall Mall] till 1733.

smokable (smōk'ka-bl), a. [*< smoke + -able.*] Capable of being smoked.

smoke (smök), v.; pret. and pp. smoked, ppr. smoking. [Formerly also *smoak*; *< ME. smoken, smokien (pret. smokede); < AS. smocian, smocigan (= MD. smoken, smooken, D. smoken = MLG. smoken, LG. smoken, smooken, also smöken = G. schmauchen, dial. schmochen = Dan. smöge), amo, reek; a secondary form, taking the place of the orig. strong verb smocian (pret. smedc; pp. smocen), smoke; perhaps related to Gr. σμύχων, burn slowly, smolder. Cf. Ir. much = W. mug, smoke; cf. also smoor, smother.] I. *intrans.* 1. To emit smoke; throw off volatile matter in the form of vapor or exhalation; reek; fume; especially, to send off visible vapor as the product of combustion.*

Queen Margaret saw
Thy murderous falchion smoking in his blood.
Shak., Rich. III., i. 2. 94.

To him no temple stood
Or altar smoked.
Milton, P. L., i. 493.

Lo there the King la with his Nobles set,
And all the crouded Table smoaks with meat.
J. Beaumont, Payche, iii. 172.

2. To burn; be kindled; rage; fume.

The anger of the Lord and his jealousy shall smoke against
that man.
Deut. xxix. 20.

How Wolsey broke off the insurance is very well told.
Mistress Anne was "sent home again to her father for a
season; whereat she smoked."
Babees Book (E. E. T. S.), Forewords, p. x., note.

3. To raise a dust or smoke by rapid motion.
Proud of his steeds, he smokes along the field.
Dryden, Æneid, vii. 909.

4. To smell or hunt something out; suspect something; perceive a hidden fact or meaning. [Now only colloq.]—5. To permit the passage of smoke outward instead of drawing it upward; send out smoke for want of sufficient draft; said of chimneys, stoves, etc.
When, in obedience to our instructions, a fire was lighted,
the chimney smoked so badly that we had to throw open
door and windows, and to sit, as it were, in the open air.
D. Christie Murray, Weaker Vessel, xxxix.

6. To draw fumes of burning tobacco, opium, or
the like, into, and emit them from, the mouth;
use tobacco or opium in this manner.

I hate married women! Do they not hate me, and, sim-
ply because I smoke, try to draw their husbands away from
my society?
Thackeray, Fitz-Boodles's Confessions.

7. To suffer as from overwork or hard treat-
ment; be punished.

At every stroke their jackets did smoke.
Robin Hood and the Ranger (Child's Ballads, V. 209).

Smoking salts. See *salt*.

II. *trans.* 1. To apply smoke to; blacken with
smoke; hang in smoke; medicate or dry by
smoke; fumigate; as, to smoke infected cloth-
ing; to subject to the action of smoke, as meat;
cure by means of smoke; smoke-dry; also, to
incense. Smoking meat consists in exposing meat
previously salted, or rubbed over with salt, to wood-smoke
in an apartment so distant from the fire as not to be
unduly heated by it, the smoke being admitted by flues
at the bottom of the side walls. Here the meat absorbs the
emphyreumatic acid of the smoke, and is dried at the same
time. The kind of wood used affects the quality and taste
of the meat, smoke from beech and oak being preferable
to that from fir and larch. Smoke from the twigs and ber-
ries of juniper, or from rosemary, peppermint, etc., im-
parts somewhat of the aromatic flavor of these plants. A
slow smoking with a slender fire is better than a quick and
hot one, as it allows the emphyreumatic principles time to
penetrate into the interior without over-drying the out-
side.

Smoking the temple. *Chaucer, Knight's Tale, l. 1423.*
Being entertained for a perfumer, as I was smoking a
musty room, comes me the prince.
Shak., Much Ado, l. 3. 60.

An old smoked wall, on which the rain
Ran down in streaks! *B. Jonson, Volpone, l. 1.*

2. To affect in some way with smoke; espe-
cially, to drive or expel by smoke: generally
with *out*; also, to destroy or kill, as bees, by
smoke.

Are not these flies gone yet? Pray quit my house,
I'll smoke you out else. *B. Jonson, Staple of News, ii. 1.*
The king, upon that outrage against his person, smoked
the Jesuits out of his nest.
Sir E. Sandys, State of Religion (ed. 1605), G. 3 b.
(Latham).

So the king arose, and went
To smoke the scandalous hive of those wild bees
That made such honey in his realm.
Tennyson, Holy Grail.

3. To draw smoke from into the mouth and
puff it out; also, to burn or use in smoking; in-
hale the smoke of: as, to smoke tobacco or
opium; to smoke a pipe or a cigar.

Here would he smoke his pipe of a sultry afternoon, en-
joying the soft southern breeze.
Irving, Knickerbocker, p. 160.

4. To smell out; find out; scent; perceive;
perceive the meaning of; suspect. [Archaic.]
I'll hang you both, you rascals!
. . . you for the purse you cut
In Paul's at a sermon; I have smoked you, ha!
Massinger, City Madam, iii. 1.

It must be a very plausible invention that carries it;
they begin to smoke me. *Shak., All's Well, iv. 1. 30.*

5†. To sneer at; quiz; ridicule to one's face.

This is a vile dog; I see that already. No offence! Ha,
ha, ha! to him; to him, Petulant; smoke him.
Congreve, Way of the World, iii. 15.
Pray, madam, smoke miss yonder biting her lips, and
playing with her fan. *Sicily, Polite Conversation, i.*

Why, you know you never laugh at the old folks, and
never fly at your servants, nor smoke people before their
faces. *Miss Burney, Cecilia, vi. 11.*

6. To raise dust from by beating; "dust": as,
I'll smoke his jacket for him. [Colloq.]

I'll smoke your skin-coat, an I catch you right.
Shak., K. John, li. 1. 139.

Smoked pearl. See *pearl*.

smoke (smök), n. [Early mod. E. also *smoak*; *< ME. smoke, < AS. smoca (rare), < smocian (pret. smedc, pp. smocen), smoke, reek; see smoke, v.* This form has taken the place of the more orig. noun, E. dial. *smeech, < ME. smeche, sneke, < AS. smēc, smýc, umlaut forms of smēc (= D. smook = MLG. smök, LG. smook = MHG. smouch, G. schmauch, G. dial. schmoch = Dan. smög), < smocian (pp. smocen), smoke; see smoke, v.*] 1. The exhalation, visible vapor, or material that escapes or is expelled from a burning substance during combustion: applied especially to the volatile matter expelled from wood, coal, peat, etc., together with the solid matter which is carried off in suspension with it, that expelled from metallic substances being more generally called *fume* or *fumes*.

And tharof rase a ful grete reke,
Bot that was ful wele smelt and smeke.
Holy Rood (E. E. T. S.), p. 94.

Laud we the gods;
And let our crooked smokes climb to their nostrils
From our blest altars. *Shak., Cymbeline, v. 5. 477.*

The smook of juniper . . . is in great request with us
at Oxford, to sweeten our chambers.
Burton, Anat. of Mel., p. 263.

Usually the name *smoke* is applied to this vaporous mix-
ture discharged from a chimney only when it contains a
sufficient amount of finely divided carbon to render it dark-
coloured and distinctly visible. *Encyc. Brit., XXII. 150.*

2. Anything that resembles smoke; steam;
vapor; watery exhalations; dust.

In vayne, mine eyes, in vaine you wast your teares,
In vayne my sighs, the smokes of my despairce.
Sir W. Raleigh, quoted in Pittenham's Arte of Eng. Poesie,
[p. 165.]

Hence—3. Something unsubstantial; some-
thing ephemeral or transient: as, the affair
ended in *smoke*.

This helpless smoke of words doth me no right.
Shak., Lucrece, l. 1027.

4. The act or process of drawing in and puff-
ing out the fumes of burning tobacco, opium,
or the like. [Colloq.]

smuggling (smug'ling), *n.* The offense of car-
rying, or causing to be carried, across the bound-
ary of a nation or district, goods which are
dutiable, without either paying the duties or
allowing the goods to be subjected to the reve-
nue laws; or the like carrying of goods the tran-
sit of which is prohibited. In a more general sense
it is applied to the violation of legal restrictions on tran-
sit, whether by revenue laws or blockades, and the viola-
tion of excise laws, by introducing into trade or consump-
tion prohibited articles, or articles evading taxation. In
either use it implies clandestine evasion of law.

smut (smut), *n.* [Prob. a var. of *smitt*, < AS.
smitta, a spot, stain, smut, = D. *smet*, a blot,
stain. The variation is appar. due to the in-
fluence of the related words, ME. *bismoteret*,
smeared, etc., and to the words cited under
smutch, *smudge¹*: see *smudge¹*.] 1. A spot
made with soot, coal, or the like; also, the foul-
ing matter itself.

With white apron and cap she ventured into the draw-
ing-room, and was straightway assailed by a joyous dance
of those monads called vulgarly smuts.

Bulwer, *Caxtons*, xiv. 2.

2. Obscene or filthy language.

He does not stand upon decency in conversation, but
will talk smut, though a priest and his mother be in the
room. *Addison*, *The Lover*, No. 39.

3. A fungous disease of plants, affecting espe-
cially the cereal plants, to many of which it is
exceedingly destructive. It is caused by fungi of
the family *Ustilaginæ*. There are in the United States
two well-defined kinds of smut in cereals: (a) the *black
smut*, produced by *Ustilago segetum*, in which the head is
mostly changed to a black dust; (b) the *stinking smut*
(called *bunt* in England), which shows only when the
kernel is broken open, the usual contents being found to
be replaced by a black unctuous powder. The stinking
smut is caused by two species of fungus, which differ only
in microscopic characters—*Tilletia tritici*, with rough
spores, and *T. foetens*, with smooth spores. It is the most
destructive disease of wheat known, not infrequently caus-
ing the loss of half of the crop or more. It occurs to some
extent throughout all the wheat-growing regions, but is
especially common in Indiana, Iowa, and adjacent States,
as well as in California and Europe. The disease does not
spread from plant to plant or from field to field, but the
infection takes place at the time the seed sprouts. No
remedy can be applied after the grain is sown, but the
disease can be prevented by sowing clean seed in clean soil
and covering well. Smutty seed can be purified by soak-
ing thoroughly with a solution of blue vitriol, using one
pound or more to a gallon of water. Black smut may be
similarly treated. *U. Maydis* is the smut of Indian corn;
U. destruens, of *Setaria glauca*; *U. ureolens*, of many species
of *Carex*, etc. See *Ustilago*, *Tilletia*, *maize-smut*, *bunt⁴*,
bunt-ear, *burnt-ear*, *brand*, 6.

4. Earthy, worthless coal, such as is often found
at the outcrop of a seam. In Pennsylvania also
called *black-dirt*, *blossom*, and *crop*.

smutting. [*< smut*, *n.*] **I. trans.** 1. To stain
or mark with smut; blacken with coal, soot, or
other dirty substance.

'Tis the opinion of these poor People that, if they can
but have the happiness to be buried in a shroud smutted
with this Celestial Fire, it will certainly secure them from
the Flame of Hell. *Maunderell*, Aleppo to Jerusalem, p. 97.

2. To affect with the disease called smut;
mildew.

Mildew falleth upon corn, and smutteth it. *Bacon.*

3. Figuratively, to tarnish; defile; make im-
pure; blacken.

snake (snāk), *v.*; pret. and pp. *snaked*, ppr. *snaking*. [*< snake, n.*] **I. intrans.** To move or wind like a snake; serpentine; move spirally.

Anon upon the flowry Plains he looks,
Laced about with snaking silver brooks.
Sylvester, tr. of *Du Bartas's Weeks*, l. 7.

An arrow *snakes* when it slips under the grass.
M. and W. Thompson, *Archery*, p. 54.

Projectiles subject to this influence [spiral motion of rotation round their original direction] are technically said to *snake*.
Farrow, *Mil. Encyc.*, III. 130.

II. trans. 1. To drag or haul, especially by a chain or rope fastened around one end of the object, as a log; hence, to pull forcibly; jerk: used generally with *out* or *along*. [U. S.]

Unless some legal loophole can be found through which an evasion or extension can be successfully *snaked*.
Philadelphia Press, No. 2810, p. 4 (1883).

After mining, the log is easily *snaked* out of the swamp, and is ready for the mill or factory.
Sci. Amer., N. S., LIX. 265.

2. *Naut.*: (a) To pass small stuff across the outer turns of (a seizing) by way of finish. (b) To wind small stuff, as marline or spun-yarn, spirally round (a large rope) so that the spaces between the strands will be filled up; worm. (c) To fasten (backstays) together by small ropes stretched from one to the other, so that if one backstay is shot away in action it may not fall on deck.

snake-bird (snāk'bêrd), *n.* 1. A totipalmate natatorial bird of the family *Plotidae* and genus *Plotus*: so called from the long, slender, snaky neck; a snake-neck; an anhinga or water-turkey; a darter. See cut under *anhinga*.—2. The wryneck, *Lynx torquilla*: so named from the serpentine movement of the neck. See cut under *wryneck*. [Eng.]

snake-boat (snāk'bōt), *n.* Same as *pamban-manche*.

snake-box (snāk'boks), *n.* A faro-box fraudulently made so that a slight projection called a snake warns the dealer of the approach of a particular card.

snake-buzzard (snāk'buz'ârd), *n.* The short-toed eagle, *Circæus gallocus*. See *Circæus*, and description under *short-toed*. See also cut in next column.

snake-cane (snāk'kân), *n.* A palm, *Kunthia montana*, of the United States of Colombia and Brazil, having a reed-like ringed stem. From the resemblance of the latter to a snake, its juice is fancied by the natives to be a cure for snake-bites. The stem is used for blowpipes to propel poisoned arrows.

snake-charmer (snāk'châr'mêr), *n.* Same as *serpent-charmer*.

snake-charming (snāk'châr'mîng), *n.* Same as *serpent-charming*.

snake-coralline (snāk'kor'a-lîn), *n.* A chilo-stomatous polyzoan, *Actea anguina*.

snake-crane (snāk'krân), *n.* The Brazilian crested screamer, or seriema, *Cariama cristata*. See cut under *seriema*.

snake-doctor (snāk'dok'tôr), *n.* 1. The doberman or hellgrammite. [Pennsylvania.]—2. A dragon-fly, horse-stinger, or mosquito-hawk. [Local, U. S.]

Also *snake-feater*.

snake-eater (snāk'ê'têr), *n.* Same as *serpent-eater*.

snake-eel (snāk'êl), *n.* An eel of the family *Ophichthyidae* or *Ophisuridae*; especially, *Ophichthys serpens* of the Mediterranean, reaching a length of 6 feet: so called because the tail has no tail-fin, and thus resembles a snake's.

snake-feeder (snāk'fê'dêr), *n.* 1. Same as *snake-doctor*, 1. [Ohio.]—2. Same as *snake-doctor*, 2.

snake-fence (snāk'fens), *n.* See *snake fence*, under *fence*.

snake-fern (snāk'fêrn), *n.* The hart's-tongue fern, *Scopolopodium vulgare*. Also *snake-leaves*.

snake-fish (snāk'fish), *n.* 1. A kind of lizard-fish, as *Synodus fæctus* or *S. myops*.—2. The red band-fish, *Cepola rubescens*: more fully called *red snake-fish*. See *Cepolidae*.—3. The oar-fish. See cut under *Regalecus*.

snake-fly (snāk'fi), *n.* A neuropterous insect of the genus *Raphidia* or family *Raphidiidae*; a camel-fly: so called from the elongated form of the head and neck, and the facility with which it moves the front of the body in different directions. They are mostly to be found in the neighborhood of woods and streams. The common European species is *Raphidia ophiopsis*.

snake-gourd (snāk'gôrd), *n.* See *gourd*.

snakehead (snāk'hêd), *n.* 1. Same as *snake's-head*, 1.—2. A plant, the turtle-head, *Chelone glabra*, used in medicine as a tonic and aperient. See *Chelone*.—3. A fish of the family *Ophiocephalidae*.—4. A snake-headed turtle, *Chelys matamora*, having a large flat carapace and long pointed head, found in South America. See cut under *Chelydidae*.—5. The end of a flat railroad-rail when enrolling upward. In the beginning of railroad-building in America the track was sometimes made by screwing or spiking straps of iron along the upper side of timbers; an end of such a rail often became bent upward, and sometimes so far as to be caught by a wheel and driven up through the car, to the danger or injury of the passengers. Such a loose end was called a *snakehead* from its moving up and down when the wheels passed over it. Also *snake's-head*. [U. S.]

snake-headed (snāk'hed'ed), *a.* Having a head like a snake's, as a turtle. See *snake-head*, 4.

snake-killer (snāk'kil'êr), *n.* 1. The ground-eekoo or chaparral-cock, *Geococcyx californianus*. See cut under *chaparral-cock*. [Western U. S.]—2. The secretary-bird. See cut under *secretary-bird*.

snake-proof (snāk'prôf), *a.* Proof against venom; hence, proof against envy. [Rare.]

I am *snake-proof*; and though, with Hannibal, you bring whole hogheads of vinegar-rallings, it is impossible for you to quench or come over my Alpine resolution.
Dekker, *Gull's Hornbook*.

snake-rat (snāk'rat), *n.* The common Alexandrine or black rat, *Mus rattus* or *alexandrinus*. A variety of it is known as the *white-bellied rat*, or *roof-rat*, *Mus tectorum*. It is one of the two longest and best-known of all rats (the other being the gray, brown, Hanoverian, or Norway rat, *M. decumanus*), runs into many varieties, and has a host of synonyms. It is called *snake-rat* by Darwin. See cuts under *Muridae*.

snakeroot (snāk'rôt), *n.* [*< snake + root.*] A name of numerous plants of different genera, whose root either has a snake-like appearance, or has sometimes been regarded as a remedy for snakes' bites, or both. Several have a medicinal value. Compare *rattlesnake-master* and *rattlesnake-root*.—**Black snakeroot**. (a) See *sanicula*, 1. (b) The black cohosh, *Cimicifuga racemosa*, whose root is an official remedy used in chorea, and formerly for rheumatism.—**Brazilian snakeroot**, *Chiococca anguifuga*; also, *Casearia serrulata*.—**Button-snakeroot**. (a) See *Eryngium*, and cut under *rattlesnake-master*. (b) A general name for the species of *Liatris*: so called from the button-shaped corolla, or from the button-like heads of some species, and from their reputed remedial property. (See cut under *Liatris*.) *L. spicata*, also called *gay-feather*, is said to have diuretic and other properties. The leaves of *L. odoratissima* are used to flavor tobacco.—**Canada snakeroot**, the wild gluger, *Asarum canadense*. See *Asarum* and *ginger*.—**Ceylon snakeroot**, the tubers of *Arisæma Lecheanaultii*.—**Heart-snakeroot**. Same as *Canada snakeroot*.—**Indian snakeroot**, a rubaceous plant, *Ophiorhiza Mungos*, whose very bitter roots are used by the Chinese and natives of India as a remedy for snake-bites. Their actual value in cases of this kind is, however, questioned.—**Red River snakeroot**. Same as *Texas snakeroot*.—**Samson's snakeroot**, a plant, *Psoralea melilotoides*, of the southern United States, whose root is said to be a gentle stimulant tonic.—**Seneca snakeroot**, *Polygala Senega* of eastern North America. It sends up several stems from hard knotty root-stocks, bearing single close racemes of white flowers. It is the source of the official *senega-root*, and from being much gathered is said to have become scarce in the east.—**Texas snakeroot**, *Aristolochia reticulata*, or its root-product, which has the same properties as the Virginia snakeroot.—**Virginia snakeroot**, the serpentine or birthwort, *Aristolochia Serpentaria*, of the eastern United States. Its root is a stimulant tonic, acting also as a diaphoretic or diuretic. It is officially recognized, and is exported in considerable quantity.—**White snakeroot**, the American *Eupatorium ageratoides*, also called *Indian* or *white sanicle*. It has no medicinal standing.

1. The upper part of the stem with the flowers of Seneca snakeroot (*Polygala Senega*). 2. The root and the base of the stem. *a.* The fruit.

snake's-head (snāk's'hed), *n.* 1. The guinea-hen flower, *Fritillaria Meleagris*: said to be so called from the checkered markings on the petals.—2. Same as *snakehead*, 5.—**Snake's-head iris**, a plant of southern Europe, *Hemodactylus (Frie) tuberosus*, the flowers of which have a fancied resemblance to the open mouth of a snake.

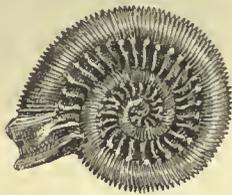

snake-shell (snāk's'hel), *n.* One of a group of gastropods of the family *Turbinidae*, which abound in the Pacific islands, and have a very rough outside, and a chink at the pillar. *P. P. Carpenter*.

snake's-mouth (snāk's'mouth), *n.* See *Pogonia*. Also called *snake's-mouth orchis*.

snakes-stang (snāk's'tang), *n.* The dragonfly. *Halliwel*. [Prov. Eng.]

snake's-tail (snāk's'täl), *n.* The sea hard-grass *Lepturus incurvatus*. [Eng.]

snakestone (snäk's'tön), *n.* 1. Same as *ammonite*: from an old popular notion that these shells were coiled snakes petrified.—2. A small rounded piece of stone, such as is often found among prehistoric and other antiquities, probably spindle-whorls or the like. Compare *adder-stone*.

Snakestone (*Ammonites bisulcatus*).

In Harris and Lewis the distaff and spindle are still in common use, and yet the original intention of the stone spindle-whorls, which occur there and elsewhere, appears to be unknown. They are called *clach-natrach*, *adder-stones*, or *snake-stones*, and have an origin assigned them much like the ovum anguinum of Pliny. *Evans*, Ancient Stone Implements, p. 391. (*Encyc. Diet.*)

3. A kind of hone or whetstone found in Scotland.—4. Same as *serpent-stone*, 1.

snake's-tongue (snāk's'tung), *n.* 1. The spearwort, *Ranunculus Flammula*; also, the closely related *R. ophioglossifolius*: named from the shape of the leaf.—2. More rarely, same as *adder's-tongue*.

snakeweed (snäk'wēd), *n.* 1. The bistort, *Polygonum bistorta*, a perennial herb of the northern parts of both hemispheres. Its root is a powerful astringent, sometimes employed in medicine. Also *adder's-wort* and *snakewort*. See *bistort*.—2. The Virginia snakeroot. See *snake-root*.—3. Vaguely, any of the woody plants among which snakes are supposed to abound.

snakewood (snäk'wūd), *n.* 1. In India, the bitter root and wood of *Strychnos colubrina*, also that of *S. Nux-vomica*, which is esteemed a cure for snake-poison, and is also employed as a tonic remedy in dyspepsia, etc. See *nux vomica*, 2.—2. The leopard- or letter-wood, *Brosimum Aubletii*: so called from the markings on the wood. See *letter-wood*.—3. A small West Indian tree, *Colubrina ferruginosa* of the *Rhamnaceæ*: named apparently from the twisted grain of the wood.—4. The trumpet-tree, *Cecropia peltata*, or sometimes the genus.—5. Sometimes, same as *serpent-wood*.—6. The red nose-gay-tree, *Plumeria rubra*.

snakeworm (snäk'wērm), *n.* One of the masses of larvæ of certain midges of the genus *Sciara*. These larvæ, when full-grown, often migrate in armies forming a snake-like body a foot or more long, an inch or more wide, and a half-inch high. Also called *army-worm*. [U. S.]

snaking (snä'king), *n.* [Verbal *n.* of *snake*, *v.*] 1. The act or process of hauling a log, or of passing a line in a zigzag manner or spirally between two larger ropes.—2. A snake-like curl or spiral.

The fleecy fog of spray, . . . sometimes tumbling in thunder upon her forward decks, sometimes curling in blown *snakings* ahead of her.

William Morris, Earthly Paradise, III. 111.

2. See the quotation.

Snatching is a form of illicit pisciculture. . . . A large triangle is attached to a line of fine gut, well weighted with swan-shot or a small plummet. . . . The line is then dropped into some quiet place where fish are plentiful. . . . and, as soon as the plummet has touched the bottom, is twitched violently up. It is almost a certainty that on some one or other of the hooks, and possibly on more than one, will be a fish hook-looked.

The Standard (London), Oct. 21, 1873. (Davies.)

snatch (snach), *n.* [*< snatch*, *v.* Cf. *snack*, *n.*]

1. A hasty catch or seizing.

How can he live by *snatches* from such people?

He bore a worthy mind.

Fletcher, Wit without Money, i. 1.

His scarsella was *snatched* at, but all the while he was being hustled and dragged, and the *snatch* failed.

George Eliot, Romola, lxvi.

2. An attempt to seize suddenly; a sharp attack.

Thus not only as oft as we speak, as one saith, but also as oft as we do anything of note or consequence, we subject ourselves to every one's censure, and happy is he that is least tossed upon tongues; for utterly to escape the *snatch* of them it is impossible!

The Translators to the Reader of the Bible (A. V.), p. cvii.

3†. A catching of the voice; impeded utterance. [*Rare.*]

The *snatches* in his voice,
And burst of speaking, were as his.

Shak., Cymbeline, iv. 2. 105.

4. A piece *snatched* or broken off; a small piece or quantity; a fragment; a bit.

Mermaid-like, awhile they bore her up;
Which time she chanted *snatches* of old tunes.

Shak., Hamlet, iv. 7. 178.

But I am somewhat worn,
A *snatch* of sleep were like the peace of God.

Tennyson, Harold, v. 1.

5. A short fit of vigorous action: as, a *snatch* at weeding after a shower.

High-stepping horses seemed necessary to all Mr. Lamble's friends—as necessary as their transaction of business together in a gipsy way at untimely hours. . . . and in rushes and *snatches*. Dickens, Our Mutual Friend, II. 4.

6. A hasty repast; a snack; a bit of food.

I fear you'll have cold entertainment when
You are at your journey's end; and 'twere discretion
To take a *snatch* by the way.

Massinger, Duke of Milan, iii. 2.

7. A quibble; a shuffling answer. [*Rare.*]

Come, sir, leave me your *snatches*, and yield me a direct answer.

Shak., M. for M., iv. 2. 6.

—By *snatches*, in a disconnected or spasmodic manner; by fits and starts.—**Dumb snatch**, a *snatch* having no sheave.

snatch-block (snach'blok), *n.* A block, used on ships, having an opening in one side to receive the bight of a rope.

The part of the strap which goes over the opening in the shell is hinged, so that by turning it back the bight of the rope can be inserted without reeving the end through. When it is used for heavy purchases where a warp or hawser is brought to a capstan, it is called a *royal* or *viol* block. Also *notch-block*. See also cut under *block*¹.

Snatch-block.

snatch-cleat (snach'klét), *n.* *Naut.*, a curved cleat or chock round which a rope may be led.

snatcher (snach'ér), *n.* [*< snatch* + *-er*.] **1.** One who *snatches*, or takes suddenly or guiltily: as, a *body-snatcher*; specifically, formerly, in Scotland, a roving thief, especially one of a body of plunderers banging upon a military force.

We do not mean the coursing *snatchers* only,
But fear the main intendment of the Scot.

Shak., Hen. V., l. 2. 143.

The Town-herd . . . regularly drove them [all the cattle belonging to the community] out to pasture in the morning, and brought them back at night, without which precaution they would have fallen a speedy prey to some of the *Snatchers* in the neighbourhood. Scott, Monastery, i.

2. pl. In *ornith.*, specifically, birds of prey; the *Raptors*. See cuts under *Raptors*.

snatchingly (snach'ing-li), *adv.* By *snatching*; hastily; abruptly. *Imp. Dict.*

snatching-roller (snach'ing-rō'ler), *n.* In a printing-press using a continuous web of paper, one of a pair of rollers running at a higher speed than those next behind them, and serving to snatch or tear off the printed sheet at the line of perforations made to divide the web into sheets.

snatchy (snach'i), *a.* [*<* *snatch* + *-y*.] Consisting of or characterized by snatches; not uniform or continuous; irregular.

The modern style [of rowing] seems short and snatchy; it has not the long majestic sweep of former days.

Cambridge Sketches, p. 16.

snath (snáth), *n.* A shortened form of *sneath*².

O mower, lean on thy bended snath,

Look from the meadows green and low.

Whittier, Wreck of Rivermouth.

sneer (snēr), *v.* [Formerly also *snear*; *<* ME. *snereu*, *<* Dan. *snærre*, grin like a dog; akin to *snar*, *snarl*.] **I. intrans.** 1. To grin or laugh foolishly.

A fourth would fondly kiss and paw his companions, and *sneer* in their faces, with a countenance more antic than any in a Dutch droll.

Beverley, Virginia, iv. ¶ 18.

2. To grin; especially and usually, to grin or smile in a contemptuous manner; express contempt by a grimace marked by slight turning up of the nose.

I have no power over one muscle in their faces, though they *sneered* at every word spoken by each other.

Tatler.

3. To insinuate contempt by a covert expression; use words suggestive rather than expressive of contempt; speak derisively.

To *sneer* at the sentiments which are the springs of all just and virtuous actions is merely a display of unthinking levity, or of want of the natural sensibilities.

O. W. Holmes, Essays, p. 92.

=Syn. 3. *Scoff*, *Sneer*, *Jeer*, *Gibe*. *Scoff* is the strongest word for the expression of utter contempt or abhorrence

by opprobrious language. To sneer is to express contempt by more or less covert sarcasm. To jeer is to try to raise a laugh by sarcastic language. To gibe is to use contemptuous, mocking, or taunting expression.

II. trans. 1. To treat or address with sneers; treat with contempt; sneer at.

He had sneer'd Sir Thomas Hamner for changing Sirrah into Sir.
T. Edwards, Canons of Criticism (1765), p. 75. (Hall.)

2. To utter with a contemptuous expression or grimace.

"A ship of fools," he shrlek'd in spite,
"A ship of fools," he sneer'd and wept.
Tennyson, The Voyage.

3. To affect in a specified way by sneering.

Very likely they were laughing over his infatuation, and sneering her fair fame away, at that very moment in the clubs.
White Melville, White Rose, II. xviii.

sneer (snēr), *n.* [*< sneer, v.*] 1. A derisive or contemptuous grin or smile; an expression of the face marked by a slight turning up of the nose, and indicating contempt; a look of scorn, disdain, or derision; hence, the feeling thus expressed.

That smile, if oft observed and near,
Waned in its mirth, and wither'd to a sneer.

Byron, Lara, I. 17.

2. A verbal expression of contempt; an insinuation of scorn or derision by language more or less covert and indirect.

Who can refute a sneer? Paley, Moral Philos., II. v. 9.
=Syn. See sneer, *v. i.*

sneerer (snēr'ēr), *n.* [*< sneer + -er.*] One who sneers.

sneerful (snēr'fūl), *a.* [*< sneer + -ful.*] Given to sneering. [Rare.]

Cell ever squall'd! where the sneerful maid
Will not fatigue her hand! broom never comes,
That comes to all.
Shenstone, Economy, III.

sneeringly (snēr'ing-li), *adv.* In a sneering manner; with a sneer.

sneering-match (snēr'ing-mach), *n.* A grinning-match (which see, under grin, *v.*). Halliwell. [Prov. Eng.]

sneering-muscle (snēr'ing-mus'ul), *n.* A muscle of expression which lifts the upper lip and draws also upon the nostril, and is the principal agent in producing a sneer or sneering expression of the face; the levator labii superioris alaeque nasi. Persons habitually surly or scornful often have a deep line engraven on the face, due to the frequent exercise of this muscle. Compare snarling-muscle, under muscle.

sneezet, *v.* and *n.* An obsolete spelling of sneeze.

sneesh (snēsh), *n.* [Also snish, snash; < Dan. snus, snuff. Cf. sneeze.] See snush.

sneeshing (snē'shing), *n.* [Also sneeshin; < sneesh, snish, snuff, + -ing¹.] Snuff; also, a pinch of snuff. [Scotch.]

A mull o' gude sneeshin' to pria.
The Bithesome Bridal.
Not worth a sneeshin.
W. Meaton, Poems.

sneeshing-mull, a snuff-box, generally made of the end of a horn. [Scotch.]

sneevlet, *v.* An obsolete form of snivel.

sneeze (snēz), *v.*; pret. and pp. sneezed, ppr. sneezing. [Early mod. E. also sneeze, sneese, sneeze; < ME. sneesen, a variant, with substitution of sn- for the uncommon initial sequence sn-, of sneesen, < AS. sneosan = D. sneezen, sneeze, = Icel. snasa, later snysa, sneeze, = Sw. snysa = Dan. snysse, snort; see sneeze, and cf. sneeze.] **I. intrans.** To emit air from the nose and mouth audibly and violently by an involuntary convulsive action, as occasioned by irritation of the lining membrane of the nose or by stimulation of the retina by a bright light. In sneezing the glottis remains open, while the passage out through the mouth is partially obstructed by the approximation of the tongue to the roof of the mouth. See sneezing.

Mr. Haliburton brings forward, as his strongest case, the habit of saying "God bless you" or some equivalent expression when a person sneezes. He shows that this custom, while, I admit, appears to us at first sight both odd and arbitrary, is ancient and widely extended. It is mentioned by Homer, Aristotle, Apuleius, Pliny, and the Jewish rabbis, and has been observed in Koordistan, in Florida, in Oahelto, and in the Tonga Islands.

Sir J. Lubbock, Orig. of Civilization, p. 335.

To sneeze at, to disregard; show contempt for; despise; now chiefly in the expression not to be sneezed at. [Colloq.]

A buxom, tall, and comely dame,
Who wish'd, 'twas said, to change her name,
And if I could her thoughts divine,
Would not perhaps have sneez'd at mine.
W. Combe, Dr. Syntax's Tours, II. 5.

My professional reputation is not to be sneezed at.

Sir A. H. Elton, Below the Surface, xxvii.

II. trans. To utter with or like a sneeze.

Shall not Love to me,
As in the Latin song I learnt at school,
Sneeze out a full God-bless you right and left?
Tennyson, Edwin Morris.

sneeze (snēz), *n.* [Early mod. E. also sneeze; < sneeze, *v.*] 1. The act of one who sneezes, or the sound made by sneezing; sudden and violent ejection of air through the nose and mouth with an audible sound.—2. Snuff. Also snish. Halliwell. [Prov. Eng.]—Cup o' sneeze. See cup.

sneeze-horn (snēz'hōrn), *n.* A sort of snuff-box made of an animal's horn. Halliwell.

sneezer (snēz'ēr), *n.* [*< sneeze + -er.*] 1. One who sneezes.

When a Hindu sneezes, bystanders say "Live!" and the sneezer replies "With you!"
E. B. Tylor, Prim. Culture, I. 101.

2. A violent blow; a blow that knocks the breath out. [Prov. Eng.]

sneezeweed (snēz'wēd), *n.* A plant of the genus *Helenium*, mostly the common *H. autumnale*. In England this, though rather coarse, is known in ornamental culture. Its powdered leaves and flowers when snuffed up produce violent sneezing. Recently the finer southwestern species, *H. tenuifolium*, has received some notice. It is poisonous to human beings and to horses. Both plants have been advocated for medicinal use in nervous diseases. Less properly called sneezewort. See cut under *Helenium*.

sneezewood (snēz'wūd), *n.* [A translation of S. African D. *nies-hout*, < D. *nieszen*, sneeze (= F. *neeze*), + *hout*, wood (= E. *holt*).] A South African tree, *Pteroxylon utile*, or its timber. The latter is a handsome wood taking a fine polish; it is strong and very durable, and but slightly affected by moisture. It is made into furniture, agricultural implements, etc., and is used for railway-ties, piles, and similar purposes. The dust produced in working it causes sneezing (whence the name).

sneezewort (snēz'wōrt), *n.* [*< sneeze + wort.*] Cf. D. *nieswortel*, hellebore.] 1. In old usage, the white hellebore, *Veratrum album*, more often under the form *neezewort*. Britten and Holland, Eng. Plant Names.—2. A composite herb, *Achillea Ptarmica*, chiefly of the Old World. The flower-heads are larger and much fewer than those of the yarrow, *A. millefolium*; the leaves are simple and sharply serrate, and when dried and pulverized are said to provoke sneezing (whence the name).

3. Same as sneezeweed.

sneezing (snēz'ing), *n.* [*< ME. *snezyng*, earlier *fneszyng*, < AS. *fneozing*, verbal n. of *fneosan*, sneeze; see sneeze. Cf. *neezing*.] 1. The act of emitting a sneeze.

Looking against the sun doth induce sneezing.
Bacon, Nat. Hist., § 687.

2. A medicine to promote sneezing; an errhine; a sternutatory.

Sneezings, masticatories, and nasals.
Burton, Anat. of Med., p. 363. (Latham.)

sneezing-powder (snēz'ing-pou'dēr), *n.* Snuff.

Sneezing-powder is not more frequent with the Irish than chewing aree . . . is with these savages.
Herbert, Travels, an. 1638.

sneg (sneg), *v. t.* A Scotch variant of snag².

snell¹ (snel), *a.* [*< ME. snel, snell*, < AS. *snel*, *snell*, active, strenuous, = OS. *snell*, *snell* = D. *snel* = MLG. *snel* = OHG. MHG. *snel* (> It. *snello* = Pr. *isnel*, *irnel* = OF. *isnel*), G. *schnell*, swift, quick, = Icel. *snjallr*, eloquent, able, bold, = Sw. *snäll* = ODan. *snel*, swift, fleet; cf. Sw. snipe¹ (snip), *n.*; *pl. snipes* or *snipes* (see below). [*< ME. snipe, snype, < Icel. snipa, a snipe (mjri-snipa, a moor-snipe); cf. Sw. snäppa, a sand-*

piper, = Dan. *sneppe, snipe, = MD. snippe, sneppe, D. snip, snep = MLG. sneppe, snippe = OLG. snepha, snepho, snepfa, MLG. snepfe, G. schneppe* (*> It. dial. sneppa*), a snipe; prob. orig. a 'snipper' or 'snapper', from the root of *snip* or *snop*: see *snip, snap*.] 1. A bird of the genus *Scelopax* in a former broad sense. (a) Some or any bird belonging to the family *Scelopacidae*, having the bill straight, much longer than the head, dilated and sensitive at the end, and with a median lengthwise groove on the upper mandible near the end, the toes cleft to the base, the primaries not emarginate, and the tail-feathers barred; especially, a member of the genus *Gallinago* (*Scelopax* being restricted to certain woodcock). In Great Britain three species of *Gallinago* are called snipe. (1) The common snipe, or whole snipe, is *Gallinago caelestis* or *G. media*, formerly *Scelopax gallinago*. (2) The great, double, or solitary snipe, or woodcock-snipe, is *G. major*. (3) The small snipe, half-snipe, or jack-snipe is *G. gallinula*. They differ little except in size. In the United States the common snipe, also called *jack-snipe* and *Wilson's snipe*, is *G. wilsoni* or *G. delicata*, about as large as *G. media*, which it very closely resembles, so that it is sometimes known as the "English" snipe, to distinguish it from various snipe-like birds peculiar to America, and also *bag-snipe, gutter snipe, meadow-snipe, alexisfe-bird, shad-bird, and shad-spirit*. It is from 10½ to 11½ inches long and from 17½ to 19½ in extent of wings; the bill is about 2½ inches long. The upper parts are blackish, varied with bay and tawny; the scapulars are edged with tawny or pale buff, forming a pair of firm stripes along the sides of the back when the wings are closed; the lining of the wings and axillary feathers is barred regularly with black and white; the tail-feathers, normally sixteen in number, are barred with black, white, and chestnut; the fore neck and breast are light-brown speckled with dark-brown; and the belly is white. (See cut under *Gallinago*.) Snipes like these, and of the same genus, are found in most countries, and are called by the same name, with or without a qualifying term. (b) Some other scelopacine or snipe-like bird. There are very many such birds, chiefly distinguished from sandpipers (see *sandpiper*) by the length, from tattlers or gambets by the sensitiveness, and from curlews, godwits, etc., by the straightness of the bill. (1) In the United States the gray-backed or red-breasted snipe are birds of the genus *Macrorhamphus*, of which there are 2 species or varietals, the lesser and greater longbeak, *M. griseus* and *M. scolopaceus*. See *dowitcher*. (2) The grass-snipe is the pectoral sandpiper, *Actodromas maculata*. See cut under *sandpiper*. Also called *jack-snipe*. (3) The robin-snipe is the knot, *Tringa canutus*, also a sandpiper. (4) The stone-snipe is *Totanus melanoleucus*, a tattler. See cut under *yellowlegs*. (5) In Great Britain the sea-snipe is the dunlin, *Tringa or Pelidna alpina*, a sandpiper. (6) In Great Britain the summer snipe is the common sandpiper, *Actitis hypoleucos*. (7) Painted snipe are the curlews birds of the genus *Rhynchaea* or *Rostratula*. See these words. (c) A common misnomer, in various localities, of the American woodcock, *Philohela minor*: also called *common snipe, big snipe, mud-snipe, red-breasted snipe, big headed snipe, blind snipe, whistling snipe, wood-snipe*. See *woodcock*. (d) A misnomer of the long-billed curlew, *R. ridgwayi*. [Salt Lake valley.] (e) *pl. The Scolopacidae*; the snipe family. [The plural means either two or more birds of one kind, or two or more kinds of these birds: in the former sense, the plural is generally *snipes*; in the latter, *snipes*.]

2. A fool; a blockhead; a simpleton; a goose.

I mine own gain'd knowledge should profane,
If I would time expend with such a snipe,
But for my sport and profit. *Shak., Othello, i. 3. 391.*

And, by Jove, I sat there like a great snipe face to face with him [the bushranger] as cool and unincensed as you like.
H. Kingsley, Geoffry Hamlyn, xxxi.

Her subtle snout
 Did quickly wind his meaning out.
S. Butler, Hudibras, I. lii. 357.

(b) In *entom.*: (1) The rostrum or head of a rhynchophorous beetle or weevil. See *snout-beetle* and *rostrum*, and cuts under *Balaninus* and *diamond-beetle*. (2) A snout-like prolongation of, or formation on, the head of various other insects. See *snout-butterfly*, *snout-mite*, *snout-moth*. (c) The nozzle or end of a hollow pipe. (d) *Naut.*, the beak or projecting prow of a ram.

The Merrimac's snout was knocked askew by a ball.
New York Tribune, March 15, 1862.

(e) The front of a glacier.
 At the end, or snout, of the glacier this water issues forth.
Huxley, Physiography, p. 161.

The ends or snouts of many glaciers act like ploughshares on the land in front of them.
Tyndall, Forms of Water, p. 58.

(f) In *conch.*, the rostrum of a gastropod or similar mollusk.

snout (snout), *v. t.* [*< snout, n.*] To furnish with a snout or nozzle; point. *Howell.*

snout-beetle (snout'bê'ti), *n.* Any beetle of the coleopterous suborder *Rhynchophora*, all the forms of which have the head more or less prolonged into a beak: as, the imbricated *snout-beetle*, *Lpicærus imbricatus*. Several kinds are dis-

tinguished by qualifying terms, as club-horned, *Anthribidæ*; leaf-rolling, *Atelabidæ*; elongate, *Brenthidæ*. These are collectively known as *straight-horned snout-beetles* (*Orthocera*), as distinguished from the *bent-horned snout-beetles* (*Gonatocera*). Among the latter are the true weevils or curculios, and also the wood-eating snout-beetles, or *Scolytidæ*.

snout-butterfly (snout'but'ér-fi), *n.* Any butterfly of Hübner's subfamily *Hypani*, or Boisduval's subfamily *Libythides*, of the *Erycinidæ*.

snouted (snou'ted), *a.* [*< snout + -ed.*] Having a snout of a kind specified by a qualifying word: as, long-snouted, pig-snouted.

Antæ, resembling a Mule, but somewhat lesse; slender snouted, the nether chappe very long, like a Trumpet.
Purchas, Pilgrimsge, p. 835.

snouter (snou'tér), *n.* A cutting-shears for removing the cartilage from a pig's nose, to prevent the pig from rooting.

snout-fair (snout'fâr), *a.* Good-looking.

Str. Not as a snouter to me, Sir?

Sw. No, you are too great for me. Nor to your Mopsey without: though shee be *snout-faire*, and has some wit, shee's too little for me.
Brome, Court Beggar, li. 1.

snout-mite (snout'mit), *n.* A snouted mite; any acarid or mite of the family *Dallidæ*.

snout-moth (snout'môth), *n.* 1. Any moth of the noctuid or deltoid family *Hypenidæ*: so named from the long, compressed, obliquely ascending palpi. See cut under *Hypena*.—2. A pyralid moth, as of the family *Crambidæ*: so called because the palpi are large, erect, and hairy, together forming a process like a snout in front of the head. See cut under *Crambidæ*.

snout-ring (snout'ring), *n.* A ring passed through a pig's nose to prevent rooting.

snouty (snou'ti), *a.* Resembling a beast's snout; long-nosed.

The nose was ngly, long, and big,
 Broad and snouty like a pig.
Olway, Poet's Complaisit of his Muse.

The lower race had long snouty noses, prognathous mouths, and retreating foreheads.
Harper's Mag., LXXVII. 299.

snow¹ (snô), *n.* [*Sc. snaw*; *< ME. snow, snou, snouh, snoung, snau, snaw*, *< AS. snâw* = OS. *snêw, snêo* = MD. *sneeuw, snee*, D. *sneeuw* = MLG. *snei, snê*, LG. *snee* = OHG. *snêo*, MHG. *snê*, G. *schnee* = Icel. *snær, snjár, snjör* = Sw. *snö* = Dan. *sne* = Goth. *snaivs*, snow; related to OBulg. *snigŭ* = Serv. *snijeg* = Bohem. *snih* = Pol. *śnieg* = Russ. *snigŭ* = Lith. *snegas* = Lett. *snegs* = OIr. *snechta*, Ir. *snaechd*, Gael. *sneachd*, snow; L. *nix* (*niv-*, orig. **snighv-*) (*>*) It. *neve* = Sp. *nieve* = Pg. *neve*; also, through LL. **nivea*, F. *neige*; W. *nyf* = Gr. *νίφα* (acc.), snow, *νίφας*, a snowflake, Zend *snizh*, snow; all from the verb represented by OHG. *snüwan*, MHG. *snien*, G. *schniecn*, L. *ningere*, impers. *ningit* (*√ snighv-*), Gr. *νίφειν*, impers. *νίφει*, snow, Lith. *snigti, sningti*, Zend *√ snizh*, snow; Gael. *snidh*, ooze in drops, Ir. *snidhe*, a drop of rain; Skt. *√ snih*, be sticky or oily, = *sneha*, moisture, oil. Cf. Skt. *√ nij*, cleanse, Gr. *νίφειν*, wash. The mod. verb *snow*¹ is from the noun.] 1. The aqueous vapor of the atmosphere precipitated in a crystalline form, and falling to the earth in flakes, each flake consisting of a distinct crystal, or more commonly of combinations of separate crystals. The crystals belong to the hexagonal system, and are generally in the form of thin plates and long needles or spicules; by their different modes of union

Crystals of Snow, after Scoresby.

they present uncounted varieties of very beautiful figure. The whiteness of snow is due primarily to the large number of reflecting surfaces arising from the minuteness of the crystals. When sufficient pressure is applied, the slightly adhering crystals are brought into

molecular contact, and the snow, losing its white color, assumes the form of ice. This change takes place when snow is gradually transformed into the ice of a glacier. Precipitation takes the form of snow when the temperature of the air at the earth's surface is near or below the freezing-point, and the flakes are larger the moister the air and the higher its temperature. The annual depth of snowfall and the number of days on which the ground is covered with snow are important elements of climate. In a ship's log-book abbreviated s.

2. A snowfall; a snow-storm. [*Colloq.*]—3. A winter; hence, in enumeration, a year: as, five *snows*. [*North Amer. Indian.*]—4. Something that resembles snow, as white blossoms.

That breast of snow.
Dionysius (trans.).

The Lily's snow.
Moore, tr. of Anacreon's Odes, li.

5. In *her.*, white; argent.

The feel of snow, with the gleam of blak therinne.
Chaucer, Monk's Tale, l. 393.

Red snow. See *Protococcus*.

snow¹ (snô), *v.* [*< ME. snowen, snawen* = D. *sneeuwen* = Icel. *snjôfa, snjôva, snjáva* = Sw. *snôa, snôga* = Dan. *sne* (cf. It. *nevicare, nevigare* = Sp. Pg. *nevar* = F. *neiger*)] snow; from the noun. The older verb was ME. *sneuen, sniwen*, *< AS. sniucian*, snow: see *snow*¹, *n.*] I. *intrans.* To fall as snow: used chiefly impersonally: as, it *snows*; it *snowed* yesterday.

II. *trans.* 1. To scatter or cause to fall like snow.

Let it thunder to the tune of Green Sleeves, hall kissing-couffits, and snow eringoos. *Shak., M. W. of W., v. 5. 21.*

2. To surround, cover, or imprison with snow: with *in, up, under, or over*: often used figuratively. See *snow-bound*.

I was *snowed up* at a friend's house once for a week. . . . I went for only one night, and could not get away till that very day se'nnight.
Jane Austen, Emma, xlii.

snow² (snô), *n.* [*< MD. snauw, snaw*, D. *snaauw*, a kind of boat; prob. *< LG. snau*, G. dial. *sehnau*, a snout, beak, = G. dial. *schnuff*, a snout: see *snout*.] A vessel equipped with two masts, resembling the mainmast and foremast of a ship, and a third small mast just abaft and close to the mainmast, carrying a trysail. It is identical with a *brig*, except that the brig bends her fore-and-aft mainsail to the mainmast, while the *snow* bends it to the trysail-mast. Vessels are no longer rigged in this way.

There was no order among us—he that was captain to-day was swabber to-morrow. . . . I broke with them at last for what they did on board of a bit of a *snow*; no matter what it was; bad enough, since it frightened me.
Scott, Redgauntlet, ch. xiv.

snow-apple (snô'ap'pl), *n.* A variety of apple which has very white flesh.

snowball (snô'bâl), *n.* [*< ME. *snaueballe, snayballe*; *< snow*¹ + *ball*.] 1. A ball of snow; a round mass of snow pressed or rolled together.

The nobleman would have dealt with her like a nobleman, and she sent him awy as cold as a snowball.
Shak., Pericles, iv. 6. 149.

2. The cultivated form of the shrub *Viburnum Opulus*; the guelder-rose. The name is from its large white balls of flowers, which in cultivation have become sterile and consist merely of an enlarged corolla. See *cranberry-tree*, and cut under *neutral*.

3. In *cookery*: (a) A pudding made by putting rice which has been swelled in milk round a pared and cored apple, tying up in a cloth, and boiling well. (b) White of egg beaten stiff and put in spoonfuls to float on the top of custard. (c) Rice boiled, pressed into shape in a cup, and variously served.—**Wild snowball.** Same as *redroot*, 1.

snowball (snô'bâl), *v.* [*< snowball, n.*] I. *trans.* To pelt with snowballs.

II. *intrans.* To throw snowballs.

There are grave professors who cannot draw the distinction between the immorality of drinking and *snowballing*.
N. A. Rev., CXXVI. 433.

snowball-tree (snô'bâl-trê), *n.* Same as *snowball*, 2.

snowbank (snô'bangk), *n.* A bank or drift of snow.

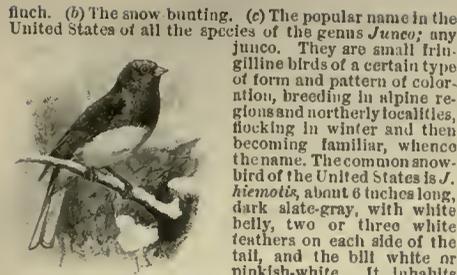

The whiteness of sea sands may simulate the tint of old snowbanks.
The Atlantic, LXVI. 597.

snowberry (snô'ber'i), *n.*; pl. *snowberries* (-iz).

1. A shrub of the genus *Symphoricarpos*, chiefly *S. racemosus*, native northward in North America. It is commonly cultivated for its ornamental, but not edible, white berries, which are ripe in autumn. The flowers are not showy, and the habit is not neat.

2. A low erect or trailing rubiaceoous shrub, *Chiococca racemosa*, of tropical and subtropical America, entering Florida.—**Creeping snowberry**, an ericaceous plant, *Chiogenes serpyllifolia*, of northern North America. It is a slender creeping and trailing scarcely woody evergreen, with thyme-like leaves and small bright-white berries. It has the aromatic flavor of the American wintergreen.

snowbird (snô'bêrd), *n.* A bird associated in some way with snow. Specifically—(a) The snow-

Snowbird (*Junco hiemalis*).

United States and British America, and in mountains as far south as Georgia and Arizona. It has a sweet song in the summer, in winter only a chirp. It nests on the ground and lays speckled eggs. In many parts of the United States it appears with the first cold weather in October, and is seen until the following April, in flocks. There are numerous other species or varieties, some reaching even Central America. See *Junco*. (d) The fieldfare, *Turdus pilaris*. See cut under *fieldfare*. [Prov. Eng.]

snow-blind (snō'blind), *a.* Affected with snow-blindness.

snow-blindness (snō'blind'nes), *n.* Amblyopia caused by the reflection of light from the snow, and consequent exhaustion of the retina.

snow-blink (snō'blingk), *n.* The peculiar reflection that arises from fields of ice or snow: same as *ice-blink*. Also called *snow-light*.

snow-boot (snō'bōt), *n.* A boot intended to protect the feet from dampness and cold when walking in snow. Specifically—(a) A boot of waterproof material with warm lining. (b) A thick and high boot of leather, specially designed for use in snow. (c) Before the introduction of lined rubber boots, a knitted boot with double or cork sole, usually worn over another boot or a shoe.

snow-bound (snō'bound), *a.* Shut in by a heavy fall of snow; unable to get away from one's house or place of sojourn on account of the obstruction of travel by snow; blocked by snow, as a railway-train.

The *snow-bound* in their arctic hulk are glad to see even a wandering Esquimaux.

C. D. Warner, *Backlog Studies*, p. 124.

snow-box (snō'boks), *n.* *Theat.*, a device used in producing an imitation of a snow-storm.

snowbreak (snō'brāk), *n.* A melting of snow; a thaw.

And so, like *snowbreak* from the mountains, for every staircase is a melted brook, it storms, tumultuous, wild-shrilling, towards the Hôtel-de-Ville.

Carlyle, *French Rev.*, i. vii. 4.

snow-broth (snō'brōth), *n.* Snow and water mixed; figuratively, very cold liquor.

A man whose blood

Is very *snow-broth*. *Shak.*, M. for M., i. 4. 53.

"This is none of your *snow-broth*, Peggy," said the mother, "it's warming."

S. Judd, *Margaret*, i. 6.

snow-bunting (snō'bun'ting), *n.* A kind of snowbird, *Plectrophanes nivalis*, a bunting of the family *Fringillidae*, which inhabits arctic and cold temperate regions of both hemispheres, and is chiefly white, varied with black or brown. Also called *snowbird*, *snowflake*, *snowfleck*, *snowflight*, *snowfool*. In full plumage, rarely seen in the United States, the bird is pure-white, with the bill, feet, middle of back, and the wings and tail in part jet-black. In the usual plumage the white is overlaid with rich, warm brown in various places, and the black is not pure or continuous. The length is 7 inches, the extent of wings 12½. This bird is a near relative of the longspurs, as the Lapland, but has the hind claw curved, and is sometimes therefore placed in another genus (*Plectrophenax*). It breeds only in high latitudes, moving south in the fall in flocks, often of vast extent. It nests on the ground, lines the nest with feathers, and lays from four to six variegated eggs.

Snow-bunting (*Plectrophanes nivalis*), male, in breeding-plumage.

snowbush (snō'būsh), *n.* One of several shrubs bearing profuse white flowers. Such are *Ceanothus cordulatus* of Californian mountains, *Olearia stellulata* of Australia and Tasmania, and *Phyllanthus nivalis* of the New Hebrides.

snowcap (snō'kap), *n.* A humming-bird of the genus *Microchæra*, having a snowy cap. There are two species, *M. albocoronata* and *M. parvirostris*, the former of Veragua, the latter of Nicaragua and Costa Rica, both of minute size (2½ inches long). The character of the white crown is unique among the *Trochilidae*.

snow-capped (snō'kapt), *a.* Capped with snow.

snow-chukor (snō'chū'kor), *n.* [*snōw* + *chukor*, a native name: see *chourka*.] A kind

of snow-partridge. See *chourka*, 1, and *snow-partridge*, 2.

snow-cock (snō'kok), *n.* Same as *snow-partridge*, 2.

Snowdonian (snō-dō'ni-an), *a.* [*Snōwdon* (see *def.*) + *-ian*.] Relating to Snowdon, a mountain of Carnarvonshire, Wales.—**Snow-dontian series**, in *geol.*, a name given by Sedgwick to a part of the Lower Silurian or Cambrian in Wales, including what is now known as the Arenig schists and the Bala beds.

snow-drift (snō'drift), *n.* A drift of snow; snow driven by the wind; also, a bank of snow driven together by the wind.

snowdrop (snō'drōp), *n.* A low herb, *Galanthus nivalis*, a very early wild flower of European woods, often cultivated. The name is also applied, in an extended sense, to the genus *G. plicatus*, the Crimean snowdrop, is larger, with broader plicate leaves. See *Galanthus* and *purification-flower*.—**African snowdrop**. See *Royena*.

snowdrop-tree (snō'drōp-trē), *n.* 1. See *Lonicera*.—2. See *Halesia* and *rattlebox*, 2 (c).

snow-eater (snō'ētēr), *n.* A warm, dry west wind which rapidly evaporates the snow. These winds are similar in character to Chinook winds. *Science*, VII. 242. [Eastern Colorado.]

snow-eyes (snō'iz), *n. pl.* A contrivance used by the Eskimos as a preventive of snow-blindness. It is made of extremely light wood, with a bridge resting on the nose, and a narrow slit for the passage of the light.

snowfall (snō'fāl), *n.* 1. The falling of snow: used sometimes of a quiet fall in distinction from a snow-storm.

Through the wavering *snow-fall*, the Saint Theodore upon one of the granite pillars of the Piazzetta did not show so grim as his wont is. *Hovells*, *Venetian Life*, III.

2. The amount of snow falling in a given time, as during one storm, day, or year. This amount is measured popularly by the depth of the snow at the close of each time of falling, and scientifically by melting the snow and measuring the depth of the water.

Stations reporting the largest total *snow-fall*, in inches, were Blue Knob, 46; Eagle's Mere, 49; Grandplan Hills, 33. *Jour. Franklin Inst.*, CXXIX. 2.

snow-fed (snō'fed), *a.* Originated or augmented by melted snow: as, a *snow-fed* stream.

snow-field (snō'fēld), *n.* A wide expanse of snow, especially permanent snow, as in the arctic regions.

As the Deer approach, a few stones come hurtling down, as the *snow-field* begins to yield.

D. G. Elliot, in *Wolf's Wild Animals*, p. 121.

snow-finch (snō'fīnch), *n.* A fringilline bird of Europe, *Montifringilla nivalis*; the stone-finch or mountain-finch, somewhat resembling the snow-bunting, but of a different genus. See cut under *brambling*.

snowflake (snō'flāk), *n.* 1. A small feathery mass or flake of falling snow. See *snow*, 1, n., 1. Flowers bloomed and *snow-flakes* fell, unquestioned in her sight. *Whittier*, *Bridal of Pennacook*, III.

2. In *ornith.*, same as *snow-bunting*. *Coues*.—3. A plant of the genus *Leucium*, chiefly *L. æstivum* (the summer snowflake), and *L. vernum* (the spring snowflake). They are European wild flowers, also cultivated, resembling the snowdrop, but larger. Of the two species the latter is smaller, and chiefly continental. The name was devised to distinguish this plant from the snowdrop, and is now commonly accepted.

4. A particular pattern of weaving certain woolen cloths, by which small knots are produced upon the face, which, when of light color, resemble a sprinkling of snow. *Diet. of Needlework*.

snow-flange (snō'flanj), *n.* A metal scraper fixed to a railroad-car, for the purpose of removing ice or snow clinging to the inside of the head of the rail.

snow-flea (snō'flē), *n.* Any kind of springtail or poduran which is found on the snow. *Ache-reutes nivalis* is the common snow-flea of the United States, often appearing in great numbers on the snow. See cut under *springtail*.

Our common *snow-flea* is . . . sometimes a pest where maple sugar is made, the insects collecting in large quantities in the esp. *Comstock*, *Introd. Entom.* (1888), p. 61.

snowfleck (snō'flek), *n.* The snow-bunting or snowflake. See cut under *snow-bunting*.

snowflight (snō'flīt), *n.* The snowflake or snow-bunting, *Plectrophanes nivalis*.

snow-flood (snō'flūd), *n.* A flood from melted snow.

snowflower (snō'flou'ēr), *n.* 1. A variant name of the snowdrop, *Galanthus*.—2. Same as *fringe-tree*.—3. A shrub, *Deutzia gracilis*. See *Deutzia*. *Miller*, *Dict. Eng. Names of Plants*.

snow-fly (snō'fli), *n.* 1. A perlid insect or kind of stone-fly which appears on the snow, as *Perla nivalis* of Fitch. The common snow-fly of New York is *Copina pygmaea*, which is black with gray hairs.

2. A neuropterous insect of the family *Panorpidæ* and genus *Boreus*, as *B. nivoriundus*, which appears on the snow in northerly parts of the United States. Also called *springtail*.—3. A wingless dipterous insect of the family *Tipulidæ* and genus *Chionea*, as *C. valga*, occurring under similar circumstances. Also *snow-gnat*.—4. A snow-gnat.—5. A snow-flea.

A paper on "Insecta nive delapsa" or "schneewürmer," . . . some one or another of the *Thysanura*. In America we find that these little creatures are to this day called *snow-flies*. *E. P. Wright*, *Animal Life*, p. 491.

snowfowl (snō'foul), *n.* The snow-bunting, *Plectrophanes nivalis*.

snow-gage (snō'gāj), *n.* A receptacle for catching falling snow for the purpose of measuring its amount.

snow-gem (snō'jem), *n.* A garden name of *Chionodoxa Luellii*. See *snow-glory*.

snowght, *n.* An old spelling of *snowl*.

snow-glory (snō'glō'ri), *n.* A plant of the liliaceous genus *Chionodoxa*. Two species from Asia Minor, *C. Lucida*, sometimes called *snow-gem*, and *C. nana*, the dwarf snow-glory, are beautiful hardy garden flowers with some resemblance to squill.

snow-gnat (snō'nat), *n.* 1. Any one of certain gnats of the genus *Chironomus* found on the snow in early spring, as *C. nivoriundus*.—2. Same as *snow-fly*, 3.

snow-goggle (snō'gog'gl), *n.* Same as *snow-eyes*.

Mr. Murdock, of the Point Barrow Station, . . . found an Eskimo *snow-goggle* beneath more than twenty feet of frozen gravel.

A. R. Wallace, *Nineteenth Century*, XXII. 672.

snow-goose (snō'gōs), *n.* A goose of the genus *Chen*, of which the white brant, *C. hyperboreus*, is the best-known species, white, with black-tipped wings, the head washed with rusty-brown, and the bill pink. Also called *Mexican goose*, *red goose*, *Texas goose*. See *wavey*, and cut under *Chen*.—**Blue or blue-winged snow-goose**. See *goose* and *wavey*.

snow-grouse (snō'grōus), *n.* A ptarmigan; any bird of the genus *Lagopus*, nearly all of which turn white in winter. Also *snow-partridge*. See cut under *grouse* and *ptarmigan*.

Up above the timber line were *snow-grouse* (*Lagopus leucurus*) and huge hoary-white woodchucks.

T. Roosevelt, *The Century*, XXXVI. 210.

snow-ice (snō'is), *n.* Ice formed by the freezing of slush: such ice is opaque and white, owing to the incompleteness of the melting of the snow: opposed to *black ice*. The word is especially used of ice thus formed in places where, without the snow, black ice would have been formed, as on a pond or a river.

snowily (snō'i-li), *adv.* In a snowy manner; with or as snow.

Afar rose the peaks

Of Parnassus, *snowily* clear.

M. Arnold, *Youth of Nature*.

snowiness (snō'i-nes), *n.* The state of being snowy, in any sense.

These last may, in extremely bright weather, give an effect of *snowiness* in the high lights.

Lea, *Photography*, p. 210.

snow-in-harvest (snō'in-hār'vest), *n.* A mouse-ear chickweed, *Cerastium tomentosum*, and some other plants with abundant white flowers in summer. *Britten and Holland*, *Eng. Plant Names*. [Prov. Eng.]

snow-insect (snō'in'sekt), *n.* A snow-flea, snow-fly, or snow-gnat.

snow-in-summer (snō'in-sum'ēr), *n.* A garden name of *Cerastium tomentosum*. See *snow-in-harvest*.

snowish (snō'ish), *a.* [*ME. snowish*; < *snow* + *-ish*.] Resembling snow; somewhat snowy; snow-white.

He gan to stroke; and good thrifts bad ful ofts

Hire *snowish* [var. *snow-ichite*] throte.

Chaucer, *Troilus*, III. 1250.

Her *snowish* necke with blewish valnea

Stood bolt upright vpon

Her poorly shoulders.

Warner, *Albion's England*, IV. 54.

snow-knife (snō'nif), *n.* An implement used by Eskimos for scraping snow from fur garments, having the general form of a large knife, but made of morse-ivory or some similar material.

snowl (snōul), *n.* [Origin obscure.] The hooded merganser, *Lophodytes cucullatus*. See cut under *merganser*. *G. Trumbull*, 1888. [Crisfield, Maryland.]

snow-leopard (snō'lep'ēr), *n.* The ounce, *Felis uncia* or *irbis*. See cut under *ounce*.

snowless (snō'les), *a.* [*snōw* + *-less*.] Destitute of snow.

snow-light (snō'lit), *n.* Same as *snow-blink*.

snowlike (snō'lik), *a.* [*< snow¹ + like².*] Resembling snow.
snow-limbed (snō'limd), *a.* Having limbs white like snow. [*Rare.*]

The *snow-limbed* Eve from whom she came.
Tennyson, Maud, xviii. 3.

snow-line (snō'lin), *n.* The limit of continual snow, or the line above which a mountain is continually covered with snow. The snow-line is due primarily to the decrease of the temperature of the atmosphere with increase of altitude. In general, the height of the snow-line diminishes as we proceed from the equator toward the poles; but there are many exceptions, since the position of the snow-line depends not only upon the mean temperature, but upon the extreme heat of summer, the total annual snowfall, the prevalent winds, the topography, etc. For these reasons, the snow-line is not only at different heights in the same latitude, but its position is subject to oscillation from year to year in the same locality. Long secular oscillations in the height of the snow-line are evidence of corresponding oscillations of climate. In the Alps the snow-line is at an altitude of 8,000 to 9,000 feet; in the Andes, at the equator, it is nearly 16,000 feet.

Between the glacier below the ice-fall and the plateau above it there must exist a line where the quantity of snow which falls is exactly equal to the quantity annually melted. This is the *snow-line*.
Tyndall, Forms of Water, p. 48.

snow-mouse (snō'mous), *n.* 1. An alpine vole or field-mouse, *Arvicola nivalis*, inhabiting the Alps and Pyrenees.—2. A lemming of arctic America which turns white in winter, *Cuniculus torquatus*. See *Cuniculus*, 2.

snow-on-the-mountain (snō'ŋn-thē-moun'tān), *n.* 1. A white-flowered garden-plant, *Arabis alpina*, from southern Russia; also, *Cerastium tomentosum*, from eastern Europe. [*Britten and Holland, Eng. Plant Names.*] [*Prov. Eng.*]
 —2. A plant, *Euphorbia marginata*. *T. Meehan, Native Wild Flowers of the United States.* [*Western U. S.*]

snow-owl (snō'oul), *n.* The great white or snowy owl, *Strix nyctea* or *Nyctea scandiaca*, in-

Snow-owl (*Nyctea scandiaca*).

habiting arctic and northerly regions of both hemispheres, and having the plumage more or less white. See *Nyctea*, and cut under *braccate*.

snow-partridge (snō'pār'trij), *n.* 1. A gallinaceous bird of the Himalayan region, *Lerwa* (or *Lerwa*) *niticola*. See cut under *Lerwa*.—2. A bird of the genus *Tetraogallus*, as *T. himalayensis*. Also called *snow-cock*, *snow-chukor*, and *snow-pheasant*. See *chourika*, *partridge*, and cut under *Tetraogallus*.—3. A ptarmigan: same as *snow-grouse*.

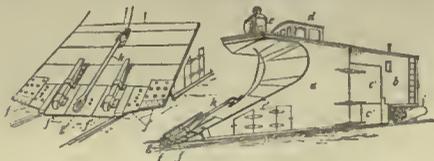

snow-pear (snō'pār), *n.* See *pearl*.
snow-pheasant (snō'fēz'ant), *n.* 1. Any pheasant of the genus *Crossoptilon*, as *C. mantchuricum*. See *eared pheasant*, under *pheasant*.—2. Same as *snow-partridge*, 2.

snow-pigeon (snō'pij'on), *n.* A notable true pigeon, *Columba leucotis*, of the northwestern Himalayan region, known to some sportsmen as the *imperial rock-pigeon*, and found at an altitude of 10,000 feet and upward. The upper parts are mostly white, the crown and auriculars blackish, the wings brownish-gray with several dusky bars, and the tail is ashy-black with a broad grayish-white bar.

snow-planer (snō'plā'nēr), *n.* See *planer*.
snow-plant (snō'plant), *n.* 1. Red snow. See *Protococcus*.—2. See *Sarcodes*.

snow-plow (snō'plou), *n.* An implement for clearing away snow from roads, railways, etc. There are two kinds—one to be hauled by horses, oxen, etc., as on a common highway, and the other to be placed in front of a locomotive to clear the rails. A modification of the latter is adapted to street-railroads. The snow-plow for ordinary country roads usually consists of a frame of boards braced together so as to form an acute angle in

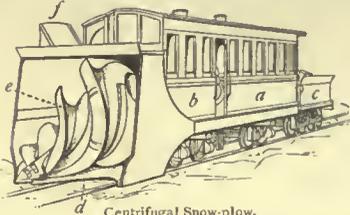

front, and spread out behind to any required distance. The machine being drawn by horses harnessed to the center framework, the angular point enters the snow.

Wing Snow-plow.

a, body of plow; *b*, caboose for implements and workmen; *c*, movable wings for widening the cuttings; *d*, doors which give access to leading track for oiling, etc.; *e*, cupola; *f*, headlight; *g*, *h*, iron plates, scrapers, or shoes which remove snow from the outer margins of the track; *i*, *j*, adjustable aprons which clean out the snow from between the tracks flush with the wheel-flanges; *k*, intermediate apron; *l*, draw-bar for hauling the plow when not in use; *m*, adjustable scraper for removing hard-packed snow or ice from the inner side of the rails.

which is thrown off by the side-boards, and thus a free passage is opened for pedestrians, etc. For railway purposes, snow-plows are of various forms, adapted to the

Centrifugal Snow-plow.

a, caboose; *b*, cab; *c*, tender; *d*, shoe, plate, or scraper which cuts horizontally at a level with the tops of the rails; *e*, auger which cuts into the snow-drift, and assists by its screw-like action to propel the machine (its centrifugal action projects the snow upward through the chute *f*, and laterally to a distance of 60 feet).

character of the country, the amount of snowfall, the tendency to drift, etc. Such plows vary in size from the simple plows carried on the front of an engine, resembling a cowcatcher with smooth iron sides, to heavy structures mounted on freight-car trucks, and pushed before one locomotive or more, or, as sometimes made, self-propelling. In recent forms the principle of centrifugal force has been utilized for removal of the snow. Snow-plows are often of great size, sometimes weighing fifty tons, and can be forced through very deep drifts.

snow-probe (snō'prōb), *n.* An instrument used by the Eskimos to probe snow and ice in searching for seals.

snow-scraper (snō'skrā'pēr), *n.* 1. A form of snow-plow made of two small planks and a crosspiece, like the letter A.—2. An iron scraper attached to a car or locomotive, to remove snow and ice from the rails.—3. Same as *snow-knife*.

snow-shed (snō'shed), *n.* On a railroad, a construction covering the track to prevent accumulations of snow on the line, or to carry snow-slides or avalanches over the track in mountainous regions.

snow-shoe (snō'shō), *n.* A contrivance attached to the foot to enable the wearer to walk on deep snow without sinking to the extent of being disabled. There are two principal kinds—the web or Canadian, and the long or Norwegian. The Canadian is a contracted oval in front and pointed behind, and is from 3 to 5 feet long and from 1 to 2 feet wide, the foot being fastened on the widest part of the shoe by means of thongs and so as to leave the heel free. It has a light rim of tough wood, on which is woven from side to side a web of rawhide. The Norwegian is merely a thin board, about 8 feet long and 3 inches wide, slightly curved upward in front; it is especially adapted to mountains, in descending which by its use great speed is attained. See *skoe*.

O'er the heaped drifts of winter's moon
 Her snow-shoes tracked the hunter's way.
Whittier, Bridal of Pennacook, III.

Snow-shoe disease, a painful affection of the feet occurring in arctic and subarctic America after long journeys on snow-shoes.—**Snow-shoe rabbit**. See *rabbit*.

snow-shoe (snō'shō), *v. i.* [*< snow-shoe, n.*] To walk on snow-shoes.

You can *snow-shoe* anywhere, even up to some chimney-tops.
Harper's Mag., LXXVI. 358.

Rink-skating is a fine art in Canada, tobogganing is an accomplishment; but sleighing and *snow-shoeing*, though often pastimes, are also normal methods of locomotion during the long winter.
Sir C. W. Dilke, Probs. of Greater Britain, I. 2.

snow-shoer (snō'shō'er), *n.* [*< snow-shoe + -er.*] One who walks on snow-shoes.

The manly *snow-shoer* hungers for the tramp on snow-shoes.
The Century, XXIX. 522.

snow-shovel (snō'shuv'1), *n.* A flat, broad wooden shovel made for shoveling snow.

snow-skate (snō'skāt), *n.* In northern Europe, a contrivance for gliding rapidly over frozen or compact snow. It is usually a long, narrow sole of wood, 6 feet or more in length. See *snow-shoe*.

He put on his *snowskates* and started, and I set about turning the delay to profit by making acquaintance with the inmates of the tents.
B. Taylor, Northern Travel, p. 120.

snow-slide (snō'slid), *n.* An avalanche; also, any mass of snow sliding down an incline, as a roof.

The terms "ground" and "dust" avalanches are applied to different varieties of snow slips or slides.
D. G. Elliot, In Wolf's Wild Animals, p. 118.

snow-slip (snō'slip), *n.* A snow-slide.

snow-snake (snō'snāk), *n.* Among North American Indians, a slender shaft from 5 to 9 feet long, with a head curving up at one end and a notch at the other and smaller end; also, the game played with this shaft.

The game is simply one of dexterity and strength. The forefinger is placed in the basal notch, the thumb and remaining fingers reaching along the shaft, and the *snow-snake* is thrown forward on the ice or hard snow. . . . When the slender shaft is thrown, it glides rapidly over the surface, with upraised head and a quivering motion, that gives it a strange resemblance to a living creature. . . . The game is to see which person or side can throw it farthest, and sometimes the distance of a quarter of a mile is reached under favorable circumstances, but I think this rare.
W. M. Beauchamp, Science, XI. 37.

snow-sparrow (snō'spar'ō), *n.* Any snowbird of the genus *Junco*. *Coues*.

snow-squall (snō'skwāl), *n.* A short fall of snow with a high wind.

Almost completely thwarted by *snow-squalls*.
Nature, XXXVII. 533.

snow-storm (snō'stōrm), *n.* A storm with a fall of snow.

snow-sweeper (snō'swē'pēr), *n.* A snow-plow combined with a street-sweeping machine for clearing snow from a horse-car track.

snow-track (snō'trak), *n.* 1. The footprints or track of a person or an animal going through snow.—2. A path or passage made through snow for persons coming and going.

snow-water (snō'wā'tēr), *n.* [*< ME. snaw-water; < snow¹ + water.*] Melted snow.

The ter that mon schet for his emeristenes sunne is Inmned *snow-water* for hit melt of the neche horte swa deth the snaw to-gelnes the sunne.
Old Eng. Hom. (ed. Morris, E. E. T. S.), 1st ser., p. 150.

snow-white (snō'hwit), *a.* [*< ME. snow-whyt, snaw-hwit, snaw-whit, snowwhit, AS. snāwhwit (= D. sneeuwvit = MLG. snēwhit = MHG. snē-witz, G. schneeweiss = Icel. snæhvitr, snjōhvitr = Sw. snöhvít = Dan. snehvid, as snāw, snow, + hwit, white: see snow¹ and white.*] White as snow; very white.

And than hir sette
 Upon an hors, *snow-whyte* and wel ambling.
Chaucer, Clerk's Tale, I. 332.

Why are you sequester'd from all your train,
 Dismounted from your *snow-white* goodly steed?
Shak., Tit. And., II. 3. 78.

snow-wreath (snō'rēth), *n.* A snow-drift. [*Scotch.*]

Was that the same Tam Linton that was precipitated from the Ban Law by the break of a *snow wreath*?
Blackwood's Mag., XIII. 320.

snowy (snō'ī), *a.* [*< ME. snawy, snawi (not in AS.) (= MLG. snēig = OHG. snēwac, MHG. snēwec, G. schneecig = Icel. snæwgr = Sw. snöigig, snöig = Dan. snēig; < snow¹ + -y¹.*] 1. Abounding with snow; covered with snow.

The *snowy* top
 Of cold Olympus. *Milton, P. L., I. 515.*

2. White like snow; niveous.
 So shows a *snowy* dove trooping with crows,
 As yonder lady o'er her fellows shows.
Shak., R. and J., I. 5. 50.

3. White; pure; spotless; unblemished.—**Snowy heron**, the small white egret of the United States, *Garzeta candidissima*, when adult entirely pure-white with renewed occipital crest and dorsal plumes. See cut under *Garzeta*.—**Snowy lemming**, the collared or Hudson's Bay lemming, or hare-tailed rat. See *snow-mouse*, 2, and *Cuniculus*, 2.—**Snowy owl**, the snow-owl.—**Snowy pear**. See *pearl*.—**Snowy plover**, *Epiplatites niveus*, a small ring-plover of the Pacific and Mexican Gulf coasts of the United States, related to the Kentish plover.

snub¹ (snub), *v. t.*; pret. and pp. *snubbed*, ppp. *snubbing*. [*< ME. snubben, snubcn, < Icel. snubba. snub, chide, = Sw. snubba, clip or snub off, snobba, lop off, snuff (a candle); cf. Icel. snubbóttr, snubbed, nipped, with the tip cut off, snupra, snub, chide; akin to E. snip. Cf. snib, a var. of snub.*] 1†. To cut off short; nip; check in growth; stunt.

Trees . . . whose heads and boughs I have observ'd to run out far to landward, but toward the sea to be so snubbed by the winds as if their boughs had been pared or shaven off on that side. *Ray, Works of Creation, i.*

2. To make snub, as the nose.

They laughed, and snubbed their noses with their handkerchiefs. *S. Judd, Margaret, i. 14.*

3. To check or stop suddenly; check the headway of, as a vessel by means of a rope in order to turn her into a narrow berth, or an unbroken horse in order to break him to the halter: commonly with *up*; also, to fasten, or tie up, as to a snub or snubbing-post.

One of the first lessons the newly caught animal has to learn is not to "run on a rope," and he is taught this by being violently snubbed up, probably turning a somersault, the first two or three times that he feels the noose settle round his neck and makes a mad rush for liberty. *T. Roosevelt, The Century, XXXV. 600.*

4. To disconcert; check; rebuke with a severe or sarcastic reply or remark; slight designedly; treat with deliberate neglect.

If the brother shal ayne in thee, go thou, and reprove hym, or snybbe. *Wyclif, Mat. xviii. 15.*

Would it not vex a Man to the heart to have an old Fool snubbing a Body every Minute afore Company? *Steele, Tender Husband, i. 1.*

I did hear him say, a little snubbing before marriage would teach you to bear it the better afterwards. *Goldsmith, Good-natured Man, iv.*

The House of Lords, or a majority of them, about 200 men, can snub both king and House of Commons. *W. R. Greg, Misc. Essays, 2d ser., p. 96.*

This youth spoke his mind too openly, and moreover would not be snubbed. *G. Meredith, Ordeal of Richard Fevrel, xii.*

5. To affect or compel in a specific way by snubbing: as, to snub one into silence.

"Deborah, there 'a gentleman sitting in the drawing-room with his arm round Miss Jessie's waist!" . . . Miss Jenkyns snubbed her down in an instant: "The most proper place in the world for his arm to be in. Oo away, Matilda, and mind your own business." *Mrs. Gaskell, Cranford, ii.*

To snub a cable (*naut.*), to check it suddenly in running out.

snub¹ (snub), *n.* [See snub¹, *v. t.*] 1. A protuberance or knot in wood.

And lifting up his dreadful club on high, All arm'd with ragged snubbes and knotlike grains. *Spenser, F. Q., i. viii. 7.*

2. A nose turned up at the tip and somewhat flat and broad; a pug-nose.

My father's nose was aquiline, and mine is a snub. *Marryat.*

3. A cheek; a rebuff; a rebuke; an intentional slight.

They [the porphyrogeniti] seldom forget faces, and never miss an opportunity of speaking a word in season, or administering a snub in season, according to circumstances. *H. N. Ozonham, Short Studies, p. 13.*

4. The sudden checking of a rope or cable running out.—5. A stake, set in the bank of a river or canal, around which a rope may be cast to check the motion of a boat or raft. [U. S. and Canada.]

snub¹ (snub), *a.* [See snub¹, *n.*] Somewhat broad and flat, with the tip turned up: said of the nose.

Her nose was unformed and snub, and her lips were red and dewy. *Mrs. Gaskell, Cranford, i.*

3. To smell; especially, to smell curiously or doubtfully.

Have, any time this three years, snuffed about With your most grovelling nose. *B. Jonson, Volpone, v. 1.*

A sweet-breath'd cow, Whose manger is stuff'd full of good fresh hay, Snuffs at it daintily, and stoops her head To chew the straw, her litter, at her feet. *M. Arnold, Balder Dead.*

4. To take snuff into the nose. Compare to dip snuff, under *dip*, *v. t.*

Although snuffing yet belongs to the polite of the present day, owing perhaps to the high workmanship and elegance of our modern gold snuff-boxes. *J. Nott, Note in Dekker's Gull's Hornbook.*

snuff¹ (snuf), *n.* [See snuff¹, *v.*] 1. Inhalation by the nose; a sniff; also, a pinch of snuff.

I will enrich . . . thy nose with a snuff from my mull, and thy palate with a dram from my bottle of strong waters, called, by the learned of Gandercleugh, the Domine's Dribble o' Drink. *Scott, Heart of Mid-Lothian, Prot.*

2. Smell; scent; odor.

The Immortal, the Eternal, wants not the snuff of mortal incense for his, but for our sakes. *Stukeley, Palæographia Sacra, p. 93. (Latham.)*

3. Offense; resentment; huff, expressed by a sniffing.

Jupiter took snuff at the contempt, and punished him. *Sir R. L'Estrange.*

4. A powdered preparation of tobacco taken into the nostrils by inhalation. It is made by grinding, in mortars or mills, the chopped leaves and stalks of tobacco in which fermentation has been induced by moisture and warmth. The tobacco is well dried previous to grinding, and this is carried sometimes so far as to give the peculiar flavor of the high-dried snuffs, such as the Irish, Welsh, and Scotch. Some varieties, as the rappee, are moist. The admixture of different flavoring agents and delicate scents has given rise to fanciful names for snuffs, which, the flavor excepted, are identical. Dry snuffs are often adulterated with quicklime, and the moist kinds with ammonia, hellebore, pearl-ash, etc.

Thou art properly my cephalick snuff, and art no bad medicine against megrims, vertigoes, and profound thinking. *Colman and Garrick, Claudestine Marriage, iv.*

Among these (the English gentry), the mode of taking the snuff was with pipes of the size of quills, out of small spring boxes. These pipes let out a very small quantity of snuff upon the back of the hand, and this was snuffed up the nostrils. *J. Ashton, Social Life in Reign of Queen Anne, i. 208.*

5. In *therap.*, any powder with medicinal properties to be snuffed up into the nose.—Cephalick snuff, an errhine powder composed of asarabacca (7 parts) and dried lavender-flowers (1 part); also, a powder of equal parts each of dried tobacco-leaves, marjoram-leaves, and lavender-leaves.—Ferriar's snuff, a snuff for nasal catarrh, composed of morphine hydrochlorate, powdered acacia, and bismuth subnitrate.—To dip snuff. See *dip*.

—To take a thing in snuff, to be offended at it; take offense at it.

Who therewith angry, when it next came there, Took it in snuff. *Shak., 1 Hen. IV., i. 3. 41.*

For, I tell you true, I take it highly in snuff to learn how to entertain gentlefolks of you, at these years. *B. Jonson, Poetaster, II. 1.*

Up to snuff, knowing; sharp; wide-awake; not likely to be deceived. [Slang.]

Lady A., who is now what some call up to snuff, Straight determines to patch Up s clandestine match. *Barham, Ingoldsby Legends, i. 295.*

snuff² (snuf), *v. t.* [See ME. *snuffen*, snuff (a candle) (cf. *snoffe*, the snuff of a candle); perhaps a var. of **snuppen*, **snoppen*, > E. dial. *snop*, crop, as cattle do young shoots: see *snop*, and cf. *snub*.] To crop the snuff of, as a candle; take off the end of the snuff from.

If it be necessarie in one houre three or four times to snuffe the candle, it shall not be onermuch that every weeke, at the lease, once or twice to purge and snuffe the soule. *Guevara, Letters (tr. by Bellows, 1577), p. 355.*

This candle burns not clear; 'tis I must snuff it; Then out it goes. *Shak., Hen. VIII., III. 2. 95.*

To snuff out, to extinguish by snuffing; hence, figuratively, to put an end to suddenly and completely: as, my hopes were quickly snuffed out.

'Tis strange the mind, that very fiery particle, Should let itself be snuff'd out by an article. *Byron, Don Juan, xi. 60.*

To snuff pepper, to take offense. *Halliwel.*

snuff² (snuf), *n.* [See ME. *snuffe*, *snoffe*, *snof*; < *snuff*, *v.*] 1. The burning part of a candle- or lamp-wick, or the part which has been charred by the flame, whether burning or not.

The snoffes ben quenched. *Wyclif, Ex. xxv. 33 (earlier version).*

There lives within the very flame of love A kind of wick or snuff that will abate it. *Shak., Hamlet, iv. 7. 115.*

Like *snuffs* that do offend, we tread them out.
Masinger, Duke of Milan, v. 1.

2. A candle almost burnt out, or one having a heavy snuff. [Rare.]

Lamentable! What,
 To hide me from the radiant sun, and solace
 I' the dungeon by a *snuff*?

Shak., *Cymbeline*, i. 6. 87.

snuff³ (snuf), *n.* In *mining*, same as *smift*.
snuff-bottle (snuf'bot'l), *n.* A bottle designed or used to contain snuff.

present, whether of good will or ceremony. On this account, and for personal display, these boxes were often made of the most costly materials, highly finished portraits were set in their lids, and settings of diamonds or pearls were not unknown. See also *cut under niello*.

Many a lady has fetched a sigh at the loss of a wig, and been puffed by the tapping of a *snuff-box*.
Steele, *Tatler*, No. 151.

2. A puffball: same as *devil's snuff-box* (which see, under *devil*). See also *Lycoperdon*.—**Anatomist's snuff-box**, the depression formed on the back of the hand at the root of the thumb, when the thumb is strongly bent back by the action of the extensor muscles, whose tendons then rise in two ridges, the one nearest the border of the wrist formed by the extensor metacarpi pollicis, and the other formed by the two tendons of the extensor primi and secundi intermedii pollicis.

snuff-color (snuf'kul'or), *n.* A coal or yellowish brown, generally of a dark shade.

The doors and windows were painted some sort of *snuff-colour*.
M. W. Savage, *Reuben Medicott*, viii. 1.

snuff-dipper (snuf'dip'er), *n.* One who practices snuff-dipping.

snuff-dipping (snuf'dip'ing), *n.* A mode of taking tobacco practised by some women of the lower class in the southern United States, consisting in wetting a stick or sort of brush, putting it into snuff, and rubbing the teeth and gums with it.

snuff-dish¹ (snuf'dish), *n.* A small open dish to hold snuff.

snuff-dish² (snuf'dish), *n.* 1. A dish used to hold the snuff of the lamps of the tabernacle. In the authorized version of the Bible this is the rendering of a Hebrew word (*nachath*) elsewhere represented by 'censer' and 'fire-pan.' The same name seems to have applied both to a dish for carrying five coals to the altar of incense and to a dish used for the snuff of the lamps.

The *snuffdishes* thereof shall be of pure gold.
 Ex. xxv. 33.

2. A tray to hold the snuff of candles, or to hold snuffers; a snuffer-tray.

This night comes home my new silver *snuff-dish*, which I do give myself for my closet.
Pepys, *Diary*, III. 54.

snuffer¹ (snuf'er), *n.* [*< snuff*¹ + *-er*¹.] 1. One who snuffs.—2. A snuffing-pig or porpoise.

snuffer² (snuf'er), *n.* [*< snuff*² + *-er*¹.] 1. *pl.* An instrument for cropping the snuff of a candle, usually fitted with a close box to receive the burnt snuff and retain the smoke and smell. Also called *pair of snuffers*.

You sell *snuffers* too, if you be remembered.
B. Jonson, *Poetaster*, li. 1.

2. Same as *snuff-dish*, 2.

snuffer-dish, **snuffer-pan** (snuf'er-dish, -pan), *n.* Same as *snuffer-tray*.

Silver Snuffers, 18th century.

snuffer-tray (snuf'er-tra), *n.* A tray made to receive the snuffers when not in use.

snuff-headed (snuf'hed'ed), *a.* Having a snuffy or reddish-brown head: as, the *snuff-headed* widgeon, the pechard, *Fuligula ferina*. [Local, Eng.]

Dr. Taylor [Johnson's old schoolfellow] read the service [at Dr. Johnson's funeral], but *so so*.
Dr. S. Parr, quoted in N. and Q., 7th ser., X. 274.

So to say, so to speak, to use or borrow that expression; speaking figuratively, by analogy, or in approximate terms; as, a moral monstrosity, *so to speak*.

The habits, the manners, the bye-play, *so to speak*, of those picturesque antiquies, the pensioners of Greenwich College?
D. Jerrold, Men of Character, II. 155.

The huge original openings are thus divided, *so to say*, into two open stories.
The Century, XXXV. 705.

So well as, as well as; in the same way as.
The rest overgrown with trees, which, *so well as* the bushes, were so overgrown with Vines we could scarce pass them. Quoted in *Capt. John Smith's Works, I. 106.*

Than so, than something indicated or signified; than that.

Itane contemnor abs te? I, am I so little set by thee: yea, make you no more account of me than so?
Terence in English (1614). (Nares.)

=Syn. 7. *Wherefore, Accordingly.* See *therefore*.
II. *conj.* 1†. In, of, or to what degree, extent, amount, intensity, or the like; as: used with or without the correlative adverb *so* or *as*, in connecting subordinate with principal clauses. See *as*†, II.

He was brizt *so* the glas,
He was whitt *so* the flur,
Rose red was his colur.
King Horn (E. E. T. S.), p. 1.

So shalt thou come to a court as clear so the sonne.
Piers Plowman (C), viii. 232.

Their land shall be *soaked* with blood.
Isa. xxxiv. 7.
Winter *soaks* the fields.
Cowper, Task, I. 215.

3. To take up by absorption; absorb through pores or other openings; suck in, as a liquid or other fluid: followed by *in* or *up*.

Ros. Take you me for a sponge, my lord?
Ham. Ay, sir, that *soaks up* the king's countenance, his rewards, his authorities.
Shak., Hamlet, iv. 2. 16.

The thirsty earth *soaks up* the rain.
Cowley, Anacreontiques, II.

4. Hence, to drink; especially, to drink immoderately; guzzle.

Scarce a Ship goes to China but the Men come home fat with *soaking* this Liquor [Arrack], and bring store of Jars of it home with them.
Dampier, Voyages, I. 419.

Her voice is as cracked as thine, O thou beer-*soaking* Renowner!
Thackeray, Vanity Fair, lxvi.

5. To penetrate, work, or accomplish by wetting thoroughly: often with *through*.

The rivulet beneath *soaked* its way obscurely *through* wreaths of snow.
Scott.

6†. To make soft as by steeping; hence, to enfeeble; enervate.

And furth with all she came to the kyng,
Which was feyill and *sokyd* with seknesse.
Genevrides (E. E. T. S.), I. 234.

7. To suck dry; exhaust; drain. [Rare.]

His feastings, wherein he was only sumptuous, could not but *soak* his exchequer.
Wotton.

8. To bake thoroughly: said of the lengthened baking given, in particular, to bread, so that the cooking may be complete. [Prov. Eng. and U. S.]—9. To "put in soak"; pawn; pledge: as, he *soaked* his watch for ten dollars. [Slang.]

—To *soak* or *soak up* bait, to consume much bait without taking the hook, as fish. [Fishermen's slang.]

soak (sōk), *n.* [*< soak, v.*] 1. A soaking, in any sense of the verb.—2. Specifically, a drinking-bout; a spree.

When a Southron intends to have a *soak*, he takes the bottle to his bedside, goes to bed, and lies there till he gets drunk.
Parsons's Tour Among the Planters. (Bartlett.)

3. That in which anything is soaked; a steep.

A *soak* or steep for seeds. *New Amer. Farm Book, p. 68.*

4. One who or that which soaks. (a) A land-spring. *Halliwell.* [Prov. Eng.] (b) A tippler; a hard drinker. [Colloq.]

5. An over-stocking, with or without a foot, worn over the long stocking for warmth or protection from dirt. Compare *boot-hose, stirrup-hose*.—To *put in soak*, to put in pawn; pawn; pledge: as, to *put one's* rings in *soak*. [Slang.]

soakage (sō'kāj), *n.* [*< soak + -age*.] The act of soaking; just, that which soaks; the amount of fluid absorbed by soaking.

The entire country from Gozerup to Cassala is a dead flat. . . . There is no drainage upon this perfect level; thus, during the rainy season, the *soakage* actually melts the soil.
Sir S. W. Baker, Heart of Africa, I.

It shall be rutable to allow *soakage* to cover the moisture absorbed by the package from its contents as follows, etc.
New York Produce Exchange Report, 1888-9, p. 306.

soak-barrel (sōk'bar'el), *n.* A barrel in which fresh fish are put to soak before salting.

soaker (sō'kēr), *n.* [*< soak + -er*.] One who or that which soaks. (a) That which steeps, wets, or drenches, as a rain.

Well, sir, suppose it's a *soaker* in the morning, . . . then may be, after all, it comes out a fine day.
Mayhew, London Labour and London Poor, I. 314.

(b) A habitual drinker; one accustomed to drink spirituous liquors to excess; a toper. [Colloq.]

By a good natur'd man is usually meant neither more nor less than a good fellow, a painful, able, and laborious *soaker*.
South, Sermons, VI. iii.

The Sun's a good Pimple, an honest *soaker*; he has a Cellular at your Antipodes. *Congreve, Way of the World, iv. 10.*

soak-hole (sōk'hōl), *n.* A space marked off in a stream, in which sheep are washed before shearing. [Australia.]

Parallel poles, resting on forks driven into the bed of the waterhole, were run out on the surface of the stream, forming square *soak-holes*, a long narrow lane leading to the dry land. *A. C. Grant, Bush Life in Queensland, I. 32.*

soaking (sō'king), *n.* [*< ME. sokynge; verbal n. of soak, v.*] 1. A steeping; a wetting; a drenching.

Sokynge, or lounge lyyng in lycure. Infusio, inhibitura.
Prompt. Parv., p. 463.

Few in the ships escaped a good *soaking*.
Cook, Second Voyage, I. 1.

2. Intemperate and continual drinking. Compare *soak, v. t.*, 4. [Colloq.]

soakingly (sō'king-lī), *adv.* As in soaking; hence, little by little; gradually.

A mannes enemies in battall are to be overcome with a carpenter's squaring axe—that is to say, *soakingly*, one pece after an other.

Udall, tr. of Apophthegms of Erasmus.

soaking-pit (sō'king-pit), *n.* A pit in which steel ingots are placed immediately after casting, in order that the mass may acquire a uniform temperature, the interior of such ingots remaining for some time after casting too hot to roll satisfactorily. These pits are generally known as "Gfers soaking-pits," from the name of the metallurgist who first introduced them into use.

soaky (sō'ki), *a.* [Also dial. *socky*; *< soak + -y*. Cf. *soggy*.] 1. Moist on the surface; steeped in water; soggy.—2. Effeminate. *Halliwell.* [Prov. Eng.]

soam¹ (sōm), *n.* [Origin obscure.] 1. A chain for attaching the leading horses to a plow. It is supported by a hanger beneath the clevis, in order to preserve the line of draft and avoid pulling down the nose of the plow-beam. *E. H. Knight.*

2. A short rope used to pull the tram in a coal-mine. *Halliwell.* [Prov. Eng.]

soam² (sōm), *n.* [A var. of *seam*.] A horse-load. *Halliwell.* [Prov. Eng.]

so-and-so (sō'and-sō), *n.* Some one or something not definitely named: commonly representing some person or thing in an imaginary or supposed instance: as, Mrs. *So-and-so*; was he wrong in doing *so-and-so*? Compare *so*¹, *adv.*, 5.

soap (sôp), *n.* [Early mod. E. also *sopce*; < ME. *soppe*, *soppe*, *sapce*, < AS. *sāpe* = MD. *sepe*, D. *seep* = MLG. *sepe*, LG. *sepe* = OHG. *seifa*, *seipfa*, *seipfa*, soap, MHG. G. *seife*, G. dial. *seipfe* = Icel. *sāpa* = Sw. *sāpa* = Dan. *sæbe* (Icel., etc., < AS.), soap; cf. L. *sapo*, pomade for coloring the hair (Pliny: see def. 2), LL. ML. soap (> Gr. *σάπων* = It. *sapone* = Sp. *jabon* = Pg. *sabão* = Pr. *sabo* = F. *savon* (> Turk. *sabun*) = W. *sebon* = Ir. *siabun* = Gael. *siopunn*, soap), prob. < Teut., the true L. cognate being prob. *sebum*, tallow, grease (see *sebum*, *sebaceous*). Cf. Fim. *saippio*, < Teut. The word, if orig. Teut., is prob. identical with AS. *sāp* = OHG. *seifa*, resin, and connected with AS. **sipan*, *sipian*, LG. *sipen*, MHG. *sifen*, trickle, and perhaps with AS. *sæp*, etc., sap: see *seep*, *sipe*, *sap*.] 1. A chemical compound in common domestic use for washing and cleansing, made by the union of certain fatty acids with a salifiable base. Fats and fixed oils consist of fatty acids combined with glycerin. On treating them with a strong base, like potash or soda, glycerin is set free, and the fatty acid combined with the strong base and forms a soap. Soap is of two kinds—*soluble* soap, in which the base is potash, soda, or ammonia, and *insoluble* soap, whose base is an earth or a metallic oxid. Only the soluble soaps dissolve readily in water and have detergent qualities. Insoluble soaps are used only in pharmacy for liniments or plasters. Of the fats, stearate makes the hardest, oleate the softest soaps; and of the bases, soda makes the hardest and least soluble, and potash the softest and most soluble. Perfumes are occasionally added, or various coloring matters are stirred in while the soap is semi-fluid. White soaps are generally made of olive-oil and soda. Common household soaps are made chiefly of soda and tallow. Yellow soap is composed of tallow, rosin, and soda, to which some palm-oil is occasionally added. (See *rosin-soap*.) Mottled soap is made by simply adding mineral and other colors during the manufacture of ordinary hard soap. Marine soap, known as *salt-water soap*, which has the property of dissolving as well in salt water as in fresh, is made of palm- or cocoanut-oil and soda. Soft soaps are made with potash, instead of soda, and whale-, seal-, or olive-oil, or the oils of linseed, hemp-seed, rape-seed, etc., with the addition of a little tallow. Excellent soaps are made from palm-oil and soda. A solution of soap in alcohol, with camphor and a little essential oil added to scent it, forms a soft ointment called *opodeldoc*, now superseded by soap-liniment, a similar preparation, which is liquid. Medicinal soap, when pure, is prepared from caustic soda and either olive- or almond-oil. It is chiefly employed in form pills of a gently aperient antacid action.

2†. A kind of pomade for coloring the hair. [Only as a translation of the Latin.]—3. Smooth words; persuasion; flattery; more often called *soft soap*. [Slang.]

He and I are great chums, and a little *soft soap* will go a long way with him.
T. Hughes, Tom Brown at Oxford, xxxiii. (Davies.)

4. Money secretly used for political purposes. [Political slang, U. S.]

Soap.—Originally used by the Republican managers during the campaign of 1880, as the cipher for "money" in their telegraphic dispatches. In 1884 it was revived as a derisive war cry aimed at the Republicans by their opponents.
Mag. of Amer. Hist., XIII. 394.

Almond-oil soap, a soap made of sodium hydrate and almond-oil. Also called *amygdaline soap*.—**Arsenical soap**, a saponaceous preparation used in tatterdemy to preserve skins from natural decay and from the attacks of insects. There are many kinds, all alike consisting in the impregnation of some kind of soap with arsenious acid or commercial arsenic.—**Beef-marrow soap**, a soap of soda and animal oil.—**Boiled soap**. Same as *grained soap*.—**Bone soap**, a soap made from cocoonut-oil mixed with jelly from bones.—**Butter soap**, soap made from soda and butter; also butyric.—**Calcium soap**, a soap made either directly by saponifying fat with hydrate of lime, or by treating soluble soap with a solution of a salt of lime. It is used in the manufacture of stearin wax.—**Carbolic soap**, a disinfectant soap containing 1 part of carbolic acid to 9 parts of soap.—**Castile soap**, a hard soap composed of soda and olive-oil, of two varieties: (1) *white Castile soap*, which contains 21 per cent. of water, is of a pale grayish-white color, giving no oily stains to paper, free from rancid odor, and entirely soluble in alcohol or water; and (2) *marbled Castile soap*, which is harder and more alkaline, contains 14 per cent. of water, and has veins or streaks of ferruginous matter running through it. Formerly also, erroneously, *castile soap*; also *Spanish soap*.

Roll but with your eyes
And foam at the mouth. A little *castile soap*
Will do 't, to rub your lips.
B. Jonson, Devil is an Ass, v. 3.

Curd soap, soap made from soda and a purified animal fat consisting largely of stearin.—**Fulling-soap**, a soap used in fulling cloth, composed of 124 parts of soap, 54 of clay, and 110 of calcined soda-ash.—**German soft soap**. Same as *green soap*.—**Glass-makers' soap**. Same as *glass-soap*.—**Grained soap**, soap melted and worked over for toilet purposes.—**Green soap**, an official preparation of soft soap, made from potash and linseed- or hempseed-oil, colored by indigo, and used in the treatment of eczema and other cutaneous diseases.—**Gum soap**, a soap prepared from potash and fixed oils.—**Marine soap**. See def. 1.—**Olive-oil soda-soap**. Same as *Castile soap*.—**Quicksilver soap**. See *quicksilver plaster*, under *quicksilver*.—**Silicated soap**. See *silicated*.—**Soap of gualac**, soap composed of liquor potassæ and gualac.—**Soft soap**. (a) A liquid soap, especially a soap made with potash as a base: so called because it does not harden into cakes, but remains semi-fluid orropy. The softest soap is made from

potash lye and olive-oil or fats rich in oleic acid. (b) See def. 3.—**Spanish soap**. Same as *Castile soap*.

Some may present thee with a pounde or twaine
Of *Spanische soap* to wash thy linnen white.
Gascogne, Cuncell to Master Withipoll.

Starkey's soap, a soap made by triturating equal parts of potassium carbonate, oil of turpentine, and Venice turpentine.—**Transparent soap**, a soap made of soda and kidney-fat, dried, then dissolved in alcohol, filtered, and evaporated in molds.—**Venice soap**, a mottled soap made of olive-oil and soda, with a small quantity of iron or zinc sulphate in solution. *Stimonda*.—**Windsor soap**, a scented soap made of soda with olive-oil 1 part and tallow 9 parts.—**Zinc soap**, a soap obtained by the double decomposition of zinc sulphate and soap, or by saponifying zinc white with olive-oil or fat. It is used as an oil-color, as an ointment, and as zinc plaster.

soap (sôp), *v. t.* [*< soap, n.*] 1. To rub or treat with soap; apply soap to.

Bells *soaped* his face and rubbed his face, and *soaped* his hands and rubbed his hands, and *soaped* his face and rubbed his face, and *soaped* his hands and rubbed his hands, and *soaped* his face and rubbed his face, and *soaped* his hands and rubbed his hands, until he was as red as beet-root.
Dickens, Our Mutual Friend, iv. 5.

2. To use smooth words to; flatter. [Slang.]

These Dear Jacks *soap* the people ashamed, but we Cheap Jacks don't. We tell 'em the truth about themselves at their faces, and acorn to court 'em.
Dickens, Doctor Marigold.

soap-apple (sôp'ap'l), *n.* Same as *soap-plant*.

soap-ashes (sôp'ash'ez), *n. pl.* Ashes containing lye or potash, and thus useful in making soap.

So drugs and sweet woods, where they are, cannot but yield great profit; *soap ashes* likewise, and other things that may be thought of.
Bacon, Plantations (ed. 1837).

soap-balls (sôp'bâlz), *n. pl.* Balled soap, made by dissolving a soap in a little hot water, mixing it with starch, and then molding the mixture into balls. The starch acts upon the skin as an emollient.

soap-bark, **soap-bark tree** (sôp'bârk, -trê). See *quillai* and *Pithecolobium*.

soap-beck (sôp'bek), *n.* In a dye-house, a vessel filled with a solution of soap in water.

soapberry (sôp'ber'ez), *n.*; *pl. soapberries* (-iz). The fruit of one of several species of *Sapindus*; also, any of the trees producing it, and, by extension, any member of the genus. The fruit of the proper soapberries abounds in saponin as to serve the purpose of soap. That of *S. Saponaria*, a small tree of South America, the West Indies, and Florida, is much used in the West India for cleaning linen, etc., and is said to be extremely efficacious, though with frequent use deleterious to the fabric. Its roots also contain saponin. Its hard black seeds are made up into rosaries and necklaces, and sometimes have been used as buttons. In the East India the fruit of *S. trifoliatum* appears to have been used as a detergent from remote times. The pulp is regarded also as astringent, anthelmintic, and tonic, and the seeds yield a medicinal oil. The wood is made into combs and other small articles. This species is sometimes called *Indian filbert*, translating the Mohammedan name. *S. Ditleasma* Rarak, of Cochin-China, etc., has also a detergent property. The wood of *S. acuminatus* (*S. marginatus*), of the southern United States, etc., is hard and strong, easily split into strips, and in the southwest much used for making cotton-baskets and the frames of pack-saddles. Its berries are reddish-brown, of the size of a cherry, with a soapy pulp. Also called *wild china-tree* (which see, under *china-tree*). The fruit of some species yields an edible pulp, though the seed is poisonous. Another name, especially of *S. trifoliatum*, is *soapnut*.

soap-boiler (sôp'boi'ler), *n.* 1. A maker of soap.

The new company of gentlemen *soapboilers* have procured Mrs. Sanderson, the Queen's laundress, to subscribe to the goodness of the new soap.
Court and Times of Charles I., II. 230.

2. That in which soap is boiled or made; a soap-pan. *Imp. Diet.*

soap-boiling (sôp'boi'ling), *n.* The business of boiling or manufacturing soap.

soap-bubble (sôp'bab'l), *n.* A bubble formed from soapy water; especially, a thin spherical film of soap-suds inflated by blowing through a pipe, and forming a hollow globe which has often beautiful iridescent colors playing over the surface.

One afternoon he was seized with an irresistible desire to blow *soap-bubbles*. . . Behold him, therefore, at the arched window, with an earthen pipe in his mouth! . . . Behold him scattering airy spheres abroad, from the window into the street.
Hawthorne, Seven O'Clock, xl.

soap-bulb (sôp'bulb), *n.* Same as *soap-plant*.

soap-cerate (sôp'sê'rât), *n.* An ointment composed of soap-plaster (2 parts), yellow wax (2½ parts), and olive-oil (4 parts).

soap-coil (sôp'koi), *n.* A coiled pipe fitted to the inside of a soap-boiling kettle, through which hot steam is circulated to boil the contents of the kettle.

soap-crutch (sôp'kruch), *n.* A staff or rod with a crosspiece at one end, formerly used in crutching or stirring soap.

soap-crutching (sôp'kruch'ing), *n.* The process of crutching or stirring soap in kettles.—**Soap-crutching machine**, an apparatus for mixing soap.

It consists of a vertical cylinder in which are numerous spiral wings and an upright shaft with radial arms, to which a rotary motion is communicated by gearing. When the tank is filled with soap, the spiral wings act like screws, carrying up the heavier part of the materials toward the top, and thoroughly intermixing the whole.

soap-earth (sôp'êrth), *n.* Soapstone or steatite.

soap-engine (sôp'en'jin), *n.* A machine upon which slabs of soap are piled to be crosscut into bars. *Weale*.

soaper (sôp'pèr), *n.* [Early mod. E. also *soper*; < ME. *sopare*; < soap + -er.] A soap-maker; a dealer in soap. [Obsolete or provincial.]

Sopers and hero *sones* for *selner* han be knyghtes.
Piers Plowman (C), vi. 72.

soap-fat (sôp'fat), *n.* Fatty refuse laid aside for use in the making of soap.

soap-fish (sôp'fish), *n.* A serranoid fish of the genus *Rhytichius* (or *Promieropterus*): so called from the soapy skin. Several are found along the Atlantic coast of the United States, as *R. maculatus*, *R. decoratus*, and *R. pituitosus*. See cut under *Rhytichius*.

soap-frame (sôp'frâm), *n.* A series of square frames locked together, designed to hold soap while solidifying, preparatory to its being cut into bars or cakes.

The interior width of *soap-frames* corresponds to the length of a bar of soap, and the length of a frame is equal to the thickness of about twenty bars of soap.
Walt, Soap-making, p. 20.

soap-glue (sôp'glü), *n.* A gelatinous mass resulting from the boiling together of tallow and lye.

soap-house (sôp'hous), *n.* A house or building in which soap is made.

soapiness (sôp'i-nes), *n.* The state or quality of being soapy. *Bailey*, 1727.

soap-kettle (sôp'ket'l), *n.* A soap-boiler.

soapless (sôp'les), *a.* [*< soap* + -less.] Lacking soap; free from soap; hence, unwashed.

He accepted the offered hand of his new friend, which . . . was of a marvellously dingy and *soapless* aspect.
Bulwer, Pelham, xlix.

soap-liniment (sôp'lin'i-ment), *n.* A liniment composed of soap (10 parts), camphor (5), oil of rosemary (1), alcohol (70), and water (14): an anodyne and rubefacient embrocation.

soap-lock (sôp'lok), *n.* A lock of hair worn on the temple and kept smoothly in place by being soaped; hence, any lock brushed apart from the rest of the hair, and carefully kept in position. [U. S.]

As he stepped from the cars he . . . brushed his *soap-locks* forward with his hand. *The Century*, XXXVI. 249.

soap-maker (sôp'mâ'kèr), *n.* A manufacturer of soap.

soap-making (sôp'mâ'king), *n.* The manufacture of soap; soap-boiling.

soap-mill (sôp'mil), *n.* 1. A machine for cutting soap into thin shavings, preparatory to drying it, and as a step toward fitting it for grinding.—2. A mill for grinding dry soap, in the manufacture of bath-soap and other soap powders.

soapnut (sôp'nut), *n.* 1. Same as *soapberry*.—2. The fruit of an East Indian climbing shrub, *Acacia concinna*; also, the plant itself. The long flat pods have a saponaceous property, and are much used in Bombay as a detergent, especially in a wash for the head. They are also used as a deobstruent and expectorant and in jaundice. Also *soap-pod*.

soap-pan (sôp'pan), *n.* In the manufacture of soap, a large pan or vessel, generally of cast-iron, in which the ingredients are boiled to the desired consistence.

The *soap-pan* or copper (or, as the French and Americans term it, *kettle*) is sometimes made of cast-iron, in several divisions, united together by iron cement.
Walt, Soap-making, p. 17.

soap-plant (sôp'plant), *n.* One of several plants whose bulbs serve the purpose of soap; particularly, the Californian *Chlorogalum pomcridianum*, of the lily family. It is a stout brownish plant, from 1 to 3 feet high, with long linear leaves and a spreading panicle of white flowers. The bulb, which is from 1 to 4 inches thick, when divested of its coat of dark-brown fibers, produces, if rubbed on wet cloth, a thick lather, and is often substituted for soap. Also called *soap-apple* and *soap-bub*, and, together with some plants of a similar property, by the Mexican name *amole*. *Zygadenus Fremontii*, also Californian, is another soap-plant.—**Indian soap-plant**, a name ascribed to the soapberry *Sapindus acuminatus*, and to the *Chlorogalum*.

soap-plaster (sôp'plâs'tèr), *n.* A plaster composed of curd soap (10 ounces), yellow wax (12½ ounces), olive-oil (1 pint), oxid of lead (15 ounces), and vinegar (1 gallon).

soap-pod (sôp'pod), *n.* 1. One of the legumes of several Chinese species of *Casalpinia*; also, the plant itself. The legumes are saponaceous, and are employed by the Chinese as a substitute for soap.—2. Same as *soapnut*, 2.

soaproot (söp'röt), *n.* 1. A Spanish herb, *Gypsophila Struthium*, whose root contains saponin. Also called *Egyptian* or *Spanish soaproot*. — 2. A Californian bulbous plant, *Leucocörinum montanum*, of the lily family, bearing white fragrant flowers close to the ground in early spring. Soaproot is used by the Digger Indians to take trout. At the season of the year when the streams run but little water, and the fish collect in the deepest and widest holes, they cut off the water above such holes in the stream, and put soaproot rubbed to a lather into the holes, which soon causes the fish in the holes to float stupefied on the surface.

soapstone (söp'stön), *n.* A variety of steatite (see *tale*); specifically, a piece of such stone used when heated for a griddle, a foot-warmer, or other like purpose.

He . . . fished up a disused *soapstone* from somewhere, put it on the stove that was growing hot for the early baking, and stood erect and patient — like a guard — till the *soapstone* was warm. *The Century*, XL. 531.

soap-suds (söp'sudz'), *n. pl.* A solution of soap in water stirred till it froths; froth of soapy water.

Phib Cook left her evening wash-tub, and appeared at her door in *soap-suds* . . . and general dampness. *George Eliot*, Janet's Repentance, iv.

soap-tree (söp'trē), *n.* The soapberry-tree *Sapindus Saponaria*. See *soapberry*.

soapweed (söp'wēd), *n.* A plant, *Agave heteracantha*, or some other species of the same genus. See *anole*.

soapwood (söp'wūd), *n.* A West Indian timber-tree or shrub, *Clethra tinifolia*.

soap-works (söp'wērks), *n. sing. or pl.* A place or building for the manufacture of soap.

The high price of potash, and the diminished price as well as improved quality of the crude sodas, have led to their general adoption in *soap-works*. *Ure*, Dict., III. 846.

soapwort (söp'wört), *n.* 1. A plant of the genus *Saponaria*, chiefly *S. officinalis*. It is a smooth perennial herb, a rather stout rambling plant a foot or two high, bearing white or pinkish flowers, native in Europe and western Asia, and running wild from gardens in America. Its leaves and roots abound in saponin; they produce a froth when rubbed in water, and are useful as a cleansing agent. They can be employed with advantage, it is said, in some flax processes of washing silk and wool, imparting a peculiar gloss without injuring the most sensitive color. (Also called *bouncing-bet*, *fuller's herb*, and by many other names. See *cut under petal*.) *S. Vaccaria* (*Vaccaria vulgaris*), the cow-herb, also contains saponin. *S. caespitosa*, *S. Calabrica*, and *S. ocyroides* are finer European species desirable in culture.

The Upper Part of the Stem with Flowers of Soapwort (*Saponaria officinalis*).

2. Any plant of the order *Sapindaceæ*. *Lindley*. — *Soapwort-gentian*. See *gentian*.

soapy (sō'pi), *a.* 1. Consisting of or containing soap; resembling soap; having some of the properties of soap; saponaceous.

All soaps and *soapy* substances . . . resolve solids, and sometimes attenuate or thin the fluids. *Arbuthnot*, On Diet, i.

2. Smear'd with soap: as, *soapy hands*.

Our *soapy* laundresses. *Randolph*, Conceited Peddler.

3. Belonging to or characteristic of soap: as, a *soapy* taste; a *soapy* feeling.

The backgrounds to all these figures have been scraped off, leaving a *soapy* light color. *The Century*, XXXVII. 672.

4. Smooth-tongued; unctuous; plausible; flattering. [Slang.]

soar¹ (sör), *v. i.* [Early mod. E. also *sore*; < ME. *soren*, *sooren*, < OF. *essorer*, *essorer*, F. *essorer*, lay out, mount, or soar, dial. *essorer*, air clothes, = Pr. *essaureiar*, *eisaurar* = It. *sorare*, soar, < LL. **exaurare*, expose to the air, formed < L. *ex*, out, + *aura*, a breeze, the air; see *aura*.] 1. To mount on wings, or as on wings, through the air; fly aloft, as a bird or other winged creature; specifically, to rise and remain on the wing without visible movements of the pinions. The specific mode of flight is specially distinguished from any one in which the wings are flapped to beat the air; but the term *soaring* is also loosely applied to any light, easy flight to a great height with little advance in any other direction, whatever be the action of the wings, as of a skylark rising nearly vertically from the ground. In the case of heavy-bodied, short-winged birds which fly up in this manner, the action is often specified as *rocketing* or *towering* (see these verbs). A kind of swift wayward soaring, as of

the swallow, is often called *skimming*. Soaring specifically so called, or sailing on the air, is best shown in the flight of long-winged birds, whether their wings be either narrow and sharp, or ample and blunt, as the albatross, frigate, and some other sea-birds, storks, cranes, and some other large waders, turkey-buzzards and other vultures, eagles, kites, and some other large birds of prey. It is capable of being indefinitely protracted, either on a horizontal plane, or at a considerable inclination upward, at least in some cases; but most birds which soar to a higher level without beating the wings take a spiral course, mounting as much as they can on that part of each lap which is against the wind, and this action is usually specified as *gyrating* or *circling*.

So have I seen a lark rising from his bed of grass, and soaring upwards, singing as he rises, and hopes to get to heaven, and climb above the clouds. *Jer. Taylor*, Sermon, The Return of Prayers, ii.

2. To mount or rise aloft; rise, or seem to rise, lightly in the air.

Flames rise and sink by fits; at last they *soar* In one bright blaze, and then descend no more. *Dryden*.

He could see at once the huge dark shell of the cupola, the slender *soaring* grace of Giotto's campanile, and the quaint octagon of San Giovanni in front of them. *George Eliot*, Romola, iii.

We miss the cupola of Saint Cyriscus *soaring* in triumph above the triumphal monument of the heathen. *E. A. Freeman*, Venice, p. 73.

3. To float, as at the surface of a liquid. [Rare.]

'Tis very likely that the shadow of your rod . . . will cause the Chubs to sink down to the bottom with fear; for they be a very fearful fish. . . . but they will presently rise up to the top again, and lie there *soaring* till some shadow affrights them again. *I. Walton*, Complete Angler (ed. 1653), p. 53.

4. To rise mentally, morally, or socially; aspire beyond the commonplace or ordinary level.

How high a pitch his resolution *soars*! *Shak.*, Rich. II., l. 1. 109.

But know, young prince, that valour *soars* above What the world calls misfortune and affliction. *Addison*, Cato, ii. 4.

In every age the first necessary step towards truth has been the renunciation of those *soaring* dreams of the human heart which strive to picture the cosmic frame as other and fairer than it appears to the eye of the impartial observer. *Lotze*, Microcosmus (trans.), I, Int., p. vii.

soar¹ (sör), *n.* [*soar*¹, *v.*] 1. The act of soaring, or rising in the air.

The churches themselves [of Rome] are generally ugly. . . . There is none of the spring and *soar* which one may see even in the Lombard churches. *Lovell*, Fireside Travels, p. 306.

2. The height attained in soaring; the range of one who or that which soars. [Rare.]

Within *soar* Of towering eagles, to all the fowls he seems A phoenix. *Milton*, P. L., v. 270.

soar², *n.* See *sore*².

the unctious with which this particular word was ordi-
narily pronounced. *Cooper*, *Osak Openings*, xi.

soc, *n.* See *sokel*.

Soc. An abbreviation of *Society*.
socage, **socage** (sok'āj), *n.* [*OE. socage* (*ML.
socagium*); as *soc* + *-age*.] In *law*, a tenure of
lands in England by the performance of cer-
tain determinate service: distinguished both
from *knight-service*, in which the render was un-

certain, and from *villainage*, where the service
was of the meanest kind: the only freehold
tenure in England after the abolition of mili-
tary tenures. Socage has generally been distinguished
into *free* and *villain*—*free socage*, or *common* or *simple* *so-
cage*, where the service was not only certain but honorable,
as by fealty and the payment of a small sum, as of a few
shillings, in name of annual rent, and *villain socage*, where
the service, though certain, was of a baser nature. This
last tenure was the equivalent of what is now called *copy-
hold tenure*.

In *socage land*—the land, that is, which was held by
free tenure, but without military service—the contest
between primogeniture and gavel-kind was still undecided
in the thirteenth century. *F. Pollock*, *Land Laws*, p. 57.

Guardianship in socage, a guardianship at common law
as an incident to lands held by socage tenure. It occurs
where the infant is seized, by descent, of lands or other
hereditaments held by that tenure, and is conferred on
the next of kin to the infant who cannot possibly inherit
the lands from him. *Minor*.—**Socage roll**, the roll of
those holding under socage tenure—that is, within a soke.
English Gilds (E. E. T. S.), p. 475 (gloas.).

sociability (sō'shia-bil'i-ti), *n.* [*F. sociabilité*
= *Sp. sociabilidad* = *Pg. sociabilidade*, < *ML.
sociabilita*(-t)-s, < *L. sociabilis*, sociable: see *so-
ciable*.] Sociable disposition or tendency; dis-
position or inclination for the society of others;
sociableness.

Such then was the root and foundation of the *sociability*
of religion in the ancient world, so much envied by mod-
ern Pagans. *Warburton*, *Divine Legislation*, ll. 1.

The true ground [of society] is the acceptance of condi-
tions which came into existence by the *sociability* inher-
ent in man, and were developed by man's spontaneous
search after convenience. *J. Morley*, *Romans*, ll. 133.

sociable (sō'shia-bl), *a.* and *n.* [*F. sociable*
= *Sp. sociable* = *Pg. sociavel* = *It. sociabile*, <
L. sociabilis, sociable, < *sociare*, associate, join,
accompany: see *sociate*.] *I. a. 1†.* Capable of
being conjoined; fit to be united in one body
or company.

Another law there is, which toucheth them as they are
sociable parts united into one body; a law which bindeth
them each to serve unto other's good.
Hooker, *Eccles. Polity*, l. 3.

2. Disposed to associate or unite with others;
inclined to company; of social disposition; so-
cial; of animals, social.

Society is no comfort
To one not *sociable*. *Shak.*, *Cymbeline*, iv. 2. 13.

3. Disposed to be friendly and agreeable in
company; frank and companionable; conver-
sible.

This Macilente, signor, begins to be more *sociable* on a
sudden, methinks, than he was before.
B. Jonson, *Every Man out of his Humour*, iv. 6.

4†. Friendly: with reference to a particular
individual.

Is the king *sociable*,
And bids thee live? *Beau. and Fl.*
The *sociable* and loving reproof of a Brother.
Milton, *Reformation in Eng.*, l.

5. Affording opportunities for sociability and
friendly conversation.

I will have no little, dirty, second-hand chariot new
furbished, but a large, *sociable*, well-painted coach.
Wycherley, *Gentleman Dancing-Master*, v. 1.

6. Characterized by sociability and the absence
of reserve and formality: as, a *sociable*
party.—7. Of, pertaining to, or constituting
society; social. [Rare.]

His divine discourses wers chiefly spent in pressing men
to exercise those graces which adorn the *sociable* state.
Bp. Atterbury, *Sermons*, l. x.

Sociable weaver or **weaver-bird**. See *weaver-bird*,
and cuts under *Phileterus* and *hive-nest*. = *Syn.* 2 and 3.
Social, Sociable, friendly, communicative, familiar. So far
as *social* and *sociable* are like in meaning, *sociable* is the
stronger and more familiar. They may differ in that *so-
cial* may express more of the permanent character, and
sociable the temporary mood: man is a *social* being, but
is not always inclined to be *sociable*.

II. n. 1. An open four-wheeled carriage with
seats facing each other.

They set out on their little party of pleasure; the chil-
dren went with their mother, to their great delight, in the
sociable. *Miss Edgeworth*, *Belinda*, xix.

2. A tricycle with seats for two persons side
by side.

A *sociable* is a wide machine having two seats, side by side. This style of cycle has been used in Europe for wedding trips. *Tribune Book of Sports*, p. 454.

3. A kind of couch or chair with a curved S-shaped back, and seats for two persons, who sit side by side and partially facing each other. Also called *vis-à-vis*.—4. A gathering of people for social purposes; an informal party; especially, a social church meeting. [U. S.]

Their wildest idea of dissipation was a church *sociable*, or a couple of tickets to opera or theater.

The Century, XL. 272.

sociableness (sō'shiā-bl-nes), *n.* [*<* *sociable* + *-ness*.] Sociable character or disposition; inclination to company and social intercourse; sociability. *Bailey*, 1727.

sociably (sō'shiā-bli), *adv.* In a sociable manner; with free intercourse; conversibly; familiarly. *Bailey*, 1727.

social (sō'shāl), *a.* [= *F. social* = *Sp. Pg. social* = *It. sociale* = *G. social*, < *L. socialis*, of or belonging to a companion or companionship or association, *socialis*, < *socius*, a companion, fellow, partner, associate, ally, as an *adj.* partaking, sharing, associated, < *sequi*, follow: see *sequent*.] 1. Disposed to live in companies; delighting in or desirous of the company, fellowship, and cooperation of others; as, man is a *social animal*.—2. Companionable; sociable; ready to mix in friendly relations or intercourse with one's fellows; also, characteristic of companionable or sociable persons; as, *social tastes*; a man of fine *social instincts*.

Withers, adieu! yet not with thee remove

Thy martial spirit or thy *social* love!

Pope, Epitaph on Withers.

He [King John] was of an amiable disposition, *social* and fond of pleasure, and so little jealous of his royal dignity that he mixed freely in the dances and other entertainments of the humblest of his subjects.

Prescott, *Ferd. and Isa.*, ii. 23.

3. Of or pertaining to society, or to the community as a body: as, *social duties*, interests, usages, problems, questions, etc.; *social science*.

Thou in thy secrecy, although alone,
Best with thyself accompanied, seek'st not
Social communication.

Milton, P. L., viii. 429.

To love our neighbour as ourselves is such a fundamental truth for regulating human society that by that alone one might determine all the cases in *social morality*.

Locke.

We could right pleasantly pursue
Our sports in *social* silence too.

Scott, *Marmion*, iv., Int.

Emerson is very fair to the antagonistic claims of solitary and *social* life.

O. W. Holmes, *Emerson*, xi.

4. In *zool.*: (a) Associating together; gregarious; given to flocking; republican; sociable; as, *social ants*, bees, wasps, or birds. (b) Colonial, aggregate, or compound; not simple or solitary: as, the *social ascidians*; *social polyps*. See *Sociales*.—5. In *bot.*, noting species of plants, as the common ragweed (*Ambrosia trifida*), in which the individuals grow in clumps or patches, or often cover large tracts to the exclusion of other species. Species of sage-brush, the common white pine and other conifers forming extensive forests, species of seaweed, etc., are *social*.—**Social ascidians**. See *Sociales* and *Clavelinidae*.—**Social bees**, the *Apis*, including the hive-bees: distinguished from *solitary bees*, or *Andrenidae*. See *Socialinæ*.—**Social contract**, or **original contract**. See *contract*.—**Social democracy**, the principles of the Social Democrats; the scheme or system of social and democratic reforms proposed and aimed at by the Social Democrats of Germany and elsewhere; the party of the Social Democrats.—**Social Democrat**, a member of a socialistic party founded in Germany in 1863 by Ferdinand Lassalle, whose ultimate object is the abolition of the present forms of government and the substitution of a socialistic one in which labor interests shall be supreme, land and capital shall belong to the people, private competition shall cease, its place being taken by associations of working-men, production shall be regulated and limited by officers chosen by the people, and the whole product of industry shall be distributed among the producers. For the present its members content themselves with the promotion of measures for the amelioration of the condition of the working classes, such as shortening the hours of labor, forbidding the employment of children in factories, and higher education for all. Social Democrats are now found in many of the countries of Europe, as well as in the United States. Since the fusion of the Lassalle and Marx groups of socialists in 1875, the social-democratic party in Germany has had remarkable development.—**Social dynamics**, that branch of sociology from one epoch to another. See *sociology*.—**Social operation of the mind**, an operation of the mind involving intercourse with another intelligent being. *Reid*.—**Social sanction**. See *sanction*.—**Social sciences**, the science of all that relates to the social condition, the relations and the institutions which are involved in man's existence and his well-being as a member of an organized community. It concerns itself more especially with questions relating to public health, education, labor, punishment of crime, reformation of criminals, pauperism, and the like. It thus deals with the

effect of existing social forces and their result on the general well-being of the community, without directly discussing or expounding the theories or examining the problems of sociology, of which it may be considered as a branch.—**Social statics**, that branch of sociology which treats of the conditions of the stability or equilibrium of the different parts of society or the theory of the mutual action and reaction of contemporaneous social phenomena on each other, giving rise to what is called *social order*.—**Social war**, in *Rom. hist.*, the war (90–88 B. C.) in which the Italian tribes specially termed the allies (*socii*) of the Roman state fought for admission into Roman citizenship. In the end the allies virtually obtained all they strove for, though at the expense of much bloodshed. Also called the *Marsic war*, from the Marsi, who took a leading part in the movement.—**Social wasps**, the *Vespidæ*, including hornets or yellowjackets, which build large papery nests inhabited by many individuals. See cuts under *hornet*, *Polistes*, and *wasp*.—**The social evil**. See *evil*.—*Syn.* See *sociable*.

social-democratic (sō'shāl-dem-ō-krat'ik), *a.* Of or pertaining to the Social Democrats; characterized by or founded on the principles of the social democracy: as, *social-democratic agitation*.—**Social-democratic party**. Same as *social democracy* (which see, under *social*).

Sociales (sō-si-ā'lēz), *n. pl.* [NL., pl. of *L. socialis*, sociable, social.] A group of social ascidians, corresponding to the family *Clavelinidae*.

Socialinæ (sō'si-ā-lī'nē), *n. pl.* [NL., < *L. socialis*, social, + *-inæ*.] A subfamily of the family *Apidae*, including the genera *Bombus* and *Apis*, the species of which live in communities; the social bees. Each species is composed of three classes of individuals—males, females, and workers. They have the power of secreting wax, from which their cells are made, and the larvae are fed by the workers, whose legs are furnished with corbicula or pollen-baskets. See cuts under *Apis*, *bumblebee*, and *corbiculum*.

socialisation, socialise. See *socialization, socialize*.

socialism (sō'shāl-izm), *n.* [= *F. socialisme* = *Sp. Pg. socialismo* = *G. socialismus*; as *social* + *-ism*.] Any theory or system of social organization which would abolish, entirely or in great part, the individual effort and competition on which modern society rests, and substitute for it cooperative action, would introduce a more perfect and equal distribution of the products of labor, and would make land and capital, as the instruments and means of production, the joint possession of the members of the community. The name is used to include a great variety of social theories and reforms which have more or less of this character.

What is characteristic of *socialism* is the joint ownership by all the members of the community of the instruments and means of production; which carries with it the consequence that the division of the produce among the body of owners must be a public act performed according to rules laid down by the community. *Socialism* by no means excludes private ownership of articles of consumption.

J. S. Mill, *Socialism*.

Socialism, . . . while it may admit the state's right of property over against another state, does away with all ownership, on the part of members of the state, of things that do not perish in the using, or of their own labor in creating material products.

Woolsey, *Communism and Socialism*, p. 7.

Christian socialism, a doctrine of somewhat socialistic tendency which sprang up in England about 1850, and flourished under the leadership of Charles Kingsley, Frederick D. Maurice, Thomas Hughes, and others. The main contentions of its advocates were (1) that Christianity should be directly applied to the ordinary business of life, and that in view of this the present system of competition should give place to cooperative associations both productive and distributive, where all might work together as brothers; (2) that any outer change of the laborer's life, as aimed at in most socialistic schemes, would not suffice to settle the labor question, but that there must be an inner change brought about by education and elevation of character, especially through Christianity; and (3) that the aid of the state should not be invoked further than to remove all hostile legislation. A similar scheme appeared somewhat earlier in France. The doctrines of Christian socialism, or similar doctrines under the same name, have been frequently advocated in the United States.

—**Socialism of the chair**, a name (first used in ridicule in 1872 by Oppenheim, one of the leaders of the National Liberals) for the doctrines of a school of political economy in Germany which repudiated the principle of *laissez-faire*, adopted in the study of political economy the historical method (which see, under *historical*), and strove to secure the aid of the state in bringing about a better distribution of the products of labor and capital, especially to bring to the laborer a larger share of this product, and to elevate his condition by means of factory acts, savings-banks, sanitary measures, shortening of the hours of labor, etc.

socialist (sō'shāl-ist), *n.* and *a.* [= *F. socialiste* = *Sp. Pg. socialista* = *G. socialist*; as *social* + *-ist*.] 1. *n.* One who advocates socialism.

A contest who can do most for the common good is not the kind of competition which *Socialists* repudiate.

J. S. Mill, *Pol. Econ.*, II. i. § 3.

Christian socialist, a believer in, or an advocate of, the doctrines of Christian socialism. See *socialism*.—**Professional socialist**. Same as *socialist of the chair*.—**Socialist of the chair**, a believer in, or an advocate of, socialism of the chair. See *socialism*.

II. *a.* Of, pertaining to, or characteristic of socialism or its advocates; relating to or favoring socialism: as, a *socialist* writer.

It must be remembered that in a *socialist* farm or manufactory each labourer would be under the eye, not of one master, but of the whole community.

J. S. Mill, *Pol. Econ.*, II. i. § 3.

socialistic (sō-shā-lis'tik), *a.* [*<* *socialist* + *-ic*.] Of, pertaining to, or characteristic of the socialists; based on the principles of socialism: as, *socialistic schemes*; *socialistic legislation*.

Socialistic troubles of close bonds

Betwixt the generous rich and grateful poor.

Mrs. Browning, *Aurora Leigh*, viii.

The general tendency is to regard as *socialistic* any interference with property undertaken by society on behalf of the poor, the limitation of the principle of *laissez-faire* in favour of the suffering classes, radical social reform which disturbs the present system of private property as regulated by free competition. *Encyc. Brit.*, XXII. 205.

socialistically (sō-shā-lis'ti-kal-i), *adv.* In a socialistic manner; in accordance with the principles of socialism.

sociality (sō-shi-āl'i-ti), *n.* [= *F. socialité* = *It. socialità*, < *L. socialitas*], fellowship, sociality, < *sociatis*, social: see *social*.] 1. The character of being social; social quality or disposition; sociability; social intercourse, or its enjoyment.—2. The impulses which cause men to form society. *Sociality*, in this sense, is a wider term than *sociability*, which embraces only the higher parts of *sociability*. The latter is a philosophical word, while the former is common in familiar language.

Sociality and individuality, . . . liberty and discipline, and all the other standing antagonisms of practical life.

J. S. Mill, *Liberty*, ii.

socialization (sō'shāl-i-zā'shōn), *n.* [*<* *socialize* + *-ation*.] The act of socializing, or the state of being socialized; the act of placing or establishing something on a socialistic basis. Also spelled *socialisation*.

It was necessary in order to bring about the *socialisation* of labour which now we see.

Fortnightly Rev., N. S., XLII. 643.

socialize (sō'shāl-iz), *v. t.*; pret. and pp. *socialized*, ppr. *socializing*. [*<* *social* + *-ize*.] 1. To render social.

The same forces which have thus far *socialized* mankind must necessarily, in Mr. Spencer's view, go on to make the world a happier and better one.

Fortnightly Rev., N. S., XLIII. 128.

2. To form or regulate according to the theories of socialism.

Also spelled *socialise*.

socially (sō'shāl-i), *adv.* In a social manner or way: as, to mingle *socially* with one's neighbors. *Latham*.

socialness (sō'shāl-nes), *n.* Social character or disposition; sociability or sociality. *Bailey*, 1727.

sociate (sō'shi-āt), *v. i.* [*<* *L. sociatus*, pp. of *sociare*, join, associate, accompany, < *socius*, partaking, associated, as a noun a companion, fellow: see *social*. Cf. *associate*.] To associate.

They seem also to have a very great love for professors that are sincere; and, above all others, to desire to *sociate* with them, and to be in their company.

Bunyan, *Pilgrim's Progress*, p. 254.

sociate (sō'shi-āt), *n.* [*<* *L. sociatus*, pp.: see the verb.] An associate.

Fortitude is wisdom's *sociate*.

Middleton, *Solomon Paraphrased*, vi.

As for you, Dr. Reynolds, and your *sociates*, how much are ye bound to his majesty's clemency!

Fuller, *Church Hist.*, X. i. 22.

sociative (sō'shi-ā-tiv), *a.* [*<* *sociate* + *-ive*.] Expressing association, coöperation, or accompaniment. [Rare.]

The pure dative, the locative, and the instrumental (including the *sociative*).

Trans. Amer. Philol. Ass., XVII. 79.

societarian (sō-si-ē-tā-ri-ān), *a.* [*<* *societary* + *-an*.] Of or pertaining to society.

The all-sweeping besom of *societarian* reformation.

Lamb, *Decay of Beggars*.

societary (sō-si-ē-tā-ri), *a.* [= *F. sociétaire*; as *societ-y* + *-ary*.] Of or pertaining to society; societarian. [Rare.]

A philosopher of society, in search of laws that measure and forces that govern the aggregate *societary* movement.

N. A. Rev., CXXXIX. 18.

society (sō-si-ē-ti), *n.*; pl. *societies* (-tiz). [*<* *F. société* = *Pr. societat* = *Sp. sociedad* = *Pg. sociedade* = *It. società*, < *L. societas* (-s), companionship, society, < *socius*, sharing, partaking, associated, as a noun a companion, fellow: see *social*.] 1. Fellowship; companionship; company: as, to enjoy the *society* of the learned; to avoid the *society* of the vicious.

Hol. I beseech your society.
Nath. And thank you, too; for society, saith the text, is the happiness of life.
 The sentiments which beautify and soften private society.
 2†. Participation; sympathy.

If the parties die in the evening, they weep all night with a high voice, calling their neighbors and kinsred to society of their grief.
 The meanest of the people, and such as have least society with the acts and crimes of kings.

3. Those persons collectively who are united by the common bond of neighborhood and intercourse, and who recognize one another as associates, friends, and acquaintances.—4. An entire civilized community, or a body of some or all such communities collectively, with its or their body of common interests and aims; with especial reference to the state of civilization, thought, usage, etc., at any period or in any land or region.

Although society and government are thus intimately connected with and dependent on each other, of the two society is the greater.

Among philosophical politicians there has been spreading the perception that the progress of society is an evolution.

Specifically—5. The more cultivated part of any community in its social and intellectual relations, interests, and influences; in a narrow sense, those, collectively, who are recognized as taking the lead in fashionable life; those persons of wealth and position who profess to act in accordance with a more or less artificial and exclusive code of etiquette; fashionable people in general: as, he is not received into society. In this sense frequently used adjectively: as, society people; society gossip; a society journal.

Society became interested, and opened its ranks to welcome one who had just received the brevet of "Man of Letters."

These envied ladies have no more chance of establishing themselves in society than the benighted squire's wife in Somersetshire, who reads of their doings in the Morning Post.

As to society in 1837, contemporary commentators differ. For, according to some, society was always gambling, running away with each other's wives, causing and committing scandals, or whispering them; the men were spend-thrifts and profligates, the women extravagant and heartless.

6. An organized association of persons united for the promotion of some common purpose or object, whether religious, benevolent, literary, scientific, political, convivial, or other; an association for pleasure, profit, or usefulness; a social union; a partnership; a club: as, the Society of Friends; the Society of the Cincinnati; a sewing society; a friendly society.

In this sense the Church is always a visible society of men; not an assembly, but a society.

It is now near two hundred years since the Society of Quakers denied the authority of the rite altogether, and gave good reasons for disusing it.

Specifically—7. In eccles. law, in some of the United States, the corporation or secular body organized pursuant to law with power to sue and be sued, and to hold and administer all the temporalities of a religious society or church, as distinguished from the body of communicants or members united by a confession of faith.

When so used in this specific sense, members of the society are those who are entitled under the law to vote for trustees—usually adults who have been stated attendants for one year and have contributed to the support of the organization according to its usages, while members of the church are those who have entered into a religious covenant with one another. To a considerable extent both bodies are the same persons acting in different capacities. Under the law in some jurisdictions, and in some denominations in all jurisdictions, there is no such distinction.—Amalgamated societies. See amalgamate.

—Bible, building, cooperative, etc., society. See the qualifying words.—Dorcas Society, an association of women organized for the supply of clothes to the poor: named from the Dorcas mentioned in Acts ix. 36. Frequently the members of the society meet at stated times and work in common. Partial payment is generally required from all except the very poorest recipients.—Emigrant aid societies. See emigrant.—Fruit-bringing society. Same as Order of the Palm (which see, under palm2).—Guaranty society. See guaranty.—Harmony Society. See Harmonist, 4.—Red-Cross Society, Ribbon Society, etc. See the adjectives.—Society hands, in printing, workmen who belong to a trade society, and work under its rules. [Eng.]—Society houses, in printing, offices that conform to the rules of a trade society. [Eng.]—Society journal or newspaper, a journal which professes to chronicle the doings of fashionable society.—Society of the Perfectibilists. Same as Order of the Illuminati (which see, under Illuminati).—Society screw. See screw1.—Society verse, verse concerned with the lighter society topics; poetry of a

light, entertaining, polished character.—The Societies. See Cameronian, 1.—Syn. 1. Corporation, fraternity, brotherhood.—6 and 7. Union, league, lodge.

socii, n. Plural of socius.
 Socinian (sō-siū'i-an), a. and n. [= Sp. *Pg. It. Sociniano*, < NL. *Socinianus*, < *Socinus* (It. *Sozzini*): see def.] I. a. Pertaining to Lælius or Faustus Socinus or their religious creed.

II. n. One who holds to Socinian doctrines. See Socinianism.

Socinianism (sō-sin'i-an-izm), n. [*Socinian* + -ism.] The doctrines of the Italian theologians Lælius Socinus (1525-62) and Faustus Socinus (1539-1604) and their followers. The term is in theological usage a general one, and includes a considerable variety of opinion. The Socinians believe that Christ was a man, miraculously conceived and divinely endowed, and thus entitled to honor and reverence, but not to divine worship; that the object of his death was to perfect and complete his example and to prepare the way for his resurrection, the necessary historical basis of Christianity; that baptism is a declarative rite merely, and the Lord's Supper merely commemorative; that divine grace is general and exerted through the means of grace, not special and personally efficacious; that the Holy Spirit is not a distinct person, but the divine energy; that the authority of Scripture is subordinate to that of the reason; that the soul is pure by nature, though contaminated by evil example and teaching from a very early age; and that salvation consists in accepting Christ's teaching and following his example. The Socinians thus occupy theologically a midway position between the Arians, who maintain the divinity of Jesus Christ, but deny that he is co-equal with the Father, and the Humanitarians, who deny his supernatural character altogether.

Socinianize (sō-sin'i-an-iz), v. t.; pret. and pp. *Socinianized*, ppr. *Socinianizing*. [*Socinian* + -ize.] To render Socinian in doctrine or belief; tinge or tincture with Socinian doctrines; convert to Socinianism. Also spelled *Socinianise*.

I cannot be ordained before I have subscribed and taken some oaths. Neither of which will pass very well, if I am ever so little Popishly inclined or Socinianized.

O. T. Mason, Smithsonian Report, 1881, p. 501.

sociologic (sō'shi-ō-loj'ik), a. [*sociology* + -ic.] Same as *sociological*.
 sociologic (sō'shi-ō-loj'ik-al), a. [*sociologic* + -al.] Of or pertaining to sociology, or sociologic principles or matters: as, sociologic studies or observations.

sociologically (sō'shi-ō-loj'ik-al-i), adv. As regards sociology; with reference to sociology.
 sociologist (sō-shi-ō'lō-jist), n. [*sociology* + -ist.] One who treats of or devotes himself to the study of sociology. J. S. Mill.

sociology (sō-shi-ō'lō-jī), n. [*L. socius*, a companion, + Gr. *-λογία*, ζ *λέγειν*, speak: see -ology.] The science of social phenomena; the science which investigates the laws regulating human society; the science which treats of the general structure of society, the laws of its development, the progress of civilization, and all that relates to society.

The philosophical student of sociology assumes as data the general and undepicted facts of human nature, and with the aid of all such concrete facts as he can get from history he constructs his theory of the general course of social evolution—of the changes which societies have undergone, or will undergo, under given conditions.

J. Fiske, Evolutionist, p. 198.
 socionomy (sō-shi-ō'nō-jī-mi), n. [*L. socius*, a companion, + Gr. *νόμος*, law: see *nomen*.] The deductive and predictive stage of sociology. O. T. Mason, Smithsonian Report, 1881, p. 501.

socius (sō'shi-us), n.; pl. *socii* (-ī). [NL., < *L. socius*, a companion, associate: see *social*.] An associate; a member or fellow, as of a sodality, an academy, or an institution of learning. [Archaic.]

sock⁶ (sok), n. A dialectal form of *sog*.

sockdologer (sok-dol'ō-jēr), n. [Also *sockdologer*, *socdologer*, *sogdologer*; a perversion of *doxology*, taken in the sense of 'the finishing act,' in allusion to the customary singing of the doxology at the close of service.] 1. A conclusive argument; the winding up of a debate; a settler.—2. A knock-down or decisive blow.—3. Something very big; a whopper.

Fit for an Abbot of Theleme, . . .
 The Pope himself to see in dream
 Before his lenten vision gleam,
 He lies there, the *sogdologer*!
Lowell, To Mr. John Bartlett, who had sent me a seven-pound trout.

4. A patent fish-hook having two hooked points which close upon each other as soon as the fish bites, thus securing the fish with certainty. [U. S. slang in all uses.]

socket (sok'et), n. [*ME. soket*, *sokete*, < OF. *soket*, dim. of **soc*, m., *soche*, *souche*, F. *souche*, f., = It. *zocco*, m., a stump or stock of a tree; same as F. *socque* = Sp. *zoco* = Pg. *soco*, *socco*, a sock, wooden shoe, clog, < *L. soccus*, a sock, shoe: see *sock*¹. Cf. *socke*.] 1. An opening or cavity into which anything is fitted; any hollow thing or place which receives and holds something else.

Another peece wherin the *sokette* or mortays was maade that the body of the crosse stood in.

Holy Rood (E. E. T. S.), p. 155.

My eyes burn out, and sink into their sockets.

Fletcher, Wife for a Month, iv. 4.

The head [of the statue] seems to have been of another piece, there being a socket for it to go in, and probably it was of a more costly material.

Pococke, Description of the East, II. ii. 74.

Specifically—2. A small hollow tube or depression in a candlestick to hold a candle. Also called *nozle*.

Item, j. candlestick, withoute *sokettes*, welyng xvij]. unces.

Paston Letters, l. 473.

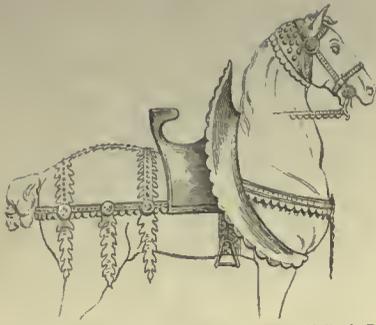

There was a lamp of brasse, with eight *sockets* from the middle stem, like those we use in churches.

Evelyn, Diary, Aug. 19, 1641.

3. In *anat.*, specifically, the hollow of one part which receives another; the concavity or excavation of an articulation: as, an eye-socket; the socket of the hip.—4. In mining, the end of a shot-hole, when this remains visible after the shot has been fired.—5. In well-boring, a tool with various forms of gripping mechanism, for seizing and lifting tools dropped in the tube.—6. In the just, a defense of steel attached to the saddle, and aery-

ing to protect the legs and thighs. Compare *bur1*, 3 (c). Also *socquette*.—**Ball and socket.** See *ball*.

socket (sok'et), *v. t.* [*socquet*, *n.*] To provide with or place in a socket.

socket-bayonet (sok'et-bā'ō-net), *n.* A bayonet of modern type, in which a short cylinder fits outside the barrel of the gun.

socket-bolt (sok'et-bōlt), *n.* In *mach.*, a bolt that passes through a thimble placed between the parts connected by the bolt.

socket-caster (sok'et-kās'ter), *n.* A caster attached to a socket which is fitted over the end of a leg of a piece of furniture.

socket-celt (sok'et-selt), *n.* A celt with a socket into which the handle or haft is fitted, as distinguished from celts of those forms in which the handle is secured to the outside of the head.

socket-chisel (sok'et-chiz'el), *n.* A chisel having a hollow tang in which the handle is inserted. The form is used for heavy chisels employed especially in mortising.

socket-drill (sok'et-dril), *n.* A drill for countersinking or enlarging a previously drilled hole. It has a central projection which fits the drilled hole, and laterally projecting cutting edges which enlarge or countersink the hole.

socketed (sok'et-ed), *p. a.* 1. Provided with or placed in a socket.

Two white marble columns or pillars, *socketed* in two foote stepps of black marble well polished.

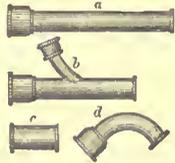

Archæologia, X. 404.

Referring to drainage, we read of *socketed* pipes which are enmocketed at the joints.

Lancet, 1859, II. 915.

2. In *anat.*, received in a socket; articulated by reception in a socket.

socket-joint (sok'et-jōint), *n.* A ball-and-socket joint; an enarthrodial articulation, or enarthrosis, as those of the shoulder and hip.

Socket-pipe. a, length of socket-pipe; b, branch-piece; c, connecting piece; d, elbow.

socket-pipe (sok'et-pīp), *n.* A joint of pipe with a socket at one end, usually intended to receive the small end of another similar joint.

socket-washer (sok'et-wosh'ēr), *n.* A washer with a countersunk face to receive the head of a bolt, etc.; a cup-washer. *E. H. Knight*.

socket-wrench (sok'et-rench), *n.* A wrench for turning nuts, having a socket fitted to a special size and shape of nut to be turned. See *cut* under *wrench*.

sockethead (sok'hed), *n.* A stupid fellow. [*Prov. Eng.*]

sockless (sok'les), *a.* [*sok1*, *n.*, + *-less*.] Lacking socks; hence, without protection or covering; said of the feet.

You shall behold one pair [of legs], the feet of which were in times past *sockless*.

Beau. and Fl., *Woman-Hater*, I. 3.

sockman, *n.* See *soeman*.

socky (sok'i), *a.* See *soaky*.

socke (sō'k), *n.* [Also *socke*; = G. Sw. *sockel* = Dan. *sokket*, < F. *soele*, a plinth, pedestal, < It. *zoccolo*, formerly *socollo*, a plinth, a wooden shoe, formerly also a stilt, < L. *socculus*, dim. of *soccus*, a light shoe, *cock*; see *sock1*. Cf. *sock-et*.] 1. In *arch.*, a low, plain member, serving as a foundation for a wall or pedestal, or to support vases or other ornaments. It differs from a pedestal in being without base or cornice, and is higher than a plinth. A *continued socke* is one extending around a building or part of a building.

2. One of the ridges or elevations which support the tentacles and sense-bodies of some worms.

soeman (sok'man), *n.* [Also *sockman*, *sokeman*; repr. AS. **sōcman* (ME. *socheman*, ML. *sokmannus*, *socmannus*, *socmannus*, *socmannus*, *socmannus*), a feudal tenant or vassal, < *sōc*, the exercise of judicial power, + *man*: see *soke1* and *soken*.] One who holds lands or tenements by socage.

A seignorie of pillsge, which had a baron of old ever ventured to arrogate, Burgess and citizen, *soeman* and *boeman*, villein and churl, would have buried him alive in his castle.

Bukeer, *My Novel*, xli. 19.

soemanry (sok'man-ri), *n.*; pl. *soemanries* (-riz). [*ML. socmanaria*, < *socmannus*, *sokmannus*, etc., < AS. *sōcman*: see *soeman*.] Tenure by socage.

These tenants . . . could not be compelled (like pure villeins) to relinquish these tenements at the lord's will, or to hold them against their own: "et ideo," says Bracton, "dicuntur liberi." Britton also, from such their freedom, calls them absolutely *sokemans*, and their tenure *sokemanries*.

Blackstone, *Com.*, II. vi.

Socotra (sok'ō-trā), *a.* and *n.* [*Socotra* (see *def.*) + *-an*.] 1. *a.* Of or pertaining to Socotra, an island in the Indian Ocean, off the east coast of Africa.

2. *n.* A native or an inhabitant of Socotra. Also *Socotrine*.

Socotrine (sok'ō-trin), *a.* and *n.* [*Socotra* (see *Socotra*) + *-ine*.] Same as *Socotran*.—**Socotrine aloes.** See *aloes*, 1.

socourt, *n.* A Middle English form of *succor*.

socquette, *n.* Same as *socket*, 6.

Socratic (sō-krat'ik), *a.* and *n.* [= F. *Socratique* = Sp. *Socrático* = Pg. It. *Socratico*, < L. *Socraticus*, < Gr. *Σωκρατικός*, of or pertaining to Socrates, < *Σωκράτης*, Socrates.] 1. *a.* Of or pertaining to the methods, style, doctrine, character, person, or followers of the illustrious Athenian philosopher Socrates (about 470–399 B. C.).

His father, Sophroniscus, was a sculptor, and he was brought up to the same profession. His mother, Phænarete, was a midwife. Socrates was unjustly accused before the council of the prytanes of being a corrupter of youth and of not believing in the gods of the city, was condemned, and died by drinking hemlock. His philosophy is known to us by the account of Xenophon, written to show the practical upshot of his teachings and the injustice of his sentence, and by the Dialogues of Plato, in most of which Socrates is introduced only to give an artistic setting to Plato's own discussions. Some things can also be inferred from fragments of Æschines, and from the doctrines of other companions of Socrates. He wrote nothing, but went about Athens frequenting some of the best houses, and followed by a train of wealthy young men, frequently cross-questioning those teachers whose influence he distrusted. He himself did not profess to be capable of teaching anything, except consciousness of ignorance; and he bargained for no pay, though he no doubt took moderate presents. He called his method of discussion (the *Socratic method*) *obstetrics* (see *maieutic*), because it was an art of inducing his interlocutors to develop their own ideas under a catechetical system. He put the pretentious to shame by the practice of *Socratic irony*, which consisted in sincerely acknowledging his own defective knowledge and professing his earnest desire to learn, while courteously admitting the pretensions of the person interrogated, and in persisting in this attitude until examination made it appear bitter sarcasm. He was opposed to the rhetorical teaching of the sophists, and had neither interest nor confidence in the physical speculations of his time. The center of his philosophy, as of all those which sprang directly or indirectly from his—that is to say, of all European philosophy down to the rise of modern science—was morality. He held that virtue was a species of knowledge; really to know the right and not to do it was impossible, hence wrong-doers ought not to be punished; virtue was knowledge of the truly useful. He was far, however, from regarding pleasure as the ultimate good, declaring that if anything was good in itself, he neither knew it nor wished to know it. The great problems he held to consist in forming general conceptions of the nature of truth, happiness, virtue and the virtues, friendships, the soul, a ruler, a suit of armor—in short, of all objects of interest. These conceptions were embodied in definitions, and these definitions were framed by means of analytic reflection upon special instances concerning which all the world were agreed. He would not allow that anything was known for certain concerning which competent minds opined differently. This process of generalization, the *Socratic induction*, together with the doctrine of the necessity of definitions, were his two contributions to logic. The disciples of Socrates were Plato, Euclides, Phædo, Antisthenes, Aristippus, Xenophon, Æschines, Simonias, Cebes, and about twenty more. Properly speaking, there was no Socratic school; but the Academy and the Megarian, Eleian, Eretrian, Cynic, and Cyrenaic schools are called *Socratic*, as having been founded by immediate disciples of Socrates.—**Socratic school.** See *school*.

2. *n.* A disciple of Socrates: as, Æschines the *Socratic*.

Socratical (sō-krat'i-kal), *a.* [*Socratic* + *-al*.] Socratic in some sense, or to some extent. [*Rare.*]

Socratically (sō-krat'i-kal-i), *adv.* In the Socratic manner; by the Socratic method.

Socraticism (sō-krat'i-sizm), *n.* [*Socratic* + *-ism*.] A Socratic peculiarity, absurdity, or the like. *Encyc. Brit.*, VIII. 579.

Socratism (sok'ra-tizm), *n.* [*Socrates* + *-ism*.] The doctrines or philosophy of Socrates. *Imp. Dict.*

Socratist (sok'ra-tist), *n.* [*Socrates* + *-ist*.] A disciple of Socrates; one who uses the Socratic method; a Socratic.

Socratize (sok'ra-tiz), *v. i.*; pret. and pp. *Socratized*, ppr. *Socratizing*. [*Socrates* + *-ize*.] To use the Socratic method. [*Rare.*]

"What is to prevent me from *Socratizing*?" was the question by which he [Ramus] established his individual right to doubt and inquiry.

J. Owen, *Evenings with Skeptics*, I. 255.

sod¹ (sod), *n.* [*ME. sod*, *sodde* = OFries. *sātha*, *sāda* = MD. *sode*, *soode*, *soede*, *socuwe*, *soye*, D. *zode*, *zoo*; = MLG. *sōdc*, LG. *sode* = G. *sode*, *sod*, turf; so called as being sodden or saturated with water; a deriv. or particular use of OFries. *sāth*, *sād* = MD. *sode*, later *sood*, *zoo* = MLG. *sōd*, LG. *sood* = MHG. *sōt*, *sōt*, boiling, seething, also a well, = AS. *seath*, a well, pit, < *scōthan* (pret. *scōth*, pp. *sodan*), etc., boil, seethe; see *scēthe*, *sodden*¹, etc.] 1. The upper stratum of grass-land, containing the roots of grass and the other herbs that may be growing in it; the sward or turf.

Tender blue-bells, at whose birth The sod scarce heaved. *Shelley*, *The Question*.

To rest beneath the clover sod. *Tennyson*, *In Memoriam*, x.

2. A piece of this grassy stratum pared or pulled off; a turf; a divot or fail.

She therefore, to encourage hir people against the enemies, mounted vp into an high place raised vp of turtes and *sods* made for the nonce.

Holinshed, *Hist. Eng.*, iv. 10.

Sod kiln, a lime-kiln made by excavating the earth in the form of a cone, filling with alternate layers of fuel and broken limestone, and covering the top with sods to prevent loss of heat. Sometimes the sides are lined with sods.—The *old sod*, one's native country; especially used by Irish emigrants: as, he's a clever lad from the *old sod*. [*Colloq.*]

sod¹ (sod), *v. t.*; pret. and pp. *sodded*, ppr. *sodding*. [*sod¹*, *n.*] To cover with sod; turf.

The slope was *sodded* and terraced with rows of sods, and the spectators looked down upon the circular basin at the bottom.

Harper's Mag., LXXIX. 558.

sod². An obsolete preterit and past participle of *seethe*.

soda (sō'dā), *n.* [= F. Sp. Pg. D. G. Sw. Dan. *soda* (NL. *soda*), < It. *soda*, *soda*, OIt. *soda* (= OF. *soilde*), saltwort, glasswort, fem. of *sodo*, contr. of *solido*, solid, hard: see *solid*.] 1. Sesquicarbonate or normal carbonate of sodium (Na₂CO₃); soda-ash: the latter being the common name of the commercial article, one of the most, if not the most, important of all the products of chemical manufacture. Various hydrated carbonates of sodium occur in nature—the decahydrate or *natron*; the monohydrate, known as *thermonatrite*; and *trona*, a compound of the sesquicarbonate and the bicarbonate with three equivalents of water. These natural carbonates occur in solution in the water of various alkaline lakes, or as deposits at the bottoms of such as have become dried up, but usually mixed with more or less common salt, sodium sulphate, and other saline combinations. It was from these deposits, and from the incineration of various plants growing by the sea-shore (*Salicorna*, *Chenopodium*, *Statice*, *Reaumuria*, *Nitraria*, *Tetragonia*, *Mesembryanthemum*), that soda was formerly obtained. These sources have become of little importance since artificial soda began to be made from common salt, a process invented by Leblanc, and put in operation near Paris toward the end of the eighteenth century. By this process common salt is decomposed by sulphuric acid, and the resulting sodium sulphate is mixed with limestone and coal, and heated in a reverberatory furnace, the product (technically known as *black ash*) consisting essentially of soluble sodium carbonate and insoluble calcium sulphid, which are easily separated from each other by lixiviation. By the Leblanc process the soda used in the arts was almost exclusively produced until about thirty years ago, when the so-called ammonia or Solvay process began to become of importance. This process had been patented in England as early as 1835, and tried there and near Paris, but without success. The difficulties were first overcome by E. Solvay, who in 1861 established a manufactory of soda by this process (since known by his name) near Brussels. By the ammonia or Solvay process a concentrated solution of common salt is saturated with ammonia, and then decomposed by carbonic acid. By this means sodium chlorid is converted into sodium carbonate, and the ammonia is afterward recovered by the aid of lime or magnesia. This process has within the past few years become of great importance, and at the present time about half the soda consumed in the world is made by it. Whether it will eventually entirely supplant the Leblanc process cannot yet be stated. The chief advantage which it presents is that the amount of coal consumed by it is much smaller than that required by the older process, so that countries where fuel is not very cheap and abundant can now make their own soda, being no longer dependent on England, as they were in large degree before the Solvay process became successful. For the properties of pure soda, see *sodium carbonate*, under *sodium*. Also called *mineral alkali*.

2. Soda-water. [*Colloq.*].—**Ball soda**, crude soda. —**Caustic soda**. See *caustic*.—**Nitrate of soda**. See *nitrate*.—**Salt of soda**, sodium carbonate.—**Soda cocktail**. See *cocktail*.—**Soda niter**. Same as *nitratin*.—**Soda powder**. See *powder*.

soda-alum (sō'dā-al'um), *n.* A crystalline mineral, a hydrated double sulphate of aluminium and sodium, found on the island of Melos, at Solfatara in Italy, and near Mendoza on the east of the Andes. Also called *mendozite*.

soda-ash (sō'dā-āsh), *n.* The trade-name of sodium carbonate. See *soda*.

soda-ball (sō'dā-bāl), *n.* An intermediate product in the manufacture of sodium carbonate, formed by fusing together sodium sulphate, coal-dust, and limestone. Also called *black ash*. See also *soda*.

soda-biscuit (sō'dā-bis'kit), *n.* A biscuit raised with soda. See *biscuit*, 2. [U. S.]

soda-cracker (sō'dā-krak'ēr), *n.* A kind of cracker or biscuit, consisting of flour and water, with a little salt, bicarbonate of soda, and cream of tartar, made into a stiff dough, rolled thin, and cut into squares. [U. S.]

The eccentric old telegraph editor . . . kept a colony of white mice in a squirrel-cage, feeding them upon *soda-crackers* and milk. *The Century*, XXXVIII, 875.

soda-feldspar (sō'dā-feld'spār), *n.* See *feldspar*.

soda-fountain (sō'dā-foun'tān), *n.* 1. A metal or marble structure containing water charged with carbonic-acid gas (or containing materials for its production), with faucets through which the water can be drawn off. Soda-fountains commonly contain tanks for flavoring-syrups and a reservoir for ice.—2. A strong metal vessel lined with glass or other non-corrosible material, used to store and transport water charged with carbonic-acid gas under pressure.

soda-furnace (sō'dā-fēr'nās), *n.* A furnace for converting into the carbonate, by fusing with chalk and slaked lime or small coal, the sulphate of soda obtained by treating common salt with sulphuric acid. In a usual form the cylinder which receives the charge is heated red-hot before being filled, and is caused to rotate by appropriate mechanism. *E. H. Knight*.

sodaic (sō-dā'ik), *a.* [*soda* + *-ic*.] Of, relating to, or containing soda: as, *sodaic* powders.

sodaine, *a.* An obsolete form of *sudden*.

soda-lime (sō'dā-līm), *n.* In *chem.*, a mixture of caustic soda and quicklime, used chiefly for nitrogen determinations in organic analysis.

sodalite (sō'dā-līt), *n.* [*soda* + *-lite*.] A mineral so called from the large portion of soda which enters into its composition. It is commonly found in volcanic rocks, occurring in isometric crystals and also massive, and is usually of a blue color, also grayish, greenish, yellowish, and white. It is a silicate of aluminium and sodium with sodium chlorid.

sodality (sō-dal'i-ti), *n.* [= *F. sodalité*, < *L. sodalitas*], companionship, friendship, a brotherhood or society, < *sodalis*, a mate, a fellow, a boon companion.] A fraternity; confraternity: especially in use by Roman Catholics for a religious fraternity or society.

He was a learned gentleman, and one of the club at the Mermaid, in Fryday street, with Sr Walter Raleigh, &c., of that *sodalitie*, heroes and wits of that time. *Aubrey*, *Lives* (Thomas Hariot), note.

soda-lye (sō'dā-lī), *n.* A solution of sodium hydrate in water.

soda-mesotype (sō'dā-mes'ō-tīp), *n.* Same as *natrolite*.

soda-mint (sō'dā-mīnt), *n.* A mixture containing sodium bicarbonate and spearmint.

soda-paper (sō'dā-pā'pēr), *n.* A paper saturated with sodium carbonate: used as a test-paper, and also for inclosing powders which are to be ignited under the blowpipe, so that they may not be blown away.

soda-plant (sō'dā-plānt), *n.* A saltwort, *Salsola Soda*, one of the plants from whose ashes barilla was formerly obtained.

soda-salt (sō'dā-sālt), *n.* In *chem.*, a salt having soda for its base.

soda-waste (sō'dā-wāst), *n.* In the soda industry, that part of soda-ball or black ash which is insoluble in water. It contains sulphids and hydrates of calcium, coal, and other matters.

soda-water (sō'dā-wā'tēr), *n.* 1. A drink generally consisting of ordinary water into which carbonic acid has been forced under pressure. On exposure to the ordinary atmospheric pressure, the excess of carbonic acid escapes, thus causing effervescence. It rarely contains soda in any form; but the name originally applied when sodium carbonate was contained in it has been retained. It is generally sweetened and flavored with syrups.

2. A solution used to cool drills, punches, etc., used in metal-working.

sod-burning (sod'bēr'ning), *n.* In *agri.*, the burning of the turf of old pasture-lands for the sake of the ashes as manure.

sod-cutter (sod'kut'ēr), *n.* A tool or machine for cutting or trimming sods; a paring-plow; a sodding-spade.

sodden¹ (sod'n), *p. a.* [*ME. soddēn, soden*, < *AS. sodēn*: see *seethe*.] 1. Boiled; seethed.

And also brede, *soddyn* egges, and somtyme other vytayles. *Sir R. Guyforde*, *Pylgrimage*, p. 17.

Which dntined by the blade-bones of sheepe, *sodde* and then burnt to powder. *Purchas*, *Pilgrimage*, p. 414.

2. Soaked and softened, as in water; soaked through and through; soggy; pulpy; pultaceous; of bread, not well baked; doughy.

It had ceased to rain, but the earth was *sodden*, and the pools and rivulets were full. *Charlotte Brontë*, *Shirley*, iv.

3. Having the appearance of having been subjected to long boiling; parboiled; bloated; soaked or saturated, as with drink.

Double your flea! as you were! faces about! Now, with the *sodden* face, keep in there! *Beau. and Fl.*, Knight of Burning Pestle, v. 2.

sodden² (sod'n), *v.* [*sodden*¹, *p. a.*] I, *intrans.*

1. To be seethed or soaked; settle down as if by seething or boiling.

It [avarice] takes as many shapes as Proteus, and may be called above all the vice of middle life, that *sodden* into the gangrene of old age, gaining strength by vanquishing all virtues. *Mrs. S. C. Hall*.

2. To become soft, as by rotting. [Unique.]

They never fail who die In a great cause: the block may soak their gore; Their heads may *sodden* in the sun. *Byron*, *Marino Faliero*, li. 2.

II, *trans.* To soak; fill the tissues of with water, as in the process of seething; saturate. Clothes . . . *soddened* with wet.

Dickens, *Little Dorrit*, i. 11.

sodden^{3†} (sod'n), *a.* [*sod*¹ + *-en*².] Of sods; soddy. *Court and Times of Charles I.*, II, 285.

[Rare.]

soddenness (sod'n-nes), *n.* Sodden, soaked, or soggy character or quality.

The *soddenness* of improperly boiled or fried foods will be avoided. *Science*, XV, 230.

sodding-mallet (sod'ing-mal'et), *n.* A beating-tool with a broad, flat face, for smoothing and compacting newly laid sods.

sodding-spade (sod'ing-spād), *n.* A spade with a flat, sharp blade, used for cutting sods; a sod-cutter.

soddy (sod'i), *a.* [*sod*¹ + *-y*¹.] Consisting of sod; covered with sod; turfy.

soden[†], **sodet**. Middle English forms of *sodden*, past participle of *seethe*.

soden[†], **sodeint**, *a.* Obsolete forms of *sudden*.

sodenet, *n.* A Middle English form of *subdean*.

sodert, *n.* and *v.* A former spelling of *solder*. *Isa.* xli. 7.

sodeynt, **sodeynlichet**. Obsolete forms of *sudden*, *suddenly*.

sodger¹ (sō'jēr), *n.* A dialectal form of *soldier*.

sodger² (soj'ēr), *n.* The whelk. *Halliwel*. [Prov. Eng.]

sodic (sō'dik), *a.* [*sod(ium)* + *-ic*.] Consisting of or containing sodium.

sodic-chalybeate (sō'dik-kā-lib'ē-āt), *a.* Containing both iron and sodium: used of mineral waters.

sodium (sō'di-um), *n.* [= *F. G. sodium* = *Sp. Pg. It. sodio*, < *NL. sodium*, < *soda* + *-ium*.] Chemical symbol, Na (natrium); atomic weight, 23.

The metallic base of the alkali soda. See *soda* and *metal*. It was first isolated by Davy, in 1807, by electrolysis, and is at present obtained on a large scale by igniting sodium carbonate with charcoal. Sodium is a silver-white metal with a high luster, but it oxidizes rapidly on exposure to moist air. Heated in the air, it burns rapidly with a bright-yellow flame, very characteristic of the metal; thrown into cold water, it oxidizes, but does not become hot enough to set the evolved hydrogen on fire, as potassium does; with hot water, ignition of the hydrogen takes place. Its specific gravity at 60° is 0.9735; at the ordinary temperature it has the consistency of wax; at 204° it melts, and forms a liquid resembling mercury in appearance. Next to silver, copper, and gold, it is, of the metals, the best conductor of heat and electricity; next to cesium, rubidium, and potassium, it is the most electropositive of the metals. It is extensively used in the laboratory as a powerful reducing agent; it is closely analogous to potassium in its chemical relations. Two of its compounds are very widely diffused in nature, and of the highest importance from various points of view; these are common salt and sodium carbonate, or soda.—**Sodium bicarbonate**, a compound having the formula NaHCO₃. It is a white crystalline powder, with a weaker alkaline taste than the other carbonate described below, and less soluble in water. Also called *soda saleratus*.—**Sodium borate**. See *borax*.—**Sodium carbonate**, a compound having the formula Na₂CO₃, either anhydrous or containing water of crystallization. (The method of manufacture is described under *soda*.) Anhydrous sodium carbonate, or chemically pure soda, is a white powder having an alkaline taste and reaction, readily soluble in water with evolution of heat. It fuses at a dull-red heat to a clear liquid. It is used in enormous quantities in the arts for a great variety of purposes. When crystallized from aqueous solution it forms transparent crystals, called *washing-crystals*, which contain ten equivalents of water. These effloresce on exposure to air.—**Sodium chlorid**, common salt, NaCl.

See *salt*, 1. **Sodium line**, the bright-yellow line (strictly a double line) which incandescent sodium vapor gives when viewed by the spectroscope: it corresponds to the dark absorption-line D (D₁ and D₂) of the solar spectrum.—**Sodium nitrate**. See *nitrate of soda*, under *nitrate*.

sod-oil (sod'oil), *n.* Oil pressed from sheepskins by tanners, and used in manufacturing the lowest grades of brown soap.

Sodom-apple (sod'om-ap'pl), *n.* 1. Same as *apple of Sodom* (which see, under *apple*). Specifically—2. The nightshade, *Solanum Sodomium*; also, sometimes, in the United States, the horse-nettle, *S. Carolinense*, or some similar species.

sodomist (sod'om-ist), *n.* [*Sodom* (see *Sodomite*) + *-ist*.] A sodomite.

Sodomite (sod'om-it), *n.* [*ME. sodomite*, < *OF. (and F.) sodomite* = *Sp. Pg. sodomita* = *It. sodomito* = *G. sodomit*, < *LL. Sodomita*, < *Gr. Σόδομις*, an inhabitant of Sodom, < *Σόδομα*, *LL. Sodoma*, < *Heb. Sedōm*, Sodom.] 1. An inhabitant of Sodom, an ancient city which, according to the account in Genesis, was destroyed by fire from heaven on account of the wickedness of its inhabitants.—2. [*i. e.*] One who is guilty of sodomy. *Deut.* xxiii. 17.

3. A mixture of fine earthy material with more or less organic matter resulting from the growth and decomposition of vegetation on the surface of the ground, or from the decay of animal matter (manure) artificially supplied. The existence of soil over any area implies a previous decomposition of the rocks, and climatic and other physical conditions favorable to the growth of vegetation. As these conditions vary, so varies the thickness of the soil. That which lies next beneath the soil and partakes of its qualities, but in a less degree, is called the *subsoil*.

Sir Walter Blunt, new lighted from his horse,
Staid with the variation of each soil

Betwixt that Holmedon said this seat of ours.
Shak., *1 Hen. IV.*, i. 1. 64.

Life without a plan,
As useles as the moment it began,

solace (*sol'ās*), v.; pret. and pp. *solaced*, ppr. *solacing*. [*ME. solacen*, *solacien*, < *OF. solacier*, *solacer*, *F. solacier* = Sp. *solazar* = It. *sozzazare*, < ML. *solatiare*, *solatiari*, give solace, console, < L. *solatium*, *solacium*, solace: see *solace*, n.]

I. trans. 1. To cheer in grief, trouble, or despondency; console under affliction or calamity; comfort.

Thy own sweet smile I see,
The same that oft in childhood *solac'd* me.
Cowper, My Mother's Picture.

Leclin . . . foamed away his heart at Averill's ear:
Whom Averill *solaced* as he might.
Tennyson, Aylmer's Field.

2. To allay; assuage; soothe: as, to *solace* grief by sympathy.

We sate sad together,
Solacing our despondency with tears.
Shelley, The Cenci, III. 1.

3. To amuse; delight; give pleasure to: sometimes used reflexively.

From that Cytee men gon be Watre, *solacyng* and dis-
protyng hem.
Mondeville, Travels, p. 21.

Houses of retrahite for the Gentlemen of Venice & Padus,
wherein they *solace themselves* in sommer.
Coryat, Crudities, I. 152.

= *Syn. 1* and *2. See solace*, n.

II. † intrans. 1. To take comfort; be consoled or relieved in grief.

One poor and loving child,
But one thing to rejoice and *solace* in,
And cruel death hath catch'd it from my sight!
Shak., R. and J., IV. 5. 47.

2. To take pleasure or delight; be amused; enjoy one's self.

These six assaulted the Castle, whom the Ladies seeing
so lusty and couragions, they were contented to *solace* with them.
Baker, Chronicles, p. 255.

solacement (*sol'ās-ment*), n. [*< solace + -ment*.] The act of solacing or comforting; the state of being solaced.

Solacement of the poor, to which our archquack now
more and more betook himself.
Carlyle, Cagliostro. (*Latham*.)

solacioust (*sō-lā'shūs*), a. [*< OF. solacieux* = Sp. *solazoso* = Pg. *solazoso*, < ML. *solatiosus*, full of solace, cheering, entertaining, < L. *solatium*, *solacium*, solace: see *solace*.] Affording pleasure or amusement; entertaining.

The abundant pleasures of Sodoma, which were . . .
pryde, plenty of feadyng, *solacyouse* pastymes, ydelnesse,
and crneltie.
Bp. Bale, English Votaries, II.

In the literal sense you meet with purposes merry and
solacioust enough.
Urquhart, tr. of Rabelais, Prol. to Gargantua, p. 95.

solæus, n. See *soleus*.

solah, n. See *sol²*, 1.

solaint, a. A Middle English form of *sullen*.

solan (*sō-lan*), n. [*Also (Sc.) soland* (with ex-
rescent *d*); < Icel. *sūla* = Norw. *sula* (in comp. Icel. *haf-sūla* = Norw. *hav-sula*, 'sea-solan'), a gannet, solan-goose. The *n* appar. represents the affixed def. art.; cf. *Shetland sooleen*, the sun, < Dan. *sol*, sun, + def. art. *en*, the.] The solan-goose.

Along th' Atlantick rock undreading climb,
And of its eggs despoil the *solan's* nest.
Collins, Works (ed. 1800), p. 99. (*Jodrell*.)

A white *solan*, far away by the shores of Mull, struck
the water as he dived, and sent a jet of spray into the air.
W. Black, Princess of Thule, xxvii.

Solanaceæ (*sol-ā-nā'sō-ē*), n. pl. [NL. (Bartling, 1830), < *Solanum* + *-acæ*.] An order of gamopetalous plants, of the series *Bicarpellatæ* and cohort *Polemonioides*, characterized by regular flowers commonly with a plicate border, carpels with many ovules, and a straight, spiral, or coiled embryo in fleshy albumen. The sepals, petals, and stamens are each usually five, the ovary usually entire and two-celled, with an undivided style. In its plicate corolla the order resembles the *Convolvulacæ*, which are, however, unlike it in their few-seeded carpels and usually twining habit. Its other nearest ally is the *Scrophularinæ*, to which the tribe *Salpiglossidæ*, by its didynamous stamens and somewhat irregular flowers, forms a direct transition. The order includes about 1,750 species, perhaps to be reduced to 1,500, classed in 72 genera of 5 tribes, for the types of which see *Solanum*, *Atropa*, *Hyoscyamus*, *Cestrum*, and *Salpiglossis*. They are erect or climbing herbs or shrubs, or sometimes trees, and either smooth or downy, but rarely with bristles. They bear alternate and entire toothed or dissected leaves, often in scattered unequal pairs, but never truly opposite. The typical inflorescence is a bractless cyme, either terminal, opposite the leaves, or lateral, but not truly axillary, and sometimes converted into umbels or sessile clusters or reduced to a single flower. They are usually rank-scented and possess strongly narcotic properties, either throughout or in special organs, in *Mandragora* in the root, in most others strongly developed in the leaves, as in belladonna, tobacco, henbane, stramonium, and nightshade. In some, as the henbane, this principle is actively developed for a limited time only; in others, parts from which it is absent furnish a valued food, as the potato, tomato, and egg-plant, or a condiment, as Cayenne pepper. The order furnishes also several tonics and numerous diuretic remedies, as species of *Physalis*, *Nicandra*, *Cestrum*, and *Solanum*. Plants of this order are widely dispersed through warm climates of both hemispheres, extending beyond the tropics in North and South America, especially in the west, but less frequent in Europe and Asia. They are absent in alpine and arctic regions and in Australia. About 17 genera and 55 species are natives of the United States, chiefly in the southwest, and largely of the genera *Lycium*, *Solanum*, and *Physalis*. For other important genera, see *Lycopersicum*, *Capsicum*, *Datura*, *Nicotiana*, *Petunia*, and *Solantra*.

solanaceous (*sol-ā-nā'shūs*), a. [*< NL. Solanacea + -ous*.] Belonging to the *Solanaceæ*.

soland (*sō-lan'd*), n. See *solan*.

solander¹ (*sō-lan'dēr*), n. Same as *sollanders*.
solander² (*sō-lan'dēr*), n. [*< Solander* (see quot. and *Solantra*).] A form of box designed to contain prints or drawings. See the quotation.

A *Solander* case is the invention of Dr. Solander, of memory dear to readers of "Cook's Voyages," who used one to contain and preserve specimens for natural history, drawings, and matters of the kind. It is really a box, generally shaped like a book, one side of which, turning on hinges, serves for a lid, while the front, or fore edge of the case, is furnished with hinges to be let down, so that the fronts as well as the tops of the contents can be got at.

N. and Q., 7th ser., VII. 135.

Solantra (*sō-lan'drā*), n. [NL. (Swartz, 1787), named after Daniel Solander (born 1736, died about 1781), a Swedish botanist and traveler.] A genus of solanaceous plants, of the tribe *Atropeæ*. It is characterized by solitary flowers with a long calyx-tube, an obliquely funnel-shaped corolla with broad imbricated lobes and induplicate sinuses, five stamens, and a two-celled ovary imperfectly four-celled by false partitions, forming in fruit a pulpy berry half-protruded from the torn membranous calyx. The 4 species are all American and tropical. They are lofty climbing coarse shrubby plants, with entire smooth fleshy and coriaceous shining leaves, clustered near the ends of the branches, and very large terminal white, yellowish, or greenish flowers on fleshy pedicels. *S. grandiflora*, *S. longiflora*, and other species are sometimes cultivated from the West Indies under the name *trumpet-flower*, forming handsome greenhouse evergreens, usually grown as climbers, or, in *S. longiflora*, as small shrubs.

Solanææ (*sō-lā'nē-ē*), n. pl. [NL. (A. L. de Jussieu, 1789), < *Solanum* + *-ææ*.] A tribe of plants of the order *Solanaceæ*. It is distinguished by flowers with the corolla somewhat equally plicate or divided into valvate or induplicate lobes, and having perfect stamens and a two-celled ovary which becomes an indehiscent berry in fruit, containing compressed seeds with a curved embryo and slender seed-leaves not broader than the radicle. It includes 31 genera, very largely natives of South America. For some of the most important, see *Solanum* (the type), *Capsicum*, *Lycopersicum*, and *Physalis*.

solanaceous (*sō-lā'nē-us*), a. Belonging to the *Solanaceæ*, or especially to *Solanum*.

solan-goose (*sō-lan-gōs*), n. [*< solan + goose*.] The gannet, *Sula bassana*. Also *solan* and *soland-goose*. See *Sulu*, and cut under gannet.

solania (*sō-lā'ni*), n. [NL., < *Solanum*.] The active principle of *Solanum Dulcamara*. See *solanine*.

solanine (*sol'a-nin*), n. [NL., < *Solanum* + *-ine*.] A complex body, either itself an alkaloid or containing an alkaloid, the active principle of bittersweet, *Solanum Dulcamara*. It is a narcotic poison.

solano (*sō-lā'nō*), n. [*< Sp. solano*, an easterly wind (cf. *solanazo*, a hot, violent easterly wind, *solana*, a sunny place), < L. *solanus* (sc. *ventus*), the east wind (usually called *subsolanus*), < *sol*, sun: see *sol¹*, *solar¹*.] The Spanish name of an easterly wind.

solanoid (*sol'a-noid*), a. [*< NL. Solanum + Gr. eidos*, form.] Resembling a potato in texture: said of cancers.

Solanum (*sō-lā'num*), n. [NL. (Tournefort, 1700), < LL. *solanum*, the nightshade.] A genus of gamopetalous plants, type of the order *Solanaceæ*, the nightshade family, and tribe *Solanææ*. It is characterized by flowers usually with a deeply five- or ten-lobed spreading calyx, an angled or five-lobed wheel-shaped corolla, very short filaments with long anthers which form a cone or cylinder, open by a vertical pore or a larger chink, and are almost destitute of any connective, and a generally two-celled ovary with its conspicuous placenta projecting from the partition. It is one of the largest genera of plants (compare *Senecio*), and includes over 950 published species, of which perhaps 750 are distinct. Their distribution is similar to that of the order, and they constitute half or two thirds of its species. They are herbs, shrubs, or small trees, sometimes climbers, of polymorphous habit, either smooth, downy, or woolly, or even viscous. They bear alternate entire or divided leaves, sometimes in pairs, but never truly opposite. Their flowers are yellow, white, violet, or purplish, grouped in panicle or umbel cymes which are usually scorpioid, sometimes apparently racemose, rarely reduced to a single flower. The species form two groups, the subgenera *Fachystemonum* and *Leptostemonum* (Dunal, 1818), the first unarmed and with broad anthers, the other with long anthers opening by minute pores, and commonly armed with straight spines on the branchlets, leaves, and calyx. South America is the central home of the genus, and of its most useful member, the potato, *S. tuberosum*, which occurs in numerous wild varieties, with or without small tubers on the rootstocks, from Lima to latitude 45° S. in Patagonia, and northward to New Mexico. (See *potato*, *potato-rot*, and *cuts under rotate* and *tuber*.) There are 15 native species in the United States, chiefly in the southwest, besides numerous prominent varieties and 5 introduced species. The seeds of many species are remarkably tenacious of life, and are therefore soon naturalized, especially the cosmopolitan weed *S. nigrum*, the common or black nightshade, and figure of leaf under *repand*; and compare *ointment of poplar-buds*, under *ointment*: from this the name *nightshade*

is sometimes extended to several other European species. For *S. Dulcamara*, the bitter-sweet, the other common species of the northeastern United States, a climber introduced for ornament, see *nightshade*, *felonwort*, *dulcamara*, and *dulcamarin*. Two others in the United States are of importance as prickly weeds, *S. Carolinense* (for which see *horse-nettle*), a pest which has sometimes caused fields in Delaware to be abandoned, and *S. rostratum* (for which see *sand-bur*), of abundant growth on the plains before the Mississippi, and known as the chief food of the Colorado beetle or potato-bug before the introduction of the potato westward. The genus is one of strongly marked properties. A few species with comparatively inert foliage have been used as salads, as *S. nodiflorum* in the West Indies and *S. sessiliflorum* in Brazil; but the leaves of most, as of the common potato, bitter-sweet, and nightshade, are more or less powerfully narcotic. (See *solanine*.) The roots, leaves, aecia, and fruit-juices yield numerous remedies of the tropics; *S. Jubatum* is strongly astringent; *S. pseudoquina* is a source of quina in Brazil, a powerful bitter and febrifuge; others are purgative or diuretic, as *S. paniculatum*, the jerubeba of Brazil; *S. stramonifolium* is used as a poison in Cayenne. The berries are often edible, as in the well-known *S. Melongena* (*S. esculentum*) (for which see *egg-plant*, *brinjal*, and *aubergine*). Others with edible fruit are *S. aviculare* (see *kangaroo-apple*), *S. Upora*, the cannibal-apple or bore-dina of the Fiji and other Pacific islands, with large red fruit used like the tomato, *S. vesicium*, the gummy of southeastern Australia, *S. album* and *S. Ethiopicum*, cultivated in China and southern Asia, *S. Gilo* in tropical America, *S. muricatum*, the pepino or melon-pear of Peru, and *S. racemosum* in the West Indies. *S. Quilboense*, the Quito orange, yields a fruit resembling a small orange in color, fragrance, and taste. *S. Indicum* (*S. Anguina*) is known as *Madagascar potato*, and *S. crispum* of Chili as *potato-tree*. Some species bear an inedible fruit, as *S. mammosum*, the macaw-bush (which see), also called *rusuber* and (together with *S. torvum*) *turkey-berry*. For *S. Bahamense*, see *cankerberry*, and for *S. Sodomense*, see *Sodom-apple*. Other species yield dyes, as *S. gnaphalodes* in Peru and *S. Vespertilio* in the Canaries, used to paint the face; *S. Guineense*, used to dye silk violet; and *S. indigoferum*, in cultivation in Brazil for indigo. *S. marginatum* is used in Abyssinia to tan leather; and the fruit of *S. saponaceum* is used as soap in Peru. Several species have been long cultivated as ornaments for their abundant red or orange berries, as *S. Pseudo-capsicum*, the Jerusalem cherry or winter-cherry (see *cherry*), and the Brazilian *S. Capsicastrum*, the dwarf winter-cherry or star-capsicum. Many others are now cultivated as ornamental plants, and are known by the generic name *Solanum*, as *S. Karwinskii*, from Venezuela, with violet flowers; *S. beta-ceum*, a small pink-flowered fleshy South American tree with fine scarlet egg-like fruit; and *S. lanceolatum*, with narrow willow-like leaves, reputed the most showy blooming species. Others are cultivated for their conspicuously foliage, as *S. crinitum* and *S. macroanthum*, with leaves 2½ feet long; *S. robustum*, clad in showy red down; and *S. Warszewiczii*, with handsome flowers and large leaves elegantly cut. The climber *S. jasminoides*, the jamine-catanium, is a house-plant from Brazil, esteemed for its large and abundant clusters of fragrant white or bluish flowers.

solar¹ (sō'lār), *a.* [= F. *solaire* = Sp. *Pg. solar* = It. *solare*, < L. *solaris*, of the sun, solar, < *sol*, the sun: see *sol*.] 1. Of, pertaining or related to, or determined by the sun: as, the *solar system*; *solar light*; *solar rays*; *solar influence*.

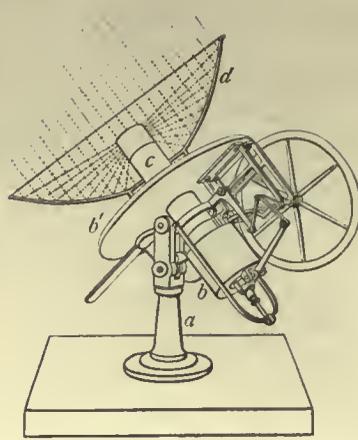

To make the solar and January year agree. *Raleigh*, Hist. World, ii. 3.
His soul proud science never taught to stray
Far as the solar walk or milky way.
Pope, Essay on Man, i. 102.

2. In *astrol.*, born under the predominant influence of the sun; influenced by the sun.

The cock was pleased to hear him speak so fair,
And proud beside, as solar people are.
Dryden, Cock and Fox, i. 652.

Solar apex, the point in space, situated in the constellation Hercules, toward which the sun is moving.—**Solar asphyxia**. Same as *sunstroke*.—**Solar boiler**, an apparatus for utilizing the heat of the sun's rays in the heating of water and the production of steam.—**Solar caloric engine**. Same as *solar engine*.—**Solar camera**, **chronometer**. See the nouns.—**Solar constant**, the number which expresses the quantity of radiant heat received from the sun by the outer layer of the earth's atmosphere in a unit of time. As shown by the researches of Langley, its value is probably somewhat over three (small) calories per minute for a square centimeter of surface normal to the sun's rays. See *calory and sun*.—**Solar cooking-apparatus**, an arrangement for cooking food by the heat of the sun's rays. It consists essentially of a cooking-vessel inclosed in a glass frame, upon which the solar rays are directed by reflectors.—**Solar cycle**. See *cycle*.—**Solar day**. See *day*, 3.—**Solar deity**, in *myth.*, a deity of the sun, or personifying some of the attributes or characteristics of the sun, or of the sun's action. A familiar example is the Greek Apollo or Helios. Solar deities play an important part in the mythology of ancient Egypt, the chief of them being Ra, the supreme power for good. The Egyptian solar deities are commonly distinguished in art by bearing upon their heads the solar disk. See also *cut* under *Apollo*, and compare *solarism*.—**Solar eclipse**.

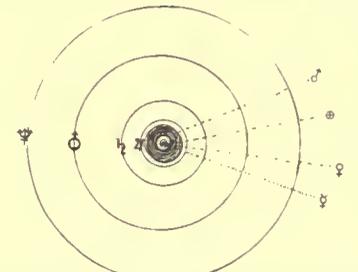

See *eclipse*, 1.—**Solar engine**, an engine in which steam for motive power is generated by direct solar heat concentrated by lenses or by reflectors upon a steam-generator,

See *equation*.—**Solar eyepiece**, a heliostatic eyepiece suitable for observing the sun. In the ordinary form, devised by Sir John Herschel, the sunlight is reflected at right angles by a transparent plane surface which allows most of the light and heat to pass through, so that only a thin shade-glass is needed. In the more perfect polarization-heliostatic eyepieces of Merz and others the light is polarized by reflection at the proper angle from one or more glass surfaces, and afterward modified in intensity at pleasure by reflection at a second polarizing surface, or by transmission through a Nicol prism which can be rotated.—**Solar fever**, dengue.—**Solar flowers**, flowers which open and shut daily at certain determinate hours.—**Solar ganglion**. See *microscope*.—**Solar month**. See *month*, 2.—**Solar myth**, in *compar. myth.*, a myth or heroic legend containing or supposed to contain allegorical reference to the course of the sun, and used by modern scholars to explain the Aryan mythologies. The fable of Apollo and Daphne is an example.—**Solar observatory**, an astronomical observatory especially equipped for the study of solar phenomena. The observatory at Mendon, near Paris, is an example.—**Solar physics**, the study of the physical phenomena presented by the sun.—**Solar plexus**, in *anat.*. See *plexus*. Also called *brain of the belly*.—**Solar print**, in *photog.*, a photographic print made in a solar camera from a negative. It is usually an enlargement, and is so called to distinguish it from an ordinary photo-print made by direct contact in a printing-frame, or otherwise.—**Solar prominence** or *protuberance*. solar² (sō'lār), *n.* See *sollar*.

solar³ (sō'lār), *n.* See *sola*².

Solariidæ (sō-lār-i-dē), *n. pl.* [NL., < *Solarium* + *-idæ*.] A family of pectinibranchiate gastropods, typified by the genus *Solarium*. The animal has the tentacles nearly united at the base; eyes on the upper part of the outer side of their base; the proboscis long, cylindrical, completely retractile; and the shell conical and generally declivous from the apex, with carinated margin of the last whorl, and a deep umbilical cavity, recalling a spiral staircase. The species inhabit tropical seas. They are rather large and generally handsome shells, some of which are common parlor ornaments. See *cut* under *Solarium*.

solaroid (sō-lār-i-oid), *a.* [< *Solarium* + *-oid*.] Of, or having characters of, the *Solariidæ*.

solariplex (sō-lār-i-pleks), *n.* The solar plexus (which see, under *plexus*). *Coates*, 1887.

solarism (sō-lār-izm), *n.* [< *solar*¹ + *-ism*.] Exclusive or excessive explanation of mythology by reference to the sun; over-addiction to the assumption of solar myths. *Gladstone*, in *Pop. Sci. Mo.*, XXVIII, 634.

solarist (sō-lār-ist), *n.* [< *solar*¹ + *-ist*.] An adherent of the doctrine of solarism. *Gladstone*, in *Pop. Sci. Mo.*, XXVIII, 876.

solarium (sō-lār-i-um), *n.* [< L. *solarium*, a sun-dial, a part of a house exposed to the sun, < *solaris*, of the sun: see *sol*.] 1. A sundial, fixed or portable. See *dial*, *poke-dial*, *ring-dial*, *sun-dial*.—2. A place arranged to receive the sun's rays, usually a flat house-top, terrace, or open gallery, formerly used for pleasure only, but in modern times commonly as an adjunct of a hospital or sanatorium, in which case it is inclosed with glass; a room arranged with a view to giving patients sun-baths.—3. [cap.] [NL. (Lamarck, 1799).] The typical genus of *Solariidæ*, containing the staircase-shells, as the perspective shell, *S. perspectivum*. They have a much depressed but regularly conic shell, angular at the periphery, and with a wide spiral umbilicus which has suggested the idea of a spiral staircase.

Staircase-shell (*Solarium perspectivum*).

solarization (sō-lār-i-zā'shon), *n.* [= F. *solarisation*; as *solarize* + *-ation*.] 1. Exposure to the action of the rays of the sun.—2. In *photog.*, the injurious effects produced on a negative by over-exposing it in the camera to the light of the sun, as blurring of outlines, obliteration of high lights, loss of relief, etc.; also, the effects on a print resulting from over-printing the sensitized paper or other medium.

solarize (sō-lār-iz), *v.*; pret. and pp. *solarized*, ppr. *solarizing*. [= F. *solariser*; as *solar*¹ + *-ize*.] I. *intrans.* In *photog.*, to become injured by too long exposure to the action of light.

It is a familiar fact that iodide of silver *solarizes* very easily—that is, the maximum effect of light is quickly reached, after which its action is reversed. *Lea*, Photography, p. 137.

II. *trans.* 1. To affect by sunlight; modify in some way by the action of solar rays.

A spore born of a *solarized* bacillus is more susceptible to the reforming influence than its parent was. *Science*, VI, 475.

2. In *photog.*, to affect injuriously by exposing too long to light.

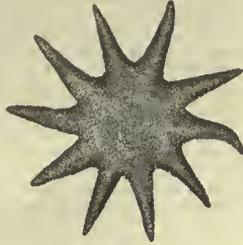

solary (sō-lār-ri), *v.* [< ML. **solaris* (used only as a noun), pertaining to the ground or soil, < L. *solum*, the ground, soil: see *soil*.] Of or belonging to the ground. [Rare.]

From the like spirits in the earth the plants thereof perhaps acquire their verdure. And from such solary irradiations may those wondrous varieties arise which are observable in animals. *Sir T. Browne, Vulg. Err., v. 12.*

solast, *n.* A Middle English form of *solace*.

Solaster (sō-las'tēr), *n.* [NL., < L. *sol*, the sun, + *aster*, a star.] The typical genus of *Solasteridæ*, having more than five rays.

In *S. endeca*, a common North Atlantic species, there are usually eleven or ten slender, tapering, and smooth arms, and the whole surface is closely reticulated. The corresponding sun-star of the North Pacific is *S. decemradiatus*.

Sun-star (*Solaster endeca*).

Solasteridæ (sō-las'tēr'i-dē), *n. pl.* [NL., < *Solaster* + *-idæ*.] A family of starfishes, typified by the genus *Solaster*. The limits of the family vary, and it is sometimes merged in or called *Echinasteridæ*.

There are several genera, most of them with more than five rays, as in *Solaster*. In *Cribrella* (or *Cribrella*) the rays are six. In *Crossaster papposus*, a common sun-star of both coasts of the North Atlantic, there are twelve short obtuse arms, extensively united by a membrane on the oral surface, and the upper side is roughened with clubbed processes and spines. *Echinaster sentus* is five-armed (see cut at *Echinaster*). The many-armed sun-stars of the genus *Helianaster* (in some forms of which the rays are more than thirty in number) are brought under this family or referred elsewhere. Also written *Solasteridæ*.

solatium (sō-lā'shi-um), *n.*; *pl. solatia* (-i).

[L., also *solacium*, consolation, solace: see *sol-acc*.] Anything that alleviates or compensates for suffering or loss; a compensation; specifically, in *Scots law*, a sum of money paid, over and above actual damages, to an injured party by the person who inflicted the injury, as a solace for wounded feelings.

sold¹ (sōld), *n.* Preterit and past participle of *sell*.

sold², *n.* [ME. *solde*, *souldye*, *solde*, *solde*, *solde*, *sold*, G. *sold* = Sw. Dan. *solde*, < OF. *solde*, *souldre*, *solde*, F. *solde*, pay (of soldiers), = Sp. *suelto* = Pg. sold², **soud**², *v. t.* [ME. **solden*, *souden*, < OF. *solder*, *souder*, pay, < *solde*, *solde*, pay: see *sold*², *n.*] To pay.

Imparfit is the pope that at the peuple sholde helpe, And *soude*th hem that sleeth suche as he sholde saue. *Piers Plowman* (C), xxii. 431.

soldado (sōl-dā'dō), *n.* [< Sp. *soldado*, a soldier: see *soldier*.] A soldier. *Scott*, Legend of Montrose, iii.

Come, help me; come, come, boys; *soldadoes*, comrades. *Fletcher*, Rule a Wife, iv. 3.

soldan, *n.* An obsolete form of *sultan*.

soldanel (sol'dā-nel), *n.* A plant of the genus *Soldanella*. Also written *soldanelle*.

Soldanella (sol-dā-nel'ā), *n.* [NL. (Tournefort, 1700) *soldanella*, dim. of *soldana*, a plant so called, < Olt. *soldo*, a coin: see *soldo*.] A genus of gamopetalous plants, of the order *Primulaceæ*, the primrose family, and tribe *Primulææ*. It is characterized by flowers with a five-parted calyx, a broadly funnel-shaped or somewhat bell-shaped corolla with fringed lobes, five stamens inserted on the corolla, and an ovoid ovary which becomes a circumscissile capsule with a five- to ten-toothed mouth, containing many seeds on an elongated central placenta. There are 4 species, spiny plants of Europe. They are smooth, delicate, stemless herbs, growing from a short perennial rootstock, and bearing long-stalked, fleshy, and entire roundish leaves with a heart-shaped base. The nodding flowers, single or umbel, are borne on a slender scape, and are blue, violet, rose-colored, or rarely white. *S. alpina*, growing near the snow-line on many European mountains, is, with other species, sometimes cultivated under the name *soldanel* or *soldanelle*, and has been also called *blue moonwort*.

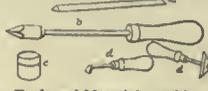

soldanest, *n.* An obsolete form of *sultanness*.

soldanriet, **soldanryt**, *n.* Obsolete forms of *sultantry*.

soldatesque (sol-dā-tesk'), *a.* [< F. *soldatesque*, < *soldat*, a soldier (see *soldier*), + *-esque*.] Of or relating to a soldier; soldier-like. [A Gallicism.]

His (the Captain's) cane clanking on the pavement, or waving round him in the execution of military cuts and *soldatesque* manoeuvres. *Thackeray*, Pendennis, xxii.

solder (sod'ēr or sol'dēr), *n.* [Early mod. E. also *souldre*, *soder*, *sowder* (dial. also *sawder*); < OF. *souldure*, *soudure*, *soudure*, *soudure*, F. *soudure* = Sp. Pg. *soldadura* = It. *soldatura*, a soldering; < OF. *souder*, *souldre*, orig. **soldre*, solder, consolidate, close or fasten together, = Pr. *soldar*, *soular* = Sp. Pg. *soldar* = It. *soldare*, *soldare*, < L. *solidare*, make firm, < *solidus*, solid, firm: see *solid*, and cf. *soud*.] 1. A fusible alloy used for joining or binding together metal surfaces or joints, as the edges of tin cans, jewelry, and kitchen utensils. Being melted on each surface, the solder, partly by chemical attraction and partly by cohesive force, binds them together. After cleaning the edges to be joined, the workman applies a solution of zinc in hydrochloric acid and also powdered rosin to the cleaned surfaces; then he touches the heated soldering-iron to the rosin, and holding the solder-bar and iron over the parts to be joined melts off little drops of solder at intervals along the margins, and runs all together with the hot iron. There are many of these alloys, as soft solder used for tinware, hard solder for brass and iron, gold solder, silver solder, spelter solder, plumbers' solder, etc. Every kind is used at its own melting-point, which must always be lower than that of the metals to be united, soft solders being the most fusible.

Tools and Materials used in Soldering. a, bar of solder; b, soldering-iron; c, rosin-box; d, e, shavers or scrapers, used for cleaning surfaces and leveling down protuberances or lumps in the soft solder after it is applied.

To solder such gold, there is a proper glew or *soder*. *Holland*, tr. of Pliny, xxxiii. 5.

Hence—2. Figuratively, that which unites in any way.

Friendship! mysterious cement of the soul, Sweetener of life, and solder of society. *Blair*, The Grave, l. 89.

Aluminium solder. See *aluminium*.—**Hard solder**, solder which fuses only at red heat, and therefore is used only to unite the metals and alloys which can endure that temperature. Spelter solder and silver solder are the principal varieties.—**Soft solder**. (a) See def. 1. (b) Gross flattery or fulsome praise, particularly when used for selfish aims.

solder (sod'ēr or sol'dēr), *v. t.* [Early mod. E. also *souldre*, *soder*, *sowder*; < *solder*, *n.*] 1. To unite by a metallic cement; join by a metallic substance in a state of fusion, which hardens in cooling, and renders the joint solid.

I *sowder* a metall with *sowder*. *Je soulede*. *Palsgrave*, p. 725.

2. Figuratively, to close up or unite firmly by any means.

As if the world should clesue, and that slaine men Should *souder* vp the Rift. *Shak.*, A. and C. (folio 1623), III. 4. 32.

Would my lips had been *soldered* when I spake on 't! *B. Jonson*, Epicoene, II. 2.

solderer (sod'ēr-ēr or sol'dēr-ēr), *n.* [< *solder* + *-er*.] One who or a machine which solders.

soldering (sod'ēr-ing or sol'dēr-ing), *n.* [Verbal *n.* of *solder*, *v.*] 1. The act of one who or that which solders.—2. A soldered place or part.

Even the delicate *solderings* of the ends of these wires to the copper clips were apparently the same as ever. *Elect. Rev.* (Eng.), XXV. 349.

Autogenous soldering. See *autogenous*.—**Galvanic soldering**, the process of uniting two pieces of metal by means of another metal deposited between them through the agency of a voltaic current.—**Soldering nipple**. See *nipple*.

soldering-block (sod'ēr-ing-blok), *n.* A tool employed in soldering cans, as a support and for trimming. It is adjustable for different sizes.

soldering-bolt (sod'ēr-ing-bōlt), *n.* Same as *soldering-iron*.

soldering-frame (sod'ēr-ing-frām), *n.* A form of clamp for holding the parts together in soldering cans.

soldering-furnace (sod'ēr-ing-fēr'nās), *n.* A portable furnace used by tanners, etc., for heating soldering-irons.

soldering-iron (sod'ēr-ing-ī'ern), *n.* A tool with which solder is melted and applied. It consists of a copper bit or bolt, having a pointed or wedge-shaped end, fastened to an iron rod with a wooden handle. In some forms the copper bit is kept hot by means of a gas-flame supplied through a flexible pipe connected with the handle. See cut under *solder*.

soldering-machine (sod'ēr-ing-mā-shēn'), *n.* In *sheet-metal work*, a general name for appliances and machines for closing the seams of tin cans with solder; also, a soldering-block, or any other machine or appliance rendering mechanical aid in soldering. The cans may be automatically dipped in molten solder, or the solder may be laid on the seams, which are then exposed to a gas-flame, hot blast, or the direct heat of a furnace.

soldering-pot (sod'ēr-ing-pōt), *n.* A small portable furnace used in soldering, especially for uniting the ends of telegraph-wires. It is

fitted with a clamp for holding the ends of the wires, etc., in position; and when they are in place the furnace is tilted, and the melted solder flows over the wires, etc., and forms a soldered joint.

soldering-tongs (sod'ēr-ing-tōngz), *n. sing.* and *pl.* A flat-nosed tongs for brazing the joints of band-saws. The saw is held in a scarfing-frame, with a film of solder between the lapping scarfed edges. This film is melted by clamping the heated tongs over the edges. *E. H. Knight*.

soldering-tool (sod'ēr-ing-tōl), *n.* A soldering-iron, or other tool for soldering.

solder-machine (sod'ēr-mā-shēn'), *n.* A machine for forming molten solder into rods or drops for use.

soldi, *n.* Plural of *soldo*.

soldier (sōl'jēr), *n.* [Also dial. *soyer*, *sodger*, *sojer*; early mod. E. *souldier*, *souldior*, *souldiour*; < ME. *souldier*, *souldiour*, *souldiour*, *sowdiour*, *sodiour*, *soudeur*, *soulier*, *soudoier*, < OF. *soldier*, also *soldoier*, *souldoier*, *souldoyer*, < ML. *soldarius*, a soldier, lit. 'one having pay,' < *solidus*, *soldum*, pay: see *sold*². Cf. D. *soldaat* = G. Sw. Dan. *soldat*, < F. *soldat*, < It. *soldato* = Sp. Pg. *soldado*, a soldier, lit. 'one paid,' < ML. *soldatus*, pp. of *soldare* (> It. *soldare* = OF. *solder*), pay, < *soldum*, pay: see *sold*².] 1. One who receives pay, especially for military service.

My fader hadde bene oneral in the lande bytwene the elne and the somme. And hadde goten many a *souldiour* that shold the next somer haue comen to helpe bruyn. *Caxton*, Reynard the Fox (ed. Arber), p. 39.

2. A person in military service. (a) One whose business is warfare, as opposed to a civilian.

Madame, ze misdoun . . . To swilche a simpul *souldiour* as I chame forto knele. *William of Palerne* (E. E. T. S.), l. 3951. *Fie*, my lord, *fie*! a *soldier*, and afeard? *Shak.*, Macbeth, v. 1. 40.

(b) One who serves in the land force, as opposed to one serving at sea.

3. Hence, one who obeys the commands and contends in the cause of another.

Give me a favour, that the world may know I am your *soldier*. *Fletcher*, Mad Lover, v. 4. To continue Christ's faithful *soldier* and servant unto his life's end. *Book of Common Prayer*, Public Baptism of Infants.

4. One of the rank and file, or sometimes including non-commissioned officers as opposed to commissioned officers.

Me thinks it were meete that any one, before he come to be a captain, should have bene a *souldiour*. *Spenser*, State of Ireland.

That in the captain's but a choleric word Which in the *soldier* is fist blasphemous. *Shak.*, M. for M., II. 2. 131.

5. Emphatically, a brave warrior; a man of military experience, skill, or genius; a man of distinguished valor; one possessing the distinctive carriage, looks, habits, or traits of those who make a profession of military service: as, he is every inch a *soldier*.

So great a *soldier* taught us there What long-enduring hearts could do In that world's-earthquake, Waterloo! *Tennyson*, Death of Wellington.

6. In *zool.*: (a) One of that section of a colony of some kinds of ants which does the fighting, takes slaves, etc.; a soldier-ant. (b) The corresponding form in a colony of white ants or termites. (c) A soldier-beetle. (d) A sort of hermit-crab; also, a fiddler-crab.

Under those Trees [Sapadillies] we found plenty of *Soldiers*, a little kind of Animals that live in Shells, and have two great Claws like a Crab, and are good food. *Dampier*, Voyages, I. 39.

(e) The red gurnard, *Trigla cuculus*. [Loeal, Eng.] (f) A red herring. [British sailors' slang].—7. One who makes a pretense of working, but is really of little or no use; one who works no more than is necessary to secure pay. See *soyer*, 2. [Colloq.].—8. *pl.* A name of the red campion (*Lychnis diurna*), of the ribwort (*Plantago lanceolata*), and of various other plants. *Britten and Holland*, Eng. Plant Names. [Prov. Eng. and Scotch.].—**Fresh-water soldier**. See *fresh-water*.—**Old soldier**. (a) A bottle emptied at a banquet, carouse, etc. [Slang.] (b) The stump, or unsmoked part, of a cigar. See *snipe*, 3. [Slang.].—**Red soldier**, a disorder of pigs; rouget.

A disorder affecting pigs, called in France "rouget," and in Ireland "red soldier," from the red patches that appear on the skin in fatal cases. This affection depends on a bacillus. *Lancet*, 1890, II. 217.

Single soldier. See *single*.—**Soldier of fortune**, one who is ready to serve as a soldier wherever profit, honor,

pleasure, or other advantage is most to be had.—Soldiers and sailors, soldier-beetles.—Soldier's wind (*naut.*), a fair wind for going and returning.—To come the old soldier over one, to impose upon one. [Colloq.]

I should think he was coming the old soldier over me, and keeping up his game. But no—he can scarce have the impudence to think of that.

Scott, St. Ronan's Well, xviii.

soldier (sōl'jēr), *v. i.* [*< soldier, n.*] 1. To serve as a soldier: as, to go *soldiering*.

Few nobles come. . . . Barra . . . is one. The reckless shipwrecked man: flung ashore on the coast of the Maldives long ago, while sailing and soldiering as Indian Fighter.

Carlyle, French Rev., III. i. 7.

2. To bully; hector. *Halliwel.* [Prov. Eng.] —3. To make a pretense or show of working, so as to be kept upon the pay-roll; shirk; feign sickness; malingering. See *soger*, 2. [Colloq.]

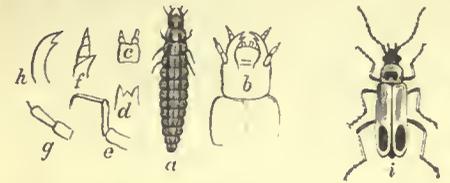

The two long lines of men attached to the ropes on the left shore . . . stretch out ahead of us so far that it needs an opera-glass to discover whether the leaders are pulling or only soldiering.

C. D. Warner, Winter on the Nile, p. 243.

4. To make temporary use of (another man's horse). Thus, a man wanting a mount catches the first horse he can, rides it to his destination, and then lets it go. [Slang, Australia.]

soldier-ant (sōl'jēr-ant), *n.* Same as *soldier*, 6 (a) (b).

soldier-beetle (sōl'jēr-bē'tl), *n.* Any beetle of

Pennsylvania Soldier-beetle (*Chaetognathus pennsylvanicus*). a, larva, natural size; b, head of same, from below, enlarged; c to h, mouth-parts, enlarged; i, beetle, natural size.

the family *Telephoridae*. The Pennsylvania soldier-beetle, *Chaetognathus pennsylvanicus*, is common in the United States.

The beetles live upon pollen, but their larvae are carnivorous and destroy other insects. The two-lined soldier-beetle, *Telephorus bilineatus*, is also common in the United States. It preys upon the larvae of the codling-moth.

Two-lined Soldier-beetle (*Telephorus bilineatus*). a, larva; b, head and thoracic joints of same, enlarged; c, beetle, (a and c natural size).

soldier-bug (sōl'jēr-bug), *n.* A predaceous bug of the family *Pentatomidae*; any rapacious reduvioid.

Podisus spinosus is a common North American species known as the *spined soldier-bug*. It preys upon many destructive larvae, such as the fall web-worm, cutworms, and the larvae of the Colorado potato-beetle. The ring-banded soldier-bug is *Perillus circumcinctus*. The rapacious soldier-bug is *Sinea diadema*. See cuts under *Pentatomidae*, *Perillus*, *Podisus*, *Sinea*, and *Harpactor*.

soldier-bush (sōl'jēr-bush), *n.* Same as *soldier-wood*.

soldier-crab (sōl'jēr-krab), *n.* A hermit-crab; a soldier.

soldieress (sōl'jēr-es), *n.* [*< soldier + -ess.*] A female soldier. [Rare.]

That equally canst poise sternness with pity.

Fletcher (and another), Two Noble Kinsmen, i. 1.

soldier-fish (sōl'jēr-fish), *n.* The blue darter or rainbow-darter, *Etheostoma caeruleum*, of gorgeous colors, the male having about twelve indigo-blue bars running obliquely downward and backward, and being otherwise vividly colored. It is abundant in rivers of the Mississippi valley.

soldier-fly (sōl'jēr-flī), *n.* A dipterous insect of the family *Stratiomyidae*: so called from its ornamentation.

soldiering (sōl'jēr-ing), *n.* [Verbal *n.* of *soldier*, *v.*] 1. The state of being a soldier; the act or condition of serving as a soldier; military duty; campaigning.

The simple soldiering of Orant and Foote was solving some of the problems that confused scientific hypothesis.

The Century, XXXVI. 664.

2. The act of feigning to work; shirking. [Colloq.]

soldier-like (sōl'jēr-lik), *a.* Soldierly. I will not say pity me; 'tis not a soldier-like phrase.

Shak., M. W. of W., II. i. 13. On hearing the general orders, he discharged a tempest of veteran, soldier-like oaths.

Irving, Knickerbocker, p. 326.

soldierly (sōl'jēr-li), *a.* [Early mod. E. *souldierly*; *< soldier + -ly¹.*] Like or befitting a soldier, especially in a moral sense: as, *soldierly* conduct.

He seem'd a souldierly person and a good fellow.

Evelyn, Diary, June 15, 1675. His own [face], tho' keen and bold and soldierly, Sear'd by the close ecliptic, was not fair.

Tennyson, Aymer's Field.

soldier-moth (sōl'jēr-mōth), *n.* An East Indian geometrid moth, *Euschema militaris*.

soldier-orchid (sōl'jēr-ōr'kis), *n.* A handsome orchid, *Orchis militaris*, of the northern Old World. It bears a dense oblong spike of small chiefly purple flowers. So named, perhaps, from the helmet-like adjustment of the sepals, or from its erect habit.

soldier's-herb (sōl'jēr-z'ērb), *n.* Same as *matricol.*

soldiership (sōl'jēr-ship), *n.* [*< soldier + -ship.*] The state of being a soldier; the qualities of a soldier, or those becoming a soldier; especially, skill in military matters.

His soldiership Is twice the other twain.

Shak., A. and C., II. i. 34.

soldierwood (sōl'jēr-wūd), *n.* A West Indian leguminous shrub, *Calliandra purpurea*. Its flowers are in heads, the stamens, as in the genus generally, united into a tube and long-exserted, forming the conspicuous part.

soldiery (sōl'jēr-i), *n.* [Early mod. E. *souldiery*, *soldiouric*; *< soldier + -y³.*] 1. Soldier-ship; military service.

Basillus . . . Inquired of his estate, adding promise of great rewards, among the rest offering to him, if he would exercise his courage in soldiery, he would commit some charge unto him under his lieutenant Phlanax.

Sir P. Sidney, Arcadia, I. To read a lecture of soldiery to Hannibal, the most cunningest warrior of his time.

2. Soldiers collectively, whether in general, or in any state, or any army, camp, or the like.

They, expecting a sharp encounter, brought Siegbert, whom they esteem'd an expert Leader, with his presence to confirm the Souldiery.

The ferocious deeds of a savage and infuriated soldiery.

soldo (sol'dō), *n.*; pl. *soldi* (-di). [*< It. soldo*, a coin: see *sol²*, *sou.*] A small Italian coin of

Billon Soldo of Peter Leopold, Grand Duke of Etruria, 1778, in the British Museum. (Size of original.)

copper or billon, the twentieth part of the lira; a sol or sou.

sole¹ (sōl), *n.* [*< ME. sole*, *soole* (of the foot or of a shoe); *< AS. sole* (pl. *solen*, for **solan*) = MD. *sole*, D. *sool* = MLG. *sole*, LG. *sale* = OHG. *sola*, MHG. *sole*, *sol*, G. *sohle* = Icel. *sōli* = Sw. *såla* = Dan. *saale* = Goth. *sulja*, the sole of the foot, = Olt. *suola*, also *suolo*, It. *suolo* = Sp. *suela* = Pg. *sola* = Pr. *sola*, *sol* = F. *sole*, the sole of the foot, *< ML. sola*, a collateral form (found in glossaries) of *L. soletis*, a slipper or sandal (consisting of a single sole fastened on by a strap across the instep), a kind of shoe for animals, also the sole of the foot (of animals), in ML. also the sole of a shoe, a flat under surface, the bottom, *< solum*, the ground, soil. Cf. *soil¹*, *sole²*.] 1. The bottom or under side of the foot; technically, the planta, corresponding to the palm of the hand.

The sole of ordinary language does not correspond well with *planta*, except in the cases of plantigrades. In digitigrades *sole* usually means only that part of the planta which rests upon the ground in ordinary locomotion, or the balls of the toes collectively; it also applies to the fore as well as the hind feet of such quadrupeds, thus including the corresponding parts of the *palma*, or palm; while the *planta* may extend far up the hind leg (only), as to the hock of the horse. In the horse *sole* is restricted to the under side of the hoof of either fore or hind feet (see def. 4 (b)). In birds the sole of the foot is the under side of the toes taken together. See *planta*, and cut under *plantigrade*, *digitigrade*, *scutelliplantar*, and *soldungulate*.

The sole of their [the cherubim's] feet was like the sole of a calf's foot.

2. The foot. [Rare.] Hast wandred through the world now long a day, Yett ceasest not thy weary soles to lead.

3. That part of a shoe or boot which comes under the sole of the foot, and upon which the wearer treads. In boots and shoes with heels, the term is usually limited to the part that is in front of the heel and of nearly uniform thickness throughout. See *half-sole*, and cuts under *boot²* and *poutaine*.

You have dancing shoes With nimble soles.

4. The part of anything that forms the bottom, and on which it stands upon the ground; the bottom or lower part of anything. (a) In *agri.*, the bottom part of a plow, to the fore part of which is attached the point or share. (b) In *farrery*, the horny under side of any foot; the bottom of the hoof. (c) In *fort.*, the bottom of an embrasure or gun-port. See *embrasure*, 2. (d) *Naut.*, a piece of timber attached to the lower part of a rudder, to render it level with the false keel. (e) The seat or bottom of a mine; applied to horizontal veins or lodes. (f) The floor of a bracket on which a plumber-block rests. (g) The plate which constitutes the foundation of a marine steam-engine, and which is bolted to the keelson. (h) The floor or hearth of the metal chamber in a reverberatory, puddling, or boiling furnace. (i) In *carp.*, the lower surface of a plane. (j) The bottom frame of a wagon, coach, or railway-car. (k) The metal shoe of a sled-runner. (l) The lower edge of a turbine. (m) In *ship-building*, the bottom plank of the cradle, resting on the bilgeways, and sustaining the lower ends of the poppets, which are mortised into the sole and support the vessel. See cut under *launching-ways*. E. H. Knight. (n) In *conch.*, the surface of the body on which a gastropod creeps.

5. A flat surface like the sole of the foot.

The stones in the boulder-clay have a characteristic form and surface. They are usually oblong, have one or more flat sides or soles, are smoothed or polished, and have their edges worn round.

European Sole (*Solea vulgaris* or *solea*).

compared to the form of a human sole; the dorsal and anal fins are very long, but free from the caudal, which has a rounded end, and pectorals are developed on both sides; the mouth is moderately decurved; the nostrils of the blind side are not dilated; and the height of the body is a little less than a third of the total length. The color is a dark brown, with a black spot at the end of the pectoral fin. This sole is common along the European coasts, and is one of the most esteemed of food-fishes.

The fish is white, firm, and of excellent flavor, especially when the fish has been taken in deep water. The average weight is about a pound, although the fish occasionally reaches a much larger size. It prefers sandy or gravelly shores, but retires into deep water when frost sets in. It feeds chiefly upon mollusks, but also on the eggs of fishes and other animals. It sometimes ascends into fresh water. There are other species, of several different genera, as *Achirus lineatus*, commonly called *hog-choker*. The name *sole* is also given to various species of the related family *Pleuronectidae*.

Along the Californian coast the common sole is a pleuronectoid, *Lepidopsetta bilineata*, which reaches a length of about 20 inches and a weight of five or six pounds, although its average weight as seen in the markets is about three pounds. In San Francisco only about two per cent. of the flatfishes caught belong to this species, but along Puget Sound it constitutes about thirty per cent. of the catch. It feeds chiefly on crustaceans and small fishes, and is regarded as an excellent food-fish. Other *Pleuronectidae* called soles along the Pacific coast of North America are the *Parophrys vetulus* and *Hippoglossoides jordanii*. See also cuts under *Pleuronectidae* and *Soleidae*.

Solea is the sole, that is a swete flashe and holson for æke people.

solenocoench (sō-lē'nō-kongk), n. [*< NL. Solenocoenchæ*.] A tooth-shell or dentaliid, as a member of the *Solenocoenchæ*.

Solenocoenchæ (sō-lē'nō-kong'kē), n. pl. [*NL.*, < *Gr. σωλήν*, a channel, pipe, + *κόγχη*, a shell: see *conch*.] An order or a class of mollusks; the tooth-shells: so called from the tubular shell. As an order, the *Solenocoenchæ* are the only order of the class *Scaphopoda*; as a class, the name is synonymous with the latter. See *Dentaliidae*. Also *Proscopocphala*, *Solenocoencha*.

Solenodon (sō-len'ō-don), n. [*NL.* (Brandt, 1833), < *Gr. σωλήν*, a channel, pipe, + *ὄδον* (*ōdon*) = *E. tooth*.] 1. The typical and only genus of the family *Solenodontidae*, containing the opossum-shrews, *S. paradoxus* of Hayti and *S. cubanus* of Cuba, respectively called *agouta* and *almiqui*. They are insectivorous mammals, singularly resembling opossums, with a long cylindrical snout, long scaly tail, five toes on each foot, the fore feet with very long claws, the ears moderate and rounded, and the pelage long and harsh. See *Solenodontidae*. Also *Solenodonta*.

2. [*l. c.*] A species of this genus; a solenodont. See *almiqui*, and *cut* under *agouta*.

solenodont (sō-leu'ō-dont), a. and n. [*< Solenodon* (-t-).] I. a. Of or pertaining to the *Solenodontidae*, or having their characters.

II. n. A solenodont.

Solenodontidae (sō-lē-nō-don'ti-dē), n. pl. [*NL.*, < *Solenodon* (-t-) + *-idae*.] A family of mammals, of the order *Insectivora*, peculiar to the West Indies. It is related to the Madagascar *Centetidae*, but has the pelage without spines, the penis abdominal, the testes perineal, the teats on the buttocks, the uterine horns ending in caecal sacs, the intestine without a caecum, the tibia and fibula distinct, the pubic symphysis short, the skull slender with an orbital constriction, small brain-case, large squamosal bones, annular tympanics, no postorbital processes or zygomatic arches, and the dental formula characteristic. There is but one genus, *Solenodon*. See *cut* under *agouta*.

Solenogastrea (sō-lē-nō-gas'trē), n. pl. [*NL.*] Same as *Solenogastres*.

Solenogastres (sō-lē-nō-gas'trēz), n. pl. [*NL.*, < *Gr. σωλήν*, a channel, pipe, + *γαστήρ*, the belly.] A group proposed by Gegenbaur for the reception of the two genera *Neomenia* (with *Proneomenia*) and *Chaetoderma*: now referred to the isopleurous *Mollusca*. See *Isopleura*, and *cut* under *Neomenia*.

solenoglyph (sō-lē-nō-glif), a. and n. [*< Gr. σωλήν*, a channel, pipe, + *γλύφειν*, carve, cut: see *glyph*.] I. a. Having apparently hollow or perforated maxillary teeth specialized and isolated from the rest; of or pertaining to the *Solenoglypha*, or having their characters. These teeth are the venom-fangs of such serpents as vipers and rattlesnakes. They are not actually perforated, but have an involute groove whose lips roll together and fuse, forming a tube through which the poison is spirted when the snake strikes. See *cut* under *Crotalus*.

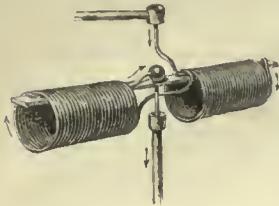

II. n. A solenoglyphic serpent.

Solenoglypha, Solenoglyphia (sol-ē-nog'li-fä, sō-lē-nō-glif'i-ä), n. pl. [*NL.*: see *solenoglyph*.]

The viperine or crotaliform serpents, a group of the order *Ophidia*, having the maxillary teeth few, canaliculated, and fang-like. It includes some of the most venomous serpents, as the rattlesnakes or pit-vipers, and the true vipers or adders. Nearly all fall in the two families *Crotalidae* and *Viperidae*, though two others (*Causidae* and *Atractaspididae*) are recognized. See *Proteroglypha*, and cuts under *adder*, *Crotalus*, *pit-viper*, and *rattlesnake*.

solenoglyphic (sō-lē-nō-glīf'ik), *a.* [*< solenoglyph + -ic.*] Same as *solenoglyph*.

solenoid (sō-lē'nōid), *n.* [*< Gr. σωληνοειδής, pipe-shaped, grooved, < σωλήν, a channel, pipe, + εἶδος, form.*] A helix of copper or other conducting wire wound in the form of a cylinder so as to be nearly equivalent to a number of equal and parallel circular circuits arranged upon a common axis. The ends of the wire are brought to the

Solenoid.

middle point, and when a current is passed through the circuit the solenoid behaves, as far as external action is concerned, like a long and thin bar magnet. For this reason, such a magnet is called a *solenoidal magnet*; and Ampère's theory of magnetism is based on the assumption that magnets and solenoidal systems of currents are fundamentally identical.

A magnetic *solenoid* is an infinitely thin bar of any form longitudinally magnetized with an intensity varying inversely as the area of the normal section [that is, the cross-section perpendicular to the length] in different parts. *J. E. H. Gordon, Elect. and Mag., 1. 157.*

solenoidal (sol-ē-noi'dal), *a.* [*< solenoid + -al.*] Pertaining or relating to a solenoid; resembling a solenoid, or equivalent to a solenoid magnetically.—**solenoidal magnet.** See *magnet*.

solenoidally (sol-ē-noi'dal-i), *adv.* As a solenoid. *Encyc. Brit., XV. 231.*

Solenomya (sol-ē-nō-mi-ā), *n.* [NL., *< Solen + Mya*¹.] The typical genus of *Solenomyidae*: so called because supposed to combine characters of the genera *Solen* and *Mya*. *Menke, 1830. Also Solemya.*

Solenomya togata (right valve).

Solenomyidae (sō-lē-nō-mi-i-dē), *n. pl.* [NL., *< Solenomya + -idae.*] A family of bivalve mollusks, typified by the genus *Solenomya*. The mantle-lobe is mostly united, with a single alaphoral orifice and one pedal opening; the foot is elongated, and there is a pair of narrow appendiculate branches; the shell is equivalve, with a thin, spreading epidermal, toothless hinge, and internal ligament. These bivalves are sometimes called *pod-gapers*. Also *Solenomyidae* (*J. E. Gray, 1840 and Solenomyidae.*)

solenostome (sō-lē'nō-stōm), *n.* [*< Solenostomus.*] A solenostomoid.

Solenostomi (sol-ē-nōs'tō-mi), *n. pl.* A sub-order of lophobranchiate fishes with an anterior spinous dorsal and spinous ventral fins, including the family *Solenostomidae*.

Solenostomidae (sō-lē-nō-stōm'i-dē), *n. pl.* [NL., *< Solenostomus + -idae.*] A family of solenostomous lophobranchiate fishes, typified by the genus *Solenostomus*. An anterior high short spinous dorsal and a posterior low one are widely separated; the pectorals are inserted low on narrow bases, and the caudal is well developed. The few known species are peculiar to the Indo-Pacific ocean. The females carry their eggs under the belly, in a pouch formed by the ventral fins. Also *Solenostomatidae*.

solenostomoid (sol-ē-nōs'tō-moid), *a. and n.* [*< Solenostomus + -oid.*] *I. a.* Of, or having characters of, the *Solenostomidae*; solenostomous.

II. n. A solenostome; any fish of the family *Solenostomidae*.

solenostomous (sol-ē-nōs'tō-mus), *a.* [*< Gr. σωλην, a channel, pipe, + στόμα, mouth.*] In *ichth.*, having a tubular or fistulous snout, as a pipe-fish of the genus *Solenostomus*; of or pertaining to the *Solenostomi* or *Solenostomidae*.

Solenostomus (sol-ē-nōs'tō-mus), *n.* [NL. (*Lacépède, 1803*), *< Gr. σωλην, a channel, pipe, + στόμα, mouth.*] The typical genus of *Sole-*

Solenostomus cyanopterus.

nostomidae, including such species as *S. cyanopterus*. Also *Solenostoma*.

sole-piece (sōl'pēs), *n.* In *mining*, the lower part of a set or durnz. See the quotation under *set*¹, *n.*, 13 (b).

sole-plate (sōl'plāt), *n.* 1. In *mach.*, a bed-plate: as, the *sole-plate* of an engine.—2. In a water-wheel, the back part of a bucket. It is often formed by a continuous cylinder concentric with the axis of the wheel, and having the buckets built upon it. *E. H. Knight.*

Also called *lobc-plate*.

solert, *n.* A Middle English form of *sollur*.

sole-reflex (sōl'rō'fleks), *n.* See *reflex*.

soleret, *n.* See *soleret*.

solert (sōl'ert), *a.* [*< L. sollers, less correctly solers (-ert-), skilful, clever, crafty, < sollus, all (see solc³), + ar(-t)-s, art, craft: see art².*] Crafty; subtle.

It was far more reasonable to think that, because man was the wisest (or most solert and active) of all animals, therefore he had hands given him.

Cudworth, Intellectual System, p. 635.

solertiousness (sō-lēr'shus-nes), *n.* [*< solertious (< L. solertia, solertia, skill, cunning, < sollers, solers, skilful) + -ness.*] The quality of being solert; subtleness; expertness; cleverness; skill.

The king confessed that they had hit upon the interpretation of his accret meaning: which abounded to the praise of Mr. Williams' solertiousness. *Ep. Hacket, Abp. Williams, 1. 22. (Davies.)*

sole-ship (sōl'ship), *n.* [*< solc³ + -ship.*] Limitation to only one individual; sole or exclusive right; monopoly. [Rare.]

The sole-ship of election, which, by the ancient canons, was in the bishops, they would have asserted wholly to themselves. *Jer. Taylor, Works (ed. 1835), II. 222.*

sole-tile (sōl'til), *n.* A form of tile used for bottoms of sewers, muffles, etc., of which the whole circumference is not in one piece. It is made flat or curved, according to the needs of the case. See cuts under *sewer*³. *E. H. Knight.*

soleus (sō-lē'us), *n.*; *pl. solei (-i).* [NL., also *soleus* (and *solea*), *< L. solea, the sole of the foot: see solc¹.*] A broad flat muscle of the calf of the leg, situated immediately in front of (deeper than) the gastrocnemius. It arises from the back upper part of the fibula and tibia, and its tendon unites with that of the gastrocnemius to form the tendo Achillis. The soleus is not a common muscle, and its great bulk in man, where it largely contributes to the swelling of the calf, is exceptional, and inversely proportionate to the smallness of the plantaris. See cuts under *muscle*¹ and *tendon*.

soleyn, *a. and n.* A Middle English form of *sullen*.

sol-fa (sōl'fä), *v.* [In ME. *solfe, solfyce*, *< OF. solfier, F. solfier = Sp. solfejar = Pg. solfejar, solfejar = It. solfeggiare, sing in gamut, sing by note, < sol + fa, names of notes of the gamut. Cf. solfeggio.*] *I. intrans.* In *music*, to solmizate, or sing solfeggio.

I have be preat and parsonn passynge threthi wynter, zete can I neither solfe ne synge ne acynte lynce rede. *Piers Plowman (B), v. 423.*

II. trans. In *music*, to sing to solmization-syllables instead of to words.

sol-fa (sōl'fä), *n. and a.* [See *sol-fa, v.*] *I. n.* In *music*: (a) The syllables used in solmization taken collectively; the act or process of solmization; solfeggio; also, rarely, same as *scale* or *gamut*.

As out of an alphabet or *sol-fa*. *Milton, Areopagitica, p. 40.*

Now was our overabundant quaver and trilling done away, and in lieu thereof was instituted the *sol-fa*. *Swift, Mem. of P. P.*

(b) See *tonic sol-fa*, under *tonic*. (c) The roll or baton used by the leaders of Italian choirs.

II. a. Of or pertaining to solmization in singing: as, the *sol-fa* method, or *tonic sol-fa* method.

sol-fa-ing (sōl'fä-ing), *n.* [Verbal *n.* of *sol-fa, v.*] In *music*, same as *solmization*.

sol-fa-ist (sōl'fä-ist), *n.* [*< sol-fa + -ist.*] In *music*, one who uses or advocates solmization.—**Tonic sol-fa-ist**, one who uses the tonic sol-fa system (which see, under *tonic*).

The *Tonic Sol-fa-ists* are now as integral part of the general musical life of the country. *Athenaeum, No. 3193, p. 24.*

sol-fa-mization (sōl'fä-mi-zä'shōn), *n.* [*< sol + fa + mi + -ize + -ation.*] Same as *solmization*.

solfanaria (sol-fä-nä'ri-ä), *n.* [It., *< solfo, sulphur: see sulphur.*] A sulphur-mine.

solfatara (sol-fä-tä'ra), *n.* [*< It. solfatara, < solfo, sulphur: see sulphur.*] An area of more or less corroded and disintegrated volcanic rock, over which sulphurous gases, steam, and other volcanic emanations escape through va-

rious orifices, frequently giving rise to what are known as mud-voleanoes, mud-cones, or salses; a region of dying or dormant volcanism.

solfatara (sol-fä-tä'rik), *a.* [*< solfatara + -ic.*] Of or pertaining to or resembling a solfatara.

Solfataric gases still issue, and are regarded as the result of the solfatara action upon chromic iron. *Amer. Jour. Sci., 3d ser., XXXIX. 73.*

solfeggio (sol-fē'jō), *n.*; *pl. solfeggii (-ii).* [It., *< sol + fa*, names of notes of the gamut (see *sol-fa*), + *-eggio*, a common It. termination.] In *music*: (a) Same as *solmization*. (b) A vocal exercise consisting of tones variously combined in steps, skips, or running passages, sung either to simple vowels or to arbitrary syllables, and designed to develop the quality, flexibility, and power of the voice.

solferino (sol-fē-rō'nō), *n.* [So named from *Solferino* in Italy, because this color was discovered in the year (1859) of the French victory of *Solferino*. Cf. *magenta*.] The color of rosaniline; an intensely chromatic and luminous purplish rose-color. See *purple*.

sol, *n.* Italian plural of *solo*.

solicit (sō-lis'it), *v.* [*< ME. solliciten, solycyten, < OF. solieiter, F. solliciter = Pr. sollicitar = Sp. Pg. sollicitar = It. sollicitare, sollicitare, < L. sollicitare, less correctly sollicitare, agitate, arouse, solicit, < sollicitus, less correctly sollicitus, agitated, anxious, punctilious, lit. 'thoroughly moved,' < OL. sollus, whole, entire (see solc³, solemn), + L. citus, aroused, pp. of ciere, shake, excite, cito: see cite¹. Cf. sollicitous.*] *I. trans.* 1. To arouse or excite to action; summon; invite; tempt; allure; entice.

That fruit . . . solicited her longing eye. *Milton, P. L., ix. 748.*

Sounds and some tangible qualities fall not to solicit their proper senses, and force an entrance to the mind. *Locke, Human Understanding, II. i. § 6.*

2. In *criminal law*: (a) To incite (another) to commit a crime. (b) To entice (a man) in a public place: said of a prostitute. (c) To endeavor to bias or influence by the offer of a bribe.

The judge is solicited as a matter of course by the parties, and they do not approach empty-handed. *Brougham.*

3. To disturb; disquiet; make anxious. [A Latinism.]

Solicit not thy thoughts with matters hid. *Milton, P. L., viii. 167.*

But anxious fears solicit my weak breast. *Dryden, Spanish Friar, III. 3.*

4. To seek to obtain; strive after, especially by pleading; ask (a thing) with some degree of earnestness or persistency: as, to solicit an office or a favor; to solicit orders.

But, would you undertake another suit, I had rather hear you to solicit that Than music from the spheræ. *Shak., T. N., III. 1. 120.*

To solicit by labour what might be ravished by arms was esteemed unworthy of the German spirit. *Gibbon, Decline and Fall, ix.*

The port . . . was crowded with those who hastened to solicit permission to share in the enterprise. *Bancroft, Hist. U. S., 1. 40.*

5. To petition or ask (a person) with some degree of earnestness or persistency; make petition to.

Did I solicit thee From darkness to promote me? *Milton, P. L., x. 744.*

6†. To advocate; plead; enforce the claims of; act as solicitor or advocate for or with reference to.

Should My brother henceforth study to forget The vow that he hath made thee, I would ever Solicit thy desert. *Ford, Lover's Melancholy, v. 1.*

Who solicited the cause of the poor and the infirm, the lame and wounded, the vagrant and lunatic, with such a particular industry and zeal as had those great and blessed effects which we at this day see and feel. *Bp. Atterbury, Sermons, 1. II.*

= *Syn. 4* and *5*. *Request, Beg*, etc. (see *ask*¹), press, urge, pray, plead for or with, sue for.

II. intrans. To make solicitation.

There are greater numbers of persons who solicit for places . . . in our own country, than in any other. *Addison, Freeholder, No. 48.*

When the same distress solicited the second time, we then feel with diminished sensibility. *Goldsmith, The Bee, No. 3.*

solicit (sō-lis'it), *n.* [*< solicit, v.*] Solicitation; request. [Rare.]

Frame yourself To orderly solicits. *Shak., Cymbeline, II. 3. 52.*

Within this hour he means his first *solicit*
And personal siege.

Shirley, Grateful Servant, l. 2.

solicitant (sō-lis'i-tant), *a.* and *n.* [*L. sollicitant(-t)s, sollicitan(-t)s*, pp. of *sollicitare*, urge, incite: see *solicit.*] **I. a.** Solicitous; seeking; making petition: as, *solicitant* of a job. *Encyc. Dict.*

II. n. One who solicits. *Imp. Dict.*

solicitate (sō-lis'i-tāt), *v. t.* [*L. sollicitatus, sollicitatus*, pp. of *sollicitare, sollicitare*, solicit: see *solicit.*] To solicit.

[He] did urge and *solicitate* him, according to his manner of words, to recant.

Foote, quoted in *Maitland on Reformation*, p. 494. (*Darvies.*)

solicitate (sō-lis'i-tāt), *a.* [*L. sollicitatus, sollicitatus*, pp.: see *solicit.*] Solicitous.

Beinge no lesse *solicitate* for them selues then meditate in what daunger they felowes had byn in Rito Negro.

Peter Martyr (tr. in *Eden's First Books on America*, ed. [Arber, p. 121].)

solicitation (sō-lis-i-tā'shən), *n.* [Formerly also *solicitation*; < OF. *solicitation*, F. *solicitation* = Sp. *solicitación* = Pg. *solicitação* = It. *sollecitazione, sollicitazione*, < L. *sollicitatio(n)-, sollicitatio(n)-*, vexation, instigation, < *sollicitare, sollicitare*, pp. *sollicitatus, urge, incite, solicit*: see *solicit.*] The act of soliciting. (a) Excitation; invitation; temptation; allurements; enticement; disturbing effect.

Children are surrounded with new things, which, by a constant *solicitation* of their senses, draw the mind constantly to them.

Locke.

The power of sustained attention grows with the ability to resist distractions and *solicitations*.

J. Sully, *Outlines of Psychol.*, p. 99.

To use an old-fashioned expression of the first students of gravitation (an expression which has always seemed to me amusingly quaint), the *solicitations* of Jupiter's attractive force are as urgent on a swiftly rushing body as on one at rest.

N. A. Rev., CXXXIX, 115.

(b) In *criminal law*: (1) The inciting of another to commit a crime. (2) The enticing of a man by a prostitute in a public place. (3) Endeavor to influence by bribery.

The practice of judicial *solicitation* has even prevailed in less despotic countries.

Brougham.

(c) An earnest request; a seeking with some degree of zeal and earnestness to obtain something from another: as, the *solicitation* of a favor.

He was generally poor, and often sent bold *solicitations* to everybody, . . . asking for places, for money, and even for clothes.

Ticknor, *Span. Lit.*, I, 353.

(d) Advocacy.

So as ye may be sure to have of him effectual concurrence and advise in the furtherance and *solicitation* of your charges, whether the pope's holiness amend, remain long sick, or (as God forbid) should fortune to die.

Ep. Burnet, *Hist. Ref.*, I, ii, 2.

=*Syn.* (c) Entreaty, supplication, importunity, appeal, petition, suit.

soliciter (sō-lis'i-tēr), *n.* [*L. sollicit + -er*.] Same as *solicitor*.

I . . . thanke God that ye have occasyon govyn unto you to be a *sollycyter* and sett forth of such thyngs as do and shall conserve my said ende.

Cardinal Wolsey, To S. Gardiner (Ellis's *Hist. Letters*, [1st ser., ciii].)

solicitor (sō-lis'i-tor), *n.* [Early mod. E. *solicitor*, < OF. (and F.) *soliciteur* = Pr. *solicitor* = Sp. Pg. *solicitor* = It. *sollicitatore, sollicitatore*, < LL. *sollicitator, sollicitator*, a solicitor, first used in sense of 'a tempter, seducer,' ML. an advocate, etc., < L. *sollicitare, sollicitare*, urge, incite, solicit: see *solicit.*] **1.** A tempter; an instigator.

Appetite is the Will's *solicitor*, and the Will is Appetite's controller.

Hooker, *Eccles. Polity*, i, 7.

2. One who solicits; one who asks with earnestness.

We single you
As our best-moving fair *solicitor*.

Shak., L. L. L., ii, 1, 29.

3. An advocate; specifically, one who represents a party in a court of justice, particularly a court of equity. Generally, in the United States, wherever the distinction between courts of law and of equity remains, practitioners in the latter are termed *solicitors*. In England solicitors are officers of the supreme court, and the medium between barristers and the general public; they prepare causes for the barrister, and have a right of audience as advocates before magistrates at petty sessions, at quarter-sessions where there is no bar, in county courts, and in the bankruptcy court, but they cannot appear as advocates in any of the superior courts, or at assizes, or at any court of commission. Solicitors were at one time officers only of the court of chancery, but the term is now applied to all attorneys. In Scotland solicitors are of two classes—solicitors in the supreme court, who occupy a position similar to that of solicitors in England; and solicitors at law, who are members of a society of law-agents at Edinburgh, incorporated by royal charter and entitled to practise before inferior courts; they are also known by the name of *procurators*. Law-agents of both kinds in Scotland are now on an equal footing. *Stater.*

Be merry, Cassio,
For thy *solicitor* shall rather die
Than give thy cause away.

Shak., *Othello*, iii, 3, 27.

I take bishops to be the worst *solicitors* in the world.

Swift, *Letter*, Oct. 10, 1710.

City solicitor, in some of the United States, an officer having charge of the legal business of a municipality.—**Crown solicitor**. See *crown*.—**Solicitor of the Treasury**, an officer of the Treasury Department having charge of the prevention and punishment of all frauds, and the conduct of all suits involving the revenue of the United States, except those arising under the internal revenue laws of the United States, which are in charge of the Solicitor of Internal Revenue.

solicitor-general (sō-lis'i-tor-jen'ē-rāl), *n.*; pl. *solicitors-general*. **1.** In England, an officer of the crown, next in rank to the attorney-general, with whom he is in fact associated in the management of the legal business of the crown and public offices. On him generally devolves the maintenance of the rights of the crown in revenue cases, patent causes, etc.—**2.** In Scotland, one of the crown counsel, next in dignity and importance to the lord advocate, to whom he gives his aid in protecting the interests of the crown, in conducting prosecutions, etc.—**3.** In the United States: (a) The second officer of the Department of Justice, who assists the attorney-general, and in his absence performs his duties. (b) A chief law officer of some of the States, corresponding to the attorney-general in others. *W. C. Anderson*, *Law Dict.*

solicitorship (sō-lis'i-tor-ship), *n.* [*L. sollicitor + -ship*.] **1.** The office or status of solicitor.—**2.** A mock respectful title of address applied with a possessive pronoun to a solicitor. Compare the analogous use of *lordship*. [Rare.]

Your good *solicitorship*, and rogue Welborn,
Were brought into her presence.

Massinger, *New Way to Pay Old Debts*, ii, 3.

solicitous (sō-lis'i-tus), *a.* [= Sp. *solicito* = Pg. *solicito* = It. *sollecito, sollicito*, < L. *sollicitus*, less correctly *solicitus*, agitated, disturbed, anxious, careful: see *solicit.*] Anxious; concerned; apprehensive; eager, whether to obtain something desirable or to avoid something evil; very desirous; greatly concerned; disturbed; uneasy; as, a *solicitous* temper or temperament: generally followed by an infinitive, or by *about, concerning, or for* (less frequently *of*) before the object of anxiety or concern.

Ever suspicious, anxious, *solicitous*, they are childishly drooping without reason.

Burton, *Anat. of Mel.*, p. 164.

You are *solicitous* of the good-will of the meanest person, uneasy at his ill-will.

Emerson, *Essays*, 1st ser., p. 216.

solicitously (sō-lis'i-tus-li), *adv.* In a solicitous manner; anxiously; with care or concern.

solicitousness (sō-lis'i-tus-nes), *n.* The state of being solicitous; solicitude.

solicitress (sō-lis'i-tres), *n.* [*L. sollicitor + -ess*.] A female solicitor or petitioner.

Beauty is a good *solicitress* of an equal suit, especially where youth is to be the judge thereof.

Fulder, *Worthies*, Northamptonshire.

solicitrix (sō-lis'i-triks), *n.* [*L. sollicitor*, with accom. L. fem. term. *-trix*.] Same as *solicitress*. *Darics.*

solicitude (sō-lis'i-tūd), *n.* [*OF. sollicitude, sollicitude*, F. *sollicitude* = Pr. *sollicitud* = Sp. *sollicitud* = Pg. *sollicitude* = It. *sollicitudine, sollicitudine*, < L. *sollicitudo, sollicitudo, anxietas, sollicitus, sollicitus*, anxious, solicitous: see *solicitous*.] **1.** The state of being solicitous; anxious care; carefulness; anxiety; concern; eager uneasiness of mind lest some desired thing may not be obtained or some apprehended evil may happen.

The terseness and brilliancy of his diction, though not at all artificial in appearance, could not have been attained without labor and *solicitude*.

Whipple, *Ess. and Rev.*, I, 141.

2. A cause or occasion of anxiety or concern.

Mrs. Todgers looked a little worn by cares of gravity and other such *solicitudes* arising out of her establishment.

Dickens, *Martin Chuzzlewit*, xxxii.

= *Syn.* *Concern, Anxiety*, etc. See *care*.

solicitudinous (sō-lis-i-tū'di-nus), *a.* [*L. sollicitudo, sollicitudo* (-din-), *solicitude*, + *-ous*.] Full of solicitude. [Rare.]

Move circumspectly, not meticulously, and rather carefully solicitous than anxiously *solicitudinous*.

Sir T. Browne, *Christ. Mor.*, I, 33.

solid (sol'id), *a.* and *n.* [Early mod. E. also *sollid*; < ME. *solide*, < OF. *solide*, vernaacularly *soude*, F. *solide* = Sp. *sólido* = Pg. *sólido* = It. *solido, sodo*, < L. *solidus*, also contracted *solidus*, firm, dense, compact, solid; akin to OL. *solus*, whole, entire, Gr. *ὅλος*, whole, entire, Skt.

surra, all, whole: see *solc*³. Hence ult. *solid*², *soldo, sol², sou, solder, soldier, consolidate*, etc.] **I. a. 1.** Resisting flexure; not to be bent without force; capable of tangential stress: said of a kind of material substance. See *II.*, 1.

O, that this too, too *solid* flesh would melt,
Thaw, and resolve itself into a dew!

Shak., *Hamlet*, I, 2, 129.

2. Completely filled up; compact; without cavities, pores, or interstices; not hollow: as, a *solid* ball, as distinguished from a *hollow* one; *solid* soda-water, not frothy.

With the *solid* darkness black
Closing round his vessel's track.

Shelley, *Lines* written among the Egean hills.

3. Firm; strong: as, a *solid* pier; a *solid* wall.

Doubtless a stanch and *solid* pece of framework as any January could freeze together.

=Syn. I. Dense.—8. Stable, weighty, important.

II. n. 1. A body which throughout its mass (and not merely at its surface) resists for an indefinite time a sufficiently small force that tends to alter its equilibrium figure, always springing back into shape after the force is removed; a body possessing elasticity of figure. Every such body has limits of elasticity, and, if subjected to a strain exceeding these limits, it takes a set and does not return to its original shape on being let go. This property is called *plasticity*. The minimum energy required to give a set to a body of definite form and size measures its resilience. When the resilience of a body is small and masks its springiness, the body is called *soft*. Even fluids transmit shearing forces if time be allowed, and many substances will yield indefinitely to very small (but not indefinitely small) forces applied for great lengths of time. So solids that have received a small set will sometimes partially recover their figures after a long time. This property in fluids is called *viscosity*, in solids *after-effect* (German *nachwirkung*). The phenomenon is connected with a regrouping of the molecules, and indicates the essential difference between a solid and a liquid. In fluids diffusion is continually active, and in gases it produces phenomena of viscosity. In liquids it is not rapid enough to give rise to sensible viscosity, but the free motion of the molecules makes the body fluid, while the tendency of sets of molecules to continue for a while associated makes the fluidity imperfect. In solids, on the other hand (at least when not under strain), there is no diffusion, and the molecules are consequently in stationary motion or describing quasi-orbits. They thus become grouped in the mode in which they have least positional energy consistent with their kinetic energy. When this grouping is slightly disturbed, it tends to restore itself; but when the disturbance is greater, some of the molecules will tend to return to their old places and others to move on to new situations, and this may give rise to a new permanent grouping, and exhibit the phenomenon of plasticity. But if not quite sufficient for this, disturbances of the molecular motions somewhat similar to the secular perturbations of the planets will result, from which there will be no restoration for a very long time. Solid bodies are very strongly cohesive, showing that the molecules attract one another on the whole; and they are generally capable of crystallization, showing that the attractions of the molecules are different in different directions.

2. In *geom.*, a body or magnitude which has three dimensions—length, breadth, and thickness—being thus distinguished from a *surface*, which has but two dimensions, and from a *line*, which has but one. The boundaries of solids are surfaces. Besides the three round bodies (the sphere, cone, and cylinder), together with the conoids, and the pyramids, prisms, and prismatoids, the most important geometrical solids are the five Platonic and the Kepler-Poinsot regular polyhedra, the two semi-regular solids, and the thirteen Archimedean solids. The faces, edges, or summits of one solid are said to correspond with the faces, edges, or summits of another when the radii from the center of the for-

(12 to 24 are the Archimedean solids.)

mer to the mid-faces, mid-edges, or summits can be simultaneously brought into coincidence with the radii from the center to the mid-faces, mid-edges, or summits of the latter. If two solids correspond facea to summits, summits to faces, and edges to edges, they are said to be *reciprocal*. If to the edges of one solid correspond the faces or summits of another, while to the faces and summits together of the former correspond the summits or faces of another, the latter is said to be the *summital* or *facial* *holohedron* of the former. The regular tetrahedron is the reciprocal of itself, and its reciprocal holohedra are the cube and octahedron. The reciprocal holohedra of these, again, are the semi-regular dodecahedron and the cuboctahedron. The facial holohedron of these, again, is the small rhombicuboctahedron. The faces of the truncated cube and truncated octahedron correspond to those of the cuboctahedron. The snub-cube has faces corresponding to the cuboctahedron, and twenty-four faces which in two sets of twelve correspond to the summits of two other cuboctahedra. The faces of the great rhombicuboctahedron correspond to those of the small rhombicuboctahedron. Just as the cube and octahedron are reciprocal, so likewise are the Platonic dodecahedron and icosahedron, though they are related to no hemihedral body like the tetrahedron. Their reciprocal holohedra are the semi-regular triacontahedron and the icosidodecahedron, and the facial holohedron of these, again, is the small rhombicosidodecahedron. The faces of the truncated dodecahedron and truncated icosahedron correspond to those of the icosidodecahedron. The snub-dodecahedron has faces corresponding to those of the icosidodecahedron, and two sets of others corresponding to the summits of two other icosidodecahedra. The faces of the great rhombicosidodecahedron correspond to those of the small rhombicosidodecahedron. The faces, summits, and edges of the great icosahedron and great stellated dodecahedron correspond respectively to the faces, summits, and edges of the Platonic dodecahedron and icosahedron. The great dodecahedron and small stellated dodecahedron are self-reciprocal, both faces and summits corresponding to the faces of the Platonic dodecahedron or summits of the icosahedron. The faces of the truncated tetrahedron correspond to the faces of the octahedron or summits of the cube.

3. *pl.* In *anat.*, all parts of the body which are not fluid: as, the *solids* and fluids of the body.
—4. *pl.* In *printing*, the parts of an engraving which show black or solid in print.—**Archimedean, rectangular, right solid.** See the adjectives.—**Cissoidal solid**, a solid generated by the rotation of the cissoid about its axis.—**Kepler solid**, or **Kepler-Poinsot solid**, a regular solid which wraps its center more than once. There are four such solids—the great icosahedron, the great dodecahedron, the small stellated dodecahedron, and the great stellated dodecahedron. Three of them were mentioned by Kepler, and all were rediscovered by Poinsot. The names here used were given by Cayley.—**Logistic solid**, a solid generated by the revolution of a logarithmic curve about its asymptote.—**Plastic solid**, a solid substance whose limit of elasticity is far below its point of rupture, so that it can be shaped; thus, putty and wrought-iron are *plastic solids*.—**Platonic solid**, one of the old regular solids which wrap the center only once. They are five—the tetrahedron, the cube, the octahedron, the twenty-vertexed dodecahedron, and the icosahedron.—**Regular solid**, a polyhedron whose faces are regular polygons, all alike.—**Semi-regular solid**, a body whose edges are all of equal length, whose faces are all alike and equally incline to one another at the edges, but whose faces are not regular polygons. Two such solids are known—the rhombic dodecahedron and triacontahedron.—**Solid of least resistance.** See *resistance*.—**Solid of revolution.** See *revolution*.

Solidago (sol-i-dá'gō), n. [NL. (Vaillant, 1720), < ML. *solidago*, goldenrod (*Solidago Virgaurea*), so called from its reputed vulnerary qualities, < L. *solidus*, solid; see *solid*.] 1. A genus of composite plants, the goldenrods, of the tribe *Asteroideæ* and subtribe *Homoehromeæ*, sometimes made the type of a further subdivision, *Solidagineæ* (De Candolle, 1836). It is characterized by several-flowered small and radiate yellow heads, with a small flat usually alveolate receptacle, and an oblong involucre of erect rigid bracts which are closely imbricated in several rows and are without herbaceous tips. The oblong or obovate five- to twelve-ribbed achenes bear a copious whitish pappus of long and nearly equal slender bristles. From *Aster*, which it closely resembles in technical characters, it is distinguished by its taller wand-like habit, yellow rays, smaller heads, and the absence of cordate leaves; from *Chrysopsis* and *Haplopappus* by its narrow few-flowered heads; and from *Bijelonia*, its other most

Solidago

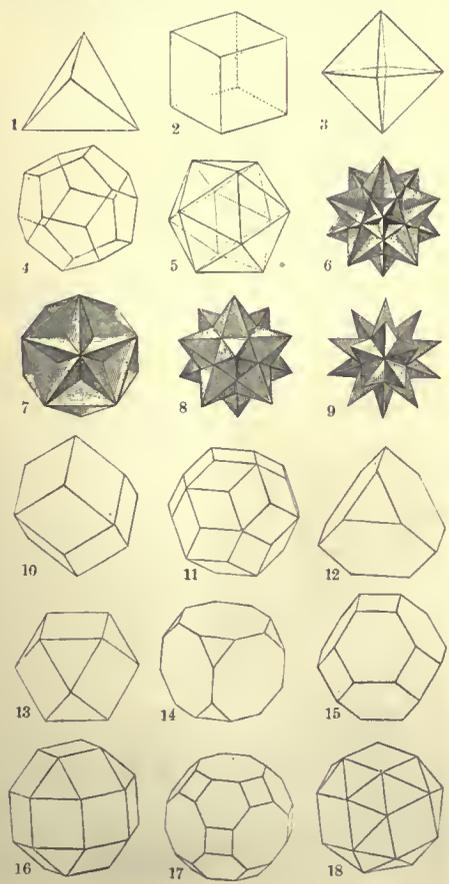

important near relative, by the presence of rays. The species have in general a very characteristic habit, being perennial herbs, usually with strictly erect unbranched stems, which bear numerous entire or serrate alternate sessile narrow stem-leaves and broader root-leaves, which taper into margined petioles. Numerous intermediate forms render many species difficult to distinguish. In the original species, *S. Virgaurea*, the golden-yellow flowers are massed in small clusters which form an elongated or interrupted spike, whence the popular name *goldenrod*. The typical inflorescence, however, is a terminal pyramidal panicle of determinate development, composed of numerous recurving and scorpioid one-sided racemes, best seen in *S. Canadensis* and *S. rugosa*. In other species the flowers form a dense thyrus of straight and terete crowded racemes, as *S. speciosa*, of the Atlantic and interior United States. A few others from the Ohio and Mississippi valleys, as *S. rigida*, produce nearly level-topped cymes. Four other cymose species were formerly separated as a genus, *Euthamia* (Nuttall, 1818), distinguished by lack of scorpioid branchlets and by their linear entire one- to five-nerved leaves, including the widely distributed species *S. lanceolata* and *S. Caroliniana* (*S. tenuifolia*), and connecting with *S. paucifloroidea*, of the Southern States and the Bahamas, formerly separated as a genus, *Chrysoma* (Nuttall, 1840), because of its shrubby stem and few-flowered heads with one to three rays. Several other species are slightly aberrant: *S. multiradiata*, of the Rocky Mountains, sometimes has twelve rays, others usually five; *S. discoidea*, a racemose Gulf species, is wholly without rays and has a purplish pappus; this, with *S. squarrosa* of northern rocks and *S. petolaris* of southern pine-barrens, varies also in the spreading tips of the involucre bracts. *S. bicolor* is remarkable for its cream-colored flowers. *S. verna*, of pine-woods near Wilmington, North Carolina, blooms in May; *S. uliginosa*, of northern peat-bogs, in July; *S. juncea* and *S. elliptica* in August; and *S. rugosa*, *S. Canadensis*, and most others mainly in September; *S. nemoralis* and *S. cæ-*

sia continue well into October. The genus is one of the most characteristic of the United States, numerous both in species and in individuals, and not entirely wanting in any region. In the northern and central States it gives to the landscape much of its beauty, and is an important element of the prevailing yellow of autumn. There are nearly 100 species, of which 80, besides more than 30 important varieties, are natives of the United States, and the others are nearly all American, 9 of them occurring in Mexico, 2, 3, or 5 in South America (3 in southern Brazil, 2 in Uruguay, and 1 in Chili), and 1 in Hayti. Only 2 species are natives of the Old World, *S. littoralis*, limited to the Tusean and Ligurian coast, and *S. Virgaurea*, which extends from Mount Parnassus north and west throughout Europe and into Siberia, Alaska, New York, and New England, in many widely differing varieties. Those of the United States are all, with 5 exceptions, confined to them and to British America (into which 32 extend), and are mainly natives of the Atlantic and central States. Numerous isolated species are southern; the northern are mostly of wider distribution and more abundant in individuals; 11 species are mainly confined to the high northern, 12 to the northeastern, 24 to the southern, 8 to the southwestern, 10 to the Pacific States; 0 belong to the Mississippi valley, of which *S. Missouriensis* is the only one widely distributed; 2 species, *S. odora* and *S. sempervirens*, extend throughout the Atlantic coast from Canada to Mexico, and the latter, the salt-marsh goldenrod, reappears at the Azores and at San Francisco. Forty-two species occur in the northeast quarter of the United States, 53 in the Southern States, and about 14 among the Rocky Mountains. *S. Canadensis*, the most numerous and most typical species, is also the one most widely diffused through the United States, followed next by *S. nemoralis* and *S. rugosa*. The species of this genus range from beyond 66° N. latitude to the city of Mexico, and from alpine summits to the sea-level; several are mostly confined to swamps, as *S. patula*, and a few to woodland borders, as *S. cæsia* and *S. bicolor*, but most are plants of dry open soil, especially *S. nemoralis*. In parts of the Atlantic coast the name *goldenrod* is locally confined to *S. odora*, the sweet goldenrod of authors, which contains in its dotted leaves an aromatic and stimulating volatile oil of an amiss odor and pale greenish-yellow color; it is also carminative and diaphoretic, and its infusion is used to relieve spasmodic pains and nausea; its dried flowers and leaves have been employed as a beverage, under the name of *Blue-Mountain tea*. *S. Virgaurea*, the goldenrod of Europe, contains an astringent and tonic principle, and was long in esteem for healing wounds.

herbalists of two and three centuries ago pronouncing it "one of the most noble wound-herbs," and prescribing "a tea of the young leaves, green or dry." It was also once in repute in Europe as a dye, and a variety of *S. nemoralis* is locally called *dyer's-weed* in America. *S. Canadensis* and others have been popularly known as *yellow-weed*, and *S. rugosa* as *bitterweed*. *S. rigida* is also a reputed astringent. The goldenrod has been recommended by many as the national emblem of the United States.

2. [*l. c.*] A plant of this genus; goldenrod. **solidaret** (sol-i-dār'), *n.* [Appar. < F. *solidaire*, solid (see *solidary*), with sense of ML. *solidus*, a piece of money: see *solidus*, *soldo*, *sol*.] A small piece of money.

Here's three *solidares* for thee; good boy, wink at me, and say thou sawest me not. *Shak.*, T. of A., li. 1. 46.

solidaric (sol-i-dar'ik), *a.* [Irreg. < *solidar-y* + *-ic*.] Characterized by solidarity. [Rare.]

In the very nature of things family supremacy will be absolutely incompatible with an interdependent *solidaric* commonwealth. *The Century*, XXXI, 745.

solidarité (sol-ē-dar-ē-tā'), *n.* [F.: see *solidarity*.] In *French law*: (a) The relation among co-debtors who are jointly and severally bound—that is, may be held jointly or severally at the option of the creditor. (b) The relation among co-creditors holding an obligation which gives expressly to each of them the right to demand payment of the entire debt, so that a payment made to any one will discharge the debt.

solidarity (sol-i-dar'i-ti), *n.* [*F.* *solidarité* (= Sp. *solidaridad* = Pg. *solidaridade*), joint liability, mutual responsibility, < *solidaire*, solid: see *solidary*.] Mutual responsibility existing between two or more persons; communion of interests and responsibilities.

Solidarity, a word which we owe to the French communists, and which signifies a fellowship in gain and loss, in honour and dishonour.

Trench, English Past and Present, p. 53.

Strong government came in with the sixteenth century, and strong government was a very strong element in reformation history, for it weakened the *solidarity* of the Catholic Church.

Stubbs, Medieval and Modern Hist., p. 232.

There is a *solidarity* in the arts; they do not flourish in isolated independence.

Thy verse does *solidate* and crystallize.

Cowley, Pindaric Odes, iv. 3.

solid-drawn (sol'id-drān), *a.* In *metal-working*, drawn from hollow ingots, in which mandrels of constantly decreasing diameter are successively inserted, till both exterior and interior diameters are brought down to the required dimensions.

solid-hoofed (sol'id-hōft), *a.* Solidungulate or soliped; whole-hoofed; not cloven-hoofed. See cut under *solidungulate*.

solid-horned (sol'id-hōrnd), *a.* Having solid deciduous horns or antlers, as deer; not hollow-horned. The solid-horned ruminants are the deer tribe. See *Cervidæ* and *Tragulidæ*.

solidi, *n.* Plural of *solidus*.

solidifiable (sō-lid'i-fī-ā-bl), *a.* [*L.* *solidify* + *-able*.] Capable of being solidified or rendered solid.

solidification (sō-lid'i-fī-kā'shən), *n.* [*L.* *solidify* + *-ation* (see *-fy*).] The act or process of making solid; specifically, in *physics*, the passage of a body from a liquid or gaseous to a solid state. It is accompanied by evolution of heat without a decrease of temperature, and by change of volume.

solidify (sō-lid'i-fī), *v.*; pret. and pp. *solidified*, ppr. *solidifying*. [*F.* *solidifier* = Sp. Pg. *solidificar*; as *solid* + *-fy*.] *I. trans.* To convert from a liquid or gaseous state to a solid state; make solid or compact: as, to *solidify* hydrogen.

II. intrans. To become solid or compact: as, water *solidifies* into ice through cold.

solidism (sol'i-dizm), *n.* [*L.* *solid* + *-ism*.] In *med.*, the doctrine that refers all diseases to alterations of the solid parts of the body. It rests on the opinion that the solids alone are endowed with vital properties, and that they only can receive the impression of morbid agents and be the seat of pathological phenomena. Opposed to *Galenism* or *humorism*.

solidist (sol'i-dist), *n.* [*L.* *solid* + *-ist*.] One who believes in or maintains the doctrine of solidism.

solidistic (sol-i-dis'tik), *a.* [*L.* *solidist* + *-ic*.] Of or pertaining to the solidists.

It is perhaps natural that we should revert to the *solidistic* notion of the all-pervading influence of the nervous system. *Lancet*, 1889, II, 1123.

solidity (sō-lid'i-ti), *n.* [*F.* *solidité* = Pr. *soliditat* = It. *solidità*, < L. *soliditas*], < *solidus*, solid: see *solid*.] 1. The state or property of being solid. Specifically—(a) The property of resisting a force tending to change the figure of a body: opposed to *fluidity*.

The idea of *solidity* we receive by our touch; and it arises from the resistance which we find in a body to the entrance of any other body into the place it possesses till it has left it. *Locke*, Human Understanding, II, iv. 1.

(b) The absolute impenetrability attributed by some metaphysicians to matter. [This use of the word is almost peculiar to *Locke*. Sir W. Hamilton attributes eight physical meanings to the word—the property of occupying space; extension in three dimensions; absolute impenetrability; great density; relative immovability; weight; hardness; and non-fluidity.] (c) Fullness of matter: opposed to *hollowness*. (d) Massiveness; substantiality; hence, strength; stability.

These towers are of tremendous girth and *solidity*; they are encircled with great bands, or hoops, of white stone, and are much enlarged at the base.

H. James, Jr., Little Tour, p. 98.

(e) Strength and firmness in general; soundness; strength; validity; truth; certainty.

They answered the objections with great strength and *solidity* of argument. *Addison*, Tatler, No. 116.

The very laws which at first gave the government *solidity*. *Goldsmith*, Polite Learning, i.

2. In *geom.*, the quantity of space occupied by a solid body. Also called its *solid* or *cubic content* or *contents*. The *solidity* of a body is estimated by the number of cubic inches, feet, yards, etc., which it contains.

3†. A solid body or mass. [Rare.]

Heaven's face doth glow;

Yea, this *solidity* and compound mass,

With tristful visage, as against the doom,

Is thought-sick at the act. *Shak.*, Hamlet, III, 4. 49.

Measure of solidity. See *measure*.

solidly (sol'id-li), *adv.* In a solid manner, in any sense of the word *solid*. (a) Firmly; densely; com-

pactly: as, the parts of a pier *solidly* united. (b) Securely; truly; on firm grounds. (c) In a body; unanimously: as, the Democrats voted *solidly* against the bill. [Colloq.]

solidness (sol'id-nes), *n.*

1. The state or property of being solid; *solidity*.

The closeness and *solidness* of the wood.

Bacon, Nat. Hist., § 635.

2. Soundness; strength; truth; validity, as of arguments, reasons, principles, etc.

solidum (sol'i-dum), *n.*

[< L. *solidum*, a solid substance, neut. of *solidus*, firm, compact: see *solid*.] 1. In *arch.*, the die of a pedestal. See cut under *dado*.—2.

In *Scots law*, a complete sum.—To be bound in *solidum*, to be bound for the whole debt, though only one of several obligants. When several debtors are bound each for a proportionate share only, they are said to be bound *pro rata*.

Solidungula (sol-i-dung-gū-lā), *n. pl.* [NL. (Blumenbach, about 1799), neut. pl. of *solidungulus*: see *solidungulus*.] The solid-hoofed, soliped, or solidungulate perissodactyl mammals, corresponding to the family *Equidæ*.

solidungular (sol-i-dung-gū-lār), *a.* [*L.* *solidungularis*, < L. *solidus*, solid, + *ungula*, hoof.] Same as *solidungulate*.

Solidungulata (sol-i-dung-gū-lā'tā), *n. pl.* Same as *Solidungula*.

solidungulate (sol-i-dung-gū-lāt), *a.* and *n.* [*NL.* *solidungulatus*, < L. *solidus*, solid, + *ungulatus*, hoofed: see *ungulate*.] *I. a.* Solid-hoofed or whole-hoofed, as the horse; of or pertaining to the *Solidungula*; equine. Also *soliped*, *solipedal*, *solidungular*, *solidungulous*. See cut in preceding column, and cuts under *hoof* and *Perissodactyla*.

II. n. A member of the *Solidungula*, as the horse or ass; an equine. Also *soliped*, *solipedes*.

solidungulous (sol-i-dung-gū-lus), *a.* [*NL.* *solidungulus*, < L. *solidus*, solid, + *ungula*, a hoof: see *ungulate*.] Same as *solidungulate*. *Sir T. Browne*, Vulg. Err., iii, 2.

solidus (sol'i-dns), *n.*; pl. *solidi* (-dī). [LL., an imperial gold coin, ML. applied to various coins, also any piece of money, money (see *def.*), lit. 'solid' (sc. *nummus*, coin): see *solid*. Cf. *soldo*, *sol*, *sou*.] 1. A gold coin introduced by Constantine the Great to take the place of the aureans, previously the chief coin of the Roman currency. The coin weighed about 70 grains, and 72 solidi were struck to the pound. The solidus continued to be

coined under the Byzantine empire, and at a later period received in western Europe the name of *bezant*. (See *bezant*.) In the middle ages the word *solidus* often indicates not any special coin, but a money of account, and was translated in the Teutonic languages by *shilling* and its cognates. Generally, the *solidus* or shilling of account contained 12 denarii, silver "pennies," the ordinary silver coins of the period. Abbreviated *s.*, in the sequence *£ s. d.* (*libra, solidi, denarii*), pounds, shillings, and pence.

Also I bequeath to the reparation of the steeple of the said church of Saint Albane XX. *solidos*.

Paston Letters, III, 463.

2. A sign (/) used to denote the English shilling, representing the old lengthened form of *s.*, as in 2/6, for 2s. 6d. This sign is often a convenient substitute for the horizontal line in fractions, as in $\frac{1}{2000}, a \text{ b, } (a \text{ b})/c, \text{ for } \frac{1}{2000} \frac{a}{b} \frac{a+b}{c}$.

solidian (sol-i-fid'i-an), *a.* and *n.* [Formerly also *solididean*; < L. *solus*, alone, only, + *fides*, faith: see *faith*.] *I. a.* Holding the tenets of solidians; pertaining to the solidians.

A *solididean* Christian is a nullifidean Pagan, and contutes his tongue with his hand. *Feltham*, Resolves, II, 47.

II. n. One who maintains that faith alone, without works, is all that is necessary to justification. See *fiduciary*, II, 2. *Rev. T. Adams*, Works, I, 325.

solidianism (sol-i-fid'i-an-izm), *n.* [*L.* *solidian* + *-ism*.] The doctrine that justification is of faith only, without works.

It was ordered that . . . for a year no preacher should preach either for or against purgatory, honouring of saints, marriage of priests, pilgrimages, miracles, or *solidianism*. *R. W. Dixon*, Hist. Church of Eng., iv.

soliform (sol'i-fōrm), *a.* [*L.* *sol*, the sun, + *forma*, form.] Formed like the sun. [Rare.]

For light, and sight and the seeing faculty, may both of them rightly be said to be *soliform* things, or of kin to the sun, but neither of them to be the sun itself.

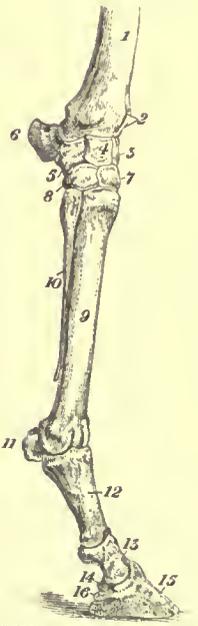

Cudworth, Intellectual System, p. 204.

Solifugæ (sō-lif'ū-jē), *n. pl.* [NL. (Sundevall), fem. pl. of *solifugus*: see *solifugous*.] A sub-order or superfamily of tracheate *Arachnida*, having the cephalothorax segmented, the cheliceres chelate, and the palpi pediform. They are nocturnal, hiding by day, active, pugnacious, and predatory, and are reputed to be venomous; they chiefly inhabit warm countries. There are 15 genera, of which *Datames* and *Cleobis* are found in the United States, and *Galeodes* is the most prominent. See *Galeodidæ*, and compare the alternative *Solpugida* (with cut).

solifuge (sol'i-fūj), *n.* [*NL.* *solifugus*: see *solifugous*.] A nocturnal arachnid of the group *Solifugæ*.

solifugous (sō-lif'ū-gus), *a.* [*NL.* *solifugus*, shunning sunlight (cf. ML. *solifuga*, an animal that shuns the light), < L. *sol*, sun, + *fugere*, flee, fly.] Shunning sunlight; fleeing from the light of day; nocturnal, as a member of the *Solifugæ*.

soliloquacious (sō-lil-ō-kwā'shus), *a.* Soliloquizing; disposed to soliloquize. *Moore*, in *Mason's Personal Traits of British Authors*, II, 17.

Solidungulate (right fore) Foot of Horse.

1, radius, its lower end with 2, a groove; 3, scaphoid; 4, lunari; 5, cuneiform; 6, pisiform; 7, magnum; 8, trochiform (9 to 11 are in the carpus, and form the so-called "knee," which is the wrist of a horse); 12, male (third) or middle metacarpal, or cannon-bone; 13, sesamoids or out-bones in ligaments at back of metacarpophalangeal articulation, or fetlock-joint; 14, outer or fourth metacarpal, or splint-bone; 15, middle phalaox, small pastern, or coronary; 16, sesamoid in tendon of flexor perforans, called navicular by veterinarians; 17, hoof, incasing distal phalaox, or coffin-bone; 18, coronet.

soliloquize (sō-lil'ō-kwīz), *v. i.*; pret. and pp. *soliloquized*, ppr. *soliloquizing*. [*< soliloquy + -ize.*] To utter a soliloquy; talk to one's self. Also spelled *soliloquise*.

soliloquy (sō-lil'ō-kwī), *n.*; pl. *soliloquies* (-kwīz). [= F. *soliloque* = Sp. Pg. It. *soliloquio*, < L. *soliloquium*, a talking to one's self, < *solus*, alone, + *loqui*, speak.] 1. A talking to one's self; a discourse or talk by a person who is alone, or which is not addressed to any one even when others are present.—2. A written composition containing such a talk or discourse, or what purports to be one.

Soliloquies; or, holy self-conferences of the devout soul, upon sundry choice occasions.

Bp. Hall, *Soliloquies*, Title.

The whole Poem is a *Soliloquy*. Prior, Solomon, Pref.

soliped (sol'i-ped), *a.* and *n.* [Also *solipede*; = F. *solipède* = Sp. *solipedo* = Pg. *solipede*, contr. < L. *solidipes* (-ped-), solid-hoofed, whole-hoofed, < *solidus*, solid, + *pes* (ped-) = E. *foot*.] Same as *solidungulate*.

solipedal (sol'i-ped-al), *a.* [*< soliped + -al.*] Same as *solidungulate*.

solipede (sol'i-pēd), *n.* Same as *solidungulate*. Sir T. Browne.

solipedous (sō-lip'e-dus), *a.* Same as *solidungulate*.

solipsism (sol'ip-sizm), *n.* [*< L. solus*, alone, + *ipse*, self, + *-ism*.] The belief or proposition that the person entertaining it alone exists, and that other people exist only as ideas in his mind. The identification of one's self with the Absolute is not generally intended, but the denial of there being really anybody else. The doctrine appears to be nothing more than a man of straw set up by metaphysicians in their reasonings.

solipsist (sol'ip-sist), *n.* [*< L. solus*, alone, + *ipse*, self, + *-ist*.] One who believes in his own existence only.

solipsistic (sol-ip-sis'tik), *a.* [*< solipsist + -ic.*] Of or pertaining to solipsism.

solisequious (sol-i-sē'kwī-us), *a.* [Cf. L. *solsequium*, the sunflower; < L. *sol*, the sun, + *sequi*, follow; see *sequent*.] Following the course of the sun: as, the sunflower is a *solisequious* plant.

solist (sō'list), *n.* Same as *soloist*.

solitaire (sol-i-tār'), *n.* [F., < L. *solitarius*, alone, lonely: see *solitary*.] 1. A person who lives in solitude; a recluse; a hermit; a solitary.

Often have I been quietly going to take possession of that tranquillity and Indolence I had so long found in the country, when one evening of your conversation has spoiled me for a *solitaire* too!

Pope, To Lady M. W. Montagu, Aug. 13, 1716.

2. A precious stone, oftenest a diamond, set by itself, and not combined with other jewels.—3†. A loose necktie of black silk, resembling a ribbon, sometimes secured to the bag of the wig behind, and in front either falling loosely or secured by a brooch or similar jewel: a fashion for men in the eighteenth century.

He came in a *solitaire*, great sleeves, jessamine-powder, and a large bouquet of jonquils. Gray, Letters, I. 310.

4. A game which one person can play alone. In particular and properly—(a) A game played on a board indented with thirty-three or thirty-seven hemispherical hollows, with an equal number of balls. One ball is removed from the board, and the empty hollow thus left enables pieces to be captured. The object of the player is to take by jumping, as in checkers, all the pieces except one without moving diagonally or over more than one space at a time; or else, by similar moves, to leave certain configurations. (b) One of a great number of card-games, the usual object of which is to bring the shuffled and confused cards into regular order or sequence. This sort of game is more properly called *patience*.

5. In *ornith.*: (a) An extinct didine bird, *Pezophaps solitarius*. See *Pezophaps*. (b) A fly-catching thrush of Jamaica, *Myiadestes armillatus*, which leads a retired life in wooded mountainous resorts; hence, any bird of this genus. The name was originally applied to the bird of Martinique, now known as *M. genibarbis*. Townsend's *solitaire* is a common bird of many parts of the western United States. All are fine songsters. See *Myiadestes*. (c) The pensive thrush, *Monticola* or *Petrocincla solitaria*. See *rock-thrush*.

solitarian (sol-i-tār'i-an), *n.* [*< L. solitarius*, alone, lonely, + *-an*.] A hermit; a solitary.

solitarity (sol'i-tār'i-e-ti), *n.* [*< L. solitarius*, alone, lonely, + *-ety*.] Solitary condition or state; aloneness.

According to the Egyptians, before all entities and principles there is one God, who is in order of nature before (him that is commonly called) the first God and King, immovable, and always remaining in the *solitarity* of his own unity. Cudworth, *Intellectual System*, p. 336.

solitarily (sol'i-tār'i-li), *adv.* In a solitary manner; without company; alone; by one's self; in solitude.

Feed thy people with thy rod, the flock of thine heritage, which dwell *solitarily* in the wood. Meash vii. 14.

solitariness (sol'i-tā-ri-nes), *n.* 1. The fact or state of being solitary, or alone, or without mate, partner, or companion, or of dwelling apart from others or by one's self; habitual retirement; solitude.

A man to eat alone is likewise great *solitariness*.

Guevara, Letters (tr. by Helowes, 1577), p. 97.

2. The state or character of being retired or unfrequented; solitude; seclusion: as, the *solitariness* of a wood.

Birds . . . had found their way into the chapel, and built their nests among its friezes and pendants—sure signs of *solitariness* and desertion.

Irving, *Sketch-Book*, p. 218.

solitariousness (sol-i-tā'ri-us-nes), *n.* Solitude; seclusion. *Aescham*, *Toxophilus* (ed. 1864), p. 41.

solitariness (sol-i-tar'i-ty), *n.* [*< solitarius + -ity.*] Solitude; loneliness.

I shall be abandoned at once to *solitariness* and penury. W. Taylor, To Southey, Dec. 10, 1811.

solitary (sol'i-tār-i), *a.* and *n.* [*< ME. solitarie*, *solitarye*, < OF. **solitarie*, *solitaire*, F. *solitaire* = Pr. *solitari*, *soletari* = Sp. Pg. It. *solitario*, < L. *solitarius*, solitary (L. as *n.* an anchorite), for **solitarius*, < *solita*(-s), loneliness, < *solus*, alone: see *sole*.] I. *a.* 1. Living alone, or by one's self or by itself; without companions or associates; habitually inclined to avoid company.

Those rare and *solitary*, these in flocks.

Milton, P. L., vii. 461.

The *solitary* man is as speechless as the lower animals. Whitney, *Life and Growth of Lang*, p. 286.

2. All by one's self; without companions; unattended.

The Indian holds his course, silent, *solitary*, but undaunted, through the boundless bosom of the wilderness. Irving, *Sketch-Book*, p. 351.

3. Marked by solitude; especially, remote from society; unfrequented; retired; secluded; lonely: as, a *solitary* glen.

Whiche bothe lye in the abbey of saynt Jnatyne vyrgyn, a place of Blake Monkes, ryght delectable, and also *solitarye*.

Sir R. Gwyllforde, *Pygrymage*, p. 6.

Cor. And how like you this shepherd's life, Master Touchstone? . . . Touch. . . In respect that it is *solitary*, I like it very well. Shak., *As you Like It*, iii. 2. 16.

4. Free from the sounds of human life; still; dismal.

Let that night be *solitary*, let no joyful voice come therein. Job iii. 7.

5. Having a sense of loneliness; lonesome.

I am not *solitary* whilst I read and write, though nobody is with me. Emerson, *Nature*, I.

6†. Retiring; diffident.

Your honour doth say that you dee ludge me to be a man *solitarie* and vertuous.

Guevara, Letters (tr. by Helowes, 1577), p. 78.

7. Passed without company; shared by no companions; lonely.

I was upon Point of going abroad to steal a *solitary* Walk, when yours of the 12th current came to hand. Howell, Letters, ii. 50.

Illm fair Lavinia, thy surviving wife, Shall breed in groves, to lead a *solitary* life. Dryden, *Enclid*, vi. 1038.

8. Single; sole; only; or only one: as, a *solitary* instance; a *solitary* example.

A *solitary* shriek, the bubbling cry Of some strong swimmer in his agony. Byron, *Don Juan*, ii. 53.

Politeness was his [Charles II.'s] *solitary* good quality. Macaulay, *Dryden*.

9. In *bot.*, one only in a place; separate: as, a *solitary* stipule. A flower is said to be *solitary* when there is only one on each peduncle, or only one to each plant; a seed, when there is only one in a pericarp.

All the New Zealand species [*Pterostylis trullifolia*] bear *solitary* flowers, so that distinct plants cannot fail to be intercrossed. Darwin, *Fertil. of Orchids by Insects*, p. 89.

10. In *anat.*, single; separate; not clustered; not agminate or gathered into patches; simple; not compound: as, the *solitary* follicles of the intestine.—11. In *zool.*: (a) Not social, sociable, or gregarious: noting species living habitually alone, or in pairs only. (b) Simple; not compound, aggregate, or colonial: as, *solitary* ascidians. See *Simplices*.—**Solitary ants**, the *Mutillidae* or spider-ants.—**Solitary bees**, bees that do not live in a hive or communally like the honey-bee, and are represented only by developed males and females, like most insects. There are very many species, of numerous genera. The designation is chiefly descriptive, not classificatory, but sometimes denotes the *Andrenidae* as distinguished from the *Apidae*.—**Solitary bundle**. Same as *solitary funiculus*.—**Solitary confinement**, in a general sense, the separate confinement of a prisoner,

with only occasional access of any other person, and that only at the discretion of the jailer; in a stricter sense, the complete isolation of a prisoner from all human society, and his confinement in a cell so arranged that he has no direct intercourse with, or sight of, any human being, and no employment or instruction. Müller, *J.*, in re Medley, 134 P. S., 100.—**Solitary follicle**. See *solitary gland*, under *gland*.—**Solitary funiculus**, a round bundle of fibers laterad of the combined small-celled nucleus of the glossopharyngeus, vagus, and spinal accessory, which passes out as one of the roots of the glossopharyngeus, but may contribute to the vagus and accessory. Also called *ascending root of glossopharyngeus*, *funiculus rotundus*, *ascending root of the lateral mixed system*, *fasciculus solitarius*, *respiratory bundle*, and *fascicle of Krause*.—**Solitary glands**. See *gland*.—**Solitary greenlet** or *virco*, *Virco solitarius*, the blue-headed greenlet or vireo of the United States, having greenish upper parts, a bluish

live in society, as the true wasps of the families *Eumenidae* and *Masariidae*, as well as all the digger-wasps: contrasted with *social wasps*. See *digger-wasp*, *sand-wasp*, and *wasp*.

II. *n.*; pl. *solitaries* (-riz). One who lives alone or in solitude; an anchorite; a recluse; a hermit.

The world itself has some attractions in it to a *solitary* of six years' standing. Gray, Letters, I. 154.

Downward from his mountain gorge Slept the long-haired, long-bearded *solitary*. Tennyson, *Enoch Arden*.

solito (sol'i-tō), *adv.* [It., < L. *solitus*, accustomed, < *solere*, be accustomed.] In *music*, in the usual, customary manner.

solitude (sol'i-tūd), *n.* [*< ME. solitudo*, < OF. (and F.) *solitude* = It. *solitudine*, < L. *solitudo*, loneliness, < *solus*, alone: see *sole*.] 1. The state of being alone; a lonely life; loneliness.

Little do men perceive what *solitude* is, and how far it extendeth; for a crowd is not company. . . . It is a mere and miserable *solitude* to want true friends. Bacon, *Friendship*.

O, might I here In *solitude* live savage, In some glade Obscured! Milton, P. L., ix. 1085.

2. Remoteness from society; lack or utter want of companionship: applied to place: as, the *solitude* of a wood or a valley.

The *solitude* of his little parish is become matter of great comfort to him. Lav.

3. A lonely, secluded, or unfrequented place; a desert.

We walked about 2 miles from ye city to an agreeable *solitude* called Du Plessis, a house belonging to ye King. Evelyn, *Diary*, June 7, 1644.

There is such an agreeable variety of fields, wood, water, and cascades that it is one of the most delightful solitudes I ever saw.

Pococke, Description of the East, II. i. 224.

= **Syn. 1.** Solitude, Retirement, Seclusion, Loneliness, Lonesomeness. Solitude is the condition of being absolutely alone, whether or not one has been with others, or desires to escape from them: as, the solitude of the Sphinx. Retirement is comparative solitude, produced by retiring, voluntarily or otherwise, from contact which one has had with others. Seclusion is stronger than retirement, implying the shutting out of others from access: after the Restoration Milton for safety's sake kept himself in retirement; indeed, except to a few trusted friends, he was in complete seclusion. Loneliness expresses the uncomfortable feelings, the longing for society, of one who is alone. Lonesomeness may be a lighter kind of loneliness, especially a feeling less spiritual than physical, growing out of the animal instinct for society and the desire of protection, the consciousness of being alone: as, the lonesomeness of a walk through a cemetery at night. Lonesomeness, more often than loneliness, may express the impression made upon the observer.

solivagant (sō-liv'ā-gant), *a.* [*L. solus*, alone, + *vagan(t)-s*, ppr. of *vagari*, wander, roam: see *vagrant*.] Same as *solivagus*. [Rare.]

solivagus (sō-liv'ā-gus), *a.* [*L. solivagus*, wandering alone, *L. solus*, alone, + *vagus*, wandering: see *vague*.] Wandering alone. Bailey, 1727. [Rare.]

solive (so-lēv'), *n.* [*OF. solive, solieve, F. solive* (ML. reflex *soliva, soliva, solivia*), a girder, joist; origin uncertain; perhaps ult. *L. sublevare*, lift up from beneath, support: see *sollevate, sullevate, sublevate*.] A joist, rafter, or secondary beam of wood, either split or sawed, used in laying ceilings or floors, and for resting upon the main beams.

sollar, soller (sol'ār, -ēr), *n.* [Also *solar*; *L. ME. solter, sollar, soler, solere*, *OF. solair, solier, solier*, a floor, loft, granary, cellar, *F. dial. solier*, a granary = *Pr. solar, solier* = *It. solera, solajo* = *AS. solere, solor* = *OS. soleri* = *MD. solder, D. zolder* = *MLG. solder, soler* = *OHG. soleri, solari*, the pretorium, a guest-chamber, *MHG. solre, solare, G. söller*, a balcony, an upper room, garret, *L. solarium*, a sunny place, a terrace, the flat roof of a house exposed to the sun, a sun-dial, *L. sol*, the sun: see *sol*, *solarium*. Perhaps in some senses confused with *L. solum*, ground: see *sol*.] 1. Originally, an open gallery or balcony at the top of a house, exposed to the sun; later, any upper room, loft, or garret.

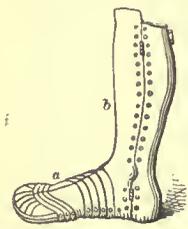

Thou shalt make *soleris* and *placia* of three chaumbris in the schip. Wyclif, Gen. vi. 16.

2. An elevated chamber in a church from which to watch the lamps burning before the altars. *Encyc. Brit.*, II. 473.—3. A story of a house. See the quotation.

Maison à trois estages. An house of three *sollers*, floores, atories, or lofts one over another. *Nomenclator*. (Nares.)

4. In *mining*, a platform or resting-place. See *ladder-sollar* and *air-sollar*.

solleret (sol'er-et), *n.* [Also *soleret*; *F. soleret*, dim. of *OF. soler*, a slipper, *L. sole*: see *sole*.] The steel shoe forming a part of armor in the fourteenth century and later, usually having splints overlapping one another and a long point or toe curved downward. It was worn only when the foot was in the stirrup, and could be removed when the rider dismounted. See also *cuta* under *armor* and *poulaine*.—**Bear-paw solleret**, the steel foot-covering worn during the second half of the fifteenth century, resembling remotely the broad foot of the bear. Compare *sabbaton*.

Solleret (a) and Jambé (b). 14th century.

Compare *sabbaton*.

sollevat, *v. t.* See *sublevate*.

sollicit, sollicitation, etc. See *solicit*, etc.

sol-lunar (sol'lū'nār), *a.* [*L. sol*, the sun, + *luna*, the moon: see *lunar*.] Proceeding from or due to the influence of both the sun and the moon: in old medicine applied to the influence supposed to be produced on various diseases when the sun and moon are in conjunction.

solmizate (sol'mi-zāt), *v. i.*; pret. and pp. *solmizated*, ppr. *solmizating*. [*F. solmiser* (as *sol* + *mi*, notes of the gamut (cf. *sol-fa*), + *-iser* = *E. -ize*), + *-ate*.] In *music*, to use solmization syllables. Also spelled *solmisate*.

solmization (sol-mi-zā'shon), *n.* [*F. solmisation*; as *solmizate* + *-ion*. Cf. *ML. solmifacio* (n-).] In *music*, the act, process, or result of using certain syllables to name or represent the tones of the scale, or of a particular series, as the scale of C. The oldest and most important system of solmization is that attributed to Guido d'Arezzo, early in the eleventh century; though this in turn appears to have been sug-

gested by a similar usage among the ancient Greeks. (See the *gamut*.) The acris *ut, re, mi, fa, sol, la* (derived from the initial syllables of the lines of a hymn to St. John, beginning "Ut quancantaxia") was applied to the tones of each of the hexachords then recognized. (See *hexachord*.) When a melody exceeded the limits of a single hexachord, a change from one series of syllables to another was made, which was called a *mutation* or *modulation*. Early in the sixteenth century, when the modern octave scale became established, the syllable *si* (probably taken from the initials of the last line of the above hymn) was added for the seventh or leading tone. Somewhat later *do* was substituted in Italy and Germany for *ut*, on account of its greater sonority. The acris thus formed is still in use, though other systems have been proposed. Such other systems are *boedization* (*bo, ce, di, ga, lo, ma, ni*), also called *botization*; *bebization* (*la, be, ce, de, me, fe, ge*); and *damenization* (*da, me, ni, po, tu, la, be*). In England and America, from before the middle of the seventeenth century to the beginning of the nineteenth, an abbreviated system was used, including only *mi, fa, sol, la*. The ideal application of solmization involves calling whatever tone is taken as the key-note *do*, irrespective of its pitch, and adjusting the other syllables accordingly, so that the scale-tones shall always be named by the same syllables respectively, and the various intervals by the same combination of syllables. This system is often called that of the *movable do*, since the pitch of *do* is variable. What is called the *fixed-do system* has also had considerable currency in Italy, France, and England, according to which the tone C is always called *do*, *D re, E mi*, etc., and this too when the pitch of these tones is chromatically altered, the system therefore following the arbitrary features of the keyboard and the staff-notation. This system is regarded by many musicians as contrary to the historic and logical idea of solmization, and its use in England and America is decreasing. The most important special application of solmization in musical study is that of the *tonic sol-fa system* (which see, under *tonic*), the syllables of which are *doh, ray, me, fah, soh, lah, te*. In the *movable-do system* the sharp of any tone is indicated by a syllable beginning with the same consonant as that of the tone, and using the vowel *i*: as, *di* for *do*, *fi* for *fa*, etc.; and similarly the flat of any tone is indicated by a syllable using the vowel *e*: as, *me* for *mi*, *le* for *la*, etc. The minor scale is solmized in two ways: either beginning with *la*, and using the same syllables as in the major scale; or beginning with *do*, and using such modified syllables as may be needed (*do, re, me*, etc.). The great utility of solmization lies in its offering an abstract vocal notation of musical facts, whereby they may be named, remembered, and studied. Also *solmization, solfanzation, solfeggio, and sol-fang*.

sol (sō'lō), *a.* and *n.* [*L. sol*, alone, *L. solus*, sole: see *sole*.] 1. *a.* In *music*, alone; not combined with other voices or instruments of equal importance; not concerted. A solo passage may be accompanied, however, by voices or instruments of less importance.—**Solo organ**, in *organ-building*, a partial organ introduced into large instruments, containing stops of special power or effectiveness, such as are used in producing striking solo effects. Its keyboard is usually the upper one when there are four, or the lower when there are three. Its stops are often connected with a special bellows, which is weighted with extra weights; they are then said to be "on a heavy wind." The choir-organ is also sometimes loosely called the *solo organ*. See *organ*.—**Solo pitch**, in *music*, a special pitch or *accordatura* (accordatura) adopted by a solo performer upon a violin or other solo instrument, so as to produce peculiar and startling effects.—**Solo stop**, in *organ-building*, a stop either of special quality or placed on a heavy wind, so as to be fitted for the performance of solos. Such stops often occur in each of the usual partial organs, but in large instruments the most important of them are gathered into a separate partial organ called the *solo organ* (see above).

II. *n.*; *It. pl. soli* (-li), *E. pl. solos* (-lōz). 1. A melody, movement, or work intended for or performed by a single performer, vocal or instrumental, with or without accompaniment. Opposed to *concerted piece*, whether chorus, duet, trio, or for a number of instruments.—2. A game of cards, played usually by four persons, with a euchre pack. That player who bids highest—that is, offers to take the greatest number of tricks alone, or, in a variety of the game, aided by a partner—plays against the rest. If he takes five or more tricks, he receives a payment from them; if not, he makes a payment to them.

solograph (sol'ō-grāf), *n.* [*L. sol*, the sun, + *Gr. γράφειν*, write.] A picture on paper taken by the talbotype or calotype process. *Simmonds*.

soloist (sō'lō-ist), *n.* [*L. solo* + *-ist*.] In *music*, a performer of solos, vocal or instrumental. Also *solist*.

Solomonic (sol'ō-mon'ik), *a.* [*L. Solomon* (see *def.*) + *-ic*.] Of or pertaining to Solomon, son of David and his successor as king of Israel: as, *Solomonic wisdom*.

Solomon's hyssop, Porch, servants. See *hyssop, porch, servant*.

Solomon's-seal (sol'ō-monz-sel'), *n.* 1. A plant of the genus *Polygonatum*. The common Solomon's-seal in England is *P. multiflorum*, a plant with erect or curving stems 2 feet high, and flowers from one to eight in a cluster.

1. The upper part of the flowering stem of Solomon's-seal (*Polygonatum multiflorum*). 2. The lower part of the stem with the rhizome, a, a flower; b, a fruit.

A smaller Old World species is *P. officinale*, whose root (like that of *P. multiflorum*) is emetic, cathartic, etc., and was formerly much applied to bruisa. In America *P. giganteum* is the great Solomon's-seal, a species 2 to 7 feet high, with leaves 3 to 8 inches long, and two to eight flowers in a cluster; and *P. biflorum* is the smaller Solomon's-seal, growing 1 to 3 feet high, with the peduncles commonly two-flowered. The larger species are rather striking plants; *P. multiflorum* has been much cultivated. See also cut under *rhizome*.

2. A symbol formed of two triangles interlaced or superposed, presenting a six-rayed figure,  Compare *pentacle*.—**Falses Solomon's-seal.** (a) See *Smilacina*. (b) See *Maianthemum*.

so-long (sō-lōng'), *interj.* [Prob. a sailors' perversion of *salaam*.] Good-by. Also *so long*. [Slang.]

Solonian (sō-lō'ni-an), *a.* [*L. Solon*, *Gr. Σόλων*, Solon, + *-ian*.] Of or pertaining to Solon, a famous lawgiver of Athens (about 594 B. C.): as, the *Solonian* Constitutions; *Solonian* legislation.

Solonic (sō-lōn'ik), *a.* [*L. Solon* (see *Solonian*) + *-ic*.] Same as *Solonian*: as, the *Solonic* talents.

Solon porcelain. See *porcelain*.

Solpuga (sol-pū'gā), *n.* [NL. (Herbst), *L. solpuga, salpuga, solipuga, solipugna* (as if *L. sol*, sun, + *pugnare*, fight), *solifuga* (as if *L. sol*, sun, + *fugere*, flee), a kind of venomous insect, an ant or spider.] 1. The name-giving genus of *Solpugida*, having the tarsi more than three-jointed. See *Galeodes*.—2. [*l. c.*] A member of this genus; a solifuge or weasel-spider.

Solpugida (sol-pū'ji-dā), *n. pl.* [NL., *L. Solpuga* + *-ida*.] An order of arachnids. They have tracheal respiration, the cephalothorax and abdomen distinct (the former segmented into a large cephalic and small thoracic part), the abdomen annulated, the chelicerae one-jointed and chelate, the palpi long and slender, extending forward, the first pair of legs palpi-form and perfect, the other legs ending in pairs of claws, and the eyes two in number. The whole body and the limbs are clothed with hairs. These arachnids resemble large hairy spiders externally, but are more nearly related to scorpions.

Datames girardi, one of the *Solpugida*. (About two thirds natural size.)

The head is largely made up of the massive chelate *falces*. The only or the leading family is *Galeodidae* or *Solpugida*. Also *Solpugidae*, *Solpugides*, and in later variant form *Solifuge*. *Galeodes* is a synonym.

Solpugida (sol-pū'ji-dē), *n. pl.* [NL., *L. Solpuga* + *-idæ*.] A family of arachnidans, named from the genus *Solpuga*: synonymous with *Galeodidae*.

Solpugidea (sol-pū-jid'ē-ā), *n. pl.* [NL., *L. Solpuga* + *-id-æa*.] Same as *Solpugida*. Also called *Galeodes*.

solstead (sol'sted), *n.* [*L. sol*, sun, + *E. stead*. Cf. *unstead* and *solstice*.] Same as *solstice*. [Rare.]

If it be gathered about the summer *solstead*.

Holland, tr. of *Pliny*, xxvi. 5.

solstice (sol'stis), *n.* [Formerly also *solsticy*; *L. ME. solstice*, *OF. (and F.) solstice* = *Sp. Pg. solsticio* = *It. solstizio*, *L. solstitium*, the solstice, a point in the ecliptic at which the sun seems to stand still, *L. sol*, the sun, + *-stitium*, *status*, pp. of *sistere*, make to stand still, a reduplicated form of *stare* = *E. stand*: see *sol*, *stand*, and *sist*. Cf. *armistice*.] 1. In *astron.*: (a) The time at which the sun is at its greatest distance from the equator, and when its diurnal motion in declination ceases, which happens about June 21st, when it enters Cancer (the summer solstice), and about December 22d, when it enters Capricorn (the winter solstice). (b) A solstitial point. Hence—2. Figuratively, culmination or turning-point; furthest limit.

He died before his time, perhaps, not yet come to the solstice of his age. Burton, *Anat. of Mel.*, p. 373.

3. A stopping or standing still of the sun.

The supernatural *solstice* of the sun in the days of Joshua. *Str T. Browne*.

solsticion, *n.* [*ME. solsticion*, also *solstacion*, *OF. *solsticion*, *L. solstitium*, the solstice: see *solstice*.] A solstitial point.

In this heved of Cancer is the grettest declinacoun northward of the sonne, and therfor is he cleped the solsticlon of Soimer.

Chaucer, Astrolabe, i. 17.

solsticyt, n. [*L. solstitium*, solstice: see solstice.] Same as solstice.

The high-heated year

Is in her solsticy.

Middleton and Rowley, World Tost at Tennis, Ind.

solstitial (sol-stish'al), a. [*F. solstitial*, solsticial = *Sp. Pg. solsticial* = *It. solstiziale*, < *L. solstitialis*, < *solstitium*, solstice: see solstice.]

1. Of or pertaining to a solstice: as, a solstitial point.—2. Happening at a solstice—especially, with reference to the northern hemisphere, at the summer solstice, or midsummer.

The sun

Had . . . from the south to bring

Solstitial summer's heat. Milton, P. L., x. 656.

Solstitial arml. See arml. 1.—Solstitial point, one of the two points in the ecliptic which are furthest from the equator, and at which the sun arrives at the time of the solstices. They are diametrically opposite to each other, and the distance of each from the equator is equal to the obliquity of the ecliptic.

solubility (sol-'u-bil'i-ti), n. [= *F. solubilité* = *Sp. solubilidad* = *Pg. solubilidad* = *It. solubilità*; < *NL. *solubilitas*, < *L. solubilis*, soluble: see soluble.] 1. The property of being soluble; that property of a body which renders it susceptible of solution; susceptibility of being dissolved in a fluid.—2. In bot., a capability of separating easily into parts, as that of certain legumes to divide transversely into parts or joints.—3. Capability of being solved, resolved, answered, cleared up, or disentangled, as a problem, a question, or a doubt.

soluble (sol-'u-bl), a. [*F. soluble* = *Sp. soluble* = *Pg. solvel* = *It. solubile*, < *L. solubilis*, dissolvable, < *solvere*, solve, dissolve: see solve.] 1. Capable of being dissolved in a fluid; capable of solution; dissolvable.—2. Figuratively, capable of being solved or resolved, as an algebraical equation; capable of being disentangled, cleared up, unfolded, or settled by explanation, as a doubt, question, etc.; solvable.

Had he denounced it as a fruitless question, and (to understanding) soluble by none, the world might have been spared a large library of resultless disputation.

Sir W. Hamilton.

More soluble is this knot

By gentleness than war. Tennyson, Princess, v.

3†. Relaxed; loose; open.

Are is their eating and their drinking, surely, which keeps their bodies clear and soluble.

Beau. and Fl., Scornful Lady, iv. 1.

And then, if Balaam's ass hath but an audible voice and a soluble purse, he shall be preferred before his master, were he ten prophets.

Rev. T. Adams, Works, I. 460.

Soluble blue, cotton, glass, indigo. See the nouns.—Soluble bougie, a bougie composed of substances which melt at the body-temperature: used for the purpose of administering medication to the urethral mucous membrane.—Soluble guncotton. Same as dinitrocellulose.—Soluble oil. See castor-oil.—Soluble soap. See soap, 1.

solubleness (sol-'u-bl-ness), n. Soluble character or property; solubility.

solus (sō'lum), n. [*L.*, the ground, the earth, a region: see soil, sole.] In Scots law, ground; a piece of ground.

solund-goose (sō'lund-gōs), n. Same as solan-goose.

solus (sō'lus), a. [*L.*: see sole³.] Alone: used chiefly in dramatic directions: as, enter the king solus. The feminine form is sola.

solute (sō-lūt'), a. [*ME. solute*, < *L. solutus*, pp. of *solvere*, loose, release, set free: see solve.] 1†. Loose; free.

Solute or sandy lands that require,

So that aboute or under hem be do

A certayne of fatte lande as that desire.

Palladius, Husbandrie (E. E. T. S.), p. 193.

As to the interpretation of the Scriptures solute and at large, there have been divers kinds introduced and devised, some of them rather curious and unsafe than sober and warranted.

Bacon, Advancement of Learning, ii.

2†. Relaxed; hence, joyous; merry.

Bacchus, purple god of joyous wit,

A brow solute, and ever-laughing eye.

Young, Night Thoughts, II. 579.

3. In bot., free; not adhering: opposed to adnate: as, a solute stipule.—4. Soluble: as, a solute salt.

solute (sō-lūt'), v. t. [*L. solutus*, pp. of *solvere*, loosen, solve: see solve, solute, a.] To dissolve; also, to resolve; answer; absolve.

What will not boldness bid a man say, when he hath made an argument against himself which he cannot solute?

Ep. Ridley, In Bradford's Works (Parker Soc., 1853), II. 393.

solution (sō-lū'shon), n. [*ME. solucion*, < *OF. solution*, *solucion*, *F. solution* = *Pr. solution* = *Sp. solucion* = *Pg. solução* = *It. soluzione*, < *L. solu-*

tio(n-), a loosing, dissolving, < *solvere*, pp. *solutus*, loose, resolve, dissolve: see solve.] 1. The act of separating the parts of any body; disruption; rupture; fracture; breach: as, a solution of continuity (see below).—2. The transformation of matter from a solid or gaseous state to the liquid state by means of a liquid called the solvent or menstruum; the state of being dissolved. The nature of the phenomenon depends upon whether chemical action is or is not present. Solution in the physical sense—the common and proper use of the word—is illustrated by dissolving sugar or salt in water, or silver in mercury; here, and in similar cases, when by the removal of the liquid (as by evaporation) the original solid is obtained, the process is essentially a change of molecular state, from the solid to the liquid, and hence accompanied by the absorption of heat; this is strikingly seen in freezing-mixtures. The word is not infrequently used, however, when the phenomenon is one of chemical combination only, as when silver dissolves in nitric acid, forming a new substance, silver nitrate; this, as is generally true of chemical union, is accompanied by the evolution of heat. The two phenomena, physical and chemical, may both be present in solution at the same time, and the line between them often cannot be sharply drawn; glacial acetic acid dissolves in water and at the same time combines with it, the liberation of heat of the chemical part of the process overbalancing the absorption of heat in the physical. The solution of a gas in a liquid, as of ammonia gas in water (also called absorption), is essentially the physical process of the change of the gas to the liquid, and hence is accompanied with the evolution of heat. The term solution is also sometimes applied to the absorption of gases by solids, as when palladium absorbs or dissolves hydrogen gas, forming a true alloy with it. The solubility of any solid is constant at a given temperature, and may be accurately determined by experiment. It may be increased or diminished by the presence of other substances in solution. The solubility of any gas also is constant under the same conditions. It varies with the temperature, the pressure, the nature of the liquid, and the matters in solution in it. In a mixture of gases, each is dissolved in the same quantity as if they were present alone under the same tension as in the mixture.

3. The liquid produced as a result of the process or action above described; the preparation made by dissolving a solid in a liquid: as, a solution of salt, soda, or alum; solution of iron, etc.—4. A liquid or dissolved state or condition; unsettled state; suspense.

His [Lessing's] was a mind always in solution, which the divine order of things, as it is called, could not precipitate into any of the traditional forms of crystallization, and in which the time to come was already fermenting.

Lowell, Among my Books, 1st ser., p. 313.

5. The act of solving, working out, explaining, clearing up, or settling, or the state of being solved, explained, cleared up, or settled; resolution; explanation: as, the solution of a difficult problem or of a doubt in casuistry.

It is according to nature no man to do that whereby he shulde take . . . a praye of a nother mannes ignorance. Of this matter Tuill writeth many proprs examples and quicke solutions.

Sir T. Elyot, The Governour, iii. 4.

In his singular "Ode inscribed to W. H. Channing" there is a hint of a possible solution of the slavery problem.

O. W. Holmes, Emerson, viii.

6. A method of solving or finally clearing up or settling something. Specifically—7. The answer to a problem or puzzle of any kind, together with the proof that that answer is correct.—8. Dissolution; a dissolving.

Easy and frequent solutions of conjugal society.

Locke, Civil Government, § 80.

9†. Release; deliverance; discharge. Imp. Diet.

—10. In med., the termination of a disease, especially when accompanied by critical symptoms; the crisis of a disease.—11. In civil law, payment; satisfaction of a creditor.—Alcoholic solution. See tincture.—Algebraic solution of an equation, a solution by means of an algebraic formula, especially by radicals.—Aqueous solution, a solution whose solvent or menstruum is water.—Barreswill's solution, a test for sugar similar to Fehling's solution.—Burnett's solution. See Burnett's liquid, under liquid.—Burov's solution, a solution of aluminum subacetate, used as a local astringent in skin-affections.—Cardan's solution, the ordinary algebraic solution of a cubic. See cubic.—Cayley's solution. (a) A solution of the general cubic. Let U = 0 be the cubic, D its discriminant, and J its cubicovariant, then the solution follows from

$$\sqrt{U}\sqrt{D} + J + \sqrt{U}\sqrt{D} - J.$$

These cube roots can always be extracted. (b) A solution of the general quartic, due to Professor Cayley. Let U = 0 be the quartic, H its Hessian, S its quadrinvariant, T its cubinvariant or catalecticant, and c₁, c₂, c₃ the roots of the cubic c³ - Sc + T = 0, then the solution follows from

$$(c_2 - c_3) \sqrt{H - c_1 U} + (c_3 - c_1) \sqrt{H - c_2 U} + (c_1 - c_2) \sqrt{H - c_3 U} = 0.$$

The square roots can always be extracted.—Chemical solution, the solution of a solid body in a liquid which is caused by or accompanied with a chemical reaction between the solid and the solution, as of zinc in dilute sulphuric acid.—Clemens's solution, a solution of arsenic bromide, used in the treatment of diabetes.—Compound solution of iodine. Same as Lugol's solution.—Compound solution of sodium borate. Same as Dobell's solution.—Descartes's solution, an algebraical

lution of the general biquadratic equation, differing from Ferrari's only in the method of investigation.—Dobell's solution, a solution containing sodium borate 120 grains, sodium bicarbonate 120 grains, crytallized carbonic acid 24 grains, glycerin 4 fluidounce, water to make 16 fluidounces.—Donovan's solution, a solution of arsenic iodide 1, red iodide of mercury 1, water 98 parts: alternative. Also called solution of iodide of arsenic and mercury.—Ethereal solution, a solution whose solvent or menstruum is an ether, usually sulphuric ether.—Euler's solution, a solution of a biquadratic after the second term has been got rid of. It differs little from Ferrari's solution.—Fehling's solution, an aqueous solution of copper sulphate, Rochelle salts, and sodium hydrate. When heated with any reducing sugar, as dextrose, copper suboxide is deposited from it. It is used in the analysis of saccharine bodies, and as a qualitative test of the presence of sugar.—Ferrari's solution, a solution of the general biquadratic. See biquadratic equation, under equation.—Fowler's solution, a solution of arsenious acid 1, potassium bicarbonate 1, compound tincture of lavender 3, water 95 parts: one of the best vehicles for administering arsenic. Also called liquor potassii arsenitici, solution of arsenite of potassium, and aqua-drop.—General solution. See differential equation, under equation.—Goadby's solution, a preparation for preserving animal substances, made with bay-salt, corrosive sublimate or arsenious acid, and water. Thomas, Med. Diet.—Hall's solution of strychnine, a solution of strychnine acetate 16 grains, dilute acetic acid 4 fluidounce, alcohol 4 fluidounces, compound tincture of cardamom 60 minima, water to make 16 fluidounces.—Heavy solution, in mineral, a liquid of high density, as a solution of mercuric iodide in potassium iodide (called the Sonstadt or Thuret solution), having a maximum specific gravity of 3.2, or of bromistate of cadmium (Klein solution), specific gravity 3.6, used as a gravity-solution (which see).—Improper solution, a function which solves a given differential equation, but also solves an equation either of lower order or of the same order but of lower degree.—Javelle's solution, potassium carbonate 58, chlorinated lime 90, water 862 parts. Also called solution of chlorinated potassa.—Labarraque's solution. Same as Labarraque's fluid (which see, under fluid).—Löfmer's solution, a saturated alcoholic solution of methyl blue 30 parts, and 100 parts of a 1:10,000 aqueous solution of potassium hydrate: used in staining bacteria.—Lugol's solution, a solution of iodine 5, potassium iodide 10, water 85 parts. Also called compound solution of iodine.—Magendie's solution of morphine, morphine sulphate 16 grains, water 1 fluidounce: used to administer morphine hypodermically.—Mechanical solution, the mere union of a solid with a liquid in such a manner that its aggregate form is changed without any alteration of the chemical properties of either the solid or its solvent: thus, sugar dissolves in water without either undergoing any chemical change.—Mechanical solution of a problem. See mechanical.—Mineral solution. See mineral.—Nessler's solution. Same as Nessler's reagent (which see, under reagent).—Numerical solution, a solution of an equation by means of numerical approximation.—Particular solution. See differential equation, under equation.—Pasteur's solution, in bot., a liquid holding in solution a small percentage of certain inorganic salts and a larger percentage of certain organic substances, employed in the cultivation of the lower forms of vegetable life, such as bacteria, yeast-cells, and fungi, for purposes of study. The composition is—potassium phosphate 20 parts, calcium phosphate 2 parts, magnesium sulphate 2 parts, ammonium tartrate 100 parts, cane-sugar 1,500 parts, distilled water 8,376 parts.—Pearson's arsenical solution, crystallized sodium arseniate 1, water 599 parts.—Pierlot's solution, an aqueous solution of ammonium valerianate to which is added some of the alcoholic extract of valerian.—Proper solution, a function which satisfies a differential equation, and no equation of lower order nor of the same order but of lower degree.—Saturated solution, a solution which at the given temperature cannot be made to contain more of the given substance than it already contains, the adhesion of the liquid to the substance being just balanced by the cohesion of the particles of the solid body in contact with it.—Simpson's solution. Same as Ferrari's solution.—Singular solution. See differential equation, under equation.—Solution of acetates of ammonia, in phar., a solution composed of dilute acetic acid 100 parts, ammonium carbonate added to the point of neutralization: a valuable diaphoretic and diuretic. Also called spirit of Mindererus.—Solution of albumen, a test solution consisting of the white of one egg triturated with four ounces of water, and filtered: used in pharmaceutical work.—Solution of an equation. See equation.—Solution of continuity, in surg., the separation of parts normally continuous, as by a fracture, laceration, etc.—Solution of lime, a clean saturated solution of slaked lime in water, useful as an antacid, astringent, and tonic. Commonly called lime-water.—Solution of potassa, in phar., an aqueous solution of potassium hydrate, KHO, containing 5 per cent. of the hydrate: an antacid, diuretic, and antilithic. Also called liquor potassæ.—Solution of soda, in phar., an aqueous solution containing 5 per cent. of sodium hydrate.—Solution of sodium carbonate, in phar., crystals of carbonic acid 30, sodium hydrate 2, water 28 parts. Also called phenol sodique.—Solution of subacetate of lead, a solution composed of lead acetate 170, lead oxide 120, water 1,710 parts: a useful astringent and sedative for external use. Also called Goulard's extract.—Sonstadt solution, a solution of mercury iodide in potassium iodide. See specific gravity, under gravity.—Standardized solution, a solution whose strength or composition has been accurately determined, and which is used as a standard of comparison.—Thompson's solution of phosphorus, a solution containing phosphorus, absolute alcohol, spirit of pepper-mint, and glycerin.—Trigonometrical solution, a solution of an equation by means of trigonometric functions. For an example, see cubic equation, under equation.—Van Swieten's solution, a solution of mercury perchlorid.—Vlemingx's solution, a solution composed of lime 1, sulphur 2, water 20 parts boiled down to 12 parts.

solutive (sol-'u-tiv), a. [*Lat. solute* + *-ive*.] 1. Tending to dissolve; loosening; laxative.

solutive

Abstersive, and opening, and *solutive* as mead.
Bacon, Nat. Hist., § 848.

2. Capable of being dissolved or loosened. *Imp. Dict.*

solvability (sel-va-bil'i-ti), *n.* [*< solvable + -ity (see -bility).*] 1. Capability of being solved; solvability: as, the *solvability* of an equation.—2. Ability to pay all just debts; solvency.

solvable (sel'va-bl), *a.* [*< F. solvable, payable; as solve + -able.*] 1. Payable.

Some of those corrodies (where the property was altered into a set summe of money) was *solvable* out of the exchequer. Fuller, Ch. Hist., VI. 326. (Davies.)

2. Solvent.

Was this well done of him [David, at Adullam], to be protector-general of outlaws, thereby defying justice, defrauding creditors, defeating God's command, which provided that the debtor, if not *solvable*, should be sold for satisfaction? Fuller, Pisgah Sight, II. xiii. 32.

3. Capable of being solved, resolved, or explained: as, equations above the fourth degree are not *solvable* by means of radicals.

Also *soluble*.

solvableness (sol'va-bl-nes), *n.* Solvability.

Solvay process. See *soda*, 1.

solve (solv), *v. t.*; pret. and pp. *solved*, ppr. *solving*. [*< ME. solven, < OF. solver, vernacularly soudre, F. soudre = Sp. Pg. solver = It. solvere, < L. solvere, pp. solutus, loosen, relax, solve, < so-, for se-, apart (see se-, and cf. sober), + luere, loosen, = Gr. λύνω, loosen, set free, release: see lose, loose. Hence ult. (< L. solvere) E. solvable, solvent, soluble, solute, solution, etc., absolve, absolute, assail, dissolve, dissolute, resolve, resolute, etc.*] 1. To loosen; disentangle; unravel; hence, to explain or clear up the difficulties in; resolve; explain; make clear; remove perplexity from: as, to *solve* a difficulty, a puzzle, or a problem.

If her wretched captives could not *solve* and interpret these riddles, she with great cruelty fell upon them in their hesitation and confusion, and tore them to pieces. Bacon, Physical Fables, x.

The most subtle and powerful intellects have been labouring for centuries to *solve* these difficulties. Macaulay, Sadler's Law of Population.

2. To determine; put an end to; settle.
He . . . would . . . *solve* high dispute
With conjugal caresses. Milton, P. L., viii. 56.
Centuries elapsed before the attempt to *solve* the great schism of the East and West by a Council.
Pusey, Eirenicon, p. 91.

3. To determine or work out by rule; operate on by calculation or mathematical processes, so as to bring out the required result: as, to *solve* a problem in mathematics.—4. To dissolve; melt. [Rare.]

Under the influence of the acid, which partly destroys, partly *solves* the membranes.
Workshop Receipts, 1st ser., p. 351.

solvet (solv), *n.* [*< solve, v.*] Solution.

But why thy odour matcheth not thy show,
The *solvet* is this, that thou dost common grow.
Shak., Sonnets, lxxix.

solvency (sol'ven-si), *n.* [*< solven(t) + -cy.*] The state of being solvent; ability to pay all just debts or just claims.

Our speech . . . was of tithes and creeds, of beeves and grain, of commodities wet and dry, and the *solvency* of the retail dealers.
Scott, Rob Roy, iii.

solvend (sol'vend), *n.* [*< L. solvendum, fut. pass. part. of solvere, loosen, dissolve: see solve.*] A substance to be dissolved.

Solutions differ from chemical compounds in retaining the properties both of the solvent and of the *solvend*.
C. Tomlinson.

solvent (sol'vent), *a.* and *n.* [= Sp. It. *solvente, < L. solven(t)-s, ppr. of solvere, loosen, dissolve: see solve.*] 1. *a.* 1. Having the power of dissolving: as, a *solvent* body.—2. Able or sufficient to pay all just debts: as, a *solvent* person or estate. Specifically—(a) Able to pay one's debts as they become due in the ordinary course of business. (b) Having property in such amount and situation that all one's debts can be collected out of it by legal process. See *insolvency*. (c) Of sufficient value to pay all just debts: as, the estate is *solvent*.

II. *n.* Any fluid or substance that dissolves or renders other bodies liquid; a menstruum. Water is of all solvents the most common and most useful. Alcohol is the solvent of resinous bodies and of some other similarly constituted substances; naphtha, oil of turpentine, and ether are solvents of caoutchouc; chlorin and aqua regia, or nitromuriatic acid, are solvents of gold.

The universal *solvent* sought by the alchemists.
Lowell, Study Windows, p. 315.

solver (sol'ver), *n.* [*< solve + -er.*] One who solves, in any sense of the verb.

solvable (sol'vi-bl), *a.* See *solvable*.

solvt, *adv.* An obsolete form of *solely*.

som†. An old spelling of *somc*, *sum*†.

som², *n.* [Russ. *somü*, the silture.] The sheatfish, *Silurus glanis*.

It [singlass] is a Russian kind, obtained from the bladders of the *som* fish. *Sci. Amer.*, N. S., LVIII. 133.

soma¹ (sō'mā), *n.*; pl. *somata* (-mā-tā). [NL., < Gr. *σῶμα*, the body, a dead body, body as opposed to spirit, material substance, mass, etc., also a person, body, human being.] Body. Specifically—(a) In *anat.* and *zool.*, the entire axial part of the body of an animal; the corpus, minus the membra; the head, neck, trunk, and tail, without the limbs. (b) In *theol.*, the body as distinguished from the psyche or soul, and the pneuma or spirit.

soma² (sō'mā), *n.* [*< Skt. soma* (= Zend *haoma*), juice, < √ *su*, press out. Cf. Gr. *σῶμα*, juice, sap (see *opium*), L. *sucus, succus*, juice (see *succulent*).] 1. In ancient India, a drink having intoxicating properties, expressed from the stems of a certain plant, and playing an important part in sacrifices, being offered especially to the god Indra. It was personified and deified, and worshipped as a god.—2. An East Indian plant, the probable source of the beverage *soma*. It is believed to be of the milkweed family and of the species now classed as *Sarcostemma brevistigma* (the *Asclepias acida* of Roxburgh). This is a twining plant, with jointed woody stems of the size of a quill, and numerous succulent branches which are pendulous when unsupported. The flowers are small, greenish-white, and fragrant, in elegant small umbel-like cymes at the ends of the branchlets. The plant yields a mild acidulous milky juice, which appears to have formed the basis of the drink called *soma* (see def. 1). The juice of more than one species may have been thus used. The plant grows in dry rocky places in India and Burma. Also called *moon-plant* (from mythological associations) and *swallowwort*.

3. In *later Hind. myth.*, the moon, or [cap.] the deity of the moon.

somacule (sō'mā-kūl), *n.* [*< NL. *somaculum, dim. of soma, < Gr. σῶμα, body: see soma*¹.] The smallest portion of protoplasm which can retain its physiological properties—that is, the chemical molecule of protoplasm. Foster.

Somaj (se-māj'), *n.* [*< Hind. somāj, a church, an assembly, < Skt. samājā, assembly, < sam, together, + √ aj, drive. Cf. Brahma-Somaj.*] See *Brahmo-Somaj*.

soma-plant (sō'mā-plant), *n.* Same as *soma*, 2.

Somaschian (sō-mas'ki-an), *n.* [*< Somascha* (see def.) + *-ian*.] A member of a Roman Catholic congregation, founded at Somascha, near Milan, in Italy, in the first half of the sixteenth century: it adopted the rules of St. Augustine.

Somateria (sō-mā-tē'ri-ä), *n.* [NL. (Leach, 1819), so called in allusion to the down on the body; < Gr. *σῶμα*(τ-), body, + *ἔριον*, wool.] A genus of *Anatidae* of the subfamily *Fuliginæ*, including various marine ducks of large size, with copious down on the under parts, with

King-duck (*Somateria spectabilis*), male.

which the female lines the nest, and large, diversiform, variously feathered or gibbous bill; the eiders or eider-ducks. The common eider is *S. mollissima*; the king-duck is *S. spectabilis*; the spectacled eider is *S. fischeri*; Steller's eider is *S. stelleri*. The genus is often dismembered into *Somateria* proper, *Erimetta*, *Lampronetta*, and *Heniconetta* (or *Polysticta*), respectively represented by the four species named. They inhabit arctic and northern regions, and are related to the scoters (*Eidemia*). See *Polysticta*, and cut under *eider-duck*.

somatic (sō-mat'ik), *a.* [= F. *somatique, < Gr. σωματικός, pertaining to the body, bodily, < σῶμα, the body: see soma*¹.] 1. Of or pertaining to the body or material organism, as distinguished from the soul, spirit, or mind; physical; corporeal; bodily.

It was shown that in the British official nosology mental diseases were classified as disorders of the intellect, the idea of *somatic* disease as associated with insanity being studiously ignored. Dr. Tukey.

We need here to call to mind the continuity of our presentations, and especially the existence of a background of organic sensations or *somatic* consciousness, as it is variously termed. J. Ward, Encyc. Brit., XX. 68.

2. Of or pertaining to the soma: as, the longitudinal *somatic* axis lies in the meson.—3. Of or pertaining to the cavity or interior hollow of the body of an animal, and especially to the body-walls of such cavity; parietal, as distinguished from *visceral* or *splanchnic*; *coelomatic*; *somatopleural*.—4. Pertaining to mass.—**Somatic anthropology**, that division of anthropology which deals with anatomical points.—**Somatic cavity**, the *coelomatic* cavity, body-cavity, or *coelom*: distinguished from *enteric cavity*, from which it is usually shut off completely. The interiors of the thorax and abdomen are *somatic* cavities. See cuts under *Actinozoa*, *Campanularia*, and *Hydrozoa*.

In the *Cœlenterata*, the *somatic cavity*, or enterocoel, is in free communication with the digestive cavity. Huxley, Anat. Invert., p. 56.

Somatic cells, in *bot.*, cells forming a part of the body of the individual, not specifically modified for any other purpose: said sometimes of those cells of plants which take part in vegetative reproduction.—**Somatic death**, death of the body as a whole: contrasted with death of any of its parts.—**Somatic musculature**, the muscles of the somatopleure; that one of the two chief layers of muscles which is subjacent to the dermic or outer epithelium: contrasted with *splanchnic musculature*.—**Somatic velocity**, the mass of matter through which a disturbance is propagated in a unit of time while advancing along a prism of unit sectional area; mass-velocity. Rankine.

somatical (sō-mat'ik-al), *a.* [*< somatic + -al.*] Same as *somatic*. Bailey, 1727.

somatics (sō-mat'iks), *n.* [Pl. of *somatic* (see *-ics*).] Same as *somatology*, 1.

somatism (sō'mā-tizm), *n.* [*< Gr. σῶμα*(τ-), the body, + *-ism*.] Materialism.

somatist (sō'mā-tist), *n.* [*< Gr. σῶμα*(τ-), the body, + *-ist*.] One who admits the existence of corporeal or material beings only; one who denies the existence of spiritual substances; a materialist.

And so our unnatural *somatists* know none of the most excellent substances, which actuate all the rest, but only the more base and gross, which are actuated by them. Baxter, Dying Thoughts.

somato-ætiological (sō'mā-tō-ē'ti-ō-loj'i-kal), *a.* [*< Gr. σῶμα*(τ-), body, + *Æ. ætiology + -ic-al*.] Pertaining to or regarding the body as a cause (as of disease). E. C. Mann, Psychol. Med., p. 51.

somatocyst (sō'mā-tō-sist), *n.* [*< Gr. σῶμα*(τ-), the body, + *κυστίς*, bladder: see *cyst*.] The inflated stem or body of some siphonophorans, or oceanic hydrozoans, serving as a pneumatocyst or air-sac to float or buoy these organisms, as in the case of the Portuguese man-of-war. See *Calycephora*, *Siphonophora*², and cuts under *Diphyidæ* and *Physalia*.

somatocystic (sō'mā-tō-sis'tik), *a.* [*< somatocyst + -ic*.] Vesicular or cystic, as the body-cavity of a siphonophorous hydrozoan; of or pertaining to a somatocyst.

somatogenic (sō'mā-tō-jen'ik), *a.* [*< Gr. σῶμα*(τ-), the body, + *-γενής*, produced: see *-genous*.] Originating in the soma, body, or physical organism in consequence of its conditions of environment: noting those modifications or biological characters which an organism acquires in reacting upon its material surroundings.

He [Prof. Weismann] uses the term *somatogenic* to express those characters which first appear in the body itself, and which follow from the reaction of the soma under direct external influences. Nature, XL. 531.

somatologic (sō'mā-tō-loj'ik), *a.* [*< somatolog-y + -ic*.] Same as *somatological*.

somatological (sō'mā-tō-loj'ik-al), *a.* [*< somatolog-y + -ic-al*.] Of or pertaining to somatology in any sense, especially to somatology as a department of anthropology; physical; corporeal; material.

somatologically (sō'mā-tō-loj'ik-al-i), *adv.* As regards physique or bodily frame; physically; from the point of view of somatology. Science, XII. 227.

somatology (sō'mā-tol'ō-jī), *n.* [= F. *somatology; < Gr. σῶμα*(τ-), the body, + *-λογία, < λέγειν, speak: see -ology*.] 1. The science of living or organized bodies, considered with regard only to their physical nature or structure. It includes natural history in the usual sense, as embracing zoology, botany, anatomy, and physiology, and differs from biology only in taking no account of mental or psychological phenomena. Also *somatics*.

2. More broadly, physics; the doctrine of material bodies or substances.—3. Specifically, the doctrine of the human body, as a department of anthropology; human anatomy and physiology; also, a treatise on this subject.—**Anthropurgic somatology**. See *anthropurgic*.

somatome (sō'mā-tōm), *n.* [For **somatotome, < Gr. σῶμα*(τ-), the body, + *-τομος, < τέμνειν,*

ταμείν, cut.] An ideal section or segment of the body; one of the structural parts into which a body, especially a vertebrate body, is theoretically divisible. When actually so divided, the somatomes are the somites, metameres, arthromeres, diarthromeres, etc., which may exist in any given case. See *somite*.

somatonic (sō-ma-tom'ik), *a.* [*< somatome + -ic.*] Having the nature, quality, or character of a somatome; dividing or segmenting a body into theoretic or actual somites; somitic; metameric.

somatopagus (sō-ma-top'ā-gus), *n.*; pl. *somatopagi* (-jī). [NL., *< Gr. σώμα(τ-), the body, + πάγος, that which is fixed, < περιγίναμι (√ παγ), fix.*] In *teratol.*, a double monster with separate trunks.

somatoparallelus (sō'ma-tō-par-a-lō'lus), *n.*; pl. *somatoparalleli* (-lī). [NL., *< Gr. σώμα(τ-), the body, + παράλληλος, beside one another; see parallel.*] In *teratol.*, a somatopagus with the axes of the two bodies parallel.

somatoplasm (sō'ma-tō-plazm), *n.* [*< Gr. σώμα(τ-), the body, + πλάσμα, anything formed or molded; see plasm.*] Somatic plasma; the substance of the body.

My germ-plasm or idoplasm of the first ontogenetic grade is not modified into the somatoplasm of Prof. Vinea. *Nature*, XL, 320.

somatopleura (sō'ma-tō-plō'rā), *n.*; pl. *somatopleuræ* (-rē). [NL.: see *somatopleure*.] Same as *somatopleure*.

The villosities of connective and vascular tissue, partly formed by the somatopleura. *Micros. Sci.*, N. S., XXX, 352.

somatopleural (sō'ma-tō-plō'rāl), *a.* [*< somatopleure + -al.*] Of or pertaining to the somatopleure; forming or formed by the somatopleure: as, the somatopleural layer or division of mesoderm. Also *somatopleuric*.

somatopleure (sō'ma-tō-plō'r), *n.* [*< NL. somatopleura, < Gr. σώμα(τ-), the body, + πλευρά, the side.*] The outer one of two divisions of the mesoderm of a four-layered germ, the inner one being the *splanchnopleure*. A germ that is three-layered—that is, consists of an ectoderm and an endoderm, with mesoderm between them—in most animals becomes four-layered by a splitting of the mesoderm into two layers, the outer or somatopleural and the inner or splanchnopleural, separated by a space which is the body-cavity or coelom. The somatopleure thus constitutes usually the great mass of the body, or the "flesh and bones" of ordinary language, together with its vessels, nerves, and other special structures—not, however, including the cerebrospinal axis of a vertebrate, which is derived from an invagination of ectoderm—while the splanchnopleure forms a portion of the substance of the intestinal tract and its annexes. Also *somatopleura*.

somatopleuric (sō'ma-tō-plō'rik), *a.* [*< somatopleure + -ic.*] Same as *somatopleural*. *Foster*, *Elem. of Embryol.*, p. 39.

somatoplaschnopleuric (sō'ma-tō-splangk-nō-plō'rik), *a.* [*< Gr. σώμα(τ-), the body, + πλάγχνον, the inward parts, + πλευρά, the side.*] Common to the somatopleure and the splanchnopleure. *Micros. Sci.*, XXVIII, 117.

somatotomy (sō-ma-tōt'ō-mī), *n.* [*< Gr. σώμα(τ-), the body, + τομία, < τέμνειν, ταμείν, cut.*] The anatomy of the human body; anthropotomy; hominisection.

somatotridymy (sō'ma-tō-trid-i-mus), *n.*; pl. *somatotridymi* (-mī). [NL., *< Gr. σώμα(τ-), the body, + τριδύμος, threefold.*] In *teratol.*, a monster having three bodies.

somatotropic (sō'ma-tō-trop'ik), *a.* [*< Gr. σώμα(τ-), the body, + τροπος, < τρέπειν, turn, + -ic.*] In *bot.*, exhibiting or characterized by somatotropism.

somatotropism (sō-ma-tōt'rō-pizm), *n.* [*< somatotropie + -ism.*] In *bot.*, a directive influence exerted upon growing organs by the mass of the substratum upon which they grow. This influence is not wholly due to the mere physical attraction between them, but is the result of a stimulating effect on what has been called the *nerve-motility* of the organ. Growing organs may be divided, according to their response to this influence, into two classes, the *positively somatotropic*, or those which tend to grow perpendicularly inward into the substratum, and *negatively somatotropic*, or those which tend to grow perpendicularly outward from the substratum.

somber, sombre (som'bēr), *a.* [= D. *somber*, formerly also *sommer*, *< F. sombre = Sp. sombrío (= Pg. sombrio)*, shady, gloomy, *< sombra (= Pg. sombra)*, shade, dark part of a picture, also a ghost (cf. *asombrar*, frighten); cf. OF. *essombre*, a shady place; prob. *< L. exumbrare, < ex, out, + umbra*, shade (or, according to some, the Sp. Pg. forms are, like Pr. *satzumbrar*, shade, *< L. subumbrare, < sub, under, + umbra*, shade): see *umbra*.] 1. Dark; dull; dusky; gloomy; as, a somber hue; somber clouds.

Sombre, old, colourated mistles. *Tennyson*, *The Daisy*.

2. Dismal; melancholy; dull: opposed to *cheerful*.

Whatever was poetical in the lives of the early New-Englanders had something shy, if not *sombre*, about it. *Lovell*, *Among my Looks*, 1st ser., p. 232.

= Syn. 1. Darksome, cloudy, murky.

somber, sombre (som'bēr), *v. t.*; pret. and pp. *sombered, sombred*, ppr. *sombering, sombring*. [*< somber, sombre, a.*] To make somber, dark, or gloomy; shade.

somberly, sombrely (som'bēr-li), *adv.* In a somber manner; darkly; gloomily.

somberness, somberness (som'bēr-nes), *n.* Somber character, appearance, or state; darkness; gloominess.

The intense gloom which follows in the track of ennui deepened the natural somberness of all men's thoughts. *C. F. Keary*, *Prim. Belief*, p. 508.

sombre, etc. See *somber, etc.*

sombrerite (som-brā'rīt), *n.* [*< Sombrero* (see *def.*) + *-ite*.] An earthy mineral consisting chiefly of calcium phosphate with impurities, as alumina, etc. It forms a large part of some small islands in the Antilles, especially of Sombrero, and has been used as an artificial manure and for the manufacture of phosphorus. It is supposed to be derived from the decayed bones of turtles and other marine animals. Also called *Sombrero guano*.

sombrero (som-brā'rō), *n.* [*< Sp. sombrero, a broad-brimmed hat, also a sounding-board, < sombra, shade; see somber.*] A broad-brimmed felt hat, of Spanish origin, but now widely used throughout the continent of America.

They rowe too and fro, and have all their marchandizes in their boats, with a great Sombrero or shadow over their heads to keepe the sunne from them, which is as broad as a great cart wheele. *Hakluyt's Voyages*, II, 253.

Both were dressed in the costume of the country—flannel shirts, with handkerchiefs loosely knotted round their necks, thick trousers and boots, and large sombreros. *The Century*, XXXIX, 625.

Sombrero guano. Same as *sombrerite*.

sombrous (som'brus), *a.* [*< somber + -ous.*] Somber; gloomy. [Poetical.]

A certain uniform strain of sombrous gravity. *T. Warton*, *Hist. Eng. Poetry*, III, 171.

Mixed with graceful birch, the sombrous pine
And yew-tree o'er the silver rocks recline.
Wordsworth, *Evening Walk*.

sombrously (som'brus-li), *adv.* In a sombrous manner; gloomily; somberly. [Poetical.]

sombrousness (som'brus-nes), *n.* The state of being sombrous.

somdelit, somdelet, adv. See *somedel*.

some¹ (sum), *a.* and *pron.* [Early mod. E. also *som*; *< ME. som, sum*, pl. *sunne, somme, some*, *< AS. sum, a, a certain, one* (with numerals, *sun fēowra*, one of four, *sun twelfa*, one of twelve, about twelve, *sun hund*, *sun hundred*, about a hundred, etc.), pl. *sume, some*, = OS. *sum* = OFries. *sum* = MD. *sum* = MLG. *sum* = OHG. MHG. *sum* = Icel. *sumr* = Dan. *somme*, pl. = Goth. *sums*, some one; hence, with adj. formative, D. *sommig* = MLG. *somich, summich, sommich* = OFries. *sumlike, somlike* = Sw. *somlike*, pl.; akin to *same*: see *same*.] I. a. 1.

A; a certain; one: noting a person or thing indefinitely, either as unknown or as unspecified. *Ther was sum prest, Zacharie by name.* *Wyclif*, *Luke* I. 5.
Let us slay him, and cast him into some pit, and we will say, some evil beast hath devoured him. *Gen.* xxxvii. 20.
Set swords against this breast, some honest man,
For I have lived till I am pitted.
Beau. and Fl., *Phalaster*, v. 5.
On almost every point on which we are opposed to Mr. Gladstone we have on our side the authority of some divine. *Macaulay*, *Gladstone on Church and State*.
In this sense often followed by a correlative *other* or *another*.
And so this vale is called the vale Ebron in some place therof, and in another place therof it is called the vale of Mambre. *Sir R. Guylford*, *Pylgrimage*, p. 55.
By some device or other
The villain is o'er-raught of all my money.
Shak., C. of E., I. 2. 95.
Therefore, it was well said, "Invidia festo die non agit," for it is ever working upon some or other.
Bacon, *Envy* (ed. 1887).
By the meers bond of humane Nature, to God, in some or other Religion. *Purehas*, *Pilgrimage*, p. 31.
There is scarce any thing so absurd, says an ancient, in nature or morality, but some philosopher or other has held it. *Ep. Atterbury*, *Sermons*, II, x.

2. A certain indefinite or indeterminate quantity or part of; more or less: often so used as to denote a small quantity or a deficiency: as, bring some water; eat some bread.
And therefore wol I maken you disport.
As I aeyde erst, and don you som confort.
Chaucer, *Gen. Prolog.* to C. T., I. 776.

some², *adv.* and *conj.* [ME., also *som, sum*, *< Icel. sem*, as, as if, when, also as an indeclinable rel. pron., who, which, that, etc.; after an adverb, to give it a relative sense, *thar sem*, 'there as,' where, *hvar sem*, 'where as,' wheresoever, etc., = Sw. Dan. *som*, as, like, as rel. pron. who, the annoyance of the dust, or else some meat
You ate at dinner, cannot brook with you.
Arden of Feversham, iv. 2.
It is some mercy when men kill with speed.
Webster, *Duchess of Malfi*.
Let her who has no hair, or has but some,
Plant Centinels before her Dressing-Room.
Congreve, tr. of *Ovid's Art of Love*, III.

3. In *logic*, at least one, perhaps all; but a few logicians sometimes employ a semidefinite *some* which implies a part, but not all. As commonly used in logic, a statement about some of a class, say that "some S is P," means that it is possible so to select an S that it shall be P; while "every S is P" means that whatever S be taken, it will be P. But when *some* and *every* occur in the same statement, it makes a difference which is chosen first. Thus, "every man knows some fact" may mean (1) that, first choosing any man, a fact may then be found which that man knows (which may be expressed by saying that every man knows some fact or other); or it may mean (2) that a fact may be first selected such that, then, taking any man, he will know that fact (which may be expressed by saying that all men know some certain fact). When several *some*s and *alls* occur in the same statement, ordinary syntax fails to express the meaning with precision, and logicians resort to a special notation.

4. A certain indefinite or indeterminate number of: used before plural substantives: as, some years ago.
They hurried na aboard a bark,
Bora us some leagues to sea.
Shak., *Tempest*, I. 2. 145.
The Lights at Paris, for 5 Months in the year only, cost 50000L. Sterling. This way of Lighting the Streets is in use also in some other Cities in France.
Lister, *Journey to Paris* (1698), p. 24.
Hence—5. A certain number of, stated approximately: in a quasi-adverbial use before a numeral or other word of number: as, a place some seventy miles distant; some four or five of us will be there.

I would detain you here some month or two.
Shak., M. of V., III. 2. 9.
Some dozen Romans of us and your lord
... have mingled sams
To buy a present for the emperor.
Shak., *Cymbeline*, I. 6. 185.
We know
That what was worn some twenty years ago
Comes into grace again.
Beau. and Fl., *Thierry and Theodoret*, *Prolog.*
A distinguished foreigner, tall and handsome, some thirty-seven years of age, who had played no insignificant part in the affairs of France. *E. Dowden*, *Shelley*, I. 380.

II. *pron.* 1. A certain person; one.
Som man desireth for to have richesse,
That cause is of his morthre or gret seeknesse,
And som wolde out of his prisoun layn,
That in his house is of his mayne fayn.
Chaucer, *Knight's Tale*, I. 397.

2. A certain quantity, part, or number, as distinguished from the rest: as, some of them are dead; we ate some of our provisions, and gave away the rest.
Loo! be that sowith, goth out to sowe his seed. And the while he soweth, *sum* felden hyade the weye.
Wyclif, *Mt.* xiii. 4.
Though some report they [elephants] cannot kneele nor lye downe, they can doe both.
Capt. John Smith, *True Travels*, I. 49.
That he might, if possible, allure that Blessed One to cheape and buy some of his vanities.
Bunyan, *Pilgrim's Progress*, I, *Vanity Fair*.

In this sense *some* is very commonly repeated, *some . . . some* (or, formerly, *other some*, as in *Acts xvii. 18*) meaning 'a number . . . others,' or 'the Acts.'
Sunne were glad whanne thei him sige,
Sunne were sory, *sunne* were layne.
Hymns to Virgyn, etc. (E. E. T. S.), p. 54.
Some of these Tabernacles may quickly be taken asunder and set together againe. . . . *Other some* cannot be take Insunder.
Hakluyt's Voyages, I. 54.

The work some praise,
And some the architect. *Milton*, P. L., I. 782.
The plural *some* is occasionally used in the possessive.
Hewsoe'er it shock *some's* self-love.
Byron. (*Imp. Dict.*)

Some, as originally used partitively with numbers (AS. *fēowra sum*, one of four, etc.), has come to be an apparent distributive suffix, as in *four-some, seven-some*.—All and some. See *all*.—By some and some, bit by bit.
You know, wife, when we met together, we had no great store of hons-hold stuff, but were fain to buy it afterward by some and some, as God sent money, and yet you see we want many things that are necessary to be had.
The Fifteen Comforts of Matrimony, n. d. (*Nares*.)

Semidefinite some. See *semidefinite*.
some¹ (sum), *adv.* [*< some*¹, *a.*] In some degree; to some extent; somewhat: as, I am some better; it is some cold. [Colloq., Scotland and U. S.]
some², *adv.* and *conj.* [ME., also *som, sum*, *< Icel. sem*, as, as if, when, also as an indeclinable rel. pron., who, which, that, etc.; after an adverb, to give it a relative sense, *thar sem*, 'there as,' where, *hvar sem*, 'where as,' wheresoever, etc., = Sw. Dan. *som*, as, like, as rel. pron. who,

which, that; akin to *same*: see *same*, and cf. *some*¹.] As; so; ever: used indefinitely after certain adverbs and pronouns, like *so*, *soever*. It remains in modern dialectal use in *how some*, *what some*, or *howsomever*, *whatsomever*, *wheresomever*, etc., equivalent to *howsoever*, *whatsoever*, *wheresoever*, etc.

Swas *sum* the godspæl kitheth. *Ormulum*, l. 302.

Sum I the telle.
Sir Amadace (Early Eng. Metr. Rom., ed. Robson). [Stratmann.]

-some. [Early mod. E. also *-som*; < ME. *-sum*, *-som*, < AS. *-sum* = OS. *-sum* = MD. *-saem*, D. *-zaam* = MLG. OHG. MHG. G. *-sam* = Icel. *-samr* = Sw. *-sam* = Dan. *-sams*, ult. identical with Teut. **sama*, the same: see *same*. This suffix occurs disguised in *buxom* (as if **bucksome*).] A suffix used to form adjectives from nouns or adjectives, as *mettlesome*, *blithesome*, *lonesome*, *gladsome*, *gamesome*, *gruesome*, *quarrelsome*, *toothsome*, *troublesome*, *wholesome*, *winsome*. It usually indicates the possession of a considerable degree of the quality named: as, *mettlesome*, full of mettle or spirit; *gladsome*, very glad or joyous. As used with numbers, foursome, seven some, *-some* is of different origin: see *some*¹, a.

somebody (sum'bod'i), n. [*< some + body.*] 1. Some one; a person unknown, unascertained, or unnamed.

Jesta said, *Somebody* hath touched me. Luke viii. 46.

Somebody, surely, some kind heart will come
To bury me. *Terence*, *Mand*, xxvii. 11.

2. Pl. *somebodies* (-iz). A person of consideration, consequence, or importance.

Before these days rose up Theudas, boasting himself to be *somebody*. Acts v. 36.

I am come to the age of seventy; have attained enough reputation to make me *somebody*.
Sydney Smith, in *Lady Holland*, vi.

While men saw or heard, they thought themselves to be *somebodies* for assisting at the spectacle.
Saturday Rev., Nov., 1873, p. 655.

somedeaft (sum'dēl), n. [Early mod. E. also *somedele*; < ME. *somdel*, *sundel*, etc., prop. two words, *sum del*, some part: see *some* and *deaf*.] Some part; somewhat; something; some.

Sundel of thy labour wolde I quyte.
Chaucer, *Parliament of Fowls*, l. 112.

Then Brenne . . . said in his game, ryche goddes must gyue to me *somedele* of theyr rychesse.
Fabyan, *Chron.*, xxxi.

somedeaft (sum'dēl), adv. [*< ME. somdel, sundel, etc.*; the noun used adverbially.] In some measure or degree; somewhat; partly; partially.

She was *somdel* deaf and that was scathe.
Chaucer, *Gen. Prol.* to C. T., l. 446.

This is the truth, though I'll not justify
The other, but he may be *some-deaf* faulty.
B. Jonson, *Volpone*, v. 6.

somegate (sum'gāt), adv. [*< some + gate*.] Somewhere; in some way; somehow. [Scotch.]

somehow (sum'hōu), adv. [*< some + how*.] In some way not yet known, mentioned, or explained: as, *somehow* he never succeeded; things must be done *somehow*.

He thought of resigning his place, but, *somehow* or other, stumbled upon a negotiation. *Walpole*, *Letters*, II. 411.

Somehow or other a little bird whispers to me we shall yet be very happy. *Disraeli*, *Henrietta Temple*, l. 9.

somert. A Middle English form of *summer*¹, *summer*², *summer*³.

somersault (sum'er-sält), n. [Also *summer-sault*, *somersaut*, *summersaut* (also *summerset*, *somersset*, *sommersset*, etc.: see *somersset*); early mod. E. *somersaut*, *somersaut*, *summersaut*, *sombersaut*, *sobresault*, < OF. *sombresault*, *soubresault*, F. *soubresaut*, *sursaut* = Sp. Pg. *sobresalto* = It. *soprasalto*, < ML. as if **supersaltus* or **suprasaltus*, a leaping over, < L. *super* or *supra*, above, over, aloft, + *saltus*, a leap, bound: see *sault*¹.] A spring or fling in which a person turns heels over head; a complete turn in the air, such as is performed by tumblers.

So doth the salmon vault,
And if at first he fail, his second *summer-saut*
He instantly assays. *Drayton*, *Polyolbion*, vi. 52.

Mr. Evans walks on the Slack Rope, and throws himself a *somersset* through a Hoghead hanging eight foot high.
Quoted in *Ashton's Social Life in Reign of Queen Anne*, I. 266.

Leaping and turning with the heels over the head in the air, termed the *somersault*, corruptly called a *somersset*.
Strutt, *Sports and Pastimes*, p. 317.

Double *somersault*, two complete turns of the body during one spring in the air. A third such turn is accomplished by a few acrobats.

somersset¹ (sum'er-set), n. Same as *somersault*.
somersset² (sum'er-set), v. i. [Also *summersset*; < *somersset*¹.] To turn a *somersault* or *somersset*.

Then the sly sheepe-biter issed into the midst, and *summer-sett*ed and flitflapt it twenty times above ground as light as a feather, and ericd "Mitton."
Nashe, *Lenten Stuffe* (Harl. Misc., VI. 164).

In such extraordinary manner doea dead Catholicism *somersset* and caper, skilfully galvanised.
Carlyle, *French Rev.*, II. iv. 2.

somersset² (sum'er-set), n. [So named from Lord Fitzroy *Somersset*, for whom such a saddle was made, he having lost his leg below the knee.] A saddle padded behind the thigh and elsewhere so as to afford a partial support for the leg of the rider. *E. H. Knight*.

somervillite (som'er-vil-it), n. [Named after Dr. *Somerville*, who brought the specimens to Brooks, the English mineralogist who described and named the species in 1824.] A variety of melilitite found on Mount Vesuvius.

something (sum'thing), n. [*< ME. som thing*, < AS. *sum thing*, prop. two words: see *some*¹ and *thing*¹.] 1. Some thing; a certain thing indefinitely considered; a certain but as yet unknown, unspecified, or unexplained thing; an event, circumstance, action, or affair the nature or name of which has not as yet been determined, or is not now known, and cannot therefore be named or specified: as, *something* must have happened to detain him; I want to tell you *something*.

By this King it appears there is *something* else besides the Grievances of Taxatons that alienates the Minds of English Subjects from their King.

Somewhither would she have thee go with her.

Shak., Tit. And., iv. 1. 11.

somital (sō'mi-tāl), *a.* [*< somite + -al.*] Same as *somitie*.

somite (sō'mit), *n.* [*< Gr. σῶμα, body, + -ite².*] An actual somatome; any one morphological segment of an articulated body, such a body being viewed as composed of a longitudinal series of somites; an arthromere or metamere of an articulate invertebrate or a diarthromere of a vertebrate; such a segment considered with or without the appendages it may possess; in the latter restricted sense, a metamere minus its appendages, or a segment of the soma or trunk without the limbs it may bear. The term sometimes extends to ideal somatomes, or to the metameres of which an organism is theoretically assumed to consist; but it is especially applied to the actual segments of such invertebrates as insects, crustaceans, and worms, whose body-rings are usually evident, though some or other of them may coalesce, as into a cephalothorax, etc. In such cases the primitive or morphological somites are usually recognized and reckoned by their respective pairs of appendages. Separate somites, continued throughout the body, are evident in the rings of earthworms and other annelids. In arthropods the typical number of somites is supposed to be twenty or twenty-one, numbers often actually recognizable. In insects the head is assumed to have six or seven somites, the thorax has normally three (see *prothorax, mesothorax, and metathorax*), and the abdomen is supposed to have ten or eleven. Each of these somites is invested and indicated by a body-ring or crust of integument, primitively or typically composed of eight sclerites, which may variously coalesce with one another, or with pieces of another somite, or both. Those sclerites which ordinarily remain distinct, and thus can be identified, take special names, as *tergite, pleurite, sternite, scutum, præscutum, etc., epimeron, epipleuron, etc.* Appendages of somites are limbs in the broadest sense, under whatever modifications; and these modifications are usually greatest at the cephalic and caudal ends of the body, as into eyestalks, antennæ, palpi, mandibles, maxillæ, maxillipeds or gnathopods, etc., of the head, and stings, claspers, or other anal armature. Intermediate somitic appendages are ordinary legs and wings, as of the thorax of insects, and the pereopods, pleopods, chelæ, rhipidura, telson, etc., of the thorax and abdomen of crustaceans. In worms such appendages chiefly occur in the form of parapodia (neuropodia and notopodia). See *sclerite*, and cuts under *Amphitoe, Apus, Bulbus, Scorpionidae, Blattidae, and cockroach*.

somitie (sō-mit'ik), *a.* [*< somite + -ic.*] Having the character of a somite; somatonic; metameric; of or pertaining to somites: as, the *somitie* divisions of the body; a *somitie* ring or joint; a *somitie* appendage.

These septa are metamericly arranged, one for each somitic constriction.

Huxley and Martin, Elementary Biology, p. 243.

E. Gurney, in Proc. Soc. Psych. Research, II. 63.

somnambulism (som-nam'bū-lizm), *n.* [= *F. somnambulisme* = *Sp. somnambulismo, sonambulismo* = *Pg. sonnambulo* = *It. sonnambulismo*; as *somnambule + -ism*.] The act of walking about, with the performance of apparently purposive acts, while in a state intermediate between sleep and waking. The sleeping condition is shown by the absence of the usual reaction to sense-impressions, and usually by the failure to recall what has been done during the somnambulist period. With many recent writers, however, the word is used, quite independently of any consideration of movements which the somnambulist may or does execute, as nearly synonymous with *trance, mesmerization, or hypnotism*, and exactly so with *somnolism*. It is generally considered under the two main conditions of the idiopathic, spontaneous, or self-induced and the artificial or induced. Compare *somnolism*. Also called, rarely, *noctambulism*.

In *somnambulism*, natural or induced, there is often a great display of intellectual activity, followed by complete oblivion of all that has passed.

W. James, Prin. of Psychology, I. 201.

Somnambulism is, as a rule, a decidedly deeper state than the lighter stage of hypnotism.

E. Gurney, in Proc. Soc. Psych. Research, II. 63.

Son of a gun. See *gun*¹.—**Son of basti**. See *bast*², *n.*—**Son of God**. (a) Christ. *Mat.* xxv. 63. (b) One of Christ's followers; one of the regenerate.

As many as are led by the Spirit of God, they are the *sons* of God. *Rom.* viii. 14.

Son of man. (a) In the Old Testament, one of the descendants of Adam; especially used as a form of address in the Book of Ezekiel (in Dan. vii. 13 of the Messiah). (b) In the New Testament, Christ as the promised Messiah.—**Son of Liberty**, in *Amer. hist.*: (a) In the years preceding the revolution, one of associations formed to forward the American cause. (b) One of the secret associations, similar to the Knights of the Golden Circle, formed in the North during the civil war, for the purpose of giving aid to the Confederacy.—**Sons of Sires, or Sons of Seventy-six**, a name said to have been applied to or assumed by members of the American or Know-nothing party. [Political slang, U. S.]—**Sons of the prophets**. See *school of the prophets*, under *prophet*.—**Sons of the South**, the name assumed by members of certain organizations formed in Missouri, about 1854, for the purpose of taking possession of Kansas in the interest of slavery.—**The Son**, the second person of the Trinity; Christ Jesus. *Mat.* xi. 27.

The Father sent the *Son* to be the Saviour of the world.
1 John iv. 14.

son², *n.* An original spelling of *sound*⁵.

-son. A form of the termination *-tion*, in some words derived through Old French, as in *benison, malison, venison, reason, season, treason*, etc. See *-tion*.

sonabile (sō-nāb'ē-le), *a.* [It., < *sonare*, sound; see *sonata*.] In *music*, resonant; sounding.

sonance (sō'nāns), *n.* [= OIt. *sonanza*, a sounding, ringing; as *sonau(t) + -cc.*] 1†. A sound; a tune; a call.

Let the trumpets sound
The tucket *sonance* and the note to mouat.
Shak., 11en. V., iv. 2. 35.

2. Sonaney.

sonancy (sō'nān-si), *n.* [As *sonance* (see *-cy*).] The property or quality of having sound, or of being sonant; sonant character; sound.

A concise description of voice, then, is this: it is the audible result of a column of air emitted by the lungs, impressed with *sonancy* and variety of pitch by the larynx, and individualized by the mouth-organs.

Whitney, Life and Growth of Lang., iv.

sonant (sō'nānt), *a.* and *n.* [= F. *sonnant* = Sp. Pg. It. *sonante*, < L. *sonan(t)-s*, ppr. of *sonare*, sound, make a noise, < *sonus*, a sound; see *sound*⁵. Cf. *assonant, consonant, dissonant, resonant*.] 1. *a.* 1. Pertaining to or having sound; sounding.—2. In *pron.*, noting certain alphabetic sounds, as the vowels, semi-vowels, nasals, and voiced mutes and fricatives, the utterance of which includes the element of tone, or a vibration of the vocal chords, as *a, l, n, b, z, v* (the last three as opposed to *p, s, f*, which are similar utterances without tone); voiced, vocal, intonated (*soft* and *flat* are also sometimes used in the same sense).—3. In *entom.*, same as *sonorific*, 2.

II. *n.* In *pron.*, a sonant letter.

sonata (sō-nā'tā), *n.* [= F. *sonate* (> D. G. Dan. *sonate* = Sw. *sonat*) = Sp. Pg. *sonata*, < It. *sonata*, a sonata, < *sonata*, fem. pp. of *sonare*, sound, < L. *sonare*, sound; see *sound*⁵. Cf. *sonnet*.] 1. In *music*, in the seventeenth and eighteenth centuries, any composition for instruments: opposed to *cantata*. These old sonatas were usually in more than one movement. The character of their themes and their structure varied widely, those called *church sonatas* tending to grave themes and a contrapuntal treatment, and the *chamber sonatas* resembling the *canzona* and the *suite*.

2. In *recent music*, an instrumental work, especially for the pianoforte, made up of three or four movements in contrasted rhythms but related keys, one or more of which are written in sonata form. The movements usually include an allegro with or without an introduction, a slow movement (usually adagio, largo, or andante), a minuet or scherzo with or without a trio appended, and a final allegro or presto, which is often a rondo. A certain unity of sentiment or style is properly traceable between the successive movements. The sonata is the most important form of homophonic composition for a single instrument. A sonata for a string quartet is called a *quartet*, and one for a full orchestra is called a *symphony*.—**Double sonata**, a sonata for two solo instruments.—**Sonata form**, in *music*, a form or method of composition in which two themes or subjects are developed according to a plan more or less like the following: (a) *exposition*, containing the first subject, followed by the second, properly in the key of the dominant or in the relative major (if the first be minor); (b) *development* or *working out*, consisting of a somewhat free treatment of the two subjects or parts of them, either singly or in conjunction; (c) *restatement*, containing the two subjects in succession, both in the original key, with a conclusion. The succession of sections and the relations of keys are open to considerable variation, and episodes often occur. The sonata form is distinctive of at least one movement of a sonata or symphony, and usually of the first and last; it also appears in many overtures.

sonatina (sō-nā-tē'nā), *n.* [It., dim. of *sonata*; see *sonata*.] In *music*, a short or simplified sonata.—**Sonatina form**, in *music*, a form or method of composition resembling the sonata form, but on a smaller scale, and usually lacking the development section.

sonation (sō-nā'shon), *n.* [= It. *sonazione*; < ML. *sonatio(n)-*, a sounding, < L. *sonare*, sound; see *sound*⁵, *v.*, *sonate*.] The giving forth of a sound; sounding. [Rare.]

But when what has the faculty of hearing, on the one hand, operates, and what has the faculty of sounding, on the other hand, sounds, then the actual hearing and the actual sounding take place conjointly; and of these the one may be called addition, the other *sonation*.

Sir W. Hamilton, tr. from Aristotle, Reid's Works, Note D.

Sonchus (song'kus), *n.* [NL. (Tournefort, 1700), < L. *sonchus*, < Gr. *σόχος*, the sow-thistle.] A genus of composite plants, of the tribe *Cichoriaceæ* and subtribe *Lactuceæ*. It is characterized by flower-heads commonly dilated at the base in fruit, with numerous compressed beakless achenes having from ten to twenty ribs and bearing a soft snowy-white pappus which is deciduous in a ring. There are about 30 species, widely diffused throughout the Old World and in Australasia; four species are naturalized as weeds in the United States, two of which are now almost cosmopolitan. They are annual or perennial herbs, having spreading radical leaves and upright stems clad with coarse clasping leaves which are often toothed with soft or rigid spines. The yellow heads are irregularly clustered at the summits of the few branches. The species are fond of bar-yards and moist rich soil, whence the name *sow-thistle*. *S. tenerrimus* is eaten as a salad in Italy, and *S. oleraceus* was once so used in various parts of Europe. (See *hare's-lettuce*.) The genus is reputed a galactagogue. One or two species with hand-

some leaves and flowers, from Madeira and the Canaries, are sometimes cultivated under glass. See *sow-thistle*.

soncie, soncy, *a.* See *sonsy*.

sondt, *n.* A Middle English form of *sand*¹, *sand*².

Sondayt, *n.* An obsolete form of *Sunday*.

Sondeli (*Crocidura myosura*).

of India, *Sorex murinus* (Linnaeus, 1766), *S. myosurus* (Pallas, 1785), or *Crocidura myosura*, an insectivorous mammal, exhaling a strong musky odor. The name specially denotes a variety which is semi-domesticated, and sometimes called *gray musk-shrew* (*C. corulea*), as distinguished from the wild brown musk-shrew.

sonder-cloud (son'der-kloud), *n.* A cirro-cumulus cloud. *Forster, Atmospheric Phenomena* (3d ed., 1823), p. 145. [Rare.]

sondryt, *a.* A Middle English form of *sundry*.

sonet, *adv.* An old spelling of *soon*.

soneri (son'er-i), *n.* [Hind. *sunahrī, sunahrī*, of gold, < *sonā, gold*.] Cloth of gold: an Indian term adopted as the name of native stuffs interwoven with gold.

song¹ (sōng), *n.* [Se. also *sang*; < ME. *song, sang*, < AS. *sang, song*, singing, fongs, a song, poem, poetry, = OS. *sang* = OFries. *song, sang* = MD. *sang, D. zang* = MLG. *sank, LG. sang* = OHG. *sang, MHG. sanc, G. gesang* = Icel. *sóngr* = Sw. *sång* = Dan. *sang* = Goth. *saggus, song*; also collectively, OHG. **gasang, kisaneh, MHG. gesane, G. gesang, song*; from the verb, AS. *singau* (pret. *sang*), etc., sing; see *sing*.] 1. Singing; vocal music in general; utterance in tones of musical quality and succession, with or without words: opposed to *speech* and to *instrumental music*.

For the tired slave *Song* lifts the languid oar.

Wordsworth, Power of Sound, iv.

2. The musical cry of some birds (see *singing bird*, under *sing*) and, by extension, of some other animals.

Trees, branches, birds, and *songs* were framed fit

For to allure fraile mind to careless esse.

Spenser, F. Q., II. vi. 13.

3. A short poem intended for singing, or set to music; a ballad or lyric. A song is properly distinguished by brevity, free use of rhythmic accent and rime, more or less division into stanzas or strophes, often with a refrain or burden, comparative directness and simplicity of sentiment, and a decidedly lyrical manner throughout.

Out on you, owls! nothing but *songs* of death?

Shak., Rich. III., iv. 4. 509.

The bard who first adorn'd our native tongue

Tun'd to his British lyre this ancient *song*.

Dryden, To the Duchess of Ormond with Pal. and Arc.

Perhaps it may turn out a *sang*,

Perhaps turn out a sermon.

Burns, Epistle to a Young Friend.

4. A particular melody or musical setting for such a poem, for either one or several voices (in the latter case usually called a *part-song* or *glee*). Songs are generally written in song form, but are often irregular also. They usually contain but a single movement, and have an accompaniment of a varying amount of elaboration. They are classified as *folk-songs*, which spring up more or less unconsciously among the common people, or *art-songs*, which are deliberately composed by musicians (see *lied*); as *strophic*, when made up of a movement repeated for the several strophes, or *composed through*, when the music varies with the successive strophes; or they are named by reference to their general subject or style, as *rustic, patriotic, national, martial, naval, nuptial, hunting, bacchanalian*, etc.

5. Poetry; poetical composition; verse.

This subject for heroic *song*

Pleased me. *Milton*, P. L., ix. 25.

6. A mere trifle; something of little or no value: as, I bought it for a *song*. [Colloq.]—**Comic, Gregorian, mastermatic, nuptial, old song**. See the adjectives.—**Master of song, master of the song**. See *master*¹.—**Song form**, in *music*, a form or method of composition consisting in general of three sections, the

first and last being nearly the same, and the second being contrasted with the first.—**Song of degrees.** See *degree*. —**Song of Solomon, Song of Songs, Canticles** (see *canticle*).—**Song of the Three Holy Children**, an addition to the book of Daniel, found in the Septuagint and in the Apocrypha, purporting to be the prayer and song of the three Hebrews in the fiery furnace. A part of it is used in Christian liturgies under the above title, in the Western Church usually under the title *Ecclesiaste*. See *canticle*.—**Syllabic song.** See *rhythmical song*.—**To sing another song.** See *sing*. (See also *even-song*, *plain-song*.)

song²⁴. A Middle English preterit of *sing*.
song-bird (sông'berd), *n.* A bird that sings; a singing bird, or songster.

song-book (sông'búk), *n.* [**ME.** **songbok*, < *AS. sangbók*, a song-book, music-book, a book of canticles and hymns (= *D. zangboek* = *MLG. sankbok* = *G. gesangbuch* = *Icel. söngbók* = *Sw. sångbok* = *Dan. sangbog*, a song-book), < *sang*, song, + *bók*, book.] 1. A collection of songs or other vocal music forming a book or volume; specifically, a hymn-book.—2. In the Anglo-Saxon church, the portass or breviary.

The *song-book* corresponded with the Salisbury perious and the Roman breviary.

song-craft (sông'kräft), *n.* [A mod. revived form of *AS. sangcræft*, the art of singing, the art of poetry, < *sang*, song, + *cræft*, art, craft.] The art of composing songs; skill in versification.

Written with little skill of *song-craft*.
Longfellow, Hiawatha, Int.

songert, *n.* [**ME.** *songere*, < *AS. sangere* (= *D. zanger* = *OHG. sangari*, *MHG. senger*, *G. sänger* = *Icel. söngvari* = *Dan. sanger* = *Sw. sångare*), a singer, psalmist, < *sang*, song: see *song*¹. Cf. *singer*¹ and *songster*.] A singer.

songewarlet, *n.* [**ME.** < **OF.** **songewarie*, observation of dreams, < *songe* (< *L. somnium*), dream, + *warir*, guard, keep: see *ware*¹.] The observation or interpretation of dreams.

Ac I have no saucure in *songewarie*, for I see it ofte falle.
Piers Plowman (B), vii. 148.

songful (sông'fúl), *a.* [**ME.** < *song*¹ + *-ful*.] Disposed or able to sing; melodious. *Savage*. [Rare.]

songish (sông'ish), *a.* [**ME.** < *song*¹ + *-ish*¹.] Consisting of or containing songs. [Rare.]

The other, which, for want of a proper English word, I must call the *songish* part, must abound in the softness and variety of numbers, its principal intention being to please the hearing. *Dryden, Albion and Albanians, Pref.*

songle (sông'gl), *n.* [Formerly also *songal*, *songow*; a var. of *single*¹, in same sense.] A handful of gleanings. [Prov. Eng.]

I have just this last week obtained a goodly *songle* of S. Staffordshire words.
N. and Q., 7th ser., VIII. 363.

songless (sông'les), *a.* [**ME.** < *song*¹ + *-less*.] 1. Without song; not singing.

Silent rows the *songless* gondoller.
Byron, Child Harold, iv. 3.

2. In *ornith.*: (a) Not singing; unable to sing; not a singer: as, the female mocking-bird is *songless*; most birds are *songless* in winter. (b) Having no singing-apparatus, and consequently unable to sing; not a song-bird; non-oscine; elamatorial or mesomyodian, as a passerine bird: as, the *Mesomyodi*, or *songless Passeres*.

songman (sông'man), *n.*; pl. *songmen* (-men). 1. A singer, especially a singer of songs; a gleeman.

She hath made me four and twenty nosegays for the shears, three-man *song-men* all, and very good ones.
Shak., W. T., iv. 3. 45.

2. A lay vicar. See *lay*⁴.

song-muscle (sông'mus'el), *n.* In *ornith.*, any muscle of the syrinx or lower larynx of a bird concerned in the act of singing, by the operation of which the voice is modulated; any muscle of vocalization. These syringeal muscles reach their highest development in number and complexity of arrangement in the *Oscines*, *Polymyodi*, or *Acromyodi*, in which group of birds there are normally five pairs—the tensor posterior longus, tensor anterior longus, tensor posterior brevis, tensor anterior brevis, and sternotrachealis.

There is no question of its being by the action of the syringeal muscles . . . that the expansion of the bronchi, both as to length and diameter, is controlled, and, as thereby the sounds uttered by the bird are modified, they are properly called the *Song-muscles*.

A. Newton, Encyc. Brit., XVIII. 29.

song-sparrow (sông'spar'ô), *n.* 1. The hedge-sparrow, *Acentor modularis*. See cut under *Acentor*. [Eng.]—2. A small fringilline bird of North America, of the genus *Melospiza*, a sweet songster, with a streaked brown, gray, and white plumage without any yellow. The best-known is *M. fasciata*, one of the most familiar birds of the

eastern half of the country; there are several other species or varieties in the west, the most distinct of which is the Kodlak song-sparrow, *M. cinerea*. The common species is 6½ inches long and 8½ in extent of wings, and the markings of the breast are gathered into a characteristic pectoral spot. It nests on the ground, and lays four or five spotted and clouded eggs. Its song is remarkably sweet and hearty, and the plain little bird is deservedly a great favorite. It is also called *silver-tongue*.—**Oregon song-sparrow**, *Melospiza fasciata guttata*, a western variety of the common song-sparrow.

songster (sông'stêr), *n.* [**ME.** **songstre*(?), < *AS. sangstre*, *sangstre*, *sangystre*, a female singer, < *sang*, song, + fem. suffix *-estre*, *E. -ster*. Cf. *songer*.] 1. One who or that which sings or is skilled in singing.

Every *songster* had sung out his fit.
B. Jonson, Neptune's Triumph.

Specifically, in *ornith.*: (a) A singer; a singing bird. (b) pl. Specifically, singing birds: the *Oscines*, *Cantores*, *Cantatores*, *Acromyodi*, or *Polymyodi*.

2. A writer of songs or poems.
Silk will draw some sneaking *songster* thither.
It is a rhyming age, and verses swarm
At every stall. *B. Jonson, An Elegy (Underwoods, lx).*

songstress (sông'stress), *n.* [**ME.** < *songster* + *-ess*.] A female singer; also, a female singing bird.

The trill . . .
Of that shy *songstress*, whose love-tale
Might tempt an angel to descend,
While heaving o'er the moonlight vale.
Wordsworth, Power of Sound.

song-thrush (sông'thrush), *n.* One of the common thrushes of Europe, *Turdus musicus*; the mavis or throstle, closely related to the mistle-thrush, redwing, and fieldfare. It is 9 inches in length, and 14 in extent of wings. The upper parts are yellowish-brown, reddening on the head; the wing-coverts are tipped with reddish-yellow; the fore neck and breast are yellowish, with brownish-black arrow-heads; the lower wing-coverts are reddish-yellow; and the belly is white. See cut under *thrush*.

sonifaction (son-i-fak'shon), *n.* [**L.** *sonus*, sound, + *factio*(-n-), < *facere*, produce.] The production of sound; a noise-making; especially, the stridulation of insects, as distinguished from vocalization: as, the *sonifaction* of the cicada or katydid.

A mode of *sonifaction* . . . similar to that where a boy runs along a fence pushing a stick against the pickets.
Stand. Nat. Hist., II. 307.

sonifer (son'i-fêr), *n.* [**L.** *sonus*, sound, + *ferre* = *E. bear*¹.] An acoustic instrument for collecting sound and conveying it to the ear of a partially deaf person. It is a bell or receiver of metal, from which the sound-waves are conducted to the ear by a flexible pipe. *E. II. Knight.*

soniferous (sô-nif'ê-rus), *a.* [**L.** *sonus*, sound, + *ferre* = *E. bear*¹.] Conveying or producing sound.

son-in-law (sun'in-lâ'), *n.* [**ME.** *sonne in lawe*: see *son*¹ and *law*¹.] The husband of one's daughter.

sonless (sun'les), *a.* [**ME.** < *son*¹ + *-less*.] Having no son; without a son.

If the Emperour die *son-lesse*, a successor is chosen, of such a spirit as their present affairs do require.
Sandys, Travalls, p. 183.

sonnet, *n.* A Middle English form of *sun*¹.
sonnekin, *n.* [Early mod. E., later **sonkin*, < *son*¹ + *-kin*.] A little son. [Nonee-word.]

παίδιον, sonnekin, or little sonne.
Udall, tr. of Apophthegms of Erasmus, p. 233, note.

Sonneratia (son-e-râ'shi-ä), *n.* [**NL.** (Linnaeus filius, 1781), named after P. Sonnerat (1745-1814), a French traveler and naturalist.] A genus of polypetalous plants, of the order *Lythraceae* and tribe *Lythreae*. It is characterized by flowers having a bell-shaped calyx with from four to eight lobes, as many small petals or sometimes none, numerous stamens, and a many-celled ovary which becomes a roundish berry stipitate in the calyx and filled with a granular pulp. It includes 5 or 6 species, natives of tropical shores, chiefly in eastern Africa and Asia, also in Madagascar and Australia. They are smooth-branched trees or shrubs, with opposite coriaceous oblong entire and almost veinless leaves, and large bractless flowers in terminal clusters of three or four or solitary in the axils. *S. opetala*, a tree of 40 feet, growing in Indian mangrove-swamps flooded by the tide, has the name of *kambala* (which see). *S. acida*, with a height of 15 feet, grows in large masses in similar situations ranging further east: its leaves are the food of a silkworm, and its acid and slightly bitter fruit is used as a condiment.

sonnet (son'et), *n.* [Early mod. E. also *sonette*; = *D. sonnet*, < *F. sonnet*, *OF. sonet*, a song, =

Song-sparrow (*Melospiza fasciata*).

*Sp. 1*g. *soneto* = *It. sonetto*, < *Pr. sonet*, a song (> *G. Sw. sonett* = *Dan. sonet*, a sonnet, canzonet), dim. of *son*, sound, tune, song, < *L. sonus*, a sound: see *sound*⁵.] 1. A song; a ballad; a short poem.

I have a *sonnet* that will werve the turn.
Shak., T. G. of V., III. 2. 93.

Teach me some melodious *sonnet*,
Sung by flaming tongues above.
R. Robinson, Come, Then Fount of Every Blessing.

Specifically.—2. A short poem in fixed form, limited to fourteen lines with a prescribed disposition of rhymes. The form is of Italian origin. A sonnet is generally written in decasyllabic or five-foot measure; but it may be written in octosyllabics. It consists of two divisions or groups of lines—(1) a major group of eight lines or two quatrains, and (2) a minor group of six lines or two tercets. The quatrains are arranged thus: a, b, b, a; a, b, b, a; the tercets, either c, d, e, c, d, or e, d, e, c, d, e. In modern French examples the order of the tercets is generally c, e, d, e, d, e. There are various deviations from the sonnet as thus described; but by purists the above is regarded as the orthodox form, established by long practice and prescription, all others being ranked simply as quatorzains, or what Lamb called *fourteeners*. With regard to the material of the poem, it is generally considered that it should be the expression of a single thought, idea, or sentiment.

I can best allowe to call those *Sonnets* whiche are of fourteens lynes, every line conteyning tenne syllables.
Gascoigne, Notes on Eng. Verse (ed. Arber), § 14.

sonnet (son'et), *v.* [**ME.** < *sonnet*, *n.*] **I. trans.** 1. To celebrate in sonnets. [Rare.]
Daniel hath divinely *sonnetted* the matchless beauty of Delia.
Francis Meres, in Arber's Eng. Garner, II. 96.

2. To cover or fill with sonnets. [Rare.]
Hee will be an Inamorato Poeta, and *sonnet* a whole quire of paper in praise of Ladie Manibetter, his yelowfaç'd mistres.
Nashe, Piers Penilesse, p. 17.

II. intrans. To compose sonnets.
Nor list I *sonnet* of my mistress' face,
To paint some Blowesse with a borrow'd grace.
Bp. Hall, Satires, I. 1. 5.

sonneteer, **sonneteer** (son-e-têr'), *n.* [**It.** *sonettiere* (= *Sp. sonetero*), a composer of sonnets, < *sonetto*, a sonnet: see *sonnet*.] A composer of sonnets or small poems: usually with a touch of contempt.

Our little *sonnetteers* . . . have too narrow souls to judge of poetry.
Dryden, All for Love, Pref.
The noble *sonnetteer* would trouble thee no more with his madrigals.
Wycherley, Plain Dealer, I. 1.

sonneteer, sonneteer (son-e-têr'), *v. i.* [**ME.** < *sonneteer*, *n.*] To compose sonnets; rime.

Lovell, Among my Books, 1st ser., p. 368.

sonneting (son'et-ing), *n.* [Verbal *n.* of *sonnet*, *v.*] 1. The making or composing of sonnets, as in praise or celebration of something; the writing of poetry.
Tut! he is famous for his revelling,
For fine set speeches, and for *sonnetting*.
Marston, Satires, I. 42.

Two whole pages . . . praise the Remonstrant even to the *sonnetting* of his fresh cheeks, quick eyes, round tongue, agil hand, and nimble invention.
Milton, Apology for Smectymnus.

2. Song; singing.
Leave groves now mainly ring
With each sweet bird's *sonnetting*.
W. Browne, Thyrasis' Praise to his Mistress.

sonnetist, **sonnetist** (son'et-ist), *n.* [= *Pg. sonetista*; as *sonnet* + *-ist*.] A sonneteer.
The prophet of the heav'nly lyre,
Great Solomon, sings in the English quire;
And is become a new-found *sonnetist*.
Bp. Hall, Satires, I. viii. 9.

sonnetize (son'et-iz), *v.*; pret. and pp. *sonnetized*, ppr. *sonnetizing*. [**ME.** < *sonnet* + *-ize*.] **I. intrans.** To compose sonnets.
II. trans. To make the subject of a sonnet; celebrate in a sonnet.
Now could I *sonnetize* thy piteous plight.
Southey, Nondescripts, v.

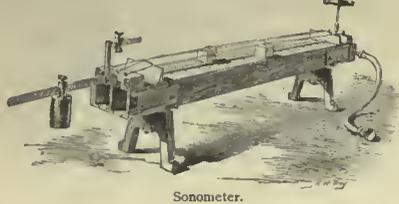

sonneteer, sonnetist. See *sonneteer, sonnetist*.
sonnet-writer (son'et-rî'têr), *n.* A writer of sonnets; a sonneteer.

Sonoma oak. An oak, *Quercus Kelloggii* (*Q. Sonomensis*), of the mountains of Oregon and California. It is a tree of moderate size, valued chiefly as fuel, but furnishing also some tan-bark.

sonometer (sô-nom'e-têr), *n.* [**L.** *sonus*, sound, + *Gr. μέτρον*, measure.] 1. An apparatus used in experimenting upon musical

strings or wires, and in illustrating the laws which govern their transverse vibrations. It consists of a sounding-board upon antible supports, so arranged that two strings may be stretched above it side by side; their tension and their lengths may be varied at

Sonometer.

will by changing the position of the bridges; the strings are usually set in vibration by a bow. With this apparatus it may be proved experimentally that the number of vibrations in the musical note given by a string varies inversely as its length and diameter, directly as the square root of the tension, and inversely as the square root of its density.

2. An instrument, consisting of a small bell fixed on a table, for testing the effects of treatment for deafness.—3. In *electr.*, an apparatus for testing metals by means of an induction-coil, with which is associated a telephone. See *induction-balance*.

Sonora gum. See *gum*².

sonore (sō-nō're), *adv.* [*It. sonoro*: see *sonorous*.] In *music*, in a loud, sonorous manner.

sonorescence (sō-nō-res'ens), *n.* [*sonorescent* (+ *-ce*).] The property of some substances, as hard rubber, of emitting a sound when an intermittent beam of radiant heat or light falls upon them. See *radiophony*.

sophism (sof'izm), *n.* [*< ME. sophisme*, orig. with silent *s*, and oftener spelled *sophime, sophyme, sopheme, sophym, sofyne, sofym, < OF. sophisme, F. sophisme = Pr. sofisme = Sp. sofisma = Pg. sophisma, sofisma = It. sofisma = D. sofisme = G. sophisma = Sw. sofism = Dan. sofisme, < L. sophisma, a sophism, < Gr. σοφισμα, a clever device, an ingenious contrivance, a sly trick, a captious argument, sophism, < σοφίζεω, make wise, instruct, dep. deal or argue subtly: see *sophist*. Cf. *sophomore*.] A false argumentation devised for the exercise of one's ingenuity or for the purpose of deceit; sometimes, a logically false argumentation; a fallacy. The word is especially applied to certain ancient tricks of reasoning, which before the systematization of logic and grammar had a real value, and were treated as important secrets. For the various kinds of sophism, see *fallacy*.*

This day ne herde I of your tonge a word,
I trowe ye studie aboute som *sophyme*.
Chaucer, Prolog. to Clerk's Tale, l. 5.

Some other reasons there are . . . which seem to have been objected . . . for the exercise of men's wits in dissolving *sophisms*. *Hooker, Eccles. Polity, viii. 4.*

The litigious sophism. See *litigious*. = *Syn.* A *sophism* is an argument known to be unavowed by him who uses it; a *paralogism* is an unavowed argument used without knowledge of its unsoundness. *Paralogism* is a strictly technical word of logic; *sophism* is not. *Sophistry* applies to reasoning as *sophism* to a single argument. See *fallacy*.

sophist (sof'ist), *n.* [In ME. *sophister*, *q. v.*; < F. *sophiste* = Pr. *sophista* = Sp. *sofista* = Pg. *sophista, sofista* = It. *sofista* = D. *sofist* = G. *sophist* = Sw. Dan. *sofist*, < L.L. *sophista*, a sophist, < Gr. σοφιστής, a master of one's craft, a wise or prudent man, a teacher of arts and sciences for money, a sophist (see *def. 2*), < σοφίζεω, make wise, instruct, in pass. be or become wise, dep. deal or argue subtly, be a sophist, < σοφός, skilled, intelligent, learned, clever, wise; cf. σοφός, clear; perhaps akin to L. *sapere*, taste, > *sapiens*, wise: see *sapient*.] 1. One who is skilled or versed in a thing; a specialist.—2. An ancient Greek philosophic and rhetorical teacher who took pay for teaching virtue, the management of a household or the government of a state, and all that pertains to wise action or speech. Sophists taught before the development of logic and grammar, when skill in reasoning and in disputation could not be accurately distinguished, and thus they came to attach great value to quibbles, which soon brought them into contempt.

Love teacheth a man to carry himself better than the *sophist* or preceptor.
Bacon, Advancement of Learning, ii.

The *Sophists* did not profess to teach a man his duty as distinct from his interest, or his interest as distinct from his duty, but Good Conduct conceived as duty and interest identified. *H. Sidgwick, Methods of Ethics, p. 94.*

Hence—3. A captious or fallacious reasoner; a quibbler.

Dark-brow'd *sophist*, come not anear;
All the place is holy ground;
Hollow smile and frozen sneer
Come not here.
Tennyson, The Poet's Mind.

sophister (sof'is-tēr), *n.* [*< ME. sophister, sofyster, < OF. *sophistire*, a var. of *sophiste*, a sophist: see *sophist*. The term. *-er* is unorigi-

nal, as in *philosopher*.] 1. A man of learning; a teacher; specifically, a professional teacher of philosophy; a sophist.

Jer. Taylor, Works (ed. 1835), I. 638.

2. A sophist; a quibbler; a subtle and fallacious reasoner.

These impudent *sophisters*, who deny matter of fact with so steeld a front.
Evelyn, True Religion, Pref., p. xxx.

You very cunningly put a Question about Wine, by a French Trick, which I believe you learn'd at Paris, that you may save your Wine by that Means. Ah, go your Way; I see you're a *Sophister*.
N. Bailey, tr. of Colloquies of Erasmus, I. 74.

The age of chivalry is gone: that of *sophisters*, economists, and calculators has succeeded.

Burke, Rev. in France.

3. In English universities, a student advanced beyond the first year of his residence, now generally called a *soph*. At Cambridge during the first year the students have the title of *freshmen*, or *first-year men*; during the second, *second-year men*, or *junior soph*s or *sophisters*; and during the third year, *third-year men*, or *senior soph*s or *sophisters*. In the older American colleges the junior and senior classes were originally called *junior sophisters* and *senior sophisters*. The terms were similarly applied to students in their third and fourth years in Dublin University. Compare *sophomore*.

I have known the railingest *sophisters* in an university sit non plus.
G. Harvey, Four Letters.

In case any of the *Sophisters* fall in the premises required at their hands.

H. B. Stowe, Oldtown, p. 435.

Sophora (sō-fō'rā), *n.* [NL. (Linnaeus, 1737), < Ar. *sofāra*, a yellow plant (applied to one faded), < *asar*, yellow; see *saffron*.] A genus of leguminous plants, of the suborder *Papilionaceae*, type of the tribe *Sophoreae*. It is characterized by flowers with a broadly obovate or orbicular banner-petal and oblong wings and keel, grouped in terminal racemes or panicles, and followed by thick or roundish or four-winged pods which are constricted into a succession of necklace-like joints (see cut under *moniliform*), and are usually indehiscent. There are about 30 species, natives of warm regions of both hemispheres. They are trees and shrubs, rarely perennial herbs, and bear odd-pinnate leaves, usually with very numerous small leaflets, but sometimes only a few, and then large and rigid. The flowers are white, yellow, or violet, and highly ornamental. Three species occur within the United States: *S. secundiflora*, the coral-bean of Texas (see *frigoletto*); *S. affinis*, a small tree of Arkansas and Texas, with hard, heavy, coarse-grained, yellow and finally red wood, and resinous pods, from which a domestic ink is made; and *S. tomentosa*, a shrub of the Florida coast, with showy yellow flowers, also widely distributed along tropical shores of Amer-

ica, Africa, and Australia, and abundant on Fiji Island sea-beaches, where it is known as *kau-ni-aleua*, or women's-tree. *S. tetraptera* of New Zealand is there known as *laburnum* or *kowhai* (for its variety *Macnabiana*, see *pelu*), *S. japonica* is the Chinese or Japanese pagoda-tree or yem-ju, a very handsome quick-growing tree reaching 60 feet in height, with dark-green younger branches and deep blue-green leaves, sometimes cultivated, especially for its large panicles of small whitish autumnal flowers. Its hard compact wood is valued for turners' work; all parts are purgative; the austere pulp of the pods dyes yellow; and the flowers (called in Chinese *wei-fa*) furnish a yellow dye greatly valued in China. For this tree is cultivated in several provinces, from which the dried flowers are exported in small sacks and used to dye blue cloth green, and to dye yellow the silk garments of the mandarins and the rush-mats which form the Chinese sails, beds, bags, and floor-matting.

Sophoreæ (sō-fō-rō-ē), *n. pl.* [NL. (Sprengel, 1802), < *Sophora* + *-æ*.] A tribe of leguminous plants, characterized by a commonly arboreous or high-climbing habit, pinnate leaves of five or numerous leaflets or of a single large leaflet, and flowers with ten free stamens. It contains about 34 genera, of which *Sophora* is the type, natives chiefly of the tropics, and largely of the southern hemisphere in America and Africa. For other important genera, see *Myrocydon* and *Cladrastis*. The latter is the chief genus represented in the United States; another, *Campesita*, a lofty-climbing African shrub with handsome and gigantic flowers, is an exception in its trifoliate leaves. See cut under *yellow-wood*.

sophrosyne (sō-fros'i-nē), *n.* [< Gr. σοφροσύνη, discretion, temperance, < *σώφρων*, earlier *σώφρων*, of sound mind, temperate, < *σῶς*, orig. **σῶς*, sound, whole, safe, + *φρόν*, mind.] The quality of wise moderation; sound-mindedness; discreet good sense; referring especially to Greek art and philosophy.

With all the savage which man's fall hath fix'd.
Byron, The Island, ii. 4.

sore¹ (sôr), *a.* [*Sc. sair, sare; < ME. sore, sare, sor, sar, < AS. sâr, painful, = OS. sâr = MD. seer, D. zcer = MLG. sâr = OHG. MHG. sâr, painful, wounded, = Icel. sâr = Norw. saar, sore (cf. Sw. sår = Dan. saar, wound, = Goth. sair, sorrow, travail, found only as a noun). Cf. Finn. sairas, sick (< Teut.).*] No cognates are found outside of Teut. 1. Painful, as being the seat of a wound or of disease; aching; specifically, painfully sensitive to the touch: said of the part affected, or, by extension, of the entire member or person concerned.

Than waxes his gast seke and sare.
Hampole, Pricke of Conscience, l. 772 (Morris and Skeat).

He maketh *sore*, and bindeth up: he woundeth, and his hands make whole.
Job v. 18.

Why art thou then exasperate, thou idle immaterial skein of sleeve-silk, thou green sarcent flap for a *sore* eye?
Shak., T. and C., v. 1. 36.

2. Inflicting physical suffering; giving bodily pain.

Merlin frusht a-monge hem with his banere, and his companie with hym, and leyde on *sore* stroke.
Merlin (E. E. T. S.), ii. 207.

There's a *sair* pain in my head, father,
There's a *sair* pain in my side.
Fair Janet (Child's Ballads, II. 89).

3. Suffering mental pain; distressed; painfully sensitive; touchy.

Peace is my dear delight—not Fleury's a more;
But touch me, and no minister so *sore*.
Pope, Imit. of Horace, II. l. 76.

Why speak I vain words to a heart still *sore*
With sudden death of happiness?
William Morris, Earthly Paradise, III. 94.

4. Bringing sorrow, misery, or regret; distressing; grievous; oppressive.

A *sore* word for them that are negligent in discharging their office.

Havelok, l. 234. (*Halliwell*.)

gif ze sale me zoure *sore*s & ich se what may gayne.
William of Paterne (E. E. T. S.), i. 593.

2. A wounded or diseased spot on an animal body; a painful or painfully tender place, with or without solution of continuity, on or near the surface of the body.

There is no medeyn on mold, saue the maiden one,
That my *sore* might salue, ne me sound make.
Destruction of Troy (E. E. T. S.), i. 9193.

A salve for any *sore* that may betide.
Shak., 3 Hen. VI., iv. c. 88.

3. A source of grief, distress, annoyance, or bitterness; a misfortune; a trouble.

What should we speak more on 't? . . . I love no rip-
ping up old *sore*s.
Brome, Northern Lass, iii. 1.

Bed-sore, a *sore* or ulcer developed on parts of the skin exposed to pressure by lying in bed. It may be very deep and extensive. Also called *decubitus*.—**Delhi sore**, **Oriental sore**. Same as *Aleppo ulcer* (which see, under *ulcer*).—**Fungating sore**, a soft chancre with abundant granulations.—**Hunterian sore**, in *pathol.*, a true or hard chancre.—**Veneral sore**. Same as *chancreoid*.

sore¹ (sôr), *adv.* [*Sc. sair, sare*; < *ME. sore, soore, sare*, < *AS. sâre, sorely, painfully*, = *OS. sêro = MD. sere, D. zeer = MLG. sêre = OHG. sêro, MHG. sêre, sêr*, painfully, sorely, strongly, very, *G. sehr*, extremely, very, = *Dan. saure*, extremely, very; from the adj.] 1. With physical suffering; so as to cause bodily pain; painfully.

He rode ouer hym that was fallen and vn-horsed, so
that he brosed hym *sore*.
Merlin (E. E. T. S.), iii. 696.

Thy hand presseth me *sore*.
Pa. xxxviii. 2.

Her brother struck her wondrous *sore*,
With cruel strokes and many.

Andrew Lammie (Child's Ballads, II. 197).

2. In a manner indicating or causing mental pain; deplorably; grievously; bitterly.

The damecell anserde in baas voyce *sore* ayhinghe.
Merlin (E. E. T. S.), iii. 611.

Merlin (E. E. T. S.), ii. 222.

If it [the bowstring] be long, the beading must needs be
in the small of the string, which, being *sore* twined, must
needs snap in sunder, to the destruction of many good
bows.

Ascham, Toxophilus (ed. 1864), p. 104.

[As an adverb *sore* is now chiefly archaic or provincial.]

sore¹ (sôr), *v. t.* [= *OS. sêrian = OHG. MHG. sâren, G. ver-schren = Icel. sârna = Sw. sâra = Dau. saare*; from the noun.] To make sore; wound.

And the wyde wound . . .

Was closed up as it had not bene *sor'd*.

Spenser, F. Q. (ed. Todd), III. xii. 38.

sore² (sôr), *a. and n.* [1. *a.* Early mod. E. also *soar, saore*; < *ME. sore, soyr*, < *OF. sor, saur*, *F. saur, saure = Pr. saur, saur = Sp. sauro = It. soro, sauro* (ML. *saurus, sorius*), reddish-brown, reddish, brownish, sorrel, < *MLG. sor = MD. sore, D. zoor*, dry, doubled, sear, = *E. sear*: see *sear*¹, of which *sore*² is a derivative, and *soirel*², a dim. of *sore*². II. *n.* < *ME. *sore, soure*, a buck, < *OF. sor, F. saur* (in *faucon sor*, a sore-falcon, *cheval*

saure, or simply *saure*, a sorrel horse) = *It. soro, sauro*, a sorrel horse, formerly also a sore-falcon: see the adj. *Cf. soirel*².] I. *a.* Reddish-brown; sorrel. See *soirel*², and compare *sor-aye, sore-eagle, sor-falcon, sore-hawk*.

Stedla stâbillede in stallis,
Lyarde and *sore*.
MS. Lincoln A. i. 17, f. 130. (*Halliwell*.)

II. *n.* 1. A hawk of the first year.—2. A buck of the fourth year. See *soirel*², 3.

Of founes, *soures*, bukkes, does
Was ful the wode, and many roes.
Chaucer, Death of Blanche, l. 429.

sore³, *v. i.* An obsolete spelling of *soar*¹.

soreaget, *n.* Same as *sorage*.

Soricidæ (sô-res'i-dê), *n. pl.* [NL.] An erroneous form of *Soricidæ*.

soredie (sô-rêd), *n.* [*soredium*.] Same as *soredium*.

soredia, *n.* Plural of *soredium*.

soredial (sô-rê-di-âl), *a.* [*soredium + -al*.] In *lichenol.*, of the nature or appearance of a soredium.—**Soredial branch**, in *lichenol.*, a branch produced by the development of a soredium into a new thallus while still on the mother thallus.

sorediate (sô-rê-di-ât), *a.* [*soredium + -ate*¹.] In *lichenol.*, bearing or producing soredia.

sorediferous (sor-ê-dif'ê-rus), *a.* [*NL. soredium + L. ferre = E. bear*¹.] In *lichenol.*, sorediate; bearing soredia.

soredium (sô-rê-di-um), *n.*; *pl. soredia* (-â). [NL., < *Gr. sôpôs*, a heap, + *-edion*, for *Gr. -idion*, a dim. suffix.] In *lichenol.*, a single algal cell or a group of algal cells wrapped in more or less hyphal tissue, which serves the purpose of vegetative propagation: commonly in the plural. Such cells form little heaps or cushion-like masses breaking through the surface of the thallus, and when set free from the thallus are able to grow at once into new thalli. Usually one species of alga furnishes all the algal cells of a lichen; more rarely two, and then one prevails in abundance over the other. The same species of alga, however, may be found in consortium with different species of fungus, and taking part in the composition, therefore, of differently formed thalli—that is, different lichens. See *Lichenes*. Also *soredie* and *brood-bud*.

soree (sô'rê), *n.* A variant of *sora*. [U. S.]

Soree. Ral-bird.
T. Jefferson, Notes on Virginia (ed. 1788), p. 74.

sore-eagle† (sôr'ê-g'l), *n.* [Also *soar-eagle*; prob. formed in imitation of *sore-falcon*; < *sore*² + *eagle*.] A young eagle.

A *soar-Eagle* would not stoop at a flye.
Milton, On Def. of Humb. Remonat.

sore-eyed (sôr'id), *a.* 1. Having sore eyes.—2. Having orbital caruncles, as if sores: as, the *sore-eyed* pigeon. See *cut* under *sheathbill*.

sore-falcon (sôr'fâ'kn), *n.* [Formerly also *soar-falcon, soare faulcon*; < *sore*² + *falcon*, tr. OF. *faucon sor*.] A falcon of the first year; a young falcon. See *sore*², 1.

Of the *soare faulcon* so I learne to flye,
That flags a white her fluttering wings beneath,
Till she her selfe for stronger flight can breath.
Spenser, Hymn of Heavenly Beauty, l. 26.

sore-hawk† (sôr'hâk), *n.* Same as *sore-falcon*.

sorehead (sôr'hed), *n.* 1. One whose head is sore. Hence—2. An irritable, discontented person; one who has a real or fancied grievance; in political use, a person who is dissatisfied through lack of recognition or reward for party services. [Slang, U. S.]

Every *sore-head* and bolter in the Majority voted with his party.
The American, X. 35.

The public don't care for a few *soreheads* and impracticables in an operation that is going to open up the whole Southwest.
C. D. Warner, Little Journey in the World, xv.

soreheaded (sôr'hed'ed), *a.* Having the character of a sorehead; discontented; having a grievance. [Slang, U. S.]

sorehon† (sôr'hon), *n.* [Said to be an Ir. corrupted form equiv. to *Sc. sorn*, a contracted form of *ME. sojorne*, a sojourn, as a verb sojourn: see *sojourn, sorn*.] In Ireland, a tax formerly imposed upon tenants for the maintenance of their lord or his men: a custom which required a tenant to maintain his chieftain gratuitously. See the second quotation.

Yea, and the very wilde Irish exactions, as Colgnye, Livery, *Sorehon*, and such like, by which they pole and utterly undoe the poore tenants and free-holders.
Spenser, State of Ireland (ed. Todd).

Sorehon was a tax laid upon the free-holders for certain days in each quarter of a year, to finde victuals, and lodging, and to pay certaine stipends to the kerne, gallowglasses, and horsemen.

Sir J. Ware, Note in Todd's *Spenser*.

sorelet. An old spelling of *soirel*¹, *soirel*².

sorely† (sôr'li), *a.* [*ME. sârlie*, < *AS. sârlic*, < *sâr*, sore, + *-lic*, E. *-ly*².] Sore; sorrowful.

Næs heo næure awa *sârlie*.
Layamon, l. 28457.

sorely (sôr'li), *adv.* [*ME. sortiche*, < *AS. sârlic* (= *Icel. sârlika*), sorely, < *sârlic*, sore: see *sorely, a.*] In a sore manner; painfully; sadly; violently; severely; extremely.

sorema (sô-ré'mâ), *n.* [NL., < *Gr. sôpôs*, a heap.] In *bot.*, a heap of carpels belonging to one flower, as in the magnolia and liriodendron.

soreness (sôr'nes), *n.* The state of being sore, in any sense of the word.

Sorex (sô'reks), *n.* [NL., < *L. sorex = Gr. sôpâs*, a shrew, shrew-mouse. *Cf. Hyrax*.] The typical genus of the family *Soricidæ* and subfamily *Soricinæ*, containing numerous small terrestrial shrews of both hemispheres. They have from 28 to 32 colored teeth, moderately long well-haired tail and ears, and feet not oared. The typical dentition of *Sorex* in the most restricted sense is 32 teeth, of which the upper incisors are 8, the (unspecialized canines and) upper premolars 6, the upper molars 6, and the total of the lower teeth 12 (as nearly constant throughout the family). *S. vulgaris* is the common shrew of Europe, and *S. platyrhinus* is a common one in North America. See *shrew*².

sorgho (sôr'gô), *n.* Same as *sorghum*, 1. Also *sorgo*.

sorghum (sôr'gum), *n.* [Formerly also *sorgum*, also sometimes *sorgo, sorgho, F. sorgho*, < *Sp. Pg. sorgo = It. sorgo, surgo*; < *NL. sorgum, sorghum*, < *ML. surcum, surcum, suricum*, Indian millet, sorghum; prob. of E. Ind. origin.] 1. A plant of the former genus *Sorghum*, commonly the cultivated saccharine plant once known as *Sorghum* (or *Holcus*) *saccharatum*, lately considered a variety of *S. vulgare*, but now classified as *Andropogon Sorghum*, var. *saccharatus*. It is a cane-like grass, with the stature and habit of broom-corn, or of the taller varieties of Indian corn, but more slender than the latter, without ears, and of a glaucous hue. Sorghum is cultivated throughout Africa, in forms called *imphee*, chiefly for the sweet juice of the cane. In the United States it has been employed for many years to make syrup, for which purpose it is more or less grown in every State. It has also been the subject of much experiment in sugar-making, and according to Wiley is now practically available for this purpose. The name is also applied to the var. *Halepense*, and possibly to others of the same species. See *def. 2*. Also called *Chinese sugar-cane*.

2. [*cap.*] [NL. (Micheli, 1729).] A former genus of grasses, of the tribe *Andropogoneæ*, now included as a subgenus in *Andropogon* (Edouard Hackel, 1889). Like the rest of the whole genus, it has one-flowered spikelets disposed in pairs at the joints of a rachis, one of each pair pedicelled, one sessile. The sessile spikelet is in all the pairs alike; the flower is fertile, and in the pedicelled spikelets male, neutral, or abortive. The rachis is fragile, or in culture tenacious; its joints and the pedicels are filiform, and convex on the back or flat without furrow. The sessile spikelet and grain are somewhat compressed on the back, or in cultivation sometimes nearly globose. The species are most often tall and flat-leaved grasses, diffused through the tropics and here and there in the temperate zone—one, *A. (Chrysopogon) nutans*, the Indian grass or wood-grass, in the southern United States. The last is widely distributed in many forms; it is a nutritious grass, 6 feet high, with a graceful panicle, sometimes named *wild oats*. The one important species is *A. Sorghum* (*Sorghum vulgare*, etc.), a polymorphous much-cultivated species, of which some varieties have been regarded as distinct. Hackel divides it into the subspecies—(a) *Halepense*, including with other varieties the ornamental *Aleppo* grass and the Johnson or Means grass cultivated in the southern United States, and (b) *atvina*, which includes the broom-corn (var. *technicus*), the sorghum (var. *saccharatus*: see *def. 1*), the durra (vars. *cernuus* and *Durra*), the so-called Indian or African millet (covering perhaps the last and the var. *vulgare*), and the guinea-corn or Kafir-corn, if it is different from the durra. The Johnson grass is of considerable utility as fodder, but is difficult to extirpate: also called *Egyptian, Cuba, or Guinea grass, Australian or Morocco millet, etc.*, and *sorghum*. The durra has been somewhat cultivated in the United States, some forms of it being called *Millo marze*. See *broom-corn, durra*, and *Indian millet* (under *millet*).

sorgo (sôr'gô), *n.* Same as *sorghum*.

sori, *n.* Plural of *sorus*.

Soricidæ (sô-ris'i-dê), *n. pl.* [NL., < *Sorex* (*Soric-*) + *-idæ*.] A family of small insectivorous mammals, the shrews. They are of terrestrial, sometimes natorial, habits, with a long and narrow skull without zygomatic arches or postorbital processes, annular tympanic bones, no symphyseal pubis, the fore limbs not specially modified as in the moles, the tibia and fibula united, and the lower teeth 12 (in one genus 12

Sorghum (*Andropogon Sorghum*). 1, wild form; 2, panicle form; a, spikelets of panicle form.

1, wild form; 2, panicle form; a, spikelets of panicle form.

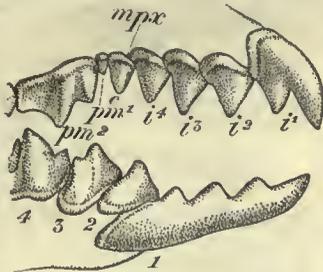

sorgo (sôr'gô), *n.* Same as *sorghum*.

sori, *n.* Plural of *sorus*.

Soricidæ (sô-ris'i-dê), *n. pl.* [NL., < *Sorex* (*Soric-*) + *-idæ*.] A family of small insectivorous mammals, the shrews. They are of terrestrial, sometimes natorial, habits, with a long and narrow skull without zygomatic arches or postorbital processes, annular tympanic bones, no symphyseal pubis, the fore limbs not specially modified as in the moles, the tibia and fibula united, and the lower teeth 12 (in one genus 12

or 14). The lower incisors are long, proclivous, and usually notched; in the upper teeth the median incisors are large, and have a basal snag or cusp, appearing as if double (but see *soricident*); no canines are specialized, and the premolars are variable; the molars are large and multicuspidate. The total number of the teeth varies from twenty-six to thirty-two. The family is well marked, with little range of variation, though the species are so numerous. The shrews are all small animals, some being the smallest known mammals, and have the general appearance of mice, though with more pointed snout. The rather numerous (about 12) genera fall in two groups or subfamilies, *Soricinæ* and *Crocidurinæ*.

soricident (sō-ris'i-dent), *a.* [*L. sorix (soric-), a shrew, + den(t)-s = E. tooth.*] Having or noting a dentition like that of shrews. This dentition is unique in some respects. It consists of the four kinds of teeth usual among diphyodont mammals, but no canines are specialized as such, and the median pair of incisors both above and below are remarkable in presenting two or more cusps, besides being of great size. These peculiarities, together with the speedy and complete obliteration of the maxillo-premaxillary suture, have caused the median incisors alone to be so named, and have occasioned great uncertainty in the dental formulae of the several genera of shrews. Determination of the position of the suture has shown, however, that several other pairs of teeth besides the specialized median upper pair are inserted in the premaxillary, and are therefore incisors; that the foremost pair of maxillary teeth (technically canines) are never specialized, and always small, and that these are followed by one or two pairs of premolars, constantly succeeded by three pairs of true molars. The constancy in number of the under teeth (twelve, with some anomalous exceptions) is also remarkable, and the total variation is only from twenty-six to thirty-two among all the genera. The eight upper incisors of several genera are a number unique among placental mammals; and the soricident dentition is, on the whole, in proportion to the size of the animals, the most formidable known among mammals, of greater relative power than that of any carnivore. See *Soricidæ*.

Soricident Teeth of Common Shrew (*Sorex vulgaris*), enlarged seven times.

*i*¹, large two-pronged anterior upper incisor; *i*^{2, 3, 4}, succeeding upper incisors, to *mpx*, line of obliterated maxillo-premaxillary suture; *i*⁵, first maxillary tooth, technically a canine, unspecialized and resembling the preceding incisor; *pm*¹, minute first premolar; *pm*², large sectorial premolar. In the lower jaw, *i*¹, very large serrated anterior incisor; *i*^{2, 3, 4}, following teeth to the one opposite *pm*²; other teeth omitted.

termination of the position of the suture has shown, however, that several other pairs of teeth besides the specialized median upper pair are inserted in the premaxillary, and are therefore incisors; that the foremost pair of maxillary teeth (technically canines) are never specialized, and always small, and that these are followed by one or two pairs of premolars, constantly succeeded by three pairs of true molars. The constancy in number of the under teeth (twelve, with some anomalous exceptions) is also remarkable, and the total variation is only from twenty-six to thirty-two among all the genera. The eight upper incisors of several genera are a number unique among placental mammals; and the soricident dentition is, on the whole, in proportion to the size of the animals, the most formidable known among mammals, of greater relative power than that of any carnivore. See *Soricidæ*.

Soricinæ (sor-i-si'nē), *n. pl.* [NL., < *Sorex (Soric-) + -inæ.*] The typical subfamily of *Soricidæ*, containing those shrews of both the Old and the New World which have the teeth brown or red: contrasted with *Crocidurinæ*. The genera usually admitted are *Sorex*, *Neosorex*, *Notiosorex*, *Soriculus*, *Blarina*, and *Crossopus*. See *Sorex*, and cuts under *Blarina*, *shrew*, and *sordid*.

soricine (sor'i-sin), *a.* [*L. soricinus*, of or belonging to a shrew, < *sorex (soric-)*, shrew: see *Sorex*.] Resembling or related to a shrew or shrew-mouse; of or pertaining to the *Soricinæ* or *Soricidæ*; soricoid in a narrow sense.—**Soricine bat**, *Glossophaga soricina*, a small South American species of bat.

soricoid (sor'i-koid), *a.* and *n.* [*L. sorix (soric-)*, shrew, + *-oid*.] *I. a.* Soricine in the broadest sense; of or pertaining to the *Soricidæ*.

sortes (sôr'téz), *n. pl.* [*L., pl. of sor(-t)-s, lot, share: see sort.*] Lots used in a kind of divination, consisting in the chance selection of a passage from an author's writings—a practice common in ancient times and in the middle ages. The method pursued by the ancients was generally to write a number of verses of a favorite poet on separate slips, put them in an urn, draw out one at random, and from its contents infer good or bad fortune. This form of divination was known as *Sortes Homerice*, *Sortes Virgilianæ*, etc., according to the name of the poet from whose works the lines were chosen.

Among the Christians of the middle ages the Bible was used for a similar purpose; the book being opened by hazard, or a pin stuck between the leaves, the first passage catching the eye was accepted as prophetic. Such lots were called *Sortes Biblicæ* or *Saeræ*. This use of the Bible is still common as a popular superstition.

sortfully (sôr'tful-i), *adv.* [*< sortful (< sort + -ful) + -ly.*] Suitably; appropriately. [*Rare.*]

(a) One of the fruit-dots or clusters of sporangia (spore-cases) on the back of the fronds of ferns, also on the mucilaginous cord emitted from the sporocarp of *Marsilea*, etc. They are of various forms and variously arranged. In the *Acrosticheæ* the sporangia are spread in a stratum over the under surface, or rarely over both surfaces, of the frond; in the *Polypodiæ* the sori are dorsal, and are

Pinnae of Various Ferns, showing the Sori.
a, pinnae of the frond of *Asplenium angustifolium*; b, pinnae of *Woodwardia angustifolia*; c, pinnae of *Polypodium Californicum*; d, pinnae of *Adiantum pedatum*; e, pinnae of *Trichomanes radicans*.

borne at or near the ends of the veinlets; in the *Fittarieæ* they are borne in continuous marginal or intramarginal furrows; in the *Pteridæ* they are marginal or intramarginal, and covered by the reflexed margin of the frond; in the *Blechnæ* they are dorsal, linear or oblong, and parallel to the midrib; in the *Asplenæ* they are also dorsal, and linear or oblong, but oblique to the midrib; and in the *Aspidiæ* they are dorsal, round or roundish, and usually on the back of a vein. In most instances the sori are covered with a projecting section of the epidermis, which is called the *indusium* and forms an important character in the systematic arrangement of ferns. See *fern*, *paraphysis*, *sporangium*, etc. See also cuts under *indusium*, *Cystopteris*, *Nothochloena*, *polypody*, and *Marsilea*. (b) In lichens, a heap or mass of soredia on the surface of the thallus. (c) In the *Synchitriæ*, a heap of zoösporangia developed from a zoöspore or swarm-cell.

Sothic (sō'chik), *a.* [< Gr. Σόθιακ, an Egyptian name of Sirius.] Of or pertaining to the dog-star, Sothis.—**Sothic year**, the fixed year of the Egyptians, determined by the heliacal rising of Sirius. Since the declination of this star is little altered by precession, and its rising took place about the summer solstice, the year would have averaged nearly the sidereal year, or 9 minutes more (instead of 11 minutes less, as the tropical year is) than 365½ days. But it is said that in practice one day was intercalated every four years. The Sothic year seems to have been little used by the Egyptians, at least before the Ptolemies.

sotthly, sotthness, sotthawt. Middle English forms of *soothly, soothness, soothsaw*.

sotie¹, n. [ME., also *sotye*, < OF. *sotie, sottie*, folly, foolishness, < *sot*, foolish: see *soT¹*.] Folly.

sotnia (sot'ni-ā), *n.* [< Russ. *sotniya*, a hundred.] A company or squadron in a Cossack regiment.

A party of Cossacks reached Pescherna from Lovatz; one *sotnia* turned northward and successfully attacked Toros. The other party turned south to Teteven.
G. B. McClellan, N. A. Rev., CXXVI. 150.

sotted, a. [< ME. *sotted*; < *sot* + *-ed²*.] Be-sotted; befooled.

This *sotted* preest, who was gladder than he?
Chaucer, Canon's Yeoman's Tale, l. 330.

sottery (sot'er-i), *n.* [< *sot* + *-cry*.] Folly.

Episcopacy, and so Presbytery, had indeed . . . suffered very much smut, soyle, darkness, and dishonour by the Tyrannies, Fedities, Luxuries, *Sotteries*, and Insolencies of some Bishops and other Churchmen under the Papal prevalence. *Bp. Gauden*, Tears of the Church, p. 12. (*Davies*.)

sottie¹, n. [OF.: cf. *sotie*.] A species of broad farce, satirical in its aim, popular in Paris in the fifteenth century and the early part of the sixteenth, from which the later French comedy derived some of its elements. The *sotties* were put down on account of their political effect.

sottise (sot'is), *n.* [< F. *sotise, sottise*, < *sot*, foolish: see *soT¹*.] A piece of foolishness; a silly act or action; a stupid thing.

sotish (sot'ish), *a.* [< *sot* + *-ish¹*.] Pertaining to a sot; having the character of a sot. (a) Dull; stupid; senseless; doltish; very foolish. (b) Dull with intemperance; given to tipping and drunkenness; pertaining to drunkenness: as, a man of *sotish* habits.

sotishly (sot'ish-li), *adv.* In a *sotish* manner; stupidly; senselessly; without reason. *Glanville*.

Milton, Hist. Eng., iii.

(b) Stupidity from intoxication; drunken habits generally.

No sober, temperate person can look with any complacency upon the drunkenness and *sotishness* of his neighbour.
South.

sotto (sot'tō), *prep.* [It., < L. *subter*, under, beneath, < *sub*, under: see *sub-*.] Under; below: an Italian word occurring in a few phrases: as, *sotto il soggetto*, below the subject; *sotto voce*, under the voice, in an undertone, aside.

sot-weed (sot'wēd), *n.* Tobacco. [Rare.]

I scarce had fill'd a pipe of *sot-weed*,
 And by the candle made it hot-weed.
Hudibras Redivivus. (*Nares*.)

We had every one rammd a full charge of *sot-weed* into our infernal guns.
Tom Brown, Works, II. 190.

sotyl¹, a. A Middle English form of *subtle*.

sou (sō), *n.* [F. *sou*, OF. *sol*, the name of a coin: see *sol²*, *sous*, *soldo*.] An old Roman, Gallic, and French coin, originally of gold, then of silver, and finally of copper. Under Philip Augustus it was of silver, and of the value of twelve deniers. Under succeeding monarchs the value varied much; but twenty sous tournois were equivalent to one livre tournois, and twenty-four sous to one livre parisais. Under

Louis XV. and Louis XVI. the sou was struck in copper, and had an intrinsic value of two deniers twelve grains, though retaining the conventional value of twelve deniers, and this coinage continued until the adoption of the existing decimal system in 1793. The present five-centime pieces, twenty of which make a franc, are still popularly called *sous*.—**Sou marqué** (F.) an old copper piece worth fifteen deniers (*Livre*); also, in the corrupted form *sou marquee*, said to be applied in the southern United States to a sou bearing some distinguishing mark, as a sou of 1767 counterstamped RF, or one marked in some way as counterfeit or spurious.

The word has been compared with *Gr.* αἶθλος, quick-moving, changeful, and with *sea* (see *sea*¹); also with *L.* *saculum*, age (life, vitality ?) (see *seale*, *secular*).] 1. A substantial entity believed to be that in each person which lives, feels, thinks, and wills. Animals also, and even plants, have been thought to have souls. Primitive peoples identify the soul with the breath, or something contained in the blood. Separated from the body, it is supposed to have some imperfect existence, and to retain the form of the body as a ghost. The verses of Davies (see below) enumerate some of the ancient Greek opinions. The first is that of Anaximander and of Diogenes of Apollonia; the second is that of Heraclitus; the third is that of Empedocles; the fourth is that attributed to Empedocles by Aristotle; the fifth is that of Dicaearchus and other Pythagoreans, as Simplicius in the "Phaedo"; the sixth is attributed wrongly to Galen; the seventh is that of Democritus and the atomists; the eighth is attributed by some authorities to the Pythagoreans; and the ninth is that of the Stoics. Aristotle makes the soul little more than a faculty or attribute of the body, and he compares it to the "axness" of an ax. The scholastics combined this idea with that of the separability and immortality of the soul, thus forming a highly metaphysical doctrine. Descartes originated distinct metaphysical dualism, which holds that spirit and matter are two radically different kinds of substance—the former characterized by consciousness, the latter by extension. Most modern philosophers hold to monism in some form, which recognizes only one kind of substance. That the soul is immortal is a very ancient and widely diffused opinion; it is also commonly believed that the soul has no parts. A soul separated from the body is commonly called a *spirit*, not a *soul*. In biblical and theological usage 'soul' (*nephesh*, *psyche*, also rendered 'life') is sometimes used for the non-corporeal nature of man in general, and sometimes, in distinction from *spirit*, for the lower part of this non-corporeal nature, standing in direct communication with the body, and regarded as the seat of the emotions, rarely of will or spirit. Some theologians minimize the distinction between *soul* and *spirit*, making them mere aspects or relations of the same substance, while others have made them distinct substances or distinct entities.

For of the *soule* the bodie forme doth take;

For *soule* is forme, and doth the bodie make.

Spenser, *Hymn in Honour of Beauty*, i. 132.

I pray Ood your whole spirit and *soul* and body be preserved blameless unto the coming of our Lord Jesus Christ.

1 *Thes.* v. 23.

The word of God is . . . sharper than any two-edged sword, piercing even to the dividing asunder of *soul* and spirit.

Heb. iv. 12.

To hold opinion with Pythagoras

That *souls* of animals infuse themselves

Into the trunks of men. *Shak.*, *M. of V.*, iv. 1. 132.

One thinks the *soule* is aire; another fire;

Another blood, diffus'd about the heart;

Another saith the elements conspire,

And to her essence each doth give a part.

Musicians think our *soules* are harmonies;

Physicians hold that their complexions be;

Epicures make them swarms of atoms,

Which doe by chance into our bodies flee.

Some think one general *soule* fills every braine;

As the bright sunne sheds light in every starre;

And others thinke the name of *soule* is vaine,

And that we onely well-mixt bodies are.

Sir J. Davies, *Nosce Teipsum*.

They [corporations] cannot commit treason, nor be outlawed, nor excommunicate, for they have no *souls*.

Case of Sutton's Hospital, 10 Coke's Rep., p. 32, b.

Although the human *soul* is united to the whole body, it has, nevertheless, its principal seat in the brain, where alone it not only understands and imagines, but also perceives. *Descartes*, *Prin. of Philoa.* (tr. by Veitch), iv. § 189.

Our idea of *soul*, as an immaterial spirit, is of a substance that thinks and has a power of exciting motion in body by writing or thought.

Locke, *Human Understanding*, II. xxiii. § 22.

With chemic art exalts the mineral powers,

And draws the aromatic *souls* of flowers.

Pope, *Windsor Forest*, l. 244.

It seems probable that the *soul* will remain in a state of inactivity, though perhaps not of insensibility, from death to the resurrection.

Hartley, *Observations on Man*, II. iv. § 3, prop. 90.

2. The moral and emotional part of man's nature; the seat of the sentiments or feelings; in distinction from *intellect*.

Hear my *soul* speak:

The very instant that I saw you, did

My heart fly to your service.

Shak., *Tempest*, iii. 1. 63.

These vain joys, in which their wills consume
Such powers of wit and *soul* as are of force
To raise their beings to eternity.

B. Jonson, *Cynthia's Revels*, v. 2.

In my *soul* I loathe

All affectation. *Couper*, *Task*, II. 410.

3. The animating or essential part; the essence; as, the *soul* of a song; the source of action; the chief part; hence, the inspirer or leader of any action or movement: as, the *soul* of an enterprise; an able commander is the *soul* of an army.

Brevity is the *soul* of wit,

And tediousness the limbs and outward flourishes.

Shak., *Hamlet*, II. 2. 90.

He had put domestic factions under his feet; he was the *soul* of a mighty coalition.

Macaulay, *Hist. Eng.*, vii.

4. Fervor; fire; grandeur of mind, or other noble manifestation of the heart or moral nature.

I have been woo'd by many with no less

Soul of affection.

Fletcher, *Faithful Shepherdess*, iv. 4.

Money gives *soul* to action. *Ford*, *Perkin Warbeck*, iii. 1.

There is some *soul* of goodness in things evil.

Shak., *Hen. V.*, iv. 1. 4.

5. A spiritual being; a disembodied spirit; a shade.

Then of his wretched friend

The *Soul* appear'd; at ev'ry part the form did comprehend
His likeness; his fair eyes, his voice, his stature, ev'ry
weed

His person wore, it fantasied. *Chapman*, *Ilad*, xxiii. f. 58.

O sacred essence, other form,

O solemn ghost, O crowned *soul*!

Tennyson, *In Memoriam*, lxxxv.

6. A human being; a person.

All the *souls* of the house of Jacob, which came into Egypt, were threescore and ten. *Gen.* xli. 27.

My lord, this is a poor mad *soul*; . . . and the truth is, poverty hath distracted her. *Shak.*, *2 Hen. IV.*, ii. 1. 113.

Humph. Where had you this Intelligence?

Tom. From a foolish fond *Soul* that can keep nothing from me.

Steele, *Conscious Lovers*, l. 1.

All *Souls*' day, in the *Rom. Cath. Ch.*, the 2d of November, a day kept in commemoration of all the faithful departed, for the eternal repose of their souls, to which end the mass and offices of the day are directed. It is the day following the feast of All Saints.—**Apparitional soul**. See *apparitional*.—**Commendation of the soul**. See *commendation*, 5.—**Cure of souls**. See *cure*.—**Descent of souls**. See *descent*.—**Seat of the soul**, the part of the body (according to some speculators a mathematical point) in immediate dynamic connection with the soul.

As long as the soul was supposed to be a material thing (which was the usual ancient opinion), it was naturally believed to have a distinct place. Later the knowledge of the functions of the nervous system, and their centralization in the brain, showed that the soul was more intimately connected with that than with other parts of the body; and it was vaguely supposed that the unity of consciousness would in some measure be explained by the hypothesis of a special seat of the soul in the brain. The commonest primitive notion was that the soul was resident in the blood or in the heart. Either the whole soul or its parts were also located in the bowels, bones, liver, gall, kidneys, and other organs. The doctrine that the soul is in the brain seems to have originated in Egypt, and found many partial adherents in antiquity, but was not generally accepted before modern times. The Neoplatonists held that the soul is wholly in the whole body and wholly in every part. Descartes placed the soul in the pineal gland, and other physiologists of the seventeenth century located it in different organs connected with the brain. Leibnitz introduced the theory that it resides at a mathematical point, which has found eminent supporters, some of whom regard this point as movable. Others hold that any conception of consciousness which forces its adherents to such a conclusion ought to be considered as reduced to an absurdity. Recent observations concerning multiple consciousness strengthen indications previously known that the unity of consciousness is somewhat illusory; and the anatomy of the brain does not support the notion of an absolute centralization of the power of forming ideas.—**Sentient soul**, the soul as affected by the senses, or as possessing sentience. = *Syn.* 1 and 2. *Intellect*, *Spirit*, etc. See *mind*¹.—4. *Ardo*, force.

soul^{1†} (söl), *v. t.* [*< ME.* *sowlen*; < *soul*¹, *n.*] To endure with a soul.

soum, sowm (soum), *n.* [*A var. of sum*², amount, proportion: see *sum*².] The proportion of cattle or sheep suitable to any pasture, or vice versa: as, a *soum* of sheep, as many sheep as a certain amount of pasturage will support; a *soum* of grass or land, as much as will pasture one cow or five sheep. [Scotch.]

soum, sowm (soum), *v. i.* [*soum, sowm, n.*] To calculate and determine what number of cattle or sheep a certain piece of land will support. [Scotch.]—**Soum and room**, to pasture (in summer) and fodder (in winter). *Jamieson*.—**Souming and rooming**, in *Scots law*, the action whereby the number of cattle to be brought upon a common by the persons respectively having a servitude of pasturage may be ascertained. The criterion is the number of cattle which each of the dominant proprietors is able to fodder during winter. Strictly speaking, to *soum* a common is to ascertain the several soums it may hold, and to *room* it is to portion it out among the dominant proprietors.

soun†, *v.* An obsolete variant of *swoon*.

soun†, *n.* and *v.* An original spelling of *sound*⁵.

sound¹ (sound), *a.* and *n.* [*ME. sound, sond, sund, isund*, < *AS. gesund* (= *OS. gesund* = *OFries. sund, sond* = *MD. ghesond, D. gezond* = *MLG. gesunt, LG. gesund, sund* = *OHG. gisunt, MHG. gesunt, G. gesund* = *Sw. Dan. sund*), sound; < *ge-*, a collective and generalizing prefix (see *i-*), + **sund*, of uncertain origin, perhaps akin to *L. sanus*, whole, sound; see *san*¹.] **I. a. 1.** Healthy; not diseased; having all the organs and faculties complete and in perfect action: as, a *sound* mind; a *sound* body.

Et horn child is hol and *sund*, And Athulf bithute (without) wund. *King Horn* (E. E. T. S.), p. 38.

Though he falle, he fallteth nat bote as ho fulle in a bote, That ay is saf and *sounde* that sitteth with yne the borde. *Piers Plowman* (C), xi. 40.

Universal distrust is so unnatural, indeed, that it never prevails in a *sound* mind. *Channing*, *Perfect Life*, p. 101.

2. Whole; uninjured; unhurt; unmutated; not lacerated or bruised: as, a *sound* limb.

Thou dost breathe; Hsst heavy substance; bleed'st not; speak'st; art *sound*. *Shak.*, *Lear*, iv. 6. 52.

3. Free from special defect, decay, or injury; unimpaired; not deteriorated: as, a *sound* ship; *sound* fruit; a *sound* constitution.

Look that my staves be *sound*, and not too heavy. *Shak.*, *Rich. III.*, v. 3. 65.

Her timbers yet are *sound*, And she may float again. *Cowper*, *Loss of the Royal George*.

A cellar of *sound* liquor, a ready wit, and a pretty daughter. *Scott*, *Kenilworth*, i.

4. Morally healthy; honest; honorable; virtuous; blameless.

In the way of loyalty and truth Toward the king, my ever royal master, Dare Iste a *sounder* man than Surrey can be. *Shak.*, *Hen. VIII.*, iii. 2. 274.

5. Without defect or flaw in logic; founded in truth; firm; strong; valid; that cannot be refuted or overthrown: as, a *sound* argument.

About him were a press of gaping faces, Which seem'd to swallow up his *sound* advice. *Shak.*, *Lucrece*, l. 1409.

Rules of life, *sound* as the Time could bear. *Wordsworth*, *Off Saint Bees' Heads*.

6. Right; correct; well-founded; free from error; pure: as, *sound* doctrine.

It is out of doubt that the first state of things was best, that in the prime of Christian religion faith was *soundest*. *Hooker*, *Eccles. Polity*, iv. 2.

Hold fast the form of *sound* words. *2 Tim.* i. 13.

7. Reasoning accurately; logical; clear-minded; free from erroneous ideas; orthodox.

Who shall decide when doctors disagree, And *soundest* casuists doubt, like you and me? *Pope*, *Moral Essays*, iii. 2.

A kick that scarce would move a horse May kill a *sound* divine. *Cowper*, *Yearly Distress*.

8. Founded in right and law; legal; not defective in law: as, a *sound* title; *sound* justice.

They reserved their titles, tenures, and signiories whole and *sound* to themselves. *Spenser*, *State of Ireland*.

Here by equity we mean nothing but the *sound* interpretation of the law. *Blackstone*, *Com.*, III. xxvii.

9. Unbroken and deep; undisturbed: said of sleep.

Let no man fear to die; we love to sleep all, And death is but the *sounder* sleep. *Fletcher*, *Humorous Lieutenant*, iii. 6.

New waked from *soundest* sleep, Soft on the flow'ry herb, I found me laid In balmy sweat. *Milton*, *P. L.*, viii. 253.

10. Thorough; complete; hearty.

The men . . . give *sound* strokes with their clubs where-with they fight. *Abp. Abbot*.

11. Of financial condition, solvent; strong; not undermined by loss or waste: as, that bank is one of our *soundest* institutions.—As *sound* as a roach. See *roach*².—**Sound and disposing mind and memory**, in the law of wills. See *memory*.—**Sound mind**. See *insanity*.—**Sound on the goose**. See *goose*.—**Syn.** 1. Hearty, hale, hardy, vigorous.—3. Entire, unbroken, undecayed.—5 and 7. Sane, rational, sensible. **II. † n. Safety.** [Rare.]

Our goddis the gonerne, & soche grace Iene That thou the victoris wyb, thi worship to saue, And to this Citie in *sound* thi seluyng may come. *Destruction of Troy* (E. E. T. S.), i. 6185.

sound¹† (sound), *v.* [*ME. sounden*; < *sound*¹, *a.*] **I. trans.** To heal; make sound.

Further wol I never founde Non other help, my sores for to *sounde*. *Chaucer*, *Anelida and Arcite*, l. 242.

II. intrans. To become sound; heal.

Thro girt with mony a wounde, That lykly ar never for to *sounde*. *Lydgate*, *Complaint of the Bisk Knight*, l. 292.

sound¹ (sound), *adv.* [*sound*¹, *a.*] Soundly; heartily; thoroughly; deeply: now used only of sleeping.

So *sound* he slept that nought mought him awake. *Spenser*, *F. Q.*, I. i. 42.

Till he tell the truth, Let the supposed faeries pinch him *sound*. *Shak.*, *M. W. of W.*, iv. 4. 61.

Every soul throughout the town being *sound* asleep before nine o'clock. *Irvine*, *Knickerbocker*, p. 175.

sound² (sound), *n.* [*ME. sound, sund*, < *AS. sund*, a sound, a strait of the sea (= *MD. sond, D. sond, sont, zond* = *MHG. G. sund* = *Icel. Sw. Dan. sund*, a sound), also, in *AS.* and *Icel.*, swimming; contracted from orig. **swund*, < *swimman* (pp. *swummen*), swim: see *swim*. Cf. *sound*³.] A narrow passage of water not a stream, as a strait between the mainland and an isle, or a strait connecting two seas, or connecting a sea or lake with the ocean: as, Long Island *Sound*; the *Sound* (between Denmark and Sweden).

Behold, I come, sent from the Stygian *Sound*, As a dire vapour. *B. Jonson*, *Catiline*, l. 1.

And, with my skates fast-bound, Skimmed the half-frozen *Sound*. *Longfellow*, *Skeleton in Armor*.

Sound dues. See *due*¹.

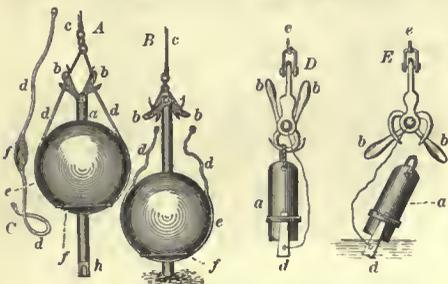

sound³ (sound), *n.* [*ME. sounde*; cf. *Icel. sundmagi*, the sound of a fish, lit. 'swimming-maw'; see *sound*² and *maw*.] In *zool.*: (a) The swimming-bladder or air-bladder of a fish. The sound is a hollow vesicular organ, originating from the digestive tract—in fact, a rudimentary lung, the actual homologue of the lungs of air-breathing vertebrates, though in fishes, as in other brachiates, respiration is effected by gills. (See *air-bladder*.) Some fishes' sounds are an esteemed article of food, as that of the cod, which when fried is something like an oyster so cooked; others are valuable as a source of isinglass.

Sounds of a fysshe, cannon. *Palegrave. (Halliwell.)*

Of [fishes'] sounds we make isinglass.
Goldsmith, Int. to Brookes's Nat. Hist., III.

(b) A cuttlefish.

sound⁴ (sound), *v.* [Early mod. E. also *sownde*; *ME. sounden* (= *D. sonderen* = *G. sondiren* = *Sw. sondera* = *Dan. sondere*, *OF. (and F.) sonder* = *Sp. Dan. sund*, a strait, *sound* (cf. *AS. sund-gyrd*, a sounding-rod, *sund-line*, a sounding-line: see *sound*²); (b) otherwise perhaps *ML. "subundare"*, submerge: see *sub-* and *ound, undulate*.] **I. trans.** 1. To measure the depth of; fathom; try or test, as the depth of water and the quality of the ground, by sinking a plummet or lead attached to a line on which is marked the number of fathoms. Machines of various kinds are also used to indicate the depth to which the lead has descended. A cavity in the lower end of the lead is partially filled with

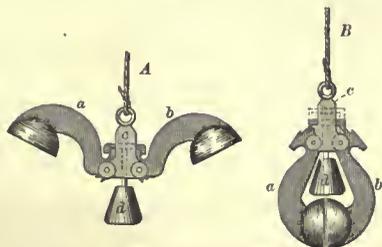

Apparatus used in Sounding.

A, B, C, Brooke's Deep-sea Sounding-apparatus: *a*, rod with horns *b* pivoted thereto; *c*, sounding-line; *d*, wires by which the lead *e* is attached to the horns, connected with a washer *f* under the lead; *g*, opening in lower end of rod, by which specimens of the bottom may be secured. When the rod strikes the bottom, the lead slides downward, bringing the horns into the position shown in *B*, and releasing the wires *d* and the lead; the rod only is then drawn up, leaving the lead at the bottom.

D, E, British Navy Sounding-apparatus: *a*, lead; *b*, counterpoised hooks which engage the loop at the top of the lead; *c*, wedge-shaped cup for specimens, attached by cord or wire to the pivot of the hooks; *d*, attachment for the sounding-line or wire. When the cup *d* touches bottom, the hooks *b* drop into the position shown in *E*; the sinker or lead then drops over, releasing the cup, and this, with its specimen and the hooks, is drawn to the surface.

tallow, by means of which some part of the earth, sand, gravel, shells, etc., of the bottom adhere to it and are drawn up. Numerous devices are in use for testing the nature of the bottom, as a pair of large forceps or scoops carried down by a weight, which are closed when they

a and *b*, arms pivoted to *c*; *d*, lead, which is attached to a stem at the top of which is a crosspiece. When the arms are raised into the position shown in *A*, the crosspiece engages them and holds them in that position till the lead strikes the bottom; they are then released, and fall into the position shown in *B*. The cups (shown in the cuts), on closing, scoop up a specimen of the bottom.

strike the ground, and so inclose some of the sand, shells, etc., a cup at the bottom of a long leaden weight, which is closed by a leathern cover when full, etc. See the accompanying cuts of apparatus used in sounding. Brooke's apparatus is said to be the first by which soundings of over 2,000 fathoms were made and specimens of the bottom obtained.

Go sound the ocean, and cast your nets;
Happily you may catch her in the sea.
Shak., Tit. And., iv. 3. 7.

Two plummets dropt for one to sound the shys.
Tennyson, Princess, II.

2. In *surg.*, to examine by means of a sound or probe, especially the bladder, in order to ascertain whether a stone is present or not.

By a precions oyle Doctor Russell at the first applyed to it when he sounded it with probe (ere night) his tormenting paine was . . . well asswaged.
Quoted in *Capt. John Smith's Works, I. 179.*

3. Figuratively, to try; examine; discover, or endeavor to discover, that which is concealed in

the mind of; search out the intution, opinion, will, or wish of.

It is better to sound a person with whom one deals, afar off, than to fall upon the point at first, except you mean to surprise him by some short question.

Bacon, Negotiating (ed. 1837).

I have sounded him already at a distance, and find all his answers exactly to our wish.

Goldsmith, Good-natured Man, II.

4. To ascertain the depth of (water) in a ship's held by lowering a sounding-rod into the pump-well.—**5.** To make a sounding with, or carry down in sounding, as a whale the tow-line of a boat.—**To sound a line, to sound all lines.** See *line*².

II. intrans. 1. To use the line and lead in searching the depth of water.

I sounde, as a schyppe man soundeth in the see with his plummet to knowe the deppeth of the see. *Je plote.*

Palegrave, p. 726.

The shipmen . . . sounded, and found it twenty fathoms.
Acts xxvii. 27, 28.

2. To penetrate to the bottom; reach the depth.

For certes, lord, so sore hath she me wounded

That stood in blake, with lokyngs of hire eyghen,

That to myn hertis botme it is ywounded.
Chaucer, Troilus, II. 535.

3. To descend to the bottom; dive: said of fish and other marine animals. When a sperm-whale sounds, the fore parts are lifted a little out of water, a strong spout is given, the nose is dipped, the back and small are rounded up, the body bends on a cross-axis, the flukes are thrown up 20 or 30 feet, and the whale goes straight down head first, in less than its own length of water.

sound⁴ (sound), *n.* [= *D. G. Dan. sonde* = *Sw. sond*, *F. sonde*, a probe, a sounding-lead, = *Sp. Pg. sonda*, a sound; from the verb: see *sound*⁴, *v.*] In *surg.*, any elongated instrument, usually metallic, by which cavities of the body are sounded or explored; a probe; specifically, an instrument used for exploring or dilating the urethra, or for searching the bladder for stone.

sound⁵ (sound), *n.* [*ME. sounde* (with excrement *d*), *soun, soun, sowne, son*, *OF. soun, son, sun*, *F. son* = *Pr. son, so* = *Sp. son* = *Pg. som* = *It. suono* = *Icel. sonn*, a sound, *L. sonus*, a sound; cf. *Skt. seana*, sound, *√ sean*, sound. Cf. *sound*⁵, *v.*, and see *assonant, consonant, dissonant, resonant, person, parson, re-sound, sonata, sonnet, sonorous, sonant, unison*, etc.] 1. The sensation produced through the ear, or organ of hearing; in the physical sense, either the vibrations of the sounding-body itself, or those of the air or other medium, which are caused by the sounding-body, and which immediately affect the ear. A musical sound, or *tone*, is produced by a continued and regular series of vibrations (or, in the physical sense, may be said to be these vibrations themselves); while a *noise* is caused either by a single impulse, as an electrical spark, or by a series of impulses following at irregular intervals. A sounding-body is a body which is in such a state of vibration as to produce a sound (see *vibration*). Thus, a tuning-fork, a bell, or a piano-string, if struck, will, in consequence of its elasticity, continue to vibrate for some time, producing, in the proper medium, a sound; similarly, the column of air in an organ-pipe becomes a sounding-body when a current of air is continually forced through the mouthpieces past the lip; again, an inelastic body, as a card, may become a sounding-body if it receives a series of blows at regular intervals and in sufficiently rapid succession, as from the teeth of a revolving cog-wheel. The vibrations of the sounding-body are conveyed to the ear by the intervening medium which is usually the air, but may be any other gas, a liquid (as water), or an elastic solid. The presence of such a medium is essential, for sound is not propagated in a vacuum. The vibrations of the sounding-body, as a tuning-fork, produce in the medium a series of waves (see *waves*) of condensation and rarefaction, which are propagated in all directions with a velocity depending upon the nature of the medium and its temperature—for example, the velocity of sound in air is about 1,090 feet per second at 32° F. (0° C.), and increases slightly as the temperature rises; in other gases the velocity varies inversely as the square root of the density: it is consequently nearly four times as great in hydrogen. In liquids the velocity is greater than in air—for water, somewhat more than four times as great. In solids the velocity varies very widely, being relatively small in inelastic substances like wax and lead, and very great (two to three miles per second) in wood and steel. Sound-waves may differ (1) in their wavelength—that is, in the number of vibrations per second; (2) in the amplitude of the motion of the particles forming them; and (3) in their form, as to whether they are simple, and consist of a single series of pendulum-like vibrations, or are compound, and formed of several such series superimposed upon each other. Corresponding to these differences in the sound-waves, the sounds perceived by the ear differ in three ways: (1) They differ in *pitch*. If the sound-waves are long and the number of vibrations few per second, the pitch is said to be *low* and the sound is called *grave*; as the number of vibrations increases, the pitch is said to *rise* and the sound to be *higher*; if the number of vibrations is very great and the length of the waves correspondingly small, the sound becomes shrill and piercing. It is found that the vibrations must be as numerous as 24 per second in order that the ear may be able to unite them as a continuous sound. Similarly, if the vibrations exceed 30,000 to 40,000 per second, they

cease to produce any sensation upon the ear. (2) Sounds differ in *intensity* or *loudness*. Primarily the intensity of the sound depends upon the amplitude of the vibrations; it diminishes with the square of the distance from the sounding-body; it also diminishes as the density of the air or other medium decreases, and is increased by the proximity of a sonorous body which can vibrate in unison with it. (3) Sounds differ in *quality* or *timbre*, that property by which we distinguish between the same tone as sounded upon two different musical instruments, as a piano and a violin. This difference is due to the fact that a note produced by a musical instrument is in general a compound note, consisting of the fundamental note, the pitch of which the ear perceives, and with it a number of higher notes of small intensity whose vibrations as compared with the fundamental note are usually as the numbers 2, 3, 4, 5, 6, etc. These upper notes, harmonics or over-tones (see *harmonic*), bleed with the fundamental note, and upon their number and relative intensity, consequently, the resultant combined effect upon the ear, or the quality of the note, depends. Sound-waves may, like light-waves, be reflected from an opposing surface (see *reflection, echo, resonance*); they may be refracted, or suffer a change of direction, in passing from one medium to another of different density; they may suffer diffraction; and they may also suffer interference, giving rise to the pulsations of sounds called *beats*. See *beat*, 7.

2. A particular quality or character of tone, producing a certain effect on the hearer, or suggesting a particular cause; tone; note; as, a joyful sound; a sound of woe.

There is a sound of abundance of rain. *1 KI. xviii. 41.*

Doug. That 's the worst tidings that I hear of yet.

Wor. Ay, by my faith, that beara a frosty sound.

Shak., 1 Hen. IV., iv. 1. 128.

The sound of a sea without wind is about them.

Steuernburge, Heesperia.

3. Vocal utterance.

'Tis not enough no harshness gives offence,

The sound must seem an echo to the sense.
Pope, Essay on Criticism, l. 365.

4. Hearing-distance; ear-shot.

Sooner shall grass in Hyde-park Cirena grow,

And wits take lodgings in the sound of Bow.
Pope, R. of the L., iv. 118.

5. Empty and unmeaning noise.

Told by an idiot, full of sound and fury,

Signifying nothing.
Shak., Macbeth, v. 5. 27.

6. Same as *signal*, 2.—**Anacampic sounds.** See *anacampic*.—**Blood-sounds**, in *auscultation*, anemic murmurs.—**Bronchial sound**, the normal bronchial breathing-sound.—**Cardiac sounds**, the heart-sounds.—**Characteristic sound**, see *characteristic letter*, under *characteristic*.—**Cogged breath-sound**. See *breath-sound*.—**Friction sound**. See *friction-sound*.—**Refraction of sound**. See *refraction*.—**Respiratory sounds**. See *respiratory*.—**To read by sound**, in *teleg*. See *read*.—**Syn. 1. Noise, Sound, Tone.** *Noise* is that effect upon the ears which does not convey, and is not meant to convey, any meaning; as, the noise made by a falling chimney; street noises. *Sound* is a general word, covering noise and intelligible impressions upon the auditory nerves; as, the sound of cannon, of hoofs, of a trumpet, of prayer. *Tone* is sound regarded as having a definite place on the musical scale, or as modified by feeling or physical affections, or as being the distinctive quality of sound possessed by a person or thing permanently or temporarily; as, his tones were those of anger; a piano of peculiarly rich tone. For technical distinctions, see *def. 1* above, *noise*, and *tone*.

sound⁵ (sound), *v.* [*ME. sounden, sounen, sounen, sunen*, *OF. suner, soner, F. sonner* = *Pr. Sp. sonar* = *Pg. soar* = *It. sonare* (= *Icel. sōna*), *L. sonare*, sound, *sonus*, a sound; see *sound*⁵, *n.*] **I. intrans.** 1. To produce vibrations affecting the ear; cause the sensation of sound; make a noise; produce a sound; also, to strike the organs of hearing with a particular effect; produce a specified audible effect: as, the wind sounds melancholy.

Ther herde I pleyen on an harpe,

That sounded bothe wel and sharpe,

Orpheus ful craftely.
Chaucer, House of Fame, l. 1202.

O earth, that soundest hollow under me.

Tennyson, Coming of Arthur.

2. To cause something (as an instrument) to sound; make music.

The singers sang, and the trumpeters sounded.

2 Chron. xxix. 28.

3. To seem or appear when uttered; appear on narration: as, a statement that sounds like a fiction.

How oddly will it sound that I

Must ask my child forgiveness!

Shak., Tempest, v. 1. 197.

All this is mine but till I die;

I can't but think 'twould sound more clever

To me and to my heirs for ever.

Pope, Imit. of Horace, II. vi. 11.

Your father never dropped a syllable which should sound toward the asking me to assist him in his adversity.

Godwin, Fleetwood, xix.

4. To be conveyed in sound; be spread or published.

From you sounded out the word of the Lord.

1 Thea. I. 8.

5. To tend; incline. [Now rare.]
 Alle hire wordes moore and lesse,
Sounnyng in vertu and in gentlesse.
Chaucer, Physician's Tale, l. 54.
 Seyng any thyng *sounnyng* to treson.
Paston Letters, l. 183.
 All such thingis as *soune* wyth or ayenst the common
 wele.
Arnold's Chron., p. 88.
 6†. To resound.
 The shippes hereupon discharge their Ordnance, . . .
 insomuch that the tops of the hilles *sounded* therewith.
Hakluyt's Voyages, l. 245.

To sound in damages, in law, to have as its object the
 recovery of damages: said of an action brought, not for
 the recovery of a specific thing, as replevin or an action
 of debt, but for damages only, as for trespass, etc.
 II. *trans.* 1. To cause to produce sound; set
 in audible vibration.

A baggepipe wel coude he blowe and *soune*.
Chaucer, Gen. Prol. to C. T., l. 565.
 I have *sounded* the very base-string of humiliffy.
Shak., 1 Hen. IV., li. 4. 6.

2. To utter audibly; pronounce; hence, to
 speak; express; repeat.

But now to yow reheren al his speche,
 Or al his woful wordes for to *soune*.
Chaucer, Troilus, li. 573.
 Then I, as one that am the toughe of these,
 To *sound* the purposes of all their hearts.
Shak., K. John, iv. 2. 48.
 The Arab by his desert well
 . . . hears his single camel's bell
Sound welcome to his regal quarters.
Whittier, The Hiaschish.

3. To order or direct by a sound; give a signal
 for by a certain sound: as, to *sound* a re-
 treat.

To *sound* a parley to his heartless foe.
Shak., Lucrece, l. 471.

4. To spread by sound or report; publish or
 proclaim; celebrate or honor by sounds.

Thou sou, of this great world both eye and soul,
 Acknowledge him thy greater; *sound* his praise.
Milton, P. L., v. 171.

She loves aloft to *sound*
 The Man for more than Mortal Deeds renown'd.
Congreve, Pindaric Odes, li.

5. To signify; import. [A Latinism.]

Hise reasons he spak ful solemnely,
Sounnyng alway thencrees of his wuuyng.
Chaucer, Gen. Prol. to C. T., l. 276.

If you have ears that will be pierced—or eyes
 That can be opened—a heart that may be touched—
 Or any part that yet *sounds* man about you.
B. Jonson, Volpone, iii. 6.

The cause of divorce mentioned in the law is translated
 "some uncleanness," but in Hebrew it *sounds* "naked-
 ness of aught, or any real nakedness." *Milton*, Divorce, i.

6. To examine by percussion, as a wall in order
 to discover hollow places or studding; specifically, in
med., to examine by percussion and auscultation, in
 order to form a diagnosis by means of sounds heard:
 as, to *sound* the lungs.

sound⁰ (sound). An obsolete or dialectal con-
 tracted form of *swound*, *swoon*.

soundable (soun'da-bl), *a.* [*<* *sound*⁴ + *-able*.*]*
 Capable of being sounded.

soundboard (soun'dbōrd), *n.* 1. In musical
 instruments, a thin resonant plate of wood so
 placed as to enhance the power and quality of
 the tones by sympathetic vibration. In the piano-
 forte it is placed just under or behind the strings;
 in the pipe-organ it forms the top of the wind-cheat
 in which the pipes are inserted; in the violin, guitar,
 etc., it is the same as the belly—that is, the front
 of the body. Great care is exercised in the selection
 and treatment of the wood for soundboards, which
 is either pine or spruce-fir. Also *sounding-board*.
 See cut under *harp*.

2. Same as *sounding-board*, 1. See cut under
abat-voix.—**Pedal soundboard**. See *pedal*.

sound-boarding (soun'dbōrd'ing), *n.* In *carp.*,
 short boards which are disposed transversely
 between the joists, or fixed in a partition for
 holding the substance called pugging, intended
 to prevent sound from being transmitted from
 one part of a house to another.

sound-body, sound-box, sound-chest (soun'd-
 bod'i, -boks, -chest), *n.* Same as *resonance-box*.

sound-bone (soun'dhōn), *n.* [*<* *sound*³ + *bone*.*]*
 The bone of a fish lying close to the sound or
 air-bladder. It is a part of the backbone consist-
 ing of those vertebrae collectively which are ordi-
 narily cut out in one piece in splitting the fish.

sound-bow (soun'dbō), *n.* The thickened edge
 of a bell against which the clapper strikes. In
 stating the proportions of a bell, the thickness
 of the sound-bow is usually taken as a unit.

sound-deafness (soun'def'nes), *n.* Deafness
 to sound of every pitch or quality, as distin-
 guished from *pitch-deafness* and *timbre-deafness*.

sounder¹ (soun'dér), *n.* [Early mod. E. also
soender, *<* ME. *soundre*, *<* AS. *sumor*, a herd.]
 1. A herd of wild swine.

That men calleth a trip of a tame awyn is called of wyld
 awyn a *soundre*: that is to say, gif ther be passay v. or vj.
 togedres.
MS. Bodl., 540. (*Halliwel*.)

Now to apeke of the boore, the fyrate year he is
 A pygge of the *sounder* callyd, as haue I bys;
 The secoude yere an hogge, and soo shall he be,
 And an hoggeater when he is of yere thre;
 And when he is foure yere, a boor shall he be,
 From the *sounder* of the swyne theune departhyth he.
Book of St. Alban's (ed. 1496), alg. d., i.

2. A young wild boar: an erroneous use.

It had so happened that a *sounder* (i. e., in the language
 of the period, a boar of only two years old) had crossed
 the track of the proper object of the chase.
Scott, Quentin Durward, ix.

Such then were the pigs of Devon, not to be compared
 with the true wild descendant, . . . whereof many a
sounder still grunted about Swinley down.
Kingsley, Westward Ho, viii.

sounder² (soun'dér), *n.* [*<* *sound*⁴ + *-er*¹.*]* A
 sounding-machine.—**Flying sounder**, an apparatus,
 devised by Thomson, for obtaining deep-sea soundings,
 at a moderate depth, without rounding or reducing speed.
 With this sounding-machine a sounding was made at a
 depth of 130 fathoms while the steamer was moving at the
 rate of 16 knots an hour.

sounder³ (soun'dér), *n.* [*<* *sound*⁵ + *-er*¹.*]*
 That which sounds; specifically, in *teleg.*, a re-
 ceiving instrument in the use of which the mes-
 sage is read by the sound produced by the arma-
 ture of the electromagnet in playing back and
 forth between its stops.

sound-figures (soun'd'fig'ūrz), *n. pl.* Chladni's
 figures. See *nodal lines*, under *nodal*.

sound-hole (soun'd'hól), *n.* In musical instru-
 ments of the viol and lute classes, an opening
 in the belly or soundboard, so shaped and
 placed as to increase its elasticity and thus its
 capacity for sympathetic vibration. In the mod-
 ern violin and similar instruments there are two sound-
 holes, placed on each side of the bridge; they are usually
 called the *f-holes*, from their shape.

sounding¹ (soun'ding), *n.* [*<* ME. *soundinge*,
sowndyng, *sownyng*; verbal n. of *sound*⁴, *v.* 1.]
 The act or process of measuring the depth of
 anything; exploration, as with a plummet and
 line, or a sound.—2. The descent of a whale
 or of a fish to the bottom after being harpooned
 or hooked.—3. *pl.* The depth of water in riv-
 ers, harbors, along shores, and even in the
 open seas, which is ascertained in the opera-
 tion of sounding. The term is also used to signify any
 place or part of the ocean where a deep sounding-line
 will reach the bottom; also, the kind of ground or bottom
 where the line reaches. Soundings on English and Ameri-
 can charts are expressed in fathoms, except in some har-
 bor-charts where they are in feet. See *deep-sea*.—**In**
or on soundings. (a) So near the land that a deep-sea
 lead will reach the bottom. (b) In comparatively shoal
 water: said of a whale in the Arctic Ocean, Bering Sea,
 Sea of Okhotsk, or in bays, lagoons, etc., whose depths
 may be readily fathomed.—**To get on or off soundings**, to
 get into or beyond water where the bottom can be touched
 by sounding; figuratively, to enter into a subject or topic
 which one is or is not competent to discuss.—**To strike**
soundings, to find bottom with the deep-sea lead.

sounding² (soun'ding), *n.* [*<* ME. *sounding*;
 verbal n. of *sound*⁵, *v.* 1.] The act of producing
 a sound or a noise; also, a sound or a noise pro-
 duced; specifically, in *music*, compare *sound*⁵,
v. i., 2.

Musicians have no gold for *sounding*.
Shak., R. and J., iv. 5. 143.

The Stage.

B. Jonson, Every Man out of his Humour, Ind.

sounding³ (soun'ding), *p. a.* [*Pr.* of *sound*⁵,
v. 1.] Causing or producing sound; sono-
 rous; *sounding*; making a noise.

Ay me! whilst thee the shores and *sounding* seas
 Wash far away.
Milton, Lycidas, l. 154.

2. Having a magnificent or lofty sound; hence,
 bombastic: as, mere *sounding* phrases.

Keep to your subject close in all you say;
 Nor for a *sounding* sentence euer stray.
Dryden and Soames, tr. of Boileau's Art of Poetry, l. 182.

sounding-board (soun'ding-bōrd), *n.* 1. A
 canopy over a pulpit, etc., to direct the sound
 of a speaker's voice toward the audience. See
abat-voix. Also *soundboard*.

Since pulpits fall, and *sounding-boards* reflect
 Most part an empty, ineffectual sound.
Cowper, Task, iii. 21.

2. In *building*, a board used in the deafening of
 floors, partitions, etc. See *sound-boarding*.—
 3. Same as *soundboard*, 1.

sounding-bottle (soun'ding-bot'l), *n.* A vessel
 for raising water from a great depth for exam-
 ination and analysis. It is generally made of wood,
 and has valves opening upward in the top and bottom.
 It is fixed on the sounding-line over the lead, so that
 the water passes through it as the line descends; but
 when it is drawn up the force of gravity closes the
 valves, thus re-

taining the contents. It often contains a thermometer
 for showing the temperature below the surface.

sounding-lead (soun'ding-led), *n.* The weight
 used at the end of a sounding-line.

sounding-line (soun'ding-līn), *n.* A line for
 trying the depth of water.

sounding-machine (soun'ding-mā-shēn'), *n.* A
 device for taking deep-sea soundings. See
deep-sea.

sounding-post (soun'ding-pōst), *n.* Same as
sound-post.

sounding-rod (soun'ding-rod), *n.* A graduated
 rod or piece of iron used to ascertain the depth
 of water in a ship's pump-well, and conse-
 quently in the hold.

soundisman, *n.* A Middle English form of
sandesman.

Then sent were there some *soundismen* two
 To Priam, the prie kyng, purpos to hold.
Destruction of Troy (E. E. T. S.), l. 8866.

 a sound manner, in any sense of the word *sound*.

soundness (soun'dnes), *n.* [*<* *sound*¹ + *-ness*.*]*
 The state of being sound, in any sense.—**Syn.** See
*sound*¹, *a.*

sound-post (soun'd'pōst), *n.* In musical in-
 struments of the viol class, a small cylindrical
 wooden prop or pillar which is inserted between
 the belly and the back, nearly under the treble
 foot of the bridge. Its purpose is to prevent the
 crushing of the belly by the tension of the strings,
 and to transmit the vibrations of the belly to the back.
 Its material, shape, and position are of great impor-
 tance in determining the quality and power of the
 tone. It is sometimes called the instrument's *soul*
 or *voice*. Also *sounding-post*.

sound-proof (soun'd'prōf), *a.* Impervious to
 sound; preventing the entrance of sounds.

It [silicate of cotton] is of great efficiency as a stuffing
 for *sound-proof* walls and flooring. *Ure*, *Diclt.*, IV. 293.

sound-radiometer (soun'd'rā-di-om'e-tēr), *n.*
 An apparatus devised by Dvorak to show the
 mechanical effect of sound-waves. It consists of
 a light cross of wood pivoted with a glass cap upon
 a vertical needle, and carrying four pieces of card
 perforated with a number of holes, raised on one side
 and depressed on the other like those of a nutmeg-
 grater. The cross-
 vanes rotate rapidly when placed before the resonance-
 box of a loud-sounding tuning-fork.

sound-register (soun'd'rej'is-tēr), *n.* An ap-
 paratus for collecting and recording tones of
 the singing voice or of a musical instrument.
 It was invented in Paris in 1858.

sound-shadow (soun'd'shad'ō), *n.* The inter-
 ception of a sound by some large object, as a
 building. It is analogous to a light-shadow, but is
 less distinct, since sound-waves have much greater
 length than light-waves.

For just as a high wall, a hill, or a railway-cutting often
 completely cuts off sounds by forming a *sound-shadow*.
Pop. Sci. Mo., XXXI. 364.

sound-wave (soun'd'wāv), *n.* A wave of con-
 densation and rarefaction by which sound is
 propagated in an elastic medium, as the air.
 See *sound*⁵ and *wave*.

southwest (south'west'), *adv.* [*ME.* southwest, *n.*] To or from the southwest: as, the ship proceeded southwest; the wind blew southwest.

southwester (south'wes'tēr), *n.* [*ME.* southwest + -er¹.] 1. A southwest wind, gale, or storm.—2. A hat of water-proof material, of which the brim is made very broad behind, so as to protect the neck from rain: usually *southwester*.

We were glad to get a watch below, and put on our thick clothing, boots, and southwesters.
R. H. Dana, Jr., *Before the Mast*, p. 26.

southwesterly (south'wes'tēr-li), *a.* [*ME.* southwest, after *westerly*.] 1. Situated or directed toward the southwest.—2. Coming from the southwest or a point near it: as, a southwesterly wind.

southwesterly (south'wes'tēr-li), *adv.* [*ME.* southwesterly, *a.*] In a southwesterly direction.

The party now headed southwesterly for the Siberian coast.
The American, VII. 168.

southwestern (south'wes'tēr-n), *a.* [*ME.* southwestern, < *AS.* sūth-western: see southwest and western.] 1. Pertaining to or situated in the southwest.—2. In the direction of southwest or nearly so: as, to sail a southwestern course.—3. From the direction of the southwest or nearly so: as, a southwestern wind.

southwestward (south'west'wārd), *a.* and *adv.* [*ME.* southwest + -ward.] Toward the southwest.

southwestwardly (south'west'wārd-li), *adv.* [*ME.* southwestward + -ly².] Southwestward. [Rare.]

soutien (F. pron. sō-tiān'), *n.* [*OF.*, < *soutenir*, sustain: see *sustain*.] In *her.*, a supporter: especially applied to an inanimate object to which the shield is secured: thus, two trees sometimes support the shield by means of its guise.

souvenancet, *n.* [Early mod. E. *souvenance*, < *OF.* *souvenance*, < *souvenir*, remember: see *souvenir*.] Remembrance.

Life will I grant thee for thy vallaunce,
And all thy wronges will wipe out of my souvenance.
Spenser, *F. Q.*, II. viii. 51.

souvenir (sō-vg-nēr'), *n.* [*F.* *souvenir*, a remembrance, < *souvenir*, remember, < *L.* *subvenire*, come up to one's aid, occur to one's mind, < *sub-*, under, + *venire* = *E.* *come*.] That which reminds one, or revives one's recollection, of an event, a person, a place, etc.; a remembrancer; a reminder; a keepsake: as, a *souvenir* of Mount Vernon; a *souvenir* of a marriage or a visit.

Across Steur George's crown, leaving a long, bare streak through his white hair, was the *souvenir* of a Mexican sabbre.
G. W. Cable, *Old Creole Days*, p. 10.
= *Syn.* *Memento*, etc. See *memorial*.

sou'wester (sou'wes'tēr), *n.* A contraction of *southwester*.

sov. An abbreviation of *sovereign*, a coin.

soveraignt, soveraint, a. and *n.* Obsolete spellings of *sovereign*.

sovereign (suv'- or sov'e-rān), *a.* and *n.* [Early mod. E. also *soveraign*, *soveraigne*, *soverain*; < *ME.* *soverain*, *soveraine*, *soverayne*, *soverain*, *sovereyn*, *sovereyne*, < *OF.* *soverain*, *soverain*, *soverain*, later *soverain* = *Pr.* *sobran* = *Sp.* *Pg.* *soberano* = *It.* *sovrano*, *soprano*, < *ML.* *superanus*, supreme, principal, < *L.* *super*, above: see *super-*. For the use as the name for a coin, cf. *ducat*, *real*³, *noble*, etc. The historical pron. is *suv'e-rān*.] I. *a.* 1. Supreme; paramount; commanding; excellent.

Evermore he hadde a *sovereyn* prys.
Chaucer, *Gen. Prolog.* to *C. T.*, l. 67.

A man of *sovereyn* parts he is esteem'd.
Shak., *L. L. L.*, il. 4. 44.

Your leaders in France . . . came to look upon it [the British constitution] with a *sovereyn* contempt.
Burke, *Rev. in France*.

I stood on Brocken's *soveran* height, and saw
Woods crowding upon woods.
Coleridge, *Lines written in an Album*.

Life's *sovereyn* moment is a battle won.
O. W. Holmes, *The Banker's Dinner*.

2. Supreme in power; possessing supreme dominion; not subject to any other; hence, royal; princely.

Whan these messageres hade here greting made,
Than the *soveraynest* seg saide of hem alle.
William of Palerne (E. E. T. S.), l. 4932.

Let her be a principality,
Sovereign to all the creatures on the earth.
Shak., *T. G. of V.*, il. 4. 153.

It was the several States, or, what is the same thing, their people, in their *sovereyn* capacity, who ordained and established the constitution.
Calhoun, *Works*, I. 130.

3. Efficacious in the highest degree; potent: said especially of medicines.

For-thi Ioke thow louye [love] as longe as thow durest,
For is no science vnder sonne so *sovereyn* for the soule.
Piers Plowman (B), x. 206.

And telling me the *sovereyn*st thing on earth
Was parmaceti for an inward bruise.
Shak., *1 Hen. IV.*, l. 3. 57.

Sovereign state, a state possessing sovereign power, or sovereignty. See *sovereignty*, 1 (d).

A State is called a *sovereign State* when this supreme power resides within itself, whether resting in a single individual, or in a number of individuals, or in the whole body of the people.
Cooley, *Const. Lim.* (4th ed.), l.

II. *n.* 1. One who exercises supreme control or dominion; a ruler, governor, chief, or master; one to whom allegiance is due.

Lady and *Sovereyn* of alle other Londea.
Mandeville, *Travels*, p. 1.

If your *Soueraign* be a Knight or Squire, set downe your Dishes couered, and your Cup also.
Babees Book (E. E. T. S.), p. 69.

The *sovereyn* [of Underwald] is the whole county, the sovereignty residing in the general assembly, where all the males of fifteen have entry and suffrage.
J. Adams, *Works*, IV. 316.

Specifically—(a) A husband; a lord and master.

The prestis they gone home agen,
And sche goth to hire *sovereyne*.
Gower, *MS. Ser. Antiq.* 134, f. 44. (*Hallivell*.)

(b) A provost or mayor.

And whanne it drowe to the day of the dede doyng,
That *sovereynes* were somblid, and the schire knyghtis.
Deposition of Rich. II., p. 23. (*Hallivell*.)

(c) A monarch; an emperor or empress; a king or queen.

Sovereign of Egypt, hail!
Shak., *A. and C.*, l. 5. 34.
And when three *sovereyns* died, could scarce be vex'd,
Considering what a gracious prince was next.
Pope, *Epil.* to *Satires*, l. 107.

2. A current English gold coin, the standard of the coinage, worth £1 or 20 shillings (\$4.84), and weighing 123.274 grains troy. The first English coin bearing this name was issued by Henry VII., was current for £1, and weighed 240 grains. Sovereigns continued to be issued till the time of James I. The original sovereign bore the type of a seated figure of the king, Henry VII. George III. revived the issue of the sovereign

current coins. Abbreviated *sov.*—**Sovereign's speech.** See *speech from the throne*, under *speech*. = *Syn.* I. *King*, etc. (see *prince*), *potestate*.

sovereign (suv'- or sov'e-rān), *r. t.* [*ME.* *sovereyn*, *n.*] To rule over as a sovereign; exercise sovereign authority over. [Rare.]

Unless her Majesty do *sovereyn* them presently.
Roger Williams, To Walsingham, August, 1535, quoted in [*Motley's Hist. Netherlands*, I. 333.

sovereigness (suv'- or sov'e-rān-ēs), *n.* [Formerly also *soverainess*; < *sovereyn* + -ess.] A woman who is sovereign; a queen. [Rare.]

Seas Sovereigness [read *soverainess*], Sleep-bringer, Pilgrims guide,
Peace-loving Queen.

Sylvester, tr. of *Du Bartas's Weeks*, l. 4.

sovereignize (suv'- or sov'e-rān-īz), *r. t.* [*ME.* *sovereyn* + -ize.] To exercise supreme authority. [Rare.]

Nimrod was the first that *sovereynized* over men.
Str. T. Herbert, *Travels*, IV. 326.

sovereignly (suv'- or sov'e-rān-li), *adv.* [Early mod. E. also *soveraignly*; < *ME.* *sovereynelyche*; < *sovereyn* + -ly².] In a sovereign manner or degree. (a) So as to exceed all others; surpassingly; exceedingly; chiefly; especially.

But *soveraignly* dame Perletole shrighte.
Chaucer, *Nun's Priest's Tale*, l. 542.

(b) Potently; effectually; efficaciously. [Rare.]
Mrs. Bisket. How do the Waters agree with your Ladyship?
Mrs. Woody, *Oh, Sovereignty*.

Shadwell, *Epsom Wells*, i.

(c) With supremacy; supremely; as a sovereign. The government resides *sovereignly* in the communities, where everything is decided by the plurality of votes.
J. Adams, *Works*, IV. 323.

sovereignty (suv'- or sov'e-rān-ti), *n.*; pl. *sovereynties* (-tiz). [Early mod. E. also *soveraignty*, *soverayntie*, etc.; < *ME.* *soverayntye*, *sovereyn-tee*, *soverainetee*, *soverointe*, < *OF.* *soverainie*, *soverainté*, *F.* *soverainté* = *It.* *soveranità* (cf. *Sp.* *Pg.* *soberania*), < *ML.* as if **superanità*(-s), < *superanus*, supreme, sovereign: see *sovereign*.] I. The state or character of being sovereign or a sovereign.

So sitting high in dreaded *soverayntie*,
Those two straoge knights were to hir presence brought.
Spenser, *F. Q.*, v. ix. 34.

I think he'll be to Rome
As is the osprey to the fish, who takes it
By *sovereynty* of nature. *Shak.*, *Cor.*, iv. 7. 35.

Specifically—(a) Mastery; control; predominance.

Women desiren to have *sovereynetye*,
As wel over hir husband as hir love.
Chaucer, *Wife of Bath's Tale*, l. 182.

I was born to command,
Train'd up in *sovereynty*.
Fletcher (and another?), *Prophetess*, iv. 3.

(b) The rule or sway of a monarch; royal or imperial power. *Jovius Augustus* . . . let the true nature of his power be seen, and, first among the Cæsars, arrayed himself with the outward pomp of *sovereynty*.

E. A. Freeman, *Venice*, p. 133.

(c) Supremacy or dominion; hegemony: applied to the relation between a powerful state and other states or regions: as, Rome's *sovereynty* over the East; Great Britain holds the *sovereynty* of the seas. (d) The supreme, absolute, uncontrollable power by which any state is governed (*Cooley*); the political authority, whether vested in a single individual or in a number of individuals, to order and direct what is to be done by each individual in relation to the end and object of the state (*Halleck*). It is essential to the modern conception of sovereignty that it should be exclusive of any other human superior authority, should be welded by a determinate person or organization of persons, and should be on the whole habitually obeyed by the bulk of the community. Thus, in the United States, sovereignty is vested in the body of adult male citizens. The claim that each State—that is, the adult male free citizens of each State—possessed a separate sovereignty was one of the elements of controversy involved in the civil war.

I state Austin's doctrine of *Sovereignty* in another way, more popularly, though without, I think, any substantial inaccuracy. It is as follows: There is, in every independent political community—that is, in every political community not in the habit of obedience to a superior above itself—some single person or some combination of persons which has the power of compelling the other members of the community to do exactly as it pleases. This single person or group—this individual or this collegiate Sovereign . . .—may be found in every independent political community as certainly as the centre of gravity in a mass of matter. If the community be violently or voluntarily divided into a number of separate fragments, then, as soon as each fragment has settled down (perhaps after an interval of anarchy) into a state of equilibrium, the Sovereign will exist and with proper care will be discoverable in each of the now independent portions. The *Sovereignty* over the North American Colonies of Great Britain had its seat in one place before they became the United States, in another place afterwards; but in both cases there was a discoverable Sovereign somewhere. This Sovereign, this person or combination of persons, universally occurring in all independent political communities, has in all such communities one characteristic common to all the shapes *Sovereignty* may take, the possession of irresistible force, not necessarily exerted, but capable of

leaves, is *S. asper*. A much more showy species is *S. arvensis*, with larger and brighter heads. These are all naturalized in the United States, the last less abundantly. The name has been extended to species of the allied genus *Lactuca*.

soy (soi), *n.* [*Al-soi soija*; = *F. soy*, *soi* = *G. Sw. Dau. soja* (NL. *soja, soya*); < *Jap. shi-yu*, Chinese *shu-yu*, soy.] 1. A kind of sauce prepared in the East from the soy-bean (see def. 2). It is eaten with fish, cold meat, etc. There are two or three qualities of soy, but the Japanese soy is reckoned the best.

I have been told that soy is made with a fishy composition, and it seems most likely by the taste; tho' a Gentleman of my Acquaintance who was very intimate with one that sailed often from Tonquin to Japan, from whence true Soy comes, told me that it was made only with Wheat and a sort of Beans mixt with Water and Salt.

From travellers accustom'd from a boy To eat their salmon, at the least, with soy. *Byron, Beppo*, vii.

2. The soy-bean or pea, *Glycine Soja* (*Soja hispida*, etc.). It is an annual leguminous plant with stout nearly erect or somewhat climbing stems covered with rusty hairs, bearing trifoliate leaves and from their axilla two or three pods $1\frac{1}{2}$ or 2 inches long. The seeds are made into the above sauce and variously used in cookery; an oil is also expressed from them, and the residue is extensively used in China for feeding cattle and as a fertilizer. The plant is native from northern India to Japan. The cultivated plant differs somewhat from the wild, and by some authors is distinguished as *Glycine hispida*. Also *Sakuea bean*.

soya (soi'ä), *n.* [*Hind. soyä, soä*, fennel.] Dill. Also *sowa*.

soy-bean (soi'bän), *n.* See *soy*, 2.

soylet. An obsolete spelling of *soil*¹, *soil*², *soil*³.

Soyuida (soi'mi-dä), *n.* [NL. (Adrien de Jussieu, 1830), from the Telugu name.] A genus of polypetalous plants, of the order *Meliaceae* and tribe *Suicetieae*. It is characterized by flowers with five petals, united stamens forming a short tenlobed tube or cup, the lobes two-toothed, with sessile anthers between the teeth, and an ovoid five-celled ovary which ripens into a woody septifragal capsule with compressed and winged seeds destitute of albumen. The only species, *S. febrifuga*, is a native of the East Indies, where it is known as *ruhan* (or *rohun*) and *redurood*. (See also *ruhun-bark* (under *bark*?) and *juribati*.) It is a tall tree with bitter bark and hard wood, bearing abruptly pinnate leaves with obtuse opposite leaflets, and flowers in axillary and terminal panicles.

soy-pea (soi'pë), *n.* See *soy*, 2.

Sozobranchia (sô-zô-brang'ki-ä), *n. pl.* [NL. < *Gr. sózeiv*, save, keep, + *NL. branchia*, gills; see *branchiae*.] A group of urodele amphibians which do not lose the gills or tail. See *Perennibranchiata*.

sozobranchiate (sô-zô-brang'ki-ät), *a.* [NL. *sozobranchiatus*, < *Gr. sózeiv*, save, keep, + *NL. branchiatus*; see *branchiate*.] Preserving the gills, as a urodele amphibian; perennibranchiate.

Sozura (sô-zü'rä), *n. pl.* [NL., neut. pl. of *sozurus*; see *sozurous*.] Urodele (or tailed) gill-less batrachians, or those batrachians which lose the gills, but not the tail, when adult. They are a higher group than the *Sozobranchia*, both being together contrasted with the *Anura* or tailless batrachians.

sozurous (sô-zü'rüs), *a.* [NL. *sozurus*, < *Gr. sózeiv*, save, keep, + *óvpa*, tail.] Retaining the tail; pertaining to the *Sozura*, or having their characters.

sozzle (soz'l), *v. t.*; pret. and pp. *sozzled*, ppr. *sozzling*. [A var. of *sozzle*.] 1. To mingle confusedly. [Prov. Eng.]—2. To spill or wet through carelessness.—3. To splash. [U. S.]

A sandpiper glided along the shore; she ran after it, but could not catch it; she sat down and sozzled her feet in the foam. *S. Judä, Margaret*, p. 8.

sozzly (soz'li), *n.* [*sozzle*, *v.*] A state of sloppy disorder. [U. S.]

The woman, who in despite of poverty and every discouragement had always hated, to the very roots of her hair, anything like what she called a *sozzle*—who had always been screwed up and sharp set to hard work. *Mrs. Whitney, Leslie Goldthwaite*, vii.

sozzly (soz'li), *a.* [*sozzle* + *-y*.] Sloppy; dragged; mentally flabby; shiftless. [New Eng.]

Folks grows helpleser all the time, and the help grows *sozzlier*; and it comes to sauciness . . . and changes. *Mrs. Whitney, The Other Girls*, xlii.

Sp. An abbreviation of *Spanish*.

sp. An abbreviation: (a) in *phar.*, of *spiritus, spirit*; (b) in *bot.*, of *species, specimen*; (c) in *zool.*, of *species* only: when two or more species are meant, *spp.* is used.

s. p. An abbreviation of *sine prole*, without issue.

spa (spä or spä), *n.* [Formerly also *spaw*; < *Spa*, or *Spaa*, in the eastern part of Belgium, where there are mineral springs.] A mineral spring, or the locality in which such springs exist.

Past cure of physis, *spaw*, or any diet. *Beau. and Fl., Scornful Lady*, iii. 2.

Never knew her better; . . . she has been as healthy as the German *Spä*. *Sheridan, Rivals*, ii. 1.

spaad† (späd), *n.* [*D. spaath* = *F. spath* = *Sp. espato* = *Pg. espatho* = *It. spato*, < *MHG. spät*, *G. spat, spath*, friable stone, splinter, spar; origin unknown. Cf. *feldspath*.] A kind of mineral; spar.

English talc, of which the coarser sort is called *plais-ter*, the finer, *spaad*, earth-flax, or salamander's hair. *Woodward. (Johnson)*

space (späs), *n.* [*ME. space*, < *OF. (and F.) espace* = *Pr. espaci* = *Sp. espacio* = *Pg. espaço* = *It. spazio*, < *L. spatium*, room, space, distance, interval, a public walk, etc., lit. "that which is drawn out," < *√ spa*, draw out; cf. *Gr. spät*, draw, draw out, *Skt. √ sphā*, fatten. Cf. *span*¹, *spade*¹.] 1. The general receptacle of things; room, (a) as a character of the universe, (b) as a cognition or psychological phenomenon, (c) as a mathematical system. That which is real about space is that the manifoldness of the universe is subject to certain general laws or limitations. In this respect it is like any other uniformity of nature; it is peculiar only in the peculiar way in which we view it—namely, in this, that instead of thinking it, as we do other laws, as abstract and general, we seem to see it, we individualize it and its parts. This peculiarity does not, however, constitute the cognition of space as entirely *vis generis*, for there is a tendency to individualize other laws. The conception of space is formed, or at least connected with objects, by means of the so-called local signs, by which the excitation of one nerve-terminal is distinguishable from a similar excitation of another, and which are analogous to the signs by which we distinguish present experiences from memories, imaginations, and expectations. These local signs are also the origin of our idea of individuality; so that it is not strange that this mode of being becomes attributed not merely to moving objects, but to the space and time that constitute the law of motion. The celebrated doctrine of Kant was that space is a form of pure intuition—that is, an idea imported by the mind into cognition, and corresponding to nothing in the things in themselves (though he did not hold that special spatial relations were altogether illusory)—just as color is a quality of sensation which in its generality corresponds to nothing in the object, though differences of color correspond to differences in objects. That this intuition of space is individual, not general, and that no outward intuition is possible except under this form, were points also insisted upon by Kant. At present there are, broadly speaking, two views of space-perception. One is the great doctrine of Berkeley—worked out in different directions by J. S. Mill, Helmholtz, Lotze, Wundt, and others—that the idea of space is evoked under the combined influence of retinal sensations and of muscular sensations of motion, in a manner analogous to that by which the laws of dynamics have been evolved from experience. This is the theory which, under one modification or another, is held by almost all modern scientific psychologists. Some competent writers, however, oppose this, holding that "all our sensations are positively and inexplicably extensive wholes." This opinion conflicts with the usual one only in so far as it clings to the inexplicability and irrationality of space. The vulgar conception of space as a sort of thing or substance of a different category from material things, through which the latter move without sensible resistance, is acceptable to mathematicians, who find that such a construction lends itself remarkably to their diagrammatic reasoning. For the geometer, space is primarily a system of points having the following properties: (1) It is continuous. See *continuity*, 2. (2) It is unlimited, whether the part at a finite distance from a given point be limited or not. (3) It has three dimensions—that is, a set of three numbers varying continuously may be placed in continuous one-to-one correspondence with the points of space. By a continuous correspondence is meant one in which a continuous variation in one member will correspond in every case to a continuous variation in the other. (4) All the points of space have perfectly similar spatial relations. (5) It is possible for a rigid body to move in space, and such a body is fixed by the fixation of three points, but not fewer. (6) Any figure may be magnified while preserving the proportionality of all its lines. Geometers often imagine these properties to be modified. In particular, they use the hypothesis of a space of four or more dimensions. They also often suppose the principle of similar figures, or, what is the same thing, the doctrine of parallels, to be false, thus producing what is known as the *non-Euclidean geometry*. This is of various kinds.

Now to pure *space* lifts her ecstatic stare, Now, running round the circle, finds it square. *Pope, Dunciad*, iv. 33.

space

Stars countless, each in his appointed place, Fast anchor'd in the deep abyss of space. *Cowper, Retirement*, l. 84.

2. The interval between any two or more objects, or between terminal points; distance; extent, as of surface: as, the *space* of a mile.

And so he hym chased as faste as his horse myght hym bere, till he hadde lefte his felowes be-hynde the *space* of an arblast. *Melton (E. E. T. S.)*, ii. 194.

There shall be a *space* between you and it [the ark] about two thousand cubits by measure. *Josh. iii. 4.*

I warrant he hath a thousand of these letters, writ with blank *space* for different names. *Shak., M. W. of W.*, ii. 1. 77.

Four gray walls, and four gray towers, Overlook a *space* of flowers. *Tennyson, Lady of Shalott*, l.

3. The interval between two points of time; quantity of time; duration.

There was silence in heaven about the *space* of half an hour. *Rev. viii. 1.*

Mean *space* I think to goe downe into Kente. *Cushman, quoted in Bradford's Plymouth Plantation*, p. 37.

Nine times the *space* that measurea day and night To mortal men he with his horrid crew Lay vanquish'd, rolling in the fiery gulf. *Milton, P. L.*, l. 50.

4. A short time; a while.

And, sith for me ys fight, to me this grace Both yield, to stay your deadly stryfe a *space*. *Spenser, F. Q.*, II. vi. 33.

And Arthur and his knight hood for a *space* Were all one will. *Tennyson, Coming of Arthur*.

5. Hence, time in which to do something; respite; opportunity; leisure.

Avyseth yow on it, when ys han *space*, And of som goodely answer yow purchase. *Chaucer, Troilus*, ii. 1124.

And I gave her *space* to repent. *Rev. ii. 21.*

6†. A path; course (?).

This like monk leet olde thynges pace, And heeld after the newe world the *space*. *Chaucer, Gen. Prool. to C. T.*, l. 176.

7. In *printing*, one of the blank types which separate the words in print. The thickness most used are one third, one fourth, and one fifth of the square body of the text-type. Hair-spaces, still thinner, are also made. Spaces as thick as one half the square body and all thicker are known as *quadrats*.

8. In *musical notation*, one of the degrees between the lines of the staff. In the usual staff there are four spaces within the staff, but in the Gregorian staff there are only three. The name and significance of a space depend on the clef and the key-signature. See *staff*.

9. In *ornith.*, an unfeathered place on the skin between pteryle; an apterium. *Coues, Key to N. A. Birds*, p. 87.—**Absolute, algebraic, basal space.** See the adjectives.—**Added space.** Same as *leger space*.—**Barycentric coordinates in space.** Same as *tetrahedral coordinates* (which see, under *coordinate*).—**Berth and space.** See *berth*².—**Cell-spaces,** the spaces in the ground-substance of connective tissue which inclose the connective-tissue corpuscles.—**Chyle-spaces,** the central lymphatic cavities of the intestinal villi.—**Complemental space of pleura,** the portion of the pleural cavity immediately above the insertion of the diaphragm, which is not filled by air in ordinary breathing.—**Dangerous space (mitil.)** the zone before and behind the object fired at covered by the trajectory. See *battle-range*, under *battle*.—**Dead space,** in *fort.* Same as *dead angle* (which see, under *angle*);—**Deep cardiac space,** the projection on the surface of the chest of the lung-covered portions of the heart. It borders on each side the superficial cardiac space.—**Elliptic, Euclidean, extramundane, gastrovascular space.** See the adjectives.—**Fontana's spaces.** Same as *canal of Fontana* (which see, under *canal*).—**Geometry of space.** See *geometry*.—**Half-space or foot-space,** in a staircase, a resting-place or broad space between two flights of steps.—**Haversian spaces.** See *Haversian canal*, under *canal*.—**Hemal, hyperbolic, intercellular, interdental space.** See the adjectives.—**Hypoprosthetic space,** the space lying between the rectum and the prostate. *Buchanan*.—**Interlamellar spaces,** the spaces between the lamellae of the cornea.—**Interosseous space,** the space between parallel long bones.—**Interpeduncular space,** the triangular space at the base of the brain, between the crura cerebri.—**Interpleural, ivory, leger space.** See the adjectives.—**Lenticular space.** See *lenticular mark*, under *lenticular*.—**Linear, local, maxillopharyngeal, meant, middle, parabolic, parasinoidal, perforated, pericocular, popliteal, etc., space.** See the adjectives.—**Polar coordinates in space.** See *coordinate*.—**Quarter-space,** a landing or interval at an angle-turn of a stair.—**Retropertoneal space.** See *retropertoneal*.—**Room and space.** See *room*.—**Superficial cardiac space,** the area on the surface of the chest over that part of the heart which is not covered by the lung. It is represented with approximate accuracy by a right-angled triangle bounded by the midventral line, a horizontal line through the point of the apex heart, and a line drawn through that point and the intersection of the midventral line with a horizontal line through the fourth costovertebral articulation.

space (späs), *v.*; pret. and pp. *spaced*, ppr. *spacing*. [*space*, *n.* Cf. *spatiate*, *expatiate*.] **I.† intrans.** To move at large; expatiate. [Rare.]

But she, as Fævee are wont, in privie place Did spend her dayes, and lov'd in foresta wyld to *space*. *Spenser, F. Q.*, IV. ii. 44.

II. trans. 1. To set at intervals; put a space between; specifically, in *printing*, to arrange the spaces and intervals in or between so that there may be no obvious disproportion: as, to *space* a paragraph; to *space* words, lines, or letters.

The porch, too, is open, and consists of columns spaced equidistantly over its floor, without either the bracketing arrangements of the southern or the domical forms of the northern styles. *J. Ferguson*, *Hist. Indian Arch.*, p. 389.

2. To divide into spaces.

The artificer is ordered "to set up the frames, and to space out the rooms, that the Nine Worthies may be so instaled as best to please the eye."

Strutt, *Sports and Pastimes*, p. 27.

3. To measure by paces. *Halliwel*. [*Prov. Eng.*]—**Spaced braid**, a white cotton braid used for the trimming of washable garments. The name is derived from the pattern, which exhibits flat and simple spaces between raised edging.—**To space out**, in *printing*, to put more spaces between the words or lines of.

space-box (spās'boks), *n.* In *printing*, a petty case of wood or millboard, in six or eight divisions, holding the spaces needed for corrections on stone. Sometimes called *space-charge* or *space-paper* in England.

space-curvature (spās'kēr'vā-tūr), *n.* A curvature of three-dimensional space in a space of four dimensions.

spaceful (spās'fūl), *a.* [*space* + *-ful*.] Wide; extensive. *Sandys*.

space-homology (spās'hō-mol'ō-jī), *n.* Geometrical homology in three dimensions.

spaceless (spās'les), *a.* [*space* + *-less*.] Descriptive of space. *Coleridge*.

space-line (spās'lin), *n.* In *printing*, same as *lead*², 3.

space-mark (spās'mārk), *n.* See *proof-reading*.

space-perception (spās'pēr-sep'shōn), *n.* The perception of space—that is, of bodies as extended or moving.

spacer (spā'sēr), *n.* 1. A device used in cable telegraphy for reversing the current at proper intervals, thus increasing the speed of transmission: also used for a somewhat similar purpose on land-lines.—2. In a typewriter, a key, and the mechanism connected with it, by which spaces are made between words.

space-relation (spās'rē-lā'shōn), *n.* A spatial relation, such as that two points lie within a tetrahedron of which four others are the vertices, and the like.

space-rule (spās'rōl), *n.* In *printing*, a hair-line of type-metal, type-high and about one thirty-sixth of an inch thick. Such rules are made of many lengths, from one twelfth of an inch to half an inch. They are used for cross-lines in table-work.

space-writing (spās'rī'ting), *n.* In newspaper work, the system of payment to reporters or other writers in proportion to the space allowed to their articles in print; also, writing or work under this system.

The standard of literary excellence in the news columns of the New York press has also been lowered by the general substitution of *space writing* for the work of salaried reporters, as well as by the influence already referred to. *Westminster Rev.*, CXXVIII, 858.

spacial, spaciality, etc. See *spatial*, etc.

spacing (spā'sing), *n.* [Verbal *n.* of *space*, *v.*] 1. The making of spaces. (*a*) The allowing and gaging of intervals between words in setting type, type-writing, or the like.

The change in the *spacing* being effected by a small cam at the side of the carriage. *Sci. Amer.*, N. S., LV, 24.

(*b*) In *art*, *mach.*, etc., the division of any surface into special parts.

In the spaces of decoration, as in all else, the Japanese artist studiously avoids uniformity or repetition of exact *spacing*. *Encyc. Brit.*, XIII, 591.

2. A space thus made.

Each tongue upon discs is cut slantingly across at regular *spacings* by steam passages analogous to the guide-plate vents of water turbines. *The Engineer*, LXIX, 225.

3. Spaces collectively.

spacing-lace (spā'sing-lās), *n.* Same as *seaming-lace*.

spacious (spā'shus), *a.* [Formerly also *spatious*; < *F. spacieux* = *Sp. espacioso* = *Pg. espaçoso* = *It. spazioso*, < *L. spatiosus*, roomy, ample, < *spatium*, room, space: see *space*.] 1. Inclosing an extended space; of great extent; wide-extended.

As though no other place, on Britain's spacious earth, Were worthy of his end, but where he had his birth. *Drayton*, *Polyolbion*, l. 189.

The spacious firmament on high, With all the blue ethereal sky. *Addison*, *Ode*, *Spectator*, No. 465.

2. Having large or ample room; not contracted or narrow; roomy.

On the North side of the Church is a *spacious* Court, which I could not conjecture to be less than one hundred and fifty yards long, and eighty or one hundred broad. *Maudrell*, *Alleppe to Jerusalem*, p. 126.

Those melodious bursts that fill The spacious tunes of great Elizabeth. *Tennyson*, *Fair Women*.

3†. Extensive; on a large scale; abounding; said of persons.

Is't possible that such a spacious villain Should live, and not be plagued?

B. Jonson, *Every Man out of his Humour*, l. 1.

spaciously (spā'shus-ly), *adv.* In a spacious manner; widely; extensively; roomily.

spaciousness (spā'shus-nes), *n.* The quality of being spacious; largeness of extent; extensiveness; roominess.

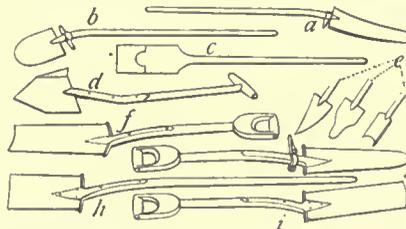

spadassin (spād'a-sin), *n.* [*F. spadassin*, < *It. spadaccino*, swordman, < *spada*, sword: see *spade*¹, *spathe*.] A swordsman; especially, a person devoted to fencing and presumed to be expert with the sword; hence, less properly, a bravo.

Bully swordsmen, *spadassins* of that party, go swag-gering; or indeed they can be had for a trifle of money. *Carlyle*. (*Imp. Dict.*)

spaddle (spād'l), *n.* [Dim. of *spade*¹. Cf. *pad-dle*².] A little spade; a spud. [Obsolete or provincial.]

Others destroy moles with a *spaddle*, waiting in the mornings and evenings for them. *Mortimer*, *Husbandry*.

spade¹ (spād), *n.* [*ME. spade*, < *AS. spadu*, *spædu*, also rarely *spada*, *spad*, in an early gloss *spadi*, = *OS. spado* = *OFries. spade* = *MD. spade*, *spæye*, *D. spade*, *spa* = *MLG. LG. spade* = *OHG. *spato*, *MHG. *spate*, *G. spate*, *spaten* = *Icel. spathi* = *Sw. Dan. spade*, a spade (cf. *MD. spade*, a sword, = *OF. espee*, *F. épée*, a sword, = *Pr. Sp. Pg. espada* = *It. spada*, a sword: see *spade*²), < *L. spatha*, < *Gr. σπάθη*, a broad blade of wood or metal, a spatula, the spathe or sheath of a flower, prob. < *σπᾶν*, draw out. Cf. *span*¹, *space*. From the same source are *ult. spade*², *spaddle*, *paddle*², *spadille*, *spadron*, *epaulet*, *espallier*, *spall*², *spatule*, *spatula*.] 1. A tool for digging and cutting the ground, having a rather thick iron blade, usually flat, so formed that its terminal edge (either straight

Spades.

a, Irish spade with foot-piece; *b*, Greek spade with foot-piece; *c*, Japanese spade; *d*, spade for cutting turf; *e*, ditching-spades; *f*, post-spade, for digging post-holes; *g*, polished drain-spade with foot-piece; *h*, long-handled garden spade; *i*, ditching-spade.

or curved) may be pressed into the ground or other resisting substance with one foot, and a handle, usually with a crosspiece at the top, to be grasped by both hands. A spade differs from a two-handed shovel chiefly in the form and thickness of the blade.

The women heo spade and schouele and ner the place wende, *Doepe heo gonne to defuc ther as the smoke out wende.*

Holy Rood (E. E. T. S.), p. 43.

Strength may wield the pond'rons spade, May turn the clod, and wheel the compost home. *Cowper*, *Task*, III, 636.

2. A tool of soft iron used with diamond-powder by cameo-cutters in finishing.—3. In *whaling*, a large chisel-like implement used on blubber or bone in cutting-in. See phrases following.—4. In *herpet.*, a formation on the foot of some toads with which they dig. See *spade-foot*.

—**Boat-spade**, an instrument, carried under the stern-sheets of a whale-boat, resembling a very large chisel, having a wide blade, and a handle six or eight feet long. This instrument was employed to stop a running whale by the process known as *hamstringing* or *spading flukes* (cutting the cords about the small) which required much experience and dexterity, and was a very hazardous undertaking; it has been done away with by the introduction of bomb-lances. The boat-spade is still carried in case of emergency.—**Bone-spade**, a cutting-spade, with a long thin shank, used by whalers for cutting out the throat-bone of a baleen-whale.—**Cutting-spade**, a sharp instrument like a very large narrow chisel fixed to a pole ten or more feet in length, used for cutting the blubber from a whale.—**Half-round spade**, a long-handled spade with a blade curved, or rolled up on the sides, resembling a carpenter's gouge, and used for cutting holes in the head of the blubber when boarding.—**Shoe-**

ing of a spade, in *her.*, same as *spade-iron*, 2 (*b*).—**To call a spade a spade**, to call things by their proper names, even though these may seem homely or coarse; speak plainly and without mincing matters. Various unnecessary conjectures have been made as to the supposed occult origin of this phrase; but it means what it says—to call a simple thing by its simple name, without circumlocution or affected elegance.

Chesham does not like to call a *spade a spade*. He calls it a horticultural utensil. *Thackeray*, *Phillip*, XIII.

spade¹ (spād), *v. t.*; pret. and pp. *spaded*, ppr. *spading*. [*cf. spade*¹, *n.*] 1. To dig or cut with a spade; dig up (the ground) by means of a spade.—2. In *whaling*, to use the boat-spade on, as a whale; cut the tendons of the flukes of; hamstring.

spade² (spād), *n.* [Prob. < *Sp. Pg. espada*, spade at cards, usually in pl. *espadas*, spades (sing. *espada*, the ace of spades); appar. a particular use of *espada*, a sword (< *L. spatha*, < *Gr. σπάθη*, a broadsword), these cards having, it is said, among the Spaniards, the figure of a sword; according to others the figure was orig. intended, as in the cards now in use, for the head of a pike, in which case the name *spade* is prob. an orig. E. designation, the head of a pike sufficiently resembling the pointed spade: see *spade*¹.] A playing-card of one of the two black suits of a pack, the other being clubs. "Let *Spades* be trumps!" she said, and trumps they were. *Pope*, *R. of the L.*, III, 46.

spait, *n.* See *spate*.

spaine (spāv), *v. t.* A dialectal variant of *spay*.

spake (spāk), *n.* A Scotch form of *spoke*.

Your cage shall be made o' the beaten gold,
And the spakes o' ivory.
May Colvin (Allingham's *Ballad-book*, p. 247).

spake. An archaic or poetic preterit of *spak*.

spake, *a.* [ME., also *spak*, *spac*, < Icel. *spakr*, quiet, gentle, wise, = Sw. *spak* = Dan. *spag*, quiet, gentle, tame.] 1. Quiet; tame.

Hyt sate by hym so spake.
Rob. of Brunne, *Handlyng Synne*, I, 7496.

2. Ready; prompt.

Spac to uvel and alaw to god.
Old Eng. Hom. (ed. Morris), I, 306.

spakely, *adv.* [ME., also *spakly*, *spakli*, *spakli*; < *spake* + *-ly*.] Quickly; speedily; nimbly. *Spek* to me *spakli* or I spille sone.
William of Palerne (E. E. T. S.), I, 1535.

One semblable to the Samaritan and some-led to Piers the Plowman,
Barfote on an asso bakke boteles cam prykye,
Wyth-onte aþores other aþere *spakliche* he loked.
Piers Plowman (B), xviii, 12.

The blode aþrente owtte, and aþrede as the horac aþryngez,
And he aþroulez fulle *spakely*, bot aþekes he no more.
Morte Arthure (E. E. T. S.), I, 2063.

spake-net (spāk'net), *n.* [< *spake* + *net*.] A net for catching crabs. *Halliwell*.

Spalacidae (spā-las'i-dē), *n. pl.* [NL., < *Spalax* (-ac-) + *-idae*.] A family of myomorphic rodents, typified by the genus *Spalax*; the mole-rats proper, having small or rudimentary eyes and ears, short tail and limbs, and fossorial fore feet and claws: divided into two subfamilies, *Spalacinae* and *Bathyerginae*. Also *Aspalacidae*, and formerly *Georychidae*. See cuts under *Bathyergus*, *mole-rat*, and *Rhizomys*.

Spalacinae (spal-a-si'nē), *n. pl.* [NL., < *Spalax* (-ac-) + *-inae*.] A subfamily of *Spalacidae*, including the typical mole-rats, in which the mandibular angle is in relation with the socket of the lower incisor. See *Spalax*. Also *Aspalacinae*.

spalacine (spal'a-sin), *a.* Of or pertaining to the *Spalacidae* or *Spalacinae*.

Spalacopodidae (spal'a-kō-pod'i-dē), *n. pl.* [NL., < *Spalacopus* (-pod-) + *-idae*.] A family of hystricomorphic rodents, named by Lilljeborg (1866) from the genus *Spalacopus*. It is inexactly equivalent to the *Octodontidae* of authors, but includes the prehensile-tailed porcupine (*Cercolabinae*). It was divided by Gill (1872) into four subfamilies, *Octodontinae*, *Ctenodactylinae*, *Echimyinae* (*Echinomyinae*), and *Cercolabinae*. See *Octodontidae*.

Spalacopus (spāl-lak'ō-pus), *n.* [NL. (Wagler, 1832), < Gr. *σπάλαξ* (*σπαλακ*-), a mole, + *πούς* = E. *foot*.] The name-giving genus of *Spalacopodidae*, now a member of the family *Octodontidae* and subfamily *Octodontinae*. The ears are rudimentary, the tail is short, and the fore claws are shorter than their digits. The skull and teeth resemble those of *Schizodon*. There are two South American species, of fossorial habits, constructing extensive subterranean burrows in which they live. They have been called *poëphagones*, from a synonymous genus *Poëphagomys*.

Spalax (spā'laks), *n.* [NL. (Güldenstädt), < Gr. *σπάλαξ*, also *σπάλαξ* and *ἀσπάλαξ*, a mole.] The typical genus of mole-rats, subfamily *Spalacinae*, having the eyes rudimentary and covered with skin. It contains *S. typhlus*, the alpeze or blind mole-rat of Europe, the most completely mole-like of the rodents in general appearance, habits, and adaptive modifications of structure. Also *Aspalax*. See cut under *mole-rat*.

spald (spāld), *v.* [Also dial. *spaud*; < ME. *spalden*, *spawden*, < MD. *spalden* = MLG. *spalden*, *spolden* = OHG. *spaltan*, MHG. G. *spalten* (> Dan. *spalte*), split, cleave; akin to *speld*, *spell*; cf. *spall*, *spale*.] Hence *spalt*. I. *trans.* To splinter; chip.

Be thane aperia whare sprongene, *spaldyd* chippya.
Morte Arthure (E. E. T. S.), I, 3700.

II. *intrans.* To founder, as a ship. [Prov. Eng., in form *spaud*.]

spald² (spāld), *n.* [Also (Sc.) *spauld*, *spawld*; < ME. *spalde*, *spawde*; a var. of *spall*²: see *spall*².] The shoulder.

Ly stille therin now and roate,
I kepe nothyng of the cooste
Ne noight of the *spalde*.
Perceval, I, 796. (Halliwell.)

The bul . . . lenand hte *spald* to the stok of ane tre.
Gavin Douglas, *Æneid*, xli, 410.

spalder (spāl'dēr), *n.* [< *spald* + *-er*.] In *stone-working*, a workman who spalls or scales off small flakes by the use of a heavy ax-shaped hammer, or muckle-hammer.

spalding-knife (spāl'ding-nif), *n.* A knife for splitting codfish. *E. H. Knight*.

spale (spāl), *v. t.*; pret. and pp. *spaled*, ppr. *spaling*. [A var. of *spall*², split, etc.: see *spall*².] To break up.

spale (spāl), *n.* [Also *spail*; < ME. *spale*; cf. Icel. *spölr* (*spal*-), a rail, bar, short piece, bit; in part a var. of *speal*¹, *spell*⁴, in part appar. due to *spale*¹, *v.*: see *spell*⁴, and cf. *spall*¹.] 1. A chip or splinter of wood. [Old Eng. and Scotch.]— 2. In *ship-building*, one of a number of cross-bands fastened temporarily to the frames to keep them in place until properly secured. Also called *spaling*.

spale² (spāl), *v. t.* [Also *spail*; perhaps a particular use of *spale*¹.] In *mining*, to inflict a

fine upon for breach of some rule of the mine. *Weale*.

spall¹ (spál), *v.* [Also *spawl*; a later form of *spald*¹, in part due to *spall*¹, *n.*] **I. trans.** 1. To split; splinter; chip; specifically, in *mining*, to chip or break up roughly, as ore, preparatory to sorting the material.—2. [*spall*¹, *n.*] To keep (the frames of a ship) at their proper distance apart.

II. intrans. To splinter; chip; give off spalls. **spall**¹ (spál), *n.* [Also *spawl*; < ME. *spalle*; a var. of *spell*⁴, *spcal*¹, etc., in part due to *spall*¹, *v.*: see *spell*⁴, and cf. *spald*¹, *spale*¹.] A chip or splinter thrown off, as in chopping or hewing; now specifically, in *masonry*, a piece of stone chipped off by a blow of a hammer or mallet.

spall², **spawl**³ (spál), *n.* [Also *spaul*, and formerly *spald*, *spauld*; < ME. **spawle*, *spalde*, *spawde*, < OF. *espaulde*, **espaulde*, F. *épaule* = Sp. Pg. *espaldá* = It. *spalla*, the shoulder, < L. *spatula*, a broad blade: see *spatula*. Cf. *epaulet*.] The shoulder. [Obsolete or Scotch.]

Their mightie strokes their haberjeous diamayld,
And naked made each others manly *spalles*.

Spenser, F. Q., II. vl. 29.

spallier (spal'yér), *n.* [Also *spaliard*; cf. *spadiard*.] A laborer in tin-works. *Halliwel*.

spalling-floor (spal'ing-flór), *n.* A clear space on the ground, a low platform, or something similar, on which ores are spalled.

spalling-hammer (spá'ling-ham'ér), *n.* A heavy ax-like hammer with a chisel-edge, used for rough-dressing stone by chipping off small flakes; in *mining*, any hammer with which spalling is done.

spalpeen (spal'pēn), *n.* [*Ir. spailpín*, a mean fellow, rascal, stroller (= Gael. *spailpean*, a mean fellow, a fop), < *spailp*, a beau, also pride, self-conceit, = Gael. *spailp*, pride, self-conceit; cf. *spailp*, strut, walk affectedly.] A mean fellow; a rascal: a term of contempt, or of contemptuous pity, for a man or boy. [Irish.]

The *spalpeen*¹ turned into a bucken that would be a
squireen, but can't. *Miss Edgeworth*, *Love and Law*, I. 4.

spalt¹ (spált), *v.* [An altered form of *spald*¹, prob. due to a pp. *spalt*. Cf. *spalt*².] To split off, as large splinters from a piece of timber in working it. [Prov. Eng.]

spalt² (spált), *a.* [Appar. < *spalt*¹, perhaps through the pp. *spalt*.] 1†. Brittle; liable to break or split.

Of all oaks growing in England, the parke oke is the softest,
and far more *spalt* and briclike than the hedge oke.
Harrison, *Descrip. of Eng.*, II. 22 (Hollinshed's *Chron.*, I.).

2. Frail; clumsy; heedless; pert. *Halliwel*. [Prov. Eng.]

spalt³ (spált), *n.* [*G. spalt*-(stein), *spalt*, lit. 'splinter-stone,' < *spalten*, split (see *spalt*¹), + *stein*, stone.] A whitish scaly mineral, used to promote the fusion of metals.

span¹ (span), *v.*; pret. and pp. *spanned*, ppr. *spanning*. [*ME. spannen*, < *AS. spannan*, *sponnan* (pret. *speónn*), *gespannan*, bind, connect, = *D. spannan*, stretch, bend, hoist, cock (a gun), hiteh (horses), = *MLG. LG. spannen* = *OHG. spannan*, *MHG. G. spannen*, extend, connect, = *Icel. spennna*, span, clasp, = *Sw. späanna*, stretch, strain, draw, = *Dan. spænde*, stretch, strain, span, buckle; √ *span*, perhaps, with present formative -n, < √ *spa*, extend, in *Gr. σπάειν*, *σπᾶν*, draw, draw out (see *spasm*), *L. spatium*, extension, space (see *space*). Cf. *spin*, *speed*.] **I. trans.** 1†. To stretch or spread out; extend in continuity; give extent to.

My right hand hath *spanned* [spread out, R. V.] the
heavens. *Isa.* xlviil. 13.

2. To stretch from side to side or from end to end of; extend over or across; continue through or over the extent of.

This soul doth *span* the world. *G. Herbert*, *Content*.
The Rhyndacus is still *spanned* by an ancient bridge of
three arches. *B. Taylor*, *Lands of the Saracen*, p. 295.

The existing church shows portions of work a thousand
years apart, and *spans* nearly the whole of Aquileian history.
E. A. Freeman, *Venice*, p. 63.

3. To make a stretch or reach along, over, or around; measure or cover the span of; grasp; specifically, to measure or encompass with the hand, the little finger and thumb being extended as far as possible: as, to *span* a stream with a log or a bridge; to *span* a person's wrist.

Thenne the Kinge *spanes* his spere.

Avoyning of Arthur, st. 13. (*Skeat*.)

Off on the well-known spot I fix my eyes,
And *span* the distance that between us lies.
Tickell, *An Epistle*.

How your plump arms, that were, have dropped away!
Why, I can *span* them. *Browning*, *Pippa Passes*, iii.

4†. To cock by the use of a spanner, as a wheel-musket or pistol.

Every man, officer and soldier, having a pistol ready
spann'd in one hand. *Clarendon*, *Civil Wars*, III. 243.

5. *Naut.*, to confine with ropes: as, to *span* the booms.—6. To shackle the legs of, as a horse; hobble. [Prov. Eng.]

II. intrans. 1. To measure off or mark distances from point to point; make distinct stretch in going, as a span-worm or measuring-worm does.

If the whale is *spanning*, i. e. swimming in a decided
direction and appearing at the surface at intervals more
or less regular, less caution is observed.

Encyc. Brit., XXIV. 526.

2. To be matched for running in harness; form a span: as, the horses *span* well. [U. S.]

span¹ (span), *n.* [*ME. spanne*, *sponne*, < *AS. span*, a span (def. 4), *gespan*, a joining, connection, = *D. span*, a span, a team of horses, = *OHG. spanna*, *MHG. G. spanne* (> *It. spanna* = *OF. espan*, F. *empan*) = *Icel. spönn* (*spann*-) = *Sw. spann* = *Dan. spand*, a span; from the verb.] 1. The full extent or course over which anything is stretched or prolonged; the space or time covered or included between terminal points; entire reach from end to end or from side to side: as, the *span* of life; the *span* of a bridge. As used of physical things, *span* is understood as the actual or net space or distance between bounding lines or surfaces; hence, the *span* of an arch is the length of the opening between the inner faces of its abutments. Compare def. 2. Often used figuratively.

The brief *span* of Roman literature, strictly so called,
was suddenly closed under a variety of influences.

Maine, *Village Communales*, p. 331.

Two arches over the same *span* of river, supposing the
abutments are at the same depth, is cheaper than one.

Ruskin, *Elements of Drawing*.

Yes, Manhood hath a wider *span*

And larger privilege of life than man.

Lowell, *Comm. Ode*.

2. A part or division of something between terminal points: as, a bridge of ten *spans*. In this sense a span would comprise the distance from the middle line of one pier or support to that of the next, the whole number of spans including the entire length of the structure. (The decision of the case referred to in the first quotation turned upon the distinction between senses 1 and 2.)

The word *span* does not, even in architecture, always mean a part of a structure. It is, perhaps, as often used to denote the distance or space between two columns. Such is the obvious import of the term as used in the act under consideration, not merely as a part of the structure itself, but the measure of the distance between the piers of the bridge.

U. S. Supreme Ct., March, 1888. (*Judge Lamar*.)

The channel *spans* were built out from the central pier
and from the adjacent flanking *spans* without the use of
false works in either channel. *Scribner's Mag.*, IV. 32.

3. Extent of stretch, physical or mental; distance over which anything may be extended; reach or grasp, as of the memory or of perception. [Rare.]

Between the ages of eight and nineteen the *span* of
school-girls increases from 6 to 7.9 for letters, and from 6.6
to 8.6 for numerals. *Span* increases not only with age,
but with rank in class, and it is suggested that a "standard
span" be added to the items for anthropometric measurement.
Amer. Jour. Psychol., I. 193.

4. As a measure, originally, the extent between the tips of the thumb and little finger when stretched out: the oldest use of the word in English. The *span* belongs to the system of long measure to which the cubit and fingerbreadth belong. It has always been considered as half a cubit, and still is so to several countries of Asia. The English span is 9 inches. The Swedish *spänn* is an entirely different kind of measure.

Spanne, measure of the hand. *Palmus*.

Prompt. Parv., p. 467.

Whyche Morceys ys In Depness ij *Spannyes* to the botom;

Torkington, *Diary of Eng. Travell*, p. 43.

Atween his shoulders was as *span*,

About his middle war but three.

The Wee Wee Man (*Child's Ballads*, I. 126).

5. Figuratively, any short space or period; a brief or limited extent or course; a relatively small measure of continuity.

Behold, thou hast made my days as it were a *span* long.
Book of Common Prayer, *Psalter*, xxxix. 6.

For the refreshing of that one *span* of ground God lets
fall a whole shower of rain. *Donne*, *Sermons*, x.

Thyself but Dust; thy Stature but a *Span*,

A Moment thy Duration; foolish Man!

Prior, *Solomon*, I.

6. The hand with the fingers outspread, as for measuring or for grasping a handful of something. [Rare.]

And my Conductor, with his *spans* extended,

Took of the earth, and, with his fists well filled,

He threw it into those rapacious gullets.

Longfellow, *Tr. of Dante's Inferno*, vi. 25.

7. *Naut.*, a rope fastened at both ends so that a purchase may be hooked to its bight; also, a double rope having thimbles attached between its two parts, used as a fair-leader for ropes.—8. (a) In the United States (from the original Dutch usage), a pair of horses or mules harnessed together; particularly, a pair of horses usually driven together, or matched for driving or work. (b) In South Africa, two or more yokes of oxen or bullocks attached to a wagon or a plow. For a wagon the span may consist of from twelve to twenty animals, and for a plow of six or eight.

span². An archaic preterit of *spin*.

span³ (span), *adv.* [The first element in the compound *span-new* erroneously taken as a separate word: see *span-new*, and cf. *spick-and-span*.] Wholly; entirely; freshly: as, my hands are *span* clean (sometimes *spandy* clean). *Bartlett*. [Colloq., U. S.]

spanæmia, **spanæmic**. See *spanemia*, etc.

spancel (span'sel), *n.* [*MD. spanscel*, *spansel*, a tether for a horse, a stretched rope, *D. spansel*, a stretched rope (= *G. spann-seil*, a tether), < *spannen* (= *G. spannen*), stretch (= *E. span*¹), + *MD. seel*, a rope (= *OHG. MHG. G. seil*, a rope, cord, = *E. solc*⁴).] A fastening for the hind legs of a horse or cow, or for the legs on one side, to prevent the animal from kicking or straying; especially, a rope for fettering a cow's hind legs while she is milked; a tether. [Prov. Eng.]

Spancel, a rope to tie a cow's hinder legs.

Ray (ed. 1674), p. 44.

spancel (span'sel), *v. t.*; pret. and pp. *spanceled* or *spancelled*, ppr. *spanceling* or *spancelling*. [*spancel*, *n.*] To fasten the legs of with a spancel, as those of a cow or horse to prevent the animal from kicking. [Prov. Eng.]—To **spancel a crab** or a lobster, to stick the point of a leg into the base of each movable claw, to prevent the animal from pinching. This is also done by thrusting a peg into the joint of the nippers or chela.

spanceled, **spancelled** (span'seld), *a.* [*spancel* + *-ed*.] In *her.*, hobbled or fettered to a clog: said of a horse. When the bearing is properly depicted, a fore and a hind leg should have each a fetterlock above the hoof and fastened to the one end of a heavy clog.

span-counter (span'koun'tér), *n.* [*span*¹, *v.*, + obj. *counter*².] An old game in which one player threw a counter on the ground, and another tried to hit it with his counter, or to get so near to it that he could span the space between them and touch both the counters. In either case he won; if not, his counter remained where it fell, and became a mark for the first player, and so alternately till the game was won. The game was apparently similar to that of pitching pennies, and it was also called *span-farthing* and *span-feather*. *Halliwel*.

Tell the king from me that, for his father's sake, Henry
the Fifth, in whose time boys went to *span-counter* for
French crowns, I am content he shall reign.

Shak., 2 *Hen. VI.*, I. v. 2. 166.

span-dogs (span'dogz), *n. pl.* A pair of iron bars linked together at one end and having sharp hooks at the other, used for grappling timber. See cut under *dog*.

spandrel (span'drel), *n.* [Also *spandril*, formerly *splaudrel*, *spaudere*; origin obscure.] In *arch.*, the triangular space comprehended between the outer curve or extrados of an arch, a horizontal line drawn through its apex, and a vertical line through its springing; also, the wall-space between the outer moldings of two arches and a horizontal line or string-course above them, or between these outer moldings and the intrados of another arch rising above and inclosing the two. In medieval architecture the spandrels are often ornamented with tracery, sculptured foliage, and the like. See cut on following page.

spandrel-wall (span'drel-wál), *n.* A wall built on the extrados of an arch, filling in the spandrel.

spandy (span'di), *adv.* A dialectal extension of *span*³. [Colloq., New Eng.]

Thirty gentlemen with *spandy* clean faces and hands

spaniel (span'yel or span'el), n. and a. [Early mod. E. also *spannel*; < ME. spāniel, spānzelle, spānyel, spānyel, spānezgeole, < OF. espagneul, espagnol, F. épagueul, a spaniel, orig. OF. chien espagnol, F. chien épagueul, a Spanish dog; < Sp. Español, Spanish: see *Spaniard*.] I. n. 1. A dog of a domestic breed, of medium and small sizes, with a long silky and usually curly coat, long, soft, drooping ears, feathered tail and stern, of docile, timid, and affectionate disposition, much used for sporting purposes and as pets. The most usual colors are liver and white, red and white, or black and white, in broken or massed areas, sometimes deep brown or black on the face or breast, with a tan mark over the eye. Spaniels sport or are bred into many strains, and three classes of them are sometimes distinguished: land- or field-spaniels, including the cocker and springer; water-spaniels; and toy spaniels, as the King Charles and the Blenheim. The English spaniel is a superior and very pure breed; and, although the name *spaniel* would seem to indicate a Spanish origin, it is most probably indigenous. This dog was used in the days of falconry to start the game. The King Charles is a small black-and-tan variety of the spaniel; the Blenheim is similar, but white marked with red or yellow; both should have a rounded head with short muzzle, full eye, and well-fringed ears

and feet. The Maltese dog and the lion-dog are also small toy spaniels, used as lap-dogs. The water-spaniel, large and small, differ from the common spaniel in the roughness of their coats, and in uniting the aquatic propensities of the Newfoundland dog with the fine hunting qualities of their own race. Leading strains of the springers are the Clumber, Norfolk, and Sussex, in different colors. 2. Figuratively, a mean, cringing, fawning person; a blindly submissive follower: from the characteristics of the spaniel in relation to its master, or when in a state of fear.

He, unhappy man! whom your advancement Hath ruin'd by being spaniel to your fortunes, Will curse he train'd me lither. Ford, Fancies, iii. 3.

II. a. Like a spaniel; fawningly submissive; mean; servile; cringing.

See the nouns.—Spanish stripes, a kind of woolen fabric. E. H. Knight.

—Spanish trefoil. Same as *luerne*.—Spanish type of poultry, an economically important group of varieties of the domestic hen, originating in the lands bordering

on the Mediterranean, and characteristic of that region. The disposition of these fowls is restless and vivacious; the form somewhat slender, approaching the games; comb typically high and deeply serrated, although there are rose-combed varieties of some of the breeds; size small to medium. The hens are non-sitters, and very superior layers; the eggs are white. The colors vary according to the breed. The ear-lobes are enameled-white. The group includes the Ancona, Andalusian, Leghorns, Minorcas, and white-faced black Spanish.—**Spanish walnut oil.** See *oil*.—**Spanish white.** See *white*.—**Spanish woodbine.** Same as *Spanish arbor-vine*.—**Spanish wormseed.** See *wormseed*.—**To ride the Spanish mare.** See *ride*.—**To walk Spanish,** to be forced to walk on tiptoe by another, who seizes one by the collar and by the seat of the trousers: a sport of boys; hence, to walk gingerly; act under the compulsion of another. [Colloq., U. S.]

II. n. 1. The language of Spain, one of the Romance languages, but much mixed with other elements and altered by them. Of its many dialects, that of Castile became the standard form in cultivated speech and literature, the language of which is hence distinctively called *Castilian*. It is the prevailing language in Mexico, Central America, and those countries of South America which were settled by Spaniards.

2. A white-faced black Spanish fowl. See *Spanish fowl*, under *I*.

Spanish-flag (span'ish-flag'), *n.* A scorpionoid fish, *Sebastes rubrivinctus*, of the coast of California, attaining a length of fifteen inches, and in life one of the most brilliantly colored fishes in American waters. It is pale rose-red, almost white, cross-banded with intense crimson, a coloration suggesting the book-name.

spank¹ (spank), *v. i.* [Cf. Dan. *spanke*, strut, stalk; MLG. freq. *spenkeren*, LG. *spenkern*, *spakern*, cause to run or spring about quickly, intr., run quickly, gallop. Cf. *spang²*.] To move with a quick springing step between a trot and a gallop; move quickly and with spirit. See *spanking¹*.

Here a gentleman in a natty gig, with a high-trotting horse, came *spanking* towards us over the common.
Thackeray, Love and the Widower.

spank² (spank), *v.* [Origin obscure; possibly a diff. use of *spank¹*.] **I. trans. 1.** To strike with the open hand, or with something flat and hard; slap with force on the buttocks.

span-shackle (span'shak'1), *n.* In *ship-build- ing*, a large bolt driven through the forecabin and spar-deck beams and foreloeked before each beam, with a large square or triangular shackle at the head for receiving the end of a boom or davit.

span-worm (span'wērm), *n.* In *entom.*, a looper, measurer, or measuring-worm; the larva of any geometrid moth. See *measuring-worm*, *inch-worm*, *looper*, *loopworm*, and especially *geometer*, 3. See *cuts* under *cankerworm* and *Cidaria*.

spar¹ (spär), *n.* [Cf. ME. *sparre*, < AS. **spearra* (not found, but indicated by the derived verb) = MD. *sparre*, *sperre*, D. *spar* = OHG. *sparra*, MHG. *sparre*, G. *sparren*, a bar, beam, = Icel. *sparri*, a spar, gaff, the gate of a town, *sperra*, a spar, rafter, = Sw. Dan. *sparre*, a rafter; cf. Ir. *sparr*, a spar, joist, beam, balk, *sparra*, a spar, nail, = Gael. *sparr*, a spar, joist, beam, roost; Ir. Gael. *sparran*, a bar, bolt (perhaps < E.); perhaps akin to *spear¹*. Hence *spar¹, v.*, and ult. *par¹*, *parrook*, *park*.] **1.** A stiek or piece of wood of considerable length in proportion to its thickness; a stout pole: a large edgel. [Obsolete or dialectal in this general sense.]

Than he caught a *sparre* of Oke with bothe hondes, and caste his shelde to the grounde for to be more light, and com in to the presse ther as he saugh thikkeste.
Merrill (E. E. T. S.), III, 460.

2†. A bar used for fastening a gate or door, or the like; hence, a bolt.

The Prince staid not his sunawere to devize,
But opening straight the *Sparre*, forth to him came.
Spenser, F. Q., V, xi, 4.

3. Specifically—(a) A round stiek of timber, or a stout pole, such as those used for the masts, yards, booms, etc., of ships, and for the masts and jibs of derrieks. (b) One of the common rafters of a roof, as distinguished from the principal rafters; also, one of the sticks used as rafters in a thatched roof.

By assaut he wan the cite after,
And rente adoun both wal and *sparre* and rafter.
Chaucer, Knight's Tale, I, 132.

New nothing was heard in the yard but the dull thuds of the beetle which drove in the *spars*, and the rustle of the thatch in the intervals.
T. Hardy, Far from the Madding Crowd, xxxvi.

(c) A pole lashed to a carriage to hold it up, in place of a disabled wheel. *E. H. Knight.*

spar¹ (spär), *v. i.*; pret. and pp. *sparred*; ppr. *sparring*. [Early mod. E. also *sparr*, *sparre*; < ME. *sparren*, *sperren*, *speren*, < AS. **spearrian* (in pp. *gesparrod*), **spearrian* (in comp. *bispearrian* = OHG. *sparran*, *sperran*, MHG. G. *sperren* = Icel. *sparra*, *sperra* = Sw. *spär* = Dan. *sparre*, fasten with a spar; from the noun.] **1†.** To shut, close, or fasten with a bar or a bolt; bar; fasten in any way.

For when he saugh here dorres *spered* alle,

B. Jonson, Staple of News, II, 7.

2. To furnish with or form by the use of spars; supply a spar or spars to: as, to *spar* a ship or a mast.—**3.** To aid (a vessel) over a shallow bar by the use of spars and tackles: a device frequently in use on the western rivers of the United States.

spar² (spär), *n.* [Formerly also *sparr*; < ME. *spar* (only in early ME. comp. *sparston*), < AS. **sper*, found only in comp. *spar-stān* (see *sparstone*) and in adj. *sparren*, glossing *gypsum*, I. e. L. *gypseus*, of gypsum, = late MHG. *spar*, gypsum, usually in comp. *spar-glas* and *spar-kale*, *spor-kalk*, *sper-kalk*, G. *spar-kalk*, plaster; origin obscure.] In *mineral.*, a general term formerly employed, but rather vaguely, to include a large number of crystalline minerals having a bright but non-metallic luster, especially when breaking readily into fragments with smooth surfaces. A specific epithet is used with it in each case to designate a particular species. *Calc-spar* or *calcareous spar* (crystalline calcite), *adamantine spar* (corundum), *heavy-spar* (barite), *satin-spar* (gypsum), *fluor-spar* or *Derbyshire spar* (fluorite), and *tabular spar* (wollastonite) are common examples. The word is used as a suffix in the name *feldspar*. Among miners the term *spar* is frequently used alone to express any bright crystalline substance.—**Adamantine, calcareous, carbon, cross-course spar.** See the qualifying words.—**Derbyshire spar**, fluorite of calcium, a mineral found in great beauty and abundance in Derbyshire, England: same as *fluor-spar*.—**Dog-tooth spar**, a variety of calcite, crystallizing in scalenohedral forms: so named from a fancied resemblance of its crystals to canine teeth.—**Iceland spar**, a transparent variety of calcite or calcium carbonate. In consequence of its strong double refraction, it is valuable for experiments on the double refraction and polarization of light, and is the substance from which Nicol prisms are made. The supply for this purpose has all been obtained from a large cave in a doleritic rock near Helgastal in Iceland.—**Nail-head, ponderous, etc., spar.** See the qualifying words.

spar³ (spär), *v. i.*; pret. and pp. *sparred*; ppr. *sparring*. [Early mod. E. *sparre*; < ME. *sparren*, rush, make an onset; in def. 2 perhaps a diff. word, < OF. *esparer*, F. *éparer* (= It. *sparare*), fling out with the heels, kick. Cf. Lith. *spirti*, stamp, kick; Russ. *sporiti*, quarrel, wrangle. The word *spar* cannot be connected, unless remotely, with *spur¹*.] **1†.** To rush forward in attack; make an onset.

He put hym to Paris with a proude will,
Sparrit at hym with a spere spytully fast.
Destruction of Troy (E. E. T. S.), I, 6914.

2. To rise and strike with the shanks or spurs; fight, as cocks, with the spurs protected with leather pads, so that the birds cannot injure each other.

Footle, Mayor of Garratt, ii. 2.

sparagus (spar'a-gus), *n.* [An aphetic form of *asparagus*. Hence *sparagrass*, *sparrow-grass*.] Same as *asparagus*. *Congreve*, tr. of Eleventh Satire of Juvenal. [Obsolete or vulgar.]

Sparaxis (spä-rak'sis), *n.* [NL. (Ker, 1805), so named from the torn shreds fringing the spathe; < Gr. *σπάραξις*, a tearing, < *σπαράσσειν*, tear.] A genus of monocotyledonous plants, of the order *Irideæ* and tribe *Iriaceæ*. It is characterized by flowers with a short perianth-tube enlarged and bell-shaped above, unilateral erect stamens, and slender undivided recurved style-branches. The fruit is a membranous three-valved loculicidal capsule. There are 5 (or as some regard them 11) species, all natives of the Cape of Good Hope. They are bulbous plants with a slender stem bearing a few flat or sword-shaped erect or curving leaves, and handsome flowers, each solitary and sessile within a thin dry fringed spathe, marked with brown lines. They are valued as summer-flowering bulbs, and numerous low-growing varieties are in cultivation, especially of *S. tricolor* and *S. grandiflora*, of various colors from white to crimson, generally with a dark center. The bulb of *S. bulbifera* is edible. See *harlequin-flower*.

sparblet, *v. t.* See *sparkle*.

spar-buoy (spär'boi), *n.* A buoy for marking a channel, etc., made of a spar moored by one end so that the other end will stand up above the water. Spar-buoys are much used in navigable channels where ice runs swiftly. See out under *buoy*.

sparclet, *v. and n.* An old spelling of *sparkle*.

spar-deck (spär'dek), *n.* *Naut.*, the upper deck of a vessel, extending from stem to stern and including the quarter-deck and poop-deck: so called as being that on or above which the spars are disposed. See *deck*, 2, and cuts under *forecastle* and *frame*.

spar-dust (spär'dust), *n.* The dust in wood which is produced by insects. *Halliwell*. [Prov. Eng.]

spare¹ (spär), *a.* [*< ME. spar* (rare), < AS. *spær*, = OHG. *spar* = Icel. *sparr*, *spar*, sparing; also in comp. or deriv. AS. *spær-hende*, *spær-hynde*, later *sparhende* = OHG. *spærhenti*, sparing; AS. *spær-lic*, sparing, = G. *spärlich*, frugal; G. *spar-sam* = Sw. *spar-sam* = Dan. *spar-som*, sparing; prob. akin to L. *parvus*, sparing, *parcere*, spare (see *parcity*, *parsimony*); Gr. *σπαρῶς*, scattered, rare, < *σπαίρω*, scatter, sow (see *spore*, *sperm*).]

Pour'd out their plenty without spight or *spar*.
Spenser, F. Q., III. i. 51.

2. In *American bowling*, an advantage gained by the knocking down of all the pins by rolling two balls: as, to make a *sparc*. In such a case, when the player's turn comes again, the pins knocked down by his first ball are added to those made in the *sparc* to complete the record of that turn, while they count also in the record of the new turn. Compare *strike*.

spare² (spär), *n.* [Early mod. E. also *sparre*, *spayere*, *spayre*; < ME. *speyre*, *speyr*; origin obscure.] An opening in a gown or petticoat; a placket. *Prompt. Parv.*, p. 468.

She took out a little penknife,
Illum low down by her *spar*.
Sir Hugh, or the Jew's Daughter (Child's Ballads, III. 332).

spare-built (spär'bilt), *a.* Built or formed without fullness or robustness; slender. *Scott*, *Rokeby*, ii. 22.

spareful (spär'fül), *a.* [*< spare¹ + -ful*.] Sparing; chary. *Fairfax*.

sparefulness (spär'fül-nes), *n.* The quality of being spareful or sparing.

Largess his hands could never skill of *sparefulness*.
Sir P. Sidney, *Arcadia*, ii.

sparely (spär'li), *adv.* [*< ME. spärliche* (= MHG. *sperliche*); < *spar¹ + -ly²*.] Sparingly; scantily; thinly; leanly.

Ye valleys low, . . .
On whose fresh lap the swart-star *sparely* looks.
Milton, *Lycidas*, l. 138.

spareness (spär'nes), *n.* [Cf. AS. *spærnes*, frugality.] The state of being spare, lean, or thin; leanness.

sparer (spär'ér), *n.* [*< ME. sparare*; < *spar¹, v.*, + *-er¹*.] One who spares, or avoids unnecessary expense; a frugal spender. [Rare.]

By nature far from profusion, and yet a greater *sparer* than a saver.
Sir H. Wotton.

sparerib (spär'rib), *n.* [Formerly also *spear-rib*; < *spar¹ + rib¹*.] A cut of pork consisting of the upper part of a row of ribs with the meat adhering to them. *Sparerib* roasted or broiled is esteemed a delicacy.

Sparganium (spär-gä'ni-nm), *n.* [NL. (Tournefort, 1700), < L. *sparganium*, < Gr. *σπαργάνιον*, a plant, bur-reed, so called from the ribbon-like leaves, dim. of *σπάργανον*, a fillet, a swaddling-band, < *σπάργειν*, swathe.] A genus of monocotyledonous plants, of the order *Typhocææ*. It is distinguished from the other genus of that order, *Typha*, by hyaline scales of the perianth, oblong or wedge-shaped anthers, and sessile ovary. There are about 6 species, natives of both hemispheres in temperate and subfrigid regions. Three somewhat polymorphous species occur in the northeastern United States. They are aquatic herbs, sending up from

Bur-reed (*Sparganium eurycarpum*).
1. Flowering plant. 2. Part of the inflorescence, showing the globular female head.

slender rootstocks erect or floating smooth spongy stems, and alternate entire linear leaves, usually with a sheathing base, stilly ascending at a wide angle with the stem (whence they were formerly called *reed-grass*). The flowers form globular heads, the upper staminate, the lower pistillate, in fruit becoming spherical compact bur-like bodies composed of many sharp-pointed spongy nutlets (whence the popular name *bur-reed*). They are sometimes planted along the margin of water. The stems have been used to make paper, and the roots of *S. ramosum* and *S. simplex* were once in repute as a remedy for snake-bites.

sparganosis (spär-gg-nō'sis), *n.* [NL., as if < Gr. σπαργάνωσις, wrapping in swaddling-clothes (see *Sparganium*); prop. *spargosis*, < Gr. σπάργωσις, a swelling, distention: see *spargosis*.] Same as *spargosis*.

sparge (spärj), *v. t.*; pret. and pp. *sparged*, ppr. *sparging*. [Sc. *spairge*; < L. *spargere*, strew, sprinkle; cf. *asperge*, *asperse*, *disperse*, etc.] 1. To sprinkle; scatter.

Wha in yon cavern, grim and sootie,
Closed under hatches,
Spairges about the brunstane cootie,
Burns, Address to the De'il.

2. To throw water upon in a shower of small drops. See *sparger*.

spargefaction (spär-jë-fak'shon), *n.* [< L. *spargere*, strew, sprinkle, + *factio*(n)-, < *facere*, do, make.] The act of sprinkling. *Swift*, Tale of a Tub, iv.

sparger (spär'jër), *n.* [< *sparge* + -er¹.] 1. A sprinkler; usually, a cup with a perforated lid, or a pipe with a perforated nozzle, used for damping paper, clothes, etc.—2. In *brewing*, a perforated cylinder, or a series of disks, for discharging hot water in a fine shower over grain falling into a mash-tub.

sparget, **spargeting**. Same as *parget*, *pargeting*.

spargosis (spär-gō'sis), *n.* [NL., < Gr. σπάργωσις, a swelling, distention, < σπαργάνω, be full to bursting, swell.] In *pathol.*: (a) Distention of the breasts with milk. (b) Same as *pachydermia*. Also *sparganosis*.

sparhawk (spär'häk), *n.* A contracted form of *sparrow-hawk*. *Chaucer*, Parliament of Fowls, l. 338.

Sparidae (spär'i-dë), *n. pl.* [NL., < *Sparus* + -idae.] A family of acanthopterygian fishes, typified by the genus *Sparus*, to which different limits have been assigned; the sea-breams. (a) In the early system of Bonaparte, same as Cuvier's fourth family of acanthopterygian fishes (*Sparoides*), which included, besides the true *Sparidae*, many other fishes. (b) In Günther's system, a family of *Acanthopterygii periformes*, having ventrals perfect, no bony stay for the preoperculum, a lateral line, and either a series of trenchant teeth in the jaws or molars on the sides. (c) In Jordan and Gilbert's classification, acanthopterygian fishes of the ordinary type with the supramaxillary bones allying under the preorbital. It thus included not only the true *Sparidae*, but the *Pristopomidae*, *Lutjanidae*, *Pimelpteridae*, and *Lobotidae*. (d) By Gill restricted to fishes of an oblong compressed form with peculiar scales, continuous lateral line, head compressed, supramaxillary bones retractile under the suborbitals, dorsal with the spinous part depressible in a groove and about as long as the soft part, pectorals with lower rays branched, and ventrals subbrachial and complete. The family thus limited comprises numerous species, among which are some of the most esteemed of the temperate seas, such as the gilthead of Europe, and the sheepshead and scup of the eastern American coast. Also *Sparoides*. See cuts under *Pimelpterus*, *porgy*, *Scorpiis*, *scup*, and *sheepshead*.

sparidal (spär'i-däl), *a.* Same as *sparoid*.

Sparinae (spär-i-në), *n. pl.* [NL., < *Sparus* + -inae.] A subfamily of sparoid fishes, typified by the genus *Sparus*, to which various limits have been assigned. (a) The genera *Sparus*, *Sargus*, and *Charax*: the *Sparini* of Bonaparte. (b) By Jordan and Gilbert used for sparoids having molar teeth on the sides of the jaws, none on vomer, palatines, or tongue, entire opercle, and few pyloric caeca, including *Sparus*, *Sargus*, or *Diplodus*, and various other genera.

sparine (spär'in), *a.* and *n.* [< *sparus* + -ine¹.] 1. *a.* Sparoid, in a narrow sense; closely resembling a sparus; belonging to the *Sparinae*.

II. *n.* A sparoid fish of the subfamily *Sparinae*.

sparing (spär'ing), *n.* [< ME. *sparynge*; verbal *n.* of *spare*¹, *v.*] 1. Parsimony.

Sparynge. *Parcimonata*. *Prompt. Parv.*, p. 467.

2. *pl.* That which is saved by frugality or economy; savings. [Rare.]

The *sparings* of the whole week which have not been laid out for chances in the lottery are spent for this evening's amusement.

Hovells, Venetian Life, v.

3t. The state of being spared from harm or death.

If the Lord give you *sparing* to-morrow, let me hear four words of comfort from you for God's sake.

J. Careless, in Bradford's Letters (Parker Soc., 1853), II. 241.

sparing (spär'ing), *p. a.* [Ppr. of *spare*¹, *v.*] 1. Inclined to spare or save; economical; frugal; chary; grudging.

Too near and *sparing* for a soldier,
Too gripping, and too greedy.

Fletcher (and another?), Propheteas, l. 2.

Defer not to do Justice, or be *sparing* of Mercy.

Baker, Chronicles, p. 160.

2. Of a sparo amount, quantity, or extent; not abundant or lavish; limited; scanty; restrained: as, a *sparing* diet; *sparing* applause.

The use of confutation in the delivery of sciences ought to be very *sparing*. Bacon, Advancement of Learning, II.

3t. Inclined to spare from harm or hardship; not oppressive; forbearing.

Their king . . . was *sparing* and compassionate towards his subjects.

sparingly (spär'ing-li), *adv.* In a sparing manner; with frugality, moderation, scantiness, reserve, forbearance, or the like; sparsely.

Touch this *sparingly*, as 'twere far off.

Shak., Rich. III., III. 5. 93.

sparingness (spär'ing-nes), *n.* The character of being sparing or inclined to spare; especially, frugality, scantiness, or the like: as, the *sparingness* of one's diet.

A year afterward he entered the ministry again, and lived with the utmost *sparingness*.

George Eliot, Felix Holt, vi.

spark¹ (spärk), *n.* [< ME. *spärke*, *spærke*, *spære*, *spærke*, < AS. *speara*, *spæra* = MD. *spærke*, *spereke*, D. *spark* = MLG. LG. *spærke* (> OF. *esparque*), a spark; perhaps so called from the crackling of a firebrand: cf. Icel. Sw. *spraka* = Dan. *sprage*, crackle, Lith. *sprageti*, crackle, Gr. σπάραγος, a crackling, Skt. √ *spṛh*, rumble.] 1. A particle of ignited substance emitted from a body in combustion; a fiery particle thrown off by burning wood, iron, powder, or other substance.

He muhte . . . blowen so litheliche that em *spærke* muhte awickien.

Aneren Rümle, p. 96.

Man is born unto trouble, as the *sparks* fly upward.

Job v. 7.

Hence—2. A scintillating or flying emanation, literally or figuratively; anything resembling a spark of fire: as, *sparks* from a gem; a *spark* of wit.

To try if it were possible to get a *spark* of human spirit out of you.

Scott, Woodstock, v.

For all the haft twinkled with diamond *sparks*.

Tennyson, Passing of Arthur.

3. A small diamond used with many others to form a setting or frame, as to a cameo or a miniature painting; also, a distinct crystal of diamond with the natural curved edges, suitable for glaziers' use.

This madonna invites me to a banquet for my discourse, 't'other . . . sends me a *spark*, a third a ruby, a fourth an emerald.

Shirley, Bird in a Cage, II. 1.

These writing diamonds are *sparks* set in steel tubes much like everpoint pencils.

Lea, Photography, p. 427.

4. A separate bit or particle of fire or burning matter in an otherwise inert body or mass; hence, a bit of anything, material or immaterial, comparable to this in its nuclear character or possible extension of activity.

If any *spark* of life be unquench'd in her,
This will recover her.

Beau. and Fl., Knight of Malta, III. 2.

If the true *spark* of religious and civil liberty be kindled, it will burn.

D. Webster, Speech, Bunker Hill Monument, June 17, 1825.

Electric spark, the luminous effect produced when a sudden disruptive electrical discharge takes place between two charged conductors, or between two conductors at different electric potentials. The length of the spark depends primarily upon the difference of potential of the two charged bodies; it is hence in general a conspicuous phenomenon with high potential frictional electricity, and not with ordinary voltaic currents. See *electricity*.—*Fairy sparks*. See *fairly*.

spark¹ (spärk), *v.* [< ME. *sparken*, < AS. *spearian* = MLG. LG. *sparken*, emit sparks; from the noun: see *spark*¹, *n.*] I. *intrans.* 1. To emit sparks, as of fire or electricity; sparkle or scintillate. *Spenser*.—2. In *elect.*, to produce sparks at points where the continuity of the circuit is interrupted. The production of sparks is due to the formation of a small arc between the extremities of the broken conductor, and also to self-induction in the circuit. Sparking often takes place between the collecting brushes and the commutator of the dynamo. It is injurious to the machine, aside from the actual dissipation of energy which it involves. It also occurs to an injurious degree in other electrical apparatus in which currents are frequently interrupted. Various measures are resorted to for the purpose of reducing it to a minimum or avoiding it altogether. See *spark-arrester*, 3.

There is no *sparking* at the brushes.

S. P. Thompson, Dynamo-Elect. Mach., p. 113.

II. *trans.* 1. To affect by sparks, as of electricity; act upon by the emission or transmission of sparks. [Recent.]

The insulation is apt to be *sparked* through and spoiled.

Elect. Rev. (Eng.), XXIV. 550.

Whenever a large Leyden jar is *sparked* through the coil.

Philos. Mag., XXVII. 339.

2. To splash with dirt. *Halliwel*. [Prov. Eng. or Scotch.]

spark² (spärk), *n.* [Usually associated with *spark*¹, *sparkish*, *sparkling*, etc., but perhaps a var. of *sprack* (cf. ME. *sparklich*, var. of *sprackliche*), < Icel. *sparkr*, usually transposed *sprærkr*, sprightly: see *sprack*.] 1. A person of a gay or sprightly character; a gay, lively, showy man (or, rarely, in former use, woman); a "blade" or roysterer.

Robbin Hood upon him set
With his courageous *spark*.

True Tale of Robin Hood (Child's Ballads, V. 358).

I will wed thee
To my great widdowes daughter and sole heir,
The lovely *spark*, the bright Laodice.

Chapman, Widdowes Teares, i. (Davies.)

Their worthy father . . . was, at his years, nearly as wild a *spark*.

Sheridan, School for Scandal, l. 2.

2. A lover; a gallant; a beau. [Colloq.]

Fly to your *spark*; he'll tell you more of the matter.

Goldsmith, She Stoops to Conquer, III.

spark² (spärk), *v.* [< *spark*², *n.*] I. *intrans.* To play the spark or gallant; court. [Colloq.]

A sure sign that his master was courting, or, as it is termed, *spark*ing, within.

Irving, Sketch-Book, p. 432.

The boys that do a good deal of *spark*ing and the girls that have a lot of beaux don't always get married first.

E. Eggleston, The Graysons, xxxiii.

II. *trans.* To pay attention to, especially with a view to marriage; court; play the gallant to, in a general sense: as, he is *spark*ing Miss Doe; to *spark* a girl home. [Colloq.]

spark-arrester (spärk'a-res'tër), *n.* 1. A fender of wire netting.—2. A netting or cage of wire placed over the smoke-stack of a steam-engine. In some arresters a deflector is placed in the stack, against which the sparks strike, and fall into a reservoir below. Also called *spark-consumer*.

3. A device for preventing injurious sparking in electrical apparatus at points where frequent interruptions of the circuit occur, as in telegraph-keys, relays, and similar instruments. It consists in some cases of a spark-coil or high-resistance connective across the point of interruption, so that the circuit is never actually broken, but only greatly reduced. In others it is a condenser whose plates are connected each with one extremity of the broken circuit. In this case the energy of the current induced on breaking is expended in charging the condenser. Also *spark*.

spark-coil (spärk'kõil), *n.* See *spark-arrester*, 3.

spark-condenser (spärk'kõn-den'sër), *n.* In *elect.*, an instrument having a glass cage in which a spark may be passed between the battery connections. It is used for burning metals or obtaining the spectra of gases, and is designed to isolate the atmosphere in which the experiment is conducted, so as to eliminate accidental disturbing causes, and also to enable the experiment to take place in an atmosphere of any required condensation or tenuity.

spark-consumer (spärk'kõn-sũ'mër), *n.* In a steam-engine, a spark-arrester.

sparked (spärkt), *a.* [< *spark*¹ + -ed².] Variegated. *Halliwel*. [Prov. Eng.]

sparked-back (spärkt'bak), *a.* Having a streaked or variegated back; streaked-back: as, the *sparked-back* plover, the turnstone. [Local, Massachusetts.]

sparker (spär'kër), *n.* [< *spark*¹ + -er¹.] Same as *spark-arrester*, 3.

sparkful (spärk'fũl), *a.* [< *spark*¹ + -fũl.] Sparkish.

Hitherto will our *sparkful* youth laugh at their great grandfather's English.

Camden, Remains, Languages.

sparkish (spär'kish), *a.* [< *spark*¹ + -ish¹. Cf. *spark*².] Gay; jaunty; sprightly; showy; fine.

I have been detained by a *sparkish* coxcomb, who pretended a visit to me.

Wycherley, Country Wife, IV. 2.

A daw, to be *sparkish*, trick'd himself up with all the gay feathers he could muster.

Sir R. L'Etrange.

sparkle (spär'kl), *v.*; pret. and pp. *sparkled*, ppr. *sparkling*. [Early mod. E. also *spærkle*, *spærkle*; < ME. *sparklen*, *spærklen*, *spærclen* (= MD. *spærkelen*); freq. of *spark*¹. Cf. *sparkle*, *n.*] I. *intrans.* 1. To emit sparks; send off small ignited particles, as burning fuel, etc.—2. To shine as if giving out sparks; glitter; glisten; scintillate, literally or figuratively: as, a brilliant *sparkles*; a *sparkling* beauty; *sparkling* wit.

The Sea seemed all of a Fire about us; for every sea that broke *sparkled* like Lightning.

Dampier, Voyages, I. 414.

The rosy sky,
With one star *sparkling* through it like an eye.

Byron, Don Juan, II. 183.

Sparkling heat, such a heat as produces sparks; especially, a degree of heat in a piece of iron or steel that causes it to sparkle or emit sparks under the hammer; a welding-heat. — **Sparkling wine**, wine characterized by the presence or the emission of carbonic-acid gas in little bubbles which sparkle or glisten in the light. = *Syn. 1* and *2. Scintillate, Glitter*, etc. (see *glare*, v. i.), cortuscate.

II. trans. 1. To emit with coruscations; throw out sparklingly.

The bright glisten of their beames cleare
Did sparkle forth great light.

Spenser, F. Q., III. i. 32.

2. To scatter; disperse. [Obsolete or prov. Eng.]

The riches of Darins was left alone, and lay sparkled
abroad over all the fields.

J. Brende, tr. of Quintus Curtius, III. 43.

3†. To sprinkle; spatter.

The pavement of the temple is all sparkled with bludde.
Peter Martyr (tr. in Eden's First Books on America,
[ed. Arber, p. 196].)

sparkle (spär'kl), *n.* [*< ME. sparkle, sparele*, with dim. *-le, -el, < sparkl*; or *< sparkle, v.*] **1.** A spark; an ignited or a luminous partiele, or something comparable to it; a scintillation; a gleam.

Foure gledes han we, welche I shal devyse,
Avanting, llyng, anger, covciltise,
Thise foure sparkles longen unto olde.

Chaucer, Prol. to Reeve's Tale, l. 31.

And drove his heel into the smoulder'd log,
That sent a blast of sparkles up the fire.

Tennyson, Morte d'Arthur.

2. The act or state of sparkling; emission of sparks or scintillations; sparkling luminosity or luster: used literally or figuratively.

Swift as the sparkle of a glancing star
I shoot from heaven, to give him safe convoy.

Milton, Comus, l. 80.

A zest and sparkle ran through every part of the paper.
G. S. Merriam, S. Bowles, II. 359.

sparkleberry (spär'kl-ber'i), *n.* Same as *sparkleberry*.

sparkler (spärk'lér), *n.* [*< sparkle + -er*]. **1.** A thing which or a person who sparkles; that which or one who gives off scintillations, as of light, beauty, or wit: often applied specifically to gems, especially the diamond.

But what would you say, should you see a Sparkler shaking
her elbow for a whole night together, and thumping
the table with a dice-box? *Addison, Guardian, No. 120.*

It [Mercury] keeps so near the sun . . . that very few
people have ever seen the brilliant sparkler.

H. W. Warren, Astronomy, p. 113.

2. One of various species of tiger-beetles (*Cicindela*): so called in allusion to their shining or sparkling appearance when running in the sunshine. See cuts under *Cicindela*.

sparkless (spärk'les), *a.* [*< sparkl + -less*]. Free from sparks; not emitting sparks: as, a *sparkless* commutator. *Electric Review* (Eng.). XXVI. 203.

sparklessly (spärk'les-li), *adv.* Without the emission of sparks.

sparklet (spärk'let), *n.* [*< sparkl + -let*]. A small spark, or minute sparkle; a scintillating speck. [Rare.]

sparkliness (spärk'li-nes), *n.* Sparklingness; sparkling vivacity. *Aubrey, Lives* (John Suckling).

sparklingly (spärk'ling-li), *adv.* In a sparkling manner; with twinkling or vivid brilliancy.

sparklingness (spärk'ling-nes), *n.* The quality of being sparkling; vivid and twinkling luster.

spark-netting (spärk'net'ing), *n.* A spark-arrester or spark-consumer.

sparkling (spär'ling), *n.* [Also *spertling, spir-ling, sportling, spurling*; *< ME. sparlyng, spertlyng, spertlyng, spurylyng* = *MLG. spertlink* = *G. spertling* (*> OF. esperlanc, esperlan, F. éperlan*; *ML. spertlingus*), a smelt; cf. *D. spiering*, a smelt.] **1.** A smolt. [Prov. Eng.]

For sprats and spurlings for your house.
Tusser, Husbandry.

2. A samlet; a smolt. [Wales.]

sparkling (spär'ling), *n.* [Also *spurling*; *< spearl + -ing*, from the sharp, picked bill.] A tern or sea-swallow. [Prov. Eng.]

sparkling-fowl (spär'ling-foul), *n.* The goosander or merganser, especially the female. *J. Latham.*

sparklire, *n.* [ME., also *spartyre, spertlire, spartlyer, spertlyer*, the calf of the leg, a muscle, *< AS. spærliira, spertliira, spearliira, < spær, spare, + liira*, fleshy part of the body without fat or bone: see *spare* and *lire*².] The calf of the leg.

Smyit thee the Lord with the moist yuel biel in knees,
and in spartyers. *Wyclif, Deut. xxviii. 35.*

spar-maker (spär'mä'kér), *n.* A carpenter whose special business is the making of masts, yards, etc.

Sparmannia (spär-man'i-ä), *n.* [NL. (Linnaeus filius, 1781), named after Andreas Sparmann or Sparmann, a Swedish naturalist of the 18th century.] A genus of polypetalous plants, of the order *Tiliaceae*, the linden family, and of the tribe *Tiliceae*. It is characterized by the outer stamens being without anther, the numerous inner ones perfect, and by a globose or ovoid capsule which is echinate with rigid bristles. There are three species, natives of tropical or southern Africa. They are shrubs or trees with soft stellate pubescence, bearing toothed or lobed heart-shaped leaves and white flowers in small terminal umbelliform cymes which are surrounded by an involucre of short bracts. *S. Africana* is a handsome greenhouse-shrub reaching from 6 to 12 feet high, with ornamental long-stalked leaves and downy white flowers with yellow and brown sterile stamens. It produces a fiber of very fine texture, known as *African hemp*, and recommended for its strength and beautiful silver-gray color.

sparoid (spä'roid), *a.* and *n.* [*< NL. Sparus + -oid*]. **I. a.** Resembling a sea-bream; or of pertaining to the *Sparidae* in a broad sense. Also *sparidal*. — **Sparoid acales**, scales characteristic of sparoid fishes—thin, wide, with lines of growth proceeding from their hind border. *Agassiz.*

II. n. A sparoid fish.

Sparoidæ (spä-roi'dē), *n. pl.* [NL.] Same as *Sparidae*.

sparplet (spär'pl), *r. t.* [Also *sparble*; *< ME. sparplen, sparpyllen*, *< OF. esparpiller*, *F. éparpiller*, scatter, fly off like a butterfly, = *Pr. esparpalhar* = *It. sparpagliare*, scatter, fly off like a butterfly. Cf. *disparple*.] To scatter; spread abroad; disperse.

Thei made the renges to sparble a-brode.
Merlin (E. E. T. S.), iii. 396.

sparret, *n.* and *v.* An obsolete form of *sparl*.

sparrer (spär'er), *n.* One who spars; one who practises boxing. *Thackeray, Adventures of Phillip*, vii.

sparrow (spar'ō), *n.* [*< ME. sparowe, sparuwe, sparwee, sparwee*, *< AS. spearwa, spearwa*, in early glosses *spearwa*, = *OHG. sparo* (*sparw-*), *sparwe*, MHG. *spar* (MHG. dim. *sperline, sperling*) = *Icel. spörr* = *Sw. sparf* = *Dan. spurv* = *Goth. sparcva*, a sparrow; prob. from the root of *spur, spurn*, 'kick, quiver': see *spur*. Cf. *MD. sparwer, sperwer*, *D. sperwer* = *MLG. sparwee, sperwee* = *OHG. sparcwari, sparcwari*, MHG. *sperwære, sparwære*, *G. sperber* (cf. *It. sparciere, sparciere* = *Pr. esparvier* = *OF. esparvier*, *F. éparvier*, in *ML. sparcvarius, sparcvarius, sparcvarius*, *< OHG., cf. Sp. esparvón*), a sparrow-hawk, lit. 'sparrow-eagle,' the second element being *OHG. aro* (in comp. *-ari*), eagle: see *earn*³. Cf. *sparver, sparv.*] **1.** The house-sparrow, *Passer domesticus*, a fringilline bird of Europe, which has been imported and naturalized in America, Australia, and other countries. It is about 6 inches long and 9½ in extent of wings. The upper parts of the male are ashy-gray, holdly streaked on the back with black and bay; there is a dark-chestnut or mahogany spot on each side of the neck; the lesser wing-coverts are chestnut; the median are tipped with white, forming a wing-bar; the greater coverts and inner secondaries have a black field bordered with gray; and the lower parts are ashy or gray, with jet-black on the throat, spreading on the breast, and bordered on the side of the neck with white. The female is similar, but more plainly feathered, lacking the distinctive head-markings of the male. The sparrow is a conirostral granivorous bird, whose food is principally seeds and grain, yet it has been introduced in many countries for the purpose of destroying noxious insects. It is extremely hardy, pugnacious, and prolific, rearing several large broods annually. Of all birds the sparrow naturally attaches itself most closely to man, and easily modifies its habits to suit artificial conditions of environment. It is thus one of several animals, as rats, mice, and other vermin, well fitted to survive under whatever conditions man may offer or enforce; hence it wins in competition with the native birds of the foreign countries where it naturalizes, without as readily developing counteractive agencies to check its increase. It speedily becomes a pest wherever introduced, and seldom destroys noxious insects to any appreciable extent. It was brought into the United States from Germany about 1869, and is now probably more numerous than any single native bird. In New York city thousands of sparrows are sold and eaten as reed-birds. See cut under *Passer*².

2. Some or any fringilline bird resembling the sparrow, as *Passer montanus*, the tree-sparrow; one of various finches and buntings, mostly of plain coloration. In the United States the name is given, with a qualifying word, to very many small sparrow-like birds, mostly of homely streaked coloration. Chipping- or field-sparrows belong to the genus *Spizella*; crown-sparrows to *Zonotrichia*; fox-sparrows to *Passerella*; grasshopper-sparrows to *Coturniculus*; the grass-sparrow to *Pooecetes*; the lark-sparrow to *Chondestes*; sage-sparrows to *Amphispiza*; savanna-sparrows to *Passerculus*; seaside sparrows to *Ammodramus*; snow-sparrows to *Junco*; song-sparrows to *Melospiza*. See cuts under *Chondestes*, *Coturniculus*, *Embernagra*, *field-sparrow*, *grassfinch*, *sage-sparrow*, *savanna-sparrow*, *snowbird*, and *song-sparrow*.

3. Some little bird likened to or mistaken for a sparrow. Thus, the hedge-sparrow is the hedge-chantrel, *Accentor modularis*, and some other warblers are loosely called sparrows. — **Bush-sparrow**, the hedge-sparrow, *Accentor modularis*. — **English sparrow**, the common European house-sparrow, *Passer domesticus*; so called in the

United States. See def. 1. — **Green-tailed sparrow**, Blanding's finch. See *finch*¹. — **Java sparrow**, the rice-bird of Java, *Amadina* (*Munia* or *Padda*) *oryzivora*, about as large as the bobolink, of a bluish-gray color with pink bill and white ear-coverts; a well-known cage-bird. — **Sandwich sparrow**, a variety of the common

Java Sparrow (*Padda oryzivora*).

savanna-sparrow found in Alaska. — **White-throated sparrow**, a crown-sparrow. (See also *field-sparrow*, *hedge-sparrow*, *hill-sparrow*, *house-sparrow*, *reed-sparrow*, *satin-sparrow*, *water-sparrow*, and other compounds noted in def. 2.)

sparrow-bill (spar'ō-bil), *n.* **1.** The bill of a sparrow. — **2.** A kind of shoe-nail: the original form of *sparable*.

Hob-nails to serve the man I' th' moene,
And sparrowsbills to cloute Pan's shoone.
Dekker, Londons Tempe.

sparrowblet (spar'ō-bl), *n.* Same as *sparrowbill*, 2, *sparable*.

sparrow-grass (spar'ō-grās), *n.* [A corruption, simulating *sparrow + grass*, of *asparagrus*, itself a corruption of *sparagus* for *asparagus*.] *Asparagus*. [Prov. or vulgar.] — **French sparrow-grass**, the sprouts of the spiked star-of-Bethlehem, *Ornithogalum Pyrenaicum*, said to be eaten as asparagus. *Prior, Popular Names of British Plants*. [Prov. Eng.]

sparrow-hawk (spar'ō-hāk), *n.* [Also contr. *sparhawk*; *< ME. spar-hawk, sperhawk*, *< AS. spearhæfoe, spearhæbe, spærhæbe* (= *Icel. sparrhaukr* = *Sw. sparfhök* = *Dan. spurvehög*), *<*

spearwa, sparrow, + *hæfoe*, hawk: see *sparrow* and *hawk*¹. For the D., G., and Rom. names for 'sparrow-hawk,' see under *sparrow*.] **1.** One of several small hawks which prey on sparrows and other small birds. (a) A hawk of the genus *Accipiter* or *Nisus*. In Great Britain the name is appropriated to *A. nisus*, or *Nisus fringillarius*, about 12 inches long, closely related to the sharp-shinned hawk of America. (b) In the United States, a hawk of the genus *Falco* and subgenus *Tinnunculus*, especially *F. (T.) sparverius*, which abounds in nearly all

European Sparrow-hawk (*Accipiter nisus*).

American Sparrow-hawk (*Falco sparverius*), adult male.

parts of the country, and is known in books as the *rusty-crowned falcon* and *prairie-hawk*. It is 10 or 11 inches long, and from 20 to 23 in extent of wings. The adult is ashy-blue on the crown, with a chestnut spot; on the back cinnamon-rufous, the male having few black marks or none, and the female numerous black bars. The wing-coverts in the male are ashy-blue, usually spotted with black; in the female cinnamon barred with black. The tail is bright-chestnut, in the male with a broad subterminal black band, and the outer feathers mostly white with black bars; in the female barred throughout with black. The under parts are white, variously tinted with buff or tawny, in the male with few black spots if any; in the female with many dark-brown stripes. The bill is dark horn-blue; the cere and feet are yellow or orange. It is an elegant and spirited falcon, breeding in hollows of trees, building no nest, but often taking possession of a woodpecker's hole. The female lays five, six, or seven

sub-spheroidal eggs, 1 1/2 inches long by 1 1/4 inches broad, of a buffy or pale-yellowish ground-color, spotted and splashed all over with dark brown. Several similar sparrow-hawks inhabit America, and various other species, of both the genera named, are found in most parts of the world.

2. In *silcer-working*, a small anvil with two horns (one flat-sided and pyramidal, the other conical in form), held between the knees of the workman, for use in flanging, making bezels, etc.

sparrow-owl (spar'ō-oul), *n.* Any one of many small owls of the genus *Glaucidium*. Two occur in western parts of the United States, *G. gnoma*, the gnome-owl, and *G. ferrugineum*. See cut under *Glaucidium*.

sparrow-tail (spar'ō-tāl), *n.* and *a.* **I.** *n.* Something formed like a sparrow's tail; a swallow-tail.

These long-tailed coats [in 1786] . . . were cut away in front to a sparrow-tail behind. *Fairholt, Costume, I. 401.*

II. *a.* Having a long skirt cut away at the sides and squared off at the end: as, a sparrow-tail coat (now usually called swallow-tail).

The lawyers in their blue sparrow-tail coats with brass buttons, which constituted them [about 1840] a kind of professional uniform, moved about with as much animation as uneasy jay-birds. *E. Eggleston, The Graysons, xxvi.*

sparrow-tongue† (spar'ō-tung), *n.* The knot-grass, *Polygonum aviculare*.

sparrowwort (spar'ō-wört), *n.* 1. Any plant of the genus *Passerina*.—2. A South African species of heath, *Erica Passerina*.

sparry (spär'i), *a.* [*< spar² + -y¹*.] Resembling spar; consisting of or abounding with spar; spathose.

As the rude cavern's sparry sides
When part the miner's taper glides. *J. Baillie.*

The rock . . . is a sparry iron ore, which turns reddish brown on exposure to the weather.

J. Croll, Climate and Time, p. 308.

Sparry iron, sparry iron ore, a carbonate of iron: same as *siderite*, 2. The clay-ironstones, or the clay-bands and black-bands of the coal and other formations, belong to this family of iron ores.

sparsate (spär'sät), *a.* [*< spar² + -ate¹*.] In *entom.*, thinly scattered; sparse; as, sparsate punctures. [*Raro.*]

sparse (spärs), *a.* [*< OF. cspars, F. épars = Pg. esparsó, scattered, < L. sparsus, pp. of spargere, scatter, sprinkle (> It. spargere = Sp. esparcir = Pg. espargir, scatter) = see sparge.* Cf. *sparse, v., spersc, disperse.*] 1. Thinly scattered; dispersed round about; existing at considerable intervals; as used of population or the like, not dense. [*Sparse* has been regarded, falsely, as an Americanism, and has been objected to as being exactly equivalent to *scattered*, and therefore unnecessary. As a merely qualifying adjective, however, it is free from the possible ambiguity inherent in the participial form and consequent verbal implication of *scattered.*]

A sparse remnant of yellow leaves falling slowly athwart the dark evergreens. *George Eliot, Middlemarch, ix.*

The sparse populations of new districts.

Sir C. W. Dilke, Probs. of Greater Britain, II. 1.

Halley . . . was one of the first to discuss the possible luminosity of sparse masses of matter in space. *Nineteenth Century, XXVI. 783.*

2. In *bot.*, scattered; placed distantly or irregularly without any apparent or regular order: applied to branches, leaves, peduncles, etc.—

3. In *zool.*, spare or remote, as spots or other markings; scattered irregularly; few or scanty, as hairs or other appendages.

sparse† (spärs), *v. t.* [*< OF. esparsar, esparscer, < L. sparsus, pp. of spargere, scatter: see sparse, a. Cf. spersc, disperse, sparge.*] To disperse; scatter.

As when the hollow flood of aire in Zephires cheeks doth swell,
And *esparseth* all the gathered clouds.

Chapman, Iliad, xi. 263.

He [God] opens his hand wide, he *sparseth* abroad his blessings, and fills all things living with his plenteousness. *Rev. T. Adams, Works, II. 413.*

sparsedly† (spär'sed-li), *adv.* In a scattered manner; dispersedly; sparsely. *Imp. Diet.*

sparsely (spärs'li), *adv.* 1. In a scattered or sparse manner; scantily; widely apart, as regards population, etc.; thinly.

The country between Trinity river and the Mississippi is sparsely settled, containing less than one inhabitant to the square mile. *Olsted, Texas, p. 365.*

2. In *bot.* and *zool.*, so as to be sparse, thin, few, or scanty; sparsely or sparingly. See *sparse, a., 2, 3.*

sparseness (spärs'nes), *n.* The state of being sparse; scattered condition; wide separation: as, sparseness of population.

The sparseness of the wires in the magnet coils and the use of the single cup battery were to me . . . obvious marks of defect. *The Century, XXXV. 931.*

sparsile (spär'sil), *a.* [*< L. sparsilis, < L. sparsus, pp. of spargere, scatter: see sparse.*] Scattered; sparse.—**Sparsile star**, in *astron.*, a star not included in a constellation-figure.

sparsity (spär'sj-ti), *n.* [*< sparse + -ity.*] The state of being sparse or scattered about; freedom from closeness or compactness; relative fewness.

At receptions where the sparsity of the company permits the lady of the house to be seen, she is commonly visible on a sofa, surrounded by visitors in a half-circle. *Howells, Venetian Life, xxi.*

spart (spärt), *n.* [= *F. sparte = Sp. Pg. esparto = It. sparto, < L. spartum, < Gr. σπάρτον, Spanish broom; a particular use of σπάρτον, a rope, cable; cf. σπάρτη, a rope. Cf. esparto.*] 1. A plant of the broom kind; broom.

The nature of spart or Spanish broom. *Holland, tr. of Pliny, bk. xix. (Davies.)*

2. A rush, *Juncus articulatus*, and other species. [*Prov. Eng.*]

spartaite (spär'tä-it), *n.* [*< Sparta (see def.) + -ite².*] A variety of calcite or calcium carbonate, containing some manganese. It is found in Sparta, Sterling Hill, New Jersey.

Spartan (spär'tan), *a.* and *n.* [*< L. Spartanus, < Sparta, < Gr. Σπάρτη, Sparta, Lacedæmon.*] **I.** *a.* 1. Of or pertaining to Sparta or Lacedæmon, the capital of Laconia, or the ancient kingdom of Sparta or Lacedæmon (Laconia), in the Peloponnesus; Lacedæmonian; specifically, belonging to the branch of the ancient Dorian race dominant in Laconia.—2. Noting characteristics distinctive of, or considered as distinctive of, the ancient Spartans.

Lycurgus . . . sent the Poet Thales from Crete to prepare and mollify the Spartan aurliness with his smooth songs and odes, the better to plant among them law and civility. *Milton, Areopagitica.*

Spartan dog, a bloodhound; hence, a cruel or blood-thirsty person.

O Spartan dog,

More fell than angulsh, hunger, or the sea!

Shak., Othello, v. 2. 361.

II. *n.* A native or an inhabitant of Sparta or Laconia; a Lacedæmonian; specifically (as opposed to *Lacedæmonian* in a narrower sense), a member of that branch of the ancient Dorian race which conquered Laconia and established the kingdom of Sparta, celebrated for its military success and prestige, due to the rigid discipline enforced upon all Spartans from early childhood; a Spartiate.

Spartanism (spär'tan-izm), *n.* [*< Spartan + -ism.*] The distinguishing spirit or a characteristic practice or quality of the ancient Spartans. See *Spartan*.

sparteine (spär'tē-in), *n.* [*< Spart(ium) + -e-ine.*] A liquid alkaloid (C₁₅H₂₃N₃) obtained from the common broom, *Cytisus (Spartium) scoparium*. In small doses (.02 to .05 gram) it stimulates the action of the vagus, and is used medicinally in the form of the sulphate in place of digitalis; it acts more quickly than the latter drug, but not as powerfully.

sparterie (spär'ter-i), *n.* [*< F. sparterie, < Sp. esparteria, < esparto, Spanish grass, broom: see esparto, spart.*] In *com.*, a collective name for articles manufactured from esparto and its fiber, as mats, nets, cordage, and ropes.

spart-grass (spär'tgräs), *n.* Same as *spart, 2*; also, a cord-grass, *Spartina stricta*. *Britten and Holland, Eng. Plant Names.*

sparth†, *n.* [*< ME. sparth, sparith, sperthe, an ax, a battle-ax, < Icel. sparthia, a kind of Irish ax; perhaps akin to spear.*] A battle-ax, or perhaps in some cases a mace.

He hath a sparth of twenti pound of wighte.

Chaucer, Knight's Tale, l. 1662.

At his saddle-gerthe was a good steel sperthe,

Full ten pound weight and more.

Scott, Eve of St. John.

Spartiate (spär'ti-ät), *n.* [*F., < L. Spartiates, < Gr. Σπαρτιάτης, a Spartan, < Σπάρτη, Sparta: see Spartan.*] A citizen of Sparta; an ancient Laconian of the Dorian race. See *Spartan*.

Aristotle recognizes only one thousand families of the ancient Spartiates; and their landed possessions, the very groundwork of their state and its discipline, had in great measure passed into the hands of women.

Von Ranke, Univ. Hist. (trans.), p. 360.

Spartina (spär'ti-nä), *n.* [*NL. (Von Schreber, 1789), so called from the tough leaves; < Gr. σπάρτιν, a cord, < σπάρτη, σπάρτον, a rope or cord.*] A genus of grasses, of the tribe *Panicoidæ*. It is characterized by flowers with three glumes and a thread-shaped two-cleft style, grouped in dense one-sided commonly numerous and divergent panicle spikes with the rachis prolonged beyond the uppermost spikelet. There are 7 species, natives mostly of salt-marshes; one, *S. stricta*, is widely dispersed along the shores of America, Europe, and Africa; four others are found in the

United States, one in South America beyond the tropics, and one in the islands of Tristan da Cunha, St. Paul, and Amsterdam. They are rigid reed-like grasses rising from a tufted or creeping base, with scaly rootstocks, very smooth sheaths, and long convolute leaves sometimes flattened at the base. Book-names for the species are *marsh-grass, cord-grass, and salt-grass*; four of them are among the most conspicuous maritime grasses of the United States. *S. polytachya*, the largest species, a stately plant with a broad stiff panicle often of fifty spikes, is known locally on the coast as *creek-thatch* and *creek-stuff*, from its growth in creeks or inlets of salt water, and from its use, when cut, as a cover for stacks of salt-hay and as bedding in stables. (See also *salt reed-grass, under reed-grass.*) *S. cynosuroides* is the cord-grass of fresh-water lakes and rivers, smaller, attaining a height of about 6 feet; it occurs from the Atlantic to the Pacific, and in great quantities along the Mississippi; a superior brown wrapping-paper has been made from it. *S. juncea*, a low turf-forming species with diminutive three- to five-forked inflorescence, sometimes called *rush salt-grass*, covers large tracts of salt-marsh on the Atlantic coast, is recommended for binding wet sands, and yields a tough fiber from its leaves. *S. stricta*, the salt-marsh grass, with very different inflorescence, bears its numerous branches rigidly appressed into a single long and slender erect spike, or sometimes two, when it is called *twist-spike grass*. It is said to be also used as a durable thatch; it is succulent and is eagerly eaten by cattle, imparting to their milk, butter, and flesh a strong rancid flavor locally known as a "thatchy" taste.

Spartium (spär'shi-um), *n.* [*NL. (Linnæus, 1737), < L. spartum, spartum, < Gr. σπάρτον, Spanish broom: see spart, esparto.*] A genus of leguminous plants, of the tribe *Genistæ*, type of the subtribe *Sparticeæ*. It is distinguished from the related genus *Genista* by a somewhat spathaceous calyx with very short teeth, by acuminate and incurved keel-petals, and by a narrower pod. The only species, *S. junceum*, is a native of the Mediterranean region and of the Canary Islands, known as *Spanish broom*, now naturalized in various parts of tropical America and long cultivated in gardens. It is a shrub with numerous long, straight, rush-like branches, which are green, polished, and round—not angular like the similar branches of the Irish broom. They are commonly without leaves; when these are present, they are composed each of a single leaflet and are without stipules. The handsome pea-like flowers form terminal racemes; they are yellow, fragrant, and highly attractive to bees, and are the source of a yellow dye. The branches are used to make baskets and fasten vines in vineyards; they yield by maceration a fiber which is made into cord and thread, and in Italy and Spain into cloth. The seeds in small doses are diuretic and tonic; in large, emetic and cathartic.

spartot (spär'tō), *n.* Same as *esparto*.

spart-torpedo (spär'tör-pē'dō), *n.* A torpedo secured to the end of a spar, rigged outboard of a vessel, and arranged to be fired on coming into contact with another vessel. Sometimes called *pole-torpedo*.

Sparus (spä'rūs), *n.* [*NL. (Linnæus, 1766), < L. sparus, < Gr. σπάρος, a kind of fish, the gilt-head.*] 1. The name-giving genus of *Sparidae*, whose longest-known representative is the gilt-head of Europe: used at first in a very comprehensive sense, embracing many heterogeneous species belonging to a number of modern families, but now restricted to the gilt-head and very closely related species, typical of the family *Sparidae*. See cut under *porgy*.—2. [*l. e.*] A fish of this or some related genus; a spar.

sparve (spärv), *n.* [*A dial. form of sparrow, ult. < AS. spærva: see sparrow.*] A sparrow: still locally applied to the hedge-sparrow, *Accentor modularis*. [*Cornwall, Eng.*]

sparver† (spär'vër), *n.* [*Also esparver; early mod. E. also sparvier, sparviour, sperver, sparrivill; < OF. espervier, espervier, the furniture of a bed; perhaps a transferred use of esparvier, espervier, a sweep-net, which is a fig. use of espervier, a sparrow-hawk: see sparrow, and cf. pavilion, ult. < L. papilio(-n-), a butterfly.*] 1. The canopy of a bed, or the canopy and curtains taken together.

I will that my . . . daughter have the sparver of my bedde.

Sir T. Elyot, The Governour, App. A.

2. In *ber.*, a tent.

sparviour†, *n.* Same as *sparver*.

sparwet, *n.* A Middle English form of *sparrow*.

spary† (spär'i), *a.* [*< spar¹ + -y¹*.] Sparing.

Homer, being otherwise *sparie* enough in speaking of pictures and colours, yet commendeth the ships painted therewith.

Holland, tr. of Pliny, xxxiii. 7.

spasm (spazm), *n.* [*Early mod. E. spasme; < F. spasme = Pr. espasme = Sp. Pg. espasmo = It. spasimo, spasmo, < L. spasmus, < Gr. σπασμός, also σπάσμα, a spasm, < σπᾶν, draw, pull, pluck, tear, rend. Cf. span¹, spacc, from the same ult. root.*] 1. Excessive muscular contraction. When this is persistent, it is called *tonic spasm*; when it consists of alternating contractions and relaxations, it is called *clonic spasm*. A spasm of one side of the body is called *hemispasm*; a spasm of some particular part, as one arm, or one side of the face, is called a *monospasm*.

2. In general, any sudden transitory movement of a convulsive character, voluntary or involuntary; an abnormally energetic action or phase of feeling; a wrenching strain or effort:

as, a *spasm* of industry, of grief, of fright, etc.; a *spasm* of pain or of coughing.

The *spasms* of Nature are centuries and ages, and will tax the faith of short-lived men. Slowly, slowly the Avenger comes, but come surely. Emerson, Fugitive Slave Law.

Bronchial spasm, the spasmodic contraction of the muscular coat of the bronchial tubes which is the essential element of asthma. — **Carpedal, clonic, cynic, histrionic spasm**. See the adjectives. — **Functional spasm**, a general term for the nervous disorders of artisans and writers, as writers' cramp, etc. Usually called *occupation neurosis*. — **Habit spasm**, a trick of winking, jerking the head, sudden brief grinning, making a sudden short vocal noise, running out the tongue, and similar acts of half-voluntary aspect, occurring at intervals long or short. Also called *habit chorea*. — **Inspiratory spasm**, a spasmodic contraction of all or nearly all the inspiratory muscles. — **Mobile spasm**, tonic spasm of varying intensity in the various muscles of a part, causing slow, irregular movements of the part, especially conspicuous in the hands. Sometimes the movements are quick. In rare cases it comes on without preceding hemiplegia; it may then, as in other cases, be called *athetosis*. Also called, when following hemiplegia, *spastic hemiplegia* and *post-hemiplegic chorea*. — **Nictitating spasm**. See *nictitate*. — **Nodding spasm**. Same as *salaam convulsion* (which see, under *salaam*). — **Retrocolic spasm**. See *retrocolic*. — **Saltatorial spasm**, a form of clonic spasm of the legs, coming on when the patient attempts to walk, causing jumping movements. — **Spasm of accommodation**, spasm of the ciliary muscle, producing accommodation for near objects. — **Spasm of the chest**, angina pectoris. — **Spasm of the glottis**, spasmodic contraction of the laryngeal muscles such as to close the glottis. See *child-crowing*, and *laryngismus stridulus* (under *laryngismus*). — **Tetanic spasm**. Same as *tonic spasm*.

spasmodic (spaz-mat'ik), *a.* [= F. *spasmodique* = Sp. *espasmódico*, < ML. *spasmodicus*, < Gr. *σπασμῶδης* (-), a spasm; see *spasm*.] Same as *spasmodic*.

spasmodical (spaz-mat'i-kal), *a.* [*< spasmodic + -al.*] Same as *spasmodic*.

The Ligaments and Sinews of my Love to you have been so strong that they were never yet subject to such *spasmodical* Shriekings and Convulsions.

Howell, Letters, II. 20.

spasmatomancy (spaz'mā-tō-man-si), *n.* [*< Gr. σπασμα(τ-), a spasm, + μαντεία, divination.*] Divination from spasmodic or involuntary movements, as of the muscles, features, or limbs.

The treatises [on physiognomy] also contain occasional digressions on onychomancy, . . . *spasmatomancy*, etc. Encyc. Brit., XIX. 4.

spasmodic (spaz-mod'ik), *a. and n.* [= F. *spasmodique* = Sp. *espasmódico* = Pg. *espasmódico* = It. *spasmodico*, < NL. **spasmodicus*, < Gr. *σπασμῶδης*, *σπασματῶδης*, convulsive, spasmodic, < *σπασμός*, *σπασμα(τ-)*, a spasm, + *εἶδος*, form.] **I. a.** 1. Pertaining to, of the nature of, or characterized by spasm; affected by spasm or spasms; convulsive; as, *spasmodic* movements; *spasmodic* asthma; a *spasmodic* person. — 2. Attended by or manifesting procedure by fits and starts; jerky; overstrained; high-strung; rhapsodical; as, *spasmodic* action or efforts; *spasmodic* utterance or literature. — **Spasmodic asthma**, true asthma caused by spasm of the bronchial tubes, as distinguished from other forms of paroxysmal dyspnea, as from heart disease. — **Spasmodic cholera**, Asiatic cholera with severe cramps. — **Spasmodic croup**. See *croup*. — **Spasmodic school**, a group of British authors of the middle of the nineteenth century, including Philip Bailey, George Gillman, and Alexander Smith, whose writings were considered to be distinguished by an overstrained and unnatural style. The name, however, properly has a much more extensive scope, being exemplified more or less in nearly all times and countries, both in literature and in art.

The so-called *spasmodic school* of poetry, whose peculiarities first gained for it a haughty reputation, and then, having suffered under closer critical examination, it almost as speedily dropped out of mind again.

Encyc. Brit., XXII. 172.

Spasmodic stricture, a stricture, as of the urethra, vagina, or rectum, caused by spasmodic muscular contraction, and not permanent, or involving any organic lesion. — **Spasmodic tabes**, spastic paraplegia, or lateral sclerosis.

II. n. Same as *antispasmodic*. [Rare.]

spasmodical (spaz-mod'i-kal), *a.* [*< spasmodic + -al.*] Same as *spasmodic*.

spasmodically (spaz-mod'i-kal-i), *adv.* In a spasmodic manner; by fits and starts; by spasmodic action or procedure.

Gradual oscillations of the land are, in the long run, of far greater importance in the economy of nature than those abrupt movements which occur *spasmodically*.

Huxley, Physiology, p. 205.

spasmodist (spaz'mō-dist), *n.* [*< spasmodic + -ist.*] One who acts spasmodically; a person whose work is of a spasmodic character, or marked by an overstrained and unnatural manner. [Rare.]

De Meyer and the rest of the *spasmodists* [in music]. Poe, Marginalia, xxxvii. (Davies.)

spasmology (spas-mol'ō-jī), *n.* [*< Gr. σπασμός, a spasm, + -λογία, < λέγειν, speak; see -ology.*] In *pathol.*, scientific knowledge of spasms.

spasmodoxin (spas-mō-tok'sin), *n.* [*< Gr. σπασμός, a spasm, + E. toxin.*] A toxin of unknown

composition, obtained by Brieger in 1887 from cultures of bacillus tetani.

spasmus (spas'mus), *n.* [L.: see *spasm*.] Spasm. — **Spasmus nutans**. Same as *salaam convulsion* (which see, under *salaam*).

spastic (spas'tik), *a.* [*< Gr. σπαστικός, drawing, pulling, stretching, < σπᾶν, draw, pull; see spasm.*] 1. In *med.*, pertaining or relating to spasm; spasmodic; as, *spastic* contractions; *spastic* remedies. — 2. In *zool.*, convulsive, as an infusorian; or of pertaining to the *Spastica*. — **Spastic albuminuria**, albuminuria dependent upon a convulsive attack. — **Spastic anemia**, local anemia or ischemia from spastic contraction of the arteries of the part. — **Spastic hemiplegia**, mobile spasm following hemiplegia. See under *spasm*. — **Spastic infantile paralysis**. See *paralysis*. — **Spastic paralysis**, paralysis with muscular rigidity and increase of reflexes. — **Spastic spinal paralysis**, spastic pseudoparalysis, spastic pseudoparesis. See *paralysis*.

Spastica (spas'ti-kā), *n. pl.* [NL., < Gr. *σπαστικός*, drawing, pulling, stretching; see *spastic*.] In Perty's system of classification, a division of ciliate infusorians, containing those which contract and change form with a jerk. There were 4 families — *Urceolarina*, *Ophrydina*, *Vorticellina*, and *Vaginifera*.

spastically (spas'ti-kal-i), *adv.* In a spastic manner.

spasticity (spas-tis'i-ti), *n.* [*< spastic + -ity.*] 1. A state of spasm. — 2. Tendency to or capability of suffering spasm.

spat (spat), *n.* [A var. of *spot*.] A spot; stain; place. [Scotch.]

spat¹ (spat), *v. t.*; pret. and pp. *spatted*, ppr. *spatting*. [A var. of *spot*, prob. in part < D. *spatten*, spot; see *spot*. Cf. *spatter*.] To spatter; defile.

Thy mind is spotted, *spatted*, apilt; Thy soule is soyled with sinne. Kendall, Flowers of Epigrammes (1577). (Nares.)

spat² (spat), *n.* [Prob., like the similar D. *spat*, a speck, spot, = Sw. *spott*, spittle, etc. (see *spot*), from the root of *spit*² (cf. *spit*¹); see *spit*².] The spawn of shell-fish; specifically, the spawn of the oyster; also, a young oyster, or young oysters collectively, up to about the time of their becoming set, or fixed to some support. See *spawn*, *n.*, 2.

Oyster *spat* may be reared from artificially fertilized eggs. The American, VII. 75.

spat² (spat), *v. t.*; pret. and pp. *spatted*, ppr. *spatting*. [*< spat*¹, *n.*] **I. intrans.** To spawn, as an oyster; shed spat.

The surfaces upon which *spatting* occurs must be kept as free as possible from sediment and organic growth. Science, VI. 465.

II. trans. To shed or emit (spawn), as an oyster.

spat³ (spat), *n.* [In the sense 'blow' (def. 1), cf. *spot*; in part prob. imitative, like *pat*.] 1. A light blow or slap. [Local.] — 2. A large drop; a spatter: as, two or three *spats* of rain fell. — 3. A petty contest; a little quarrel or dissension. [U. S.]

They was pretty apt to have *spats*. H. B. Stone, Oldtown, p. 33.

spat³ (spat), *v. t.*; pret. and pp. *spatted*, ppr. *spatting*. [*< spat*³, *n.*] **I. trans.** To give a light blow to, especially with the flat of the hand; strike lightly; slap: as, to *spat* dough; to *spat* one's hands together.

The little Isabel leaped up and down, *spatting* her hands. S. Judd, Margaret.

II. intrans. To engage in a trivial quarrel or dispute; have a petty contest. [U. S.]

spat⁴ (spat). A preterit of *spit*².

spat⁵ (spat), *n.* [Also *spati*; usually or only in pl. *spats*, *spattis*; abbr. of *spatterdashes*.] A gaiter or legging. [Scotland and North of England.]

Cloth gaiters seem to have revived, after about thirty years of disuse, and are now called *spats*. N. and Q., 7th ser., VI. 87.

A pair of black *spats* covering broad flat feet. N. Macleod, The Starling, III.

Spatangida (spā-tan'ji-dā), *n. pl.* [NL., < *Spatangus* + *-ida*.] The spatangoid sea-urchins, as distinguished from *Clypeastrida*. See *Spatangoida*.

Spatangidæ (spā-tan'ji-dē), *n. pl.* [NL., < *Spatangus* + *-idæ*.] A family of irregular sea-urchins, typified by the genus *Spatangus*; the heart-urchins. The mouth is eccentric, transverse, or reniform, and without dentary apparatus; there are petaloid ambulacra, of which the anterior one is unpaired; semite or fascioles are always present; and the figure is oval or cordate. This is the leading family of the order, divided mainly by the characters of the ambulacra and semite into several subfamilies (some of which rank as separate families with some authors), as *Ananchytinæ*,

Brissinæ, *Leskutinæ*, and others. See cuts under *Spatangoida* and *Spatangus*, with others there noted. Also called *Brissidæ*.

Spatangina (spat-an'jī-nā), *n. pl.* [NL., < *Spatangus* + *-ina*.] 1. The spatangoid sea-urchins, as an order of petalostichous echinoids contrasted with *Clypeastrina*. — 2. Same as *Spatanginæ*.

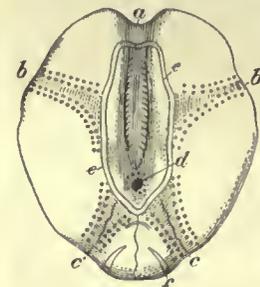

Spatanginæ (spat-an'jī-nē), *n. pl.* [NL., < *Spatangus* + *-inæ*.] One of several subfamilies of *Spatangidæ*, including the genus *Spatangus* and closely related forms, as *Lavenia*, *Breyinia*, etc.

spatangite (spā-tan'jit), *n.* [*< Spatangus* + *-ite*.] A fossil spatangoid. See *Dysasteridæ*, and cut under *Ananchytes*.

spatangoid (spā-tang'goid), *a. and n.* [*< Spatangus* + *-oid*.] **I. a.** Resembling a heart-urchin; related to *Spatangus*; of or pertaining to the *Spatangidæ* in a broad sense.

II. n. A spatangoid sea-urchin; a heart-urchin.

Spatangoida, Spatangoidea (spat-ang-goi'dā, -dē-ā), *n. pl.* [NL.: see *spatangoid*.] The *Spatangidæ*, in a broad sense, as an order of petalostichous sea-urchins; synonymous in some uses with *Petalostieha*, but usually restricted to exclude the clypeastroids or flat sea-urchins; then also called *Spatangida* and *Spatangina*. The forms are numerous; most of them fall in the family *Spatangidæ* as usually limited, from which the *Cassidulidæ* are distinguished by the absence of semite and other approaches to the regular sea-urchin. The form of the spatangoid is various, and only a part of them have a cordate figure. Some are quite elongate, and may even bear a sort of beak or rostrum, as in the genus *Pourtalesia*. The tendency is away from radialism and toward a sort of bilateral symmetry, as evidenced by the disposition of five ambulacra in two groups, an anterior trivium — under the odd ambulacrum of which is the mouth — and a posterior bivium, in relation

Amphidotus cordatus (or Echinocardium cordatum), one of the Spatangoida, viewed from above.

a, anterior ambulacrum, forming with b, anterolateral ambulacra, the trivium; c, e, two posterolateral ambulacra, forming the bivium; d, madreporic tubercle surrounded by genital pores; e, intrapetalous semite or fasciole; f, circumanal semite. with which is the anus. The odd anterior ambulacrum often aborts, leaving apparently but four ambulacra on the upper surface; in other cases it is disproportionately enlarged. The ambulacra are always petaloid; semite are not recognized outside this group, and occur nearly throughout it (but not in *Cassidulidæ* and the fossil *Dysasteridæ*); the spines are very variable, and few or many, but always slender or fine, sometimes like hairs of great length. The genital and ocular plates are centric; there are no Polian vesicles, and four kinds of pedicels or tube-feet occur, of which the semite are always different from the two or three kinds of ambulacral feet. See cuts under *Ananchytes*, *Echinocardium*, *petalostichous*, *semite*, and *Spatangus*.

Spatangus (spā-tang'gus), *n.* [NL., < Gr. *σπατάγγης*, a sea-urchin.] 1. The representative genus of the family *Spatangidæ*, and a type form of the irregular sea-urchins called *Spatangoida*. — 2. [l. c.] A species of this genus: as, the violet *spatangus*, *S. purpureus*.

Violet Spatangus (S. purpureus). One half shown with its spines removed.

spatch-cock (spach'kok), *n.* [Usually supposed to stand for **despatch-cock*, meaning 'a cock quickly done'; but such a formation is irregular, and no record of it exists. There is prob. some confusion with *spitchecock*, q. v.] A fowl killed and immediately broiled, as for some sudden occasion. [Colloq., Eng.]

spate (spāt), *n.* [Also *spait*, *speat*; appar. < fr. *speid*, a great river-flood.] A natural out-pour of water; a flood; specifically, a sudden flood or freshet, as from a swollen river or lake. [Originally Scotch.]

Down the water wif' speed she rins, While tears in *spaits* fa' faat frse her eie. Jock o' the Side (Child's Ballads, VI. 82).

Mr. Scrope held that while spawning-beds are swept away by *spates* on the Tweed.

The Avon . . . running yellow in *spate*, with the recent heavy rains. W. Black, House-boat, xix.

spate-bonet, *n.* Same as *spade-bone*.

Some afterwards set up on a window a painted Mastiff-dog gnawing the *spate-bone* of a shoulder of mutton. Fuller, Ch. Hist., V. I. 32. (Davies.)

spatha (spā'thā), *n.*; pl. *spathæ* (-thē). [*L. spatha*, *Gr. σπάθη*, a broad flat blade, a broadsword: see *spathe*.] 1. A broadsword, thin, pointed, and double-edged, such as was used by the Franks and kindred peoples.

The British swords, called *spathæ*, were large, long, and heavy. *Encyc. Brit.*, IX. 69.

2. In *bot.*, same as *spathe*.

spathaceous (spā-thā'shius), *a.* [*Gr. spathe* + *-aceous*.] In *bot.*, spathe-bearing; furnished with or of the nature of a spathe.

spathal (spā'thal), *a.* [*Gr. spathe* + *-al*.] In *bot.*, inclosed in or furnished with a spathe: as, *spathal* flowers.

spathe (spā'thē), *n.* [*L. spatha*, *Gr. σπάθη*, a broad flat blade, a broadsword, a broad rib, the shoulder-blade, the stem of a leaf, the spathe of a flower, a spatula. Hence ult. (*Gr.*) *E. spade*¹, *spade*², *spatula*, *spatule*, *spatlic*², *spaddle*, *spittle*³, etc.] 1. In *bot.*, a peculiar often large and colored bract, or pair of bracts, which subtend or envelop a spadix, as in palms and arums. The name is also given to the peculiar several-leaved involucre of iris and allied plants. See *spadix*, 1, and cuts under *Araceæ*, *Indian turnip* (under *Indian*), *Monstera*, *Peltandra*, and *Symplocarpus*.

2. In *zool.*, some spatulate or spoon-shaped part.

spathebill (spā'th'bil), *n.* The spoon-billed sandpiper, *Eurynorhynchus pygmaeus*. *G. Cuvier* (trans.). See cut under *Eurynorhynchus*.

spathed (spā'thd), *a.* [*Gr. spathe* + *-ed*.] In *bot.*, surrounded or furnished with a spathe; spatheaceous.

Spathogaster (spath-ē-gas'tēr), *n.* [*NL.* (*Hartig*, 1840), *Gr. σπάθη*, a blade, + *γαστήρ*, the stomach.] 1. A spurious genus of hymenopterous gall-insects, containing dimorphic forms of *Neuroterus*, the name being retained as distinctive of such forms.—2. A genus of syrphid flies. *Schiner*, 1868. Also *Spatigaster* (*Schiner*, 1862), *Spathogaster* (*Loew*, 1843), *Spazigaster* and *Spazogaster* (*Rondani*, 1843).

spathegastic (spath-ē-gas'trik), *a.* [*Gr. spathe* + *-ic*.] Pertaining to *Spathogaster* (sense 1): as, a *spathegastic* form.

Spathelia (spā-thē'li-ā), *n.* [*NL.* (*Linnaeus*, 1752), perhaps so called from its resemblance to a palm-tree; *Gr. σπάθη*, a blade, *spathe*, petiole of a palm-tree: see *spathe*.] A genus of polypetalous trees, of the order *Simarubaceæ* and tribe *Pieramnieæ*. It is characterized by polygamous flowers without the disk usually present in the order, five stamens alternate to the petals, and a three-angled ovary with two pendulous ovules in each of its three cells. There are 3 species, natives of the West Indies, extending perhaps into Mexico. They are lofty and handsome trees with an erect unbranched trunk, destitute of the bitter principle which pervades *Pieramnia*, the next related genus, and many others of the order, and in many respects, as in the ovary, resembling *Bonellia*, the frankincense-tree, of the order *Burseraceæ*. They bear odd-pluminate alternate leaves, composed of numerous linear-oblong or sickle-shaped leaflets with a toothed or gland-bearing margin, and cymose clusters of red short-pediced flowers, disposed in elongated terminal panicles. The fruit is a somewhat elliptical three-angled and three-winged drupe, with a three-celled and three-seeded stone perforated with resin-bearing canals. *S. simplex* is the mountain-pride or mountain-green of the West Indies, a handsome tree with slender trunk rising from 20 to 50 feet, its leaves and its powdery inflorescence each several feet long.

spathella (spā-thel'ā), *n.* [*NL.*, dim. of *L. spatha*, a blade, *NL.* a spathe: see *spathe*.] In *bot.*: (a) A glume in grasses. (b) See *spathilla*.

spathic (spā'th'ik), *a.* [*Gr. spathe*, spar (see *spad*), + *-ic*.] In *mineral.*, having an even lamellar or flatly foliated structure.—**Spathic iron**, *spathic iron ore*, carbonate of iron: same as *siderite*, 2.

spathiform (spā'th'i-fōrm), *a.* [*Gr. spathe*, spar, + *L. forma*, form.] Resembling spar in form: as, the ocherous and *spathiform* varieties of uranite.

spathilla (spā-thil'ā), *n.*; pl. *spathillæ* (-ē). [*NL.*, dim. of *spatha*, a spathe: see *spathe*. Cf. *spathella*.] In *bot.*, a secondary or diminutive spathe in a spathaceous inflorescence, as in palms. Also, sometimes, *spathella*.

When the spadix is compound or branching, as in Palms, there are smaller spatheæ, surrounding separate parts of the inflorescence, to which the name *spathellæ* has sometimes been given. *Encyc. Brit.*, IV. 120.

spathing (spā'thing), *n.* Same as *spaying*.

spathiopyrite (spā'th'i-ō-pi'rīt), *n.* [*Gr. σπάθιον*, dim. of *σπάθη*, a broad blade, + *E. pyrite*.] Same as *safflorite*.

spathose¹ (spā'thōs), *a.* [*Gr. spathe* + *-ose*.] In *bot.*, relating to or formed like a spathe; spatheaceous; *spathal*.

spathose² (spā'thōs), *a.* [*Gr. spathe*, spar (see *spathe*), + *-ose*.] In *mineral.*, sparry; of the

nature of spar; occurring in broad plates or lamellæ; foliated in texture.—**Spathose iron**, *spathic iron*.

spathous (spā'thus), *a.* [*Gr. spathe* + *-ous*.] In *bot.*, same as *spathose*¹.

spatulate (spā'thū-lāt), *a.* Same as *spatulate*.

Spathulea (spā-thū'lē-ā), *n.* Same as *Spatula*, 3.

Spathura (spā-thū'rā), *n.* [*NL.* (*Gould*, 1850), *Gr. σπάθη*, a blade, + *οὐρά*, a tail.] A remarkable genus of *Trochilidæ*, containing hummingbirds with the lateral tail-feathers long-exsert-

Racket-tailed Humming-bird (*Spathura underwoodi*).

ed, narrowed, and then dilated into a spatule or racket at the end, and with conspicuous leg-muffs. There are 4 or 5 species, as *S. underwoodi*, also called *Steganurus spatuligera*.

spatial (spā'shal), *a.* [*Also spacial*; *L. spatium*, space: see *space*.] Of, pertaining to, or relating to space; existing in or connected with space.

We have an intuition of objects in space: that is, we contemplate objects as made up of spatial parts, and apprehend their spatial relations by the same act by which we apprehend the objects themselves. *Whewell*, *Philos. of Inductive Sciences*, I. p. xx.

The ascertaining of a fixed spatial order among objects supposes that certain objects are at rest or occupy the same position. *J. Sully*, *Outlines of Psychol.*, p. 160.

To analyze the United States of America as a spatial extent. *H. N. Day*, *Logic*, p. 175.

spatiality (spā-shi-al'i-ti), *n.* [*Also spaciality*; *Gr. spatia* + *-ity*.] Spatial character; extension.

So far, all we have established or sought to establish is the existence of the vague form or quale of spatiality as an inseparable element bound up with the other qualitative peculiarities of each and every one of our sensations. *W. James*, *Mind*, XII. 10.

spatially (spā'shal-i), *adv.* Having reference to or as regards space. Also written *spacially*.

Usually we have more trouble to discriminate the quality of an impression than to fix it spatially. *J. Ward*, *Encyc. Brit.*, XX. 62.

Objects of different sense-organs, experienced together, do not in the first instance appear either inside or alongside or far outside of each other, neither spatially continuous nor discontinuous, in any definite sense of these words. *W. James*, *Prin. of Psychol.*, II. 181.

spatiatē (spā'shi-āt), *v. i.* [*L. spatiatius*, pp. of *spatiari* (> *G. spazieren*), walk about, go, proceed, *Gr. spatium*, room, space: see *space*. Cf. *expatiate*.] To rove; ramble; expatiate.

Confined to a narrow chamber, he could *spatiatē* at large through the whole universe. *Bentley*.

spatilomancy (spā-til'ō-man-si), *n.* [*Gr. σπατίλη*, excrement, + *μαντεία*, divination.] Divination by means of animal excrements and refuse.

spatious, *a.* An obsolete spelling of *spacious*.

spatt, *n.* See *spat*⁵.

spatter (spat'er), *v.* [*Freq. of spat*¹, or, with variation, of *spot*: see *spat*¹, *spot*.] 1. *trans.* I. To scatter or throw about carelessly, as some fluid or semi-fluid substance; dash or splash so as to fall in spreading drops or small quantities: as, to *spatter* water or mud over a person; to *spatter* oaths or calumnies.

spatterdash (spat'er-dash), *n.* [*Gr. spatte* + *dash*.] A covering for the legs, used to protect the stockings, trousers, etc., from mud and wear. In modern military uniform the name is applied to several kinds of gaiters, and to the water-proof leggings or shields to the trousers of some French mounted troops. Also *spatterdash*.

Here 'a a fellow made for a soldier: there 'a a leg for a *spatterdash*, with an eye like the king of Prussia. *Sheridan* (?), *The Camp*, l. 2.

spatter-dock (spat'er-dok), *n.* The yellow pond-lily, *Nymphaea (Nuphar) advena*; also extended to other species of the genus. See *Nymphaea*¹, 1, and *pond-lily*, 1. [*U. S.*]

spatterwork (spat'er-wèrk), *n.* A method of producing a figure or design upon a surface of any kind by spattering coloring matter upon the exposed parts of it; any work or object, or objects collectively, showing an effect so produced.

spattle¹ (spat'i), *n.* [*ME. spattle*, *spettle*, *spatel*, *spotil*, *spotele*, later *spatjill* (= *OFries. spedel*, *spella*), *AS. spāt*, spittle, *Gr. σπάτην*, spit: see *spit*². Cf. *spittle*¹.] Spittle. *Bp. Bale*.

He *spette* in to erthe, and made clay of the *spotte*. *Wyclif*, *John* ix. 6.

spattle² (spat'l), *n.* [Formerly also *spatule*; *OF. spatule*, *espature*, *F. spatule* = *Sp. espátula* = *Pg. spatula* = *It. spatola*, *L. spatula*, *spatula*, a blade, spatula: see *spatula*. Doublet of *spatula*, *spittle*³.] 1. A flat blade for stirring, mixing, or molding plastic powdered or liquid substances; a spatula.—2. Specifically, in *pottery*, a tool for mottling a molded article with coloring matter.

spatting-machine (spat'ling-mā-shēn'), *n.* A machine, consisting of a reservoir with sieves through which the liquid is caused to fall to divide it into spray, for sprinkling a colored glaze to form party-colored ware.

spatula (spat'ū-lā), *n.* [*L. spatula*, also *spatula*, dim. of *spatha*, *Gr. σπάθη*, a broad blade, a spatula, a paddle: see *spade*¹, *spathe*. Cf. *spatule*, *spittle*², *spittle*³.] 1. A broad flat blade or strip of metal or wood, with unsharpened edges and a commonly rounded outer end (which may be spoon-shaped), and a handle: used for spreading, smoothing, scraping up, or stirring substances, comminuting powders, etc. Spatulas are usually set in handles like those of table-knives, and are of many shapes, sizes, and materials. Those used by druggists, painters, etc., are comparatively long and narrow, straight, and made of more or less flexible steel. Freaco-painters use a trowel-shaped or spoon-shaped spatula for spreading wax or mortar upon the surface which is to receive the painting.

2. [*cap.*] [*NL.* (*Boie*, 1822).] A genus of *Anatinae*, having the bill much longer than the head or tarsus, twice as wide at the end as at the base, there broadly rounded and spoon-shaped, with narrow prominent nail and numerous protrusive lamellæ; the shoveler-ducks or souchets. The tail is short and pointed, of fourteen feathers. *S. clypeata* is the common shoveler (see cut under *shoveler*), *S. rhynchotis* is Australian, *S. platalea* is South American, *S. capensis* is South African, and *S. variegata* inhabits New Zealand. Also *Rhynchaspis*, *Clypeata*, and *Spathulea*.—**Spatula mallei**, in *anat.*, the flattened extremity of the handle of the mallens attached to the umbo of the membrana tympani. See cut under *tympanic*.

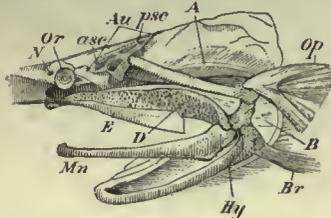

spatulamancy (spat'ū-lā-man-si), *n.* [*Prop. "spatulomancy"*, *L. spatula*, a blade, + *μαντεία*, divination.] A method of divination by a sheep's shoulder-blade.

Spatulamancy (called in Scotland *Slinneanch* [divination] by reading the spal bone or the blade bone of a shoulder of mutton well scraped.

Ribton-Turner, *Vagrants and Vagrancy*, p. 78.

spatular (spat'ū-lār), *a.* [*< spatula + -ar3.*] Like a spatula in form; spatulate.

Spatularia (spat'ū-lā'ri-ā), *n.* [NL. (Shaw), *< L. spatula*, a spatula: see *spatula*.] In *ichth.*,

Skull of *Spatularia*, with the long beak removed, the anterior (*asc*) and posterior (*psc*) semicircular canals exposed; *Au*, auditory chamber; *Or*, orbit of eye; *N*, nasal sac; *Hy*, hyoidean apparatus; *Br*, representatives of branchiostegial rays; *Op*, operculum; *Mn*, mandible; *A*, *B*, suspensorium; *D*, palatoquadrate cartilage; *E*, maxilla.

a genus of ganoid fishes: same as *Polyodon*, I. See also cut under *paddle-fish*.

Spatulariidae (spat'ū-lā-ri-i-dē), *n. pl.* [NL., *< Spatularia + -idae*.] In *ichth.*, a family of ganoid fishes, named from the genus *Spatularia*: same as *Polyodontidae*. Also *Spatularidae*. See cuts under *paddle-fish* and *Psephurus*.

spatulate (spat'ū-lāt), *a.* [*< NL. spatulatus*, *< spatula*, a spatula: see *spatula*.] Shaped like a spatula; in *zool.* and *anat.*, spoon-shaped, or rounded more or less like the outlines of a spoon; spatuliform; in *bot.*, shaped like a spatula; resembling a spatula in shape, being oblong or rounded with a long narrow attenuate base: as, a *spatulate* leaf, petal, or other flattened organ. Also *spathulate*. See cuts under *Eurynorhynchus*, *paddle-fish*, *Parotia*, *Prioniturus*, *Spathura*, and *shoreler*².

Spatulate Leaves of *Callitriche heterophylla*.

The large basal joint of the sixth appendage [of *Limulus*] is almost devoid of spines, and bears a curved, *spatulate* process.

Huxley, *Anat. Invert.*, p. 229.

spatulation (spat'ū-lā-shon), *n.* [*< spatulate + -ion*.] Spatulate shape or formation; appearance as of a spatula; spoon-shaped figure or arrangement. See cuts noted under *spatulate*.

The lateral [tail]-feathers [of some humming-birds] may suddenly enlarge into a terminal *spatulation*, as in the forms known as "Racquet-tails." *Encyc. Brit.*, XII. 359.

spatule (spat'ūl), *n.* [*< F. spatule*, *< L. spatula*, a blade, spatula: see *spatula*.] 1†. Same as *spatula*².

Stirring it thrice a day with a *spatule*.

Holland, tr. of *Pliny*, xxiii. 17.

2. In *zool.*, a spatulate formation or spatuliform part; specifically, in *ornith.*, the racket at the end of the tail-feathers, as of the motmots or sawbills and certain parakeets and humming-birds. See cuts under *Momotus*, *Prioniturus*, and *Spathura*.

spatuliform (spat'ū-li-fōrm), *a.* [*< L. spatula*, a blade, spatula, + *forma*, form.] Spatulate in form; spoon-shaped.

spatuligerous (spat'ū-hij'ē-rus), *a.* [*< L. spatula*, a blade, spatula, + *gerere*, carry.] In *zool.*, bearing or provided with a spatule or racket.

spaud, *v.* A dialectal form of *spald*¹.

E. *spawne*; *< ME. spawnen*, *spawen*, *< OF. espandre*, *espandre*, also *espandir*, shed, spill, pour out, spawn, same as *espanir*, blow, bloom as a flower, lit. expand, *F. épandre*, spread, = It. *spandere*, spill, scatter, shed, *< L. expandere*, spread out, shed abroad: see *expand*. Cf. *spannisking*.] I. *trans.* To produce or lay (eggs): said of a female fish, and by extension of other animals; hence, to generate. It is sometimes applied, in contempt, to human beings.

What practices such principles as these may *spawn*, when they are laid out to the sun, you may determine.

Swift.

II. *intrans.* 1. To produce or lay eggs of the kinds called *spawen*, as a fish, frog, mollusk, or crustacean; by extension, to produce offspring: said of other animals, and, in contempt, of human beings.

The Trout usually *spawns* about October or November.

I. Walton, *Complete Angler*, p. 75.

2. To issue, as the eggs or young of a fish: by extension applied to other animals, and to human beings, in contempt.

The beguiling charms of distinctions and magnificent subtleties have *spawned* into prodigious monsters, and the birth of error.

Erelyn, *True Religion*, II. 176.

It is so ill a quality, and the mother of so many ill ones that *spawn* from it, that a child should be brought up in the greatest abhorrence of it.

Locke.

spawn (spân), *n.* and *a.* [Early mod. E. *spawne*; *< spawen*, *v.*] I. *n.* 1. The eggs or ova of various oviparous animals, as amphibians, fishes, mollusks, crustaceans, etc., when small and numerous, or extruded in more or less coherent masses; female roe. The number of individual eggs in *spawen* varies much, and is sometimes prodigiously great: thus, it has been estimated that the spawn of a single codfish may contain several million eggs. In oviparous fishes the eggs are spawned directly into the water, fecundated as they flow out, or afterward, by the milt of the male, and left to hatch by themselves. Fish-spawn is also easily procured by the process of stripping the female, and artificially fecundated by the same process applied to the male, the spawn and milt being mixed together in the water of a vessel made for the purpose. In ovoviviparous fishes the spawn is impregnated in the body of the female, as is usual with the eggs of higher animals. Frogs and lizards lay a quantity of spawn consisting of a jelly-like mass in which the eggs are embedded, and it is fertilized as it flows forth. Some shell-fish extrude spawn in firm gelatinous masses, as the common sea-snail, *Notica heros*. (See *sand-saucer*.) The mass of eggs (called *coral* or *berry*) that a lobster carries under her tail is the spawn or roe of that crustacean; and in various other crustaceans and some fishes the spawn is carried to hatchling in special brood-pouches (see *opossum-shrimp*), which are sometimes in the male instead of the female, as in the sea-horse (see *Hippocampidae*). Anadromous fishes are those which leave the sea and run up rivers to spawn; a few fishes are catadromous, or the converse of this. The name *spawen* is seldom or never given to the eggs of scaly reptiles, birds, or mammals; but the term has sometimes included milt. See *spawning*.

2. The spat of the oyster, from the time of the discharge of the egg until the shell is visible and the creature has become attached.—3. Offspring of fish; very small fish; fry.—4.

Offspring in general; a swarming brood: applied, mostly in contempt, to human beings.

To Sem the East, to Cham the South, the West 'to Iapheth falls; their general scopes express: Their fruitful *Spawen* did all the World supply.

Sylvester, tr. of *Du Bartas's Weeks*, ii, The Colonies, Arg.

Howe'er that common *spawen* of ignorance, Our fry of writers, may beslime his fame.

B. Jonson, *Poetaster*, Ind.

5. In *bot.*, the mycelium of fungi; the white fibrous matter forming the matrix from which fungi are produced. Certain species of edible fungi, as *Agaricus campestris*, are propagated artificially by sowing the spaw in prepared beds of horse-droppings and sand.

By this time these will be one mass of natural *spawen*, having a grey mouldy and thready appearance, and a smell like that of mushrooms.

Cooke and Berkeley, *Fungi*, p. 257.

The agarics have an abundant mycelium, known to gardeners as the *spawen*, consisting of white, cottony filaments, which spread in every direction through the soil.

Amer. Cyc., XII. 70.

To shoot spawn. See *shoot*.

II. *a.* Containing spawn; spawning, or about to spawn; ripe, as a fish.

spawn-brick (spân'brik), *n.* In *bot.*, brick-shaped masses of mold or compressed horse-droppings fermented with mushroom-spawn, and used for the artificial sowing or stocking of a mushroom-bed.

The [mushroom]-bed will be ready for spawning, which consists of inserting small pieces of *spawn bricks* into the sloping side of the bed, about 6 inches asunder.

Encyc. Brit., XII. 284.

spawn-eater (spân'ē'tēr), *n.* A spawn-eating fish, or other animal which habitually feeds upon spawn, to the detriment of the fisheries or of fish-culture; especially, a cyprinoid fish,

Spawn-eater (*Notropis hudsonius*).

Notropis hudsonius, found in streams along the coast from New York to Virginia. This is one of the largest minnows, from 4 to 8 inches long, of a pale coloration, the sides with a broad silvery band, and usually a dusky spot at the base of the caudal fin. It is sometimes called *smelt*.

spawned (spând), *p. a.* 1. Having emitted spawn; spent, as a fish.—2. Extruded or deposited, as spawn.

spawner (spā'nēr), *n.* [*< spawn + -er*¹.] 1. That which spawns, as the female of fish, frogs, oysters, etc.; a ripe fish about to spawn: correlated with *milter*.

There the *Spawner* casts her eggs, and the *Milter* hovers over her all that time that she is casting her *Spawn*, but touches her not.

I. Walton, *Complete Angler* (ed. 1653), p. 147.

2. In *fish-culture*, a spawn-gatherer. [Recent.]

spawn-fungus (spân'fung'gus), *n.* See *fungus*. **spawn-hatcher** (spân'hach'tēr), *n.* An apparatus for the artificial hatching of the ova of fish. It consists essentially of a box, or a series of boxes, fitted with trays with perforated bottoms to receive the spawn, and arranged for the supply of a regulated current of fresh water.

spawning (spā'ning), *n.* [Verbal *n.* of *spawen*, *v.*] The act or process of emitting and fecundating spawn. It consists essentially in the emission by the female of her eggs, and by the male of his milt, in such a manner that they may come in contact with each other, and that the eggs may be placed in a position favorable to their development. The manner, time, and place in which this is performed vary with the species. Some kinds bury their eggs in sand or gravel; some attach them to weeds, sticks, or stones; some build nests of stones or other material; and others drop their eggs carelessly through the water. Fish spawn at all seasons of the year, every species having its appropriate time. Rapid streams, quiet lakes, and sea-bottoms are among the places of deposit. In some cases nests are constructed somewhat elaborately. With the laying of the eggs the care of the parents for their offspring generally ends. Not infrequently both sire and dam immediately devour their yet unhatched descendants. A few species guard their eggs during incubation, and in some rare cases this care continues after the young fishes are hatched.

spawning-bed (spā'ning-bed), *n.* A bed or nest made in the bottom of a stream, as by salmon and trout, in which fish deposit their spawn and milt.

spawning-ground (spā'ning-ground), *n.* A water-bottom on which fish deposit their spawn; hence, the body or extent of water to which they resort to spawn; a breeding-place.

spawning-screen (spā'nīng-skrēd), *n.* In fish-culture, a frame or screen on which the spawn of fish is collected.

spawn-rising (spān'rī'zīng), *n.* In fish-culture, the increase in size of spawn after the milt has been added.

spay¹ (spā), *v. t.* [Early mod. E. also *spaic*; dial. *spave*, *spave*, *spave*; supposed to be < Gael. *spoth* = Manx *spoiy* = Bret. *spachein*, *spaza*, castrate, geld; cf. W. *yspadu*, exhaust, empty, *dyspyddu*, drain, exhaust; perhaps connected with L. *spado*, < Gr. *σπάδων*, a eunuch, < *σπᾶν*, draw, extract; see *spade*.] To castrate (a female) by extirpating the ovaries. The process corresponds to castration or emasulation of the male, incapacitating the female from breeding, or making her barren. Applied to hens, it corresponds to the caponizing of a cock. It is also practised on other animals, as swine. The animals fatten more readily, and the flesh is improved. Compare *Battey's operation*, under *operation*.

spay² (spā), *n.* [Also *spaic*; perhaps < OF. **espais*, *espois*, F. *épois*, branches of a stag's horns, < G. *spitz*, a point (cf. G. *spitz-hirsch*, a stag whose horns have begun to grow pointed); see *spitz*, *spitz*. Cf. *spittard*, a two-year-old hart.] The male red-deer or hart in his third year.

spay³, *v.* See *spac*.

spayeret, spayret, n. See *spare*².

Spea (spē'ā), *n.* [NL. (Cope, 1863), < Gr. *σπίος*, a cave.] A genus of spade-footed toads (*Scaphiopodidae* or *Pelobatidae*), representing a low type of organization, and peculiar to America. Several species, as *S. hammondi* and *S. bombifrons*, inhabit arid regions in the western United States and Mexico, being adapted to dry climate by the rapidity of their metamorphosis. During rains in summer they come out of their holes in the ground, and lay their eggs in rain-pools, where the tadpoles are soon seen swimming. These get their legs very promptly, and go hopping about on dry land. They are very noisy in the spring, like the common spade-foot.

speak (spēk), *v.*; pret. *spoke* (*spake* archaic or poetical), pp. *spoken* (*spoke* obs. or vulgar), ppr. *speaking*. [*ME. speken* (pret. *spake*, *spak*, *spee*, *spæc*, pp. *spoken*, *spoke*, earlier *spæken*, *spœkene*, *i-spēken*, *ispeke*), < late AS. *specan*, earlier *sprecan* (pret. *spæc*, pl. *spæcon*, earlier *spæc*, pl. *spæcon*, pp. *specan*, earlier *sprecan*) = OS. *sprecan* = OFries. *spreka* = D. *spreken* = MLG. *LG. spreken* = OHG. *sprehhan*, MHG. *G. sprechen*, speak; cf. MHG. *spehten*, chatter, G. dial. *spächten*, speak; root unknown. Hence ult. *speech*, and perhaps *spook*.] **I. intrans.** 1. To use articulate utterance in the tones of the speaking-voice, in distinction from those of the singing-voice; exert the faculty of speech in uttering words for the expression of thought.

Sire, are hi beo [ere they be] to diþe awreke
We mote ðere the children *speke*.

Their children *speak* half in the speech of Ashdod, and could not *speak* in the Jews' language. Neh. xiii. 24.

Many good scholars *speak* but fumblingly.
B. Jonson, Discoveries.

2. To make an oral address, as before a magistrate, a tribunal, a public assembly, or a company; deliver a speech, discourse, argument, plea, or the like: as, to *speak* for or against a person or a cause in court or in a legislature.

Then Agrippa said unto Paul, Thou art permitted to *speak* for thyself. Acts xxvi. 1.

Lord Sandwich, by a most inconceivable jumble of cunning, *spoke* for the treaty. Walpole, Letters, II. 278.

3. To make oral communication or mention; talk; converse: as, to *speak* with a stranger; to *speak* of or about something; they do not *speak* to each other.

Than eche toke other be the hande, and wente *spekyng* of many thinges till thei com to the hostell of Vlfin and Bretell. Merlin (E. E. T. S.), III. 467.

I must thank him only,
Lest my remembrance suffer ill report;
At heel of that, defy him. . . .
Would we had *spoke* together.
Shak., A. and C., II. 2. 167.

4. To communicate ideas by written or printed words; make mention or tell in recorded speech.

I *speak* concerning Christ and the church. Eph. v. 32.
The Scripture *speaks* only of those to whom it *speaks*.
Hammond.

The Latin convent is thought to have been on mount Gihon, though some seem to *speak* of that hill as beyond the pool of Gihon. Pococke, Description of the East, II. i. 10.

5. To make communication by any intelligible sound, action, or indication; impart ideas or information by any means other than speech or writing; give expression or intimation.

And let the kettle to the trumpet *speak*,
The trumpet to the cannoner without.
Shak., Hamlet, v. 2. 286.

That brow in furrow'd lines had fix'd at last,
And *spoke* of passions, but of passion past.
Byron, Lara, I. 5.

Abate the stride, which *speaks* of man.
Tennyson, Princess, II.

6. Of an organ-pipe, to emit or utter a tone; sound.—7. *Naut.*, to make a stirring and lapping sound in driving through the water: said of a ship.

At length the sniffer reached us, and the sharp little vessel began to *speak*, as the rushing sound through the water is called; while the wind sang like an Eolian harp through the taut weather-rigging.

M. Scott, Tom Cringle's Log, viii.

8. To bark when ordered: said of dogs.—**III spoken.** See *well* or *ill spoken*, below.—**Properly speaking.** See *properly*.—**So to speak.** See *sol.*—**Speaking acquaintance.** (a) A degree of acquaintance extending only to formal intercourse.

Between them and Mr. Wright [the Rector] there was only a *speaking acquaintance*.
Trollope, Belton Estate, I. 33.

(b) A person with whom one is only sufficiently acquainted to interchange formal salutations or indifferent conversation when meeting casually.—**Speaking terms,** a relation between persons in which they speak to or converse with each other; usually, an acquaintance limited to speaking in a general way or on indifferent subjects. *Not to be on speaking terms* is either to be not sufficiently acquainted for passing speech or salutation, or to be so much estranged through disagreement as to be debarred from it.

Our poorer gentry, who never went to town, and were probably not on *speaking terms* with two out of the five families whose parks lay within the distance of a drive.
George Eliot, Felix Holt, I.

To speak by the card. See *card*.—**To speak for.** (a) To speak in behalf or in place of; state the case, claims, or views of.

The general and his wife are talking of it;
And she *speaks* for you stoutly.
Shak., Othello, iii. 1. 47.

There surely I shall *speak* for mine own self.
Tennyson, Lancelot and Elaine.

(b) To afford an indication of; intimate; denote.

Every half mile some pretty farmhouse was shining red through clumps of trees, the many cattle-sheds *speaking* for the wealth of the owner.
Froude, Sketches, p. 93.

To speak holiday. See *holiday*, a.—**To speak in lutestring.** See *lutestring*.—**To speak like a book.** See *book*.—**To speak of.** (a) See def. 3. (b) To take or make account of; mention as notable or of consequence; deserve mention.

Those Countries nearest Tigris Spring,
In those first ages were most flourishing,
Most *spoken-of*.
Sylvester, tr. of Dn Bartas's Weeks, II., The Colonies.

Strangers . . . that pay to their own Lords the tenth, and not to the owner of those liberties any thing to *speak* of.
Capt. John Smith, Works, II. 244.

To speak out, to speak loud or louder; hence, to speak freely, boldly, or without reserve; disclose what one knows or thinks about a certain matter.—**To speak to.** (a) To answer for; attest; account for.

For a far longer time than they, the modern observatories, can directly *speak* to. Piazzi Smyth, Pyramid, p. 74.

(b) To admonish or rebuke. [Colloq. and euphemistic.]
"Papa," he exclaimed, in a loud, plaintive voice, as of one deeply injured, "will you *speak* to Gilea? . . . If this sort of thing is allowed to go on, . . . it will perfectly ruin the independence of my character."
Jean Ingelow, Off the Skelligs, xix.

To speak to one's heart. See *heart*.—**To speak up,** to express one's thoughts freely, boldly, or unreservedly; speak out.

Speak up, jolly blade, never fear.
Robin Hood and Little John (Child's Ballads, V. 221).

To speak well for, to be a commendatory or favorable indication of or with regard to: as, his eagerness *speaks well* for him, or for his success.—**Well or ill spoken,** given to speaking well or ill; given to using decorous or indecorous speech, in either a literal or a moral sense.

Thou *speak'st*
In better phrase and matter than thou didst. . . .
Methinks you're *better spoken*.
Shak., Lear, iv. 6. 10.
He was wise and discrete and *well spoken*, having a grave & deliberate utterance.
Bradford, Plymouth Plantation, p. 413.

=**Syn. Speak, Talk.** *Speak* is more general in meaning than *talk*. Thus, a man may *speak* by uttering a single word, whereas to *talk* is to utter words consecutively; so a man may be able to *speak* without being able to *talk*. *Speak* is also more formal in meaning: as, to *speak* before an audience; while *talk* implies a conversational manner of speaking.

II. trans. 1. To utter orally and articulately; express with the voice; enunciate.

And thei seide, "That he is, for this thre dayes he *spake* no speche, ne neuer shall *speke* worde."
Merlin (E. E. T. S.), I. 94.

They sat down with him upon the ground seven days and seven nights, and none *spake* a word unto him.
Job ii. 13.

2. To declare; utter; make known by speech; tell, announce, or express in uttered words.

Grant unto thy servants that with all boldness they may *speak* thy word.
Acts iv. 29.

One that, to *speak* the truth,
Had all those excellencies that our books
Have only feign'd.
Middleton, Anything for a Quiet Life, I. 1.

I am come to *speak*
Bryant, Hymn to Death.

3. To use in oral utterance; express one's self in the speech or tongue of: as, a person may read a language which he cannot *speak*.

The Arabic language is *spoke* very little north of Aleppo.
Pococke, Description of the East, II. I. 154.

4. To accost or address in speech; specifically (*naut.*), to accost at sea; hail and hold communication with by the voice, as a passing vessel.

About six bells, that is three o'clock P. M., we saw a sail on our harbour bow. I was very desirous, like every new sailor, to *speak* her.

R. H. Dana, Jr., Before the Mast, p. 10.

5. To say, either in speech or in writing; use as a form of speech.

A beavie of ladyes is *spoken* figuratively for a company or troupe: the terme is taken of Larkes.
Spenser, Shep. Cal., April, Glossae.

6. To produce by means or as a result of speech; bring about or into being by utterance; call forth.

They sung how God *spoke* out the World's vast Ball;
From Nothing and from No where call'd forth All.
Cortley, Davidsia, I.

7. To mention as; speak of as being; call. [Obsolete or rare.]

Mayst thou live ever *spoken* our protector!
Fletcher, Valentinian, v. 8.

8. To make known as if by speech; give speaking evidence of; indicate; show to be; declare.

Whatever his reputed parents be,
He hath a mind that *speaks* him right and noble.
Fletcher, Spanish Curate, I. 1.

And for the heaven's wide circuit, let it *speak*
The Maker's high magnificence.
Milton, P. L., viii. 101.

Eleanor's countenance was dejected, yet sadate; and its composure *spoke* her inured to all the gloomy objects to which they were advancing.

Jane Austen, Northanger Abbey, xxiv.

To speak a ship. See def. 4, above.—**To speak daggers.** See *dagger*.—**To speak** (a person) *fair*, to address in fair or pleasing terms; speak to in a friendly way.

Oh run, dear friend, and bring the lord Phylaster! *speak* him *fair*; call him prince; do him all the courtesies you can.
Beau, and Fl., Philaster, v. 3.

To speak for, to establish a claim to by prior assertion; ask or engage in advance: as, we have *spoken* for seats; she is already *spoken for*.—**To speak one's mind,** to express one's opinion, especially with emphasis.

The Romans had a time once every year, when their slaves might freely *speak* their minds.
Milton, On Def. of Humb. Remonst.

To speak out, to utter openly; proclaim boldly.

But strait I'll make his Dumbness find a Tongue
To *speak* out his imposture, and thy wrong.
J. Beaumont, Psyche, II. 164.

=**Syn. Tell, State,** etc. See *say*.

speakable (spē'ka-bl), *a.* [*ME. spekan* + *-able*.]
1. Capable of being spoken; fit to be uttered.

The other, . . . heaping oaths upon oaths, . . . most horrible and not *speakable*, was rebuked of an honest man.
Ascham, Toxophilus, I.

2†. Having the power of speech. [Rare.]

Redouble then this miracle, and say
How can'st thou *speakable* of mute?
Milton, P. L., ix. 563.

speaker (spē'kēr), *n.* [*ME. speker*, *spekere* (= OFries. *spreker* (in *forspreker*) = D. MLG. *spreker* = OHG. *sprākhari*, *sprāchari*, *sprehari*, *sprehheri*, *sprechhari*, MHG. *sprechære*, *sprecher*, G. *sprecher*, a speaker); < *speak* + *-er*.] 1. One who speaks or utters words; one who talks or converses; one who makes a speech or an address; specifically, one who engages in or practises public speaking.

Thei seyn also that Abraham was Frennd to God, and that Moyses was familee *spekere* with God.
Manderlille, Travels, p. 136.

Bearers far more strange of the Roman name, though no *speakers* of the Roman tongue, are there in special abundance.
E. A. Freeman, Venice, p. 57.

2. A proclaimer; a publisher. [Rare.]

After my death I wish no other herald,
No other *speaker* of my living actions.
Shak., Hen. VIII., iv. 2. 70.

3. [*cap.*] The title of the presiding officer in the British House of Commons, in the House of Representatives in the Congress of the United States, in the lower houses of State legislatures in the United States, and in British colonial legislatures; also of the Lord Chancellor of Great Britain as presiding officer of the House of Lords. The Speaker of the House of Commons is elected in each Parliament from its members, with the royal concurrence, generally without regard to politics, and may preside in successive Parliaments of opposite political character. His powers (which have been much diminished in the course of time) are limited to the pres-

ervation of order and the regulation of debate under the rules of the House, the use of the casting-vote in case of an equal division, and speaking in general committee. The Speaker in the House of Representatives (as also in the State legislatures) is usually a leader of the party having a majority of the members, and has, in addition to the powers of the British Speaker, the power of appointing all committees, and the right, as a member, of participating in general debate after calling another member to the chair, and of voting on all questions—rights exercised, however, only on important occasions. He is thus in a position to control the course of legislation to an important extent, and the office is consequently regarded as of great power and influence.

I hear that about twelve of the Lords met and had chosen my Lord Manchester speaker of the House of Lords.
Pepys, Diary, April 26, 1660.

In the Lower House the Speaker of the Tudor reigns is in very much the same position as the Chancellor in the Upper House; he is the manager of business on the part of the crown, and probably the nominee either of the king himself or of the chancellor.

Stubbs, Medieval and Modern Hist., p. 272.

Not only that the Standing Committees are the most essential machinery of our governmental system, but also that the Speaker of the House of Representatives is the most powerful functionary of that system.

W. Wilson, Cong. Gov., p. 103.

4. A title, and hence a general name, for a book containing selections for practice in declamation, as at school. [U. S.]

speakership (spē'kēr-shīp), *n.* [*< speaker + -ship.*] The office of Speaker in a legislative body.

speaking (spē'king), *p. a.* Adapted to inform or impress as if by speech; forcibly expressive or suggestive; animated or vivid in appearance: as, a *speaking* likeness; *speaking* gestures.

A representation borrowed, indeed, from the actual world, but closer to thought, more *speaking* and significant, more true than nature and life itself. *J. Caird.*

The smallness of Spalato, as compared with the greatness of ancient Salona, is a *speaking* historical lesson.

E. A. Freeman, Venice, p. 172.

speaking demurrer, *In law*, a demurrer which alleges or suggests a fact which to be available would require evidence, and which therefore cannot avail on demurrer.

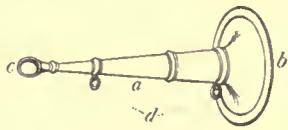

speakingly (spē'king-li), *adv.* In a speaking manner; so as to produce the effect of speech; very expressively.

A Mute is one that acteth *speakingly*,
And yet sayes nothing. *Brome, Antipodes, v. 4.*

speaking-machine (spē'king-mā-shēn'), *n.* A mechanical contrivance for producing articulate sounds automatically; a speaking automaton.

Kempelen's and Kratzenstein's *speaking-machine*, in the latter part of the last century; the *speaking-machine* made by Fabermann of Vienna, closely imitating the human voice. *Encyc. Brit., XV. 208.*

speaking-trumpet (spē'king-trūm'pet), *n.* A trumpet-shaped instrument by which the sound of the human voice is reinforced so that it may be heard at a great distance or above other sounds, as in hailing ships at sea or giving orders at a fire. In the United States navy a speaking-trumpet is the badge of the officer of the deck at sea.

Speaking-trumpet.
a, tube; b, bell; c, mouthpiece; d, rings for a band by which the trumpet may be attached to the person.

speaking-tube (spē'king-tūb), *n.* A tube of sheet-tin, gutta-percha, or other material, serving to convey the voice to a distance, as from one building to another, or from one part of a building to another, as from an upper floor to the street-door, or from the rooms of a hotel to the office. It is commonly used in connection with an annunciator, and is usually fitted at each end with a whistle for calling attention.

speaking-voice (spē'king-vois), *n.* The kind of voice used in speaking; opposed to *singing-voice*, or the kind of voice used in singing. The singing-voice and the speaking-voice differ in several respects: (a) in pitch and inflection, which are arbitrary in singing, but conformed to the thought in speaking; (b) in succession of tones, the tones of music being discrete, while those of speech are concrete; (c) in time and emphasis, which in music are more arbitrary and less conformed to the thought than in speech. So great is the difference that many persons who have a good voice for one use have a very poor voice for the other.

speal (spēl), *n.* Same as *spell*, *spill*.

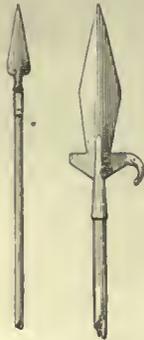

speal², *n.* An obsolete variant of *spall*.

speal-bone (spēl'bōn), *n.* The shoulder-blade. —Reading the *speal-bone*, scapulumancy; divination by means of a shoulder-blade. *E. B. Tylor, Prim. Cult., I. 125.* Compare *spatulamancy*.

spean (spēn), *n.* [*< ME. spene, < AS. spana, teat, udder; cf. spanan, wean: see spane.*] An animal's teat. [Old and prov. Eng.]

It hath also four *speanes* to her paps.
Topsell, Four-footed Beasts, p. 38. (Halliwell.)

spear¹ (spēr), *n.* [*< ME. sperc, pl. speres, speren, < AS. spere = OS. sper = OFries. sper, spiri = MD. spere, D. speer = MLG. sper, spere = OHG. MHG. sper, G. speer (> OF. espier) = Icel. spjör, pl., = Dan. spær, a spear (the L. sparus, a small missile weapon, dart, hunting-spear, is prob. < Teut.); perhaps akin to spar, a beam, bar: see spar¹.* In def. 7 prob. confused with *spire*¹.] 1. A weapon consisting of a penetrating head attached to a long shaft of wood, designed to be thrust by or launched from the hand at an enemy or at game. Spears have been used as warlike weapons from the earliest times, and were the principal reliance of many ancient armies, as those of the Greeks, while in others they were used coordinately with the bow and the sword. They are represented by the bayonet in modern armies, though some use is still made of spears, of which javelins and lances are lighter, and pikes heavier, forms. Compare cuts under *bayonet* and *pike*.

Hunting-spears, 15th or 16th century.

When they were ouer, they smyten in a-monge hem so vigorously that oon myght here the crassinge of *speres* half a myle longe.
Mertin (E. E. T. S.), ll. 155.

They shall beat their swords into plowshares, and their *spears* into pruninghooks. *Isa. ll. 4.*

2. A man armed with a spear; a spearman.

Earl Doorn

Struck with a knife's haft hard against the board,
And call'd for flesh and wine to feed his *spears*.
Tennyson, Gerald.

3. A sharp-pointed instrument with barbed tines, generally three or four, used for stabling fish and other animals; a fish-gig.—4. An instrument like or suggestive of an actual spear, as some articles of domestic or mechanical use, one of the long pieces fixed transversely to the beam or body of *chevaux-de-frise*, in some parts of England a bee's sting, etc.—5. One of the pieces of timber which together form the main rod of the Cornish pumping-engine.—6. The feather of a horse. Also called the *stroke of the spear*. It is a mark in the neck or near the shoulder of some barbs, which is reckoned a sure sign of a good horse.

7. A spire: now used only of the stalks of grasses: as, a *spear* of wheat.

Tell me the notes, dust, sands, and *speares*
Of corn, when Summer shakes his eares.
Herrick, To Flnd Ood.

The *spear* or steeple of which church was fired by lightning.
Lambarde, Perambulation (1596), p. 287. (Halliwell.)

Holy spear. Same as *holy lance*. See *lance*.—**Spear pyrites**, a variety of *marcasite*.—**Spear side**, occasionally **spear half**, a phrase sometimes used to denote the male line of a family, in contradistinction to *distaff* or *spindle side* (or *half*), the female line. See *distaff side*, under *distaff*.

A King who by the spindle-side sprang from both William and Cerdic, but who by the *spear-side* had nothing to do with either.

E. A. Freeman, Norman Conquest, V. 168.

To sell under the *spear*, to sell by suction: from the ancient Roman practice of setting a spear (*hasta*) in the ground at an auction, originally as a sign of the sale of military booty.

My lords the senators
Are sold for slaves, their wives for bondwomen, . . .
And all their goods, under the *spear*, at outcry.
B. Jonson, Catilina, II.

spear¹ (spēr), *v.* [*< spear¹, n.*] I. *trans.* To pierce or strike with a spear or similar weapon: as, to *spear* fish.

The [Australian] youngsters generally celebrated the birth of a lamb by *spear*ing it.
C. Reade, Never too Late to Mend, II.

The Mayfly is torn by the swallow, the sparrow *spear*'d by the shrike.
Tennyson, Maud, IV. 4.

II. *intrans.* To shoot into a long stem; germinate, as barley. See *spire*¹.

The single blade [of wheat] *spears* first into three, then into five or more side-shoots.
Science, VII. 174.

spear² (spēr), *v.* An obsolete form of *spear*¹.

spear-billed (spēr'bīld), *a.* Having a long, straight, and sharp bill, beak, or rostrum: as, the *spear-billed* grebes of the genus *Aechmophorus*. See cut under *Aechmophorus*. *Coues.*

spear-dog (spēr'dog), *n.* The common piked dog-fish, *Squalus acanthias* or *Acanthias vulgaris*. [Local, Eng.]

spearer (spēr'er), *n.* [*< spear¹ + -er.*] 1. One who *spears*.—2. A person armed with a spear, whether for war or for ceremony.

spear-fish (spēr'fish), *n.* 1. A catostomid fish of the genus *Carpiodes*, *C. cyprinus*, a kind of

carp-sucker, also called *sailfish*, *skimback*, and *quillback*. It is common from the Mississippi valley to Chesapeake Bay.—2. The bill-fish, *Tetrapturus albidus*, belonging to the family *Histiophoridae*, or sailfishes. The dorsal fin is low or moderately developed, and the ventrals are represented

Spear-fish (*Tetrapturus albidus*).

only by spines. It inhabits American waters as far north as New England in summer, and is not seldom taken in the sword-fishery. In tropical seas its horizon is about 100 fathoms deep. The spear-fish is related to the sword-fish (though of another family), and has a similar beak or sword. It attains a length of six or eight feet. In the West Indies its Spanish name is *aguja*. Compare cut under *sailfish*.

spear-flower (spēr'flou'èr), *n.* A tree or shrub of the large tropical and subtropical genus *Ardisia* of the *Myrsinaceæ*. The species are mostly handsome with white or red flowers and pea-form fruit, often blue. The name translates *Ardisia*, which alludes to the sharp segments of the calyx.

spear-foot (spēr'füt), *n.* The off or right hind foot of a horse.

spear-grass (spēr'grās), *n.* 1. A name of various species of *Agrostis*, bent-grass, of *Agropyrum repens*, quitch-grass, of *Alopecurus agrestis*, foxtail, and perhaps of some other grasses. The spear-grass of Shakspeare, according to Ellacombe, is the quitch-grass; according to Prior, it is the common reed, *Phragmites communis*. [Old or prov. Eng.]

To tickle our noses with *spear-grass* to make them bleed.
Shak., I Hen. IV., ll. 4. 340.

2. The June-grass, or Kentucky blue-grass, *Poa pratensis* (see cut under *Poa*); also other species of the genus. *P. annua* is the low or annual spear-grass. It is so called from the lance-shaped spikelets. (See *meadow-grass*.) The name is said to be applied also to the porcupine-grass, on account of its awns. [U. S.]

3. In New Zealand, a name of one or two plants of the umbelliferous genus *Aciphylla*: so called from their long grass-like leaflets, which have hard and sharp points.

spear-hand (spēr'hānd), *n.* The right hand or the right side, as distinguished from the *shield-hand*.

spear-head (spēr'hed), *n.* The head of a spear. It is always pointed, and of iron or steel among people who know the use of iron, but anciently of bronze, and among some savage peoples of stone, bone, or the like. The form varies from that of a long double-edged blade which with its socket is two feet or more in length, as was common in throwing-spears of the Franks and Saxons, to the head of the fourteenth-century lance, which was a mere pointing of the wooden shaft with steel and only a few inches in length. The spear-head is often barbed, sometimes serrated or wavy, etc. Compare *coronet*, 2, also *pilum*, *lance*¹, *javelin*.

spear-hook (spēr'hük), *n.* Same as *spring-hook*.

spear-javelin (spēr'jav'lin), *n.* Same as *frama*, 1.

spear-leafed lily. See *lily*, 1.

spear-lily (spēr'lil'i), *n.* A plant of one of three species of the Australian genus *Doryanthes* of the *Amaryllidaceæ*. It has partly the habit of *Agave*, having a cluster of over one hundred sword-shaped leaves at the base, an erect stem, in *D. excelsa* from 10 to 18 feet high, with a dense terminal head of red flowers. The leaves of that species contain a fiber suitable for rope- and paper-making.

spearman (spēr'mān), *n.*; pl. *spear-men* (-mēn). [*< ME. sperman; < spear¹ + man.*] 1. One who uses or is armed with a spear; especially, a soldier whose spear is his principal weapon. Compare *lanceer*, *lansquenet*, *pikeman*¹.

Wily as an eel that stirs
The mud
Thick overhead, so baffling
spearman's thrust.
Browning, Ring and Book, II. 162.

2. A book-name for any leaf-beetle of the genus *Doryphora*. The Colorado potato-beetle, *D. decemlineata*, is the ten-lined spearman. See cut under *beetle*.

spearmint (spēr'mint), *n.* [Said to be a corruption of *spire-mint*, with ref. to the pyramidal inflorescence.] An

Spearmint (*Mentha viridis*), upper part of the stem with the inflorescence. a, a flower.

aromatic plant, *Mentha viridis*, the common garden-mint, or mint proper. It is known chiefly in gardens, or as an escape from them, in both hemispheres, and is suspected to be a garden or accidental variety of *M. sylvestris*. Its properties are those of peppermint, and it yields an oil like that of the latter, but with a more pleasant flavor.—**Spirit of spearmint.** See *spirit*.

spear-nail (spēr'nāl), *n.* A form of nail with a spear-shaped point.

spear-plate (spēr'plät), *n.* Same as *strapping-plate*.

spear-thistle (spēr'this'tl), *n.* See *thistle*.

spear-widgeon (spēr'wij'on), *n.* 1. The red-breasted merganser, *Mergus serrator*. Also called *shelduck*.—2. The goosander, *Mergus merganser*. [Irish in both uses.]

spearwood (spēr'wüd), *n.* One of two Australian trees, *Eucalyptus Doratoxyton* in the southwest, and *Acacia Doratoxyton* in the interior, or the wood of the same, sought by the natives for spear-shafts.

spearwort (spēr'wört), *n.* [ME. *spereworte*, *sperewurt*, < AS. *sperewyrt*, < *spere*, spear, + *wyrt*, wort: see *spear*¹ and *wort*¹.] The name of several species of crowfoot or *Ranunculus* with lance-shaped leaves. *R. Lingua*, the greater spearwort, is found in Europe and temperate Asia; *R. Flammula*, the lesser spearwort (also called *banewort*), through the north temperate zone; *R. ophioglossifolius*, the snake's-tongue or adder's-tongue spearwort, in southwestern Europe; *R. ambigua* (*R. alismifolius*), the water-plantain spearwort, in North America.

speat, *n.* Same as *spate*.

speave, *v. t.* A dialectal form of *spay*¹.

speck (spek), *n.* A colloquial abbreviation of *speculation*.

They said what a wery gen'rons thing it was o' them to have taken up the case on *speck*, and to charge nothing at all for costs unless they got 'em out of Mr. Pickwick. *Dickens*, *Pickwick*, xxxiv.

speck² In *nat. hist.*, an abbreviation of *specimen*: with a plural *specks*, sometimes *specc*. Compare *sp*.

speckel, *n.* A Middle English form of *spice*¹.

special (spesh'al), *a.* and *n.* [ME. *special*, *speciall*, *speciale*, *specyal*, *specyalle*, < OF. *special*, *special*, F. *spécial* = Pr. *special*, *especial* = Sp. *especial* = Pg. *especial* = It. *speciale*, *special*, < L. *specialis*, belonging to a species, particular, < *species*, kind, species: see *species*. Doublet, *especial*.] **I. a.** 1. Of or pertaining to a species or sort; of a particular kind or character; distinct from other kinds; specifically characteristic.

Crist! kepe us out of harme and hate,
For thin hooli spiryt so *special*.
Hymns to Virgin, etc. (E. E. T. S.), p. 57.

A *special* idea is called by the schools a *species*.
Watts, *Logic*, I. iii. § 3.

A certain order of artistic culture should be adopted, answering to the order of development of the *special* sensibilities and faculties concerned.
J. Sully, *Outlines of Psychol.*, p. 553.

2. Of or pertaining to one or more of a kind; peculiar to an individual or a set; not general; particular; individual.

He spekis thus in his *special* spell,
And of this matere makis he mynde.
York Plays, p. 471.

For the question in hand, whether the commandments of God in Scripture be general or *special*, it skilleth not.
Hooker, *Ecclia. Polity*, iii. 7.

The *special* charm of Oxford for Shelley lay in the comparative freedom of the student's life.
E. Dowden, *Shelley*, I. 56.

3. Peculiar or distinct of the kind; of exceptional character, amount, degree, or the like; especially distinguished; express; particular.

Thei suffre no Cristene man entre in to that Place, but zif it be of *specyalle* grace of the Soudan.
Mandeville, *Travels*, p. 66.

Can anch thinga be,
And overcome us like a summer's cloud,
Without our *special* wonder?
Shak., *Macbeth*, iii. 4. 112.

It is a fair and sensible paper, not of *special* originality or brilliancy.
O. W. Holmes, *Emerson*, I.

Other groups of phenomena require *special* study.
H. Spencer, *Study of Sociol.*, p. 382.

4. Specifically, limited as to function, operation, or purpose; designed for specific application or service; acting for a limited time or in a restricted manner; not general of the kind named: as, *special* legislation; *special* pleading; *special* agent, constable, or correspondent; *special* employment; a *special* dictionary.

Too all his ost he gave a *special* charge,
Ayenat that day that he shuld fight alone.
Genevieve (E. E. T. S.), I. 3221.

To Eltham will I, where the young king is,
Being ordain'd his *special* governor.
Shak., I. ii. VI., l. 1. 171.

Estate tail special. See *estate*.—**Heir special.** See *heir*.—**Special act.** See *statute*.—**Special administrator.** An administrator appointed without full powers of administration, but for some special purpose, as to collect and hold assets and pay urgent debts pending a contest as to the probate of a will. Also called a *temporary administrator*, a *collector*, or an *administrator ad colligendum*.—**Special agent.** An agent authorized to transact in the service or interest of his principal only a particular transaction or a particular kind of business, as distinguished from a *general agent*: as, a *special agent* of the revenue department.—**Special anatomy.** See *anatomy*.—**Special assignment.** See *partial assignment*, under *partial*.—**Special bail.** See *bail*², 3.—**Special bailiff.** *bastard*, case. See the nouns.—**Special carrier.** See *carrier*¹, 2.—**Special commission.** In law, a commission of oyer and terminer issued by the crown to the judges for the trial of specified cases.—**Special constable.** *contract*, *damages*, *demurrer*, *deposit*, *edict*, *homology*, *hospital*, *injunction*, *issue*, *jury*, *license*, etc. See the nouns.—**Special linear complex.** The aggregate of all the lines of space that cut a given line.—**Special logic.** The rules for thinking concerning a certain kind of objects.

Such *special logics* only exhibit the mode in which a determinate matter or object of science, the knowledge of which is presupposed, must be treated, the conditions which regulate the certainty of inference in that matter, and the methods by which our knowledge of it may be constructed into a scientific whole.

Sir W. Hamilton, *Logic*, iii.

Special orders, paper, partner, plea, pleader, pleading, property, providence, retainer, sessions, statute, tail, verdict, etc. See the nouns.—**Special trust.** An active trust; a trust which involves specific duties on the part of the trustee, as distinguished from a *general or naked trust*. In which he holds only a legal title and it may be possession, but the entire right of disposal is in the beneficiary.—**Syn.** *Special*, *Especial*, *Particular*, *Peculiar*, *Specific*. *Special* is more common than *especial*, which has the same meaning; but *especially* is for rhythmical reasons (because it occurs most frequently at the beginning of a dependent clause, where usually an unaccented particle occurs, and where, therefore, a word with an accent on the first syllable is instinctively avoided) much more common than *speciality*. The *special* comes under the *general*, as the *particular* comes under the *special*. A *special* favor is one that is more than ordinary; a *particular* favor is still more remarkable; a *peculiar* favor comes very closely home. When we speak of any *particular* thing, we distinguish it from all others; when we speak of a *specific* fault in one's character, we name it with exactness; a *special* law is one that is made for a *particular* purpose or a *peculiar* case; a *specific* law is either one that we name exactly or one that names offenses, etc., exactly.

II. n. 1. A special or particular person or thing. Specifically—(a) A particular thing; a particular.

Thir 's all the *specials* I of speake.
Raid of the Reidsvire (Child's Ballads, VI. 138).

(b) A private companion; a paramour or concubine.
Speycal, concubine, the womann (*special* or leman).
Concubina. *Prompt. Parv.*, p. 468.

Syr Roger of Donkester,
That was her owne *special*.
Lytell Geste of Robyn Hode (Child's Ballads, V. 123).

2. A person or thing appointed or set apart for a special purpose or occasion, as a constable, a railway-train, an examination, a dispatch, etc.: as, they traveled by *special* to Chicago; the *specials* were called out to quell the riot.

What are known as *specials* are being held this week. These are for men who partially failed at the last regular examinations.
Lancet, 1890, II. 796.

In special. In a special manner; especially; particularly. [Obsolete or archaic.]

Se that thou in *special*
Requere noght that is ageyns hire nam.
Chaucer, *Troilus*, l. 901.

But yf vertue and nurture were withe alle;
To yow therfore I speke in *specyalle*.
Babees Book (E. E. T. S.), p. 1.

specialisation, specialise. See *specialization, specialize*.

specialism (spesh'al-izm), *n.* [*special* + *-ism*.] Devotion to a special branch or division of a general subject or pursuit; the characteristic pursuit or theme of a specialist; restriction to a specialty. [Recent.]

Special hospitals and *specialism* in medical practice are in danger of being carried too far. *Lancet*, 1889, II. 1049.

All *specialism* of study, one-sidedness of view, and division of labor is dangerous (according to Comte).
N. A. Rev., CXX. 259.

specialist (spesh'al-ist), *n.* [*special* + *-ist*.] A person who devotes himself to a particular branch of a profession, science, or art; one who has a special knowledge of some particular subject: thus, ophthalmologists, neurologists, or gynecologists are *specialists* in medicine.

Specialists are the coral-insects that build up a reef.
O. W. Holmes, *Poet at the Breakfast-table*, iii.

specialistic (spesh-a-lis'tik), *a.* [*specialist* + *-ic*.] Of or pertaining to a specialist or specialism. [Recent.]

The learned *specialistic* mind takes in the facts of one or two creeds or departments. *Athenæum*, No. 3273, p. 87.

speciality (spesh-i-al'i-ti), *n.*; pl. *specialities* (-tiz). [*OF. specialité, especialité, F. spécialité* = Sp. *especialidad* = Pg. *especialidade* = It.

specialità (> D. *specialiteit* = G. *Spezialität* = Sw. *specialitet*), < L. *specialitas*(-t)s, particularity, peculiarity, < *specialis*, particular, special: see *special*. Cf. *specialty*, a doublet of *speciality*, as *personality*, *reality*, etc., are of *personality*, *reality*, etc.] 1. A special characteristic or attribute; a distinctive feature, property, or quality; a condition or circumstance especially distinguishing a class or an individual. [In this abstract sense *speciality* is preferable to the form *specialty*, on the analogy of *personality*, *reality*, and other words of similar tenor as related to *personality*, *reality*, etc. The distinction, so far as it exists, is accidental; the syncope form, in these pairs, is more vernacular, the full form more recent and artificial.]

It is the *speciality* of all vice to be selfishly indifferent to the injurious consequences of our actions, even . . . to those nearest to us. *F. P. Cobbe*, *Peak in Darien*, p. 32.

The *specialities* of nature, chiefly mental, which we see produced, . . . must be ascribed almost wholly to direct equilibration. *H. Spencer*, *Prin. of Biol.*, § 170.

2. A special matter or thing; a characteristic or distinctive object, pursuit, diversion, operation, product, or the like; a specialty. See *specialty*, 6.

The *speciality* of the sport was to see how some for bla slackness had a good bob with the hag.
Laneham, quoted in *Strutt's Sports and Pastimes*, p. 191.

The small State of Rhode Island, whose *speciality* has always been the manufacture of ordnance.
Comte de Paris, *Civil War in America* (trans.), I. 187.

specialization (spesh'al-i-zā'shən), *n.* [*specialize* + *-ation*.] 1. The act or process of specializing; a making or fixing of special differences or requirements; differentiation.

In the history of Law the most important early *specialization* is that which separates what a man ought to do from what he ought to know.

Maine, *Early Law and Custom*, p. 18.

2. The state of being or becoming specialized; a condition of fixed or developed differentiation, as of parts, organs, or individuals, with reference to form, appearance, function, etc.

That there is [in women] . . . a mental *specialization* joined with the bodily *specialization* is undeniable; and this mental *specialization*, though primarily related to the rearing of offspring, affects in some degree the conduct at large.

H. Spencer, *Study of Sociol.*, p. 375.

3. In *biol.*, that evolutionary process whereby parts or organs primitively indifferent or of common character become differentiated in form or function (usually in both); also, the result of such process or course of development; adaptive modification. The most exact synonym is *differentiation* (which see). It is common to say *differentiation* of structure, but *specialization* of function, giving to the former word a morphological and to the latter a physiological significance. Since, however, change of form almost always implies change in use of the parts thus modified in adaptation to different purposes, the two words come to the same thing in the end, and may be interchanged. The whole course of biological evolution is from the most general to some particular form and function, or from that which is simple, primitive, indifferent, and low in the scale of organization to that which is a complex of particulars and thus highly organized. Such *specialization* is expressed both in the structure of any of the higher animals and plants, regarded as wholes to be compared with other wholes, and in the structure of their several parts, organs, or tissues, compared with one another in the same animal or plant, and compared with the corresponding parts, organs, or tissues in different animals and plants. The actual ways in which or means by which *specialization* is known or supposed to be effected are among the broadest problems in biology. See biological matter under *evolution*, *Darwinism*, *selection*, *survival*, *variation*, *species*, *protoplasm*, *morphology*, *homology*, *analogy*, *heredity*, *environment*, and words of like bearing on the points in question.

All physiologists admit that the *specialization* of organs, inasmuch as they perform in this state their functions better, is an advantage to each being.
Darwin, *Origin of Species*, p. 122.

This [frizzly] character of hair must be a *specialization*, for it seems very unlikely that it was the attribute of the common ancestors of the human race.
W. H. Flower, *Pop. Sci. Mo.*, XXVIII. 320.

Also spelled *specialisation*.
specialize (spesh'al-iz), *v.*; pret. and pp. *specialized*, ppr. *specializing*. [= F. *spécialiser*; as *special* + *-ize*.] **I. trans.** 1. To make individually or generically special or distinct; make specifically distinct; differentiate from other kinds in form, adaptation, or characteristics, as by a process of physical development; limit to a particular kind of development, action, or use. See *specialization*, 3.

The sensitiveness of the filaments [of *Dionæa Muscipula*] is of a *specialized* nature, being related to a momentary touch rather than to prolonged pressure.
Darwin, *Insectiv. Plants*, p. 292.

The eye is a highly *specialized* organ, admirably adapted for the important function which it fulfills.
Stokes, *Light*, p. 90.

Prudence may be said to be merely *Wisdom specialized* by the definite acceptance of Self-Interest as its sole ultimate end.
H. Sidgwick, *Methods of Ethics*, p. 304.

2†. To mention specially or in detail; particularize; specify.

Our Saviour *specializing* and nominating the places.
Sheldon, *Miracles* (1616), p. 261.

II. *intrans*. To act in some special way; pursue a special course or direction; take a specific turn or bent.

That some cells have *specialised* on the same old character is seen in the so-called myeloplaxes.
Lancet, 1889, II. 635.

Also spelled *specialise*.

specializer (spesh'al-i-zēr), *n.* One who makes a speciality of anything; a specialist. Also spelled *specialiser*. *The Nation*.

specially (spesh'al-i), *adv.* [*<* ME. *specially*, *specialliche*; *<* *special* + *-ly* 2. Doublet of *especially*.] 1. In a special manner; specifically; particularly; exceptionally; especially.

Thay suld be clene of euery vyce,
And, *specialite*, of Couatyece.
Lauder, *Dewtie of Kyngis* (E. E. T. S.), l. 461.

The earth . . . of Scripture generally is *specially* the dry land.
Dawson, *Nature and the Bible*, p. 161.

2. For a particular reason or purpose; by special or exceptional action or proceeding; as, a meeting *specially* called; an officer *specially* designated.

The Latin tongue lived on in Britain after the withdrawal of the legions, but it lived on, as it lives on in modern countries, as a book-language *specially* learned.
E. A. Freeman, *Amer. Lects.*, p. 124.

specialty (spesh'al-ti), *n.*; pl. *specialties* (-tiz). [*<* ME. *specialite*, *<* OF. *specialte*, *speciale*, *especialte*, *especialte*, etc., a more vernacular form of *specialite*, *especialite*, etc., speciality: see *speciality*.] 1. The fact or condition of being special or particular; particularity of origin, cause, use, significance, etc. [Rare.]

And that they that be ordeynyd to sette messys bryng them be ordre and continually tyl alle be serued, and not inordinatly, And thorow affection to peronys or by *specialite*.
Babees Book (E. E. T. S.), p. 330.

It is no denial of the *speciality* of vital or psychical phenomena to reduce them to the same elementary motions as those manifested in cosmic phenomena.

G. H. Lewes, *Probs. of Life and Mind*, II. vi. § 35.

2. The special or distinctive nature of anything; essence; principle; groundwork. [Rare.]

The *speciality* of rule hath been neglected.
Shak., *T. and C.*, i. 3. 78.

3. A special quality or characteristic; a distinguishing feature; a speciality. See *speciality*, 1.

The Last Supper at San Marco is an excellent example of the natural reverence of an artist at that time, with whom reverence was not, as one may say, a *speciality*.

H. James, Jr., *Trans. Sketches*, p. 298.

4. A special or particular matter or thing; something specific or exceptional in character, relation, use, or the like.

Acosta numbreth diuerse strange *specialties*, excepted from the generall Rules of Natures wouited course.
Purchas, *Pilgrimage*, p. 872.

5. A special employment or pursuit; a distinct occupation or division of duty or interest; that which one does especially, either by choice or by assignment.

As each individual selects a special mode of activity for himself, and aims at improvement in that *specialty*, he finds himself attaining a higher and still higher degree of aptitude for it.

Dr. Carpenter, *Correlation and Conserv. of Forces*, p. 410.

6. A special product or manufacture; something made in a special manner or form, or especially characteristic of the producer or of the place of production: as, a dealer in *specialties*; also, an article to which a dealer professes to pay special attention or care, or which is alleged to possess special advantages in regard to quality, quantity, or price: as, fountain-pens a *specialty*. See the second quotation under *speciality*, 2.—7. In *law*, an instrument under seal, containing an express or implied agreement for the payment of money. The word has also been loosely used to include obligations or debts upon recognition, judgments and decrees, and statutes, because these, being matter of record, rank in solemnity, conclusiveness, and endurance with free contracts under seal.

Let *specialties* be therefore drawn between us.
Shak., *T. of the S.*, II. 1. 127.

All instruments under seal, of record, and liabilities imposed by statute, are *specialties* within the meaning of the Stat. 21 James I. Wood, *On Limitation of Actions*, § 29.

specie (spē'siē or -shē), *n.* [*L.* *specie*, abl. of *species*, kind, formerly much used in the phrase *in specie*, in kind, in ML. in coin: see *species*.] 1. As a Latin noun, used in the phrase *in specie*: (a) In kind.

So a lion is a perfect creature in himself, though it be less than that of a buffalo, or a rhinoceros. They differ

but *in specie*; either in the kind is absolute; both have their parts, and either the whole. B. Jonson, *Discoveries*.

You must pay him *in specie*, Madam; give him love for his wil.
Dryden, *Mock Astrologer*, v. 1.

Uneconomical application of punishment, though proper, perhaps, as well *in specie* as in degree.
Bentham, *Introd. to Morals and Legislation*, xvi. 54, note.

(b) In coin. See def. 2. Hence, as an English noun—2. Coin; metallic money; a medium of exchange consisting of gold or silver (the precious metals) coined by sovereign authority in pieces of various standard weights and values, and of minor coins of copper, bronze, or some other cheap or base metal; often used attributively. The earliest coinage of specie is attributed to the Lydians, about the eighth century B. C. Previously, and long afterward in many countries, pieces of silver and gold (the latter only to a small extent) were passed by weight in payments, as lumps of silver are still in China. The use of specie as a measure of price is based upon the intrinsic value of the precious metals as commodities, which has diminished immensely since ancient times, but is comparatively stable for long periods under normal circumstances. In modern civilized communities specie or bullion is largely used by banks as a basis or security for circulating notes (bank-notes) representing it. In times of great financial disturbance this security sometimes becomes inadequate from depletion or through excessive issues of notes, and a general suspension of specie payments takes place, followed by great depreciation of the paper money. General suspensions of specie payments occurred in the United States in 1837, 1857, and 1861, the last, due to the civil war, continuing till 1879. Specie payments by British banks were suspended by law, in consequence of the French wars, from 1797 to 1823, but were actually resumed by the Bank of England in 1821. Similar interruptions of solvency have occurred in the other European countries, resulting in Austria and Russia in an apparently permanent substitution of depreciated paper money for specie in ordinary use and reckoning.—**Specie circular**, in *U. S. hist.*, a circular issued by the Secretary of the Treasury in July, 1836, by direction of President Jackson, ordering United States agents to receive in future only gold and silver or Treasury certificates in payment for government lands.

An appearance or representation to the senses or the perceptive faculties; an image presented to the eye or the mind. According to the Roman Catholic doctrine of transubstantiation, the species, the outward and visible forms or the appearance of bread and wine in the eucharist, are the accidents only of bread and wine severally, the substance no longer existing after consecration. See *intentional species*, below.

The sun, the great eye of the world, prying into the recesses of rocks and the hollowness of valleys, receives *species* or visible forms from these objects.

Jer. Taylor, *Works* (ed. 1835), I. 782.

Wit . . . is no other than the faculty of imagination in the writer, which searches over all the memory for the *species* or ideas of those things which it designs to represent.
Dryden.

By putting such a rubric into its Missal, the church of Milan sought to express nothing more than that the accidents or *species* of the sacrament are broken.

Rock, *Church of our Fathers*, i. 125.

2†. Something to be seen or looked at; a spectacle or exhibition; a show.

Shows and *species* serve best with the people. Bacon.

3. [Tr. of Gr. *εἶδος*.] In *logic*, and hence in ordinary language, a class included under a higher class, or, at least, not considered as including lower classes; a kind; a sort; a number of individuals having common characters peculiar to them.

There is a prived *specie* of pride that waiteth first to be sawed or he wol sawe.
Chaucer, *Parson's Tale*.

Different essences alone . . . make different *species*.
Locke, *Human Understanding*, III. vi. 35.

It is well for thee that . . . we came under a convention to pardon every *species* of liberty which we may take with each other.
Scott, *Redgauntlet*, letter III.

A poor preacher being the worst possible *species* of a poor man.
W. M. Baker, *New Timothy*, p. 222.

4. One of the kinds of things constituting a combined aggregate or a compound; a distinct

constituent part or element; an instrumental means: as, the *species* of a compound medicine. [Now rare in this medical sense, and obsolete or archaic in others.]

In Algebra, *Species* are those Letters, Characters, Notes, or Marks which represent the Quantities in any Equation or Demonstration.

E. Phillips, *New World of Words* (ed. 1706).

5. In *biol.*, that which is specialized or differentiated recognizably from anything else of the same genus, family, or order; an individual which differs, or collectively those individuals which differ, specifically from all the other members of the genus, etc., and which do not differ from one another in size, shape, color, and so on, beyond the limits of (actual or assumed) individual variability, as those animals and plants which stand in the direct relation of parent and offspring, and perpetuate certain inherited characters intact or with that little modification which is due to conditions of environment. *Species* is thus practically, and for purposes of classification, the middle term between *genus* on the one hand and *individual* (or *specimen*) on the other; and only the latter can be said in strictness to have material existence, so that *species*, like *genus*, etc., is in this sense an abstract conception. It is also an assured fact in biology that no given stock or lineage breeds perfectly true in all its individuals; the line of descent is always marked by modification of characters (due to the interaction between heredity and environment); the whole tendency of such modification is toward further specialization, in the preservation of the more useful and the extinction of the less useful or the useless characters, and thus to the gradual acquirement, by insensible increments, of differences impressed upon a plastic organism from without—which is as much as to say that new species have always been in process of evolution, and still continue to be so developed. (See biological senses of *evolution*, *selection*, *survival*, and *variation*.) Such evolution has in fact been arrested at some point for every species once existent whose members have perished in time past; and of those specific forms whose adaptation to their environment has fitted them to survive till the present some are tending to perpetuation and some to extinction, but all are subject to incessant modification, for better or worse. (See *atavism*, *reversion*, 2, *retrograde*, a, 3, *degradation*, 7, 8, and *parasitism*, 2.) Such are the views taken by nearly all biologists of the present day, in direct opposition to the former opinion of a special creation, which proceeded upon the assumption that all species of animals and plants, such as we find them actually to be, came into existence by creative fiat at some one time, and have since been perpetuated with little if any modification. In consequence of the fact that the greatest as well as the least differences in organisms are of degree and not of kind, no rigorous and unexceptionable definition of *species* is possible in either the animal or the vegetable kingdom; and in the actual naming, characterizing, and classifying of species naturalists differ widely, some reducing to one or two species the same series of individuals which others describe as a dozen or twenty species. (See *lumper*, 3, *splitter*, 2.) This, however, is rather a nomenclatural than a doctrinal difference. The difficulty of deciding in many cases, and the impossibility of deciding in some, what degree of difference between given specimens shall be considered specific, and so formally named in the binomial system, have led to the introduction of several terms above and below the species (see *subgenus*, *subspecies*, *conspicies*, *varieties*, *races*, 5 (a) (b), *intergrade*, v. t.), and also to a modification of the binomial nomenclature (see *polynomial*, 2, and *trinomial*). Two tests are commonly applied to the discrimination between good species and mere subspecies or varieties: (1) the individuals of thoroughly distinct species do not interbreed, or, if they are near enough to hybridize, their progeny is usually infertile, so that the cross is not in perpetuity: the horse and ass offer a good case in point; (2) the specific distinctions do not vanish by insensible degrees when large series of specimens from different geographical localities or geological horizons are available for comparison; for, should characters assumed to be distinctive, and therefore specific, be found to grade away under such scrutiny, they are by that fact proved to be non-specific, and the specimens in question are reducible to the rank of conspecies, subspecies, varieties, or races. Attempts which have been made to separate mankind into several species of the genus *Homo* fall according to both of the criteria above stated. To these may be added, in judging the validity of an alleged species, the third premise, that stable specific forms are evolved by or in the course of natural selection only; for all the countless stocks or breeds resulting from artificial selection, however methodically conducted, tend to revert when left to themselves, and also hybridize freely; they are not therefore in perpetuity except under cultivation, and are no species in a proper sense, though their actual differences may have become, under careful selection, far greater than those usually accounted specific or even generic. (See *dog*, *rose* 1.) Taking into account geological succession in time as well as geographical distribution in space, and proceeding upon accepted doctrines of the evolution of all forms of animal and vegetable life from antecedent forms, it is evident, first, that "species" is predicable only by means of the "missing links" in the chains of genetic relationships; for, were all organisms that have ever existed before our eyes in their actual evolutionary sequences, we should find no gap or break in the whole series; but, secondly, that development along numberless diverging lines of descent with modification has in fact resulted (through obliteration of the consecutive steps in the process) in the living fauna and flora of the globe, in respect of which not only specific, but generic, ordinal, and still broader distinctions are easily and certainly predicable. It does not appear that any animal or plant has always maintained what we now find its specific character to be; yet the persistence of some forms under no greater variation than that usually ac-

counted generic is established, as in the case of the genus *Lingula*, whose members have survived from the Silurian to the present epoch with only specific modification. In the animal kingdom probably about 250,000 species have been described, recorded, and formally named by a word following the name of the genus to which they are severally ascribed (see under *specific*); the actual number of species is doubtless much greater than this; some 200,000 species are insects (see *Insecta*), of which 80,000 or more belong to one order (see *Coleoptera*). These estimates are exclusive of merely nominal species. (See *synonymy*.) The known species of flowering plants are summed up by Durand in his "Index Generum Phanerogamorum" as follows: dicotyledons, 78,200; monocotyledons, 19,600; gymnosperms, 2,420—in all, 100,220. This is the net result after extensive sifting. To this number large additions are to be expected from regions, as central Africa, still imperfectly or not at all explored. Of the number of cryptogams no reliable estimate can at present be given. The described species of fungi, judging from the eight volumes of Saccardo's work now published, are likely to number, before sifting, about 50,000. Abbreviated *sp.*, with plural *spp.*

6t. Coin; metallic money; specie. See *specie*.

Rome possessed a much greater proportion of the circulating *species* of its time than any European city.

He [Necker] affirms that, from the year 1726 to the year 1784, there was coined at the mint of France, in the *species* of gold and silver, to the amount of about one hundred millions of pounds sterling. Burke, Rev. in France.

7. One of a class of pharmaceutical preparations consisting of a mixture of dried herbs of analogous medicinal properties, used for making decoctions, infusions, etc. See under *tea*.

—8. In *civil law*, the form or shape given to materials; fashion; form; figure. Burrill.—

9. In *math.*: (a) A letter in algebra denoting a quantity. [This meaning was borrowed by some early writers from the French of Viète, who derived it from a Latin translation of Diophantus, who uses *εἶδος* to mean a term of a polynomial in a particular power of the unknown quantity.] (b) A fundamental operation of arithmetic. See the *four species*, below.—

Disjunct species, in *logic*. See *disjunct*.—**Intelligible species**. See *intentional species*.—**Intentional species**, a similitude or simulacrum of an outward thing; the vicarious object in perception and thought, according to the doctrine held and attributed to Aristotle by the medieval realists, beginning with Aquinas. Such species were divided into *sensible species* and *intelligible species*, which distinction and terminology, originating with Aquinas, were accepted by Scotus and others. The sensible species mediated between the outward object and the senses. They were metaphorically called *emanations*, but, being devoid of matter, are not to be confounded with the emanations of Democritus, from which they also differ in being related to other senses besides sight. So far as they belong to the outward thing they were called *impressed*, so far as they are perceived by the mind *expressed species*. From these sensible species the agent intellect, by an act of abstraction, was supposed to separate certain intelligible species, which the higher or patient intellect was able to perceive. These intelligible species so far as they belong to sense were called *impressed*, so far as they are perceived by the intellect *expressed species*. Species were further distinguished as *acquired*, *infused*, and *connatural*. The doctrine of intentional species was rejected by the nominalists, and exploded early in the seventeenth century, but not until the nineteenth was it generally acknowledged to be foreign to the opinion of Aristotle.

—**Nascent species**, in *biol.*, a species of animal or plant in the act, as it were, of being born or produced; an incipient species, whose characters are not yet established in the course of its development.—**Sensible species**. See *intentional species*.—**Species anthelmintica**, a mixture of equal parts of absinthium, tansy, camomile, and santonica.—**Species diuretica**, a mixture of equal parts of roots of lovage, asparagus, fennel, parsley, and butcher's-broom.—**Species laxantes**. Same as *St. Germain tea* (which see, under *tea*).—**Species pectorales**. Same as *breast tea* (which see, under *tea*).—**Species aurorifica**. Same as *wood tea* (which see, under *tea*).—**Subaltern species**, in *logic*, that which is both a species of some higher genus and a genus in respect of the species into which it is divided.—**The four species**, the four fundamental operations of arithmetic—addition, subtraction, multiplication, and division. This phrase, rare in English but common in German, seems to have been first so applied by the East Frisian mathematician Gemma in 1540. It was borrowed from *logic*, where since Petrus Hispanus four species of logical procedure are enumerated in all the old books. Thus, Wilson (1551) says: "There be four kinds of argumentes, a perfecte argument, an unperfecte argument, an Inductione, an example"; and Blundeville (1599): "There be foure principall kindes or formes of argumentation, that is, a syllogisme, an induction, an enthymeme, and example."

Species-cover (spē'shēz-kuv'ēr), *n.* The cover used in a herbarium to inclose and protect all the species-sheets of a single species. Such covers are usually made of folded sheets of light-weight brown paper, a little larger than the species-sheets.

Species-cycle (spē'shēz-si'kl), *n.* In *bot.*, the complete series of forms needed to represent adequately the entire life-history of a species.

Species-monger (spē'shēz-mung'gēr), *n.* In *nat. hist.*: (a) One who occupies himself mainly or exclusively in naming and describing species, without inclination to study, or perhaps without ability to grasp, their significance as biological facts; a specialist in species, who cares little or nothing for broader generaliza-

tions. (b) One who is finical in drawing up specific diagnoses, or given to distinctions without a difference. [Cant in both senses.]

species-paper (spē'shēz-pā'pēr), *n.* Same as *species-sheet*.

species-sheet (spē'shēz-shēt), *n.* One of the sheets or pieces of paper upon which the individual specimens of a species in a herbarium are mounted for preservation and display. They are usually made of heavy stiff white paper, the standard size of which is, in the United States, 16½ × 11½ inches, weighing about 28 pounds to the ream. Only a single species is placed on a sheet, and its label is placed in the lower right-hand corner.

specifiable (spēs'i-fi-ā-bl), *a.* [*specify* + *-able*.] That may be specified; capable of being distinctly named or stated.

A minute but *specifiable* fraction of an original disturbance may be said to get through any obstacle.

Nature, XXXVIII. 592.

specific (spē-sif'ik), *a.* and *n.* [*OF. spécifique*, *F. spécifique* = *Sp. específico* = *Pg. específico* = *It. specifico* (cf. *G. spezifisch*), < *ML. specificus*, *specific*, particular, < *L. species*, kind, + *-ficus*, < *facere*, make.] **I. a.** 1. That is specified or defined; distinctly named, formulated, or determined; of a special kind or a definite tenor; determinate; explicit: as, a *specific* sum of money; a *specific* offer; *specific* obligations or duties; a *specific* aim or pursuit.

To be actuated by a desire for pleasure is to be actuated by a desire for some *specific* pleasure to be enjoyed by oneself.

T. H. Green, *Prolegomena to Ethics*, § 282.

In addition to these broad differences, there are finer differences of *specific* quality within each sense.

J. Sully, *Outlines of Psychol.*, p. 115.

2. Pertaining to or accordant with what is specified or determined; relating to or regarding a definite subject; conformable to special occasion or requirement, prescribed terms, or known conditions; having a special use or application.

It was in every way stimulating and suggestive to have detected a *specific* bond of relationship in speech and in culture between such different peoples as the English and the Hindus.

J. Fiske, *Evolutionist*, p. 109.

3. Of or pertaining to a species. (a) Pertaining to a logical species. (b) In *zool.* and *bot.*, of or pertaining to species or a species; constituting a species; peculiar to, characteristic of, or diagnostic of a species; designating or denominating a species; not generic or of wider application than to a species: as, *specific* characters; *specific* difference; a *specific* name. See *generic*, *subgeneric*, *conspecific*, *subspecific*.

4. Peculiar; special.

Their style, like the style of Bolardo in poetry, of Botticelli in painting, is *specific* to Italy in the middle of the fifteenth century. *J. A. Symonds*, *Italy and Greece*, p. 251.

5. In *law*, having a certain or well-defined form or designation; observing a certain form; precise.—6. In *med.*, related to special infection, particularly syphilitic infection; produced by some distinct zymotic poison.—**Specific cause**, in *med.*, a cause which in operation will produce some special disease.—**Specific centers**, points or periods in the course of evolution at which an organism is supposed to become specifically differentiated from a common stock, having assumed or acquired its specific characters.—**Specific characters**, in *zool.* and *bot.*, the diagnostic marks of a species; differences of whatever kind, which are peculiar to a species and serve to distinguish it from any other. The sum of such characters, or the total specific characteristics, are also spoken of as the *specific character*. Any one such mark or feature is a *specific character*.—**Specific denial**, in *law*, denial which itself rehearses what is denied, or which sufficiently specifies what particular part of the adversary's allegations are denied, as distinguished from a general denial of all his allegations.—**Specific difference**, in *logic*. See *difference*.—**Specific disease**, a disease produced by a special infection, as syphilis.—**Specific duty**, in a trifle, an impost of specified amount upon any object of a particular kind, or upon a specified quantity of a commodity, entered at a custom-house.—**Specific gravity**. See *gravity*.—**Specific heat**. See *heat*.—**Specific inductive capacity**. See *capacity* and *induction*, 6.—**Specific intent**, **legacy**, **lien**. See the nouns.—**Specific medicine** or **remedy**, a medicine or remedy that has a distinct effect in the cure of a certain disease, as mercury in syphilis, or quinine in intermittent fever.—**Specific name**, in *zool.* and *bot.*, the second term in the binomial name of an animal or a plant, which designates or specifies a member of a genus, and which is joined to the generic name to complete the scientific or technical designation. Thus, in the name *Felis leo*, *leo* is the specific name, designating the lion as a member of the genus *Felis*, and as specifically different from *Felis tigris*, the tiger, *Felis catus*, the wildcat, etc. Also called *nomen specificum*, and formerly *nomen triviale* or *triviale name*. See *binomial*, 2, and *nomen*.—**Specific performance**, **relief**, **resistance**. See the nouns.—**Specific rotatory power**. See *rotatory*. = *Syn. 1* and *2. Particular*, etc. See *special*.

II. n. Something adapted or expected to produce a specific effect; that which is, or is supposed to be, capable of infallibly bringing about a desired result; especially, a remedy which cures, or tends to cure, a certain disease, whatever may be its manifestations, as mercury used as a remedy for syphilis.

Always you find among people, in proportion as they are ignorant, a belief in *specifics*, and a great confidence in pressing the adoption of them.

H. Spencer, *Study of Sociol.*, p. 20.

specific (spē-sif'ik-ā), *a.* [*specific* + *-al*.] Same as *specific*. [Archaic.]

To compel the performance of the contract, and recover the *specific* sum due. *Blackstone*, *Com.*, 111. ix.

specifically (spē-sif'ik-ā-lī), *adv.* 1. In a specific manner; according to the nature of the species or of the case; definitely; particularly; explicitly; in a particular sense, or with a particularly differentiated application.

But it is rather manifest that the essence of spirits is a substance *specifically* distinct from all corporeal matter whatsoever. *Dr. H. More*, *Anti-dotes against Atheism*, iii. 12.

Those several virtues that are *specifically* requisite to a due performance of this duty. *South*, *Sermon*.

2. With reference to a species, or to specific difference; as a species.

specificity (spē-sif'ik-ā-nes), *n.* The state of being specific. [Rare.]

specificate (spē-sif'ik-ā-tē), *v. t.* [*ML. specificatus*, pp. of *specificare*, specify: see *specify*.] To denote or distinguish specifically; specify.

Now life is the character by which Christ *specificates* and denominates himself. *Donne*, *Sermons*, vii.

specification (spēs'i-fi-kā'shōn), *n.* [= *F. spécification* = *Sp. especificacion* = *Pg. especificação* = *It. specificazione*, < *ML. specificatio(n)-*, a specifying, enumeration, < *specificare*, specify: see *specify*.] 1. An act of specifying, or making a detailed statement, or the statement so made; a definite or formal mention of particulars: as, a *specification* of one's requirements.

All who had relatives or friends in this predicament were required to furnish a *specification* of them.

Prescott, *Ferd. and Isa.*, i. 7.

2. An article, item, or particular specified; a special point, detail, or reckoning upon which a claim, an accusation, an estimate, a plan, or an assertion is based: as, the *specifications* of an architect or an engineer, of an indictment, etc.; the *specification* of the third charge against a prisoner; statements unsupported by *specifications*.—3. The act of making specific, or the state of having a specific character; reference to or correlation with a species or kind; determination of species or specific relation.

For, were this the method, miracles would no more be miracles than the diurnal revolution of the sun, the growth and *specification* of plants and animals, the attraction of the magnet, and the like.

Evelyn, *True Religion*, II. 195.

Here we may refer to two principles which Kant put forward under the names of Homogeneity and *Specification*.

F. H. Bradley, *Ethical Studies*, p. 68.

4. In *patent law*, the applicant's description of the manner of constructing and using his invention. It is required to be so explicit as to enable any person skilled in the art or science to make and use the same; and in the United States it forms part of the patent, which cannot therefore protect the inventor in anything not within the specification.

5. In *civil law*, the formation of a new property from materials belonging to another person. Specification exists where a person works up materials belonging to another into something which must be taken to be a new substance—for example, where whisky is made from corn. The effect is that the owner of the materials loses his property in them, and has only an action for the value of them against the person by whom they have been used. The doctrine originates in the *civil law*, but has been adopted by the common law, under the name of *confusion* and *accession*, at least where the person making the specification acts in good faith.—**Accusative of specification**. Same as *synecdochical accusative*. See *synecdochical*.—**Charge and specifications**. See *charge*.—**Law of specification**, in *Kantian philos.*, the logical principle that, however far the process of logical determination may be carried, it can always be carried further.—**Principle of specification**, in *Kantian philos.*: (a) The logical maxim that we should be careful to introduce into a hypothesis all the elements which the facts to be explained call for, or that *entium varietates non temere esse minuendas*, which is a counteracting maxim to Occam's razor. (b) Same as *law of specification*.

specificity (spēs-i-fis'i-ti), *n.* [*specific* + *-ity*.] The state of being specific, or of having a specific character or relation; specific affinity, cause, origin, or effect; specificness. [Recent.]

The suddenness, vigour, and *specificity* of their effects. *F. W. H. Myers*, *Proc. Lond. Soc. Psychic Research*.

Are we any longer to allow to this disease [cowpox] any high degree of *specificity*? *Lancet*, 1889, I. 1130.

specificize (spē-sif'iz), *v. t.*; pret. and pp. *specificized*, ppr. *specificizing*. [*specific* + *-ize*.] To make specific; give a special or specific character to. [Recent.]

The richest *specificized* apparatus of nervous mechanism. *Allen and Neurol.*, VI. 483.

specificness (spē-sif'ik-nes), *n.* The state or character of being specific.

specify (spes'i-fi), *v. t.*; pret. and pp. *specified*, ppr. *specifying*. [*< ME. specifyen, specifien, < OF. specifier, specifier, F. spécifier = Pr. Sp. Pg. especificar = It. specificare = D. specificeren = G. specificiren = Sw. specificera = Dan. specificere, < ML. specificare, make specific, mention specifically, < specificus, specific, particular: see specific.*] 1. To mention specifically or explicitly; state exactly or in detail; name distinctly: as, to *specify* the persons concerned in a given act; to *specify* one's wants, or articles required.

Ther cowde no man the nowmber *specifie*.

Generydes (E. E. T. S.), 1. 1953.

I nevere hadde to do more with the seyð John Wortes than is *specified* in the seyð instruction.

Paston Letters, 1. 20.

There is no need of *specifying* particulars in this class of uses.

Emerson, *Nature*, p. 17.

2. To name as a requisite, as in technical specifications; set down in a specification.—3. To make specific; give a specific character to; distinguish as of a species or kind. [Rare.]

Be *specified* in yourself, but not *specified* by anything foreign to yourself. *F. H. Bradley*, *Ethical Studies*, p. 71.

specillum (spē-sil'um), *n.*; pl. *specilla* (-ā). [*L. < specere, look, behold: see species.*] 1. In med., a probe.—2. A lens; an eye-glass.

specimen (spes'i-men), *n.* [= *F. spécimen = Sp. especimen, < L. specimen, that by which a thing is known, a mark, token, proof, < specere, see: see species.*] 1. A part or an individual taken as exemplifying a whole mass or number; something that represents or illustrates all of its kind; an illustrative example: as, a collection of geological *specimens*; a wild *specimen* of the human or of the feline race; a *specimen* page of a book (a page shown as a specimen of what the whole is or is to be); a *specimen* copy of a medal.

The best *specimens* of the Attic coinage give a weight of 4.366 grammes (67.38+ grains Troy) for the drachma.

Trans. Amer. Philol. Ass., XVI. 117.

Curzola is a perfect *specimen* of a Venetian town.

E. A. Freeman, *Venice*, p. 205.

The leaf sculpture of the door jambs of the Cathedral of Florence affords *specimens* of the best Italian work of this sort [fourteenth century].

C. H. Moore, *Gothic Architecture*, p. 296.

2. In *zool.* and *bot.*, an individual animal or plant, or some part of one, prepared and preserved for scientific examination; an example of a species or other group; a preparation: as, a *specimen* of natural history; a *specimen* of the dog or the rose. Abbreviated *sp.* and *spec.*—3. A typical individual; one serving as a specially striking or exaggerated example of the kind indicated. [Jocose and colloq.]

There were some curious *specimens* among my visitors.

Thoreau, *Walden*, p. 163.

Specimen, *Sample*. A *specimen* is a part of a larger whole employed to exhibit the nature or kind of that of which it forms a part, without reference to the relative quality of individual portions; thus, a cabinet of mineralogical *specimens* exhibits the nature of the rocks from which they are broken. A *sample* is a part taken out of a quantity, and implies that the quality of the whole is to be judged by it, and not rarely that it is to be used as a standard for testing the goodness, genuineness, or purity of the whole, and the like. In many cases, however, the words are used indifferently. *Sample* is more often used in trade: as, a *sample* of cotton or coffee.

speciological (spē'shi-ō-loj'i-kāl), *a.* [*< speciology + -ic-al.*] Of or pertaining to speciology.

speciology (spē-shi-ol'ō-jī), *n.* [*< L. species, species, + Gr. -λογία, < λέγειν, speak: see -ology.*] In *biol.*, the science of species; the doctrine of the origin and nature of species.

speciosity (spē-shi-os'i-tī), *n.*; pl. *speciosities* (-tiz). [*< OF. speciosité = Sp. especiosidad = Pg. especiosidade = It. speciosità, < LL. speciositas(-is), good looks, beauty, < L. speciosus, good-looking, beautiful, splendid: see species.*] 1. The state of being specious or beautiful; a beautiful show or spectacle; something delightful to the eye.

So great a glory as all the *speciosities* of the world could not equalise.

Dr. H. More, *On Godliness*, III. vi. § 5. (*Encyc. Diet.*)

2. The state of being specious or plausible; a specious show; a specious person or thing. [Rare.]

Professions built so largely on *speciosity* instead of performance.

Carlyle.

speciosus (spē'shus), *a.* [*< ME. speciosus, < OF. speciosus, F. spécieux = Sp. Pg. especioso = It. specioso, < L. speciosus, good-looking, beautiful, fair, < species, form, figure, beauty: see species.*] 1. Pleasing to the eye; externally fair

or showy; appearing beautiful or charming; sightly; beautiful. [Archaic.]

The rest, far greater part,
Will deem in outward rites and *speciosus* forms
Religion satisfied. *Milton*, *P. L.*, xli. 534.

2. Superficially fair, just, or correct; appearing well; apparently right; plausible; beguiling: as, *speciosus* reasoning; a *speciosus* argument; a *speciosus* person or book.

It is easy for princes under various *speciosus* pretences to defend, disguise, and conceal their ambitious desires.

Bacon, *Political Fables*, ii., Expl.

Thou *speciosus* Head without a Brain. *Prior*, *A Fable*.

He coined

A brief yet *speciosus* tale, how I had wasted
The sum in secret riot. *Shelley*, *The Cenci*, III. 1.

3. Appearing actual, or in reality; actually existing; not imaginary. [Rare.]

Let me sum up, now, by saying that we are constantly conscious of a certain duration—the *speciosus* present—varying in length from a few seconds to probably not more than a minute, and that this duration (with its content perceived as having one part earlier and the other part later) is the original intuition of time.

W. James, *Prin. of Psychol.*, 1. 642.

4. Pertaining to species or a species.—**Speciosus arithmetic**, algebra: so called by old writers following Viète. The phrase implies that algebra is computation by means of species, or letters denoting quantities; but the choice of the name was probably influenced by the beauty of algebraic processes.—**Speciosus logistic**. See *logistic*.—**Speciosus 2**. *Colorable, Plausible, etc.* See *ostensible*.

speciously (spē'shus-li), *adv.* In a specious manner; with an appearance of fairness or of reality; with show of right: as, to reason *speciously*.

My dear Anacreon, you reason *speciously*, which is better in most cases than reasoning soundly; for many are led by it and none offended.

Landor, *Imag. Conv.*, Anacreon and Polycrates.

speciousness (spē'shus-nes), *n.* The state or quality of being specious; plausible appearance; fair external show: as, the *speciousness* of an argument.

His theory owes its *speciousness* to packing, and to packing alone.

Macaulay, *Sadier's Refutation Refuted*.

speck¹ (spek), *n.* [*< ME. specke, spekke, < AS. specca (pl. speccan), a spot, speck (also in comp. spec-faag, specked, spotted); cf. LG. spaken, spot with wet, spakig, spotted with wet; MD. spicken, spit, spickelen, spot, speckle: see speckle.*] 1. A very small superficial spot or stain; a small dot, blot, blotch, or patch appearing on or adhering to a surface: as, *specks* of mold on paper; fly-*specks* on a wall.

He was wonderfully careful that his shoes and clothes should be without the least *speck* upon them.

Steele, *Tatler*, No. 48.

2. In fruit, specifically, a minute spot denoting the beginning of decay; a pit or spot of rot or rottenness; hence, sometimes, a fruit affected by rot.

The shrivelled, dwarfish, or damaged fruit, called by the street traders the *specks*.

Mayhew, *London Labour and London Poor*, I. 117.

The little rift within the lamer's lute,
Or little pitted *speck* in governor's fruit,
That rotting inward slowly moulders all.

Tennyson, *Merlin and Vivien* (song).

3. A patch or piece of some material.

But Robin did on the old mans cloake,
And it was torn in the necke;
"Now by my faith," said William Scarlett,
"Heere should be set a *specke*."

Robin Hood and the Old Man (Child's Ballads, V. 258).

4. Something appearing as a spot or patch; a small piece spread out: as, a *speck* of snow or of cloud.

Come forth under the *speck* of open sky.

Hawthorne, *Seven Gables*, vi.

5. A distinct or separate piece or particle; a very little bit; an atom; a mite: as, *specks* of dust; a *speck* of snuff or of soot; hence, the smallest quantity; the least morsel: as, he has not a *speck* of humor or of generosity.

The bottom consisting of gray sand with black *specks*.

Anson, *Voyages*, II. 7.

Still wrong bred wrong withu her, day by day
Some little *speck* of kindness fell away.

William Morris, *Earthly Paradise*, II. 326.

6. A percid fish, *Ulocentra stigmæa* of Jordan, common in ponds of the hill-country from Georgia to Louisiana. It is a darter, 2½ inches long, of an olivaceous color, speckled with small orange spots, and otherwise variegated.—7. A *speck*-moth.

speck¹ (spek), *v. t.* [*< ME. specken; < speck¹, n.*] 1. To spot; mark or stain in spots or dots.

Wyclif, *Gen.* xxx. 32.

Each flower of slender stalk, whose head, though gay
Carnation, purple, azure, or *speck'd* with gold,
Hung drooping ununsustain'd.

Milton, *P. L.*, ix. 429.

2. Of fruit, specifically, to mark with a discolored spot denoting decay or rot: usually in the past participle.

It seemed as if the whole fortune or failure of her shop might depend on the display of a different set of articles, or substituting a fairer apple for one which appeared to be *specked*.

Hawthorne, *Seven Gables*, iii.

speck² (spek), *n.* [*Prop. *spick (the form speck being dial. and in part due to D. or G.); early mod. E. spycke, < ME. spik, spyk, spike, also assimilated spich, < AS. spic, bacon, = D. spck = MLG. spek = OHG. MHG. spec, G. speck = Icel. spik, lard, fat; prob. akin to Gr. πικον (*πικων), = Zend pivaih = Skt. pivan, fat.*] Fat; lard; fat meat. Now used chiefly as derived from the German in the parts of Pennsylvania originally settled by Germans, or from the Dutch in New York (also in South Africa, for the fat meat of the hippopotamus); among whalers it is used for whale's blubber.

Adue good Cheese and Oynons, stuffe thy guts
With *Specke* and Barley-pudding for digestion.

Heywood, *English Traveller*, 1. 2.

Speck [in Pennsylvania] is the hybrid offspring of English pronunciation and German *Speck* (pronounced schpeck), the generic term applied to all kinds of fat meat.

Trans. Amer. Philol. Ass., XVII, App., p. xii.

Speck and applejacks, pork fat and apples cut up and cooked together: an old-fashioned Dutch dish. *Bartlett*.

speck-fall (spek'fāl), *n.* [*< speck² + fall³*] In *whale-fishing*, a fall or rope rove through a block for hoisting the blubber and bone off the whale.

speckle (spek'li), *n.* [*Early mod. E. also speckle (= D. spikkel, a speckle), with dim. -le, < speck¹, n. Cf. speckle, v.*] 1. A little speck or spot; a speckled marking; the state of being speckled: as, yellow with patches of *speckle*.

She curiously examined . . . the peculiar *speckle* of its plumage.

Hawthorne, *Seven Gables*, x.

2. Color; hence, kind; sort. [Scotch.]

As ye well ken, . . . "the wanges o' sin is deith." But, mairly, . . . sinners get first wanges o' anither *speckle* frae the maister o' them.

G. Macdonald, *Warlock o' Glenwarlock*, xii.

speckle (spek'li), *v. t.*; pret. and pp. *speckled*, ppr. *speckling*. [*< MD. spickelen, speckelen, spot, speckle: see speckle, n.*] To mark with specks or spots; fleck; speck; spot.

Seeing Atys, straight he [the boar] rushed at him,
Speckled with foam, bleeding in flank and limb.

William Morris, *Earthly Paradise*, I. 348.

speckle-belly (spek'li-bel'i), *n.* 1. The North American white-fronted goose, *Anser albifrons gambeli*: so called in California because the under parts are whitish, blotched and patched with black. Also called *harlequin brant*, *speckled brant*. See cut under *laughing-goose*.—2. The gadwall, or gray duck, *Chauelasmus streperus*. See cut under *Chauelasmus*. *G. Trumbull*, 1888. [Long Island.]—3. A trout or char, as the common brook-trout of the United States, *Salvelinus fontinalis*. See cut under *char*.

speckled (spek'ld), *p. a.* [*< speckle + -ed²*] 1. Spotted; specked; marked with small spots of indeterminate character; maculate: specifically noting many animals.

I will pass through all thy flock to day, removing from thence all the *speckled* and spotted cattle, and all the brown cattle among the sheep, and the spotted and *speckled* among the goats: and of such shall be my hire. *Gen.* xxx. 32.

Ouer the body they haue built a Tombe of *speckled* stone, a brace and halfe high. *Purchas*, *Pilgrimage*, p. 271.

2. Variegated in appearance or character; diversified; motley; piebald: as, a *speckled* company. [Colloq.]

It was a singularly freaked and *speckled* group.

S. Judd, *Margaret*, 1. 10.

Thurgh which he may hise verry frendes see.

Chaucer, Wife of Bath's Tale, l. 347.

5. *pl.* A pair of lenses set in a frame adjusted to the eyes, to correct or improve defective vision; also, sometimes, a similar frame with pieces of plain white or colored glass to protect the eyes from glare or dust: commonly called a pair of *spectacles*. The frame was in former times usually of horn or tortoise-shell, and afterward of

silver; it is now usually of steel or of gold. It is made up of the "bridge," "rims" (or frames of the lenses), "bows," and "sides" or "temples"; but the bows are now often omitted. The frame is so constructed and adjusted as to rest on the nose and ears and hold the lenses in the proper position. Spectacles which are supported on the nose only, by means of a spring, are commonly called *eye-glasses*. Spectacles with convex lenses are for the aged, or farsighted; and spectacles with concave lenses are for the near-sighted. In both cases the value of spectacles depends upon their being accurately adapted to the per-

son's vision. Spectacles with colored lenses, as green, blue, neutral-tint, or smoke-color, are used to protect the eyes from a glare of light. *Divided spectacles* have each lens composed of two parts of different foci neatly united, one part for observing distant objects, and the other for examining objects near the eye. Another kind, called *periscope spectacles*, are intended to allow the eye a considerable latitude of motion without fatigue. The lenses employed in this case are of either a meniscus or a concavo-convex form, the concave side being turned to the eye. Spectacles with glazed wings or frames partly filled with crapa or wire gauze are used to shield the eyes from dust, etc.

He [Lord Crawford] sat upon a couch covered with deer's hide, and with *spectacles* on his nose (then a recent invention) was laboring to read a huge manuscript called the Rosler de la Guerre.

Scott, Quentin Durward, vii.

6. *pl.* Figuratively, visual aids of any kind, physical or mental; instruments of or assistance in seeing or understanding; also, instruments or means of seeing or understanding otherwise than by natural or normal vision or perception: as, rose-colored *spectacles*; I cannot see things with your *spectacles*.

And even with this I lost fair England's view,

And bid mine eyes be packing with my heart,

And call'd them blind and dinky *spectacles*.

For losing ken of Albion's wished coat.

Shak., 2 Hen. VI., ill. 2. 112.

Subjects are to look upon the faults of princes with the *spectacles* of obedience and reverence to their place and persona.

Donne, Sermons, II.

Shakespeare . . . was naturally learn'd; he needed not the *Spectacles* of Books to read Nature; he look'd inwardly, and found her there.

Dryden, Essay on Dram. Poesy (1693), p. 31.

7. *pl.* In *zoöl.*, a marking resembling a pair of spectacles, especially about the eyes: as, the *spectacles* of the cobra. See cut under *cobra-de-capello*.

A pair of white *spectacles* on the eyes, and whitish about base of bill.

Coues, Key to N. A. Birds, p. 815.

Compound spectacles. (a) Spectacles fitted for receiving extra colored glasses, or to which additional lenses can be attached to vary the power. (b) A form of spectacles having in each bow two half glasses differing in power or character; divided spectacles. See def. 5.—**Franklin spectacles.** Same as *pantoscopic spectacles* (which see, under *pantoscopic*).

spectacled (spek'ta-kld), *a.* [*spectacle* + *-ed*.] 1. Furnished with or wearing spectacles.

The bleared sights

Are *spectacled* to see him.

Shak., Cor., ill. 1. 222.

Porphyry upon her face doth look,

Like puzzled urchin on an aged crone

Who keepeth uchel a wondrous riddle-book,

As *spectacled* she sits in chilmney-nook.

Keats, Eve of St. Agnes, xv.

2. In *zoöl.*: (a) Marked in any way that suggests spectacles or the wearing of spectacles: as, the *spectacled* bear or cobra. (b) Spectacle or spectacular; being "a sight to behold"; spectral: as, the *spectacled* shrimp.—**Spectacled bear, Ursus or Tremarctos ornatus**, the only South American

Spectacled Bear (*Tremarctos ornatus*).

bear, having a light-colored mark on the face, like a pair of spectacles.—**Spectacled cobra**, any specimen of the common Indian cobra, *Naja tripartita*, which has the markings of the back of the hood well developed so as to resemble a pair of spectacles. See cut under *cobra-de-capello*.—**Spectacled coot, spectacled duck**, the surf-scooter or -duck, *Eidemia perspicillata*; the goggle-nose. [Connecticut].—**Spectacled eider**, *Somateria (Arctonetta) fisheri*, an eider-duck of the northwest coast of America, having in the male the eyes set in silvery-white plumage rimmed with black.—**Spectacled goose, gull-lemot, anake, atenoderm**. See the nouns.—**Spectacled ahrimp**, the specter- or skeleton-shrimp, a caprellid. See *Caprella*.—**Spectacled vampire**. Same as *spectacled stenoderm*.

spectacled-headed (spek'ta-kld-hed'ed), *a.* Having the head spectacled: applied to flies of the genera *Holcocephala* (family *Asilidæ*) and *Diopsis* and *Sphyracephala* (family *Diopsidæ*). See cut under *Diopsis*.

A queer-looking, *spectacled-headed*, predatory fly. . . The head is unusually broad in front, the eyes being very prominent and presenting a spectacled or goggled appearance.

C. H. Tyler Townsend, Proc. Entom. Soc. [of Washington], I. 254.

spectacle-furnace (spek'ta-kl-fêr'nâs), *n.* A literal translation of the German *brillenofen*,

which is a variety of the *spurofen*, a form of shaft-furnace of which the essential peculiarity is that the melted material runs out upon the inclined bottom of the furnace into a crucible-like receptacle or pot outside and in front of the furnace-stack. This sort of furnace has been used at Manafeld and in the Harz, but apparently not in any English-speaking country.

spectacle-gage (spek'ta-kl-gäj), *n.* A device used in fitting spectacles to determine the proper distance between the glasses.

spectacle-glass (spek'ta-kl-glâs), *n.* 1. Glass suited for making spectacles; optical glass.—2. A lens of the kind or form used in spectacles.—3†. A field-glass; a telescope.

As 1678 he added a *spectacle-glass* to the shadow-vane of the lesser arch of the Sea-quadrant.

Aubrey, Lives (Edmund Halley).

spectacle-maker (spek'ta-kl-mâ'kêr), *n.* A maker of spectacles; one who makes spectacles, eye-glasses, and similar instruments. The Spectacle-makers' Company of London was incorporated in 1630.

spectacle-ornament (spek'ta-kl-ôr'nâ-ment), *n.* A name given to an ornament, often found in sculptured stones in Scotland, consisting of two disks connected by a band: the surface so marked out is often covered with interlaced whorl-ornaments.

spectacular (spek-tak'ü-lâr), *a.* [*L. spectaculum*, a sight, show (see *spectacle*), + *-ar*.] 1. Pertaining to or of the nature of a show or spectacle; marked or characterized by great display: as, a *spectacular* drama.

The *spectacular* sports were concluded.

Hickes, Sermon, Jan. 30, 1681.

2. Pertaining to spectacles or glasses for assisting vision. [Rare.]

spectacularity (spek-tak'ü-lâr'i-ti), *n.* [*spectacular* + *-ity*.] Spectacular character or quality; likeness to or the fact of being a spectacle or show.

It must be owned that when all was done the place had a certain *spectacularity*; the furniture and ornaments wore somehow the air of properties.

Hovells, Private Theatricals, x.

spectacularly (spek-tak'ü-lâr-li), *adv.* In a spectacular manner or view; as a spectacle.

The last test was, *spectacularly*, the best of the afternoon.

Sci. Amer., N. S., LVII. 360.

spectant (spek'tant), *a.* [*L. spectant(-t)s*, pp. of *spectare*, look at, behold, freq. of *specere*, look at, behold: see *spectacle, species*.] In *her.*: (a) At gaze. (b) Looking upward with the nose bendwise: noting any animal used as a bearing.

spectate (spek'tât), *v. t. and i.* [*L. spectatus*, pp. of *spectare*, see, behold: see *spectant*.] To look about or upon; gaze; behold. [Obsolete or archaic.]

Coming on the Bridge, a Gentleman sitting on the Coach civilly salutes the *Spectating* Company; the turning of the Wheels and motion of the Horses are plainly seen as if natural and Alive.

Quoted in *Ashton's Social Life in Reign of Queen Anne*, [I. 287].

Mr. De Quincey—Works, VI. 329—has *spectate*: and who can believe that he went anywhere but to spectate for it?

F. Hall, Falae Philol., p. 76.

spectation (spek-tâ'ahon), *n.* [*L. spectatio(n-)*, a beholding, contemplation, < *spectare*, pp. *spectatus*, look at, behold: see *spectant*.] Look; aspect; appearance; regard.

direct reference to the name of the periodical cited.]

There is a vicious terror of being blamed in some well-inclined people, and a wicked pleasure in suppressing them in others; both which I recommend to your *spectatorial* wisdom to animadvert upon.

Steele, Spectator, No. 348.

spectatorship (spek-tā'tor-ship), *n.* [*spectator* + *-ship*.] The act of looking or beholding; the state or occupation of being a spectator or looker-on.

Guess . . . if thou standest not i' the state of hanging, or of some death more long in *spectatorship*.

Shak., Cor., v. 2. 71.

Bathing in the sea was the chief occupation of these good people, including, as it did, prolonged *spectatorship* of the process.

II. James, Jr., Confidence, xix.

spectatress (spek-tā'tres), *n.* [*spectator* + *-ess*. Cf. *spectatrix*.] A female spectator or looker-on.

Helen, in the night when Troy was sack'd,
Spectatress of the mischief which she made.

Rowe, Fair Penitent, v. 1.

spectatrix (spek-tā'triks), *n.* [= *F. spectatrice* = *It. spettatrice*, *fem.* of *spectator*, a beholder: see *spectator*.] Same as *spectatress*.

specter, spectre (spek'tēr), *n.* [*OF. (and F.) spectre* = *Sp. Pg. espectro* = *It. spettro*, an image, figure, ghost, < *L. spectrum*, a vision, appearance, apparition, image, < *specere*, see: see *species, spectacle*. Cf. *spectrum*.] 1. A ghostly apparition; a visible incorporeal human spirit; an appearance of the dead as when living. Spectera are imagined as disembodied spirits haunting or revisiting the scenes of their mundane life, and showing themselves in intangible form to the living, generally at night, from some overpowering necessity, or for some benevolent or (more usually) malevolent purpose. They are sometimes represented as speaking, but more commonly as only using terrifying or persuasive gestures to induce compliance with their wishes. The word is rarely used for the dissociated soul of a living person.

The ghosts of traitors from the Bridge descend,
With bold fanatic *spectres* to rejoice.

Dryden, Annus Mirabilis, st. 223.

One of the afflicted,
I know, bore witness to the apparition
Of ghosts unto the *spectre* of this Bishop,
Saying, "You murdered us!"

Longfellow, Giles Corey, iii. 2.

A fine traditional *spectre* pale,
With a turnip head and a ghostly wail,
And a splash of blood on the dickey!

W. S. Gilbert, Haunted.

2. In *zool.*: (a) One of many names of gressorial orthopteran insects of the family *Phasmidae*; a walking-stick or stick-insect; a specter-insect. (b) The specter-bat. (c) The specter-lemur. (d) A specter-shrimp.—**Specter of the Brocken**, an optical phenomenon named from the Brocken, a mountain of the Harz range, where it has been most frequently observed. It consists of the shadow of the observer cast at sunrise or sunset in apparently gigantic size upon the mist or fog about the mountain-summit. The shadow is sometimes inclosed in a prismatic circle called the *Brocken bow*, and again is bordered with a colored fringe. Howitt states that, if the fog is very dry, one sees not only one's self, but one's neighbor; if very damp, only one's self, surrounded by a rainbow-colored glory. Also *Brocken specter*. = *Syn. 1. Apparition, Phantom*, etc. See *ghost*.

specter-bat (spek'tēr-bat), *n.* The spectral bat, a South American leaf-nosed bat or vampire, *Phyllostoma spectrum*, or a similar species.

specter-candle (spek'tēr-kan'dl), *n.* A straight fossil cephalopod, as a baculite, belemnite, or orthoceratite. These and similar objects have often been superstitiously regarded, in ignorance of their origin and nature. See *baculus, salagrama*, and *thunder-stone*.

specter-crab (spek'tēr-krab), *n.* A glass-crab; one of the larval forms which were called *Phyllosomata*. See cut under *glass-crab*.

specter-insect (spek'tēr-in'sekt), *n.* Same as *specter*, 2 (a).

specter-lemur (spek'tēr-lēm'ér), *n.* The tarsier, *Tarsius spectrum*. See cut under *tarsier*.

specter-shrimp (spek'tēr-shrimp), *n.* A small læmodipod crustacean of the family *Caprellidae*, as *Caprella tuberculata*; a skeleton-shrimp: so called from the singular form and aspect.

spectra, *n.* Plural of *spectrum*.

spectral (spek'tral), *a.* [= *F. spectral*, < *L. spectrum*, *specter*: see *specter*.] 1. Of or pertaining to a specter; resembling or having the aspect of a specter; ghostlike; ghostly.

Some of the *spectral* appearances which he had been told of in a winter's evening. Scott, Bride of Lammemoor, xlii.

To his excited fancy everything assumed a *spectral* look. The shadows of familiar things about him stalked like ghosts through the haunted chambers of his soul.

Longfellow, Hyperion, iv. 3.

Spectral in the river-mist
The ship's white timbers show.
Whittier, The Ship-builders.

2. Pertaining to ocular spectra, or pertaining to the solar, prismatic, or diffraction spectrum; exhibiting the hues of the prismatic spectrum; produced by the aid of the spectrum: as, *spectral colors; spectral analysis*.

It is important to be able to observe the varying effects of pressure and density upon *spectral* phenomena.

J. N. Lockyer, Spect. Anal., p. 75.

3. In *zool.*, like or likened to a specter or apparition; suggestive of a ghost in any way: as, the *spectral* bat; *spectral* shrimps; *spectral* insects.—**Spectral lemur**, the tarsier.—**Spectral owl**, *Syrnium cinereum*, or *Strix cinerea*, the great gray owl of arctic America, remarkable for having more plumage in proportion to the size of the body than any other owl.

spectrality (spek-tral'i-ti), *n.*; pl. *spectralities* (-tiz). [*spectral* + *-ity*.] The state of being spectral; a spectral being or object. [Rare.]

What is he doing here in inquisitorial sanbenito, with nothing but ghastly *spectralities* prowling round him?

Carlyle, Sterling, i. 1. (Davies.)

spectrally (spek'tral-i), *adv.* In a spectral manner; like a ghost or specter.

spectre, *n.* See *specter*.

spectroholometer (spek'trō-bō-lom'e-tēr), *n.* [*NL. spectrum*, *spectrum*, + *E. bolometer*.] An instrument consisting of a bolometer in combination with a spectroscope, used in the study of the distribution of heat in the solar spectrum and in similar investigations. The absorbing surface of the bolometer is an extremely slender strip of platinum, and it is so mounted that this can be moved at will to any desired part of the spectrum, the amount of heat received being measured, as usual, by the deflection of a galvanometer-needle.

spectrograph (spek'trō-gráf), *n.* [*NL. spectrum* + *Gr. γράφειν*, write.] An apparatus designed to give a representation of the spectrum from any source, particularly one in which photography is employed; a spectroscope in which a sensitive photographic plate takes the place of the eyepiece of the observing telescope.

spectrographic (spek'trō-gráf'ik), *a.* [*spectrograph* + *-ic*.] Pertaining to a spectrograph or the observations made with it; specifically, relating to the process or results of photography as applied to the study of spectra.

Spectrographic operations are, as Professor Young well says, much more sensitive to atmospheric conditions than are visual observations.

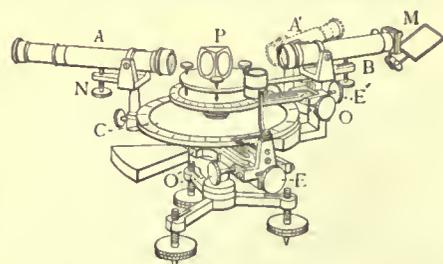

D. Todd, Science, III. 727.

spectrography (spek-trog'ra-fī), *n.* [As *spectrograph* + *-y*.] The art of using the spectrograph.

spectrological (spek'trō-loj'i-kal), *a.* [*spectrology* + *-ic-al*.] Of or pertaining to spectrology; performed or determined by spectrology: as, *spectrological analysis*.

spectrology (spek-trol'ō-jī), *n.* [*NL. spectrum* + *Gr. λογία*, < *λέγειν*, speak: see *-ology*.] That branch of science which determines the constituent elements and other conditions of bodies by examination of their spectra.

spectrometer (spek-trom'e-tēr), *n.* [*NL. spectrum*, *spectrum*, + *L. metrum*, measure.] An instrument used chiefly to measure the angular deviation of light-rays in passing through a prism, and hence to determine the refractive indices of the substance of which the prism is formed. Its essential parts are—(1) a tube B (see figure), having a slit at the further end through which the light is thrown by the mirror M, and a collimating lens at the other end to convert the divergent pencil into a parallel beam; (2) the prism P, which can be turned upon the cen-

Spectrometer.

tral axis, its position being centered by two slides moved at right angles to each other by means of the screws E and E'; (3) the observing telescope A, the eyepiece of which is provided with cross-wires so that the position of a given line can be accurately fixed; the axis of the telescope can be made horizontal by the screw N. After the position of the prism has been accurately adjusted, usually so as to give the minimum deviation for the given ray, the angle of deviation is measured by the telescope moving with the graduating circle C, while the prism (with the vernier) is stationary. By the tangent screws at O and O' the positions of the two circles can be adjusted more delicately. The instrument can also be used, like the ordinary reflecting goniometer (it is then a spectro-meter-goniometer), to mea-

sure the angle between the two faces of the prism, which angle, with that of the minimum deviation, is needed to give the data for calculating the required refractive index. (See *refraction*.) If a diffraction-grating instead of a prism is employed, the telescope A is moved into the position A', making a small angle with the tube B; the instrument may then be used to measure the wave-length of a given light-ray.

spectrometric (spek-trō-met'rik), *a.* [As *spectrometer* + *-ic*.] Pertaining to a spectrometer or the observations made with it.

spectromicroscopical (spek-trō-mī-krō-skōp'i-kal), *a.* [*NL. spectrum* + *E. microscopical*.] Pertaining to spectroscopic observations made in connection with the microscope.

The *spectro-microscopical* apparatus, especially in the hands of botanists, has become an important instrument in the investigation of the coloring matter of plants.

Behrens, Micros. in Botany (trans.), ii. 139.

spectrophone (spek'trō-fōn), *n.* [*NL. spectrum* + *Gr. φωνή*, sound.] An adaptation of the principle of the radiophone, devised by Bell to be used in spectrum analysis. It consists of a spectroscopic eyepiece of which is removed—the sensitive substances being placed in the focal point behind an opaque diaphragm containing a slit, while the ear is in communication with the substances by means of a hearing-tube. See the quotation.

Suppose we smoke the interior of our spectrophonic receiver, and fill the cavity with peroxide of nitrogen gas. We have then a combination that gives us good sounds in all parts of the spectrum (visible and invisible) except the ultra violet. Now pass a rapidly interrupted beam of light through some substances whose absorptive spectrum is to be investigated, and bands of sound and silence are observed in exploring the spectrum, the silent positions corresponding to the absorption bands.

A. G. Bell, in Philosph. Mag., 5th ser., II. 527, 1881.

spectrophonic (spek'trō-fōn'ik), *a.* [As *spectrophone* + *-ic*.] Of or pertaining to the spectrophone, or investigations made by means of it.

spectrophotometer (spek'trō-fō-tōm'e-tēr), *n.* [*NL. spectrum* + *E. photometer*.] An instrument used to compare the intensities of two spectra (as from the limb and center of the sun), or the intensity of a given color with that of the corresponding color in a standard spectrum. It is based upon the fact that the eye is very sensitive to slight differences of intensity between two similar colors when brought side by side. It consists essentially of a spectroscopic arrangement with total reflecting prisms, so that, for example, the spectra to be compared can be brought into immediate juxtaposition, while Nicol prisms in the path of the pencil of rays make it possible to diminish the intensity of the brighter light until the two exactly correspond. The angular position of the analyzing prism gives the means of deducing the required relation in intensity.

spectrophotometric (spek'trō-fō-tō-met'rik), *a.* [As *spectrophotometer* + *-ic*.] Pertaining to the spectrophotometer, to its use, or to observations made with it.

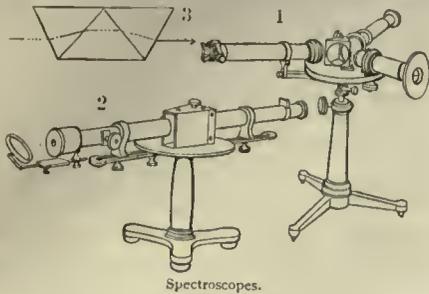

spectrophotometry (spek'trō-fō-tōm'e-trī), *n.* [As *spectrophotometer* + *-y*.] The art of using the spectrophotometer.

spectropolariscope (spek'trō-pō-lar'is-skōp), *n.* [*NL. spectrum* + *E. polariscope*.] A combination of the spectroscopic and the polariscope, an instrument sometimes used in the analysis of sugar. It is a modification of a form of the saccharimeter.

spectroscopy (spek'trō-pi-rōm'e-tēr), *n.* [*NL. spectrum* + *E. pyrometer*.] An instrument devised by Crova for measuring high temperatures, based upon the principle that two incandescent bodies of the same radiating power have the same temperature when their spectra are identical in extent. It is essentially a form of spectrophotometer.

spectroscope (spek'trō-skōp), *n.* [*NL. spectrum* + *Gr. σκοπεῖν*, view.] An instrument used to produce a spectrum of the light (or, more generally, the radiation) from any source by the passage of the rays through a prism or their reflection from a grating, and for the study of the spectrum so formed. In its common form the essential parts of the *prismatic spectroscope* are—(1) a tube with a slit at the further end (see fig. 1), through which the light enters, and at the other end a collimating lens which brings the rays into a parallel beam (the slit is formed between two parallel edges the distance between which can be varied at will); (2) a prism to refract and disperse the rays, or a series or train of prisms when greater dispersion is desired—a gain, however, which is accompanied by a serious diminution in the intensity of the light; (3) a telescope through which the magnified image of the spectrum thus formed is viewed. A third tube is usually added, containing a scale, which is illuminated by a small gas-flame and reflected from the surface of the prism into the telescope, thus giving the means of fixing the position of the lines observed. A small glass comparison prism is often placed in front of half the slit, and through it, by total reflection, a second beam of light can be introduced, the spectrum of which is seen directly over the other. An instrument which gives a spectrum when the source of the light is in a straight line with the eye—that is, which gives dispersion without deviation—is called a *direct-vision spectroscope* (see

fig. 2); this may be accomplished by combining two crown-glass prisms, with a third flint-glass prism of an angle of

Spectroscopes.

90° between them (fig. 3). For certain rays—for example, the yellow—there is no divergence while a spectrum is obtained, since the dispersion of the flint-glass prism in one direction is greater than that of the two crown-glass prisms in the opposite direction. Other forms of direct-vision spectroscopes have also been devised. In the *grating spectroscope*, or *diffraction spectroscope*, a diffraction-grating (a series of very fine parallel lines ruled on glass or speculum-metal) takes the place of the prism; and the parallel rays falling upon it are reflected, and form a series of diffraction-spectra (see *diffraction*, *grating*, 2, and *interference*, 5), which are called *normal spectra* (see *spectrum*, 3), since the dispersion of the rays is proportional to their wave-length. A prism is sometimes used before the telescope to separate parts of the successive spectra which would otherwise overlap. If a Rowland grating (see *diffraction*) is employed, the arrangements can be much simplified, since the large concave surface of the grating forms an image directly, which may be received upon a screen, or for study upon a photographic plate, or viewed through an eyepiece with cross-wires to fix the position of the lines observed. The grating is supported at one end of a rigid bar, in practice about 21 feet in length, at the other end of which, and at the center of curvature of the concave surface, is the eyepiece or support for the sensitive plate. The ends of this bar rest on carriages moving on two rails at right angles to each other; and, as the end carrying the eyepiece is moved, the whole length of the spectrum (several feet) may be successively observed, the fixed beam of parallel rays from the slit falling upon the grating as its position is slowly turned. The whole apparatus is mounted on rigid supports in a room from which all light but that received through the slit is carefully excluded. A high degree of dispersion is thus obtained, combined with the advantage of the normal spectrum, and the further advantages that the amount of light employed is large, while the disturbing effect of the absorption of the material of the prisms is avoided. See further under *spectrum*.—*Analyzing spectroscope*, *integrating spectroscope*, terms applied to the spectroscope (Young) to describe its use, with or without a lens throwing an image of the luminous object upon the slit. In the former case, different parts of the slit are illuminated by light from different parts of the object, and their spectra can be separately compared, or, in other words, the light is thus analyzed; while in the second case, when the collimator is pointed toward the source of light, the combined effect of the whole is obtained.—*Half-prism spectroscope*, a spectroscope in which the beam of rays enters the prism at right angles to one face, and suffers dispersion only on emerging from the face opposite and inclined to it. The half-prism ordinarily employed is half of a compound prism such as is used in the direct-vision spectroscope.—*Rainband-spectroscopes*. See *rainband*.

spectroscope (spek'trō-skōp), *v. i.* and *t.*; pret. and pp. *spectroscoped*, ppr. *spectroscoping*. [*spectroscope*, *n.*] To use the spectroscope; study by means of observations with the spectroscope. C. Piazzi Smyth, Trans. R. S. E., XXXII. 521. [Rare.]

spectroscopic (spek'trō-skōp'ik), *a.* [*spectroscopic* + *-ic*.] Of, pertaining to, or performed by means of the spectroscope or spectroscopy; as, *spectroscopic analysis*; *spectroscopic investigations*.

spectroscopical (spek'trō-skōp'i-kəl), *a.* [*spectroscopic* + *-al*.] Same as *spectroscopic*.

spectroscopically (spek'trō-skōp'i-kəl-i), *adv.* In a spectroscopic manner; by the use of the spectroscope.

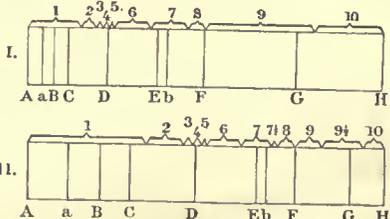

spectroscopist (spek'trō-skō-pist), *n.* [*spectroscopic* + *-ist*.] One who uses the spectroscope; one skilled in spectroscopy.

spectroscopy (spek'trō-skō-pi), *n.* [As *spectroscopic* + *-y*.] That branch of science, more particularly of chemical and physical science, which is concerned with the use of the spectroscope and with spectrum analysis.

spectrum (spek'trum), *n.*; pl. *spectra* (-trā). [*NL. spectrum*, a spectrum, < *L. spectrum*, an appearance, an image or apparition: see *specter*.] 1†. A specter; a ghostly phantom.—2. An image of something seen, continuing after the eyes are closed, covered, or turned away. If, for example, one looks intently with one eye upon any colored object, such as a wafer placed on a sheet of white paper, and immediately afterward turns the same eye to another part of the paper, one sees a similar spot, but of a different color. Thus, if the wafer is red, the seem-

ing spot will be green; if black, it will be changed into white. These images are also termed *ocular spectra*.

3. In physics, the continuous band of light (*visible spectrum*) showing the successive prismatic colors, or the isolated lines or bands of color, observed when the radiation from such a source as the sun, or an ignited vapor in a gas-flame, is viewed after having been passed through a prism (*prismatic spectrum*) or reflected from a diffraction-grating (*diffraction- or interference-spectrum*). The action of the prism (see *prism* and *refraction*) is to refract the light and at the same time to separate or disperse the rays of different wave-lengths, the refraction and dispersion being greater as the wave-length diminishes. The grating (see *grating*, 2), which consists usually of a series of fine parallel lines (say 10,000 or 20,000 to the inch) ruled on speculum-metal, diffracts and at the same time disperses the light-rays, forming a series of spectra whose lengths depend upon the fineness of the lines. If, now, a beam of white light is passed through a slit, and then by a collimator lens is thrown upon a prism, and the light from this received upon a screen, a colored band will be obtained passing by insensible degrees, from the less refrangible end, the red, to the more refrangible end, the violet, through a series of colors ordinarily described as red, orange, yellow, green, blue, indigo, and violet. A similar effect is obtained from a grating, with, however, this difference, that in the prismatic spectrum the red covers only a small part relatively of the colored band, since the action of the prism is to crowd together the less refrangible rays and separate the more refrangible rays of less wave-length, and thus distort the spectrum. The diffraction-spectrum, on the other hand, shows the red occupying about the same space as the blue and violet, and is called a *normal spectrum*. When the light from different sources is studied in the spectroscope, it is found, first, that a solid or a liquid when incandescent gives a continuous spectrum, and this is true of gases also at great pressures; second, bodies in the gaseous form give discontinuous spectra, consisting of colored bright lines (*line-spectrum*) or bands (*band-spectrum*), or of bands which under certain conditions appear as channeled spaces or fittings (*fluted spectrum*), and these lines or bands for a given substance have a definite position, and are hence characteristic of it; third, if light from an incandescent solid or liquid body passes through a gas (at a lower temperature than the incandescent body), the gas absorbs the same rays as those its own spectrum consists of; therefore, in this case, the result is a spectrum (*absorption-spectrum*) continuous, except as interrupted by black lines occupying the same position as the bright lines in the spectrum of the gas itself would occupy. An absorption-spectrum, showing more or less sharply defined dark bands, is also obtained when the light has passed through an appropriate liquid (as blood), or a solid such as a salt of didymium (see further under *absorption*). For example, the spectrum from a candle-flame is continuous, being due to the incandescent carbon particles suspended in the flame. If, however, the yellow flame produced when a little sodium is inserted in the non-luminous flame of a Bunsen burner is examined, a bright-yellow line is observed; if a red lithium flame, then a red and a yellow line are seen; the red strontium flame gives a more complex spectrum, consisting of a number of lines, chiefly in the red and yellow; and so of other similar substances. For substances like iron, and other metals not volatile except at very high temperatures, the heat of the voltaic arc is employed, and by this means their spectra, often consisting of a hundred or more lines (of iron at least 2,000), can be mapped out. Still again, if the light from the sun is studied in the same way, it is found to be a bright spectrum from red to violet, but crossed by a large number of dark lines called *Fraunhofer lines*, because, though earlier seen by Fraunhofer (1814), they were first mapped by Fraunhofer in 1814; this name is given especially to the more prominent of them, which he designated by the

Fixed Lines and Colored Spaces of Prismatic Spectrum (L) and Normal Spectrum (11).
1, red; 2, red-orange; 3, orange; 4, orange-yellow; 5, yellow; 6, green-yellow and yellow-green; 7, green and (7/2) blue-green; 8, cyan-blue; 9, blue and (9/2) blue-violet; 10, violet; A, a, B, C, etc., Fraunhofer lines.

letters A to H, etc. (See the figures.) These lines, as explained above, are due to the absorption by gases, either in the sun's atmosphere or in that of the earth. When the light is passed through a train of prisms, or reflected from a Rowland grating, and thus a very high degree of dispersion obtained, the rays are more widely separated and the spectrum can be more minutely examined. Studied in this way, it is found that the dark lines in the solar spectrum number many thousands, the greater part of which can be identified in the spectra of known terrestrial substances. Thus, the presence in the sun's atmosphere of thirty-six elements has been established (Rowland, 1891); these include sodium, potassium, calcium, magnesium, iron, copper, cobalt, silver, lead, tin, zinc, titanium, aluminum, chromium, silicon, carbon, hydrogen, etc. The radiation from the sun consists not only of those rays whose wave-length is such as to produce the effect of vision upon the eye, but also of others of greater wave-length than the red rays and less wave-length than the violet; the spectrum from such a source consequently includes, besides the luminous part, an invisible part (*invisible spectrum*) below the red, called the *infra-red* region, and another beyond the violet, called the *ultra-*

violet. The first region is also present in the spectrum from any hot body, and the latter in that from a body at a high temperature—for example the incandescent carbons of an arc electric light. Thus, Langley by means of his bolometer has proved the existence of rays having a wave-length nearly twenty times that of the luminous red rays, in the radiation of the surface of the moon, and corresponding to a temperature not far from that of melting ice. Further, while the visible spectrum includes rays separated by only about one octave (since the wave-length for the extreme red is approximately twice that of the extreme violet), the full spectrum, from the extreme ultra-violet to the longest waves recognized by the bolometer, embraces more than seven octaves. In other words, it extends from rays having a wave-length of 0.18 of a micron to those whose wave-length is 30 microns (1 micron = 1/1000 millimeter). The invisible regions of the spectrum cannot be directly studied by the eye, but they can be explored, first by photography, it being possible to prepare suitable plates sensitive to the infra-red as well as others sensitive to ultra-violet rays, and such photographs show the presence of many additional absorption-lines. The invisible infra-red region (*heat-spectrum*) can also be explored by the thermopile and still better the bolometer, and the distribution of the heat thus examined, and a thermogram of the spectrum constructed in which the presence of "cold" absorption-bands is noted. Still again, the method of phosphorescence is employed to give a phosphorograph of the spectrum, while fluorescence is made use of in studying the ultra-violet region. In studying the invisible heat-spectrum lenses and prisms of rock-salt must be used, because the dark rays of long wave-length are largely absorbed by glass; further, in investigating the invisible ultra-violet region quartz is similarly employed, since it is highly transparent to these short wave-length vibrations. In many investigations it is of great advantage to use the grating-spectroscopes, especially one provided with a concave Rowland grating, since then the normal spectrum (fig. 11.) is obtained directly without the use of the usual lenses and prisms, and hence free from their absorbing effects. Recent photographs of the solar spectrum obtained by Prof. Rowland in this way give a clearness of definition combined with high dispersion never before approached. Thus, in their enlarged form as published (1890), the double sodium-lines are widely separated, and sixteen distinct fine lines may be counted between them. It was formerly the custom to divide the solar spectrum into three parts, formed by the invisible heat-rays, the luminous rays, and the so-called chemical or actinic rays. This threefold division of the spectrum is, however, largely erroneous, since all the rays of the spectrum are "heat-rays" if they are received upon an absorbing surface, as lampblack; and, while it is true that the chemical change upon which ordinary photography depends is most stimulated by the violet and ultra-violet rays, this is not true universally of all chemical changes produced by direct radiation. The rays from the lowest end of the spectrum to the highest differ intrinsically in wave-length only, and the difference of effect observed is due to the character of the surface upon which they fall. The spectra of the stars, of the comets, nebulae, etc., can be studied in the same way as the solar spectrum, and the result has been to throw much light upon the constitution of these bodies; the spectrum of the aurora has been similarly examined. In addition to its use in the study of comical physics, spectrum analysis has proved a most delicate and invaluable method to the chemist and physicist in the examination of the different elements and their compounds. By this method of research a number of new elements have been detected (as rubidium, cesium, indium, thallium); and recently the study of the absorption-spectra of the earths—obtained from samarskite, gadolinite, and other related minerals—has served to show the existence of a group of closely related elements whose existence had not before been suspected. Further, the study of the change in the spectra of certain elements under different conditions of temperature has led Lockyer to some most important and suggestive hypotheses as to the relation between them and their possible compound nature.

4. [cap.] [NL.] In zool., a generic name variously used: (a) A genus of lepidopterous insects. Scopoli, 1777. (b) A genus of grasshopper orthopterous insects: same as *Phasma*. Stall, 1787. (c) A genus of lemuroid mammals: same as *Tarsius*. Lacépède, 1803.—5. The specific name of some animals, including *Tarsius spectrum* and *Phyllostoma spectrum*.—*Fluted spectrum*. See *Herschelian*.—*Secondary spectrum*, the residual or secondary chromatic aberration observed in the use of an ordinary so-called achromatic lens (see *achromatic*), arising from the fact that while by combining the crown- and flint-glass two of the colors of the spectrum are brought to the same focus, the dispersion of the others is not equally compensated. By using new kinds of glass which allow of proportional dispersion in different parts of the spectrum (see *apochromatic*), Abbe has made lenses which collect three colors to one focus, leaving only a small residual aberration uncorrected, which is called the *tertiary spectrum*.

specula, *n.* Plural of *speculum*.

speculable (spek'ū-lā-bl), *a.* Knowable.

specular (spek'ū-lār), *a.* [= *F. spéculaire* =

Pr. specular = *Sp. Pg. especular* = *It. specular*, < *L. specularis*, belonging to a mirror, < *speculum*, a mirror: see *speculum*.] 1. Of or pertaining to a mirror; capable of reflecting objects: as, a *specular surface*; a *specular mineral*; *specular metal* (an alloy prepared for making mirrors).—2. Assisting or facilitating vision; serving for inspection or observation; affording a view: as, a *specular orb* (the eye or a lens); *specular stone* (an old name for mica used in windows, in Latin *specularis lapis*); a

specular tower (one serving as a lookout). [Archaic.]

You teach (though we learn not) a thing unknown

Wordsworth, Cave of Staffa.

3. In *ornith.*, of or pertaining to the speculum of the wing; ocellar: as, the *specular area*; *specular iridescence*.—*Specular iron ore*, a variety of hematite, or anhydrous iron sesquioxide, occurring in crystals and massive forms with a brilliant metallic luster. Finely pulverized and washed, it is used as a polishing powder.

Specularia (spek'ū-lā'ri-ā), *n.* [NL. (Heister, 1748), < L. *speculum* in *speculum Veneris*, 'Venus's looking-glass,' a medieval name of *S. Speculum*, from the resemblance of its flowers set on their cylindrical ovary to the ancient round bronze mirror at the end of a straight handle: see *speculum*.] A genus of gamopetalous plants of the order *Campanulaceae*. It is distinguished from the allied genus *Campanula* by its wheel-shaped or shallow and broadly bell-shaped corolla and linear or narrowly oblong ovary. There are about 8 species, natives of the northern hemisphere, chiefly of southern and central Europe, with one in South America. They are annual herbs, either erect or decumbent, and smooth or bristly. They bear alternate entire or toothed leaves, and blue, violet, or white two-bracted flowers nearly or quite sessile in the axils. *S. Speculum* is the Venus's looking-glass, formerly a favorite in English gardens; *S. hybrida* is there known as the *corn-violet*; and *S. perfoliata*, native in the United States, is remarkable for its dimorphic flowers, the earlier being minute and clistogamic.

Shirley, Grateful Servant, ii. 1.

2. To take a discriminating view of; consider attentively; speculate upon; examine; inspect: as, to *speculate* the nature of a thing. [Rare.]

We . . . conceit ourselves that we contemplate absolute existence when we only *speculate* absolute privation.
Sir W. Hamilton, Discussions, p. 21.

II. intrans. 1. To pursue truth by thinking, as by mathematical reasoning, by logical analysis, or by the review of data already collected.—2. To take a discursive view of a subject or subjects; note diverse aspects, relations, or probabilities; meditate; conjecture: often implying absence of definite method or result.

I certainly take my full share, along with the rest of the world, . . . in *speculating* on what has been done, or is doing, on the public stage.
Burke, Rev. in France.

3. To invest money for profit upon an uncertainty; take the risk of loss in view of possible gain; make a purchase or purchases, as of something liable to sudden fluctuations in price or to rapid deterioration, on the chance of selling at a large advance: as, to *speculate* in stocks.

speculation (spek'ū-lā'shon), *n.* [*OF. speculation*, *speculation*, F. *speculation* = Pr. *speculacio* = Sp. *especulacion* = Pg. *especulação* = It. *speculazione*, < LL. *speculatio(n)*-, a spying out, exploration, observation, contemplation, < L. *speculari*, view: see *speculate*.] 1. The act or state of speculating, or of seeing or looking; intelligent contemplation or observation; a viewing; inspection. [Obsolete or archaic, but formerly used with considerable latitude.]

Thence [from the works of God] gathering plumes of perfect speculation,
To impel the wings of thy high flying mynd,
Mount up aloft through heavenly contemplation.
Spenser, Heavenly Beauty, l. 134.

Thou hast no speculation in those eyes
Which thou dost glare with.
Shak., Macbeth, iii. 4. 95.

I am arrived to that perfection in speculation that I understand the language of the eyes.
Steele, Spectator, No. 354.

2. The pursuit of truth by means of thinking, especially mathematical reasoning and logical analysis; meditation; deep and thorough consideration of a theoretical question. This use of the word, though closely similar to the application of *speculatio* in the Latin of Boethius to translate *θεωρία*, is chiefly due to 1 Cor. xiii. 12, "now we see through a glass, darkly," where 'glass' is in the Vulgate *speculum*. But

some writers, as Milton and Cowper, associate the meaning with *specula*, 'a watch-tower.'

For practise must agree with speculation,
Belief & knowledge must guide operation.
Times' Whistle (E. E. T. S.), p. 147.

Thenceforth to speculations high or deep
I turn'd my thoughts.
Milton, P. L., ix. 602.

Join sense unto reason, and experiment unto speculation.
Sir T. Browne, Christ. Mor., ii. 5.

From him [Pythagoras] Socrates derived the principles of virtue and morality. . . . and most of his natural speculations.
Sir W. Temple, Ancient and Modern Learning.

The brilliant fabric of speculation erected by Darwin can scarcely sustain its own weight.
Dawson, Nature and the Bible, p. 240.

3. In *philos.*, sometimes, a purely a priori method of philosophizing; but commonly in philosophy the word has the meaning 2, above.

—4. The investing of money at a risk of loss on the chance of unusual gain; specifically, buying and selling, not in the ordinary course of commerce for the continuous marketing of commodities, but to hold in the expectation of selling at a profit upon a change in values or market rates. Thus, if a merchant lays in for his regular trade a much larger stock than he otherwise would because he anticipates a rise in prices, this is not termed *speculation*; but if he buys what he does not usually deal in, not for the purpose of extending his business, but for the chance of a sale of the particular articles at a profit by reason of anticipated rise, it is so termed. In the language of the exchanges, *speculation* includes all dealing in futures and options, whether purchases or sales.

The establishment of any new manufacture, of any new branch of commerce, or of any new practice in agriculture, is always a speculation from which the projector promises himself extraordinary profits.

Adam Smith, Wealth of Nations, I. x. 1.

A vast speculation had fall'd,
And ever he mutter'd and madden'd.
Tennyson, Maud, l. 3.

5. A game at cards, the leading principle of which is the purchase of an unknown card on the calculation of its probable value, or of a known card on the chance of no better appearing during the game, a part of the pack not being dealt. *Latham*. = **Syn.** 2. *Hypothesis*, etc. See *theory*.

speculatist (spek'ū-lā-tist), *n.* [*L. speculate* + *-ist*.] A speculative philosopher; a person who, absorbed with theoretical questions, pays little attention to practical conditions.

Such *speculatists*, by expecting too much from friendship, dissolve the connection.
Goldsmith, Friendship.

Fresh confidence the *speculatist* takes
For every hare-brain'd proelyte he makes.
Cowper, Progress of Error.

speculative (spek'ū-lā-tiv), *a.* [= F. *spéculatif* = Sp. Pg. *especulativo* = It. *speculativo*, < LL. *speculativus*, pertaining to or of the nature of observation, < L. *speculari*, view: see *speculate*.] 1†. Pertaining to or affording vision or outlook: a meaning influenced by Latin *specula*, 'a watch-tower.'

Now roves the eye;
And, posted on this speculative height,
Exults in its command.
Cowper, Task, l. 289.

2†. Looking; observing; inspecting; prying.
My *speculative* and officed instrument.
Shak., Othello, l. 3. 271.

To be *speculative* into another man, to the end to know how to work him or wind him or govern him, proceedeth from a heart that is double and cloven.
Bacon, Advancement of Learning, i.

3. Given to speculation; contemplative; theoretical.

He [Washington] was not a *speculative*, but a practical man; not at all devoted to Ideas.
Theodore Parker, Historic Americans, Washington, p. 114.

Speculative men are deemed unsound and frivolous.
Emerson, Misc., p. 12.

4. Purely scientific; having knowledge as its end; theoretical: opposed to *practical*; also (limiting a noun denoting a person and signifying his opinions or character), in theory, and not, or not merely, in practice; also, cognitive; intellectual. In this sense (which has no connection with *speculation*), *speculative* translates Aristotle's *θεωρητικός*. Thus, *speculative science* is science pursued for its own sake, without immediate reference to the needs of life, and does not exclude experimental science.

I do not think there are so many *speculative* atheists as men are wont to imagine.

Boyle, Christian Virtuoso, part i.

It is evidently the intention of our Maker that man should be an active and not merely a *speculative* being.
Reid, Active Powers, Int.

When astronomy took the form of a *speculative* science, words were invented to denote distinctly the conceptions thus introduced.

Whewell, Philos. of Inductive Sciences, I. liii.

A distinction merely *speculative* has no concern with the most momentous of all practical controversies.
J. R. Seeley, Nat. Religion, p. 51.

5. Inferential; known by reasoning, and not by direct experience: opposed to *intuitive*; also, improperly, purely a priori. This meaning was introduced into Latin by Anselm, with reference to 1 Cor. xiii. 12, where the Vulgate has *speculum*. *Speculative cognition* is cognition not intuitive.

6. Pertaining or given to speculation in trade; engaged in speculation, or precarious ventures for the chance of large profits; of the nature of financial speculation: as, a *speculative trader*; *speculative investments* or business.

The *speculative* merchant exercises no one regular, established, or well-known branch of business.

Adam Smith, Wealth of Nations, I. x. 1.

Speculative geometry, philosophy, reason, theology, etc. See the nouns.

speculatively (spek'ū-lā-tiv-li), *adv.* In a speculative manner; as or by means of speculation, in either the intellectual or the material sense.

speculativeness (spek'ū-lā-tiv-nes), *n.* The state of being speculative, or of consisting in speculation.

speculativism (spek'ū-lā-tiv-izm), *n.* [*L. speculative* + *-ism*.] The tendency to speculation or theory, as opposed to experiment or practice; a theorizing tendency. *Pop. Sci. Mo.*, XIII. 269. [Recent.]

speculator (spek'ū-lā-tor), *n.* [= F. *spéculateur* = Sp. Pg. *especulador* = It. *speculatore*, < L. *speculator*, an explorer or scout, a searcher, an investigator, < *speculari*, pp. *speculatus*, spy out, watch, observe, view: see *speculate*.] 1†. An observer or onlooker; a watcher; a lookout; a seer; in a specific use, an occult seer; one who looks into mysteries or secrets by magical means.

All the boats had one *speculator*, to give notice when the fish approached.
Broome.

2. One who engages in mental speculation; a person who speculates about a subject or subjects; a theorizer.

The number of experiments in moral science which the *speculator* has an opportunity of witnessing has been increased beyond all calculation.
Macaulay, History.

3. One who practises speculation in trade or business of any kind. See *speculation*, 4.

speculatorial (spek'ū-lā-tō-ri-āl), *a.* [*L. speculatorius*, pertaining to a scout or observer (see *speculatory*), + *-al*.] **Speculatorial**.

speculatory (spek'ū-lā-tō-ri), *a.* [*L. speculatorius*, pertaining to a scout or observer, < *speculator*, an observer: see *speculator*.] 1†. Practising or intended for oversight or outlook; overseeing; overlooking; viewing.

My privileges are an ubiquitous, circumambulatory, *speculatory*. Interrogatory, redargutory immunity over all the privy lodgings.
Carew, Coelum Britannicum.

Both these [Roman encampments] were nothing more than *speculatory* outposts to the Akeman-aliret.
T. Warton, Hist. Kiddington, p. 66.

2. Given to, or of the nature or character of, speculation; speculative. [Rare.]

speculatrix (spek'ū-lā-triks), *n.*; pl. *speculatrices* (spek'ū-lā-tri'sēz). [L., fem. of *speculator*: see *speculator*.] A female speculator. [Rare.]

A communion with inviable spirits entered into the general creed [in the sixteenth century] throughout Europe, and crystal or beryl was the magical medium. . . . Persons even of ordinary rank in life pretended to be what they termed *speculators*, and sometimes women were *speculatrices*.
I. D'Israeli, Amen. of Lit., II. 297.

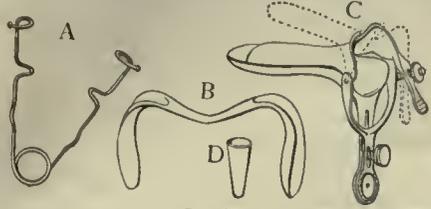

speculum (spek'ū-lum), *n.*; pl. *specula* (-lā), sometimes *speculums* (-lumz). [*L. speculum*, a mirror, a copy or imitation (cf. *specula*, a watch-tower, lookout), < *specere*, look at, behold: see *species*.] 1. Something to look into or from; specifically, a mirror or looking-glass.—2. An attachment to or part of an optical instrument, as a reflecting telescope, having a brightly polished surface for the reflection of objects. *Specula* are generally made of an alloy called *speculum-metal*, consisting of ten parts of copper to one of tin, sometimes with a little arsenic to increase its whiteness. Another *speculum* alloy is made of equal weights of steel and platinum. *Specula* are also made of glass covered with a film of silver on the side turned toward the object.

3. In *ornith.*: (a) An ocellus or eye-spot, as of a peacock's tail. See *ocellus*, 4. (b) The mirror of a wing, a specially colored area on some of the flight-feathers. It is usually iridescent-green, purple, violet, etc., and formed by a space of such color on the outer webs of several secondaries, toward their end, and commonly set in a frame of different colors formed by the tips of the same secondaries or of the greater wing-coverts, or of both. Sometimes it is dead-white, as in the gadwall. A *speculum* occurs in various birds, and as a rule in ducks, especially the *Anatine*, being in these so constant and characteristic a marking that some breeds of game-fowls are named *duckwing* in consequence of a certain resemblance in the wing-markings. See *silver-duckwing*. Also called *mirror*. See cuts under *Chauliastmus* and *mollard*.

The wing [in *Anatine*] has usually a brilliant *Speculum*, which, like the other wing-markings, is the same in both sexes. *Coues*, Key to N. A. Birds, p. 690.

4. In *anat.*, the septum lucidum of the brain.

See cut under *corpus*.—5. In *med.* and *surg.*, an

instrument used for rendering a part accessible to observation, especially by opening or enlarging an orifice.—6. A lookout; a place to spy from.

It was in fact the *speculum* or watch-tower of Teufelsdröckh; wherefrom, sitting at ease, he might see the whole life-circulation of that considerable City.

Carlyle, Sartor Resartus, l. 3.

Duck-billed speculum, a name sometimes applied to Sims's vaginal speculum, and more rarely to some of the bivalve vaginal specula, whose valves resemble a duck's bill. Also called *duck-bill*.—**Ear-speculum**, an instrument, usually a hollow cone, introduced into the meatus externus for holding the hairs out of the way so that the bottom of the passage may be illuminated and seen.—**Nose-speculum**. See *rhinoscope*.

speculum-metal (spek'ū-lum-met'al), *n.* See *speculum*, 2.

sped (sped). A preterit and past participle of *speed*.

spedet, spedefult. Old spellings of *speed*, *speedful*.

speeçet, n. An old form of *spece*, *spice*.

speech (spēch), *n.* [Early mod. E. also *speach*. < ME. *speche*, *spæche*, earlier *spek*, *speke*, < AS. *spæc*, *spæc*, earlier *spriec*, *spriec* (= OS. *spraeca* = OFries. *spreke*, *spretse*, *sprake* = D. *spraak* = MLG. *sprake* = OHG. *sprāha*, MHG. *G. sprache* = Icel. *spækjur*, *f. pl.*, = Sw. *språk* = Dan. *sprog*), *apeech*, < *sprecan* (pret. *spræc*), *speak*: see *speak*.] 1. The faculty of uttering articulate sounds or words, as in human beings and, by imitation, in some birds; capacity for expressing thoughts by words or articulate sounds; the power of speaking, or of uttering words either in the speaking- or the singing-voice.

And they bring unto him one that was deaf, and had an impediment in his *speech*. Mark vii. 32.

Speech is the instrument by which a Fool is distinguished from a Philosopher.

See *set*.—**Speech from the throne**, in *British politics*, a speech or address prepared by the ministry in the name of the sovereign, and read at the opening of Parliament either by the sovereign in person or by commission. It states briefly the relations with foreign countries and the condition of domestic affairs, and outlines vaguely the chief measures which will be considered by Parliament. Also called *King's* (or *Queen's*) *speech*.—**Syn. speech, Address, Harangue, Oration**. *Speech* is generic, and applies to any form of words uttered; it is the thing spoken, without reference to its quality or the manner of speaking it. An *address* is a *speech* viewed as spoken to one or more persons, and is generally of the better sort: as, Paul's *speech* on Mars' Hill; his *address* before Felix. A *harangue* is a noisy speech, usually unstudied and unpolished, addressed to a large audience and in a violent manner. An *oration* is a formal, impressive, studied, and elaborately polished *address*: as, Webster was selected to deliver the *oration* when the corner-stone of the Buoker Hill monument was laid, and again when the monument was completed. See *sermon* and *language*.

Sith we have of this lady tolde.

Cursor Mundi, MS. Coll. Trin. Cantab., f. 127. (*Halliwel*).
speller² (spel'er), *n.* [*< late ME. spellere* (= MD. D. *speller*), a speller; *< spell*² + *-er*¹.] 1. One who spells, as in school; a person skilled in spelling.

Spellare, syllabicator. *Prompt. Parv.*, p. 463.

2. A book containing exercises or instructions in spelling; a spelling-book.

speller³ (spel'er), *n.* [*< spell*⁴ + *-er*¹.] A branch shooting out from the crown of a deer's antler. See cut under *Dama*, *Cotgrave*.

spellful (spel'fūl), *a.* [*< spell*¹ + *-ful*.] Full of spells or charms; fascinating; absorbing. *Hoole*, tr. of Orlando Furioso, xv. [*Rare.*]

spelling^{1†} (spel'ing), *n.* [*< ME. spellinge, spelunge, spelling, spelung, recital*, *< AS. spellung*, narration, verbal *n.* of *spellian*, tell, declare: see *spell*¹.] A story; a relation; a tale.

As we telle yn owre *spellingyng*,
Falsenes come never to gode endyng.
MS. Cantab. Fi. ii. 33, f. 125. (*Halliwel*).

spelling² (spel'ing), *n.* [*< late ME. spellinge* (= MD. *spellinghe*, D. *spelling*); verbal *n.* of *spell*², *v.* Cf. D. *spellkunst* (*kunst*, art), spelling; *buchstabiren*, spell, as a noun, spelling (*< buchstabe*, a letter: see under *book*); Sw. *stafning* = Dan. *stanning*, spelling (see *staff*, *stave*); and cf. *orthography*.] 1. The act of one who spells; the manner of forming words with letters; or thography.

Spellynge, syllabicator. *Prompt. Parv.*, p. 463.
Our common *spelling* is often an untrustworthy guide to etymology. *J. Hadley, Essays*, p. 356.

To prepare the way for such a change [a reform in spelling] the first step is to break down, by the combined influence of enlightened scholars and of practical educators, the immense and stubborn prejudice which regards the established modes of *spelling* almost as constituting the language, as having a sacred character, as in themselves preferable to others. All agitation and all definite proposals of reform are to be welcomed so far as they work in this direction. *Proc. Amer. Philol. Assoc.*, VII. 35.

It may be observed that it is mainly among the class of half-taught dabblers in philology that etymological *spelling* has found its supporters. All true philologists and philological bodies have uniformly denounced it as a monstrous absurdity, both from a practical and a scientific point of view. *H. Sweet, Handbook of Phonetics*, p. 201.

2. A collocation of letters representing a word; a written word as spelled in a particular way.

Our present spelling is in many particulars a far from trustworthy guide in etymology, and often, indeed, entirely falsifies history. Such *spellings* as island, author, delight, sovereign, require only to be mentioned, and there are hundreds of others involving equally gross blunders, many of which have actually corrupted the spoken language. *H. Sweet, Handbook of Phonetics*, p. 200.

Phonetic spelling. See *phonetic*.—**Spelling reform**, the improvement by regulation and simplification of the conventional orthography of a language, specifically of the English language; the proposed simplification of English orthography. The spelling of all languages having a recorded history tends to lag behind the changes of pronunciation, and in time a reform becomes necessary. In English, since the gradual fixation of the spelling after the invention of printing, the separation of spelling and pronunciation has become very wide, and numerous proposals for spelling reform have been made. The present organized effort for spelling reform has arisen out of the spread of phonography, which is based on phonetic spelling, and from the more recent spread of the study of comparative philology, which is also based on phonetics. Proposals for a gradual reform in spelling have been put forth jointly by the American Philological Association and the Philological Society of England, and are advocated by the Spelling Reform Association. Amended spellings have been accepted to some extent by various periodicals, and are admitted, less freely, into recent books. Movements for spelling reform exist also in France, Germany, Denmark, and other countries. A spelling reform has been accomplished in Dutch, Spanish, and other tongues, and to some extent, by government action, in Germany.

spelling-bee (spel'ing-bē), *n.* Same as *spelling-match*.

spelling-book (spel'ing-būk), *n.* A book from which children are taught to spell.

spelling-match (spel'ing-mach), *n.* A contest for superiority in spelling between two or more persons or parties. A formal spelling-match is usually between sides or sets of persons chosen by two leaders. Any person who mispells one of the words given out retires, and the victory belongs to the side that has the larger number left at the close. Also called *spelling-bee*. [U. S.]

spellken (spel'ken), *n.* [Also *speelken*; *< D. spel*, play (see *spell*³), + *E. ken*⁵, a resort.] A playhouse; a theater. [*Low slang.*]

tre, spelt; *< LL. spelta*, spelt.] A kind of wheat commonly known as *Tritium Spelta*, but believed to be a race of the common wheat, *Tritium sativum* (*T. vulgare*). Spelt is marked by the fragile rachis of the spike, which easily breaks up at the joints, and by the grains being adherent to the chaff. It was cultivated by the Swiss lake-dwellers, by the ancient Egyptians, and throughout the Roman empire, and is still grown in the colder mountainous regions of Europe and elsewhere. It makes a very fine flour, used especially for pastry-making, but the grain requires special machinery for grinding.

spelt^{2†} (spelt), *n.* [*< ME. spelt*; a var. of *speld*.] A splinter, splint, or strip; a spell or spill.

The spekes was splentide sile with *speltis* of silver,
The space of a spere lenghe springande fulle faire.
Morte Arthure (E. E. T. S.), l. 3265.

spelt^{2†} (spelt), *v. t.* [A var. of *speld*, *spald*¹, perhaps confused with ME. *spelken*, spilt: see *spald*¹, *speld*, *spelk*. Cf. *spelt*², *n.*] To split; break.

Feed geese with oats, *spelted* beans.
Mortimer, Husbandry.

spelt³ (spelt), *n.* A preterit and past participle of *spelt*².

spelter (spel'tèr), *n.* [Not found in ME., and prob. of LG. origin: LG. *spiatler*, pewter, = MD. *speauter*, D. *spiauter* = G. Sw. Dan. *spiauter*, zinc, bell-metal; cf. OF. *piautre*, *peutre*, *peautre*, *espeautre* = Sp. Pg. *petre* = It. *petro* (ML. *peutrum*, *pestrum*), pewter: see *pewter*. The Rom. forms are from Teut., but have appeared in turn influenced the Teut. forms.] Zinc: now used only in commerce.

Not only those metalline corpuscles that were just over or near the terminate place where I put the *spelter*, but also all the rest, into how remote parts soever of the liquor they were diffused, did settle upon the *spelter*.

Boyle, History of Fluidity, xxiii.

Spelter solder, hard solder. See *solder*.

spelter (spel'tèr), *v. t.* [*< spelter*, *n.*] To solder with spelter solder, or hard solder. *Brass-Founders' Manual*, p. 59.

spelunct, **spelunk**† (spè-lung'k'), *n.* [*< ME. spelunk*, *spelonke*, *spelunc* = D. *spelunk*, *< OF. spelonque*, F. *spelouque* = Pr. *spelunca* = Sp. Pg. *espelunca* = It. *spelunca*, *< L. spelunca*, *< Gr. σπηλυγ* (*σπηλυγγ*-), a cave, cavern, *< σπέος*, a cave.] A cave; a cavern; a vault.

In spekes and in *spelunkes* selden spoken toglderes.
Piers Plowman (B), xv. 270.

And parte of the same stone lieth ther yett now in the same vitermost *Spelunk*.
Torkington, Diarie of Eng. Travell, p. 40.

speluncous (spè-lung'k'us), *a.* [*< spelunc* + *-ous*.] Same as *spelunc*, 2.

spent, *v. t.* [*ME. spennen* (= MHG. *spennen* = Icel. *spenna*), a secondary form of AS. *spannan*, span: see *span*¹. Cf. *spend*².] To stretch; grasp; span.

Bifore that spot my honde I *spenn*[e]d.
Alliterative Poems (ed. Morris), l. 49.

spencet, **spencer**^{1†}. See *spence*, *spenser*.

spencer² (spen'sèr), *n.* [Named after Earl Spencer (1782-1845). The surname is derived from *spencer*¹, *spenser*.] 1. A man's outer garment or overcoat so short that the skirts of the body-coat worn under it were seen: a fashion introduced about 1800.—2. A woman's garment introduced a year or two later, and made in direct imitation of the above. It also was short, and formed a kind of over-jacket, reaching a little below the waist.

spencer³ (spen'sèr), *n.* *Naut.*, a trapezoidal fore-and-aft sail set abaft the foremast and mainmast; a trysail.

spencer-gaff (spen'sèr-gaf), *n.* The gaff to which the spencer is bent.

Spencer gun. See *gun*¹.

Spencerian (spen-sè'ri-an), *a.* [*< Spencer* (see def.) + *-ian*.] Pertaining or relating to the English philosopher Herbert Spencer (born 1820), or characteristic of his philosophical system. See *Spencerianism*.

Spencerianism (spen-sè'ri-an-izm), *n.* The philosophy of Herbert Spencer, called by him the *synthetic philosophy*. Like almost all the ancient and a considerable part of the modern philosophical systems, it is a philosophy of evolution; but it differs from most of these in reducing evolution to the rank of a mere secondary principle, and in making the immutable law of mechanics the sole fundamental one. Spencer has formally stated his philosophy in sixteen propositions, which concern the relations of evolution and dissolution. These are of a special and detailed character, so that he does not countenance the claim made for him of the principle of evolution itself. His sixteenth proposition states that under the sensible appearances which the universe presents to us, and "transcending human knowledge, is an unknown and unknowable power."

spencer-mast (spen'sèr-màst), *n.* See *mast*¹.

spency (spen'si), *n.*; pl. *spencies* (-siz). The stormy petrel, *Procellaria pelagica*. C. Swainson. [Shetland Isles.]

spend¹ (spend), *v.*; pret. and pp. *spent* (formerly sometimes *spended*), ppr. *spending*. [ME. *spenden* (pret. *spende*, pp. *ispended*, *ispent*), < AS. *spendan*, spend (also in comp. *ā-spendan*, for-*spendan*) = OHG. *spēntōn*, MHG. *spēnten*, *spenden*, G. *spenden* = Sw. *spendera* = Dan. *spendere* = It. *dispendere*, *spendere* = Sp. Trevisa, tr. of Higden's Polychronicon, IV. 309.

The *spencer* came with keys in his hand,
Opened the doore and them at dinner found.
Henryson, Moral Fables, p. 12.

Spenserian (spen-sō'r-i-an), *a.* and *n.* [*Spenser* (see def. and *spenser*) + -i-an.] **I. a.** Of or pertaining to the English poet Edmund Spenser (died 1599); specifically, noting the style of versification adopted by Spenser in his "Faerie Queene." It consists of a strophe of eight decasyllabic lines and an Alexandrine, with three lines, the first and third line forming one, the second, fourth, fifth, and seventh another, and the sixth, eighth, and ninth the third. It is the stacelst of English measures, and is used by Thomson in his "Castle of Indolence," by Byron in his "Childe Harold," etc.

II. n. The poetical measure of Spenser's "Faerie Queene"; a Spenserian verse or stanza. O. W. Holmes, Poetry.

spent (spent), *p. a.* [Pp. of *spend*¹, *v.*] **1.** Nearly or quite exhausted or worn out; having lost force or vitality; inefficient; impotent: generally in a comparative sense. A *spent deer* or other animal is one that has been chased or wounded nearly to death. A *spent ball* is a flying ball (from a gun) that has so nearly lost its impulse as to be unable to penetrate an object struck by it, though it may occasionally inflict a dangerous contused wound. A *spent bill of lading* or other commercial document is one that has fulfilled its purpose and should be canceled.

The forme of his style there, compared with Tullies writyng, is but even the talke of a *spent* old man.
Ascham, The Scholemaster, p. 152.

Mine eyes, like *spent* lamps glowing out, grow heavy.
Fletcher, Sea Voyage, ill. 1.

2. Exhausted by spending or spawning; of fish, having spawned.

speos (spē'os), *n.* [*Gr. σπέος*, a cave.] In Egypt. *archæol.*, a temple or part of a temple, or a tomb of some architectural importance, as distinguished from a mere tunnel or syringe, excavated in the solid rock; a grotto-temple or tomb, as at Beni-Hassan (see cut under *hypogeum*) and Abou Simbel (Ipsamboul). The larger speos of Abou Simbel is about 169 feet deep, and has all the parts of a complete open-air Egyptian temple.

Spectyto (spé-ot'i-tō), *n.* [NL. (Gloger, 1842), < *Gr. σπέος*, a cave, + *τύτω*, the night-owl.] An American genus of *Strigidæ*, containing several species of small long-legged earless owls which live in treeless regions and burrow in the ground, as *S. cucularia* of the pampas of South America and *S. hypogæa* of the prairies of western North America; the burrowing owls. A variety of the latter also inhabits Florida, and the genus is likewise represented in the West Indies. *S. hypogæa* is the species which is found in association with prairie-dogs and spermophiles, giving rise to many exaggerated accounts of the relation between the bird and the mammal. These owls were formerly placed in the genus *Athene*, and were also called *Photeptyna*. See cuts under *owl*.

spert, *v. t.* A variant of *spar*¹.

sporable¹ (spē'ra-bl), *a.* [*L. sperabilis*, that may be hoped for, < *sperare*, hope, < *spes*, hope.] Capable of being hoped for; affording grounds of hope.

Wherin, suerly perceaving his own cause not *sporable*, he doth honorably and wilsly.
Sir W. Cecil (June 3, 1565), in Ellis's Hist. Letters, 2d ser., [cixii].

sporable², *n.* An obsolete form of *sparable*.

speraget, *n.* Same as *sparage*.

sperate (spē'rāt), *a.* [*L. speratus*, pp. of *sperare*, hope.] Hoped for; not hopeless: opposed to *desperate*. In old law, in determining whether debts to a testator, the right to collect which devolved upon the executor, were assets to be accounted for by him, though not collected, regard had to be had to their character, whether they were sperate or desperate.

sperclet, *v.* A Middle English form of *sparkle*.

speret. An old spelling of *spear*¹. *speer*¹, *sphere*.

Spergula (spēr'gū-lā), *n.* [NL. (Dillenius, 1719), named from its scattering its seeds; < *L. spargere*, scatter: see *sparge*.] A genus of poly-petalous plants, of the order *Caryophyllaceæ* and tribe *Alsineæ*. It is characterized by the presence of small scarious stipules, by flowers with five styles alternate with the five sepals, and by a one-celled capsule with its five valves opposite the sepals. There are 2 or 3 species, widely scattered through temperate regions of either hemisphere, and especially abundant in fields and cultivated places of the Old World. They are annual herbs with dichotomous or clustered branches, the swollen and succulent axils bearing apparent whorls of awl-shaped leaves. The small white or pink flowers form raceme-like cymes with conspicuous pedicels. The species are known by the general name of *spurry*, sometimes *sandweed*.

Spergularia (spēr-gū-lā'ri-ā), *n.* [NL. (Persoon, 1805), < *Spergula* + -aria.] A genus of polypetalous plants, of the order *Caryophyllaceæ* and tribe *Alsineæ*. It is distinguished from the allied genus *Spergula* by its three styles and three-valved capsule, and differs from *Arenaria*, to which it was formerly referred, in the possession of stipules. There are 3 or 4 species, scattered through temperate regions, especially along salt-marshes and shores. They are commonly diffuse herbs, small and often succulent, with thread-like or linear leaves, often, as

in *Spergula*, with secondary clusters of leaves forming apparent whorls at the axils. The small flowers open in bright sunshine, and are white or rose-colored or commonly purplish. The species are known as *sand-spurry*. At least 3 species are found on the Atlantic coast of the United States. See *Tissot*.

sperhawk, *n.* Same as *sparhawk* for *sparrowhawk*.

sperket (spér'ket), *n.* [Also *spirket*; origin obscure.] A large hooked wooden peg, not much curved, to hang saddles, harness, etc., on. *Halliwel*. [Prov. Eng.]

Light on the *spirket* there it hung.
Bloomfield, The Horkey. (Davies.)

sperling (spér'ling), *n.* Same as *sparling*¹.
sperm¹ (spérm), *n.* [From *ME. sperme*, < *OF. sperme*, *sperme*, *F. sperme* = *Sp. Pg. sperma* = *It. sperma*, < *L. sperma*, < *Gr. σπέρμα (σπερμα-)*, seed, < *σπείρω*, sow. Cf. *spore*².] The male seed of any kind, as the semen or seminal fluid of the higher vertebrates, the male spawn or milt of the lower vertebrates, or the seminal elements of any animal, containing the male germs, or spermatozoa.

sperm² (spérm), *n.* [Abbr. of *spermaceti*.] 1. Same as *spermaceti*.—2. A sperm-whale.—3. Sperm-oil.

sperma (spér'mä), *n.* Same as *semen* (which see).

spermaceti (spér-mä-set'i or -sē'ti), *n.* and *a.* [Formerly or dial. also, in corrupt forms, *parmaceti*, *parmacite*, *parmacity*, *parmacity*, *parmacitty*, etc.; < *F. spermaceti* = *Sp. espermaceti* = *Pg. espermacete* = *It. spermaceti*, < *NL. spermaceti*, lit. 'whale's seed,' the substance having been regarded as the spawn of the whale; < *L. sperma*, seed, + *ceti*, gen. of *cetus*, < *Gr. κῆτος*, whale: see *Cete*³.] **I. n.** A peculiar fatty substance contained in the characteristic adipose tissue of the cavity of the head of the sperm-whale or cachalot, *Physeter* or *Catodon macrocephalus*, and related cetaceans. During the life of the animal the spermaceti is in a fluid state, and when the head is opened has the appearance of an oily white liquid. On exposure to the air the spermaceti concretes and precipitates from the oil, from which it may then be separated. After being purified by an elaborate process the spermaceti concretes into a white, crystallized, brittle, semi-transparent unctuous substance, nearly inodorous and insipid. It dissolves in boiling alcohol, and as the solution cools it is deposited in perfectly pure lamellated crystals. In this state it is called *cetin*. Spermaceti is a mixture of various fatty acids and derivatives of the acids. It is bland and demulcent, but in medicine it is chiefly employed externally as an ingredient in ointments, cerates, and cosmetics. It has also been largely used in the manufacture of candles.

By this [fallacy of Equivocation] are they defuded who conceive *spermaceti* [*sperma Ceti*, Pseud. Ep., 1646], which is found about the head, to be the spawn of the whale.

Sir T. Browne, Vulg. Err., ii. 1.

II. a. 1. Pertaining to, derived from, or composed of spermaceti or sperm.—2. Producing or yielding spermaceti, as the sperm-whales.—**Spermaceti ointment.** See *ointment*.

spermaceti-oil (spér-mä-set'i-oil), *n.* Sperm-oil.

spermaceti-whale (spér-mä-set'i-hwāl), *n.* A sperm-whale.

Spermacoce (spér-mä-kō'sē), *n.* [NL. Dillenius, 1732], so called in allusion to the carpels pointed with one or more calyx-teeth: < *Gr. σπέρμα*, seed, germ, + *ἀκμή*, a point, < *ἀκμή*, a point, anything sharp.] A genus of rubiaceae plants, type of the tribe *Spermacoceae*. It is characterized by flowers with from two to four calyx-lobes sometimes with smaller teeth between, a small two-cleft or capitate stigma, and a dry fruit of two carpels which separate when ripe and are each or only one of them open, one often retaining the membranous axis. There are about 175 species, scattered through tropical and subtropical regions, and particularly common in America. They are annual or perennial herbs or low undershrubs, with smooth, rough, or hairy stems, commonly with four-angled branchlets. They bear opposite leaves, which are either sessile or petioled, membranous or coriaceous, nerved or feather-veined. The stipules are united with the petioles into a bristle-bearing membrane or sheath. The small sessile flowers are solitary in the axils or variously clustered, often in dense axillary and terminal heads, and are white, pink, or blue. In allusion to the heads, the species are called *button-wood*. Five species occur in the United States, all southern and summer-flowering and with a short white corolla; *S. glabra*, the most common, extends into Ohio. Several species are in repute for medicinal properties, especially as substitutes for ipecacuanha, for which *S. ferruginea* and *S. Poaya* are used in Brazil, and *S. verticillata* in the West Indies. The root of *S. hispida* is used as a sudorific in India.

Spermacoceae (spér-mä-kō'sē-ē), *n. pl.* [NL. (Chamisso and Schlechtendal, 1828), < *Spermacoce* + *-ae* (shortened for *Spermacoceae*).] A tribe of rubiaceae plants, of which *Spermacoce* is the type, embracing 18 other genera, chiefly natives of tropical or subtropical America.

sperma-duct (spér'mä-duct), *n.* [NL. *sperma-ductus*, irreg. < *Gr. σπέρμα*, seed, + *L. ductus*, a

duct: see *duct*.] A spermatic duct, or sperm-duct; a male gonaduct or seminal passage; a hollow tubular or vesicular organ in the male, serving to convey or detain sperm or semen. It is connected in some way with the spermary, from which it carries off the sperm, and in many animals is specifically called the *vas deferens*. But it is a more comprehensive term, including the whole of the male generative passages, of whatever kind. Also *sperma-ductus*, *spermiduct*.

spermagone (spér'mä-gōn), *n.* Same as *sperma-gone*.

spermagonium (spér'mä-gō'ni-um), *n.* Same as *spermagonium*.

spermalist (spér'mä-list), *n.* [From *sperm*¹ + *-al* + *-ist*.] A spermist.

spermangium (spér-man'ji-um), *n.*; *pl. spermangia* (-iā). [NL., < *Gr. σπέρμα*, seed, sperm, + *ἀγγεῖον*, vessel.] In *Algae*, a receptacle containing the spores: same as *conceptacle*, 2 (b).

spermaphyte (spér'mä-fit), *n.* See *spermophyte*.

spermarium (spér-mä'ri-um), *n.*; *pl. spermaria* (-iā). [NL., < *L. sperma*, seed, + *-arium*.] A spermary: used in distinction from *ovarium*.

spermary (spér'mä-ri), *n.*; *pl. spermaries* (-ri-). [NL. *spermarium*.] The male germ-gland or essential sexual organ, of whatever character; the sperm-gland, or spermatic organ, or seminal gonad, in which spermatozoa are generated, in its specialized condition in the higher animals known as the *testis* or *testicle*. The term is used in distinction from *ovary*, both spermaries and ovaries being gonads. Also *spermarium*.

spermatemphraxis (spér'mä-tem-frak'sis), *n.* [NL., < *Gr. σπέρμα*(τ-), seed, + *ἐμπόρασις*, obstruct: see *emphractic*.] Obstruction to the discharge of semen.

spermatheca (spér-mä-thē'kā), *n.*; *pl. spermathecae* (-sē). [NL., irreg. < *Gr. σπέρμα*, seed, + *θήκη*, a case. Cf. *spermatheca*.] A spermatic case, capsule, or sheath; a receptacle for semen; specifically, the seminal receptacle in the female, as of various insects and other invertebrates, which receives and conveys or detains the sperm of the male. More correctly *spermatheca*. See cuts under *Dendrocaala*, *ovariole*, and *Rhabdocala*.

spermathecal (spér-mä-thē'kal), *a.* [From *spermatheca* + *-al*.] Of or pertaining to a spermatheca: as, a *spermathecal duct* or vesicle.

On reaching the point where the *spermathecal duct* debouches, they [ova] are impregnated by the spermatozoa which escape now from the spermatheca and meet the ova. *Encyc. Brit.*, XVI. 653.

spermatia, *n.* Plural of *spermatium*.

spermatic (spér-mat'ik), *a.* [From *OF. (and F.) spermatique* = *Sp. espermatico* = *Pg. espermatico* = *It. spermatico*, < *L. spermaticus*, < *Gr. σπερματικός*, < *σπέρμα*, seed: see *sperm*¹.] 1. Of or pertaining to sperm, or male seed, in general; containing spermatozoa, or consisting of sperm or semen; seminal: as, *spermatic fluid*.—2. Secreting spermatozoa; generating or producing semen; seminal, as a spermary.—3. Connected with or related to the spermary, or essential male organ; subservient to the male function; testicular: as, *spermatic vessels*; the *spermatic cord*.—4. In *bot.*, resembling or of the nature of spermatia: as, *spermatic filaments*; *spermatic gelatin*.—5. Figuratively, seminal; germinal; fructifying. [Rare.]

I find certain books vital and spermatic, not leaving the reader what he was; he shuts the book a richer man. *Emerson, Books.*

External spermatic fascia. Same as *intercolumnar fascia* (which see, under *fascia*).—**External spermatic nerve,** the genital branch of the genitocrural nerve. It supplies the cremaster muscle.—**Internal spermatic fascia.** Same as *infundibuliform fascia* (which see, under *fascia*).—**Spermatic artery,** any artery supplying a testis or other spermary, corresponding to an ovarian artery of the female. In man the spermatic arteries are two long slender arteries arising from the abdominal aorta a little below the renal arteries, and passing along each spermatic cord, to be distributed to the testes.—**Spermatic calculus,** a concretion sometimes found in the seminal vesicles.—**Spermatic canal.** (a) The inguinal canal. (b) Any spermatic duct, as the *vas deferens*.—**Spermatic cartridge.** Same as *spermatophore*.—**Spermatic cord.** See *cord*¹.—**Spermatic cyst,** in *pathol.*, a cyst arising in the testicle near the epididymis, and filled with fluid in which are often found spermatozoa, crystals, etc. See *spermatocoele*.—**Spermatic duct.** Same as *sperma-duct*.—**Spermatic filament,** a spermatozoon.—**Spermatic gelatin,** in *bot.*, a gelatinous substance in spermogonia which when wet aids in the expulsion of the spermatia.—**Spermatic loges.** See *logos*.—**Spermatic plexus of nerves.** See *plexus*.—**Spermatic plexus of veins,** a thick plexus of convoluted vessels formed in the spermatic cord by the *vena comitea* of the spermatic arteries. These veins coalesce after leaving the inguinal canal, and empty into the *vena cava inferior* of the right side and the renal vein of the left side. This venous plexus corresponds to the ovarian venous plexus of the female, and is specifically known as the *pampiniform plexus*. When varicose, it constitutes a

varicocele or *circoscele*, an extremely common affection, most frequent on the left side.—**Spermatic rete.** Same as *rete vasculosum testis* (which see, under *rete*).—**Spermatic sac,** a sac containing a number of spermatozoa packed or budded together, to be discharged on rupture of the sac.

spermatical (spér-mat'ikal), *a.* [From *spermatic* + *-al*.] Same as *spermatic*. *Bacon*.

spermatogenous (spér-mä-shi-ōj'e-nus), *a.* [From *NL. spermatium* + *Gr. -γενής*, producing: see *-genous*.] In *bot.*, producing or bearing spermatia: as, a *spermatogenous surface*.

On the contrary, they are disk-shaped or cushion-shaped bodies with the *spermatogenous surface* folded into deep sinuous depressions. *De Bary, Fungi (trans.)*, p. 241.

spermatophore (spér-mä'shi-ō-fōr), *n.* [From *NL. spermatium* + *Gr. φέρω*, < *φέρω* = *F. bear*¹.] In *bot.*, a structure bearing a spermatium.

spermatism (spér'mä-tizm), *n.* [From *spermat(ize)* + *-ism*.] 1. Emission of semen; a seminal discharge.—2. Same as *spermism*.

spermatist (spér'mä-tist), *n.* [From *Gr. σπέρμα*(τ-), seed, + *-ist*.] Same as *spermist*.

spermatium (spér-mä'shi-um), *n.*; *pl. spermatia* (-iā). [NL., < *Gr. σπέρμα*, seed.] In *bot.*, an exceedingly minute cylindrical or rod-shaped body in fungi, produced like spores in cup-like organs called *spermatogonia*. The spermatia are conjectured to be the male fertilizing organs, although the male sexual function of all spermatia in fungi has not been demonstrated. In more technical language a spermatium is a "male non-motile gamete conjugating with the trichogyne of a procarp" (*Goebel*).

spermatize (spér'mä-tiz), *v. i.*; *pret. and pp. spermated*, *ppr. spermating*. [From *Gr. σπερματίζω*, sow, yield seed, < *σπέρμα*, seed: see *sperm*¹.] To yield male sperm or seed; have a seminal emission; discharge semen.

spermatoid, *n.* Plural of *spermatoid*. *Owen*.

spermatool (spér-mä-tō'al), *a.* [From *spermatol(ōn)* + *-al*.] Pertaining to a spermatoid. *Owen*.

spermatoblast (spér'mä-tō-blāst), *n.* [From *Gr. σπέρμα*(τ-), seed, + *βλαστός*, bud, sprout, shoot.] The bud or germ of a spermatozoon; a germinal blastema whence spermatozoa are produced. Spermatoblasts form a layer of nucleated and nucleolated cells in the seminal tubules, which proliferates or projects into the lumen of the tubule with often a lobed or digitate end; and from every lobe a spermatozoon develops and is discharged, leaving a branching stump of the spermatoblast. Also *spermatoblast*, *neblast*.

spermatoblastic (spér'mä-tō-blāst'ik), *a.* [From *spermatoblast* + *-ic*.] Of or pertaining to spermatoblasts or the formation of spermatozoa; germinal or budding, as a structure which develops spermatozoa. Also *spermatoblastic*.

spermatocoele (spér'mä-tō-sēl), *n.* [From *Gr. σπέρμα*(τ-), seed, + *κύστη*, a tumor.] A retention-cyst of the epididymis or testicle containing spermatozoa.

spermatocyst (spér'mä-tō-sist), *n.* [From *NL. spermatocystis*, < *Gr. σπέρμα*(τ-), seed, + *κύστις*, bladder: see *cyst*.] 1. In *anat.*, a seminal vesicle.—2. In *pathol.*, a spermatic cyst or sac. See *spermatic*.

spermatocystic (spér'mä-tō-sis'tik), *a.* [From *spermatocyst* + *-ic*.] Containing spermatozoa, as a cyst; of the nature of a spermatocyst.

spermatocystidium (spér'mä-tō-sis-tid'i-um), *n.*; *pl. spermatocystidia* (-iā). [NL., < *Gr. σπέρμα*(τ-), seed, + *κύστις*, bladder, + *dim.*, -*ίδιον*.] In *bot.*, same as *antheridium*. *Hedwig*.

spermatocystis (spér'mä-tō-sis'tis), *n.* [NL.: see *spermatocyst*.] Same as *spermatocyst*.

spermatocystitis (spér'mä-tō-sis-ti'tis), *n.* [NL., < *spermatocystis* + *-itis*.] Inflammation of the seminal vesicles.

spermatocytal (spér'mä-tō-si'tal), *a.* [From *spermatocyte* + *-al*.] Of or pertaining to spermatocytes; of the nature of a spermatocyte.

spermatocyte (spér'mä-tō-sit), *n.* [From *NL. spermatium* + *Gr. κύτος*, a hollow: see *cyte*.] 1. In *bot.*, the mother-cell of a spermatozoid.

The protoplasm in each of the two cells of the antheridium (in *Salvinia*) contracts and by repeated bipartition divides into four roundish primordial cells (*spermatocytes*), each of which produces a spermatozoid. *Goebel, Special Morphology of Plants (trans.)*, p. 230.

2. The cell whose nuclear chromatin and cell-protoplasm become respectively the head and tail of the spermatozoon: synonymous with *spermatoblast*. *Flemming*.

These *spermatocytes* may either all develop into spermatozoa (Mammals), or a single *spermatocyte* may become modified as a basal cell (Plagiostome Fishes), or a number may form an envelope or cyst around the others (Amphibians and Fishes). *Encyc. Brit.*, VIII. 412.

spermatogemma (spér'mä-tō-jem'mä), *n.*; *pl. spermatogemmæ* (-ē). [NL., < *Gr. σπέρμα*(τ-), seed, + *gemma*, a bud.] A mass of spermatoocytes; a multinuclear spermatic cyst; a kind of

spermatoblast. See also *spermosphere*. *Encyc. Brit.*, XX. 412.

spermatogenesis (spér' ma-tō-jen'e-sis), *n.* [NL., < Gr. σπέρμα(τ-), seed, + γένεσις, origin.] In *biol.*, the formation or development of spermatozoa. *Huxley and Martin*, *Elementary Biology*, p. 301.

spermatogenetic (spér'ma-tō-jē-net'ik), *a.* [*<* *spermatogenesis*, after *genetic*.] Of or pertaining to spermatogenesis; exhibiting or characterized by spermatogenesis; as, a *spermatogenetic* process or result; a *spermatogenetic* theory. *Encyc. Brit.*, XX. 412.

spermatogenous (spér-ma-toj'e-nus), *a.* [*<* Gr. σπέρμα(τ-), seed, + γένεσις, producing: see *-genous*.] Producing spermatozoa.

spermatogeny (spér-ma-toj'e-ni), *n.* [*<* Gr. σπέρμα(τ-), seed, + γένεσις, < γένεσις, producing: see *-geny*.] The generation or production of spermatozoa; spermatogenesis.

spermatogonium (spér'ma-tō-gō'ni-um), *n.*; pl. *spermatogonia* (-iā). [NL., < Gr. σπέρμα(τ-), seed, + γόνι, generation.] 1. In *bot.*, same as *pycnidium*, 1.—2. A primitive or formative seminal cell, forming a kind of sperm-morula, or spermosphere composed of spermatoblasts or spermatocytes, which in turn give rise to spermatozooids. *La Valette St. George*.

spermatoid (spér'ma-toid), *a.* [*<* Gr. σπέρμα(τ-), seed, + εἶδος, form.] Resembling sperm, or male seed; sperm-like; of the nature of sperm; spermatoid or seminal.

spermatological (spér'ma-tōj'oi-ka-l), *a.* [*<* *spermatology* + *-ical*.] Of or pertaining to spermatology. Also *spermatological*.

spermatologist (spér-ma-tol'ō-jist), *n.* [*<* *spermatology* + *-ist*.] One who is versed in spermatology. Also *spermatologist*.

spermatology (spér-ma-tol'ō-ji), *n.* [*<* Gr. σπέρμα(τ-), seed, + λογία, < λέγειν, speak: see *-ology*.] The doctrine or body of facts and opinions regarding sperm, semen, or the male elements of procreation, as those of spermatogenesis or spermatogeny. Also *spermatology*.

spermatomere (spér'ma-tō-mēr), *n.* [*<* Gr. σπέρμα(τ-), seed, + μέρος, part.] One of the parts into which the male or female pronucleus of an ovum may divide after fertilization.

Two of these "residual globules" are, according to them, expelled by the *spermatomeres* during their nuclear metamorphosis preceding division.

Micros. Science, XXVI. 597.

spermatooñ (spér-ma-tō'on), *n.*; pl. *spermatooñs* (-iā). [*<* Gr. σπέρμα(τ-), seed, + ὄν, an egg.] The nucleus of a sperm-cell or spermatozoön; a cell which stands in the relation of such a nucleus, as that out of or from which a spermatozoön may be developed; a spermatoblast.

Spermatophilus (spér-ma-tof'i-lus), *n.* [NL. (Wagler, 1830), emended from *Spermophilus*.] Same as *Spermophilus*.

spermatophoral (spér-ma-tof'ō-ra-l), *a.* [*<* *spermatophore* + *-al*.] Of the character of or pertaining to a spermatophore. *Huxley and Martin*, *Elementary Biology*, p. 291.

spermatophore (spér-ma-tō-fōr), *n.* [*<* Gr. σπέρμα(τ-), seed, + φέρειν = E. bear¹.] A special case, capsule, or sheath containing spermatozoa; specifically, one of the peculiar spermatoid cysts of cephalopods (also called *spermatoid* or *seminal cartridge*, *seminal rope*, or *filament of Needham*), usually forming a long cylindrical structure in which several envelopes may be distinguished. The contents of such a spermatophore are not exclusively seminal, for in the hinder part of each there is a special substance, the exploding mass, which serves to discharge the packet of spermatozoa. These are invested in a special tubular tunic, and packed in the front part of the spermatophore, like a charge of shot in a cartridge in front of the powder. Behind this packet of sperm the exploding mass forms a spiral cell, which extends through the greater part of the spermatophore and is continuous behind with the coat of the latter. When the spermatophore is wetted it swells up and bursts, through the force of the spring coiled inside, and the spermatozoa are discharged with considerable force. A spermatophore thus offers a striking analogy to the nematophore or thread-cell of a coelenterate, though the object attained is not urtication or netting, but a seminal emission and consequent impregnation of the female. A spermatophore of some sort, less complex than that of cephalopods, is very commonly found in several classes of invertebrates.

spermatophorous (spér-ma-tof'ō-rus), *a.* [As *spermatophore* + *-ous*.] Bearing or conveying seed, sperm, or spermatozoa; spermatogenous; seminiferous; specifically, bearing sperm as a spermatophore; of or pertaining to a spermatophore; spermatophoral.

spermatorrhœa, **spermatorrhœa** (spér'ma-tō-rē'ä), *n.* [NL. *spermatorrhœa*; < Gr. σπέρμα(τ-),

seed, + ρέειν, flow, run.] Involuntary seminal loss.

spermatospore (spér'ma-tō-spōr), *n.* [*<* Gr. σπέρμα(τ-), seed, + σπόρος, a sowing.] A kind of cell which gives rise to spermatozoa. Also *spermatospore*.

spermatotheca (spér'ma-tō-thē'kä), *n.* Same as *spermatheca*.

spermatovum (spér-ma-tō'vum), *n.*; pl. *spermatova* (-vü). [NL., < Gr. σπέρμα(τ-), seed, + L. ovum, egg.] A fecundated egg; an ovum after impregnation by spermatozoa, whence its substance consists of material from both parents. Also *spermatovum*.

Spermatozoa (spér'ma-tō-zō'ä), *n. pl.* [NL., pl. of *spermatozoön*, q. v.] 1. A supposed class or other group of animalcules; sperm-animals: so called before their nature was known, when they were regarded as independent parasitic organisms.—2. [*l. c.*] Plural of *spermatozoön*.

spermatozoal (spér'ma-tō-zō'al), *a.* [*<* *spermatozoön* + *-al*.] Same as *spermatozoan*.

spermatozoan (spér'ma-tō-zō'an), *a. and n.* [*<* *spermatozoön* + *-an*.] 1. *a.* Of the nature of a spermatozoön; of or pertaining to spermatozoa.

II. *n.* A spermatozoön or spermatozoid.

spermatozoic (spér'ma-tō-zō'ik), *a.* [*<* *spermatozoön* + *-ic*.] Same as *spermatozoan*.

spermatozoid (spér'ma-tō-zō'id), *a. and n.* [*<* *spermatozoön* + *-oid*.] Same as *spermatozoan*.

spermatozoidal (spér'ma-tō-zō'i-dal), *a.* [*<* *spermatozoön* + *-oid* + *-al*.] Same as *spermatozoid*. *W. B. Carpenter*, *Micros.*, § 443.

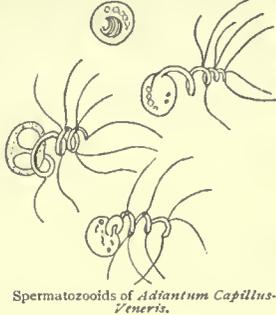

spermatozoid (spér'ma-tō-zō'oid), *a. and n.* [*<* *spermatozoön* + *-oid*.] 1. *a.* Resembling a spermatozoön; of spermatozoan nature or appearance.

II. *n.* 1. A spermatozoön. *Von Siebold*.

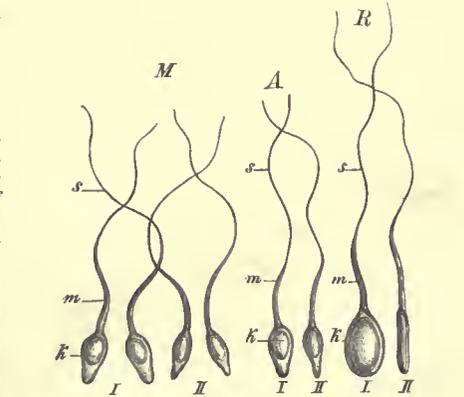

Also, less commonly, *spermatozoid*. See *zoid*.

—2. In *bot.*, a male ciliated motile gamete produced in an antheridium: same as *antherozoid*. In this sense more commonly *spermatozoid*. See also *cut* under *antheridium*.

spermatozoön (spér'ma-tō-zō'on), *n.*; pl. *spermatozoa* (-iä). [NL., < Gr. σπέρμα(τ-), seed, + ζῶον, an animal.] 1. One of the numberless microscopic bodies contained in semen, to which the seminal fluid owes its vitality, and which are the immediate and active means of impregnating or fertilizing the ovum of the fe-

Spermatozooids of *Adiantum Capillus-Veneris*.

M, four spermatozoa of man; A, two of ape; R, two of rabbit. In each case, I, broadest view, II, profile, of A, kernel or nucleus of the head, and m, filamentous body, ending in s, the long slender tail.

male; a spermatoid cell or filament; a spermatozoan or spermatozoid. Spermatozoa are the vital and essential product of a spermary, male gonad, or testis, as ova are of the ovary or female gonad; their production, or the ability to produce them, is the characteristic distinction of the male from the female organism, whatever their size or shape or other physical character, and however various may be the organ in which they are produced. Spermatozoa, like ova, have the morphological value of the cell; and a spermatozoön is usually a cell in which a cell-wall, cell-contents, and cell-nucleus, with or without a nucleolus, may be distinguished. The form may be spherical, like the ovum, and indistinguishable therefrom by any physical character; more frequently, and especially in the higher animals, these little bodies are shaped like a tadpole, with a

small spherical or discoidal head, a succeeding rod-like or bacillar part, and a long slender tail or caudal filament, capable of spontaneous vibratile movements, by means of which the spermatozoa swim actively in the seminal fluid, like a shoal of microscopic fishes, every one seeking, in the passages of the female into which the fluid has been injected, to discover the ovum in which to bury itself, in order to undergo dissolution in the substance of the ovum. They are smaller than the corresponding ovum, and several or many of them may be embedded in one ovum. The actual union of spermatozoa with an ovum, and fusion of their respective protoplasts, is required for impregnation, and is the consummation of sexual intercourse, to which all other acts and processes are simply ancillary or subservient. Spermatozoa may be killed by cold, or chemical or mechanical injury, like any other cells. These bodies, very similar to various animalcules, were discovered and named *spermatozoa* by Leeuwenhoek in 1677; they were at first and long afterward regarded as independent organisms, variously classed as parasitic helminths or Infusorians—such a view being held, for instance, by Von Baer so late as 1827 or 1835. Von Siebold, who found them in various vertebrates, called them *spermatozooids*. Their true nature appears to have been first recognized by Kölliker. Spermatozoa or their equivalents are diagnostic of the male sex under whatever conditions they exist, whether in male individuals separate from the female, or in those many hermaphrodite animals which unite the two sexes in one individual; and the organ which produces them is invariably a testis or its equivalent spermary, of whatever character. The male elements of the lowest animals, however, as *Protozoa*, do not ordinarily receive the name *spermatozoa*, this being specially applied to the more elaborate male cells of the character above described. The origination of spermatozoa has of late years been the subject of much research and discussion; the details of the process, as observed in different animals, or under different conditions of investigation, together with conflicting doctrinal conclusions, have occasioned a large special vocabulary. See many words preceding and following this one.

2. [*cap.*] A genus of animalcules. *Von Baer*, 1827.

sperm-ball (spér'm'bäl), *n.* A spherical cluster of spermatozoa, such as occurs in some sponges. *Encyc. Brit.*, XXII. 424.

sperm-blastoderm (spér'm'blas'tō-dér'm), *n.* A blastodermic layer of formative spermatozoa composing the surface of a sperm-blastula.

sperm-blastula (spér'm'blas'tū-lä), *n.* A spermatoid blastula, or hollow sphere whose surface is a layer of formative spermatozoa.

sperm-cell (spér'm'sel), *n.* 1. A spermatozoön: so called from its morphological valence as a cell.—2. A cell giving rise to spermatozoa; a spermatoblast or spermatocyte.

spermet, *n.* An obsolete spelling of *sperm*¹.

Spermestes (spér-mes'téz), *n.* [NL. (Swainson, 1837), said to be (irreg.) < Gr. σπέρμα, seed, + εσθίεν, eat.] The typical genus of *Spermestinae*, containing six or eight species confined to Africa and Madagascar. Such are *S. cucullata*, *S. poensis*, and *S. bicolor*, of the continent, and the Madagascar *S. nana*. These little birds are closely related to *Amadina*, of which *Spermestes* is often rated as a subgenus.

Spermestinae (spér-mes-ti'nä), *n. pl.* [NL., < *Spermestes* + *-inae*.] An extensive subfamily of *Ploccidae*, named from the genus *Spermestes*. The very numerous species, about 150, are chiefly African and Asiatic, but some of them extend to Australia and various Polynesian islands. Among them are the amadavats and estrilds. Leading genera are *Lagonosticta*, *Spermospiza*, *Pyrenestes*, *Estrilda*, and *Amadina*. See *cut* under *senegal*.

spermestine (spér-mes'tin), *a.* Of, or having characters of, the *Spermestinae*.

spermic (spér'm'ik), *a.* [*<* *sperm*¹ + *-ic*.] Same as *spermatoid*.

spermidium (spér-mid'i-um), *n.*; pl. *spermidia* (-iä). [NL., < L. *sperma*, seed, germ, + *-idium*.] In *bot.*, same as *achenium*, 1.

spermiduct (spér'mi-duct), *n.* [*<* L. *sperma*, sperm, + *ductus*, a duct: see *duct*. Cf. *spermaduct*.] A passage for the conveyance of sperm in the female of *Echinorhynchus*. See the quotation. [Rare.]

From the lower end of the ovarium [of the female of *Echinorhynchus*] two short oviducts, or rather *spermiducts*, arise, and almost immediately unite into a sort of uterus, which is continued into the vagina.

Huxley, *Anat. Invert.*, p. 555.

spermin (spér'm'in), *n.* [*<* *sperm*¹ + *-in*².] A non-poisonous alkaloid (C₂H₅N) obtained from sputum, human semen, organs of leucemic patients, and alcoholic anatomical preparations.

spermism (spér'mizm), *n.* [*<* *sperm*¹ + *-ism*.] The theory or doctrine that the male sperm contains the whole germ of the future animal, which develops entirely from a spermatozoön, the ovum serving merely as a mold or matrix; animalculism. Also *spermatism*.

spermist (spér'mist), *n.* [*<* *sperm*¹ + *-ist*.] One who holds the theory of spermism or spermatism; an animalculist: the opposite of *ovulist*. See *theory of incasement*, under *incasement*. Also *spermatist*.

sperm-kernel (spér'm'kér'nol), *n.* Same as *spermococcus*.

sperm-morula (spèrm'mor'fō-lā), *n.* A spermatomorula; a mulberry-mass of formative spermatozoa.

sperm-nucleus (spèrm'nū'klē-us), *n.* 1. The nucleus of a spermatozoön; a spermococcus or sperm-kernel.—2. In *bot.*, the nucleus of a male gamete, which coalesces with the nucleus of an oöspere to form a germ-nucleus. *Goebel.*

spermoblast (spèr'mō-blāst), *n.* Same as *spermoblast*.

spermoblastic (spèr'mō-blāst'ik), *a.* Same as *spermoblastic*.

spermocarp (spèr'mō-kārp), *n.* [*Gr.* σπέρμα, seed, + καρπός, fruit.] In *bot.*, the so-called "fruit" in the *Characeae* and certain coniferoid algae. It is the fertilized and matured female organ with its variously formed covering or pericarp and accessory cells. The "fruit" of the *Characeae* has also been called the *antheridium*, *sporogonium*, *enveloped oogonium*, and *sporophyllum*, by different authors. *Sporophyllum* seems the preferable term. See these various words. Compare *sporocarp*. See cuts under *antheridium* and *conceptacle*.

spermococcus (spèr'mō-kok'us), *n.*; pl. *spermococci* (-si). [*NL.*, < *Gr.* σπέρμα, seed, + κόκκος, grain, berry.] The nucleus of a spermatozoön: it consists of the head of the sperm-animalcule, excepting its thin outer layer. Also *sperm-kernel*.

spermoderm (spèr'mō-dèrm), *n.* [*Gr.* σπέρμα, seed, + δέρμα, skin.] In *bot.*, the integument of a seed in the aggregate; properly, same as *testa*.

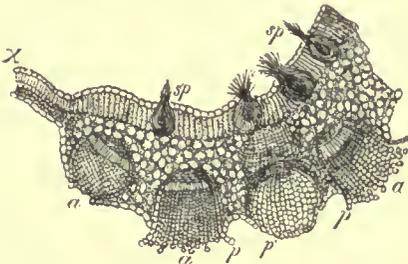

spermogastrula (spèr'mō-gas'trō-lā), *n.*; pl. *spermogastrulae* (-lā). [*NL.*, < *L.* sperma (see *sperm*) + *NL.* gastrula, *q. v.*] A sperm-blastula which has undergone a kind of gastrulation.

spermogone (spèr'mō-gōn), *n.* [*NL.* *spermogonium*.] In *bot.*, same as *spermogonium*; also employed by some writers to denote the spermatium or spore-like body which is produced in a spermogonium. See *spermogonium*, *spermatorium*. Also spelled *spermatogone*.

spermogonia, *n.* Plural of *spermogonium*.

spermogoniferous (spèr'mō-gō-nif'è-rus), *a.* [*NL.* *spermogonium*, *q. v.*, + *L.* ferre = *E.* bear.] In *bot.*, bearing or producing spermogonia.

spermogonium (spèr'mō-gō-ni-um), *n.*; pl. *spermogonia* (-iā). [*NL.*, < *Gr.* σπέρμογονος, producing seed, < σπέρμα, seed, + γονος, producing: see *-gony*.] In *bot.*, a cup-shaped cavity or

Section of Barberry-leaf (of its natural thickness at *x*), infested with *Puccinia graminis* in its aecidial stage.

sp, spermogonia; *a*, fruit, enclosed within the peridium *p*, or open and discharging spores. (Somewhat magnified.)

receptacle in which spermata are produced. See *spermatorium*, *peridium*, *Puccinia* (with cut). Also *spermogonium*.

spermogonous (spèr'mō-gō-nus), *a.* [*Gr.* σπέρμογονος, producing seed, + ουσ, resembling or having the character of spermogonia or spermogones.

sperm-oil (spèrm'oil), *n.* Spermaceti-oil; the oil of the spermaceti-whale. See *train-oil*.

spermolith (spèr'mō-lith), *n.* [*Gr.* σπέρμα, seed, + λίθος, stone.] A concretion which occasionally forms in the seminal ducts.

spermological (spèr'mō-loj'i-kāl), *a.* Same as *spermatological*.

spermologist (spèr'mol'ō-jist), *n.* [*Gr.* σπέρμογος + ιστος.] 1. Same as *spermatologist*.—2. In *bot.*, one who treats of or collects seeds; a student of or an authority in spermology.

spermology (spèr'mol'ō-jī), *n.* 1. Same as *spermatology*.—2. In *bot.*, that branch of science which investigates the seeds of plants.

spermonucleus (spèr'mō-nū'klē-us), *n.*; pl. *spermonuclei* (-i). [*NL.*, < *L.* sperma (see *sperm*) + nucleus, *q. v.*] A male pronucleus. See *masculonucleus*, *feminonucleus*. *Hyatt.*

Spermophila (spèr'mof'i-lā), *n.* [*NL.* (Swainson, 1827), < *Gr.* σπέρμα, seed, + φιλέω, love.] 1. In *ornith.*, the little seed-eaters or pygmy finches, an extensive genus of small American fringilline birds, with very short stout bills

like a bullfinch's, giving name to the subfamily *Spermophilinae*. The limits of the genus vary with different authors, but it usually includes about 50 species, of tropical and subtropical America. The only one of these which occurs in the United States is *S. moreleti*, which is found in Texas, and known as *Morelet's pygmy finch*. It is only about 4 inches long, with extremely turgid bill convex in all its outlines, short rounded wings, and still shorter tail. The male is entirely black and white, the latter color tinged with buff on the under parts; the female is olivaceous-brown above and brownish-yellow or buff below, with whitish wing-bars. A like dissimilarity of coloration characterizes the sexes throughout the genus. By those who hold that *Spermophila* is the same name as *Spermophilus*, this genus is called *Spermophila*; and some or all of the species are often placed in a more extensive genus *Gyrinorhynchus*, of which *Spermophila* or *Sporophila* then constitutes one section. See cut under *grassquit*. Also called *Spermospiza*.

2. In *mammal.*, same as *Spermophilus*, 1. *J. Richardson*, 1825.—3. In *entom.*, a genus of arachnidans. *Hentz*, 1842.

spermophile (spèr'mō-fil), *n.* [*NL.* *Spermophilus*.] 1. A rodent quadruped of the genus *Spermophilus*, as a ground-squirrel or suslik, of which there are numerous species in Europe, Asia, and North America. See cuts under *suslik* and *Spermophilus*.—2. A fringilline bird of the genus *Spermophila*; a little seed-eater, of which there are numerous Central and South American species. See cut under *grassquit*.

Spermophilinae (spèr'mō-fil'i-nē), *n. pl.* [*NL.*, < *Spermophilus* (in sense 2) < *Spermophila* + *-inae*.]

1. In *mammal.*, the ground-squirrels or spermophiles, prairie-dogs, and marmots, one of two subfamilies into which the *Sciuridae* are sometimes divided, represented by the genera *Spermophilus*, *Tamias*, and *Arctomys*. It is not separated from *Sciurinae* or the true arboreal squirrels by any trenchant characters, and the two divisions intergrade through the genera *Xerus* and *Tamias*. But the spermophilines are of terrestrial habits, with usually stouter form, larger size, and less bushy tail than the *Sciurinae*. They inhabit Europe, Asia, and especially North America, where the greater number of species are found, and most of them are called *gophers*. The group is also called *Arctomyiinae*. See cuts under *Arctomys*, *chipmunk*, *prairie-dog*, *Spermophilus*, and *suslik*.

2. In *ornith.*, an American subfamily of *Fringillidae*, named from the genus *Spermophila*. *P. L. Selater*, 1862.

spermophiline (spèr'mof'i-lin), *a.* and *n.* [*Gr.* σπέρμοφιλος, pertaining to the *Spermophilinae*, or having their characters.

II. *n.* A member of the *Spermophilinae*.

Spermophilus (spèr'mof'i-lus), *n.* [*NL.* (F. Cuvier, 1822), < *Gr.* σπέρμα, seed, + φιλέω, love.]

1. A genus of ground-squirrels, giving name to the *Spermophilinae*. The type is *S. citellus* of Europe, the suslik, but the genus is especially well represented in North America, where more than a dozen distinct species occur, some of which run into several varieties. They are divided into 3 subgenera. (1) *Otospermophilus*, in which the ears are high and pointed, the tail is full and broad, with the hairs from two thirds to three quarters of the length of the head and body, and the whole aspect is strongly squirrel-like. To this section belongs *S. grammurus*, with its varieties *beecheyi* and *douglasi*; these are the common ground-squirrels of California, Oregon, and Washington, and east to the Rocky Mountains. *S. annulatus* of Mexico probably also belongs here. (2) *Colobatus*, in which the ears are short and marginiform, the tail is short, from one third to one half the length of the body, and the form is stout. The Old World species belong here, and several of those of North America, as *Parry's spermophile*, *S. empetra* (or *parryi*), which inhabits British America and Alaska, and runs into several varieties, as *kodiakensis* and *erythrogaleus*. In the United States the best-known species of this section is *Richardson's spermophile*, *S. richardsoni*, very generally distributed, in one or another of its varieties, from the plains of the Saskatchewan to those of the Laramie. It is a tawny animal, resembling a prairie-dog in appearance and habits. Here also belong *S. mollis*, *S. spilosoma*, and *S. obsoletus*, inhabiting western parts of the United States. (3) *Tetiomys*, which includes several slender-bodied species, almost like weasels in this respect (whence the name), with the ears generally small or rudimentary, as in *Colobatus*, the skull long and narrow, the tail variable, and the first upper premolar generally small. The most squirrel-like of these is *Franklin's spermophile*, *S. franklini*, inhabiting Illinois and Missouri and northward to 64°. It not distantly resembles a gray squirrel, the tail being bushy, two thirds as long as the head and body. The commonest species is *S. tridecemlineatus*, the thirteen-

Thirteen-lined Spermophile, or Federation Squirrel (*Spermophilus tridecemlineatus*).

lined spermophile, or federation squirrel, so called by Dr. S. L. Mitchell (in 1821) from the original thirteen States of the United States, it having a number (six or eight) of longitudinal stripes, with five or seven rows of spots be-

tween them, likened by that patriot to the "stars and stripes." It inhabits the prairies of the United States at large, and extends northward into British America. Other species of this section are *S. mexicanus* of Texas and Mexico, and *S. tereticaudus* of Arizona and California. Three of the above animals, *S. grammurus*, *S. franklini*, and *S. tridecemlineatus*, are numerous enough in cultivated districts to be troublesome, and all of them are called *gophers*, a name shared by the different animals of the family *Geomysidae*. They are all terrestrial (*S. franklini* somewhat arboreal), and live in burrows underground, much like prairie-dogs, though none of them dig so extensively. In many parts of the Dakotas and Montana the ground is honeycombed with the burrows of *S. richardsoni*. They feed on herbage and seeds, and are also to some extent carnivorous. They are prolific, like most rodents, and bring forth their young in burrows. Those of northern regions hibernate like marmots. Their flesh is eatable. The name of the genus is also written *Spermophila* and *Spermatophilus*, but both of these forms are rare. See also cut under *suslik*.

2. In *entom.*, a genus of coleopterous insects. *Göbler*.

spermophore (spèr'mō-fōr), *n.* [*NL.* *spermophorum*.] Same as *spermophorum*.

spermophorum (spèr'mof'ō-rum), *n.*; pl. *spermophora* (-rā). [*NL.*, < *Gr.* σπέρμα, seed, + φέρω = *E.* bear.] 1. A seminal vesicle.—2. In *bot.*, a synonym of *placentula* and also of *funiculus*.

Spermophyta (spèr'mof'i-tā), *n. pl.* [*NL.*, *pl.* of *spermophytum*: see *spermophyte*.] The highest of the four principal groups or divisions into which the vegetable kingdom is separated by the later systematists. It embraces the higher or flowering plants, those producing true seeds. It is the same as *Phanerogamia*. The correlative terms in descending systematic order are *Pteridophyta*, *Bryophyta*, and *Thallophyta*. See *Panerogamia*, and compare *Cryptogamia*.

spermophyte (spèr'mō-fit), *n.* [*NL.* *spermophytum*, < *Gr.* σπέρμα, seed, + φυτόν, plant.] In *bot.*, a member of the *Spermophyta*; a plant producing true seeds; a phænogam, or flowering plant. Sometimes written *spermaphyte*.

spermophytic (spèr'mō-fit'ik), *a.* [*Gr.* σπέρμοφυτος + ικ]. In *bot.*, capable of producing true seeds; phænogamic.

spermoplasm (spèr'mō-plāzm), *n.* [*Gr.* σπέρμα, seed, + πλάσμα, anything formed or molded: see *plasm*.] The protoplasm of a spermatozoön; the plasmic contents of a spermule, distinguished from the *spermococcus* or *sperm-kernel*. Also *spermoplasma*.

spermopodium (spèr'mō-pō-di-um), *n.*; pl. *spermopodia* (-iā). [*NL.*, < *Gr.* σπέρμα, seed, + ποδός (pod-) = *E.* foot.] In *bot.*, an unused name for the gynophore in *Umbelliferae*.

spermosphere (spèr'mō-sfēr), *n.* [*Gr.* σπέρμα, seed, + σφαίρα, sphere.] A mass of spermatoblasts; a spermatogemma.

Spermospiza (spèr'mō-spi'zā), *n.* [*NL.* (G. R. Gray, 1840), < *Gr.* σπέρμα, seed, + σπιζα, a finch.] 1. A leading genus of *Spermestinae*, the type of which is the African *S. hæmatina*. Originally called *Spermophaga*, a name too near *Spermophagus*.—2. A genus of American finches, synonymous with *Spermophila*. *Bonaparte*.

spermospore (spèr'mō-spōr), *n.* Same as *spermatospore*.

spermotheca (spèr'mō-thē'kā), *n.*; pl. *spermothecæ* (-sē). [*NL.*, < *Gr.* σπέρμα, seed, +θήκη, a case. Cf. *spermatheca*.] In *bot.*, a pericarp. [*Rare.*]

spermous (spèr'mus), *a.* [*Gr.* σπέρμος + ουσ.] Same as *spermatous*.

spermovarian (spèr'mō-vā-ri-an), *a.* [*Gr.* σπέρμοβαριον + αν.] Of or pertaining to a spermovarium.

spermovarium (spèr'mō-vā-ri-um), *n.*; pl. *spermovaria* (-iā). [*NL.*, < *Gr.* σπέρμα, seed, + *NL.* ovarium, *q. v.*] A hermaphroditic genital gland; a bisexual gonad; an ovispermary or ovotestis, which gives rise, simultaneously or successively, to male and female products. See cut under *ovotestis*.

spermovary (spèr'mō-vā-ri), *n.*; pl. *spermovaries* (-riz). [*NL.* *spermovarium*.] Same as *spermovarium*.

spermovum (spèr'mō-vum), *n.*; pl. *spermovæ* (-vā). [*Gr.* σπέρμα, seed, + *L.* ovum, egg.] Same as *spermatovum*.

sperm-ropé (spèr'mō-rōp), *n.* A string of spermatozoa packed in a long case; a package of sperm, as one of the spermatocartridges of a cephalopod. For description, see *spermatophore*. *Encyc. Brit.*, XVI, 682.

spermule (spèr'mül), *n.* [*NL.* *spermulum*, dim. of *LL.* sperma, seed: see *sperm*.] A seed-animalcule, sperm-cell, spermatozoön, or zoöspERMium; the fertilizing male element, of the morphological valence of a cell. *Spermule* is Haeckel's

term, corresponding to *ovule* for the female egg-cell. The protoplasm of the spermule is called *spermoplasm*, and the nucleus *spermococcus*.

spermulum (spér' mū-lum), *n.*; pl. *spermula* (-lā). [NL.: see *spermule*.] A spermule, sperm-cell, or spermatozoön.

sperm-whale (spérm'hwāl), *n.* [*sperm* + *whale*.] The spermaceti-whale or cachalot, *Physcter* (or *Catodon*) *macrocephalus*, belonging

Sperm-whale (*Physcter macrocephalus*).

to the family *Physcteridae* (which see for technical characters; see also out of skull under *Physcter*). It is one of the largest of animals, exceeded in length only by the great orqual or finner, *Balaenoptera sibbaldii*; it has teeth in the lower jaw, but none and no baleen in the upper; and the enormous square head contains the valuable product spermaceti. This whale is also the source of the best whale-oil, and its chase is a very important industry in the warmer waters of all seas. See *cachalot*.—**Porpoise sperm-whale**, a pygmy sperm-whale, or snub-nosed cachalot, of the family *Physcteridae* and genus *Kogia*, as *K. brevirostris* (*K. floweri* of Gill) of the Pacific and chiefly tropical seas, but sometimes occurring off the coast of the United States.—**Sperm-whale porpoise**, a bottle-nosed whale of the genus *Hyperoodon*. It belongs to the same family (*Physcteridae*) as the sperm-whale, but to a different subfamily. (See *Ziphiidae*.) The species are several, not well determined, and with confused synonymy. They are larger than any porpoises properly so called, though far inferior in size to the true sperm-whale.

speron, *n.* [*It. sperone* = OF. *esperon*, F. *éperon*, a spur, the beak of a ship: see *spur*.] The beak of a ship.

Which barks are made after the manner of fusts or gal-liots, with a *Speron* and a covered poope.

Hakluyt's Voyages, II. 215.

sperri, *v. t.* Same as *spari*.

sperriable, *n.* An obsolete form of *sparable*.

sperrylite (spér'i-lit), *n.* [Named after F. L. Sperry, the discoverer.] A native arsenide of platinum, occurring in minute isometric crystals with pyrite and chalcopyrite at the Vermilion mine, near Sudbury in Ontario. It has a tin-white color, brilliant metallic luster, and a specific gravity of 10.6. It is the only compound of platinum known to occur in nature.

sperset (spérs), *v. t.* and *i.* [An aphetic form of *disperse*, or var. of *sparsc*.] To disperse. *Spenser*, Visions of Bellay, l. 195.

spertnet, *n.* A Middle English form of *sparth*.

spertlet, *v.* and *n.* An obsolete form of *spurtle*.

spervet, **spervyout**, *n.* Same as *sparver*.

spessartite, **spessartine** (spes'är-tit, -tin), *n.* [*Spessart*, a mountainous region in Germany, north of the river Main.] A manganesian variety of garnet.

spet, *v.* and *n.* An obsolete or dialectal variant of *spit*.

spetch (spech), *n.* [Assibilated form of *speck*.] A piece of skin or hide used in making glue: as, size made from buffalo-spetches.

spetoust, *a.* See *spitous*.

spew (spū), *v.* [Formerly also *spue*; < ME. *spewen*, *spuen*, *spūwen*, < AS. *spūcan* (pret. *spāw*, pp. *spūcan*) = OS. *spūcan* = OFries. *spūa* = MD. *spūen*, *spouwen*, *spuūwen*, D. *spuwen* = OHG. *spūcan*, *spūan*, MHG. *spūen*, G. *speien* = Icel. *spýja* = Sw. Dan. *spý* = Goth. *spūwan*, *spew*, = L. *spuere* = Gr. *πύειν*, Doric *πύττειν* (for **σπύειν*), spit, = OBulg. *plūvati*, *plūti* = Bohem. *plūti* = Pol. *pluc* = Russ. *plivati* = Lith. *spiauti* = Lett. *spļaut* (Slav. *√ pljū* < *spjū* < *spū*), spit. Hence ult. *spit*.] I. *intrans.* 1. To discharge the contents of the stomach; vomit; puke.

Then he gan to *spewe*, and up he threwe

The balsame all againe.

Robin Hood and the Peddlers (Child's Ballads, V. 248).

2. In *gun.*, to run at the mouth: said of a gun which bends at the chase, or whose muzzle droops, from too quick firing.

II. *trans.* 1. To vomit; puke up or out; eject from or as if from the stomach.

So then because thou art lukewarm . . . I will *spue* thee out of my mouth. Rev. III. 16.

2. To eject as if by retching or heaving; send or cast forth from within; drive by internal force or effort: often used figuratively.

That the land *spue* not you out also, when ye defile it, as it *spued* out the nations that were before you.

Lev. xviii. 28.

To live, for me, Jane, is to stand on a crater-crust which may crack and *spew* fire any day.

Charlotte Brontë, Jane Eyre, xx.

To *spew* oakum, said of the seams of a ship when the oakum starts out from between the planks.

spewer (spū'ér), *n.* [*spew* + *-er*.] One who or that which spews.

spewiness (spū'ies), *n.* The state of being spewy, moist, or damp.

The coldness and *spewiness* of the soil.

Bp. Gauden, Hieraspistes (1653), p. 551. (Latham.)

spewing (spū'ing), *a.* Samo as *spewy*.

The soil [in New England] for the general is a warm kind of Earth, there being little cold *spewing* Land.

S. Clarke, Four Plantations in America (1670), p. 29.

[See also the quotation under *emuscation*.]

spewy (spū'i), *a.* [*spew* + *-y*.] Wet; boggy; moist; damp.

The lower valleys in wet winters are so *spewy* that they know not how to feed them. Mortimer, Husbandry.

Speyside pine. See *pine* 1.

sp. gr. An abbreviation of *specific gravity*.

sphacel (sfas'el), *n.* [*NL. sphacelus*, *q. v.*] Same as *sphacelus*.

sphacela (sfas'e-lā), *n.*; pl. *sphacelæ* (-lā). [*Gr. σφάκελος*, gangrene.] In *bot.*, in certain algæ, a hollow chamber of considerable size which is developed from the apical cell of each branch. When young it is filled with dark mucilaginous contents, which at a later stage become watery. The term is sometimes used as nearly or quite the equivalent of *protoplastum*. Also *sphacelæ*.

Sphacelaria (sfas-e-lā'ri-ā), *n.* [*NL.*, so called in allusion to the tips of the branches, which are black and shriveled when dried; < *Gr. σφάκελος*, gangrene.] A genus of algæ, typical of the family *Sphacelariaceæ*. They have olive-brown, branching, filamentous fronds, with corticating cells wanting or confined to the base of the frond. The axis and branches are terminated by a large apical cell, from which, by transverse, longitudinal, and oblique divisions, a solid frond is formed whose external surface is composed of rectangular cells arranged in regular transverse bands. The unicellular and plurilocular sporangia are spherical or ellipsoidal, borne on short pedicels; reproduction is non-sexual, by means of propogula. The species are variable, and difficult of determination. There are two species along the New England coast.

Sphacelariaceæ (sfas-e-lā'ri-ā'sē-ē), *n.* pl. [*NL.*, < *Sphacelaria* + *-acæ*.] A family of algæ, typified by the genus *Sphacelaria*. They are olive-brown seaweeds with branching polysiphonous fronds, the branches of which terminate in a peculiar large apical cell. Also *Sphacelariæ*.

sphacelate (sfas'e-lāt), *a.* [*sphacelus* + *-ate*.] 1. In *pathol.*, dead; necrosed.—2. In *bot.*, decayed, withered, or dead.

sphacelate (sfas'e-lāt), *v.*; pret. and pp. *sphacelated*, prp. *sphacelating*. [*sphacelus* + *-ate*.] I. *intrans.* To become necrosed.

II. *trans.* To affect with *sphacelus* or necrosis.

The floor of the existing wound was of course formed by *sphacelated* hepatic tissue. *Lancet*, 1890, II. 425.

sphacelated (sfas'e-lāt-ed), *a.* [*sphacelate* + *-ed*.] Same as *sphacelate*.

sphacelation (sfas-e-lā'shon), *n.* [*sphacelate* + *-ion*.] Necrosis; the process of becoming or making gangrenous; mortification.

sphacela (sfas'el), *n.* [*NL. sphacela*.] In *bot.*, same as *sphacela*.

Sphacelia (sfā-sē'li-ā), *n.* [*NL.*, < *Gr. σφάκελος*, gangrene.] A former genus of fungi, now known to be the conidial stage or form of *Claviceps*, the ergot. It constitutes the first stage of the ergot, and consists of a growth of mycelium destroying and replacing the ovary of the host, taking approximately the form of the latter. It produces conidial spores upon the tips of basidia which radiate from the surface of the hyphal mass. See *ergot*, 2. Also *Sphacelium*.

sphacelism (sfas'e-lizm), *n.* [*sphacel(us)* + *-ism*.] Same as *sphacelismus*.

sphacelismus (sfas-e-lis'mus), *n.* [*NL.*, < *Gr. σφάκελισμός*, gangrene, < *σφάκελιζεν*, be gangrened or blighted, < *σφάκελος*, gangrene: see *sphacelus*.] Necrosis.

Sphacelium (sfā-sē'li-um), *n.* [*NL.*: see *Sphacelia*.] Same as *Sphacelia*.

Sphaceloma (sfas-e-lō'mā), *n.* [*NL.*, < *Gr. σφάκελος*, gangrene: see *sphacelus*.] A genus of pyrenomycetous fungi, containing the very destructive species (*S. Ampelimum*) known as *anthracnose*. It first appears on the shoots, leaves, and berries of grape-vines as minute brown spots which are a little depressed in the middle and have a slightly raised darker-colored rim. These spots soon increase in size and elongate longitudinally. On the fruit the spots retain a more or less regularly rounded outline, and have a well-defined band of bright vermilion between the dark border and the central portion. Finally, under the action of the disease, the berries dry up, leaving nothing, apparently, but the skin and seeds. Washing the vines with a strong solution of sulphate of iron before the appearance of the leaves has been found effective in destroying or checking the disease. See *anthracnose*.

sphacelus (sfas'e-lus), *n.* [*NL.*, < *Gr. σφάκελος*, gangrene, mortification, caries, also a spasm, convulsion.] 1. Necrosis.—2. A necrosed mass of tissue.

Sphæralcea (sfē-rāl'scē-ā), *n.* [*NL.* (St. Hilairc, 1824), so called from the fruit, a round head of carpels; < *Gr. σφαῖρα*, a ball, sphere, + *ἀλκία*, a plant, *Malva Aleca*, related to the plant here defined.] A genus of polytypalous plants, of the order *Malvaceæ*, tribe *Malvææ*, and subtribe *Abutiliææ*. It is characterized by flowers each with three bractlets, and fruit of numerous two-valved carpels naked within, each containing two or three reniform seeds. There are about 25 species, natives of warmer parts of America, with 4 at the Cape of Good Hope. They are herbs or shrubs, in habit resembling the genus *Malva*. They usually bear angled or lobed leaves, and short-pediced violet or reddish flowers single or clustered in the axils or forming a raceme or spike. They are known as *globe mallow*, and several species are in cultivation for ornament under glass. They possess marked demulcent properties, especially *S. cispatina*, a decoction of which is used as a remedy in Brazil, and as a substitute for marsh-mallows.

Sphæranthus (sfē-ran'thus), *n.* [*NL.* (Linnæus, 1753), so called from the clustered heads of flowers; < *Gr. σφαῖρα*, a ball, + *άνθος*, flower.] A genus of gamopetalous plants, of the order *Compositæ*, tribe *Inuloideæ*, and subtribe *Pluchineæ*. It is characterized by flowers without pappus, the central ones bisexual, fertile or sterile, tubular and four- to five-lobed, the outer female and fertile, filiform and minutely two- to three-toothed, and by the aggregation of the small flower-heads into a dense solitary terminal spherical or ovoid glomerule. There are about 10 species, natives of the tropics of Asia, Africa, and Australia. They are erect villous or glutinous herbs, with divaricate branches terminated by the pink flower-clusters. The leaves are alternate, toothed, and decurrent on the stem. *S. hirtus* is known as the *East Indian globe-thistle*; *S. mollis* is a common Indian weed of dry cultivated land, clothed everywhere with soft glandular hairs which give off a powerful honey-like odor.

sphæraphides (sfē-raf'i-dēz), *n. pl.* [*Gr. σφαῖρα*, a ball, + *ραφίς*, a needle.] In *bot.*, the more or less spherical masses of crystals or raphides occurring in the cells of many plants. Also called *sphere-crystals*.

sphæret, *n.* An obsolete form of *sphere*.

sphærenchyma (sfē-reng'ki-mā), *n.* [*NL.*, irreg. < *Gr. σφαῖρα*, a ball, + *ἐγγύμα*, an infusion: see *parenchyma*.] Spherical or spheroidal cellular tissue, such as is found in the pulp of fruits: a modification of parenchyma. *Treas. of Bot.*

Sphæria (sfē'ri-ā), *n.* [*NL.*, < *Gr. σφαῖρα*, a ball: see *sphere*.] A genus of pyrenomycetous fungi, giving name to the family *Sphæriaceæ*. The perithecia are black, carbonaceous or membranaceous, pierced at the apex, usually superficial or erumpent. The species are very numerous, among them being *S. morbosa*, the destructive black-knot of plum- and cherry-trees. See *black-knot*, 2.

Sphæriaceæ (sfē-ri-ā'sē-ē), *n. pl.* [*NL.* (Fries, 1825), < *Sphæria* + *-acæ*.] A family of pyrenomycetous fungi, typified by the genus *Sphæria*.

Sphæriacei (sfē-ri-ā'sē-i), *n. pl.* [*NL.*, < *Sphæria* + *-acæi*.] Same as *Sphæriaceæ*.

sphæriaceous (sfē-ri-ā'shi-us), *a.* [*Sphæria* + *-accous*.] In *bot.*, resembling or belonging to the genus *Sphæria* or the *Sphæriaceæ*.

sphæridia, *n.* Plural of *sphaeridium*, 1.

sphæridial (sfē-rid'i-āl), *a.* [*sphaeridium* + *-al*.] Of or pertaining to the *sphæridia* of a sea-urchin.

Sphæridiidae (sfē-ri-dī'i-dē), *n. pl.* [*NL.*, < *Sphæridium* + *-idae*.] The *Sphæridiidae* as a family of palpicorn coleopterous insects. Also *Sphæridiidae*, *Sphæridia*, *Sphæridides*, *Sphæridiites*, *Sphæridiota*, *Sphæridiites*.

Sphæridiinae (sfē-rid-i-i-nē), *n. pl.* [*NL.* (Le Conte, 1833, as *Sphæridini*), < *Sphæridium* + *-inae*.] A subfamily of the water-beetle family *Hydrophilidae*, remarkable from the fact that its forms are all terrestrial. They are small, oval, convex, or hemispherical beetles which live in the excrement of herbivorous mammals. They are usually black in color, with the elytra frequently spotted or margined with yellow. They are divided into six genera, of which five are represented in the United States. See *Sphæridium*, 2.

sphæridium (sfē-rid'i-um), *n.* [*NL.*, < *Gr. σφαῖριδιον*, dim. of *σφαῖρα*, a ball, sphere: see *sphere*.] 1. Pl. *sphæridia* (-ā). In echinoderms, one of the numerous minute spheroidal bodies, rarely more than one hundredth of an inch long, which are found in nearly all sea-urchins upon the ambulacral plates, especially those nearest the mouth. Each contains a dense glassy calcareous skeleton, and is articulated by a short pedicel, like a spine, to one of the tubercles. The *sphæridia* are supposed to be olfactory or auditory sense-organs.

In some genera, these *sphæridia*, to which Lovén ascribes a sensory function (probably auditory), are sunk in fosses of the plate to which they are attached.

Huxley, Anat. Invert., p. 480.

2. [*cap.*] [*NL.* (Fabricius, 1795).] The typical genus of the *Sphæridiinae*, comprising mainly African species distinguished by the elongate

scutellum and the visible pygidium. *S. seuraeoides* is an example.

Sphaeriidae (sfē-rī'i-dē), *n. pl.* [NL., < *Sphaerium* + *-idae*.] A family of fresh-water bivalve mollusks, typified by the genus *Sphaerium*, formerly called *Cycladidae*, and now generally united with the typical *Cyrenidae* under the latter name.

sphaeristerium (sfē-ris-tē'ri-um), *n.*; *pl. sphaeristeria* (-iā). [*L. sphaeristerium*, < Gr. *σφαίριον*, a place for playing ball, < *σφαίρα*, a ball; see *sphere*.] In *class. antiq.*, any place or structure for the exercise of ball-playing; a tennis-court.

sphaerite (sfē'rit), *n.* [*L. sphaerite*, < Gr. *σφαίρα*, a ball, sphere, + *-ite*.] A hydrous phosphate of aluminium, allied to wavellite in structure and composition.

Sphaerium (sfē'ri-um), *n.* [NL. (Scopoli, 1777), < Gr. *σφαίριον*, dim. of *σφαίρα*, a ball.] The typical genus of the *Sphaeriidae*, or a genus of the family *Cyrenidae*, for a long time generally known as *Cyclas*. It contains many small clamlike fresh-water shells.

Sphaerobacteria (sfē'rō-bak-tē'ri-ā), *n. pl.* [NL., < Gr. *σφαίρα*, a sphere, + NL. *bacterium*, q. v.] In Cohn's system of classification, a tribe of schizomycetes or bacteria, with spherical cells, as in the genus *Micrococcus*. See *Micrococcus*.

Sphaerococcaceae (sfē'rō-ko-kā'sē-ē), *n. pl.* [NL., < *Sphaerococcus* + *-aceae*.] The same or nearly the same as the *Sphaerococcidae*.

Sphaerococcidae (sfē'rō-ko-koi'dē-ē), *n. pl.* [NL., < *Sphaerococcus* + *-idae*.] An order or suborder of florideous algae, named from the genus *Sphaerococcus*. The fronds are cylindrical or membranaceous, often of very delicate substance. The antheridia form superficial patches, or are occasionally contained in sunken cavities.

Sphaerococcus (sfē'rō-kok'us), *n.* [NL. (Stackhouse), < Gr. *σφαίρα*, a ball, + *κόκκος*, a berry.] A genus of florideous algae, giving name to the order *Sphaerococcidae*. There are no American species.

Sphaerodactylus (sfē-rō-dak'ti-lus), *n.* [NL. (Wagler, 1830), < Gr. *σφαίρα*, a ball, + *δάκτυλος*, finger.] A genus of American gecko lizards, having toes ending in small circular sucking-disks, by means of which they adhere to perpendicular surfaces. There are large carinate scales on the back, and small smooth hexagonal ones on the belly. *S. notatus* is one of the smallest of lizards, about 2 inches long, found in Florida and Cuba; it is notable as the only gecko of the United States. Also *Sphaerodactylus*.

Sphaerogaster (sfē-rō-gas'tēr), *n.* [NL. (Zetterstedt, 1842), < Gr. *σφαίρα*, a ball, + *γαστήρ*, belly.] A genus of dipterous insects, of the family *Acroceridae*, containing one species, *S. arcticus*, a minute shining-black fly, which occurs from the northernmost point of Lapland to northern Sweden.

Sphaerogastra (sfē-rō-gas'trā), *n. pl.* [NL., < Gr. *σφαίρα*, a ball, + *γαστήρ*, belly.] A division of arachnidans, containing those whose abdomen is more or less spheroidal or globose, as the spiders; contrasted with *Arthrogastra*. See cut under *spider*.

spheroid, *n.* See *spheroid*.

Sphaeroma (sfē-rō'mā), *n.* [NL. (Latreille, 1802), < Gr. *σφαίρωμα*, anything made round or globular, < *σφαίρον*, make round or globular, < *σφαίρα*, a ball, sphere; see *sphere*.] The typical genus of *Sphaeromidae*, so called from their habit of rolling themselves up in a ball when disturbed, like some of the *Oniscidae*. They are known as *globe-slaters*. Also *Sphaeroma*. *Leach*.

sphaeromere, *n.* See *sphaeromere*.

sphaeromian, *a. and n.* See *sphaeromian*.

Sphaeromidae (sfē-rom'i-dē), *n. pl.* [NL., < *Sphaeroma* + *-idae*.] A family of isopod crustaceans, typified by the genus *Sphaeroma*; the globe-slaters. Also *Sphaeromatidae*.

sphaerosiderite, *n.* See *sphaerosiderite*.

sphaerospore, *n.* Same as *sphaerospore*.

sphaerostilbite (sfē-rō-stil'bit), *n.* [*L. sphaerostilbite*, < Gr. *σφαίρα*, a ball, + *E. stilbite*.] A variety of stilbite.

Sphaerotheca (sfē-rō-thē'kē), *n.* [NL. (Léveillé, 1851), < Gr. *σφαίρα*, a ball, + *θήκη*, a case.] A genus of pyrenomycetous fungi, belonging to the family *Erysiphaceae*, characterized by a perithecium which contains only a single ascus. The appendages are simple threads not unlike the mycelium with which they are frequently interwoven. The ascus is usually suborbicular in shape, and generally contains eight spores. *S. humuli*, called the hop-mildew, is destructive to the hop-vine; *S. pannosa* is injurious to rose-bushes; and *S. mors-vivae* is the common gooseberry-mildew. See *hop-mildew*.

sphaerotherian (sfē-rō-thē'ri-an), *a. and n.* [*L. Sphaerotherium* + *-an*.] *I. a.* Of or pertaining to the genus *Sphaerotherium*.

II. n. A milleped of the genus *Sphaerotherium* or family *Sphaerotheriidae*.

Sphaerotheriidae (sfē'rō-thē-rī'i-dē), *n. pl.* [NL., < *Sphaerotherium* + *-idae*.] A family of chilogath myriapods, typified by the genus *Sphaerotherium*, having aggregated eyes and lateral antennae. Also called *Zephroniidae*.

Sphaerotherium (sfē-rō-thē'ri-um), *n.* [NL., (Brandt, 1841), < Gr. *σφαίρα*, a ball, + *θηρίον*, a wild beast.] A genus of chilogath myriapods, of the family *Glomeridae*, and giving name to the *Sphaerotheriidae*. *S. elongatum* is an example. Also called *Zephronia*.

sphaerozoa, *n.* Plural of *sphaerozoön*.

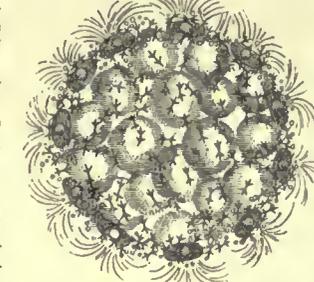

sphaerozoön (sfē-rō-zō'id), *a. and n. I. a.* Of or pertaining to the *Sphaerozoöida*.

II. n. A *sphaerozoön*, or member of the *Sphaerozoöida*.

Sphaerozoöida (sfē-rō-zō'i-dē), *n. pl.* [NL., < *Sphaerozoön* + *-ida*.] A family of spumellarians, or compound radiolarians, typified by the genus *Sphaerozoön*, with a skeleton composed of numerous detached spicules scattered round the social central capsules, or embedded in their common gelatinous body.

sphaerozoön (sfē-rō-zō'on), *n.*; *pl. sphaerozoa* (-iā). [NL.: see *Sphaerozoön*.] An individual or species of the genus *Sphaerozoön* or family *Sphaerozoöida*.

Sphaerozoön (sfē-rō-zō'um), *n.* [NL., < Gr. *σφαίρα*, a ball, + *ζῷον*, an animal.] A genus of compound radiolarians, typical of the family *Sphaerozoöida*, the protoplasm of which contains colored cell-form bodies, and gives rise to a network of spicules forming a loose detached skeleton. *S. orodimare* is an example. A second species is *S. punctatum*. See also cut under *spicule*.

sphaerule, sphaerulite, etc. See *sphaerule*, etc.

Sphagnaceae (sfag-nā'sē-ē), *n. pl.* [NL. (Bridel, 1826), < *Sphagnum* + *-aceae*.] A monotypic order of mosses; the peat-mosses. They are soft and flaccid caulescent plants, generally of large size, growing in more or less compact tufts or patches on the surface of bogs, or floating in stagnant water, more rarely on the borders of mountain rivulets. They are whitish, yellowish, or sometimes red or olive-colored, and are perennial by the annual prolongation of the stems or by simple innovations at the apex. The branches are generally spreading, in lateral fascicles of from two to seven, rarely more, those at the summit of the stem capitate. The leaves are nerveless, translucent, formed of a single layer of two kinds of cells. The inflorescence is monoecious or dioecious; the male organs (antheridia) are borne upon clavate catkin-like branches, solitary at the side of each leaf, globose or ovoid, pedicellate; the female organs (archegonia) are generally three or four terminating a short branch, only one perfecting fruit and forming a capsule. The capsule is globose, operculate with a convex or nearly flat lid, the orifice naked; the spores are of two kinds. See cut under *Sphagnum*.

Sphagnaceae (sfag-nā'sē-ē), *n. pl.* [NL. (Bridel, 1826), < *Sphagnum* + *-aceae*.] A monotypic order of mosses; the peat-mosses. The plants of this genus are widely diffused over the temperate parts of the globe, and enter largely into the composition of peat. There are about 25 North American species and many varieties or forms, about the validity of which the best authorities differ widely. The most divergent forms may be distinguished by well-marked characters, but these seem to merge into one another by a complete series of connecting links. See *peat*, *peat-moss*, *Bryaceae*.

a, Fertile plant of *Sphagnum cuspidatum*, var. *plumosum*; *b*, the capsule of *Sphagnum subsecundum*; *c*, the antheridium of *Sphagnum subsecundum*; *d*, cells of the leaf of *Sphagnum sylvicola*.

2. [l. c.] A mass or quantity of moss of this genus: often used attributively: as, *sphagnum* moss; a *sphagnum* bog.

Sphagolobus (sfā-gol'ō-bus), *n.* [NL. (Cabanis, 1860), < Gr. *σφαγή*, the throat, + *λοβός*, lobe.] A genus of hornbills, of the family *Bucerotidae*, characterized by the peculiar form of the casque and by the curly crest. The

Sphagolobus atratus.

only species is *S. atratus* of western Africa, of a blackish color with the tail dark-green and broadly tipped with white.

sphalerite (sfal'e-rit), *n.* [*L. sphalerite*, < Gr. *σφαλερός*, slippery, uncertain (< *σπάλλειν*, cause to fall, throw down, trip; see *fall*, *fail*), + *-ite*: so named because often confounded with more useful ores.] The native zinc sulphid more familiarly known as *zinc-blende*. See *blende*.

sphalerotheca (sfal'e-rō-kār'pi-um), *n.*; *pl. sphalerothecaria* (-iā). [NL., < Gr. *σφαλερός*, slippery, uncertain (see *sphalerite*), + *καρπός*, fruit.] In *bot.*, a name proposed for an accessory fruit, as that of *Shepherdia*, in which the achene is invested by a persistent succulent calyx, which assumes the appearance of a berry.

Sphargididae (sfār-jid'i-dē), *n. pl.* [NL. (Bonaparte, 1839), < *Sphargis* (*Sphargid*-) + *-idae*.] A family of chelonians, typified by the genus *Sphargis*, having a soft, thick, coriaceous carapace not consolidated by the bones, and clawless feet forming mere paddles; the soft-shelled turtles. Only one species is known, the luth, or leatherback turtle, which reaches a gigantic size. Preferably to be called *Dermochelyidae*. Also *Sphargidæ*, *Sphargidina*, *Sphargidoidea*. See cut under *leatherback*.

Sphargis (sfār'jis), *n.* [NL. (Merrem, 1820).] The typical genus of *Sphargididae*. The species is *S. coriacea*, the soft-shelled or leather-backed turtle, or trunk-turtle. An earlier and unexceptionable name, and therefore the onym of this genus, is *Dermochelys*. See cut under *leatherback*.

Sphecia (sfē'shi-ā), *n.* [NL. (Hübner, 1816), < Gr. *σφήξ* (*σφηκ*-), a wasp.] A genus of lepidopterous insects, of the family *Aegeriidae*, having the abdomen moderate and no anal tuft; the hornet-moths. Two European species are the hornet-moth (*S. apiformis*) and the linnar hornet-moth (*S. bembeciformis*). See *Sesta*.

Sphecidæ (sfes'i-dē), *n. pl.* [NL., also erroneously *Sphegidae*, < *Sphex* (*Sphex*-) + *-idae*.] A family of fossorial hymenopterous insects, typified by the genus *Sphex*: same as *Sphegidae*.

Sphecicus (sfē'shi-us), *n.* [NL. (Dahlbom, 1843), < Gr. *σφήξ* (*σφηκ*-), a wasp.] A notable genus of digger-wasps, of the family *Bembecidae*, having the middle tibiae armed with two spurs at the apex, and the marginal cell of the fore wings lanceolate. The species are of large size and bright colors. *S. speciosus* is one of the largest of the

Sphecius speciosus, natural size.

North American solitary wasps, and digs large cylindrical burrows which it stores with stung cecidias, particularly with the dog-day harvest-fly (*Cicada tibicen*).

Sphecotheres (sfē-kō-thē'rēs), *n.* [NL. (Vieillot, 1816, also *Sphecothera* and *Sphecothera*), < Gr. σφήξ (sphēx-), a wasp, + θηρῶν, hunt, chase.] One of two leading genera of passerine birds, of the family *Oriolidae*, having the lores and circumocular region naked. There are 4 species, ranging in Australia, New Guinea, Timor, and the Kei Islands. The Australian is *S. maxillaris*; the Papuan is *S. salvadori*; *S. javiventris* inhabits the Kei Islands and parts of Australia; while *S. viridis* is found in Timor and Senso. Also called *Picnorhamphus*.

Sphegidae (sfēj'i-dē), *n. pl.* [NL. (Westwood, 1840), irreg. < *Spheg* (*Sphec*) + *-idae*.] A family of fossorial hymenoptera, or digger-wasps.

The prothorax is narrowed anteriorly, and forms a sort of neck; the basal segment of the abdomen is narrowed into a long, smooth, round petiole; and the head and thorax are usually clothed with a long, thin pubescence. These wasps usually burrow into sand-banks, and provision their cells with caterpillars and spiders. Eighteen genera and about three hundred species are known. Also *Sphecidæ*. See *sand-wasp*, and cuts under *digger-wasp*, *Ammophila*, *mud-dauber*, and *Peloponæus*.

Blue Digger-wasp (*Chalybion cæruleum*), one of the *Sphegidae*, natural size.

Sphenæacus, *n.* See *Sphenæacus*.

sphendone (sfen'dō-nē), *n.* [*Gr.* σφενδόνη, a sling, a head-band, a hoop, etc.] In *Gr. archæol.*: (a) A form of head-band or fillet worn by women to confine the hair around and on the top of the head. It is characteristically broad in front and narrow behind, being thus opposite in its arrangement to the opthosphenone. (b) An elliptical or semi-elliptical area, or any place of kindred form, as the auditorium of a theater; that end of a stadium which was curved or rounded.

The Messenian stadium, which is surrounded by colonnades, has 16 rows of seats in the *sphendone*. C. O. Müller, *Manual of Archæol.* (trans.), § 290.

sphene (sfēn), *n.* [*F.* *sphène*, in allusion to the wedge shape of the crystals, < *Gr.* σφήν, a wedge.] The mineral titanite. The transparent green, greenish-yellow, or yellow varieties frequently exhibit a play of colors as brilliant as that of the yellow or green diamond, showing a strong refractive and dispersive power on light. It is quite soft, the hardness being only 5.5. See *titanite*.

sphenethmoid (sfē-neth'moid), *a.* and *n.* [*Gr.* σφην(oid) + ethmoid.] I. *a.* 1. Of or pertaining to the sphenoid and the ethmoid bone; sphenethmoidal; ethmosphenoid: as, the *sphenethmoid* suture or articulation.—2. Representing or combining characters of both sphenoid and ethmoid: as, the *sphenethmoid* bone.

II. *n.* The sphenethmoid bone, as of the frog's skull: one of the cranial bones, situated in front of the parasphenoid. See *girdle-bone*, and cuts under *Anura*² and *Rana*.

Also *spheno-ethmoid*.

sphenethmoidal (sfē-neth-moi'dal), *a.* [*Gr.* σφην(oid) + *-al*.] Same as *sphenethmoid*.—**Sphenethmoidal nerve**, a branch of the nasal nerve described by Luschka as passing through the posterior internal orbital canal to the mucous membrane of the posterior ethmoidal cells and the sphenoidal sinus. Called by Krause the *posterior ethmoidal nerve*.

sphenic (sfē'nik), *a.* [*Gr.* σφήν, a wedge, + *-ic*.] Wedge-like.—**Sphenic number**, a number having three unequal factors.

sphenion (sfē'ni-on), *n.* [NL., < *Gr.* σφήν, a wedge.] The apex of the sphenoidal angle of the parietal bone, on the surface of the skull: so called by Von Torök. See *craniometry*.

spheniscan (sfē-nis'kan), *n.* [*Gr.* σφηνίσκος + *-an*.] A penguin or spheniscomorph; espe-

cially, a jackass-penguin of the restricted genus *Spheniscus*. See cut under *Spheniscus*.

Spheniscidæ (sfē-nis'i-dē), *n. pl.* [NL., < *Sphe-niscus* + *-idæ*.] The penguins as a family of squamipennate or brevipennate palmiped natorial birds, of the order *Pygopodes*; the only family of *Spheniscomorpha*, *Squamipennes*, *Impennes*, or *Ptilopteri*, so strongly marked that it is regarded as representing a superfamily, order, or even superorder, though formerly included in the *Alcidæ*, or auk family. The wings are reduced to flippers, like a seal's or turtle's. They hang by the side, and cannot be closed like those of other birds; in swimming under water they are flapped alternately with a peculiar motion suggesting that of the blades of a screw propeller. They are covered with small scaly feathers in which no remiges can be distinguished, and their bones are peculiarly flat, and not hollow. The feet are four-toed and webbed, with very short broad tarsi, the bones of which are more separate than the metatarsals of any other birds. In walking or standing the whole tarsus rests on the ground, so that the birds are plantigrade; and in swimming under water the feet act mainly as rudders. The beak varies in form in different genera. The plumage is uniformly implanted in the skin, without any apertures; and there is a highly developed system of subcutaneous muscles, contributing to the sinuous movements of the birds under water, suggestive of those of the duck-mole. The feathers of the upper parts and wings are scaly, with thick, flattened shafts and slight webbing. The *Spheniscidæ* are confined to the southern hemisphere, and abound in cold temperate and antarctic waters, especially about the southern end of Africa and South America, where they live in communities, often of great extent. There are about 14 species, one of which reaches Brazil and another Peru. The generic forms are *Aptenodytes*, the king-penguins, of great size, with slender bill; *Pygoscelis*, a similar but long-tailed type; *Dasyrhamphus*, with extensively feathered bill; *Eudyptula*, of very small size; *Eudyptes* (or *Catarractes*), the rock-hoppers, which are crested, and hop instead of waddling; and *Spheniscus*, the jackass-penguins. There is a fossil penguin, *Palæeudyptes antarcticus*, from the Tertiary of the west coast of Nelson Island, which was a giant, 6 or 7 feet tall. *Aptenodytidæ* is a synonymy. See the generic names, *Spheniscomorpha*, and cuts under *Eudyptes*, *metatarcus*, *penguin*¹, *Pygoscelis*, *Spheniscus*, and *Squamipennes*.

Spheniscinæ (sfē-ni-si'nē), *n. pl.* [NL., < *Sphe-niscus* + *-inæ*.] The penguins: (a) as a subfamily of *Alcidæ*; (b) as the only subfamily of *Spheniscidæ*.

spheniscine (sfē-nis'in), *a.* [*Gr.* σφηνίσκος + *-ine*.] Of or pertaining to the *Spheniscidæ*; spheniscomorphic.

spheniscoid (sfē-nis'koid), *a.* [*Gr.* σφηνίσκος + *-oid*.] Same as *spheniscomorphic*.

spheniscomorph (sfē-nis'kō-mōrf), *n.* A penguin as a member of the *Spheniscomorpha*.

Spheniscomorpha (sfē-nis-kō-mōr'fō), *n. pl.* [NL. (Huxley, 1867), < *Sphe-niscus* + *Gr.* μορφή, form.] The penguins as a group of schizognathous carinate birds, represented by the single family *Spheniscidæ*. See *Spheniscidæ*.

spheniscomorphic (sfē-nis-kō-mōr'fik), *a.* [*Gr.* σφηνίσκος + *-ic*.] Of or pertaining to the *Spheniscomorpha*. Also *spheniscoid*.

Spheniscus (sfē-nis'kus), *n.* [NL. (Brisson, 1760), < *Gr.* σφηνίσκος, dim. of σφήν, a wedge.] I. In *ornith.*, a genus of penguins, of the family *Spheniscidæ*, having a stout, compressed beak hooked at the end, and no crest; the jackass-penguins. There are several species, of medium size. *S. demersus* is found off the Cape of Good Hope. It

Cape Jackass-penguin (*Spheniscus demersus*).

is bluish-gray or slate-colored above, white below, with a dark mask and single collar cut off by a white band from the other colored parts, the collar extending as a stripe along the sides of the body. The Magellanic penguin, *S. magellanicus*, of South America, is similar, but has a double collar. *S. humboldti* is another, inhabiting the coast of Peru. *S. minor* is a very small species, only about 12 inches long, now placed in another genus, *Eudyptula*.

2. In *entom.*, a genus of heteromeric coleopterous insects, of the family *Tenebrionidae*. Kirby, 1817.—3. [*l. c.*] In *math.*, a sphenic number. **sphenobasilar** (sfē-nō-bas'i-lār), *a.* [*Gr.* σφην(oid) + *basilar*.] Of or pertaining to the basisphenoid and the basioecipital or basilar process of the occipital bone; basilar, as the suture between these bones. See cuts under *craniofacial*, *skull*, and *sphenoid*.

sphenoccipital (sfē-nōk-sip'i-tal), *a.* [*Gr.* σφην(oid) + *occipital*.] Of or pertaining to the sphenoid and the occipital bone; occipitosphenoid; sphenobasilar.

Sphenocercus (sfē-nō-sēr'kus), *n.* [NL. (G. R. Gray, 1840), < *Gr.* σφήν, a wedge, + κέρκος, a tail.] A genus of fruit-pigeons or *Treroninae*, having the tail emarginate. Several species inhabit parts of Asia, Japan, and the East Indies, as *S. sphenurus*

Wedge-tailed Pigeon (*Sphenocercus sphenurus*).

of the Himalayan region, *S. sieboldi* of Japan, *S. korthalsi* of Sumatra, *S. apicauda* of Nepal, *S. oxyurus* of Java and Borneo, *S. formosæ* of Formosa. The genus is also called *Sphenurus*, *Sphenænas*, and *Sphenotreron*.

Sphenodon (sfē'nō-don), *n.* [NL., < *Gr.* σφήν, a wedge, + ὄδον (ōdon) = *E. tooth*.] I. In *mammal.*, a genus of extinct megatheriid edentates, or fossil sloths, remains of which occur in the bone-caves of South America. Lund, 1839.—2. In *herpet.*: (a) A genus of extant rhynchocephalous lizards of New Zealand. *S. punctatus* is known as the *tuatara*. The name is synonymous with *Hatteria*. (b) [*l. c.*] A lizard of this genus. They resemble ordinary lizards externally, but have internal characters representative of an order (*Rhynchocephalia*). They are new restricted to certain localities in New Zealand, and live chiefly in holes in the sand or about stones on certain rocky islets, though they were formerly abundant in other places. They have been thinned out, it is said, chiefly by hogs. Three species are described. See cut under *Hatteria*.

sphenodont (sfē'nō-dont), *a.* and *n.* [*Gr.* σφην(oid) + *-ont*.] I. *a.* Having the character of a sphenodon; or of pertaining to the *Sphenodontidæ* or *Hatteriidæ*.

II. *n.* A sphenodont lizard. **Sphenodontidæ** (sfē-nō-don'ti-dē), *n. pl.* [NL., < *Gr.* σφην(oid) + *-idæ*.] A family of rhynchocephalous reptiles, named from the genus *Sphenodon*: same as *Hatteriidæ*.

sphenodontoid (sfē-nō-don'toid), *a.* and *n.* [*Gr.* σφην(oid) + *-oid*.] Same as *sphenodont*.

Sphenæacus (sfē-nē-ā'kus), *n.* [NL. (Strickland, 1841), < *Gr.* σφήν, a wedge, + αἰάξ (aiak-), a rudder.] A genus of aberrant reed-warblers, of uncertain systematic position. It is remarkable in having only ten tail-feathers, which are stiffened with spiny shafts, and whose webs are lax and decomposed. There are no rictal bristles (as in the related emu-wren: see cut under *Stipiturus*). There are 6 species, of South Africa, New Zealand, and the Chatham Islands, as *S. africanus*, *S. punctatus* of New Zealand, and *S. rufescens* of the Chatham Islands. Also *Sphenæacus* and *Sphenura*.

Sphenænas (sfē-nē'nas), *n.* [NL., < *Gr.* σφήν, a wedge, + αἰάξ, a wild pigeon of the color of ripening grapes, < αἰάξ, αἰή, the vine: see *wine*.] Same as *Sphenocercus*.

spheno-ethmoid (sfē-nō-eth'moid), *a.* and *n.* Same as *sphenethmoid*.

spheno-ethmoidal (sfē'nō-eth-moi'dal), *a.* Same as *sphenethmoidal*.

sphenofrontal (sfē-nō-fron'tal), *a.* [*Gr.* σφην(oid) + *frontal*.] Of or pertaining to the sphenoid and the frontal bone; frontosphenoid.—**Sphenofrontal suture or articulation**, in man, a long horizontal suture between the orbital plates of the frontal bone and the orbitosphenoids, and between the external angular processes of the frontal and the alisphenoids.

sphenogram (sfē'nō-gram), *n.* [*Gr.* σφήν, a wedge, + γράμμα, a writing, < γράφειν, write.] A cuneiform or arrow-headed character.

sphenographer (sfē-nōg'ra-fēr), *n.* [*Gr.* σφην(oid) + *-graph* + *-er*.] One versed in sphenography. [Little used.]

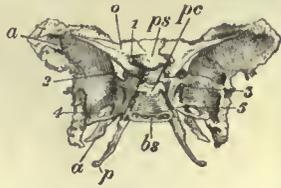

sphenographic (sfē-nō-graf'ik), *a.* [*Gr.* σφην(oid) + *-ic*.] Of or pertaining to sphenography.

sphenographist (sfē-nog'ra-fist), *n.* [*< sphenograph-y + -ist.*] Same as *sphenographer*.

sphenography (sfē-nog'ra-fi), *n.* [*< Gr. σφην, a wedge, + γραφία, γράφειν, write.*] The study and description of cuneiform writings. [Rare.]

sphenoid (sfē'no'id), *a. and n.* [*< Gr. σφαινοειδής, wedge-shaped, < σφην, a wedge, + εἶδος, form.*] **I. a.** Wedge-shaped; wedge-like; specifically, in *anat.*, noting certain cranial bones. See **II., 2.**—**Minimum sphenoid diameter**, the least transverse diameter of the skull, measured between the temporal fossae.

II. n. 1. In *crystal.*, a wedge-shaped crystalline form contained under four equal isosceles triangles. It is the hemihedral form of the square pyramid of the tetragonal system.—**2.** In *anat.*, a large and important compound bone of the skull: so called from its shape and connections in man.

Human Sphenoid Bone, from above.

It has a solid median and inferior body, and bears on each side two pairs of wings, greater and lesser, separated by the sphenoidal fissure from each other. It is a collection of bones, not a single bone, its composition including:

in man and the mammals generally, (a) a basisphenoid, the principal posterior part of the body of the bone, bearing (b) the alisphenoids, the pair of greater wings, these elements forming with the parietal bones the second or parietal segment of the cranium; (c) the presphenoid, the lesser anterior moiety of the body of the bone, bearing (d) the orbitosphenoids, the pair of lesser wings, or processes of Ingrassias, these forming with the frontal bones the third or frontal cranial segment; (e) a pair of pterygoid bones, the so-called internal pterygoid processes; (f) a pair of spongy bones, the sphenoturbinals. The development of the human sphenoid is from 14 centers of ossification, 8 in the postnasal division, and 6 in the presphenoid division. Below mammals, in *Sauropsida* (birds and reptiles), the sphenoid is simplified by abstraction of the pterygoids, which then form permanently distinct bones, and complicated by the addition of other elements, especially an underlying membrane-bone called the *parasphenoid*. In *Ichthyopsida* (amphibians and fishes) further and very great modifications occur. To the sphenoid of man are attached twelve pairs of muscles.

sphenoidal (sfē-noi'dal), *a.* [*< sphenoid + -al.*]

Same as *sphenoid*.—**Sphenoidal angle**. See *craniometry*.—**Sphenoidal crest**, the median thin ridge projecting from the anterior surface of the sphenoid bone to articulate with the perpendicular plate of the ethmoid. Also called *ethmoidal crest*.—**Sphenoidal fissure**. See *fissure*.—**Sphenoidal fontanelle**, the membranous interspace in the infant skull at the junction of the squamous suture with the coronal suture. It often contains a Wormian bone.—**Sphenoidal hemihedrism**. See *hemihedrism*.—**Sphenoidal process**. See *process*.—**Sphenoidal rostrum**. (a) The beak, or a beak-like part, of the sphenoid bone. In man it is a vertical ridge upon which the vomer rides, forming the sphenovomerine suture or schindylesis. (b) In birds, a rostrate part of the skull which appears to be chiefly, if not entirely, developed from the parasphenoid.—**Sphenoidal septum**. See *septum sphenoidale*, under *septum*.—**Sphenoidal sinuses**. See *sinus*.—**Sphenoidal spongy bones**, the sphenoturbinals.

sphenoides (sfē-noi'dēs), *n.* [NL., < Gr. σφαινοειδής, wedge-shaped: see *sphenoid*.] **1.** In *anat.*, the sphenoid bone: more fully called *os sphenoides*.—**2.** [*cap.*] A genus of coelenterates.

sphenoidium (sfē-noi'dē-um), *n.*; pl. *sphenoidia* (-ā). [NL.: see *sphenoid*.] The sphenoid bone, or os sphenoidium.

sphenoido-auricular (sfē-noi'dō-ā-rik'ū-lār), *a.* In *craniom.*, noting the ratio of the minimum sphenoidal diameter of the skull to the minimum auricular diameter: as, the *sphenoido-auricular* index.

sphenoidofrontal (sfē-noi'dō-fron'tal), *a.* In *craniom.*, noting the ratio of the minimum sphenoidal diameter of the skull to the minimum frontal diameter.

sphenoidoparietal (sfē-noi'dō-pā-ri'e-tal), *a.* In *craniom.*, noting the ratio of the minimum sphenoidal diameter of the skull to the maximum parietal diameter.

sphenomalar (sfē-nō-mā-lār), *a.* [*< sphenoid + malar.*] Of or pertaining to the sphenoid and malar bones: as, the *sphenomalar* articulation, between the alisphenoid and malar bones.—**Sphenomalar suture**. See *suture*.

sphenomaxillary (sfē-nō-mak'si-lār-i), *a.* [*< sphenoid + maxillary.*] Relating to the sphenoid and superior maxillary bones.—**Sphenomaxillary fissure, fossa, suture**, etc. See the nouns.

Sphenomonadida (sfē'nō-mō-nad'i-dē), *n. pl.* [NL., < *Sphenomonas* (-monad-) + *-ida*.] A family of dimastigatae eustomatous infusorians, represented by the genus *Sphenomonas*. These animalcules are free-swimming; the cuticular surface is indurated; flagella are two in number, one long and one short, both vibratile and extended anteriorly; the oral aperture is succeeded by a distinct tubular pharynx; the endoplasm is colorless, granular; an endoplast and contractile vesicle are conspicuous.

Sphenomonas (sfē-nōm'ō-nas), *n.* [NL., < Gr. σφην, a wedge, + μνάς, solitary, a unit: see *monad*.] The representative genus of *Sphenomonadida*. These animalcules are of persistent polyhedral prismatic figure, with four or more longitudinal carinae, and two vibratile flagella, a long and a short one. Two fresh-water species are *S. quadrangularis* and *S. octocostata*.

sphenonchus (sfē-nong'kus), *n.*; pl. *sphenonchi* (-kī). [NL., < Gr. σφην, a wedge, + ὄγκος, bulk, mass.] In *ichth.*: (a) One of the hooked dermal spines of the cephalic armature of certain fossil fishes, as of the genera *Hybodus* and *Acrodus*. (b) [*cap.*] A lapsed genus of fishes, founded on *sphenonchi* by Agassiz in 1843.

spheno-orbital, spheno-orbitar (sfē-nō-ōr'bi-tal, -tār), *a.* Same as *sphenorbital*.

sphenopalatine (sfē-nō-pal'ā-tin), *a.* [*< sphenoid + palatine*.] Pertaining to the sphenoid and palatine bones. Also *sphenopalatal, sphenopalatinated*.—**Internal sphenopalatine nerve**. Same as *nasopalatine nerve* (which see, under *nasopalatine*).—**Sphenopalatine artery**, a branch arising from the third or sphenomaxillary portion of the internal maxillary artery. It passes through the sphenopalatine foramen into the cavity of the nose, and is distributed to the nasal mucous membrane and the membranes of the antrum, ethmoid, and sphenoid cells. Also called *nasal artery*.—**Sphenopalatine foramen, ganglion, notch**. See the nouns.—**Sphenopalatine nerves**, two small branches of the superior maxillary nerve to the sphenopalatine or Meckel's ganglion.—**Sphenopalatine vein**, a small vein entering the pterygoid plexus.

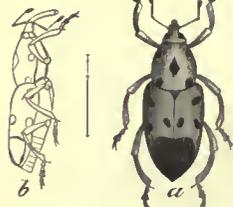

sphenoparietal (sfē'nō-pā-ri'e-tal), *a.* [*< sphenoid + parietal*.] Pertaining to the sphenoid and parietal bones: as, the *sphenoparietal* suture.—**Sphenoparietal sinus**, a small vessel which communicates with the cavernous sinus and middle meningeal veins, and rests in a groove on the under side of the lesser wing of the sphenoid. *Breschet*.—**Sphenoparietal suture**. See *suture*.

sphenopetrosal (sfē'nō-pet-rō'sal), *a.* [*< sphenoid + petrosal*.] Of or pertaining to the sphenoid and petrosal bones; petrosphenoidal.—**Sphenopetrosal suture**. See *suture*.

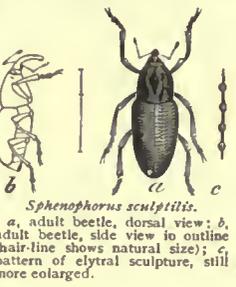

sphenopharyngeus (sfē'nō-far-in-jē'us), *n.* [*< sphenoid + pharyngeus*.] An occasional elevator muscle of the pharynx which arises from the spine of the sphenoid.

Sphenophorus (sfē-nōf'ō-rus), *n.* [NL. (Schönherr, 1838), < Gr. σφην, a wedge, + φόρος, < φέρειν = E. bear¹.] A notable genus of rhynchophorous beetles, of many species and very wide distribution, having the anterior coxae narrowly separated, and the body beneath glabrous. Nearly 200 species are known, of which 30 inhabit America north of Mexico. Many of them breed in the roots of plants, and so may become pests. The adult beetles also often feed upon plants. Thus *S. sculptilis* feeds upon corn, and *S. pulchellus* upon the cocklebur (*Xanthium*).

Sphenophyllum (sfē-nō-fil'um), *n.* [NL. (Brongniart, 1822), < Gr. σφην, a wedge, + φύλλον, a leaf.] A genus of fossil plants, occurring throughout the whole thickness of the coal-measures, both in Europe and in the United States, and supposed to have been found also in the Lower Silurian, near Cincinnati in Ohio. It is a herbaceous plant, with whorls of wedge-shaped leaves, springing from enlarged articulations, the fructification in cylindrical spikes, with bracts curved upward in a sharp flexure from near the base, and globular sponges in the axils of the bracts. *Sphenophyllum*, first thought by Brongniart to belong to the gymnosperms, is now believed to constitute a peculiar type of vegetation, regarded by some authors as related to the rhizocarps, by others as connected with the *Calamariæ* through *Asterophyllites*.

Sphenophorus pulchellus. a, adult beetle, dorsal view; b, adult beetle, side view in outline. (Hair-line shows natural size.)

Sphenophorus sculptilis. a, adult beetle, dorsal view; b, adult beetle, side view in outline (hair-line shows natural size); c, pattern of elytral sculpture, still more enlarged.

sphenopterid (sfē-nop'te-rid), *n.* A fern of the genus *Sphenopteris*.

Sphenopteris (sfē-nop'te-ris), *n.* [NL. (Brongniart, 1822), < Gr. σφην, a wedge, + πτερίς (πτερόν), a fern: see *Pteris*.] A genus of fossil ferns, very widely distributed and very abundant, especially in the (Carboniferous) coal-measures, but ranging from the Devonian to the Middle Cretaceous. "These are elegant ferns, very numerous in species, and most difficult to discriminate" (Dawson). Almost nothing is known of the fructification of *Sphenopteris*, and the numerous specific distinctions which have been made are generally derived from the subdivisions of the fronds, and the shape and venation of the pinnules. Lesquerenx divides the sphenopterids into three subdivisions: (a) the pectopterid sphenopterids, species of which group were referred to *Pectopteris* by Brongniart, of which the fronds have their ultimate pinnules pinnately deeply lobed, the lobes connate to the middle or higher, and the veins pinnately divided, as in *Pectopteris*; (b) *Sphenopteris* proper, of which the pinnules are more deeply divided in lobes, or pinnately narrowed and decurrent at the base, and generally dentate or crenate at the apex; (c) the hymenophyllite sphenopterids, which he thinks should constitute a distinct genus. See cut under *fern*.

sphenopterygoid (sfē-nop-ter'i-goid), *a.* [*< sphenoid + pterygoid*.] Common to the sphenoid and pterygoid bones. Also *pterygosphenoid*.

sphenorbital (sfē-nōr'bi-tal), *a.* [*< sphenoid + orbital*.] Pertaining to the sphenoid bone and the orbits of the eyes; orbitosphenoid. The sphenorbital parts of the sphenoid are the lesser wings, or orbitosphenoids; the sphenorbital fissure is the sphenoidal fissure, or anterior lacerae foramen. See *orbitosphenoid*. Also *spheno-orbital* and *spheno-orbitar*.

Sphenorhynchus (sfē-nō-ring'kus), *n.* [NL., prop. *Sphenorrhynchus* (Hemprich and Ehrenberg, 1829), < Gr. σφην, a wedge, + ῥύγχος, a snout.] **1.** A genus of *Ciconiida*, the wedge-billed storks, having a sharp straight bill with a membrane saddled on the base of the upper mandible, and no ambiens muscle. The only species is the white-bellied stork or simbl, *S. abdini*, also called *Abdini sphenorhyncha*, of greenish and brownish-purple color and white below, the bill tipped with orange-red. It inhabits Africa, nests in trees, and is regarded with veneration by the natives. See cut under *simbl*. **2.** A genus of South American dendrocolapine birds, now called *Glyphorhynchus*. *Maximilian*, 1831.—**3.** A genus of reptiles. *Tschudi*, 1838.

sphenosquamosal (sfē'nō-skwā-mō'sal), *a.* [*< sphenoid + squamosal*.] Of or pertaining to the sphenoid and the squamous part of the temporal bone; squamosphenoidal.

sphenotemporal (sfē-nō-tem'pō-ral), *a.* [*< sphenoid + temporal*.] Of or belonging to the temporal and sphenoid bones. Also *temporosphenoid*.—**Sphenotemporal suture**. See *suture*.

sphenotic (sfē-nō'tik), *a. and n.* [*< sphenoid + otic*.] **I. a.** Of or pertaining to the sphenoid bone and the otic capsule, or hard parts of the auditory organ: as, a *sphenotic* ossification in various fishes. See cut under *teleost*.

II. n. In *ornith.*, a postfrontal process of bone, or a separate ossification, developed in relation with sphenoidal and otic elements, entering into the posterior boundary of the orbital cavity.

sphenotresia (sfē-nō-trēs'i-ā), *n.* [NL., < Gr. σφην, a wedge, + τρησις, perforation, < τρυπαίνω (τρυπα), perforate.] The breaking up of the basal portion of the fetal skull in craniotomy.

sphenotribe (sfē-nō-trīb), *n.* [*< Gr. σφην, a wedge, + τριβειν, rub, bruise.*] The instrument used in performing sphenotresia.

sphenoturbinal (sfē-nō-tēr'bi-nal), *a. and n.* [*< sphenoid + turbinal*.] **I. a.** Sphenoidal and turbinated or whorled or scroll-like; sphenoturbinate: specifically applied, conformably with *ethmoturbinal* and *maxilloturbinal*, to the sphenoidal spongy bones. See **II.**

II. n. One of the sphenoidal spongy bones; one of a pair of small bones situated in front of the body of the sphenoid, in man at birth solid, nodular, distinct from each other and from the sphenoid, afterward fused with the body of the sphenoid as delicate spongy or scroll-like bones which take part in forming the sphenoidal sinuses. Their homologues in other animals are questionable.

sphenoturbinate (sfē-nō-tēr'bi-nāt), *a.* [*< sphenoid + turbinate*.] Same as *sphenoturbinal*.

sphenovomerine (sfē-nō-vom'er-in), *a.* [*< sphenoid + vomerine*.] Of or pertaining to the sphenoid bone and the vomer: as, the *sphenovomerine* suture or schindylesis.

Sphenozamites (sfē'nō-za-mi'tēs), *n.* [NL. (Brongniart, 1849), < Gr. σφην, a wedge, + NL. *Zamites*, q. v.] A genus of fossil plants belonging to the cycads, ranging from the Permian to the Jurassic inclusive. They are said by Schimper to bear some resemblance to the problematical *Noeggerthia*, and, among living forms, to be

most nearly analogous to *Zamia* and *Encephalartos*. See *Zamites*.

Sphenura (sfē-nū'ri), *n.* [NL., < Gr. σφύρα, a wedge, + ὄψα, a tail.] 1. In *ornith.*, a generic name variously applied. (a) An Australian genus of aberrant reed-warblers, with only ten tail-feathers and three pairs of strong recurved rectal bristles. It is quite

Sphenura brachyptera.

near *Sphenæacus* (which see), and in part synonymous therewith. There are 3 species, *S. brachyptera*, *S. longirostris*, and *S. broadbenti*. *Lichtenstein*, 1823. (b) A genus of South American synalaxine birds now called *Eusphenura* and *Thripophaga*. *Spix*, 1824; *Sundevall*, 1835. (c) A genus of Indian and African birds related to neither of the foregoing, now called *Argya* (or *Argia*) and *Malcolmia*. *Bonaparte*, 1854.

2. In *entom.*, a genus of coleopterous insects. *Dejean*, 1834.

spherā (sfēr'ā), *a.* [*L. sphæralis*, of or pertaining to a sphere, globular, < *sphæra*, < Gr. σφαῖρα, a ball, sphere: see *sphere*.] 1. Rounded or formed like a sphere; sphereshaped; hence, symmetrical; perfect in form. —2. Of or pertaining to the spheres or heavenly bodies; moving or revolving like the spheres; hence, harmonious.

Well I know that all things move
To the spherā rhythm of love.
Whittier, Andrew Rykman's Prayer.

The spherā souls that move
Through the ancient heaven of song-illumined air.
Swinburne.

Carlyle had no faith in . . . the astronomic principle by which the systems are kept in poise in the spherā harmony.
The Century, XXVI, 533.

spherality (sfē-rāl'i-ti), *n.* [*spherā* + *-ity*.] The state of being spherā, or having the form of a sphere. [Rare.]

spheraster (sfē-ras'tēr), *n.* [NL., < Gr. σφαῖρα, a ball, sphere, + ἀστὴρ, a star.] In sponges, a regular polyact or stellate spicule whose rays coalesce into a spherical figure, as in the genus *Godia*; an aster with a thick spherā body. *W. J. Sollas*.

spheration (sfē-rā'shən), *n.* [*sphere* + *-ation*.] Formation into a sphere; specifically, the process by which cosmic matter is formed into a globular or planetary body. [Recent.]

The physical relations accompanying the spheration of a ring are not such as to determine uniformly either direct or retrograde motion.
Winchell, *World-Life*, p. 123.

sphere (sfēr), *n.* [Early med. E. also *sphæar*, *sphære*, also *sphære* (with vowel as in *L.*); earlier (and still dial.) *sperē*, < ME. *sperē*, < OF. *esperē*, later *sphere*, F. *sphère* = Pr. *espera* = Sp. *esfera* = Pg. *esfera* = It. *sfera* = D. *sfeer* = G. *sphäre* = Dan. *sphære* = Sw. *sphær*, < *L. sphæra*, ML. also *sphera*, *spera*, < Gr. σφαῖρα, a ball, globe, sphere, applied to a playing-ball, a sphere as a geometrical figure, the terrestrial globe, the earth, also an artificial globe (so in *Strabo*, the notion that the earth is a sphere appearing first prob. in *Plato*), also a star or planet (*Plutarch*), also a hollow sphere, one of the concentric spheres supposed to revolve around the earth, also a ball (of the eye), a pill, etc.; perhaps lit. 'that which is tossed about' (applied first to a playing-ball), for *σφαῖρα fer *σπάρα, < σπαίρειν, scatter, throw about (see *spern*, *spore*); or perhaps connected with σφαῖρα, a coil, ball, spire (see *spire*?).] 1. In *geom.*, a solid figure generated by the revolution of a semicircle about its diameter. This is substantially *Euclid's* definition. The modern definition is a quadric surface having contact with the absolute throughout a conic, and therefore everywhere equidistant from a center. The surface of a sphere is $4\pi R^2$, where *R* is the radius; its volume is $\frac{4}{3}\pi R^3$. Hence—2. A rounded body, approximately spherā; a ball; a globe.

The Lieutenant's evidence was as round, complete, and lucid as a Japanese sphere of rock-crystal.
O. W. Holmes, *Old Vol. of Life*, p. 55.

3. An orbicular body representing the earth or the apparent heavens, or illustrating their astronomical relations. Hence—4. The visible supernal region; the upper air; the heavens; the sky. [Poetical.]

Then shall the righteous shine like glorious starres
Within the sphere of heaven.
Sweet Echo, . . .
Sweet queen of parley, daughter of the sphere.
Milton, *Comus*, l. 241.

An eagle, clang an eagle to the sphere.
Tennyson, *Princess*, lli.

5. One of the supposed concentric and eccentric revolving rigid and transparent shells called crystalline, in which, according to the old astronomers (following *Eudoxus*), the stars, sun, moon, and planets were severally set, and by which they were carried in such a manner as to produce their apparent motions. The term is now generally restricted to the sphere of the fixed stars, and is recognized as a convenient fiction. It is also loosely applied to the planets themselves.

After shewede he hym the nyne speres;
And after that the melodye herde he
That cometh of thilke speres thryes three,
That welte is of musik and melodye
In this world here and cause of harmonye.
Chaucer, *Parliament of Fowls*, l. 59.
Stand still, you ever-moving spheres of heaven!
Marlowe, *Doctor Faustus*, v. 4.

Hence—6. An orbicular field or course of movement; an orbit, as that of a heavenly body or of the eye; a circuit.

As Mars in three-score yeares doth run his sphere, . . .
The sphere of Cupid forty yeares contains.
Spenser, *Sonnets*, lx.
Make thy two eyes, like stars, start from their spheres.
Shak., *Hamlet*, i. 5. 17.

7. Place or scene of action; the space within which movement is made or operations are carried on; a circumscribed region of action: as, the sphere of a mission; the spheres (fuller, *spheres of influence*) of the different European powers and trading companies in Africa.

The four elements wherof the body of man is compacte . . . be set in their places called spheres, higher or lower accordyng to the sphericity of their natures.
Sir T. Elyot, *The Governour*, i. 1.

All this while the King had mov'd within his own sphere, and had done nothing out of the Realm.
Baker, *Chronicles*, p. 403.

Our South African sphere seems better suited for European settlement than is the Tunisian protectorate of France.
Sir C. W. Dilke, *Probs. of Greater Britain*, v.

8. Position or rank in society; position or class with reference to social distinctions.

Pleas'd, or not pleas'd, if we be Englands King,
And mightiest in the Sphere in which we moove,
Wee'le shine alone, this Phaeton cast downe.
Heywood, *Royal King* (Works, ed. Pearson, 1874, VI, 29).
I saw her [Marie Antoinette] just above the horizon,
decorating and cheering the elevated sphere she just began to move in.
Burke, *Rev. in France*.

9. Circuit or radius, as of knowledge, influence, or activity; definite or circumscribed range; determinate limit of any mental or physical course: as, the sphere of diplomacy.

This being wholly out of my sphere, I can give no account of them.
Dampier, *Voyages*, II, i. 126.
Nature to each allots his proper Sphere.
Congreve, *Of Pleasing*.

Armillary sphere. See *armillary*.—**Axis of a sphere.** See *axis*.—**Circle of the sphere.** See *circle*.—**Colloid, dialing, direct sphere.** See the qualifying words.—**Copernican sphere,** an armillary sphere with the addition of a second sphere representing the sun, central to a divided circle representing the ecliptic.—**Doctrine of the sphere,** the elements of the geometry of figures drawn upon the surface of a sphere.—**Epidemic spheres.** Same as *epithelial pearls* (which see, under *pearl*).—**Geometry of spheres,** a branch of geometry in which the lines of *Hücker's* geometry of lines are replaced by spheres, and the intersections of lines by the contact of spheres.—**Harmony or music of the spheres.** See *harmony*.—**Logical sphere,** the subject or ultimate antecedent of a statement, or the objects which a term denotes.—**Magic sphere.** See *magic*.—**Oblique sphere,** the sphere of the heavens, or another sphere representing that, as it appears at a station where the angle between the equator and the horizon is oblique. The right sphere is the same sphere for an equatorial station where the angle is a right angle, and the parallel sphere is the same where the angle vanishes—that is, for a polar station.—**Osculating sphere of a non-plane curve,** the sphere through four consecutive points of the curve.—**Parallel circles on a sphere.** See *parallel*.—**Parallel sphere.** See *oblique sphere*.—**Power of a sphere in regard to another,** the squared distance of the two centers less the sum of the squares of the radii. *Clifford*.—**Projection of the sphere.** See *map-projection*, under *projection*.—**Radical sphere,** a sphere orthogonally cutting four spheres having their centers at the summits of the tetrahedron of coordinates.—**Right sphere.** See *oblique sphere*.—**Sector of a sphere.** See *sector*.—**Segmentation sphere.** See *segmentation*.—**Segment of a sphere.** See *segment*.—**Sphere at infinity.** See *infinity*, 3.—**Twelve-point sphere.** (a) A sphere (discovered by *Prouhet* in 1863) be-

spherical

longing to a tetrahedron in which the four perpendiculars from the summits upon the opposite faces intersect in one point, this sphere passing through the four feet of these perpendiculars and consequently also through the centers of gravity of the four faces, and through the mid-points of the lines from the vertices to the common intersections of the perpendiculars aforesaid. (b) More generally, a sphere (discovered in 1834 by the Italian mathematician *Intrigida*) belonging to any tetrahedron, and passing through the four feet of the perpendiculars from the summits upon the opposite faces, and consequently also through the mid-points of the lines from the summits to the center of the hyperboloid of which these perpendiculars are generators, and through the orthogonal projections of these points upon the opposite faces. = *Syn.* 1-3. *Orb.*, *Ball*, etc. See *globe*.

sphere (sfēr), *v. t.*; pret. and pp. *sphered*, ppr. *sphering*. [*sphere*, *n.*] 1. To make into a sphere; make spherā; round, or round out; fill out completely.

Blow, villain, till thy sphered bias check
Outswell the colic of puff'd Aquilon.
Shak., *T. and C.*, iv. 5. 8.

2. To place in a sphere or among the spheres; ensphere.

And therefore is the glorious planet Sol
In noble eminence enthroned, and sphered
Amidst the other.
Shak., *T. and C.*, i. 3. 90.

Light . . . from her native east
To journey through the aery gloom began,
Sphered in a radiant cloud; for yet the sun
Was not.
Milton, *P. L.*, vii. 247.

Because I would have reach'd you, had you been
Sphered up with Cassiopeia.
Tennyson, *Princess*, iv.

3. To inclose as in a sphere or orbit; encircle; engirdle.

When any towns is spher'd
With siege of such a foe as kills men's minds.
Chapman, *Iliad*, xviii. 185.

4. To pass or send as in a sphere or orbit; circulate. [Rare.]

We'll still sit up,
Sphering about the waassail cup
To all those times
Which gave me honour for my rhimes.
Herrick, *His Age*.

sphere-crystals (sfēr'kris'talz), *n. pl.* In *bot.*, same as *sphærophides*.

sphereless (sfēr'les), *a.* [*sphere* + *-less*.] Having no sphere; wandering; unrestrained.

Let the horsemen's scimitars
Wheel and flash, like sphereless stars,
Thirsting to eclipse their burning
In a sea of death and mourning.
Shelley, *Masque of Anarchy*, st. 79.

sphere-yeast (sfēr'yēst), *n.* In *bot.*, an aggregation of certain sprouting forms of the genus *Mucor*: formerly so called from a resemblance in shape to the saccharomycete of yeast.

spheric (sfēr'ik), *a.* [= F. *sphérique* = Sp. *esférico* = Pg. *esférico* = It. *sferico*, < *L. sphaericus*, < Gr. σφαιρικός, of or pertaining to a ball, < σφαῖρα, a ball, sphere: see *sphere*.] Of or pertaining to a sphere or the spheres; spherelike; spherā.

Up the spheric circles, circle above circle.
Mrs. Browning, *Drama of Exile*.

Let any sculptor hew us out the most ravishing combination of tender curves and spheric softness that ever stood for woman.
S. Lauer, *The English Novel*, p. 273.

spherical (sfēr'ik-əl), *a.* [*spheric* + *-al*.] 1. Bounded by or having the form of the surface of a sphere: as, a spherical body; a spherical surface; a spherical shell.

We must know the reason of the spherical figures of the drops.
Glanville.

2. Pertaining or relating to a sphere or spheres, or to sphericity: as, a spherical segment or section; spherical trigonometry.—3. Relating to the planets; planetary, in the astrological sense.

We make guilty of our disasters the sun, the moon, and the stars: as if we were villains by necessity; fools by heavenly compulsion; knaves, thieves, and treachers by spherical predominance.
Shak., *Lear*, i. 2. 134.

Adjunct spherical function. See *function*.—**Center of spherical curvature.** See *center*.—**Concave spherical mirror.** See *mirror*, 2.—**Line of spherical curvature.** See *line*, 2.—**Spherical aberration.** See *aberration*, 4.—**Spherical angle.** See *angle*, 3.—**Spherical bracketing, in arch.**, an arrangement of brackets for the support of lath-and-plaster work forming a spherical surface.—**Spherical compasses,** a kind of calipers for measuring globular bodies, variously constructed.—**Spherical complex,** the aggregate of all the spheres in space fulfilling a single geometrical condition.—**Spherical congruence,** the aggregate of all the spheres in space fulfilling two geometrical conditions.—**Spherical conic section.** See *conic*.—**Spherical coordinates.** See *coordinates*.—**Spherical curvature, epicycloid, excess, function, geometry.** See the nouns.—**Spherical cycloid,** a curve which is the intersection of a sphere with a quadric surface.—**Spherical group,** the spherical complex determined by a linear equation between the coordinates and the power of the center of the variable circle.—**Spherical harmonic.** Same as *Laplace's function* (which see, under *function*).—**Spherical indicatrix.** See *indicatrix*.—**Spherical inversion.** See *geometrical inversion*, under

inversion.—**Spherical lune**, the portion of the surface of a sphere included between two great circles.—**Spherical nucleus**. Same as *nucleus globosus* (which see, under *nucleus*).—**Spherical pencil**, a singly infinite continuous series of spheres determined like a spherical group, but by three equations.—**Spherical polygon**. See *polygon*.—**Spherical representation**, a mode of continuous correspondence between the points of a surface and the points of a sphere, each radius of the sphere through the center representing the parallel normal of the surface. Any part of the sphere considered as thus representing a part of the surface is called its *spherical image*.—**Spherical saw**, a saw made in the form of a segment of a sphere, used for sawing out curvilinear work. See *cut d* under *saw*.—**Spherical sclere**. See *sclere* and *spheraster*.—**Spherical-shot machine**, a machine for finishing cannon-balls by mulling and pressing to a true spherical form. *E. H. Knight*.—**Spherical surface-harmonic**. See *harmonic*.—**Spherical triangle, trigonometry**, etc. See the nouns.

sphericality (sfer-i-kal'i-ti), *n.* [*< spherical + -ity.*] Spherical form; sphericity. *N. A. Rev.*, CXXVI. 375. [Rare.]

spherically (sfer'i-kal-i), *adv.* In the form of a sphere, or of part of a sphere; so as to be spherical.

sphericalness (sfer'i-kal-nes), *n.* The state or property of being spherical; sphericity. [Rare.]

sphericity (sfê-ris'i-ti), *n.* [= *F. sphericité*; as *spheric + -ity.*] The character of being in the shape of a sphere.

sphericle (sfer'i-kl), *n.* [Dim. of *sphere*.] A small sphere; a spherule. [Rare.] *Imp. Dict.*

spherics (sfer'iks), *n.* [Pl. of *spheric* (see *-ics*).] Geometry of figures drawn on the surface of a sphere; specifically, spherical trigonometry.

spheriform (sfê-ri-fôrm), *a.* [*< L. sphaera, sphere, + forma, form.*] Formed or existing as a sphere; sphere-shaped; spherical. *Cudworth, Intellectual System*, II. 23. [Rare.]

sphercobaltite (sfê-rô-kô'bâl-tit), *n.* [*< Gr. σφαῖρα, a ball, sphere, + E. cobalt + -ite.*] Carbonate of cobalt, a rare mineral occurring in small spherical masses with concentric radiated structure, and having a peach-blossom red color.

spheroconic (sfê-rô-kon'ik), *n.* [*< Gr. σφαῖρα, a ball, sphere, + κώνος, a cone; see conic.*] A non-plane curve, the intersection of a sphere with a quadric cone having its vertex at the center of the sphere.—**Cyclic arcs of the spheroconic**, the intersections of the cyclic planes of the cone with the sphere.—**Reciprocal spheroconic**, the envelop of the great circles of which the points on the first spheroconic are the poles.

sphero-crystal (sfê-rô-kris'tal), *n.* [*< Gr. σφαῖρα, a ball, sphere, + κρυσταλλός, crystal.*] 1. In *lithol.*, a mineral occurring in spherical form with fibrous-radiate structure.—2. *pl.* In *bot.*, same as *sphaeraphides*.

spherodactyl (sfê-rô-dak'til), *a.* Of or pertaining to the genus *Sphaerodactylus*, as a gecko.

spherogastric (sfê-rô-gas'trik), *a.* [*< Gr. σφαῖρα, a ball, sphere, + γαστήρ, stomach.*] Having a spherical or globular abdomen, as a spider; or of pertaining to the *Sphaerogastera*. See *cut* under *honey-bearer*.

spherograph (sfê-rô-gráf), *n.* [*< Gr. σφαῖρα, a ball, sphere, + γράφειν, write.*] A nautical instrument consisting of a stereographic projection of the sphere upon a disk of pasteboard, in which the meridians and parallels of latitude are laid down to single degrees. By the aid of this projection, and a ruler and index, the angular position of a ship at any place, and the distance sailed, may be readily and accurately determined on the principle of great-circle sailing.

spheroid (sfê-roid), *n.* [Also *sphaeroid*; = *F. sphéroïde*, *< Gr. σφαιροειδής, like a ball or sphere, globular, < σφαῖρα, a ball, sphere, + εἶδος, form.*] 1. A geometrical body approaching to a sphere, but not perfectly spherical.—2. In *geom.*, a solid generated by the revolution of an ellipse about one of its axes. When the generating ellipse revolves about its longer or major axis, the spheroid is *prolate* or *oblong*; when about its less or minor axis, the spheroid is *oblate*. The earth is an oblate spheroid—that is, flattened at the poles, so that its polar diameter is shorter than its equatorial diameter. (See *earth*, 1.) The same figure is assumed by the other planets; hence the properties of the oblate spheroid are of great importance in geodesy and astronomy.—**Universal spheroid**, a surface generated by the revolution of an ellipse about any diameter.

spheroidal (sfê-roï'dal), *a.* [*< spheroid + -al.*] 1. Of or pertaining to, or having the form of, a spheroid.—2. In *crystal.*, globose; bounded by several convex faces.—3. In *entom.*, round and prominent, appearing like a ball or sphere partly buried in the surface: as, *spheroidal eyes; spheroidal coxae*.—**Spheroidal bracketing**, in *arch.*, bracketing which has a spheroidal surface.—**Spheroidal epithelium**. See *epithelium*.—**Spheroidal state or condition**, the condition of water or other liquid when, on being placed on a highly heated surface, as red-hot metal, it assumes the form of a more or less flattened spheroid, and evaporates without ebullition.

The spheroid in this condition does not touch the surface of the metal, but floats on a layer of its own vapor, and evaporates rapidly from its exposed surface. It is heated mainly by radiation from the hot surface, since the layer of intervening vapor conducts heat very feebly. The formation of a layer of non-conducting vapor explains why it is possible to dip the wetted hand into molten iron with impunity. It is sometimes spoken of as the *caloric* or *caloric paradox*.

spheroidally (sfê-roï'dal-i), *adv.* In a spheroidal manner; so as to form a spheroid or spheroids.

The great mass . . . is largely built up of *spheroidally* jointed rock. *Quart. Jour. Geol. Soc.*, XLIV. 450.

spheroidic (sfê-roï'dik), *a.* [= *F. sphéroïdique*; as *spheroid + -ic.*] Same as *spheroidal*. [Rare.]

spheroidal (sfê-roï'di-kal), *a.* [*< spheroidic + -al.*] Same as *spheroidal*. [The usual old form.]

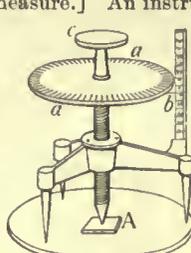

The same *spheroidical* form. *Jefferson, Correspondence*, II. 67.

spheroidicity (sfê-roï-dis'i-ti), *n.* [*< spheroidic + -ity.*] The state or character of being spheroidal.

Spheroma, *n.* See *Sphaeroma*.

spheromere (sfê-rô-mêr), *n.* [Also *sphaeromere*; *< Gr. σφαῖρα, a ball, sphere, + μέρος, a part.*] One of the radially arranged parts or symmetrical segments of any radiate; an actinomere. Perhaps the most remarkable spheromeres are those two which, in the Venus's-girdle, give that ctenophoran a ribbon-like figure by their enormous development. See *cut* under *Cestum*.

spherometer (sfê-rom'e-têr), *n.* [*< Gr. σφαῖρα, a ball, sphere, + μέτρον, measure.*] An instrument for measuring the radii of spheres; a sphere-measurer. It is of especial service to opticians in determining the focal lengths, etc., of lenses. The common form (see figure) consists of a vertical screw *c*, with a large graduated head *a*, turning in a socket supported by three legs whose hard steel points are exactly equidistant. The fixed scale *b* at the side, together with the graduated screw-head, makes it possible to measure with great accuracy the distance between the extremity of the screw and the plane passing through the ends of the three supports, when, for example, all the points are in contact with the surface of the sphere. If, in addition, the distance between the ends of the supports is known, a simple calculation gives the radius of the sphere. The same instrument may also be used to determine with precision the thickness of a plate, as (in the figure) *A*, placed upon a horizontal surface.

Spherometer.

spheromian (sfê-rô-mi-an), *a.* and *n.* [*< Sphaeroma + -ian.*] 1. *a.* Of or pertaining to *Sphaeroma* or the *Sphaeromida*. 2. *n.* A globe-slater. Also spelled *sphaeromian*.

spheropolar (sfê-rô-pô'lâr), *a.* [*< Gr. σφαῖρα, sphere, + E. polar.*] Reciprocal relatively to a sphere. The plane through the points of contact of a cone with a sphere is the *spheropolar* of the vertex.

spherosiderite (sfê-rô-sid'e-rit), *n.* [Also *sphaerosiderite*; *< Gr. σφαῖρα, a ball, sphere, + σιδήριτος, of iron; see siderite.*] A variety of the iron carbonate siderite, occurring in globular concretionary forms.

spherospore (sfê-rô-spôr), *n.* [*< Gr. σφαῖρα, a ball, + E. spore.*] In *bot.*, same as *tetraspore*.

spherular (sfer'ô-lâr), *a.* [*< spherule + -ar.*] 1. Having the form of a spherule; resembling a spherule.—2. Of or pertaining to a spherulite; spherulitic.

Spherular bodies consisting of radially aggregated fibres of a single mineral. *Nature*, XXXIX. 315.

spherulate (sfer'ô-lât), *a.* [*< spherule + -ate.*] In *entom.*, having one or more rows of minute rounded tubercles; studded with spherules.

spherule (sfer'ôl), *n.* [Also *sphaerule*; *< L. sphaerula, dim. of sphaera, a ball, sphere; see sphere.*] A little sphere or spherical body. Quicksilver, when poured upon a plane surface, divides itself into a great number of minute spherules.

spherulite (sfer'ô-lit), *n.* [Also *sphaerulite*; *< spherule + -ite.*] 1. A vitreous globule, such as those of which perlite is made up, having a more or less perfectly developed concentric and at the same time decidedly radiating fibrous structure. The highly siliceous volcanic rocks not unfrequently have a spherulitic structure.—2. Same as *radiolite*. 2.—**Spherulite rock**, in *geol.*, a rock of which the predominating part has a spherulitic structure.

spherulitic (sfer'ô-lit'ik), *a.* [*< spherulite + -ic.*] Made up of or containing spherulites; having the character of a spherulite. Also *sphaerulitic*.

spherulitize (sfer'ô-li-tiz), *v. t.*; pret. and pp. *spherulitized*, ppr. *spherulitizing*. [*< spherulite*

+ *-ize.*] To convert more or less completely into spherulites, or cause to assume a spherulitic structure, wholly or in part. *Quart. Jour. Geol. Soc.*, XLV. 250.

spherulitoid (sfer'ô-li-toid), *a.* [*< spherulite + -oid.*] Having more or less perfectly the form of a spherulite. *Quart. Jour. Geol. Soc.*, XLV. 248.

sphery (sfê-ri), *a.* [*< sphere + -y.*] 1. Belonging to the spheres.

She can teach ye how to climb Higher than the *sphery* chime. *Milton, Comus*, l. 1021.

2. Resembling a sphere or star in roundness, brightness, or other attribute.

What wicked and dissembling glass of mine Made me compare with *Hermia's sphery* eye? *Shak., M. N. D.*, II. 2. 99.

spheterize (sfet'e-riz), *v. t.*; pret. and pp. *spheterized*, ppr. *spheterizing*. [*< Gr. σφητερίζειν, make one's own, < σφῆτερος, their own, poss. adj. of the 3d pers. pl., < σφῆς, they.*] To take to one's self; appropriate as one's own. *Burke*. [Rare.] (*Encyc. Diet.*)

Sphex (sfeks), *n.* [NL. (Linnaeus, 1758), *< Gr. σφήξ, a wasp; see wasp.*] 1. A notable genus of large handsome digger-wasps, typical of the family *Sphagidae* (or *Sphécidæ* or *Sphexidæ*). They abound in tropical regions, but some 12 species inhabit the United States. *S. ichneumonæa* digs rapidly in hard ground, and provisions its cells with grasshoppers. About 100 species are known. See *cut* under *digger-wasp*. 2. [*l. e.*] A wasp of this genus.

sphex-fly (sfeks'fli), *n.* One of numerous different dipterous insects, as of the genus *Conops*, which resemble a sphex in some respects.

sphiggure (sfing'ûr), *n.* See *sphingure*.

sphincter (sfingk'têr), *n.* [NL., *< L. sphincter, < Gr. σφιγκτήρ, anything which binds tight, a lace, a band, < σφίγγειν, shut tight, close.*] An orbicular, circular, or annular muscle surrounding and capable of closing a natural orifice or passage of the body.—**Oral sphincter**. Same as *orbicularis oris* (which see, under *orbicularis*).—**Sphincter ani**, the sphincter of the anus, under which name two distinct muscles are known. (a) The sphincter ani proper, *sphincter externus*, or external sphincter is a thin, flat plane of voluntary muscular fibers supplied by hemorrhoidal branches of nerves from the sacral plexus, surrounding the anus, subcutaneous and intimately adherent to the integument, of elliptical form 3 or 4 inches in long diameter, and an inch wide across. It arises from the tip of the coccyx, and is inserted into the tendinous raphe of the perineum. Like most sphincters, it consists of asymmetrical lateral halves united by a raphe in front of and behind the opening it incloses. (b) The sphincter recti, *sphincter internus*, or internal sphincter surrounds the lower end of the rectum, forming a muscular ring about an inch in extent and a quarter of an inch thick, and consists of an aggregation and thickening of the circular fibers of the gut. This sphincter is involuntary, and in health maintains its tonic contractility, which yields by reflex action to the pressure of the contents of the bowel.—**Sphincter oculi**, or *sphincter palpebrarum*, the orbicular muscle of the eyelids, which surrounds and closes them. Unusually called *orbicularis palpebrarum*. See *cut* under *muscle*.—**Sphincter oris**, the oral sphincter. See *orbicularis oris*, under *orbicularis*.—**Sphincter pupillarîs**, the circular or concentric fibers of the iris, whose contraction makes the pupil smaller. Also called *sphincter pupillæ* and *sphincter iridis*.—**Sphincter pylori**. See *pylorus*.—**Sphincter recti**, the internal sphincter ani (see above).—**Sphincter vaginae**, an elliptical muscle surrounding the orifice of the vagina, corresponding to the bulbocavernosus of the male. Also called *constrictor vaginae*.—**Sphincter vesicae**, the unstriped involuntary muscular fibers around the neck of the urinary bladder.—**Sphincter vesicae externus**, the partly plain partly striated muscular fibers which surround the prostatic part of the urethra. Also called *sphincter prostaticus* and *sphincter of Hente*.

sphincteral (sfingk'têr-al), *a.* [*< sphincter + -al.*] Same as *sphincterial*.

sphincterate (sfingk'têr-ât), *a.* [Also *sphincterate*; *< sphincter + -ate.*] 1. In *anat.* and *zool.*, provided with a sphincter; closed or closable by means of a sphincter.—2. Contracted or constricted as if by a sphincter; thus, an hour-glass is *sphincterate* in the middle.

sphincterial (sfingk-tê-ri-al), *a.* [*< sphincter + -ial.*] Of or pertaining to a sphincter or its function: as, a *sphincterial* muscle; *sphincterial* fibers; *sphincterial* action.

sphincteric (sfingk-tê-rik), *a.* [*< sphincter + -ic.*] Same as *sphincterial*.

sphincterotomy (sfingk-tê-rot'ô-mi), *n.* [*< Gr. σφιγκτήρ, a sphincter, + -τομία, < τέμνειν, ταμείν, cut.*] The operation of cutting a sphincter to prevent its spasmodic action.

sphinctrate (sfingk'trât), *a.* Same as *sphincterate*.

Sphindidæ (sfîn'di-dê), *n. pl.* [NL., *< Sphindus + -idæ.*] An aberrant family of serricorn beetles, in which the antennæ are so obviously clavate as to resemble those of the clavicorn series. It contains a few small species found in fungi which grow upon the trunks of trees.

Sphinxus (sfín'dus), *n.* [NL. (Chevrolat, 1833), a made word.] The typical genus of the *Sphingidae*. Only 3 species are known, one of which is North American.

Sphingidæ (sfín'ji-dé), *n. pl.* [NL. (Leach, 1819), < *Sphinx* (*Sphing*-) + *-idæ*.] An important family of heterocerous lepidopterous insects, with fusiform antennæ, typified by the genus *Sphinx*, including all those commonly known as *sphinxes*, *sphinx-moths*, *hawk-moths*, or *humming-bird moths*. The body is robust; the abdomen is stout, conical, often tufted; the tongue is usually long and strong; the antennæ have a hook at the tip; the wings are comparatively small and narrow, the fore wings acute at the tip. They are diurnal or crepuscular in habit, a few flying in the hottest sunshine, but the majority in the twilight. The larvæ are large, naked, usually green in color, and generally furnished with a prominent caudal horn, which is sometimes replaced after the last molt by a shining fenticular tubercle. When full-grown they either pupate above ground, between leaves, in a slight cocoon, or more generally go deep under ground, and transform in an earthen cell. The long-tongued species have a special free and characteristic tongue-case. The species of temperate regions are divided into four principal subfamilies: *Macroglossinæ*, *Cherocompinæ*, *Sphinginæ*, and *Smerinthinæ*. From America north of Mexico 83 species have been described, about 50 from Europe, and rather more than 600 for the entire world. Also *Sphingides*, *Sphingidi*, *Sphingina*, *Sphingoidea*, and *Sphingoides*. See cuts under *hog-caterpillar*, *Philampelus*, *hawk-moth*, *Lepidoptera*, and *sphinx*.

sphingiform (sfín'ji-fórm), *a.* [< NL. *Sphinx* (*Sphing*-) + L. *forma*, form.] In entom., resembling a moth of the family *Sphingidæ*.

sphingine (sfín'jin), *a.* Resembling a sphinx or hawk-moth; of or pertaining to the *Sphingidæ*; sphingoid or sphingiform.

sphingoid (sfing'goid), *a.* [< NL. *Sphinx* (*Sphing*-) + *-oid*.] Like a sphinx or hawk-moth; sphingine or sphingiform.

sphingure (sfing'gür), *n.* [= F. *sphingure*: see *Sphingurus*.] A member of the genus *Sphingurus*.

Sphingurinae (sfing-gü-rí-né), *n. pl.* [NL., < *Sphingurus* + *-inae*.] The American porcupines; a subfamily of *Hystriidæ*, of more or less completely arboreal habits, represented by four genera, *Sphingurus*, *Syntheres*, *Chaetomys*, and *Erethizon*: so named by E. R. Alston in 1876. It corresponds to the *Syntherina* of Gervais (1852), the *Syntherinae* of J. A. Allen (1877), and the *Cercolabinae* (as a subfamily of *Spalacopodidæ*) of Lilljeborg (1866) and Gill (1872). See cuts under *porcupine* and *prehensile*.

sphingurine (sfing'gü-rin), *a.* Of or belonging to the *Sphingurinae*; syntheriine; cercolabine.

Sphingurus (sfing-gü-rus), *n.* [NL. (F. Cuvier, 1822, in form *Sphingurus*), < Gr. *σφίγγω*, throttle, strangle (see *sphinx*), + *οὐρά*, tail.] The typical genus of *Sphingurinae*, having the tail prehensile, all four feet four-toed, and little development of spines. It is closely related to *Syntheres*; but the latter is more apiny, and has a broad, highly arched frontal region. The two genera are united by Brandt under the name *Cercolabes*. Each has several Neotropical species in Central and South America, east of the Andes, from southeastern Mexico and the West Indies to Paraguay.

sphinx (sfingsks), *n.*; *pl. sphinxes, sphinges* (sfingks'sez, sfín'jéz). [= F. *sphinx* = Sp. *esfinge* = Pg. *esfinge* = It. *sfinge* = G. *sphinx*, < L. *sphinx*, < Gr. *σφίγξ* (*σφίγγω*), Æolic φίξ, a sphinx (Theban or Egyptian: see defs. 1 and 2); supposed to mean lit. 'strangler,' the story being that the Sphinx strangled those who could not solve her riddles; < σφίγ-

γω, throttle, strangle, orig. bind, compress, fix; prob. = L. *figere*, fix (see *fix*); by some connected with L. *fascis*, a bundle; see *fascis*.] 1. [cap. or l. e.] In *Gr. myth.*, a female monster, said to have proposed a riddle to the Thebans who passed her as she sat on a rock by the roadside, and to have killed all who were not able to guess it. The riddle, according to tradition, inquired what being has successively four, two, and three feet, and is weakest when it has most feet. (Edipus answered, Man, who creeps in infancy, afterward goes erect, and finally walks with her own conditions. The Sphinx, in compliance with her own conditions, thereupon threw herself from her rock and died. In art this monster is represented with the body of a lion or a dog, winged, and the head and often the breasts of a woman.

For valour, is not Love a Heracles? . . . Subtle as *Sphinx*. *Shak.*, L. L. L., iv. 3. 342.

In the third [cont.] . . . are two *Sphinges* very curiously carved in brass.

Coryal, *Cruditia*, I. 35.

2. In *Egypt. antiq.*, a figure somewhat similar in composition to the Greek, having the body of a lion (never winged), and a male human head or an animal head. The human-headed figures have been called *androsphinxes*; those with the head of a ram, *criosphinxes*; and those with the head of a hawk, *hieracosphinxes*. Egyptian sphinxes are symbolical figures, having no connection with the Greek fable; and the Greeks probably applied the term *sphinx* to the Egyptian statues merely on account of the accidental external resemblance between them and their own conception. The Egyptian sphinxes were commonly placed in avenues leading to temples or tombs. The most celebrated example is the Great Sphinx near the great pyramid of Ghizeh, hewn out of solid granite, with the recumbent body of a lion, 146 feet long from the shoulders to the rump, and 56 feet high, and a man's head 2½ feet high from chin to crown. A small temple stood between the fore paws of this sphinx. There are also Oriental sphinxes, in general akin to the Egyptian, but more often winged than wingless. See cut under *androsphinx*.

3. In *her.*, a creature with a lion's body and a woman's head, but not necessarily like any ancient original. It is assumed to be winged; when not winged, it should be blazoned "sans wings."—4. An enigmatic or sphinx-like person; one who talks puzzlingly, or is inscrutable in disposition or character; one whom it is hard to understand.—5. In *entom.*: (a) A hawk-moth; a member of the genus *Sphinx* or the family *Sphingidæ*. See cuts under *hawk-moth*, *hog-caterpillar*, *Lepidoptera*, and *Philampelus*. (b) [cap.] [NL. (Linnaeus, 1767).] The typical genus of the family *Sphingidæ*. At first it was co-extensive with this family; later it formed a group of variable extent; now it is confined to forms having the head small, the eyes lashed, tibiae spinose, and fore tarsi usually armed with long spines. It is a wide-spread genus; 19 species occur in America north of Mexico. The larvæ of this, as well as of other groups of the family *Sphingidæ*, have the habit of erecting the head and anterior segments, from which Linnaeus derived a fanciful resemblance to the Egyptian Sphinx (whence the name).

6. The Guinea baboon, *Cynocephalus papio* or *Papio sphinx*. Also called *sphinx-baboon*.—**Abbot's sphinx**, *Thyreus abboti*, a small North American

log coloration, whose larva feeds on purslane.—**Satellite sphinx**. See *satellite-sphinx* (with cut).—**Walnut-sphinx**, *Cressonia juglandis*, an American moth whose larva feeds on the walnut.

sphinx-moth (sfingsks'móth), *n.* Same as *sphinx*, 5 (a).

sphragide (sfraj'id), *n.* [< F. *sphragide*, < L. *sphragis*, < Gr. *σφραγίς*, a signet, a seal.] Same as *Lemnian earth* (which see, under *Lemnian*).

sphragistics (sfraj-jis'tiks), *n.* [< Gr. *σφραγιτικός*, of, for, or pertaining to sealing, < *σφραγίζω*, seal, < *σφραγίς*, a seal.] The study of seals and the distinctions among them; the archaeology of seals. This study is similar in its nature to numismatics, and has been of great use in the history of the middle ages, as well as in the investigation of costume, armor, etc.; it is also of value in connection with the documents to which seals are attached, as adding in their classification and in the proof of their authenticity.

sphrigosis (sfri-gó'sis), *n.* [NL., for *sphrigosis*; < Gr. *σφρίγιαν*, be full and vigorous, + *-osis*.] Over-rankness in fruit-trees and other plants. It is a disease in which the plant tends to grow to wood or stems and leaves in place of fruit or bulb, etc., or to grow so luxuriantly that the nutritious qualities of the product are injured, as in the turnip and potato. *Sphrigosis* is sometimes due to over-maturing, sometimes to constitutional defect. Compare *rankness*, 4.

sphygmie (sfígmik), *a.* [< Gr. *σφύγμικός*, pertaining to the pulse, < *σφύγμις*, the beating of the heart, the pulse; see *sphygmus*.] 1. Of or pertaining to the pulse.—2. In *zool.*, pulsating or pulsatile; beating with rhythmic contraction and dilatation, like a pulse; specifically, belonging to the *Sphygmica*.

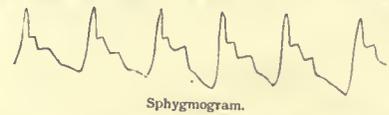

Sphygmica (sfígm'i-ká), *n. pl.* [NL., < Gr. *σφύγμικός*, pertaining to the pulse; see *sphygmie*.] A group or series of amœbiform protozoans, in which regularly contractile or sphygmie vacuoles are observed. See *Amœboidea*.

sphygmogram (sfígm'gō-gram), *n.* [< Gr. *σφύγ-*

See cut under *tobacco-worm*.—**Catalpa sphinx**, *Ceratonia catalpa*, an American moth whose larva feeds on the catalpa.—**Clear-winged sphinx**, a moth whose wings are partly hyaline, as *Hemaris difinis* and other members of the same genus; also, improperly, certain of the *Seiidae*. See cut under *raspberry-borer*.—**Death's-head sphinx**, *Acherontia atropos*. See cut under *death's-head*.—**Five-spotted sphinx**, *Protoparce celtus*, a common gray North American moth whose abdomen is marked with five orange spots on each side, and whose larva feeds upon the tomato, potato, and other solanaceous plants. See cut under *tomato-worm*.—**Morning-sphinx**, any species of the genus *Deilephila*, as *D. lineata*, the white-lined morning-sphinx, a common American moth of strik-

Sphygmogram.

μός, pulse, + γράμμα, a writing.] A tracing of the changes of tension at a point in an artery, as obtained with a sphygmograph.

sphygmograph (sfígm'gō-gráf), *n.* [< Gr. *σφύγμις*, pulse, + *γράφω*, write.] An instrument which, when applied over an artery, traces on

Sphygmograph.

a, band by which the instrument is fastened on; b, spring which rests upon the artery; c, adjusting-screw (with graduated head) which regulates the pressure of the spring b according as the pulse is strong or weak; d, supports for paper upon which the tracing is made; e, the paper is carried; f, spring which and the pressure-wheels e, e the paper engage the paper positively; g, small spring clockwork (incased) by which motion is imparted to the feed-roller e'; h, milled-headed winding-key; i, stop-motion; j, tracer attached to the oscillating arm k, which is moved by the rod l that connects this arm with the spring b.

a piece of paper moved by clockwork a curve which indicates the changes of tension of the blood within. The paper is blackened by holding it over a smoking lamp, and the tracer, moving in accordance with the pulsations of the artery, indicates the rapidity, strength, and uniformity of the beats. The tracings are preserved by a thin varnish of gum damar dissolved in benzolium.

sphygmographic (sfīg-mō-graf'ik), *a.* [*<* *sphygmograph* + *-ic*.] Of or pertaining to, or registered or traced by, the sphygmograph.

sphygmography (sfīg-mog'grā-fī), *n.* [*As sphygmograph* + *-y*.] 1. The act or art of taking pulse-tracings or sphygmograms.—2. A description of the pulse.

sphygmoid (sfīg'moid), *a.* [*<* Gr. *σφύγμος*, pulse, + *ειδος*, form.] Pulse-like.

sphygmology (sfīg-mol'ō-jī), *n.* [*<* Gr. *σφύγμος*, pulse, + *-λογία*, *<* *λέγειν*, speak: see *-ology*.] The sum of scientific knowledge concerning the pulse.

sphygmomanometer (sfīg'mō-mā-nom'e-tēr), *n.* [*<* Gr. *σφύγμος*, pulse, + *μανός*, rare, + *μέτρον*, measure (cf. *manometer*).] An instrument for measuring the tension of the blood in an artery.

sphygmometer (sfīg-mom'e-tēr), *n.* [*<* Gr. *σφύγμος*, pulse, + *μέτρον*, measure.] Same as *sphygmomanometer*.

sphygmophone (sfīg'mō-fōn), *n.* [*<* Gr. *σφύγμος*, pulse, + *φωνή*, sound, voice.] An instrument by the aid of which each pulse-beat makes a sound. It is a combination of a kind of sphygmograph with a microphone.

sphygmoscope (sfīg'mō-skōp), *n.* [*<* Gr. *σφύγμος*, pulse, + *σκοπεῖν*, view.] An instrument for rendering the arterial pulsations visible. One form of it works by the projection of a ray of light from a mirror which is moved by the pulsation; in another form the impact of the pulsation is received in a reservoir of liquid, which is caused by it to mount in a graduated tube. The invention of the instrument is ascribed to Galileo.

sphygmus (sfīg'mus), *n.* [NL., *<* Gr. *σφύγμος*, the beating of the heart, the pulse, *<* *σφίζεν*, beat violently, throb.] The pulse.

sphinx, *n.* An occasional misspelling of *sphinx*.

Sphyræna (sfī-rē'nā), *n.* [NL. (Artedi, Bloeh, etc.), *<* L. *sphyræna*, *<* Gr. *σφίρανα*, a sea-fish so called, a hammer-fish, *<* *σφίρα*, hammer, mallet.] 1. The representative genus of *Sphyrænidæ*. It contains about 20 species of voracious pike-like fishes, of most temperate and tropical seas. *S. sput* or *S. vulgaris* is the becauna, of both coasts of the Atlantic and of the Mediterranean, the *sphyræna* of the ancients, about 2 feet long, of an olive color, silvery below, when young with dusky blotches. *S. argentea* of the Pacific coast, abundant from San Francisco southward, about 3 feet long, is an important food-fish. *S. picuda*, the barcauda of the West Indies, grows to be sometimes 7 or 8 or even, it is claimed, 10 feet long. See cut under *becuana*. 2. [*l. c.*] A fish of this genus.

Sphyrænidæ (sfī-ren'ī-dē), *n. pl.* [NL. (Bonaparte, 1831), *<* *Sphyræna* + *-idæ*.] A family of percossocine acanthopterygian fishes, typified by the genus *Sphyræna*. About 20 species are known, all of which are closely related, and usually referred to the single genus *Sphyræna*. They are mostly inhabitants of the tropical seas; but a few advance northward and southward into cooler waters, as along the United States coast to New England. They are voracious and savage, and the larger ones are much dreaded. See cut under *becuana*. Also *Sphyrænoidei*.

sphyrænine (sfī-rē'nin), *a.* [*<* *Sphyræna* + *-ine*.] Same as *sphyrænoïd*.

sphyrænoïd (sfī-rē'noid), *a.* [*<* *Sphyræna* + *-oid*.] Of or pertaining to the *Sphyrænidæ*.

Sphyrna (sfēr'nā), *n.* [NL. (Rafinesque, 1815), an error for **Sphyræna*, *<* Gr. *σφίρα*, a hammer.] A genus of hammer-headed sharks, giving name to the family *Sphyrnidæ*. It contains those in which the head is most hammer-like, and grooves extend from the nostrils to the front. *S. tiburo*, the bonnet-shark, is now placed in another genus (*Rhizoprion*). *Zygæna* is an exact synonym of *Sphyrna*, but is preoccupied in entomology. Also called *Cestracion* (after Klein). See cut under *hammerhead*.

Sphyrnidæ (sfēr'ni-dē), *n. pl.* [NL., *<* *Sphyrna* + *-idæ*.] A family of anarthrous selachians; the hammer-headed sharks, having an extraordinary conformation of the head. There are 3 genera and 5 or 6 species, found in most seas. The body usually has the common shark-like form; but the head is expanded laterally into a kidney-like shape, or arched like a hammer-head. The eyes are upon the sides of the expanded head, and the nostrils are on the front edge. The fins are like those of ordinary sharks. See cuts under *hammerhead* and *shark*. Also called *Zygænoidei*.

sphyrnine (sfēr'nin), *a.* [*<* *Sphyrna* + *-ine*.] Of the character or appearance of a hammer-headed shark; belonging to the *Sphyrnidæ*; *zygænine*.

Sphyrpicus (sfī-rō-pī'kus), *n.* [NL. (orig. *Sphyrpicus*, S. F. Baird, 1858), *<* Gr. *σφίρα*, a hammer, + L. *picus*, a woodpecker.] A remarkable genus of *Picidæ*, having the tongue ob-

tuse, brushy, and scarcely extensible, owing to the shortness of the hyoid bones, whose horns do not curl up over the hindhead; the sapsuckers, or sapsucking woodpeckers. There are several species, all American, feeding upon soft fruits and sapwood, as well as upon insects. The common yellow-bellied woodpecker of the United States is *S. varius*, of which a variety, *S. nuchalis*, is found in the west, and another, *S. ruber*, has the whole head, neck, and breast carmine-red. A very distinct species is *S. thiroideus* of the western United States, notable for the great difference between the sexes, which long caused them to be regarded as different species, and even placed in different genera. The condition of the hyoid apparatus in this genus is unique, though an approach to it is seen in the genus *Xenopicus*. See cut under *sapsucker*.

spialt (spī'al), *n.* [Early mod. E. also *spyal*, *spyal*; by apheresis from *espial*: see *espial*, and cf. *spion*, *spy*.] 1. Close or secret watch; espial.

I have those eyes and ears shall still keep guard
And spial on thee. B. Jonson, *Catiline*, iv. 2.

2. A spy; a watcher; a scout.

Secretaries and spials of princes and states bring in bills for intelligence. Bacon, *Advancement of Learning*, li.

spialterite (spī-ā'tēr-it), *n.* [*<* G. *spialter*, spelter (see *spelter*), + *-ite*.] Same as *wurtzite*.

spica (spī'kā), *n.* [*<* L. *spica*, a point, spike, ear of grain: see *spike*.] 1. In *bot.*, a spike.

—2. In *surg.*, a spiral bandage with reversed turns: so named because it was thought to resemble a spike of barley.—3. In *ornith.*, a spur; a calcar.—4. [*cap.*] In *astron.*, a very white star of magnitude 1.2, the sixteenth in order of brightness in the heavens, a Virginis, situated on the left hand of the Virgin.—*Spica celtica*, an old name of *Valeriana Celtica*.—*Spica nardi*. Same as *spikenard*.

spical (spī'kal), *a.* [*<* NL. **spicalis*, *<* L. *spica*, a spike: see *spike*.] Same as *spicate*: as, the *spical* palpi of a dipterous insect.

Spicata (spī-kā'tē), *n. pl.* [NL., fem. pl. of L. *spicatus*, spiked: see *spicate*.] A section of penatuloïd polyps, distinguished by a bilateral arrangement of the polyps on the rachis, which is elongate, cylindrical, and destitute of pinules.

spicate (spī'kāt), *a.* [*<* L. *spicatus*, spiked, pp. of *spicare*, furnish with spikes, *<* *spica*, a spike: see *spike*.] 1. In *bot.*, having the form of a spike; arranged or disposed in spikes.—2. In *ornith.*, spurred; calcarate; spiciferous.

spicated (spī'kāt-ed), *a.* [*<* *spicate* + *-ed*.] In *bot.*, same as *spicate*.

spicateous (spī-kā'tē-us), *a.* [Irreg. *<* *spicate* + *-ous*.] In *zool.*, spicate; specifically, of or pertaining to the *Spicata*.

spicatum (spī-kā'tum), *n.* [L., sc. *opus*, lit. 'spicate work': see *spicate*.] In *anc. masonry*, herring-bone work: so called from the resemblance of the position of the blocks of any two contiguous courses to that of the grains in an ear of wheat.

spiccato (spik-kā'tō), *a.* [It., pp. of *spiccare*, detach, divide.] In *music*, same as *picchetato*.

spice (spīs), *n.* [*<* ME. *spice*, *spyce*, *spyse*, *spice*, species, kind, spice (cf. *spiz*, spices, *<* E.), *<* OE. *espice*, *espece*, kind, spice, F. *épice*, *spice*, *espèce*, kind, species, *espèces*, pl., *spécie*, = Pr. *especia*, *especi* = Sp. *especta*, *spice*, *especie*, species, = Pg. *especia*, *spice*, *especie*, species, *specie*, = It. *specie*, species, kind, pl. spices, drugs, *<* L. *species*, look, appearance, kind, species, etc., LL. also spices, drugs, etc. (ML. *espiciæ*, after Rom.): see *species*. Doublet of *species* and *specie*.] 1. Kind; sort; variety; species.

The spices of penance ben three. Chaucer, *Parson's Tale*.
Justice, all though it be but one . . . vertue, yet is it described in two kyndes or species.
Sir T. Elyot, *The Governour*, iii. 1.

The very calling it a Bartholomew pig, and to eat it so, is a spice of idolatry. B. Jonson, *Bartholomew Fair*, i. 1.

2. Kind of thing; anything of the kind or class before indicated; such sort: used demonstratively or indefinitely.

Chydungs comys of hert by,
And grett pride and velany,
And other spice that mekylle derea.
R. de Brunne, MS. Bowca, p. 31. (Halliwell.)

All that toucheth dedly synne
In any spice that we falle ynne.
MS. Harl. 1701, f. 1. (Halliwell.)

For trowth the telteth that lone is triacle of henene;
May no synne be on him sene that vseth that spice.
Piers Plowman (B), l. 147.

3. An exemplification of the kind of thing mentioned; specimen; sample; instance; piece.

Whanne he seith the lepre in the skyne, and the heeris chaungid into whiff colour, and thilk spice of lepre lower than the skyne and that other flesh, a plaage of lepre it is.
Wyclif, *Lev. xiii. 8*.

He hath spices of them all, not all. Shak., *Cor.*, iv. 7. 46.

4. A characteristic touch or taste; a modicum, smack, or flavoring, as of something piquant or exciting to the mind: as, a *spice* of roguery or of adventure. [In this sense now regarded as a figurative use of def. 5; compare *sauce* in a similar figurative use.]

I think I may pronounce of them, as I heard good Senecio, with a *spice* of the wit of the last age, say, viz., "That a merry fellow is the saddest fellow in the world."
Steele, *Tatler*, No. 45.

The world loves a *spice* of wickedness.
Longfellow, *Hyperion*, l. 7.

5. A substance aromatic or pungent to the taste, or to both taste and smell; a drug; a savory or piquant condiment or eatable; a relish. The word in this sense formerly had a much wider range than at present (def. 6); it is still used in northern England as including sweetmeats, gingerbread, cake, and any kind of dried fruit.

"Hastow auzte in thl purs, any hote spices?"
"I haue peper and plones [peony-seeds]," quod she, "and a pounde of garlike,
A ferthyngworth of fenel-seed for fastyngdayes."
Piers Plowman (B), v. 311.

Now, specifically—6. One of a class of aromatic vegetable condiments used for the seasoning of food, commonly in a pulverized state, as pepper, allspice, nutmeg, ginger, cinnamon, and cloves; collectively, such substances as a class: as, the trade in *spices* or *spice*.

So was her love diffused; but, like to some odorous spices,
Suffered no waste nor loss, though filling the air with aroma.
Longfellow, *Evangeline*, li. 5.

7. A piquant odor or odorous substance, especially of vegetable origin; a spicy smell. [Poetical.]

The woodhline spices are wafted abroad,
And the musk of the rose is blown.
Tennyson, *Maud*, xxli.

8. Figuratively, a piquant concomitant; an engaging accompaniment or incident; an attractive or enjoyable variation.

Is not birth, . . . youth, liberality, and such like, the spice and salt that season a man?
Shak., *T. and C.*, i. 2. 277.

Variety's the very spice of life,
That gives it all its flavour.
Cowper, *Task*, li. 606.

Madagascar spice, the clove-nutmeg. See *Ravensara*.

Spice plaster. See *plaster*.—**Syn.** 4. Relish, savor, dash.

spice (spīs), *v. t.*; pret. and pp. *spiced*, ppr. *spicing*. [*<* ME. *spice*, *<* OF. *espicer*, F. *épicer* = Sp. *especiar*, *spice*; from the noun.] 1. To prepare with a condiment or seasoning, especially of something aromatic or piquant; season or temper with a spice or spices: as, highly *spiced* food; to *spice* wine.

Shulde no curyous clothe comen on hys rugge,
Ne no mete in his mouth that maister Iohan spiced.
Piers Plowman (B), xix. 232.

2. To vary or diversify, as speech, with words or matter of a different kind or tenor; interlard; make spicy, piquant, or entertaining: as, to *spice* one's talk with oaths, quips, or scandal; to *spice* a sermon with anecdotes.

spice (spīs), *n.* [Perhaps a var. of *spike*.] A small stick. [Prov. Eng.]

spice-apple (spīs'ap'l), *n.* An aromatic variety of the common apple.

spiceberry (spīs'ber'i), *n.*; pl. *spiceberries* (-iz). The checkerberry or wintergreen, *Gaultheria procumbens*.

spice-box (spīs'boks), *n.* 1. A box to keep spices in; specifically, a cylindrical box inclosing a number of smaller boxes to contain the different kinds of spice used in cooking.—2. In *decorative art*, a cylindrical box, low in proportion to its diameter, and having a lid; especially, such a box of Indian or other Oriental work. Spice-boxes are usually of metal, often of gold or silver, and decorated with damascening or otherwise.

Small boxes of very graceful form, covered with the most delicate tracery, and known to Europeans as *spice-boxes*.
G. C. M. Birdwood, *Indian Arts*, l. 160.

spice-bush (spīs'bush), *n.* A North American shrub, *Lindera Benzoin*, the bark and leaves of which have a spicy odor, bearing small yellow flowers very early in the spring and oval scarlet berries in late summer. See *Lindera* and *fever-bush*. Also *spice-wood*.

spice-cake (spīs'kāk), *n.* A cake flavored with a spice of some kind, as ginger, nutmeg, or cinnamon.

She's g'ien him to eat the good *spice-cake*.
She's g'ien him to drink the blood-red wine.
Young Beichan and Susie Pye (Child's Ballad, IV. 5).

A *spice-cake*, which followed by way of dessert, vanished like a vision.
Charlotte Brontë, *Shirley*, i.

spiced (spist), *p. a.* [*< ME. spiced; < spicē + -ed.*] 1. Impregnated with an aromatic odor; spicy to the smell; spiced-lard.

In the *spiced* Indian air, by night,

R. T. Cooke, *Somebody's Neighbors*, p. 39.

2†. Particular as to detail; over-nice in matters
of conscience or the like; scrupulous; squeamish.

Ye sholde been al pacient and meke,
And han a sweete, *spiced* conscience,
Sith ye so preche of Jobes patience.

Chaucer, *Prologue to Wife of Bath's Tale*, l. 435.

Take it; 'tis yours;
Be not so *spiced*; 'tis good gold,
And goodness is no gall to the conscience.

Fletcher, *Mad Lover*, III, 1.

spiceful (spis'fūl), *a.* [*< spicē + -ful.*] Spice-laden; spicy; aromatic.

The scorching sky
Doth singe the sandy wilds of *spiceful* Barbary.

Drayton, *Polyolbion*, v. 312.

spice-mill (spis'mil), *n.* A small hand-mill for
grinding spice, etc.: sometimes mounted ornamentally
for use on tables.

spice-nut (spis'nūt), *n.* A gingerbread-nut.
spice-plate (spis'plāt), *n.* A particular kind
of plate or small dish formerly used for holding
spice to be served with wine.

Item, ij. *spiceplates*, welyng both iij^{xx} xij. uncea.
Paston Letters, l. 474.

The spice for this mixture [hypocras] was served often
separately, in what they called a *spice-plate*.

T. Warton, *Hist. Eng. Poetry* (ed. 1871), III, 277, note.

spicer (spis'sēr), *n.* [*< ME. spicer, spyeer, spyecere, spysere, < OF. espicier, F. épicier = Pr. espessier = Sp. especiero = Pg. especieiro, < ML. speciarus, a dealer in spices or groceries, < LL. species, spice: see spicē, n.*] 1†. A dealer in spices, in the widest sense; a grocer; an apothecary.

Spiceres spoke with hym to spien here ware,
For he counth of here craft and knewe many gomme.

Piers Plowman (B), II, 225.

2. One who seasons with spice.
spicery (spis'sēr-i), *n.* [*< ME. spicerye, spicerie = D. speerij = G. spezerei = Sw. Dan. speceri, < OF. spicerie, espicerie, F. épicerie = Pr. Pg. especiaris = Sp. especieria = It. spiceria, < ML. speciaris, spices, < LL. species, spice: see spicē, n.*] 1. Spices collectively.

Ne how the fyr was couched first with stree [straw], . . .
And thanne with greene woode and *spicerye*.

Chaucer, *Knight's Tale*, l. 2077.

And eke the fayrest Alma mett him there,
With balme, and wine, and costly *spicerye*,
To comfort him in his infirmity.

Spenser, *F. Q.*, II, xl. 49.

2†. A spicy substance; something used as a
spice.

For (ahlas my goode Lorde), were not the cordial of these
two pretious *spiceries*, the corrosyue of care would quicke-
ly confounde me.

Gascoigne, *Steele Glas* (ed. Arber), *Ep. Ded.*, p. 43.

3. A repository of spices; a grocery or buttery;
a store of kitchen supplies in general.

Furst speke with the pantere or officers of the *spicerye*,
For frutes a-fore mete to ete them fastyngly.

Babees Book (E. E. T. S.), p. 162.

He had in the hall-kitchen . . . a clerk of his *spicerye*.

G. Cavendish, *Cardinal Wolsey*, l. 34.

4. A spicy quality or effect; an aromatic efflu-
ence; spiciness.

My taste by her sweet lips drawn with delight,
My smelling won with her breath's *spicerye*.

Drayton, *Idea*, *xxix.*, To the Senses.

The affluence of his [Emerson's] illustrations diffuses
a flavor of oriental *spicery* over his pages.

G. Ripley, in *Frothingham*, p. 266.

spice-shop (spis'shop), *n.* [*< ME. spicē schope; < spicē + shop.*] A shop for the sale of aromatic
substances; formerly, a grocery or an apothecary's
shop.

A *Spicere schoppe* (a *Spice schope* . . .), *apotheca vel*
ipotheca. *Cath. Ang.*, p. 355.

spice-tree (spis'trē), *n.* An evergreen tree,
Umbellularia Californica, of the Pacific United
States, variously known as *mountain-laurel*,
California laurel, *olive*, or *bay-tree*, and *cajeput*.
Northward it grows from 70 to 90 feet high, and affords
a hard strong wood susceptible of a beautiful polish; this
is used for some ship building purposes, and is the finest
cabinet-wood of its region. The leaves are exceedingly
acid, exhaling, when bruised, a pungent effluvia which
excites sneezing.

spicewood (spis'wūd), *n.* Same as *spice-bush*.
spiciferous (spi-sif'ē-rus), *a.* [*< L. spicifer*,
ear-bearing, *< spica*, a spike, ear, + *ferre* = E.

bear].] 1. In *bot.*, bearing or producing spikes;
spicate; eared.—2. In *ornith.*, spurred; hav-
ing spurs or calcears, as a fowl.

spiciform (spi'si-fōrm), *a.* [*< L. spica*, a point,
spike, ear, + *forma*, form.] Having the form
of a spica or spike.

spicily (spi'si-li), *adv.* In a spiey manner; pun-
gently; with a spiey flavor.

spiciness (spi'si-nes), *n.* The quality of being
racy, piquant, or spicy, in any senso.

Delighted with the *spiciness* of this beautiful young
woman.

The Century, XXVI, 370.

spick¹, *n.* [An obs. or dial. form of *spike*¹; cf.
*pick*¹ as related to *pikē*.] A spike; a tenter.

spick² (spik), *n.* [Origin obscure.] A titmouse.
—Blue *spick*, the blue titmouse, *Parus caeruleus*.

spick³ (spik), *n.* See *spick-and-span-new*.

spick-and-span (spik'and-span'), *a.* [Short-
ened from *spick-and-span-new*.] Same as *spick-*
and-span-new.

From our poetic store-house we produce
A couple of (similes) *spick and span*, for present use.

Garrick, quoted in *W. Cooke's Memoirs of S. Foote*, l. 107.

The Dutch Boer will not endure over him . . . a *spick-*
and-span Dutch Africander from the Cape Colony.

Trotlope, *South Africa*, II, vi.

Beside my hotel rose a big *spick-and-span* church.

H. James, Jr., *Little Tour*, p. 178.

spick-and-span-new (spik'and-span'nū'), *a.*
[Also *spick-span-new*; lit. 'new as a spike and
chip': an emphatic form of *span-new*: see *spike*¹,
*spoon*¹, *new*, and cf. *span-new*, *spick-span-new*.
Cf. also the equiv. *D. spik-splinter-nieuw*, 'spick-
splinter-new,' *Dan. splinter-ny*, *Sw. splitter-ny*,
'splinter-new,' *Sw. dial. till splint och span ny*,
'splint-and-span-new,' *G. spalt-neu*, 'splinter-
new,' etc., *E. brand-new*, etc. A compound of
four independent elements, like this, is very
rare in E.; the lit. meaning of the nouns *spick*
and *span* is not now recognized, but the words
spick and *span* are taken together adverbially,
qualifying *new*, with which they form a com-
pound. By omission of *new*, the phrase *spick-*
and-span is sometimes used with an attributive
force.] New and fresh; span-new; brand-
new.

'Tis a fashion of the newest edition, *spick and span new*,
without example.

Ford, *Lover's Melancholy*, II, 1.

Among other Things, Black-Friars will entertain you
with a *Play spick and span new*, and the Cockpit with an-
other.

Howell, *Letters*, I, iv, 2.

spicket (spik'et), *n.* An obsolete form of *spigot*.

spicknel, **spignel** (spik'nel, spig'nel), *n.* [Ear-
ly mod. E. also *spicknell*, *spignell*, *speknel*, *spike-*
nel; said to be a corruption of *spike-nail*, and
to be so called in allusion to the shape of its
long capillary leaves.] The baldmoney, *Meunium*
athamanticum; also, any plant of the related
genus *Athamanta*, which has similar graceful
finely dissected foliage.

spick-span-new (spik'span-nū'), *a.* Same as
spick-and-span-new.

Look at the cloaths on 'er back, thebbe ammost *spick-span-*
new.

Tennyson, *Northern Cobbler*.

spicose (spi'sōs), *a.* [*< NL. spicosus*: see *spi-*
cous.] In *bot.*, same as *spicous*.

spicosity (spi-kos'i-ti), *n.* [*< spicose* + *-ity*.]
In *bot.*, the state or condition of being spicous
or eared.

spicous (spi'kus), *a.* [Also *spicose*; *< NL. spic-*
osus, *< L. spica*, a spike, ear: see *spike*¹.] In
bot., having spikes or ears; spiked or eared like
corn.

spicula¹ (spik'ū-lā), *n.*; pl. *spiculæ* (-lā). [NL.:
see *spicula*.] 1. In *bot.*, a diminutive or second-
ary spike; a spikelet.—2. A small splinter-
like body; a spicule.—3. In *zool.*, a spicule or
spiculum. [Rare.]

spicula², *n.* Plural of *spiculum*.

spicular (spik'ū-lār), *a.* [*< spicula* + *-ar*.] In
zool.: (a) Having the form or character of a
spicule; resembling a spicule; dart-like; spicu-
liform; spiculate. (b) Containing or composed
of spicules; spiculous; spiculiferous or spicu-
ligenous: as, a *spicular* integument; the *spicu-*
lar skeleton of a sponge or radiolarian.—**Spicu-**
lar notation, a notation for logic, invented by Augustus
De Morgan (though the name was given by Sir William
Hamilton), in which great use is made of marks of paren-
thesis. The significations of the principal signs are as
follows:

X)Y All Xs are Ys.
X.)Y No Xs are Ys.
X.)Y Everything is either X or Y.
X((Y Some Xs compose all the Ys.
X.)Y Some Xs are not Ys.
X(Y) Some Xs are Ys.
X(Y) Some things are neither X nor Y.
X.)Y None of the Xs are certain of the Ys.

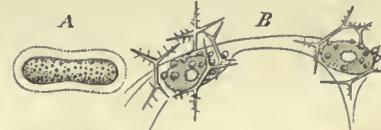

spiculate (spik'ū-lāt), *v. t.*; pret. and pp. *spicu-*
lated, ppr. *spiculating*. [*< L. spiculatus*, pp. of
spiculare, sharpen, *< spiculum*, dim. of *spicum*,
a point: see *spike*¹.] To sharpen to a point.

Extend a rail of elm, securely arm'd
With *spiculated* paling.

W. Mason, *English Garden*, II.

spiculate (spik'ū-lāt), *a.* [*< L. spiculatus*, pp.:
see the verb.] 1. In *zool.*, sharp-pointed; spi-
cate.—2. Covered with or divided into fine
points. Specifically, in *bot.*: (a) Covered with pointed
fleshy appendages, as a surface. (b) Noting a spikc com-
posed of several spikelets crowded together.

spicule (spik'ūl), *n.* [*< L. spiculum*, NL. also *spic-*
ula, f., a little sharp point, dim. of *spicum*, *spica*,
a point, spike: see *spike*¹.] 1. A fine-pointed
body resembling a needle: as, *ice-spicules*.—2.
In *bot.*: (a) A spikelet. (b) One of the small
projections or points on the basidia of hymeno-
mycetous fungi which bear the spores. There
are usually four to each basidium. See *sterigma*.
—3. In *zool.*, a hard, sharp body like a little
spike, straight or curved, rod-like, or branched,
or diversiform; a spiculum; a sclere: variously
applied, without special reference to size or
shape. Specifically—(a) One of the skeletal elements,
scleres, or spicula of the protozoans, as radiolarians, either

Sphaerozoum punctatum.

A, natural size; B, two of the sacs with colored vesicles and spicules
which lie in the investing protoplasm, magnified.

calcareous or silicious, coherent or detached. See cuts
under *Radiolaria* and *Sphaerozoum*. (b) One of the spines
of echinoderms, sometimes of great size, and bristling
over the surface of the test, as in sea-urchins or snail,
and embedded in the integument, as in holothurians;
sometimes of singular shape, like wheels, anchors, etc.
See cuts under *ancora*¹, *Echinometra*, *Echinus*, and *Spa-*
langus. (c) In sponges, a spiculum; one of the hard cal-
careous or silicious bodies, of whatever shape, which enter
into the composition of the skeleton; a mineral sclere:
a sponge-spicule (which see). Some sponges mostly consist
of spicules, as that figured under *Eurypetella*. (d) In some
worms and mollusks, a dart-like organ constituting a kind
of penis; a spiculum (which see). (e) In *entom.*: (1) A
minute spine or spinous process. (2) The piercing ovi-
positor of any insect; especially, the lancet-like portion
of the sting of a parasitic hymenopter. See *Spiculifera*.

spicule-sheath (spik'ūl-shēth), *n.* A thin layer
of organic substance forming the sheath or in-
vestment of a sponge-spicule.

Spiculifera (spik'ū-lif'ē-rā), *n. pl.* [NL.: see
spiculiferous.] In Westwood's classification of
insects, a division of *Hymenoptera*, in which the
abdomen is, in the female, armed with a long
plurivalve ovipositor, and the larvae are footless.
It contains the ichneumonids (including braconids), the
evanilids, the proctotrypids, the chalcids, and the cynipids
or gall-flies. It thus corresponds to the *Pupivora* of La-
treille, except in excluding the *Chrysididae* as *Tubulifera*.

spiculiferous (spik'ū-lif'ē-rus), *a.* [*< L. spicu-*
lum, a spicule, + *ferre* = E. *bear*].] In *zool.*,
having a spiculum or spicula; spicular or spicu-
lous; specifically, in *entom.*, having a piercing
ovipositor; of or pertaining to the *Spiculifera*.
Also *spiculiferous*.

spiculiform (spik'ū-li-fōrm), *a.* [*< L. spiculum*,
a spicule, + *forma*, form.] In *bot.* and *zool.*,
having the form of a spicule; being of the na-
ture of a spicule.

spiculigenous (spik'ū-lij'ē-nus), *a.* [*< L. spicu-*
lum, a spicule, + *-genus*, producing: see *-ge-*
nous.] Producing spicules; giving origin to
spicules; spiculiferous: as, the *spiculigenous*
tissue of a sponge.

spiculigerous (spik'ū-lij'ē-rus), *a.* [*< L. spicu-*
lum, a spicule, + *gerere*, carry.] Same as *spicu-*
liferous.

spiculose (spik'ū-lōs), *a.* [*< NL. spiculosus*:
see *spiculous*.] Same as *spiculous*.

spiculous (spik'ū-lus), *a.* [Also *spiculose*; *<*
NL. spiculosus, *< L. spiculum*, a spicule: see
spicula.] Having spicules; spinulose; spicu-
lose or spiculiferous.

spiculum (spik'ū-lum), *n.*; pl. *spicula* (-lā).
[NL., *< L. spiculum*, a little sharp point: see
spicula.] In *zool.*, a spicula or spicule. Spe-
cifically—(a) In some worms, a chitinous rod developed
in the cloaca as a copulatory organ; a kind of penis. (b)
In some mollusks, as snails, the love-dart, a kind of penis,
more fully called *spiculum amoris*. (c) In insects, the
piercing non-poisonous ovipositor of the *Spiculifera*.

spicy (spi'si), *a.* [*< spicē + -y*.] 1. Produ-
cing spice; abounding with spices.

As . . . off at sea north-east winds blow
Sabean odours from the *spicy* shore
Of Araby the bless'd.

Milton, *P. L.*, IV, 162.

2. Having the qualities of spice; flavored with spice; fragrant; aromatic: as, *spicy* plants.

The *spicy* nut-brown ale. Milton, *L'Allegro*, l. 100.

Under southern skies exalt their sails,
Led by new stars, and borne by *spicy* gales!
Pope, *Windsor Forest*, l. 392.

3. Highly flavored; pungent; keen; pointed; raey: as, a *spicy* letter or debate. [Colloq.]

Your hint about letter-writing for the papers is not a bad one. . . . A political surmise, a *spicy* bit of scandal, a sensation trial, wound up with a few moral reflections upon how much better we do the same sort of thing at home.
Lever, *A Rent in a Cloud*, p. 58.

4. Stylish; showy; smart in appearance: as, a *spicy* garment; to look *spicy*. [Slang.]

"Bless'd if there isn't Snipe dismounting at the gate!" he exclaimed joyfully; "there's a drummer holding his nag. What a *spicy* chestnut it is!"

Whyte Melville, *White Rose*, l. xiii.

=Syn. 3. *Racy*, *Spicy*. See *racy*.

spider (spi'dér), *n.* [An altered form of **spithér*, < ME. *spithér*, dat. *spithre*, < AS. **spithér*, orig. **spinthér*, with formative -*ther* of the agent, < *spinnan*, spin: see *spin*. Cf. *spinner*¹, a spider; D. *spin* = OHG. *spinnā*, MHG. G. *spinne*, a spider, lit. 'spinner'. For other E. names, see *attecop*, *cop*², *lob*¹, *lop*³.] 1. An arthropod of the order *Araneæ*, *Araneina*, or *Araneida* (the old Linnean genus *Aranea*), of the class *Arachnida*, of which there are many families, hundreds of genera, and thousands of species, found all over the world. Though popularly considered insects, spiders are not true *Insecta*, since they have eight instead of only six legs, normally seven-jointed, and no wings are developed. They are dimerosomatous—that is, have the body divided into two principal regions, the cephalothorax, or head and chest together, and the abdomen, which is generally tumid or globose, whence the name *Sphærogastra*. No antennæ are developed as such, but there are raptorial organs called *falces*, which are subchelate—that is, have a distal joint folding down on the next like the blade of a pocket-knife. (See cut under *falx*.) In those species which are poisonous the falces are traversed by the duct of a venom-gland. Some spiders are by far the most venomous animals in existence in proportion to their size: that the bite of a spider can be fatal to man (and there are authentic instances of this) implies a venom vastly more powerful than that of the most poisonous snakes. (See *katipo* and *Latrodectus*.) Spiders breathe by means of pulmonary sacs, or lung-sacs, nearly always in connection with tracheæ or spiracles, whence they are called *pulmo-tracheal*; these sacs are two or four in number, whence a division of spiders into dipneumons and tetrapneumons araneids. (See *Dipneumones*, 2. *Tetrapneumones*.) Most spiders belong to the former division. They have usually eight eyes, sometimes six, rarely four, in one genus (*Nops*) only two. The abdomen is always distinct, ordinarily globose, never segmented, and provided with two or more pairs of spinnerets. (See cut under *arachnidium*.) The characteristic habit of spiders is to spin webs to catch their prey, or to make a nest for themselves, or for both these purposes. Cobweb is a fine silky substance secreted by the arachnidium, or arachnidial glands, and conducted by ducts to the several, usually six, arachnidial mammillæ, which open on papillæ at or near the end of the abdomen, and through which the viscid material is spun out in fine gossamer threads. Gossamer or spider-silk serves not only to construct the webs, but also to let the spider drop speedily from one place to another, to throw a "flying bridge" across an interval, or even to enable some species to "fly"—that is, be buoyed up in the air and wafted a great distance. It has occasionally been woven artificially into a textile fabric, and is a well-known domestic application for stanching blood. (See cut under *silk-spider*.) Some spiders are sedentary, others vagabond; the former are called *orbicularian*, *reticularian*, *tubularian*, etc., according to the character of their webs. Spiders move by running in various directions, or by leaping; whence the vagabond species have been described as *rectigrade*, *laterigrade*, *citigrade*, *saltigrade*, etc. They lay numerous eggs, usually inclosed in a case or cocoon. The male is commonly much smaller than the female, and in impregnating the female runs great risk of being devoured. The difference in size is as if the human female should be some 60 or 70 feet tall. (See cut under *silk-spider*.) Spiders are carnivorous and highly predatory. Some of the largest kinds are able to kill small birds, whence the name *bird-spiders* of some of the great hairy mygalids. (See cut under *bird-spider*.) A few are aquatic, as the water-spiders of the genus *Argyroneta* (which see, with cut). Wolf-spiders or tarantulas belong to the family *Lycosidæ*; but the name *tarantula* is more frequently applied to the *Mygalidæ* (or *Theraphosidæ*). The common garden-spider or diadem-spider of Europe is *Epeira diademata*; that of the United States is *E. cophinaria* (or *riparia*). See *Araneida*, and cuts under *Chelicera*, *cross-spider*, *pulmonary*, and *tarantula*.

Female of *Latrodectus mactans*, enlarged one quarter.
a, under side of abdomen.

My brain, more busy than the labouring spider,
Weaves tedious snares to trap mine enemies.
Shak., 2 Hen. VI., iii. 1. 339.

2. Some other arachnid, resembling or mistaken for a spider; a spider-mite. See *red-spider*.—3. A spider-crab; a sea-spider.—4. A cooking-utensil having legs or feet to keep it from contact with the coals: named from a fancied resemblance to the insect—the ordinary frying-pan is, however, sometimes erroneously termed a *spider*. (a) A kind of deep frying-pan, commonly with three feet.

Some people like the sound of bubbling in a boiling pot, or the fizzing of a frying-spider.

C. D. Warner, *Backlog Studies*, p. 10.

Hash was warmed up in the spider.

J. T. Townbridge, *Coupon Bonds*, p. 113.

(b) A trivet; a low tripod used to support a dish, or the like, in front of a fire.

5. In *mach.*: (a) A skeleton of radiating spokes, as a rag-wheel. (b) The internal frame or skeleton of a gear-wheel, for instance, on which a cogged rim may be bolted, shrunk, or cast. (c) The solid interior part of a piston, to which the packing is attached, and to whose axis the piston-rod is secured. E. H. Knight.

—6. *Naut.*, an iron outrigger to keep a block clear of the ship's side.—**Geometrical spider**. See *geometric*.—**Grass-spider**, one of many different spiders, as species of *Agalena*, which spin webs on the grass, such as may be seen spangled with dew in the morning in meadows.—**Round-web spider**, one of many orbicularian spiders, as species of *Epeira* (see, also, cut under *cross-spider*).—**Spider couching**. See *couching*¹, 5.—**Trap-door spider**. See *Cteniza*, *Mygalidæ*, *trap-door*, and cut under *Araneida*. (See also *bird-spider*, *crab-spider*, *diving-spider*, *garden-spider*, *house-spider*, *jumping-spider*, *sea-spider*, *silk-spider*, *water-spider*, *wolf-spider*.)

spider-ant (spi'dér-ánt), *n.* A solitary ant of the family *Mutillidæ*: so called from the spider-like aspect of the females.

spider-band (spi'dér-band), *n.* *Naut.*, an iron hoop round a mast to which the lower ends of the futtock-shrouds are secured; also, a hoop round a mast provided with belaying-pins. See cut under *futtock-shrouds*.

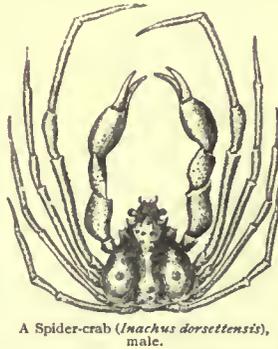

spider-bug (spi'dér-bug), *n.* A long-legged heteropterous insect of the family *Emesidæ*, *Emesa longipes*, somewhat resembling a spider. See cut under *stick-bug*. [U. S.]

spider-catcher (spi'dér-kach'ér), *n.* A bird that catches spiders. Specifically—(a) The wall-creeper, *Tichodroma muraria*. See cut under *Tichodroma*. (b) *pl.* The genus *Arachnothera* in a broad sense, numerous species of which inhabit the Indo-Malayan region. They are small creeper-like birds with long bills, and belong to the family *Nectariniidæ*. Also called *spider-eaters* and *spider-hunters*.

spider-cells (spi'dér-selz), *n. pl.* Neuroglia cells.

spider-cot (spi'dér-kot), *n.* Same as *spider-web*.

spider-crab (spi'dér-krab), *n.* A spider-like crab, or sea-spider, with long slender legs and comparatively small triangular body. The name is given to many such crabs, of different families, but especially to the maioids, or crabs of the family *Maoidæ*, such as *Maia squinado*, the common spinous spider-crab of Great Britain, and species of *Libinia*, *Inachus*, etc. The giant Japanese spider-crab, *Macrochira kaempferi*, is the largest crustacean. See cuts under *Leptopodia*, *Lithodes*, *Maia*, and *Oxyrhyncha*.

A Spider-crab (*Inachus dorsettensis*), male.

spider-diver (spi'dér-dí'vèr), *n.* The little grebe, or dabchick. [Local, British.]

spider-eater (spi'dér-è'tèr), *n.* Same as *spider-catcher* (b).

I obtained an interesting bird, a green species of *Spider-eater*. H. O. Forbes, *Eastern Archipelago*, p. 233.

spidered (spi'dérd), *a.* [*spider* + -ed².] Infested with spiders; cobwebbed. [Rare.]

Content can visit the poor spidered room.

Wolcot (Peter Pindar), p. 39. (Davies.)

spider-flower (spi'dér-flou'ér), *n.* 1. A plant of the former genus *Lasiandra* of the *Mcclastomaceæ*, now included in *Tibouchina*. The species are elegant hothouse shrubs from Brazil, bearing large purple flowers.—2. A plant of the genus *Cleome*, especially *C. spinosa* (*C. pungens*), a native of tropical America, escaped from gardens in the southern United States. The stipules are spinous, the flowers large, rose-purple to white, with long stamens and style, suggesting the name. See cut under *Cleome*.

spider-fly (spi'dér-flí), *n.* A parasitic pupiparous dipterous insect, as a bee-louse, bat-louse, bird-louse, bat-fly, sheep-tick, etc. They are of three families, *Braulidæ*, *Nycteribidæ*, and *Hippoboscidæ*. Some of them, especially the wingless forms, as *Nycteribia*, closely resemble spiders in superficial appearance. See cut under *sheep-tick*.

spider-helmet (spi'dér-hel'met), *n.* A name given to the skeleton head-pieces sometimes worn. See *seeret*, *n.*, 9.

spider-hunter (spi'dér-hun'tèr), *n.* Same as *spider-catcher* (b).

spider-legs (spi'dér-legz), *n. pl.* In *gilding*, irregular fractures sometimes occurring when gold-leaf is fitted over a molding having deep depressions.

spider-line (spi'dér-lin), *n.* One of the threads of a spider's web substituted for wires in micrometer-scales intended for delicate astronomical observations.

The transit of the star is observed over *spider lines* stretched in the field, while a second observer reads the altitude of this star from the divided circle.

The Century, XXXVI. 608.

spider-mite (spi'dér-mít), *n.* A parasitic mite or acarid of the family *Gamasidæ*.

spider-monkey (spi'dér-mung'ki), *n.* A tropical American platyrrhine monkey, of the family *Cebidæ*, subfamily *Cebinæ*, and genera *Ateles* and *Brachyteles*; a kind of sajou or sapajou,

A Spider-monkey (*Ateles paniscus*).

likened to a spider by reason of the very long and slim limbs, and long prehensile tail. They are large slender-bodied monkeys of great agility and of arboreal habits, with the thumb absent or imperfect. *Brachyteles* (or *Eriodes*) *arachnoides* is a Brazilian spider-monkey called the *miriki*. *Ateles paniscus* is the large black spider-monkey, or colati; *A. melanochir* is the black-handed spider-monkey; and many more species or varieties of this genus have been named. One of the spider-monkeys, *A. vellerous*, is among the most northerly of American monkeys, extending into Mexico to Orizaba and Oajaca. The flesh of some species is used for food, and the pelts have a commercial value. See also cut under *Eriodes*.

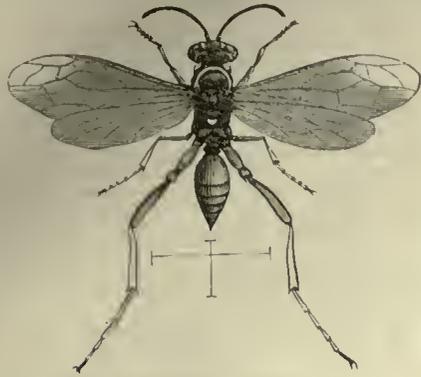

spider-net (spi'dér-net), *n.* Netting by spider-stitch.

spider-orchis (spi'dér-òr'kis), *n.* A European orchid, *Ophrys aranifera*. It has an erect stem from 9 to 18 inches high, with a few leaves near the base, and a loose spike of few small flowers with broad dull-brown lip and parts so shaped and arranged as somewhat to resemble a spider.

spider-shell (spi'dér-shel), *n.* The shell of a gastropod of the family *Strombidæ* and genus *Pteroceras*; a scorpion-shell, having the outer lip expanded into a number of spines. The species inhabit the Indian and tropical Pacific oceans. See cut under *scorpion-shell*.

spider-stitch (spi'dér-stieh), *n.* A stitch in darned netting and in guipure, by which open spaces are partly filled with threads carried diagonally and parallel to each other, the effect of several squares together being that of a spider-web.

spider-wasp (spi'dér-wosp), *n.* Any true wasp of the family *Pompilidae*, which stores its nest

Spider-wasp (*Ceropales rufiventris*). (Cross shows natural size.)

with spiders for its young, as *Ceropales rufiventris* of North America, which lays its eggs in the mud nests of *Agonia*. See ent under *Agonia*.
spider-web (spi'dér-web), *n.* The web or net spun by a spider; cobweb; gossamer. Also *spider-cot*.

spider-wheel (spi'dér-hwél), *n.* In embroidery, any circular pattern or unit of design open and having radiating and concentric lines. Compare *catharine-wheel*, 4.

spider-work (spi'dér-wérk), *n.* Lace worked by spider-stitch.

spiderwort (spi'dér-wért), *n.* 1. A plant of the genus *Tradescantia*, especially *T. virginica*, the common garden species. It is a native of the central and southern United States, and was early introduced into European gardens. The petals are very delicate and ephemeral; in the wild plant they are blue, in cultivation variable in color, often reddish-violet.
2. By extension, any plant of the order *Commelinaceae*; specifically, *Commelina celestis*, a blue-flowered plant from Mexico. The name is also given to *Lloydia serotina*, mountain-spiderwort; to *Anthericum (Phalangium) Lilago*, St. Bernard's lily; and to *Paradisa (Zackia) Lilium*, St. Bruno's lily—all Old World plants, the last two ornamental.

Spiderwort (*Tradescantia virginica*). 1, the inflorescence; 2, the lower part of the stem with the root.

spidery (spi'dér-i), *a.* [*< spider + -y*]. Spiderlike. *Cotgrave*.

spiet, *v.* and *n.* An old spelling of *spy*.

spiegel (spé'gl), *n.* [Short for *spiegeleisen*.] Same as *spiegeleisen*.—**Spiegel-iron**. Same as *spiegeleisen*.

spiegeleisen (spé'gl-'zén), *n.* [*G.*, *< spiegel* (*< L. speculum*), a mirror, + *eisen* = *E. iron*]. A pig-iron containing from eight to fifteen or more per cent. of manganese. Its fracture often presents large well-developed crystalline planes. This alloy, as well as ferromanganese, an iron containing still more manganese than spiegeleisen, is extensively used in the manufacture of Bessemer steel, and is a necessary adjunct to that process. Also called *spiegel-iron*.

spiegelerz (spé'gl-'erts), *n.* [*G.*, *< spiegel*, a mirror, + *erz*, ore.] Specular ironstone: a variety of hematite.

spier¹ (spi'ér), *n.* [*< spy + -er*]. One who spies; a spy; a scout. *Halliwel*.

spier², *v.* See *spicer*¹.

spiffy (spif'i), *a.* [Origin obscure.] Spruce; well-dressed. [Slang, Eng.]

spificate (spif'i-kät), *v. t.*; pret. and pp. *spificated*, ppr. *spificating*. [Also *spificate*, *spifigate*; appar. a made word, simulating a *L.* origin.] 1. To beat severely; confound; dismay. *Halliwel*. [Prov. Eng.]—2. To stifle; suffocate; kill. [Slang.]

So out with your whinger at once,
And scrag Jane while I spificate Johnny.
Barham, Ingoldshy Legends, II, 166.

spification (spif-li-kä'shon), *n.* [*< spificate + -ion*]. The act of spificating, or the state of being spificated; annihilation. [Slang.]

Whose blood he vowed to drink—the Oriental form of threatening spification. *R. F. Burton, El-Medina*, I, 264.

Spigelia (spi-jé'li-ä), *n.* [*NL.* (Linnaeus, 1737), named after Adrian van der Spiegel (1558–1625), a Belgian physician and professor of anatomy at Padua.] A genus of gamopetalous plants, of the order *Loganiaceae* and tribe *Euloganieae*, type of the subtribe *Spigeliaceae*. It is characterized by flowers commonly disposed in one-sided spikes, the corolla with valvate lobes, a jointed style, and a two-celled ovary becoming in fruit a compressed twin capsule which is circumscissile above the cup-shaped persistent base. There are about 30 species, natives of America and mostly tropical, 5 extending into the United States; of these 2 are confined to Florida, 2 to Texas, and 1, *S. Marylandica*, the Maryland pinkroot or worm-grass, reaches Pennsylvania and Wisconsin. They are annual or perennial herbs, rarely somewhat shrubby, either smooth, downy, or woolly, bearing opposite feather-veined or rarely nerved leaves, which are connected by a line or transverse membrane or by stipules. The flowers are usually red, yellow, or purplish, and the many-flowered secund and curving spikes are often very handsome. In *S. Anthelmia*, the Demerara pinkroot, the flowers are white and pink, followed by purple fruit, and the two pairs of upper leaves are crowded in an apparent whorl. See *pinkroot*.

Spigelian (spi-jé'li-an), *a.* [*< Spiegel* (see *Spigelia*) + *-ian*]. In *anat.*, noting the lobulus Spigelii, one of the lobes of the liver.

spight¹, *n.* See *spight*.

spight², *n.* and *v.* An obsolete erroneous spelling of *spite*.

spignel, *n.* See *spicknel*.

spignet (spig'net), *n.* [A corruption of *spikenard*]. The American spikenard, *Aralia racemosa*. See *spikenard*.

spigot (spig'ot), *n.* [Early mod. E. also *spigot*, *spiggott*, *spiggotte*, *spygotte*, *spygote*, *< ME. spigot*, *spygott*, *spygott*, *speget*; obs. or dial. also *spicket*, *< ME. spykke*, *spykette*; appar. *< Ir. Gael. spicoid*, a spigot (= *W. ysbigod*, a spigot, spindle), dim. of *Ir. spice* = *W. ysbig*, a spike, *< L. spica*, *spicus*, a point, spike; see *spike*¹. The Celtic forms may be from the E.] A small peg or plug designed to be driven into a gimlet-hole in a cask through which, when open, the contained liquor is drawn off; hence, by extension, any plug fitting into a faucet used for drawing off liquor.

He runs down into the cellar, and takes the Spiggott. In the mean time all the Beer runs about the House. *Selden, Table-Talk*, p. 63.

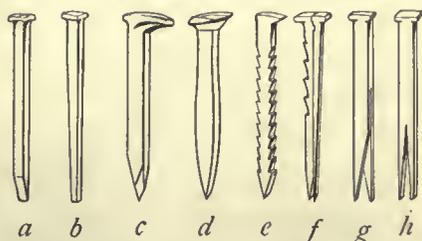

spigot-joint (spig'ot-joint), *n.* A pipe-joint made by tapering down the end of one piece and inserting it into a correspondingly widened opening in the end of another piece. Also called *faucet-joint*. *E. H. Knight*.

spigot-pot (spig'ot-pot), *n.* A vessel of earthenware or porcelain with a hole in the side, near the bottom, for the insertion of a spigot.

spigurnel, *n.* [*ML. spigurnellus*; origin obscure.] In *law*, a name formerly given to the sealer of the writs in chancery.

These Bohuna . . . were by inheritance for a good while the king's spigurnells—that is, the sealers of his writs. *Holland, tr. of Camden*, p. 312.

spike¹ (spik), *n.* [Early mod. E. also *spyke*; *< ME. spik* = *leel. spik* = *Sw. spik*, a spike, = *Ir. spice* = *W. ysbig*, a spike; cf. *MD. spijeker*, *D. spijker* = *MLG. hinder passage. See cut under *chevaux-de-frise*. (b) A sharp projecting point on the sole of a shoe, to prevent slipping, as on ice or soft wet ground. (c) The central boss of a shield or buckler when prolonged to a sharp point. Such a spike is sometimes a mere pointed umbo and sometimes a square or three-cornered steel blade screwed or bolted into the boss. (d) In *zool.*: (1) The antler of a young deer, when straight and without snag or tine; a spike-horn. (2) A young mackerel 6 or 7 inches long. (3) A spine, as of some animals. (e) A piece of hardened steel, with a soft point that can be clenched, used to plug up the vent of a cannon in order to render it useless to an enemy.

2. A large nail or pin, generally of iron. The larger forms of spikes, particularly railroad-spikes, are chisel-pointed, and have a head or fang projecting to one side to bite the rail. Spikes are also made split, barbed, grooved, and of other shapes. See cut in preceding column.

3. An ear, as of wheat or other grain.

Bote yf the seed that sowen is in the sloth sterue,
Shall neuere spir springen vp, ne *spik* on strawe curne.
Piers Plowman (C), xlii, 130.

4. In *bot.*, a flower-cluster or form of inflorescence in which the flowers are sessile (or apparently so) along an elongated, unbranched common axis, as in the well-known mullein and plantain. There are two modifications of the spike that have received distinct names, although not distinguishable by exact and constant characters. They are *spadix* and *catkin*. In the *Equisetaceae* a spike is an aggregation of sporophylls at the apex of a shoot. Compare *raceme*, and see cuts under *inflorescence*, *barley*, *papyrus*, and *Equisetaceae*.

Hence—5. A sprig of some plant in which the flowers form a spike or somewhat spike-like cluster: as, a *spike* of lavender.

The head of *Nardus* spreadeth into certain spikes or eares, whereby it hath a twofold use, both of spike and also of leaf; in which regard it is so famous. *Holland, tr. of Pliny*, xii, 12.

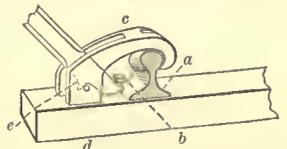

Within, a stag-horned sunsch grows,
Fern-leaved, with spikes of red.
Whittier, The Old Burying-Ground.

spike¹ (spik), *v. t.*; pret. and pp. *spiked*, ppr. *spiking*. [*< spike*¹, *n.*] 1. To fasten with spikes or long and large nails: as, to spike down the planks of a floor or a bridge.—2. To set with spikes; furnish with spikes.—3. To fix upon a spike.—4. To make sharp at the end. *Johnson*.—5. To plug up the vent of with a spike, as a cannon.—**Spiked looestrife**. See *looestrife*.

spike² (spik), *n.* [= *MD. spijcke*, *spiek*, *D. spijk*, *< OF. spicque*, *F. spic*, lavender; cf. *NL. Lavandula Spica*, spike-lavender; *< L. spica*, a spike; see *spike*¹. Cf. *aspic*².] Same as *spike-lavender*.—**Oil of spike**. See *oil of lavender*, under *lavender*².

spikebill (spik'bil), *n.* 1. A merganser, as the hooded merganser; a sawbill. See cut under *merganser*. *G. Trumbull*, 1888. [Michigan.]—2. The great marbled godwit, *Limosa fedoa*. *G. Trumbull*, 1888.

[New Jersey.]
spike-extractor (spik'eks-trak'tor), *n.* An apparatus for extracting spikes, as from a rail.

Spike-extractor. *a*, rail; *b*, spike to be extracted; *c*, fulcrum-piece hooked over the rail and supported on the sleeper; *d*, claw-lever, with a heel shown in dotted outline, which is passed through a slot in the fulcrum-piece.

spike-fish (spik-'fish), *n.* A kind of sailfish, *Histiophorus americanus*, so called from the long sharp snout. See *Histiophorus*, and cut under *sailfish*.

spike-grass (spik'grás), *n.* One of several American grasses, having conspicuous flower-spikelets. (a) *Diplachne fascicularis*. (b) *Distichlis maritima* (salt-grass). (c) The genus *Uniola*, especially *U. paniculata* (also called *sea* or *seaside oats*), a tall coarse grass with a dense heavy panicle, growing on sand-hills along the Atlantic coast southward.

spikehorn (spik'hörn), *n.* 1. The spike of a young deer.—2. A young male deer, when the antler is a mere spike.

spike-lavender (spik'lav'en-dér), *n.* A lavender-plant, *Lavandula Spica*. See *aspic*², and *oil of lavender* (under *lavender*²).

spikelet (spik'let), *n.* [*< spike*¹ + *-let*]. In *bot.*, a small or secondary spike: more especially applied to the spiked arrangements of two or more flowers of grasses, subtended by one or more glumes, and variously disposed around a common axis. See cuts under *Melicaceae*, *oat*, *orchard-grass*, *Poa*, *reed*¹, *rye*, and *Sorghum*.

spike-nail (spik'näl), *n.* A spike.

spikenard (spik'närd), *n.* [*< ME. spikenard*, *spikenarde*, *spykward*, *spikanard*, *< OF. spique-nard* (also simply *espice*, *spice*) = *Sp. espicanard*,

espica nardo = Pg. *spicanardo*, *espicanardo* = It. *spiganardo*, formerly *spigo nardo*, = MD. *spijk-nard* = MHG. *spicanarde*, *nardespicke*, G. *spicknard*, < L. *spica nardi*, 'a spike of nard' (ML. also *nardus spicatus*, 'spiked nard'): L. *spica*, spike; *nardi*, gen. of *nardus*, nard: see *spike* and *nard*.] 1. A plant, the source of a famous perfumed unguent of the ancients, now believed to be *Nardostachys jatamansi*, closely allied to valerian, found in the Himalayan region. This plant is known to have been used by the Hindus as a medicine and perfume from a very remote period, and is at present employed chiefly in hair-washes and ointments. The odor is heavy and peculiar, described as resembling that of a mixture of valerian and patchouli. The market drug consists of short pieces of the rootstock densely covered with fibers, the remains of leafstalks. Also *nard*.

Spikenard (*Nardostachys jatamansi*).

2. An aromatic ointment of ancient times, in which spikenard was the characteristic ingredient; nard. It was extremely costly.

There came a woman having so alabaster box of ointment of *spikenard*, very precious, and she brake the box, and poured it on his head. Mark xlv. 3.

3. A name given to various fragrant essential oils.—**American spikenard**, a much-branching herbaceous plant, *Aralia racemosa*, with a short thick rootstock more spiky than that of *A. nudicaulis*, the wild sarsaparilla, and, like that, used in domestic medicine in place of true sarsaparilla. The *A. nudicaulis* is sometimes named *small spikenard*, while *A. spinosa*, the angelica-tree, has been called *spikenard-tree*.—**Celtic spikenard**, *Valeriana Celtica* of the Alps, Apennines, etc.—**Cretan spikenard**, *Valeriana Phu*, an Asiatic plant, sometimes cultivated in Europe, but medicinally weaker than the official valerian.—**False spikenard**, an American plant, *Smilacina racemosa*, somewhat resembling the true (American) spikenard. Also *false Solomon's seal*.—**Indian spikenard**, the true spikenard. See def. 1.—**Ploverman's spikenard**, a European plant, *Invia Conyza*, so called from its fragrant root and from being confounded with a plant by some writers called *nardus rustica* or *clown's-nard*. **Prior**.—**Small spikenard**. See *American spikenard*.—**West Indian spikenard**, a fragrant weed, *Hyptis suaveolens*, sometimes cultivated for medicinal use.

spikenard-tree (spik' nard-trē), *n.* See *American spikenard*, under *spikenard*.

spikenel, *n.* An obsolete form of *spicknel*, *spicknel*.

spikenose (spik' nōz), *n.* The pike-perch, or wall-eyed pike, *Stizostedion vitreum*. See *cut* under *pike-perch*. [Lake Ontario.]

spike-oil (spik' oil), *n.* [= D. *spijkolie*; as *spike*² + *oil*.] The oil of spike. See *spike*², *lavender*².—**Spike-oil plant**, *Lavandula Spica*. See *lavender*².

spike-plank (spik' plangk), *n.* **Naut.**, a platform or bridge projecting across a vessel before the mizzenmast, to enable the ice-master to cross over and see ahead, and so pilot her clear of the ice: used in arctic voyages. *Admiral Smyth*.

spiker (spi' kēr), *n.* In *rail-laying*, a workman who drives the spikes.

spike-rush (spik' rush), *n.* See *Eleocharis*.

spike-shell (spik' shel), *n.* A pteropod of the genus *Styliola*.

spike-tackle (spik' tak' l), *n.* A tackle serving to hold a whale's carcass alongside the ship during flensing.

spiketail (spik' täl), *n.* Same as *piutail*, 1. [Illinois.]

spike-tailed (spik' tald), *a.* Having a spiked tail.—**Spike-tailed grouse**, the sharp-tailed, sprig-tailed, or pin-tailed grouse, *Pediceetes phasianellus* or *columbianus*. See *cut* under *Pediceetes*.

spike-team (spik' tēm), *n.* A team consisting of three horses or other draft-animals, two of which are at the pole while the third leads.

spiky (spi' ki), *a.* [*spike*¹ + *-y*.] 1. Having the shape of a spike; having a sharp point or points; spike-like. [Rare.]

Ranks of *spiky* maize
Rose like a host embattled.
Bryant, *The Fountain*.

2. Set with spikes; covered with spikes.
The *spiky* wheels through heaps of carnage tore.
Pope, *Iliad*, xx. 585.

spil, *n.* An obsolete form of *spill*².

Spilanthes (spi-lan' thēz), *n.* [NL. (Jacquin, 1763), said to be so called in allusion to the brown disk surrounded by yellow rays in the original species; < Gr. *σπίλος*, spot, + *ἄθος*, flower.] A genus of composite plants, of the tribe *Helianthoidæ* and subtribe *Verbesinææ*.

It is characterized by stalked and finally ovoid-conical heads with small flowers; the ray-flowers are fertile or absent; the style-branches are truncate and without the appendages common among related genera; the achenes are small, compressed, commonly ciliate, and without pappus, or bearing two or three very slender bristles. Over 40 species have been described, of which perhaps 20 are distinct. They are mainly natives of eastern and tropical America, with some species common in warmer parts of both hemispheres. Most of the species are much-branched annuals, smooth or slightly downy, bearing toothed opposite leaves, and long-stalked solitary heads with a yellow disk and yellow or white rays. *S. Aencella*, of the East India, has been called *alphabet-plant*. Its variety *oleacea* is the *Para cress*. Another species, *S. repens*, occurs in the southern United States.

spile¹ (spil), *n.* [*D. spijl*, a spile, bar, spar, = LG. *spile*, a bar, stake, club, bean-pole (> G. *spile* (obs.), *speiler*, a skewer); perhaps in part another form of *D. spil*, a pivot, axis, spindle, capstan, etc., a contracted form, = E. *spindle*: see *spindle*. Cf. *spill*², *spell*⁴. The Ir. *spile*, a wedge, is from E.] 1. A solid wooden plug used as a spigot.—2. A wooden or metal spout driven into a sugar-maple tree to conduct the sap or sugar-water to a pan or bucket placed beneath it; a tapping-gouge. [U. S.]—3. In *ship-building*, a small wooden pin used as a plug for a nail-hole.—4. A narrow-pointed wedge used in tubbing.—5. A pile: same as *pile*¹, 3.

R. Carew, *Survey of Cornwall*, fol. 31.

3. A slip or strip of wood or paper meant for use as a lamplighter. Paper spills are made of strips of paper rolled spirally in a long tapering form or folded lengthwise. Thin strips of dry wood are also used as spills.

What she pliqued herself upon, as arts in which she excelled, was making candle-lighters, or *spills* (as she preferred calling them), of colored paper, cut so as to resemble feathers, and knitting garters in a variety of dainty stitches.
Mrs. Gaskell, *Cranford*, xiv.

4. A small peg or pin for stopping a cask; a spilo: as, a vent-hole stopped with a *spill*.—

5. The spindle of a spinning-wheel. *Halliwel*. [Prov. Eng.]—6†. A trifling sum of money; a small fee.

The blshops who consecrated the ground were wont to have a *spill* or sportule from the credulous laity.
Ayliffe, *Parergon*.

spill² (spil), *v. t.* [*spill*², *n.*] To inlay, diversify, or piece out with spills, splinters, or chips; cover with small patches resembling spills. In the quotation it denotes inlaying with small pieces of ivory.

All the pillours of the one [temple] were gullt,
And all the others pavement were with ivory *spilt*.
Spenser, *F. Q.*, IV. x. 5.

spillan, **spillar** (spil' an, -ār), *n.* Same as *spill-er*².

spill-case (spil' kās), *n.* A small ornamental vase meant for the decoration of a mantel-piece, etc., and to hold spills or lamplighters. [Eng.]

spill-channel (spil' chan' el), *n.* A bayou or overflow-channel communicating with a river: used in India. See *spill-stream*. *Hunter*, *Statistics of Bengal*.

spiller¹ (spil' ēr), *n.* [*spill*¹ + *-er*.] One who spills or sheds: as, a *spiller* of blood.

spiller² (spil'ér), *n.* [Also *spillar*, *spiliard*, *spillan*, *spillet*; origin obscure.] 1. A trawl-line; a bultow. [West of Ireland.]—2. In the mackerel-fishery, a seine inserted into a larger seine to take out the fish, as over a rocky bottom where the larger seine cannot be hauled ashore. [Nova Scotia.]

spillet (spil'et), *n.* Same as *spiller*².
spillet-fishing (spil'et-fish'ing), *n.* Same as *spilliard-fishing*.

spill-good (spil'gud), *n.* [*spill*¹, *v.*, + *obj. good*.] A spendthrift. *Minsheu*.

spilliard (spil'yård), *n.* Same as *spiller*². [West of Ireland.]

spilliard-fishing (spil'yård-fish'ing), *n.* Fishing with a trawl-line.

spillikin (spil'i-kin), *n.* [Also *spilliken*, *spilikin* (and in pl. *spelicans*, *spelicans*); < MD. *spelleken*, a little pin, < *spelle*, a pin, splinter, + *dim. -ken*: see *spill*², *spell*⁴, and *-kin*.] 1. A long splinter of wood, bone, ivory, or the like, such as is used in playing some games, as jackstraws.

The kitchen fire-irons were in exactly the same position against the back door as when Martha and I had skillfully piled them up like *spillikins*, ready to fall with an awful clatter if only a cat had touched the outside panels.

Mrs. Gaskell, Cranford, x.

2. *pl.* A game played with such pegs, pins, or splinters, as push-pin or jackstraws.—3. A small peg used in keeping count in some games, as a cribbage.

spilling-line (spil'ing-lin), *n.* *Naut.*, a rope occasionally fitted to a square sail in stormy weather, so as to spill the sail, in order that it may be reefed or furled more easily.

Reef-tackles were rove to the courses, and *spilling-lines* to the topsails. *R. H. Dana, Jr.*, Before the Mast, p. 347.

spill-stream (spil'strēm), *n.* In India, a stream formed by the overflow of water from a river; a bayou. See *spill-channel*.

The Bhagirathi, although for centuries a mere *spill-stream* from the parent Ganges, is still called the Ganges by the villagers along its course.

Nineteenth Century, XXIII. 43.

spill-time (spil'tim), *n.* [ME. *spille-tyme*; < *spill*¹, *v.*, + *obj. time*.] A waste of time; a time-killer; an idler.

A splendour that spende mot other a *spille-tyme*,
Other beggest thy bytyue a-boute at menne haches.
Piers Plouman (C), vi. 28.

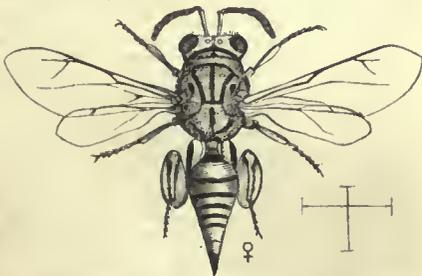

spill-trough (spil'trōf), *n.* In *brass-founding*, a trough against which the inclined flask rests while the metal is poured from the crucible, and which catches metal that may be spilled.

spillway (spil'wā), *n.* A passage for surplus water from a dam.

In wet weather the water in the two reservoirs flows away through the *spillways* or waste weirs beside the dams, and runs down the river into Croton Lake.

The Century, XXXIX. 207.

Spilochalcis (spi-lō-kal'sis), *n.* [NL. (Thomson, 1875), < Gr. *σπίλος*, a spot, speck, + NL. *Chalcis*: see *Chalcis*¹.] A genus of parasitic hymenopterous insects, of the family *Chalcididae*, containing some of the largest species. The hind thighs are greatly enlarged, the abdomen has a long petiole, the thorax is maculose, and the middle tibiae have spurs. The genus is very widely distributed, and the species destroy many kinds of insects. Some of the smaller

Spilochalcis marie, female. (Cross shows natural size.)

ones are secondary parasites. *S. marie* is a common parasite of the large native American silkworms, such as the polyphemus and cecropia.

Spilogale (spi-log'a-lē), *n.* [NL., < Gr. *σπίλος*, a spot, + *γαλή*, contr. of *γαλήνη*, a weasel.] A genus of American skunks, differing from *Mephitis* in certain cranial characters. The skull is depressed, with highly arched zygomatica, well-developed postorbital and slight mastoid processes, and peculiarly bullous periotic region. *S. putorius*, formerly *Mephitis bicolor*, is the little striped or spotted skunk of the United States. It is black or blackish, with numerous white stripes and spots in endless diversity of detail. The length is scarcely 12 inches without the tail, which is shorter than the rest of the animal. The genus was named by J. E. Gray in 1865. See cut in next column.

Little Striped Skunk (*Spilogale putorius*).

Spilornis (spi-lōr'nis), *n.* [NL. (G. R. Gray, 1840), < Gr. *σπίλος*, a spot, + *ὄρνις*, a bird.] A genus of large spotted and crested hawks, of the family *Falconidae*, having the tarsi bare below, the nostrils oval and perpendicular, and the crest-feathers rounded. There are several species of India, and thence through the Indo-Malayan region to Celebes and the Sulu and Philippine Islands. The best-

Crested Serpent-eagle, or Cheela (*Spilornis cheela*).

known is the cheela, *S. cheela*, of India. The bacha, *S. bacha*, inhabits Java, Sumatra, and Malacca; *S. pallidus* is found in Borneo, *S. rufipectus* in Celebes, *S. sulensis* in the Sulu Islands, and *S. holospilus* in the Philippines.

spilosite (spi-lō-sit), *n.* [Irreg. < Gr. *σπίλος*, a spot, + *-ite*².] A name given by Zincken to a rock occurring in the Harz, near the borders of the granitic mass of the Ramberg, apparently the result of contact metamorphism of the slate in the vicinity of granite or diabase. The most prominent visible feature of this change in the slate is the occurrence of spots; hence the rock has been called by the Germans *Fleckenschiefer*, while rocks of a similar origin, but striped instead of spotted, are known as *Bandschiefer*. Similar phenomena of contact metamorphism have been observed in other regions and described by various authors, and such altered slates are called by English geologists *spotted schists*, *chaistolite schists*, and *andalusite schists*, etc.

Spilotes (spi-lō'tēz), *n.* [NL. (Wagler, 1830), as if < Gr. *σπίλωτης*, < *σπίλων*, stain, < *σπίλος*, a spot.] A genus of colubrine serpents, having smooth equal teeth, one median dorsal row of scales, internasals not confluent with nasals, two prefrontals, two nasals, one preocular, the rostral not produced, and the anal scute entire. *S. couperi* is a large harmless snake of the South Atlantic and Gulf States, sometimes 6 or 8 feet long, of a black color shading into yellow below, and known as the *indigo*- or *gopher-snake*. This genus was called *Georgia* by Baird and Girard in 1853.

spilt (spilt), *n.* A preterit and past participle of *spill*¹.

spilter (spil'tēr), *n.* Same as *speller*³.
spilth (spilth), *n.* [*spill*¹ + *-th*³. Cf. *tilth*.] That which is spilled; that which is poured out lavishly.

Our vaults have wept
With drunken *spilth* of wine.
Shak., T. of A., II. 2. 169.
Burned like a *spilth* of light
Out of the crashing of a myriad stars.
Browning, Sordello.

spilus (spi'lus), *n.* [NL., < Gr. *σπίλος*, a spot, blemish.] 1. *Pl.* *spili* (-li). In *anat.* and *pathol.*, a spot or discoloration; a nevus or birthmark.—2. [*cap.*] In *entom.*, a genus of elaterid beetles, confined to South America. *Candèze*, 1859.

spin (spin), *v.*; pret. *spun* (formerly also *span*), pp. *spun*, ppr. *spinning*. [*ME.* *spinnen*, *spynnen* (pret. *span*, pl. *sponne*, pp. *sponnen*), < AS. *spinnan* (pret. *spann*, pp. *spunnen*) = D. *spinnen* = MLG. LG. *spinnen* = OHG. *spinnan*, MHG. G. *spinnen* = Icel. Sw. *spinna* = Dan. *spinde* = Goth. *spinnan*, spin; prob. related to *span* (AS. *spannan*, etc.), < Teut. √ *span*, draw out: see *span*¹. Hence ult. *spinner*, *spindle*, *spinster*, *spider*.] I. *trans.* 1. To draw out and twist into

threads, either by the hand or by machinery: as, to *spin* wool, cotton, or flax.

All the yarn she [Penelope] *spun* in Ulysses' absence did but fill Ithaca full of moths. *Shak.*, Cor., I. 3. 93.

For plain truths lose much of their weight when they are rarity'd into subtiles, and their strength is impaired when they are *spun* into too fine a thread.

Stillingfleet, Sermons, I. iv.

The number of strands of gut *spun* into a cord varies with the thickness of catgut required.

Workshop Receipts, 2d ser., p. 320.

2. To make, fabricate, or form by drawing out and twisting the materials of: as, to *spin* a thread or a web; to *spin* glass.

O fatal austren! which, or any cloth
Me shapen was, my desteyne me *sponne*.
Chaucer, Troilus, III. 734.

She, them saluting, there by them sate still,
Beholding how the thrills of life they *span*.
Spenser, F. Q., IV. II. 49.

What Spinster Witch could *spin* such Thread
He nothing knew. *Congreve*, An Impossible Thing.

There is a Wheel that's turn'd by Humane power, which
Spins Ten Thousand Yards of Glass in less than half an hour.
Advertisement quoted in *Ashton's Social Life* (In Reign of Queen Anne, I. 290).

3. To form by the extrusion in long slender filaments or threads of viscous matter which hardens in air: said of the spider, the silkworm, and other insects: as, to *spin* silk or gossamer; to *spin* a web or cocoon.—4. Figuratively, to fabricate or produce in a manner analogous to the drawing out and twisting of wool or flax into threads, or to the processes of the spider or the silkworm: sometimes with *out*.

When they [letters] are *spun* out of nothing, they are nothing, or but apparitions and ghosts, with such hollow sounds as he that hears them knows not what they said.

Donne, Letters, xlvii.

Those accidents of time and place which obliged Greece to *spin* most of her speculations, like a spider, out of her own bowels.

De Quincey, Style, iv.

5. To whirl rapidly; cause to turn rapidly on its own axis by twirling: as, to *spin* a top; to *spin* a coin on a table.

If the ball were *spun* like a top by the two fingers and thumb, it would turn in the way indicated by the arrow in the diagram.

St. Nicholas, XVII. 826.

6. To fish with a swivel or spoon-bait: as, to *spin* the upper pool.—7. In *sheet-metal work*, to form in a lathe, as a disk of sheet-metal, into a globe, eup, vase, or like form. The disk is fitted to the live spindle, and is pressed and bent by tools of various forms. The process is peculiarly suitable to plated ware, as the thin coating of silver is not broken or disturbed by it. Called in French *repoussé sur tour*.

8. To reject at an examination; "send spinning." [Slang.]

"When must you go, Jerry?" "Are you to join directly, or will they give you leave?" "Don't you funk being *spun*?" "Is it a good regiment? How jolly to dine at mess every day!"

Whyte Melville, White Rose, I. x.

Spun glass, silk. See the nouns.—**Spun gold**, gold thread prepared for weaving in any manner; especially, that prepared by winding a very thin and narrow flat ribbon of gold around a thread of some other material.—**Spun silver**, silver thread for weaving. Compare *spun gold*.—**Spun yarn** (*naut.*), a line or cord formed of rope-yarns twisted together, used for serving ropes, bending sails, etc.—**To spin a yarn**, to tell a long story; originally a seamen's phrase. [*Colloq.*]—**To spin hay** (*milit.*), to twist hay into ropes for convenient carriage.—**To spin out**, to draw out tediously; prolong by discussion, delays, wordiness, or the like; protract: as, to *spin out* the proceedings beyond all patience.

By one delay after another, they *spin out* their whole lives.

Sir R. L'Estrange.

Do you mean that the story is tediously *spun out*?

Sheridan, The Critic, I. 1.

He endeavoured, however, to gain further time by *spinning out* the negotiation.

Prescott, Ferd. and Isa., II. 13.

To spin street-yarn, to gad abroad; spend much time in the streets. [Slang. New Eng.]

II. *intrans.* 1. To form threads by drawing out and twisting the fiber of wool, cotton, flax, and the like, especially with the distaff and spindle, with the spinning-wheel, or with spinning-machinery.

Deceite wepyng, *spynnyng*, God bath yeve
To women kyndely.

Chaucer, Prolog. to Wife of Bath's Tale, l. 401.

When Adam dalve, and Eve *span*,

Who was then a gentleman?

Bp. Pilkington, Works (Parker Soc.), p. 125.

2. To form threads out of a viscous fluid, as a spider or silkworm.—3. To revolve rapidly; whirl, as a top or a spindle.

Let the great world *spin* for ever down the ringng grooves of change.

Tennyson, Locksley Hall.

4. To issue in a thread or small lock; spirt.

Make incision in their hides,
That their hot blood may *spin* in English eyes.

Shak., Hen. V., IV. 2. 10.

The sharp streams of milk spin and foamed into the pail below. R. T. Cooke, Somebody's Neighbors, p. 84. 5. To go or move rapidly; go fast: as, to spin along the road. [Colloq.]

While it [money] lasts, make it spin.

W. Collins, Hide and Seek, ii. 4.

The locomotive spins along no less merrily because ten carloads of rascals may be profiting by its speed. S. Lanier, The English Novel, p. 3.

6. To use a spinner or spinning-spoon; troll: as, to spin for trout.—7. To be made to revolve, as a minnow on the trolling-spoon. The minnow is fastened on a gang of small hooks that are thrust into its back and sides so bend it that it may turn round and round when dragged through the water.—Spinning dervish. See dervish.

spin (spīn), n. [spin, v.] 1. A rapid revolving or whirling motion, as that of a top on its axis; a rapid twirl: as, to give a coin a spin.

She found Nicholas busily engaged in makng a penny spin on the dresser, for the amusement of three little children. . . He, as well as they, was aming at a good long spin. Mrs. Gaskell, North and South, xxxix.

2. A continued rapid motion or action of any kind; a spirited dash or run; a single effort of high speed, as in running a race; a spurt. [Colloq.]—3. In math., a rotation-velocity considered as represented by a line, the axis of rotation, and a length marked upon that line proportional to the number of turns per unit of time. W. K. Clifford.

spina (spī'nā), n.; pl. spinæ (-nē). [L. spina, a thorn, prickle, the backbone: see spine.] 1. In zool. and anat.: (a) A spine, in any sense. (b) The spine, or spinal column; the backbone: more fully called spina dorsalis or spina dorsi, also columna spinalis.—2. [cap.] [NL.] In ornith., a genus of fringilline birds, the type of which is S. lesbia of southern Europe. Kaup, 1829. Also called Buscartia. See Spinus.—3. In Kom. antiq., a barrier dividing the hippodrome longitudinally, about which the racers turned.—4. One of the quills of a spinet or similar instrument.—Erector spinæ, multifidus spinæ, rotatores spinæ. See erector, multifidus, rotator.—Spina angularis. See spine of the sphenoid, under spine.—Spina bifida, a congenital gap in the posterior wall of the spinal canal, through which protrudes a sac, formed in hydrorachis externa of meninges, and in hydrorachis interna of these with a nervous lining. This forms a tumor in the middle line of the back.—Spina dorsalis, spina dorsi, the vertebral column.—Spina frontalis. See nasal spine (a), under nasal.—Spina helictis, the spinous process of the helix of the ear.—Spina mentalis, one of the mental or genal tubercles. See mental², genal².

spinaceous (spī-nā'shius), a. [L. Spinacia + -ous (accem. to -aceous).] Of, pertaining to, or of the nature of spinach, or of the class of plants to which it belongs.

spinach, spinage (spī'nāj), n. [(a) According to the present pron., prop. spelled spinage (early mod. E. also spinage), this being an altered form of spinach (early mod. E. spinache); = MD. spinagie, spinazi, D. spinazie = LG. spinacie, OF. spinache, espinache, espinaque, espinaque, espinoche, espinoche, etc., = Sp. espinauca = Cat. espinauc = It. spinace, also spinacchia, < ML. spinacia, spinacium, also spinacius, spinachia, spinachium, spinathia, etc., after Rom. (NL. spinacia), spinach; cf. (b) Pr. espinar, OF. espinars, espinard, espinar, F. épinard, < ML. *spinarius, *spinarium, spinach; (c) G. Dan. spinat = Sw. spenat, spinat, < ML. *spinatum, spinach; (d) Pg. espinafre, spinach (cf. L. spinifer, spine-bearing); so called with ref. to the prickly fruit; variously formed, with some confusions, < L. spina, a thorn: see spine.] 1. A chenopodiaceous garden vegetable of the genus Spinacia, producing thick succulent leaves, which, when boiled and seasoned, form a pleasant and wholesome, though not highly flavored dish. There is commonly said to be but a single species, S. oleracea; but S. glabra, usually regarded as a variety, is now recognized as distinct, while there are two other wild species. The leaves of S. oleracea are sagittate, undivided, and prickly; those of S. glabra are larger, rounded at the base, and smooth. These are respectively the prickly-leaved and round-leaved spinach. There are several cultivated varieties of each, one of which, with wrinkled leaves like a Savoy cabbage, is the Savoy or lettuce-leaved spinach. All the species are Asiatic; the cultivated plant was first introduced into Europe by the Arabs by way of Spain.

2. One of several other plants affording a dish like spinach. See phrases below.—Australian spinach, a species of goosefoot, Chenopodium auricomum, a recent substitute for spinach; also, Tetragonia implexicoma, the Victorian bower-spinach, a trailing and climbing plant festooning bushes, its leaves covered with transparent vesicles as in the ice-plant.—Indian spinach. Same as Malabar nightshade. See nightshade.—Mountain spinach. See mountain-spinach.—New Zealand spinach, a decumbent or prostrate plant, Tetragonia expansa, found in New Zealand, Australia, and Tasmania, and also in Japan and southern South America. It has numerous rhom-

boid thick and succulent deep-green leaves.—Strawberry spinach. Same as strawberry-bite.—Wild spinach, a name of several plants locally used as pot-herbs, namely Chenopodium Bonus-Henricus and C. album, Beta maritima (the wild beet), and Campanula latifolia. [Prov. Eng.]

Spinachia (spī-nā'ki-ä), n. [NL. (Cuvier, 1817), < L. spina, a thorn, prickle, spine: see spine, and cf. spinach.] In ichth., a genus of marine gasterosteids. S. vulgaris is the common sea-stickleback of northern Europe.

Spinacia (spī-nā'si-ä), n. [NL. (Tournefort, 1700), < ML. spinacia, spinach: see spinach.] A genus of apetalous plants, of the order Chenopodiaceæ and tribe Atripliceæ. It is characterized by bractless and commonly dioecious flowers, the pistillate with a two- to four-toothed roundish perianth, its tube hardened and closed in fruit, covering the utricle and its single erect turgid seed. There are 4 species, all Oriental (for which see spinach). They are erect annuals, with alternate stalked leaves which are entire or minutely toothed. The flowers are borne in glomerules, the fertile usually axillary, the staminate forming interrupted spikes.

Spinacidae (spī-nās'i-dē), n. pl. [NL., < Spinax (-ac-) + -idae.] A family of anarthrous sharks, typified by the genus Spinax; the dogfishes. There are 6 or more genera and about 20 species of rather small sharks, chiefly of the Atlantic.—Also called Acanthiidae, Centriniidae, and Spinacæ.

spinacine (spī'nā-sin), a. [L. Spinax (-ac-) + -ine.] Of or pertaining to the Spinacidae.

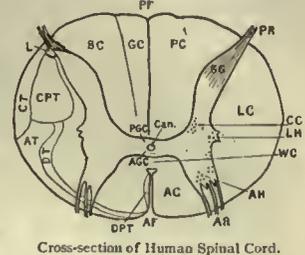

spinacoid (spī'nā-koid), a. and n. [L. Spinax (-ac-) + -oid.] I. a. Resembling or related to the dogfish; of or pertaining to the Spinacidae.

II. n. A member of the Spinacidae; a dogfish.

spinage, n. See spinach.

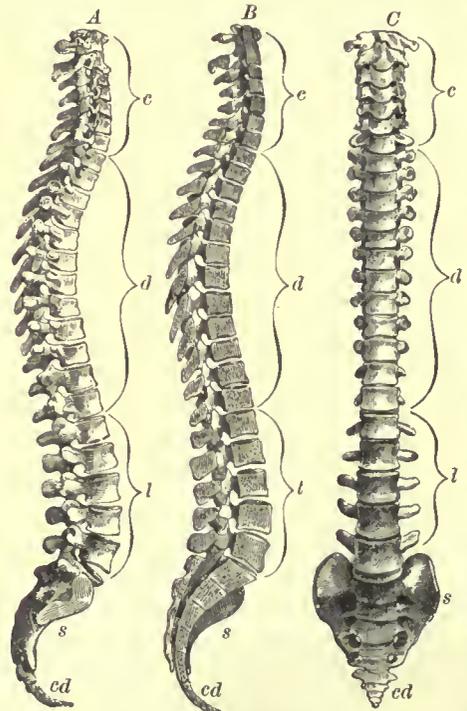

spinal (spī'nal), a. [= F. spinal = Sp. espinal = Pg. espinal = It. spinale, < LL. spinalis, of or pertaining to a thorn or the spine, < L. spina, a thorn, prickle, spine, the spine or backbone: see spine.] In anat.: (a) Of or pertaining to the backbone, spine, or spinal column; rachidian; vertebral: as, spinal arteries, bones, muscles, nerves; spinal curvature; a spinal complaint. (b) Pertaining to a spine or spinous process of bone; spinous: as, the spinal point (the base of the nasal spine, or subnasal point); specifically used in craniometry. [Rare.]—Accessory spinal nerve, or spinal accessory. Same as accessorius (b).—Acute, atrophic, and spastic spinal paralysis. See paralysis.—Spinal arteries, numerous branches, especially of the vertebral artery, which supply the spinal cord.—Spinal bulb, the medulla oblongata.—Spinal canal. See canal.—Spinal column, the spine or backbone; the vertebral column or series of vertebrae, extending from the head to the end of the tail, forming the morphological axis of the body of every vertebrate. In man the bones composing the spinal column are normally thirty-three—seven cervical, twelve dorsal or thoracic, five lumbar, five sacral, and four coccygeal. These form a flexuous and

sacral. Twenty-four of its bones are individually movable. The total length averages 26 or 27 inches. See vertebra, and cuts under backbone and spine.—Spinal cord, the main neural axis of every vertebrate, exclusive of the brain; the myelon, or the neuron without the encephalon; the spinal marrow, or nervous cord which extends in the spinal canal from the brain for a varying distance in different animals, and gives off the series of spinal nerves in pairs. The cord is directly continuous with the brain in all cranial vertebrates, and with the brain, constitutes the neuron, or cerebrospinal axis, developed from an involution of epiblast in connection with a notochord (see cut under protovertebra). The cord is primitively tubular, and may retain, in the adult, traces of its cells (see rhombocœlia, comparable to the cells of the brain; but it generally solidifies, and also becomes fluted, or presents several parallel columns, from between certain of which the spinal nerves emerge. In man the cord is solid and subcylindrical, and extends in the spinal canal from the foramen magnum, where it is continuous with the oblongata, to the first or second lumbar vertebra. It gives off the spinal nerves, and may be regarded as made up of a series of segments, from each of which springs a pair of nerves; it is divided into cervical, thoracic, lumbar, sacral, and coccygeal regions, corresponding to the nerves and not to the adjacent vertebrae. There is an enlargement where the nerves from the arms come in (the cervical enlargement), and one where those from the legs come in (the lumbar enlargement). A cross-section of the cord exhibits a central H-shaped column of gray substance incased in white. (See figure.) The tracts of different functions are exhibited on one side of the cut; they are not distinguished in the adult healthy cord, but differ from one another in certain periods of early development, and may be marked out by secondary degenerations. The cord is a center for certain reflex actions, and a collection of pathways to and from the brain. The reflex centers have been located as follows: scapular, 5 C. to 1 Th.; epigastric, 4 Th. to 7 Th.; abdominal, 8 Th. to 1 L.; cremasteric, 1 L. to 3 L.; patellar, 2 L. to 4 L.; cystic and sexual, 2 L. to 4 L.; rectal, 4 L. to 2 S.; gluteal, 4 L. to 5 L.; Achilles tendon, 5 L. to 1 S.; plantar, 1 S. to 3 S. See also cuts under brain, cell, Petromyzontidae, and Pharyngobranchii.—Spinal epilepsy, muscle-clonus, spontaneous or due to assuming some ordinary position of the legs, the result of increased myotatic irritability, as in spastic paralysis.—Spinal foramina, the intervertebral foramina.—Spinal ganglia. See ganglion.—Spinal marrow. Same as spinal cord.—Spinal muscles, the muscles proper of the spinal column, which lie longitudinally along the vertebrae, especially the epaxial muscles of the back, constituting what are known in human anatomy as the third, fourth, and fifth layers of muscles of the back (the so-called first and second "layers" of human anatomy being not axial, but appendicular). One of these is called spinalis.—Spinal nerves, the numerous pairs of nerves which arise from the spinal cord and emerge from the intervertebral foramina. In the higher vertebrates spinal nerves originate by two roots from opposite sides of that section of the spinal cord to which they respectively pertain—a posterior, sensory, or ganglionated root, and an anterior, motor, or non-ganglionated root, which usually unite in one sensorimotor trunk before emergence from the intervertebral foramina, and then as a rule divide into two main trunks, one epaxial and the other hypaxial. The number of spinal nerves varies within wide limits, and bears no fixed relation to the length of the spinal cord, which latter may end high in the dorsal region, yet give off a leash of nerves (see cauda equina, under cauda) which emerge from successive intervertebral foramina as far as the coccygeal region. The spinal nerves form numerous and intricate connections with the nerves of the ganglionic system. Their epaxial trunks are always few and small in comparison with the size, number, and extent of the ramifications of the hypaxial trunks, which latter usually supply all the appendicular and most of the axial parts of the body.—Spinal reflexes. See reflex.—Spinal veins, the numerous veins and venous plexuses in and on the spinal column, carrying off blood from the bones and included structures. In man these veins are grouped and named in four sets. See vena.

Cross-section of Human Spinal Cord.

AC, anterior column; AF, anterior fissure; ACC, anterior gray commissure; AH, anterior horn of gray matter; AN, anterior roots; AT, ascending anterolateral tract, or tract of Gowers; BC, postero-external column, or column of Burdach; Can., central canal; CC, Clarke's column; CPT, crossed pyramidal tract; CT, cerebellar tract; DPT, direct or uncrossed pyramidal tract; DT, anterolateral descending tract; GC, posteromedian column, or column of Goll; L, Lissauer's tract; LC, lateral column; LH, lateral horn or intermedialateral tract of gray matter with contained ganglion-cells; PC, posterior column; PF, posterior fissure; PGC, posterior gray commissure; PR, posterior root; SG, substantia gelatinosa; WC, anterior white commissure.

Human Spinal Column.

A, side view; B, same, in median sagittal section; C, front view; c, seven cervicals; d, twelve dorsals; l, five lumbar; s, five sacral, fused in a sacrum; cd, four caudals or coccygeals, forming a coccyx.

spinalis (spī-nā'lis), n.; pl. spiniales (-lēs). [NL. (sc. musculus), < LL. spinalis, pertaining to a thorn: see spinal.] In anat., a series of muscular slips, derived from the longissimus dorsi, which pass between and connect the spinous processes of vertebrae: usually divided into the spinalis dorsi and spinalis colli, according to its relation with the back and the neck respectively.

spinate (spī'nāt), a. [NL. spinatus, < L. spina, spine: see spine. Cf. spinach (d).] Covered with spines or spine-like processes.

Spinax (spī'naks), n. [NL. (Cuvier, 1817), < Gr. σπινα or σπιν, a fish so called.] A genus of dogfishes, giving name to the family Spinacidae, and

represented by *S. niger* or *spinax*, a small black shark of Europe.

Spindalis (spin'dā-lis), *n.* [NL. (Jardine and Selby, 1836); origin unknown.] A genus of thick-billed tanagers, of the family *Tanagridae*, peculiar to the Antillean region. They have a comparatively long bill, ascending gony, and swollen upper mandible; in the male the coloration is brilliant orange varied with black and white. There are 6 species, *S. nigricapilla*, *portoricensis*, *multicolor*, *pretrii*, *benedicti*, and *zeta*, respectively inhabiting Jamaica, Porto Rico, San Domingo, Cuba, Cozumel Island (off the Yucatan coast), and the Bahamas. The first-named builds a cup-shaped nest in trees or shrubs, and lays spotted eggs, and the others are probably similar in this respect. See cut under *casheo-bird*.

spindle (spin'dl), *n.* [Also dial. *spinnel*; < ME. *spindle*, *spyndle*, *spindel*, *spyndel*, *spyndelle*, *spyndyl*, *spyndylte*, < AS. *spindole*, *spindel*, earlier *spinel*, *spinnil*, *spinnil* (dat. *spincle*, *spincle*) (= MD. *spille* (by assimilation for **spincle*), D. *spil* = OHG. *spinnela*, *spinnilla*, *spinnala*, MHG. *spincule*, *spinnel*, G. *spindel* (also *spille*, < D.) = Sw. Dan. *spindel*), a spindle, < *spinnan*, spin: see *spin*. Cf. *spill*².] 1. (a) In *hand-spinning*, a small bar, usually of wood, hung to the end of the thread as it is first drawn from the mass of fiber on the distaff. By rotating the spindle, the spinner twists the thread, and as the thread is spun it is wound upon the spindle.

Sing to those that hold the vital shears,
And turn the adamantine spindle round,
On which the fate of gods and men is wound.

Milton, *Arcades*, l. 66.

(b) The pin which is used in spinning-wheels for twisting the thread, and on which the thread, when twisted, is wound. See cut under *spinning-wheel*. (c) One of the skewers or axes of a spinning-machine upon which a bobbin is placed to wind the yarn as it is spun. See cut under *spinning-jenny*.—2. Any slender pointed rod or pin which turns round, or on which anything turns. (a) A small axle or axis, in contradistinction to a *shaft* or large axle, as the arbor or mandrel in a lathe; as, the *spindle* of a vane; the *spindle* of the fusee of a watch. See *dead-spindle*, *live-spindle*. (b) A vertical shaft supporting the upper stone or runner of a pair in a flour-mill. See cut under *mill-spindle*. (c) In vehicles, the tapering end or arm on the end of an axle-tree. (d) A small shaft which passes through a door-lock, and upon which the knobs or handles are fitted. When it is turned it withdraws the latch. (e) In *ship-building*: (1) The upper main piece of a made mast. (2) An iron axle fitted into a block of wood, which is fixed securely between two of the ship's beams, and upon which the capstan turns. (f) In *foundry*, the pin on which the pattern of a mold is formed. (g) In *building*, same as *newell*. (h) In *cabinet-making*, a short turned part, especially the turned or circular part of a baluster, stair-rail, etc.

3. Something having the form of a spindle (sense 1); a fusiform object. (a) The grip of a sword. (b) A pine-needle or leaf. [U. S.]

We went into camp in a magnificent grove of pines. The roots of the trees are buried in the *spindles* and burrs which have fallen undisturbed for centuries.

G. W. Nichols, *Story of the Great March*, xxii.

(c) The roll of not yet unfolded leaves on a growing plant of Indian corn.

Its (the spindle-worm's) ravages generally begin while the cornstalk is young, and before the *spindle* rises much above the tuft of leaves in which it is embosomed.

Harris, *Insects Injurious to Plants*.

(d) In *conch.*, a spindle-shell. (e) In *anat.*, a fusiform part or organ. (1) A spindle-cell. (2) The inner segment of a rod or cone of the bacillary layer of the retina. See cut under *retina*. Huxley, *Crayfish*, p. 121. (f) In *embryol.*, one of the fusiform figures produced by chromatin fibers in the process of karyokinesis. *Amer. Nat.*, XXIII, 933.

4. In *geom.*, a solid generated by the revolution of the arc of a curve-line about its chord, in opposition to a *conoid*, which is a solid generated by the revolution of a curve about its axis. The spindle is denominated *circular*, *elliptic*, *hyperbolic*, or *parabolic*, according to the figure of its generating curve. 5. A measure of yarn: in cotton a *spindle* of 18 hanks is 15,120 yards; in linen a *spindle* of 48 cuts is 14,400 yards.—6. A long slender stalk.

The *spindles* must be tied up, and, as they grow in height, rods set by them, lest by their bending they should break.

Mortimer.

7. Something very thin and slender.

I am fall'n awy to nothing, to a *spindle*.

Fletcher, *Women Pleas'd*, iv. 3.

Ring-spindle, a spindle which carries a traveling ring.—**Spindle side of the house**, the female side. See *spear-side*.

spindle (spin'dl), *v. i.*; pret. and pp. *spindled*, ppr. *spindling*. [*Spindle*, *n.*] To shoot or grow in a long, slender stalk or body.

When the flowers begin to *spindle*, all but one or two of the biggest at each root should be nipped off. Mortimer.

spindle-cataract (spin'dl-kat'ā-rakt), *n.* A form of cataract characterized by a spindle-shaped opacity extending from the posterior surface of the anterior part of the capsule to the anterior surface of the posterior part of the

capsule, with a central dilatation. Commonly called *fusiform cataract*.

spindle-cell (spin'dl-sel), *n.* A spindle-shaped cell; a fusiform cell.—**Spindle-cell layer**, the deepest layer of the cerebral cortex, containing many fusiform with a few angular cells.—**Spindle-cell sarcoma**. See *spindle-celled sarcoma*, under *sarcoma*.

spindle-celled (spin'dl-seld), *a.* Made up of or containing spindle-shaped cells.—**Spindle-celled sarcoma**. See *sarcoma*.

spindle-legged (spin'dl-legd), *a.* Having long, thin legs; spindle-shanked.

A pale, sickly, *spindle-legged* generation of valetudinarians.

Addison, *Tatler*, No. 148.

spindle-legs (spin'dl-legz), *n. pl.* Long, slim legs; hence, a tall, thin person with such legs or shanks: used humorously or in contempt.

spindle-shanked (spin'dl-shangkt), *a.* Same as *spindle-legged*.

spindle-shanks (spin'dl-shangks), *n. pl.* Same as *spindle-legs*.

A Weazel-faced cross old Gentleman with *Spindle-Shanks*.

Steele, *Tender Husband*, i. 1.

spindle-shaped (spin'dl-shāpt), *a.* Circular in cross-section and tapering from the middle to each end; fusiform; formed like a spindle.

spindle-shell (spin'dl-shel), *n.* In *conch.*, a spindle-shaped shell; a spindle. (a) A shell of the genus *Fusus* in some of its applications, as *F. antiquus*, the common spindle or red-whelk, also called *buckie* or *roaring buckie*. See cuts under *Fusus* and *Siphonostoma*, 2. (b) A spindle-stromb. (c) A gastropod of the family *Muricidae* and genus *Chrysodomus*, having a spindle-like or fusiform shape and the canal slightly produced. The species inhabit chiefly the northern cold seas. See cut under *reverse*.

spindle-step (spin'dl-step), *n.* In mill- and spinning-spindles, the lower bearing of an upright spindle. E. H. Knight.

spindle-stromb (spin'dl-stromb), *n.* A gastropod of the family *Strombidae* and genus *Rostellaria*, having a spindle-like or fusiform shell with a long spire, and also a long anterior canal. The species inhabit the tropical Pacific and Indian oceans. See cut under *Rostellaria*.

spindletail (spin'dl-tāl), *n.* The pin-tailed duck, *Dafila acuta*. See *pin-tail*, 1. [Local, U. S.]

spindle-tree (spin'dl-trē), *n.* A European shrub or small tree, *Euonymus Europæa* (*E. vulgaris*), growing in hedge-rows, on borders of woods, etc. It is so called from the use of its hard fine-grained wood in making spindles, and other uses have given it the names *prick-timber*, *skewer-wood*, and *pegwood*. It is one of the dogwoods. The name is carried over to the American *E. atropurpurea*, the wahoo or burning-bush, and to the Japanese *E. japonica*; it is also extended to the genus, and even to the order (*Celastrineæ*).

spindle-valve (spin'dl-valv), *n.* A valve having an axial guide-stem. E. H. Knight.

spindle-whorl (spin'dl-hwrl), *n.* See *whorl*.

spindle-worm (spin'dl-wrm), *n.* The larva of the noctuid moth *Achatodes* (or *Gortyna*) *zeæ*: so called because it burrows into the spindle of Indian corn. See *spindle*, *n.*, 3 (e). [Local, U. S.]

spindling (spind'ling), *a.* and *n.* [*Spindle* + *-ing*².] 1. *a.* Long and slender; disproportionately slim or spindle-like.

II. *n.* A spindling or disproportionately long and slim person or thing; a slender shoot. [Rare.]

Half-conscious of the garden-squirt,

The *spindlings* leek unhappy.

Tennyson, *Amphion*.

spindly (spind'li), *a.* [*Spindle* + *-y*¹.] Spindle-like; disproportionately long and slender or slim. [Colloq.]

The effect of all this may be easily imagined—a *spindly* growth of rootless ideas. *Pop. Sci. Mo.*, XXXVI, 556.

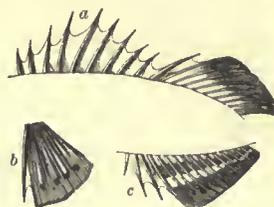

spindrift (spin'drift), *n.* [A var. (simulating *spin*, go rapidly] of *spoon-drift*, q. v.] *Naut.*, the spray of salt water blown along the surface of the sea in heavy winds.

spine (spin), *n.* [*OF. espine*, F. *épine* = Pr. Sp. *espina* = Pg. *espinha* = It. *spina*, < L. *spina*, a thorn, prickle, also the backbone; prob. for **spicna*, and akin to *spica*, a point, spike: see *spike*¹.] In the sense of "backbone" *spine* is directly < L. *spina*. Hence *spinaech*, *spine-age*, *spinal*, *spiny*, *spinnet*, *spinney*, etc.] 1. In

bot., a stiff sharp-pointed process, containing more or less woody tissue, and originating in the degeneracy or modification of some organ. Usually it is a branch or the termination of a stem or branch, indurated, leafless, and attenuated to a point, as in the hawthorn, stee, pear, and honey-locust; its nature is clearly manifest by the axillary position, and also by the fact that it sometimes produces imperfect leaves and buds. A spine may also consist of a modified leaf (all gradations being found between merely spiny-toothed leaves and leaves which are completely contracted into simple or multiple spines, as in the barberry), or of a persistent petiole, as in some *Astragal* and in *Fouquieria*, or of a modified stipule, as in the common locust. A spine is to be clearly distinguished from a prickle, which is merely a superficial outgrowth from the bark. See *prickle*, 1.

2. The backbone; the rachis, *spina*, or spinal column of a vertebrate. The name is due to the series of spinous processes of the several vertebrae which it presents, forming a ridge along the middle of the back. See *spinal column* (under *spinal*), and *vertebra*, *vertebral*.

3. A name of some part in various animals. (a) In *anat.*, a sharp process, point, or crest of bone; a spinous process, generally stouter than a styloid process: as, the *spine* of the ilium, of the ischium, of the scapula, of the pubis. See cuts under *innominatum* and *shoulder-blade*. (b) In *morph.*, a bony element, or pair of bony elements, which completes a segment of either the neural canal or the hemal canal of a vertebrate on the midline of the dorsal or ventral aspect of the body, the ossification intervening dorsad between a pair of neuropophyses or ventrad between a pair of hemapophyses, the former being a *neural spine*, the latter a *hemal spine*. Thus, the spinous process of a dorsal vertebra is the neural spine of that vertebra, and the segment of the sternum with which the rib of that vertebra articulates is the hemal spine of the same vertebra. Owen. See cuts under *dorsal*, *carapace*, and *endoskeleton*. (c) In *mammal.*, a modified hair; a sharp, stiff, hard, horny dermal outgrowth, as one of the quills of a porcupine, or of the prickles of the hedgehog or spiny ant-eater. In many animals the transition from soft fur through harsh or bristly pelage to spinosity is very gradual. See cuts under *Echidnidae*, *Erinaceus*, and *porcupine*. (d) In *ornith.*, a spur or calcar, as of the wing or foot; a micro, as of a feather. See cuts under *Palamedea*, *Rasores*, and *mucronate*. (e) In *herpet.*, a sharp, prickly scale of considerable size; a horn. See cuts under *Cerastes* and *Phrynosoma*. (f) In *conch.*, any considerable sharp projection of the shell. Such spines are endlessly modified in size, shape, and site. Good examples are figured under *urex*, *scorpion-shell*, and *Spondylus*. (g) In *Crustacea*, any considerable spinous process of the carapace, of the legs, etc. Such spines are the rule with most crustaceans. The large tail-spine of some is specified as the *telson*. (h) In *entom.*, any comparatively short sharp projection of the chitinous body-wall of an insect. Such occur commonly upon the larvæ of *Lepidoptera*, upon the bodies of many adult *Coleoptera*, *Hemiptera*, and *Hymenoptera*, and upon the legs (principally upon the tibiae) of these and nearly all *Orthoptera* and many *Neuroptera*. The body-spines of adult insects are always of great use in classification. (i) In *ichth.*: (1) A fin-spine; one of the unjointed and unbranched sharp bony rays of the fins, such as those

a, b, c, spines (followed by soft rays) of an acanthopterygian fish; a, anal spines; b, one spine; c, three spines.

the presence of which gives name to the acanthopterygian fishes; a spinous fin-ray, as distinguished from a soft ray. See *ray*¹, 7, and the formula under *radial*, a. (2) A spinous process, as of an opercular bone. (3) The spinous process of some ganoid, placoid, etc., scales. See cuts under *Echinorhinus*, *sand-fish*, *scales*, *searaven*, and *shackle-joint*. (j) In *echinoderms*, one of the movable processes which beset the exterior, as of an echinus, and are articulated with the tubercles of the body-wall. *Primary spines* are the large ones forming continuous series along the ambulacra, as distinguished from less-developed *secondary* and *tertiary* spines. Other spines are specified as *scutal*. See cuts under *Cidaris*, *Echinometra*, *Echinus*, *scutula*, and *Spatangus*. (k) In general, some or any hard sharp process, like a spine; a thorn; a prickle: as, the *spine* at the end of the tail of the lion or the fer-de-lance.

4. In *mach.*, any longitudinal ridge; a fin. E. H. Knight.—5. In *lace-making*, a raised projection from the cordonnet: one of the varieties of pinwork; especially, one of many small points that project outward from the edge of the lace, forming a sort of fringe.—6. The duramen or heartwood of trees: a ship-builders' term. See *duramen*.—**Angular curvature of the spine**. See *curvature*.—**Anterior superior spine of the ilium**. See *spines of the ilium*.—**Concussion of the spine**, in theoretic strictness, a molecular lesion of the spinal cord too fine for microscopic detection, but impairing the functions of the cord, and produced by violent jarring, as in a railway accident: often applied, without discrimination, to cases which, after an accident, exhibit various nervous or spinal symptoms without any manifest gross lesion which explains them. These include cases of traumatic neurasthenia, of hemorrhage in the cord or its membranes, of displacement and fracture of vertebrae, and of muscular and ligamentous strains.—**Ethmoidal spine**, a projection of the sphenoid bone for articulation with the cribriform plate of the ethmoid.—**Hemal spine**. See def. 3 (b), and *hemal*.—**Interhemal spine**. See *interhemal*.—**Interneural spine**. See *interneural*.—**Lateral curvature of the spine**. See *curvature*.—**Mental external spine**, the mental protuberance of the human mandible.—**Mental spines**, the genial tubercles. See *genial*².—**Nasal, pharyngeal, pleural spine**. See the

adjectives.—**Palatine spine.** See (*posterior*) *nasal spine*, under *nasal*.—**Posterior superior spines of the ilium.** See *spines of the ilium*.—**Pubic spine.** See below, and *pubic*.—**Railway spine,** concussion of the spine (especially in its more vague sense) resulting from railway accident.—**Scapular spine.** Same as *spine of the scapula*.—**Sciatic spine,** the spine of the ischium.—**Semital spine.** See *semital*.—**Spine of the ischium,** a pointed triangular eminence situated a little below the middle of the posterior border of the ischium, and separating the lesser from the greater sacrosciatic notch. In man the pudic vessels and nerve wind around this spine.—**Spine of the pubis,** the pubic spine, a prominent tubercle which projects from the upper border of the pubis about an inch from the symphysis.—**Spine of the scapula,** the acapular spine, in man a prominent plate of bone separating the supraspinous and infraspinous fossae, and terminating in the acromion.—**Spine of the sphenoid,** a projection from the lower part of the greater wing of the sphenoid, extending backward into the angle between the petrous and squamous divisions of the temporal bone. Also called *spinous process of the sphenoid*.—**Spines of the ilium,** the iliac spines. In man these are four in number: the anterior extremity of the iliac crest terminates in the *anterior superior spine*, below which and separated from it by a concavity is the *anterior inferior spine*; in a similar manner the posterior extremity of the iliac crest terminates in the *posterior superior spine*, while below it is the *posterior inferior spine*, the two being separated by a notch.—**Spines of the tibia,** a pair of processes between the two articular surfaces of the head of the tibia, in the interior of the knee-joint, to which are attached the ends of the semilunar cartilages and the crucial ligaments of the joint.—**Trochlear spine,** a small spine-like projection upon the orbital part of the frontal bone for attachment of the pulley of the superior oblique muscle of the eye.

spine-armed (spī'ärmd), *a.* Armed with spines or spiny processes, as a murex; spinigerous.

spineback (spīn'bak), *n.* A fish of the family *Notacanthidae*.

spine-bearer (spīn'bär'ēr), *n.* A spine-bearing caterpillar.

spine-bearing (spīn'bär'ing), *a.* Having spines; spined or spiny; spinigerous.

spinebelly (spīn'bel'i), *n.* A kind of balloon-fish, *Tetraodon lineatus*, more fully called *striped spinebelly*. See cut under *balloon-fish*.

spinebill (spīn'bil), *n.* An Australian meliphagine bird, *Acanthorhynchus tenuirostris*, formerly called *slender-billed creeper*, or another of this genus, *A. superciliosus*. In both these honey-eaters the bill is slender, curved, and extremely acute. They are closely related to the members of the genus *Myzomela*, but present a totally different pattern of coloration. The first-named is widely distributed on the continent and in Tasmania; the second inhabits western and southwestern Australia.

spined (spīnd), *a.* [*< spine + -ed.*] 1. Having a spine or spinal column; backboned; vertebrate.—2. Having spines; spinous or spiny: as, a *spined caterpillar*; the *spined cicadas*.—**Spined soldier-bug.** See *soldier-bug*.

spinefoot (spīn'füt), *n.* A lizard of the genus *Acanthodactylus*, as *A. vulgaris* of northern Africa.

spinel (spīn'el or spīn'el'), *n.* [Also *spinelle*, *espinel*; early mod. E. *spinelle*; < OF. *spinelle*, *espinnelle*, F. *spinelle* = It. *spinella*, *spinel*; prob. orig. applied to a mineral with spine-shaped crystals; dim. of L. *spina*, a thorn, spine: see *spine*.] 1. A mineral of various shades of red, also blue, green, yellow, brown, and black, commonly occurring in isometric octahedrons. It has the hardness of topaz. Chemically, it consists of the oxides of magnesium and aluminum, with iron protoxide in some varieties, also chromium in the variety picotite. Clear and finely colored red varieties are highly prized as ornamental stones in jewelry. The red varieties are known as *spinel ruby* or *balas ruby*, while those of a dark-green, brown, or black color, containing iron protoxide in considerable amount, are called *ceylonite* or *pleonaste*. The valuable varieties, including the *spinel ruby* (see *ruby*), occur as rolled pebbles in river-channels in Ceylon, Burma, and Siam; they are often associated with the true ruby (corundum). The spinel group of minerals includes several species which may be considered as made up of equal parts of a protoxide and a sesquioxide (RO + R₂O₃). Here belong garnet, magnetite, franklinite, etc. An octahedral habit characterizes them all.

There [in the Island of Zellan] is also founde an other kynde of Rubies, which wee calue *Spinelle* and the Indians Caropus. R. Eden, tr. of Antonio Pigafetta (First Books on America, ed. Arber, p. 264).

2. A bleached yarn from which the linen tape called *inkle* is made. E. H. Knight.—**Zinc-spinel.** Same as *gahnite*.

spineless (spīn'les), *a.* [*< spine + -less.*] 1. Having no spine or spinal column; invertebrate. Hence.—2. Having no backbone, vigor, or courage; limp; weak; nerveless.—3. Having the backbone flexible or supple.

A whole family of Sprites, consisting of a remarkably stout father and three *spineless* sons. Dickens, *Uncommercial Traveller*, iv. (Davies.)

4. In *ichth.*, having no fin-spines; soft-finned; anacanthine; malacopterous: as, the *spineless fishes*, or *Anacanthini*.—**Spineless perch,** a piraterch.

spinellane (spīn'el'än), *n.* [*< spinelle + -ane.*] A blue variety of noscan occurring in small crystalline masses and in minute crystals, found near Andernach on the Rhine.

spinelle (spīn'el'), *n.* See *spinell*.

spine-rayed (spīn'räd), *a.* In *ichth.*, acanthopterygian.

spinescent (spīn'es'ent), *a.* [*< L. spinescens(t)-s*, ppr. of *spinescere*, grow thorny, < *spina*, a thorn, prickle, spine: see *spine*.] 1. In bot., tending to be hard and thorn-like; terminating in a spine or sharp point; armed with spines or thorns; spinose.—2. In *zool.*, somewhat spinous or spiny, as the fur of an animal; very coarse, harsh, or stiff, as hair; spinulous.

spinet (spīn'et), *n.* [*< L. spinetum*, a thicket of thorns, < *spina*, a thorn, spine: see *spine*. Cf. OF. *spinat*, F. dial. *épinat*, a thicket of thorns; and see *spinney*.] A small wood or place where briars and thorns grow; a spinney.

A aaty, lodged in a little *spinet*, by which her majesty and the Prince were to come. . . . advanced his head above the top of the wood. B. Jonson, *The Satyr*.

spinet (spīn'et or spīn'et'), *n.* [Formerly also *spinnet*, *espinnette*; = D. *spinet* = G. Sw. *spinnett* = Dan. *spinet*, < OF. *espinnette*, F. *épinette* = Sp. Pg. *espinneta*, < It. *spinnetta*, a spinet, or pair of virginals (said to be so called because struck with a pointed quill), < *spinnetta*, a point, spigot, etc., dim. of *spina*, a thorn, < L. *spina*, a thorn: see *spine*.] A musical instrument essentially similar to the harpsichord, but of smaller size and much lighter tone. Also called *virginal* and *couched harp*.—**Dumb spinet.** Same as *manichord*.

spinetail (spīn'täl), *n.* In *ornith.*: (a) A passerine bird of the family *Dendrocolaptidae*, having stiff and more or less acuminate tail-feathers, much like a woodpecker's; a spine-tailed or sclerurine bird. See cuts under *säberbill* and *Sclerurus*. (b) A cypseline bird of the subfamily *Chæturinae*; a spine-tailed or chæturine swift, having mucronate shafts of the tail-feathers. See *Acanthyllis*, and cut under *mucronate*. (c) The ruddy duck, *Erimaturus rubida*. [Pennsylvania and New Jersey.]

spine-tailed (spīn'täld), *a.* 1. In *ornith.*: (a) Having stiff and generally acuminate tail-feathers; dendrocolaptine; sclerurine. (b) Having mucronate shafts of the tail-feathers; chæturine.—2. In *herpet.*, having the tail ending in a spine, as a serpent. See *fer-de-lance*, and cuts under *Craspidocephalus* and *Cyclus*.—3. In *entom.*, having the abdomen ending in a spine or spines. The *Scoliidæ* are known as *spine-tailed wasps*, and the *Sappidæ* have been called *parasitic spine-tailed wasps*. See cut under *Elis*.

spine-tipped (spīn'tipt), *a.* In *bot.*, tipped with or bearing at the extremity a spine, as the leaves of agave.

spin-house (spīn'hous), *n.* A place in which spinning is carried on. Also *spinning-house*. See the quotation.

As we returned we attep'd in to see the *Spin-house*, a kind of Bridewell, where incorrigible and lewd women are kept in discipline and labour. Evelyn, *Diary*, Aug. 19, 1641.

spincerebrate (spīn'i-ser'ē-brät), *a.* [*< L. spina*, the spine, + *cerebrum*, the brain, + *-ate*.] Having a brain and spinal cord; cerebrospinal; myelencephalous.

spindeloid (spīn-i-del'oid), *a. and n.* [*< L. spina*, the spine, + E. *deltoid*.] I. *a.* Representing that part of the human deltoid muscle which arises from the spine of the scapula, as a muscle; pertaining to the spindeloides.

II. *n.* The spindeloides. **spindeloides** (spīn'i-del-toi'dē-us), *n.*; pl. *spindeloides* (-i). [NL.: see *spindeloid*.] A muscle of the shoulder and arm of some animals, corresponding to the spinal or mesoscapular part of the human deltoides: it extends from the mesoscapula and metacromion to the deltoid ridge of the humerus.

spiniferite (spīn'if'ē-rīt), *n.* [*< L. spinifer*, bearing spines (see *spiniferous*), + *-ite*.] A certain minute organism beset with spines, occurring in the Chalk flints. Their real nature is unascertained, but they have been supposed to be the gemmules of sponges.

spiniferous (spīn'if'ē-rus), *a.* [*< L. spinifer*, bearing spines, < *spina*, a thorn, spine, + *ferre* = E. *bear*.] Bearing or provided with spines; spinous or spiny; spinigerous.

spiniform (spīn'i-fōrm), *a.* [*< L. spina*, a thorn, spine, + *forma*, form.] Having the form of a spine or thorn; spine-like. Hurley.

spinigerous (spīn'ij'ē-rus), *a.* [*< LL. spiniger*, bearing thorns or spines, < L. *spina*, a thorn,

spine, + *gerere*, bear, carry.] Bearing spines, as a hedgehog; spinose; aculeate; spiniferous.—**Spinigerous elytra,** in *entom.*, elytra each one of which has an upright sutural process, the two uniting, when the elytra are closed, to form a large spiniform process on the back, as in certain phytophagous beetles.

Spinigrada (spī-nig'rā-dä), *n. pl.* [NL., neut. pl. of *spinigradus*: see *spinigrade*.] An order of echinoderms, composed of the ophiurans and euryaleans, or the brittle-stars and gorgon's-heads. Forbes. [Rare.]

spinigrade (spī-ni-gräd), *a.* [*< NL. spinigradus*, < L. *spina*, a thorn, spine, + *gradi*, walk, go: see *grade*.] Moving by means of spines or spinous processes, as an echinoderm; of or pertaining to the *Spinigrada*.

spininess (spī-ni-nes), *n.* Spiny character or state. (a) Thorniness. (b) Slenderness; alimness; lankness.

The old men resemble grasshoppers for their cold and bloodless *spininess*. Chapman, *Iliad*, iii., Commentarius.

spinirector (spī-ni-rek'tor), *a. and n.* [*< L. spina*, the spine, + *rector* for NL. *erector*, q. v.] I. *a.* Erecting, extending, or straightening the spine, or spinal column: noting the set or series of muscles of the back of which the erector spinæ is the basis.

II. *n.* The erector spinæ. (See *erector*.) It corresponds to the so-called fourth layer of the muscles of the back in human anatomy. Coues and Shute, 1887.

spinispicule (spī-ni-spik'ül), *n.* [*< L. spina*, a spine, + E. *spicule*.] A spiny sponge-spicule; a spiraster.

spinispirula (spī-ni-spir'ö-lä), *n.*; pl. *spinispirulæ* (-lä). [NL., < L. *spina*, a spine, + *spirula*, a small twisted cake, dim. of *spira*, a coil, spire: see *spire*.] A spiny sigmaspire; a sigmoid microscle or flesh-spicule provided with spines. Also called *spiraster*. Sollas.

spinispirular (spī-ni-spir'ö-lär), *a.* [*< spinispirula* + *-ar*.] Spiny and slightly spiral, as a sponge-spicule; having the character of a spinispirula. Sollas.

spinispirulate (spī-ni-spir'ö-lät), *a.* [*< spinispirula* + *-ate*.] Same as *spinispirular*.

spinitis (spī-ni'tis), *n.* [NL., < L. *spina*, the spine, + *-itis*.] Inflammation of the spinal cord and its membranes, in the horse and other domestic quadrupeds.

spinitrapezius (spī-ni-trä-pē'zi-us), *n.*; pl. *spinitrapezii* (-i). [NL., < L. *spina*, the spine, + NL. *trapezius*.] The spinal as distinguished from the cranial part of the trapezius muscle, forming in some animals a nearly distinct muscle.

spink¹ (spīngk), *n.* [*< ME. spink, spyink, spynke* = Sw. dial. *spink*, also *spikke, spekke*, a sparrow (*gull-spink*, a goldfinch), = Norw. *spikke* (for **spinke*), a sparrow or other small bird; cf. Gr. *σπίγγος*, also *σπίκα*, a finch (< *σπίζειν*, chirp); an imitative name, like the equiv. *pink*⁵, *finch*¹.] The chaffinch, *Fringilla cælebs*. [Prov. Eng.]

The *spink* chants sweetest in a hedge of thorns. W. Harte.

spink² (spīngk), *n.* [Origin obscure; prob. in part a var. of *pink*².] The primrose, *Primula veris*; also, the lady's-smock, *Cardamine pratensis* (also *bog-spinks*), and some other plants. [Scotland.]

spinnaker (spīn'ä-kër), *n.* [Said to be < *spin*, in sense of 'go rapidly.'] A jib-headed racing-sail carried by yachts, set, when running before the wind, on the side opposite to the mainsail.

spinnel (spīn'el), *n.* A dialectal variant of *spindle*.

spinner¹ (spīn'ēr), *n.* [*< ME. spinnere, spyunner, spinnare* (= D. G. *spunier* = Sw. *spinnare* = Dan. *spinder*); < *spin* + *-er*. Cf. *spider*.] 1. One who or that which spins, in any sense; one skilled in spinning. (a) A workman who gives shape to vessels of thin metal by means of a turning-lathe. See *spin*, v. t., 8. (b) In *woolen-manuf.*, any thread-spinning machine; a drawing and twisting machine for making woolen threads. (c) A trawling fish-hook fitted with wings to make it revolve in the water; a propeller spoon-bait. (d) In *hat-manuf.*, a machine for finishing the exterior of a hat. It consists of a flat oval table with a face corresponding to the curve of the hat-brim.

2. A spider; especially, a spinning-spider.

As if thou hadst borrowed legs of a *spinner* and a voice of a cricket. B. Jonson, *Bartholomew Fair*, i. 1.

3. See the quotation. [Eng.]

I do not know whether the daddy longlegs is ever called "gin spinner"; but Jenny *Spinner* is certainly the name of a very different insect, viz. the metamorphosis of the iron-blue dun, which, according to Ronald's nomenclature, is an ephemera of the genus *Cloë*.

N. and Q., 7th ser., VI. 153.

4. A spinneret.—5. The night-jar or night-churr, *Caprimulgus europæus*: from its cries, which may be likened to the noise of a spinning-wheel. See cut under *night-jar*. Also *wheel-bird*. Compare *recler* in like use for another bird. [Wexford, Ireland.]—**Ring-and-traveler spinner**. Same as *ring-frame*.
spinner², *n.* [ME. *spynner*; origin obscure.] A kind of boat.

As on Monday next after May day there come tydyngs to London, that on Thursday before the Duke of Suffolk come unto the costes of Kent full nere slower with his li, shopes and a litel *spynner*; the qweche *spynner* he sente with certeyn letters to certeyn of his trustid men.
Paston Letters, l. 124.

spinneret (spin'ér-et), *n.* [*spinner*¹ + -et.] A part or organ concerned in the spinning of silk, gossamer, or cobweb, as of a silkworm or spider. Specifically—(a) One of the mammillæ of the arachnidium of a spider; one of the four, six, or eight little conical or nipple-like processes under a spider's abdomen and near its end, through which the viscid secretion of the arachnidial glands is spun out into threads of silk. Some of the spinnerets are three-jointed. See *arachnidium*. (b) One of the tubules of the labium of certain caterpillars, as silkworms, through which silk is spun out of the secretion of glands connected with the mouthparts. See *sericterium*. (c) One of the tubules of the anal segment of certain coleopterous larvæ, as in the first larval stage (trilugulin) of some blister-beetles (*Meloidæ*), through which a little silk is spun. See cut under *Sitaris*. (d) A like organ of any other insect.

spinnerular (spi-ner'ù-lär), *a.* [*spinnerule* + -ar³.] Entering into the formation of a spinneret, as a tubule; of or pertaining to spinnerules.

spinnerule (spin'ér-ùl), *n.* [*spinner*¹ + -ule.] One of the several individual tubules which collectively form the spinneret of a spider.

spinnery (spin'ér-i), *n.*; pl. *spinneries* (-iz). [= D. *spinnery*, a spinning-house, = G. *spinnerei* = Sw. *spinneri* = Dan. *spinderi*, spinning, spinning-house; as *spin* + -ery.] A spinning-mill. *Imp. Dict.*

spinnett, *n.* See *spinet*².

spinney, spinny² (spin'í), *n.* [*ME. *spineye*, *spenne*, < OF. *espinaie*, *espinoie*, *espinoie*, F. *épine*, a thicket, grove, a thorny plot, < L. *spineum*, a thicket of thorns, < *spina*, a thorn: see *spine*. Cf. *spinet*².] A small wood with undergrowth; a clump of trees or shrubs; a small grove or shrubbery.

As he sprent over a *spenné*, to spye the schrewe.
Sir Gawayne and the Green Knight (E. E. T. S.), l. 1895.

A load . . . covered with fine hedgerow timber, with here and there a nice little gorse or *spinney*.
T. Hughes, *Tom Brown at Rugby*, l. 1.

spinning (spin'ing), *n.* [*ME. spynnyng*; verbal *n.* of *spin*, *v.*] 1. The act of one who spins.—2. The process of giving shape to vessels of thin metal by means of a turning-lathe.

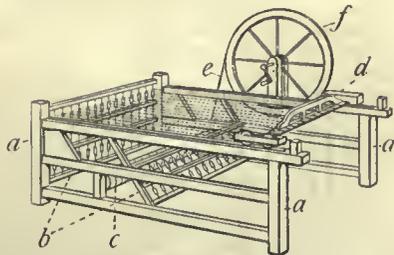

spinning-frame (spin'ing-frám), *n.* A machine by which cotton thread was twisted hard and firm, so as to make it suitable for the warp of cotton cloth: the invention of Richard Arkwright. *E. H. Knight*.

spinning-head (spin'ing-hed), *n.* An early form of spinning-machine in which the drawing and twisting mechanisms are combined in one head.

spinning-house† (spin'ing-hous), *n.* Same as *spin-house*.

spinning-jack (spin'ing-jak), *n.* In *cotton-manuf.*, a device for twisting and winding a sliver as it comes from the drawing-rollers. It is placed in the can, in which it rotates, the sliver being wound on a bobbin. *E. H. Knight*.

spinning-jenny (spin'ing-jen'í), *n.* A spinning-machine, invented by James Hargreaves

Hargreaves's Original Spinning-Jenny.

a, frame; *b*, frames supporting spindles; *c*, drum driven by the hand *e* from the band-wheel *f*, and carrying separate hands (not shown) which separately drive each spindle; *d*, fluted wooden clasp which travels on wheels on the top of the frame, and in which the rovings are arranged in due order.

in 1767, which was the first to operate upon more than one thread. It has a series of vertical spindles, each of which is supplied with roving from a separate spool, and has a clasping and traversing mechanism by

means of which the operator is enabled to clasp and draw out all the rovings simultaneously during the operation of twisting, and to feed the twisted threads to the spindles when winding on—the whole operation being almost exactly like hand-spinning, except that a large number of rovings are operated upon instead of a single one.

spinning-machine (spin'ing-má-shén'), *n.* 1. Any machine for spinning; a mule; a mullet; a spinner. Specifically—2. An apparatus which spins continuously, as distinguished from the intermittent action of the mule. *E. H. Knight*.

spinning-mill (spin'ing-mil), *n.* A mill or factory where thread is spun.

spinning-mite (spin'ing-mít), *n.* Any mite or acarid of the family *Tetraonychidæ*; a red-spider.

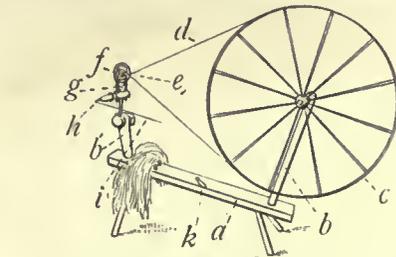

spinning-organ (spin'ing-ór'gan), *n.* The organ or apparatus by means of which a spider or caterpillar spins silk; an arachnidium, as of a spider. See cut under *arachnidium*.

spinning-roller (spin'ing-rò'lér), *n.* One of the iron wheels, covered with various materials—as rubber, vulcanite, paper, or felt—running in pairs in the drawing mechanism of a spinning-machine.

spinning-spider (spin'ing-spi'dér), *n.* A spider which spins cobwebs; specifically, a true spider or araneid, as distinguished from any other arachnid, whether it actually spins or not.

spinning-wart (spin'ing-wárt), *n.* A spinneret; one of the papillæ or mammillæ out of which a spider spins silk. See cut under *arachnidium*. *Gegenbaur*, *Comp. Anat.* (trans.), p. 291.

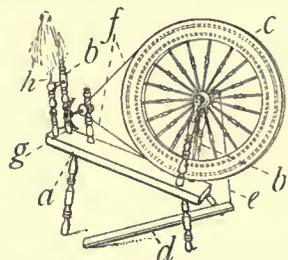

spinning-wheel (spin'ing-hwél), *n.* A machine for spinning wool, cotton, or flax into threads by hand. It consists of a wheel, band, and spindle, and

Spinning-wheel for Wool.

a, bench; *b*, standards; *c*, driving band-wheel with flat rim, turned by the peg *k* held in the right hand of the spinner; *d*, cord-band, crossed at *e* and driving the speed-pulley *f*; *g*, cord-band imparting motion to the spindle *h*; *i*, thread in process of spinning.

is driven by foot or by hand. Before the introduction of machinery for spinning there were two kinds of spinning-wheels in common use—the *large wheel* for spinning wool and cotton, and the *small or Saxon wheel* for spinning flax. The girdle-wheel was a spinning-wheel formerly in use, small enough to be fastened to a girdle or apron-string, and used while standing or walking about.

Spinning-wheel for Flax.

a, bench or stool; *b*, standards; *c*, driving band-wheel grooved in its perimeter; *d*, treadle; *e*, rod which connects treadle with crank; *f*, cord-hand which drives the fier-spindle; *g*, tier; *h*, distaff upon which the flax to be spun is placed, and which in use is held in the left hand of the operator.

spinny¹, *n.* See *spinney*.

spinny², *a.* [Appar. an irreg. var. of *spinny*, 3, or of *spindly*.] Thin; slender; slim; lank.

They plow it early in the year, and then there will come some *spinny* grass that will keep it from scalding.
Mortimer.

spinode (spi'nòd), *n.* [*L. spina*, a thorn, spine, + *nodus*, a knot.] In *geom.*, a stationary point or cusp on a curve. A spinode may be conceived as resulting from the vanishing of the angle at a node between the two branches, the length of arc between them being reduced to zero, just as an inflection may be regarded as resulting from the vanishing of the interval between the two points of tangency of a bitangent, the total curvature between them at the same time vanishing. But this view in the latter case includes all the points of the inflectional tangent as points of the curve, and in the former case includes all lines through the spinode as tangents. For this reason the spinode, like the inflection, is reckoned as a distinct kind of singularity. A curve cannot, while remaining real, change continuously from having a cusp to having an anode without passing through a form in which it has a spinode.

spinode-curve (spi'nòd-kèrv), *n.* A singularity of a surface consisting in a locus of points where tangent-planes to the curve intersect it in curves having spinodes at those points. The spinode-curve on a real surface is the boundary between a synclastic and an anticlastic region. It bears no resem-

blance to that singularity of a surface termed the *cuspidal curve*.

spinode-torse (spi'nòd-tòrs), *n.* That torse of which a spinode-curve is the edge of regression. It is the envelop of tangent-planes to a surface intersecting it in curves having spinodes.

spinose (spi'nòs), *a.* [*L. spinosus*, full of thorns: see *spinous*.] Full of spines; spinous; spinigerous or spiniferous; armed with spines or thorns; of a spiny character; as, a *spinose* leaf; a *spinose* stem.—**Spinose maxilla**, in *entom.*, maxillæ armed with spines at the apex, as in the dragonfly.

spinosely (spi'nòs-li), *adv.* In *bot.*, in a spinose manner.

spinosity (spi'nòs'í-ti), *n.*; pl. *spinosities* (-tiz). [*L. spinosita(t)-s*, thorniness, < *spinosus*, thorny, spiny: see *spinous*.] 1. The state of being spinous or spinose; rough, spinous, or thorny character or quality; thorniness: literally or figuratively.

The part of Human Philosophy which is Rational . . . seemeth but a net of subtilty and spinosity.
Bacon, *Advancement of Learning*, ii.

2. A thorny part or thing; something thorny or crabbed.

spinous (spi'nus), *a.* [= F. *épineux* = Sp. *espinoso* = Pg. *espinhoso* = It. *spinoso*, < L. *spinosus*, full of thorns, thorny, spiny, < *spina*, a thorn, spine: see *spine*.] 1. In *zool.* and *anat.*: (a) Having spines; spiny; spinigerous or spiniferous. (b) Shaped like a spine; spiniform; having the character of a spine; sharp or pointed: as, a *spinous* process of bone. See *spinose*.—2. In *bot.*, same as *spinose*.—**Spinous foramen**, the foramen spinosum of the sphenoid. See under *foramen*.—**Spinous process of a vertebra**, one of the elements of most vertebrae, usually autogenous, or having its own center of ossification, forming a process, point, or plate of bone where the lateral halves of the neural arch, or neurapophyses, come together behind (in man) or above the neural arch; a neural spine. See cuts under *axis*, *cervical*, *dorsal*, *hygapophysis*, *lumbar*, and *vertebra*.—**Spinous process of the sphenoid**. See *spine* of the *sphenoid*, under *spine*.—**Spinous rat**, a spiny rat, in any sense.—**Spinous shark**. See *shark*¹, and *Echinorhinus* (with cut).—**Spinous spider-crab**, *Maia squinado*, the common spider-crab.

spinous-radiate (spi'nus-rá'di-át), *a.* In *entom.*, rayed or encircled with spines.

Spinozism (spi-nò'zizm), *n.* [*Spinoza* (see *def.*) + -ism.] The metaphysical doctrine of Baruch (afterward Benedict) de Spinoza (1632–1677), a Spanish Jew, born at Amsterdam. Spinoza's chief work, the "Ethics," is an exposition of the idea of the absolute, with a monistic theory of the correspondence between mind and matter, and applications to the philosophy of living. It is an excessively abstruse doctrine, much misunderstood, and too complicated for brief exposition. The style of the book, an imitation of Euclid's "Elements," is calculated to repel the mathematician and logician, and to carry the attention of the ordinary reader away from the real meaning, while conveying a completely false notion of the mode of thinking. Yet, while the form is pseudomathematical, the thought itself is truly mathematical. The main principle is, indeed, an anticipation in a generalized form of the modern geometrical conception of the absolute, especially as this appears in the hyperbolic geometry, where the point and plane manifolds have a correspondence similar to that between Spinoza's worlds of extension and thought. Spinoza is described as a pantheist; he identifies God and Nature, but does not mean by Nature what is ordinarily meant. Some sayings of Spinoza are frequently quoted in literature. One of these is *omnis determinatio est negatio*, "all specification involves exclusion"; another is that matters must be considered *sub specie eternitatis*, "under their essential aspects."

Spinozist (spi-nò'zist), *n.* [*Spinoza* + -ist.] A follower of Spinoza.

Spinozistic (spi-nò'zist'ik), *a.* [*Spinozist* + -ic.] Of, pertaining to, or characteristic of Spinoza or his followers: as, the *Spinozistic* school; *Spinozistic* pantheism.

spinster (spin'stér), *n.* [*ME. spinster*, *spynstare*, *spinnestere*, *spynnster* (= D. *spinster*), with suffix -estere (E. -ster), < AS. *spinnan*, spin: see *spin*.] 1. A woman who spins; by extension, any person who spins; a spinner.

My wif was a webbe and wollen cloth made.
 Hu spak to the *spynnestere* to spynnen hit onte.
Piers Plowman (C), vii. 222.
 The silkworm is
 Only man's *spinster*.
Randolph, *Muses' Looking-Glass*, iv. 1.

Let the three housewifely *spinsters* of destiny rather curtail the thread of thy life.
Dekker, *Gull's Hornbook*, p. 83.

2. An unmarried woman (so called because she was supposed to occupy herself with spinning): the legal designation in England of all unmarried women from a viscount's daughter downward; popularly, an elderly unmarried woman; an "old maid": sometimes used adjectively.

I, Anthony Lumpkin, Esquire, of Blank place, refuse you, Constantia Neville, *spinster*, of no place at all.
Goldsmith, *She Stoops to Conquer*, v. 1.

o, that I should live to hear myself called *Spinster!*
Sheridan, The Rivals, v. 1.
 Here the *spinster* aunt uttered a loud shriek, and became senseless.
Dickens, Pickwick, x.
 3†. A woman of an evil life or character: so called from being forced to spin in the house of correction. See *spin-house*.

We are no *spinsters*; nor, if you look upon us,
 So wretched as you take us.
Fletcher (and another?), Prophetess, iii. 1.
spinsterdom (spin'stér-dum), *n.* [*spinster* + *-dom*.] Spinsters or "old maids" collectively.
G. Meredith, Manfred, ii. 2. [Rare.]
spinsterhood (spin'stér-húd), *n.* [*spinster* + *-hood*.] The state of being a spinster; unmarried life or state.
spinstership (spin'stér-ship), *n.* [*spinster* + *-ship*.] Spinsterhood. *Southey.*
spinstress (spin'stress), *n.* [*spinster* + *-ess*.] A woman who spins, or whose occupation is spinning; a spinster.

Let meaner souls by virtue be cajoled,
 As the good Grecian *spinstress* [Penelope] was of old.
Tom Brown, Works, IV. 10. (Davies.)
spinstry (spin'stri), *n.* [*spinster* + *-y* (cf. *-ery*).] The work or occupation of spinning; spinning.

What new decency can be added to this your *spinstry*?
Milton, Church-Government, ii. 2.
spintext (spiu'tektst), *n.* [*spin*, *v.*, + *obj. text*.] One who spins out long dreary discourses; a prosy preacher.

The race of formal *spintexts* and solemn saygraces is nearly extinct.
V. Knox, Winter Evenings, ix.
spinthere (spin'thēr), *n.* [= *F. spinthère*, < *Gr. σπινθήρ*, a spark.] A greenish-gray variety of spene or titanite.
spintry (spin'tri), *n.* [*L. spintria, spinhtria*, a male prostitute.] A male prostitute. [Rare.]

Ravished hence, like captives, and, in sight
 Of their most grieved parents, dealt away
 Unto his *spintries*, sellaries, and slaves.
B. Jonson, Sejanus, iv. 5.

spinula (spin'ū-lā), *n.*; pl. *spinulae* (-lā). [NL., < *L. spinula*, dim. of *spina*, a spine: see *spine*.] In *entom.*, a minute spine or hook. Specifically—(a) One of the little hooks bordering the anterior edge of the lower wing in most *Hymenoptera*: same as *hamulus*, 1 (d). (b) One of the bristles forming the strigilis.

spinulate (spin'ū-lāt), *a.* [*spinula* + *-atē*.] In *zool.*, covered with little spines.—**Spinulate hairs**, hairs emitting minute rigid branches or spinules: such hairs cover many hymenopterous insects.

spinulated (spin'ū-lā-ted), *a.* [*spinulate* + *-ed*.] Same as *spinulate*.

spinule (spin'ūl), *n.* [*L. spinula*, dim. of *spina*, a thorn, spine: see *spine*.] A small spine; a spinule.

spinulescent (spin'ū-les'ent), *a.* [*spinule* + *-escent*.] In *bot.*, producing diminutive spines; somewhat spiny or thorny.

spinuliferous (spin'ū-lif'e-rus), *a.* [*L. spinula*, a spinule, + *ferre* = *E. bear*.] In *bot.*, same as *spinulose*.

spinulose (spin'ū-lōs), *a.* [*NL. spinulosus*: see *spinulose*.] In *bot.* and *zool.*, furnished with spinules or diminutive spines.

I have never seen any prominent spine upon the posterior elevation, though it is sometimes minutely *spinulose*.
Huxley, Crayfish, p. 234.

spinulose (spin'ū-lus), *a.* [*NL. spinulosus*, < *L. spinula*, a spinule: see *spinule*.] Same as *spinulose*.

spinus (spī'nus), *n.* [NL., < *Gr. σπινοσ*, a bird of the finch kind; cf. *spink*.] 1†. An old name of some small bird which feeds on seeds, as a thistle-bird, linnet, siskin, or hunting. Hence—2. [*cap.*] A genus of thistle-birds named by Koch in 1816, containing the linnet, the siskin or aberdevine, the goldfinch, the redpoll, and others, both of Europe and of America. In present usage, the siskin is *Spinus spinus*, the pine-finch is *S. pinus*, the goldfinch of Europe is *S. carduelis*, that of America is *S. tristis*, etc. The name wavers in application, and is more or less inexact synonymy with several others, as *Acanthis*, *Carduelis*, *Chrysomitris*, *Astragalinus*, *Egiothus*, *Linaria*, *Linota*, etc. See cuts under *siskin* and *goldfinch*.

spiny (spī'ni), *a.* [*spin* + *-y*.] 1. Having thorns or spines; full of spines; thorny; prickly.—2. Figuratively, thorny; perplexed; difficult; troublesome.

The *spiny* deserts of scholastick philosophy.
Warburton, On Prophecy, p. 61. (Latham.)
 3†. Thin; slim; slender.

As in well-grown woods, on trees, cold *spiny* grasshoppers sit chirping
Chapman, Iliad, iii. 161.

Faith, thou art such a *spiny* bald-rib, all the mistresses in the town will never get thee up.
Middleton, Mayor of Queenborough, iii. 3.

Spiny calamary, a cephalopod of the genus *Acanthoteuthis*. *P. P. Carpenter.*—**Spiny crab**, a crab whose carapace is spiny, or has spinous processes; a spider-crab or maioid. See cut under *Oxyrhymcha*.—**Spiny fish**, a spiny-finned or acanthopterygian fish.—**Spiny lobster**. See *lobster*.—**Spiny rat**, one of sundry small rat-like rodents whose pelage is more or less spiny. (a) One of the South American species of *Echymys* and *Loncheres* or *Nelomys*. See cut under *Echymys*. (b) One of several pouched rats of the genus *Heteromys*.

spiny-eel (spī'ni-ēl), *n.* See *Mastacembelidae*.
spiny-finned (spī'ni-find), *a.* In *ichth.*, having spinous fin-rays; spine-finned; acanthopterygian.

spiny-skinned (spī'ni-skind), *a.* Echinodermatous.

spion (spī'on), *n.* [Early mod. E. also *spyon*; = *D. G. Sw. Dan. spion*, < *OF. (and F.) espion*, a spy: see *spy*. Cf. *espionage*.] A spy.

Captaine of the *Spions*.
Heywood, Four Prentises of London (Works, 1874, II. 242).

spirt, *v.* An obsolete form of *speer*.
spira (spī'rā), *n.*; pl. *spirae* (-rē). [L., the base of a column, a spire: see *spire*.] In *arch.*, the moldings at the base of a column; a torus. Such a molding or moldings are not present in the Greek Doric order of architecture, but the feature is constant in all varieties of the Ionic and Corinthian. See cuts under *base*, 3.

spiracle (spī'rā-kl), *a.* [*L. spirabilis*, that may be breathed, respirable, < *spirare*, breathe, blow: see *spire*.] Capable of being breathed; respirable.
 The *spirable* odor and pestilent steame ascending from it put him out of his bias of congruity.
Nashe, Lenten Stuffe (Harl. Misc., VI. 173). (Davies.)
spiracle (spī'r' or spī'r'ā-kl), *n.* [*ME. spyrakle*, < *OF. spiracle*, vernacularly *spirail*, *espirail* = *It. spiracolo*, < *L. spiraculum*, a breathing-hole, air-hole, < *spirare*, breathe: see *spire*.] 1. An aperture or orifice.
 And after XL dayes this *spiracle* is uppe to close, and whenne the [you] list, it [the wine] drinke.
Palladius, Husbandrie (E. E. T. S.), p. 202.

2. In *zool.*, an aperture, orifice, or vent through which air, vapor, or water passes in the act of respiration; a breathing-hole; a spiraculum: applied to many different formations. Specifically—(a) In *Mammalia*, the nostril or blow-hole of a cetacean, as the whale, porpoise, etc., through which air, mixed with spray or water, is expelled. (b) In *ichth.*: (1) An aperture on the upper side of the head, in front of the suspensorium of the lower jaw, observed in many fishes, as selachians and ganoids. This is the external opening of the hyomandibular cleft, or persistent first postoral visceral cleft, of the embryo. (2) The single nostril of the monorhine vertebrates, or myzonts—the lampreys and hags. (c) In *entom.*, a breathing-hole; the external orifice of one of the tracheae or windpipes of an arachnid or myriapod, opening in the side of the body. In true insects (*Hexapoda*) the spiracles are typically twenty-two in number, a pair (one on each side) for each of the three thoracic segments, and for each of the anterior eight abdominal segments; but they are almost always lacking on some one or more of these. They are either simple openings into the respiratory system, or are provided with valves, sieves, or fringes of hair for the exclusion of foreign particles. See cut under *Systoechus*.

spiracula, *n.* Plural of *spiraculum*.

spiracula² (spī-rak'ū-lā), *n.*; pl. *spiraculae* (-lā). [NL.: see *spiracle*.] In *entom.*, same as *spiracle*.

spiraculum (spī-rak'ū-lār), *a.* and *n.* [*spiraculum* + *-ar*.] 1. *a.* 1. Of or pertaining to a spiracle, breathing-hole, or blow-hole.—2. Fitted for or permitting respiration, as a spiracle; respiratory.—**Spiracular arch**, in *ichth.*, one of the visceral arches of some fishes, between the mandibular and hyomandibular arches, in special relation with the spiracular cleft and spiracle.—**Spiracular cleft**, in *ichth.*, the hyomandibular cleft: so called from its relations to the spiracle in certain fishes, as all selachians and various ganoids. See *spiracle*, 2 (b) (1).—**Spiracular gill**, a false gill, or pseudobranch.—**Spiracular respiration**, a breathing through spiracles, as in the tracheal respiration of many insects.

II. *n.* A small bone or cartilage in special relation with the spiracle of some fishes.

A series of small ossicles, of which two may be distinguished as *spiraculosa*.
Encyc. Brit., XII. 648.

spiraculate (spī-rak'ū-lāt), *a.* [*spiraculum* + *-atē*.] Provided with a spiracle.

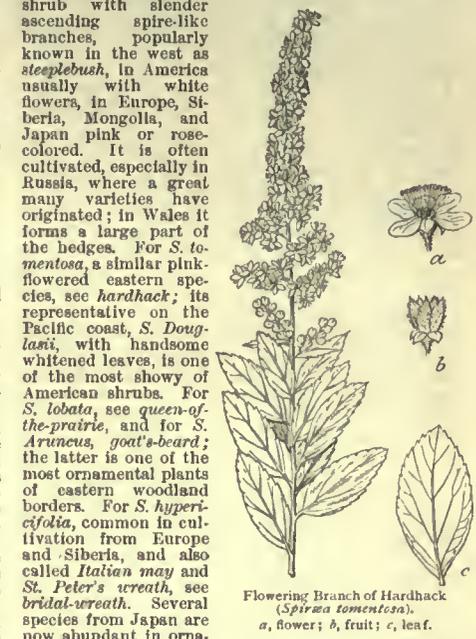

spiraculiferous (spī-rak'ū-lif'e-rus), *a.* [*L. spiraculum*, a breathing-hole, + *ferre* = *E. bear*.] In *entom.*, bearing a spiracle or breathing-pore: said of segments in which these organs are visible. See cut under *Systoechus*.

spiraculiform (spī-rak'ū-li-fōrm), *a.* [*L. spiraculum*, a breathing-hole, + *forma*, form.] In *entom.*, having the structure, form, or appearance of a spiracle; stigmatiform.

spiraculum (spī-rak'ū-lum), *n.*; pl. *spiracula* (-lā). [L.: see *spiracle*.] 1. A spiracle, in any sense.—2. A breathing-hole in the aventails, beaver, or mesail of a helmet.

spiræ, *n.* Plural of *spira*.

Spiræa (spī-rē'ā), *n.* [NL. (Tournefort, 1700), < *L. spiræa*, < *Gr. σπειρα*, meadow-sweet, so called from the shape of its follicles, < *σπειρα*, a coil, *spira*: see *spire*.] 1. A genus of rosaceous plants, type of the *Spirææ*. It is characterized by fruit commonly of five follicles, containing usually numerous linear seeds with a membranous or rarely coriaceous outer seed-coat and little or no albumen. The flowers have four or five calyx-lobes, as many rounded petals, twenty to sixty filiform stamens, and a smooth or woolly fleshy disk. The Himalayan *S. parvifolia* is an exception in its solitary seeds and obconical calyx. There are about 50 species, widely scattered through temperate and cold regions of the northern hemisphere, and occurring rarely on mountains within the tropics. They are herbs or shrubs, bearing alternate simple pinnate or ternately compound leaves, usually furnished with free or wing-like and united stipules. The small white, pink, or rose-colored flowers form a copious axillary or terminal inflorescence, which is either a raceme, cyme, panicle, or corymb, or consists, as in *S. Aruncus*, of a diffuse panicle composed of numerous elongated slender spikes. Most of the species are highly ornamental in flower. They are now most commonly known, especially in cultivation, by the generic name *Spiræa*. Eleven species are natives of Europe, 3 of which occur in England; of these *S. Filipendula* is the dropwort, and the others, *S. salicifolia* and *S. Ulmaria*, are known as *meadow-sweet* (the latter also as *queen-of-the-meadows*, which see). Six species are natives of the northeastern United States, of which *S. salicifolia* is the most widely distributed, a shrub with slender ascending spire-like branches, popularly known in the west as *steepbrush*, in America usually with white flowers, in Europe, Siberia, Mongolia, and Japan pink or rose-colored. It is often cultivated, especially in Russia, where a great many varieties have originated; in Wales it forms a large part of the hedges. For *S. tomentosa*, a similar pink-flowered eastern species, see *hardhack*; its representative on the Pacific coast, *S. Douglasii*, with handsome whitened leaves, is one of the most showy of American shrubs. For *S. lobata*, see *queen-of-the-prairie*, and for *S. Aruncus*, *goat's-beard*; the latter is one of the most ornamental plants of eastern woodland borders. For *S. hypericifolia*, common in cultivation from Europe and Siberia, and also called *Italian may* and *St. Peter's wreath*, see *bridal-wreath*. Several species from Japan are now abundant in ornamental grounds, as *S. Japonica* and its variety *S. Fortunei*, and *S. prunifolia*, the plum-leaved spiræa, a white-flowered shrub with handsome silky leaves. *S. Thunbergii* from Japan is much used in parks, forming a small diffuse shrub 2 or 3 feet high with light recurving branches whitened before the leaves with a profusion of small flowers usually in threes in the axils. Some Asiatic species with pinnate leaves and large terminal panicles of white flowers are arborescent, as *S. orbifolia*, often seen as a shrub in New England dooryards, and *S. Kamchatka*, with the panicles very large, the flowers fragrant and feathery. The former *S. opulifolia*, the ninebark, and its variety *aurea*, the golden spiræa of gardens, are now referred to *Neillia*, or by some separated as a genus *Physocarpus*. Many species possess moderate astringent or tonic properties; the roots of the British species are so used, and the flowers of *S. hypericifolia*; *S. Ulmaria* is valuable also as a diuretic. *S. tomentosa*, the principal American medicinal species, a plant of bitter and astringent taste, is used in New England and also formerly by the Indians as a tonic.

Flowering Branch of Hardhack (*Spiræa tomentosa*).
a, flower; *b*, fruit; *c*, leaf.

2. [l. c.] (a) A plant of this genus. (b) The white-flowered shrub *Astilbe Japonica*, now extensively imported into the United States and propagated under glass, forming one of the chief materials of Easter decorations.

Spirææ (spī-rē'ā-ē), *n.* pl. [NL. (Bentham and Hooker, 1865), < *Spiræa* + *-æ*.] A tribe of poly-petalous plants, of the order *Rosaceæ*. It is characterized by flowers with bractless and commonly persistent calyx-lobes, ten or more stamens, from one to eight superior carpels, usually each with two or more pendulous ovules, either indehiscent or ripening into follicles, and not included within the calyx-tube. It consists of 10 genera, of which *Spiræa* is the type. They are usually shrubs, all natives of the northern hemisphere; *Spiræa* only is of wide distribution; 4 others are confined to North America, of which *Neviusia* is found only in Alabama, and *Adenostoma* in California. Four or five other genera are confined to Japan and China.

spiræic (spī-rē'ik), *a.* [*NL. Spiræa* + *-ic*.] 1. Pertaining to or derived from *Spiræa*.—2†. Same as *salicylic*.

spiral (spī'ral), *a.* and *n.* [*F. spirale* = *Sp. Pg. espiral* = *It. spirale* = *D. spiraal* = *G. Sw. Dan. spirål*, < *ML. spiralis*, spiral (*linea spiralis*,

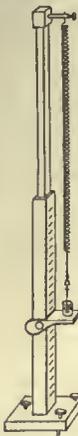

a spiral line, a spiral), < *L. spira*, a coil, spire; see *spire*².] **I. a. 1.** Of or pertaining to a spire or coil; like a spire; pointed or shaped like a spire.—**2.** Winding around a fixed point or center, and continually receding from it, like a watchspring; specifically, in *conch.*, making a number of turns about the columella or axis of the shell; whorled. The whorls may be in one plane, producing the flat or discoid shell, or often wound into a spire, resulting in the ordinary turreted form. Compare cuts under *Planorbis* and *Linnæa*, and see *spire*², **2**. **3.** Winding and at the same time rising or advancing like a screw-thread: more accurately *helical* or *helicoidal*.

Flat Spiral of an Ammonite (*Ammonites bifrons*).

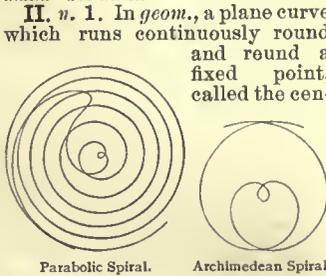

Where upward, in the mellow blush of day,
The noisy bittern wheeled his spiral way.
Longfellow, Sunrise on the Hills.

Spiral axis. See *axis*¹.—**Spiral balance,** a form of balance in which the weight of the body under examination is measured by the stretching (torsion) of an elastic wire in the form of a long spiral. A common use of the simple form of spiral balance (see cut) is in determining the specific gravity of small fragments of minerals, which for this purpose are weighed first in the upper pan and then in that below, which is immersed in water.—**Spiral canal of the cochlea, of the medius.** See *canal*¹, and cut under *ear*¹.—**Spiral duct,** in *bot.*, same as *spiral vessel*.—**Spiral fracture,** a fracture of bone due to torsion, so that the broken ends have a more or less screw-like appearance.—**Spiral gearing.** See *gearing*.—**Spiral layer,** the middle one of the three layers or coats of the tracheal wall in insects. See *tænidium* and *trachea*.—**Spiral ligament of the cochlea,** the spiral ridge at the outer insertion of the basilar membrane: it is prismatic, or triangular in section.—**Spiral line,** the line connecting the radii or radiating lines of a geometrical spider's web, and forming a continuous spiral from the circumference nearly to the center. It is formed after the radii have been put in place.—**Spiral nebula, phyllocladus, plexus.** See the nouns.—**Spiral point.** See *spire*², **3**.—**Spiral pteropods, the Limacinae.**—**Spiral pump,** a form of the Archimedean screw water-elevator. See *Archimedean screw*, under *Archimedean*.—**Spiral screw.** See *screw*¹.—**Spiral space,** the area bounded at its two ends by successive parts of the same radius vector, and within and without by successive parts of the same spiral.—**Spiral spring.** See *spring*.—**Spiral valve, in teeth,** a continuous fold or ridge of mucous membrane which winds spirally about the interior of the intestine of some fishes, as ganoids.—**Spiral vessel, in bot.,** a vessel which is usually long, with fusiform extremities, and has the walls thickened in a spiral manner with one or more simple or branched bands or fibers. In most cases the direction of the spiral is from right to left, but it frequently happens that the earlier formed spirals run in one direction, while those formed later run in an opposite direction. See *tissue, vessel*.—**Spiral wheels, in mach.** See *wheel*.

Spiral Balance for determining specific gravities.

II. n. 1. In *geom.*, a plane curve which runs continuously round and round a fixed point, called the center, with constantly increasing radius vector, so that the latter is never normal to the curve; also, a part of such a curve in the course of which the radius from the center describes 360°. Besides the spirals mentioned below, the involute of the circle and the cycloids are very important. The principal spirals which have received attention are the spiral of Archimedes (usually understood to have been discovered by Conon the Samian), the radius of which increases uniformly with the angle; the hyperbolic spiral, whose radius vector is inversely proportional to the angle; the lituus, the square of whose radius vector is inversely proportional to the angle; and the logarithmic spiral, whose angle is proportional to the logarithm of the radius vector.

Parabolic Spiral. Archimedean Spiral.

Spiral Vessels or Ducts of *Erbidium Elaterrimum*.

Hyperbolic Spiral. (Less of the inner part of one branch is shown than of the other.)

2. A helix or curve which winds round a cylinder like a screw.—**3.** A spiral spring.—**4.** In wool, one of the curls or convolutions in wool-fiber, the number of which in a unit of length is made the basis of an estimate of its quality for manufacturing.—**5.** In *zool.* and *anat.*, a spiral formation, as of a univalve, of the cochlea, etc.—**Airy's spirals,** the peculiar colored interference figures seen when two sections of quartz, one of a right-handed the other of a left-handed crystal, both cut transverse to the vertical axis, are placed one over the other, and viewed in converging polarized light.—**Curshmann's spirals, in pathol.,** bodies formed of spirally wound mucous threads with often a fine shining central thread. They seem to be casts of small bronchi, and are expected in asthma and certain forms of bronchitis.—**Double, equiangular, logarithmic, lexicodromic spiral.** See the adjectives.—**Logistic spiral.** Same as *logarithmic spiral* (which see, under *logarithmic*).—**Norwich spiral,** that second involute of the circle whose apex is midway between the cusp of the first involute and the center of the circle: so called because first shown by Sylvester at the meeting of the British Association at Norwich in 1868.—**Parabolic spiral.** See *parabolic*², and cut above.

spiral (spī'ral), *v. t.*; pret. and pp. *spiraled, spiralled, ppr. spiraling, spiralling*. [*< spiral, n.*] To make spiral; cause to move spirally.

The teeth of the cutter should be made to run slightly spiralled. Joshua Rose, Practical Machinist, p. 346.

spirality (spī'ral'i-ti), *n.* [*< spiral + -ity.*] Spiral character or quality. *Science*, III. 583.
spirally (spī'ral-i), *adv.* In the form or manner of a spiral.

spiral-tail (spī'ral-tāl), *n.* The royal or king bird of paradise, *Cincinurus regius*: so called from the spiral coil at the end of the middle tail-feathers. See cut under *Cincinurus*.
spirament, n. [*< L. spiramentum, a breathing-hole, air-hole, < spirare, breathe: see spire*³.] A spiracle. *Rev. T. Adams, Works*, I. 78.
spirant (spī'rant), *n.* [*< L. spiran(-t)s, ppr. of spirare, breathe, blow, exhale: see spire*³.] A consonant uttered with perceptible blowing, or expulsion of breath; an alphabetic sound in the utterance of which the organs are brought near together but not wholly closed; a rustling, or fricative, or continuant consonant. The term is by some restricted to sounds of the grade of *v* and *f*, the *th* of *thin* and that of *thine*, and the German *ch*; others make it include also the sibilants; others, the semivowels *w* and *y*.

Spiranthes (spī-ran'thēz), *n.* [NL. (Richard, 1818), so called in allusion to the spiral arrangement of the flowers; < Gr. *σπειρα*, a coil, spire, + *άνθος*, flower.] A genus of orchids, of the tribe *Neottieae*, type of the subtribe *Spirantheae*. It is characterized by commonly spirally ranked and somewhat ringlet flowers with the upper sepal and the two petals erect or connivent and galeate, and the lateral sepals set obliquely on the ovary or long-decurrent, and by a column not prolonged into a free appendage, but usually decurrent on the ovary. There are about 80 species, widely dispersed through temperate and tropical regions of both hemispheres. They are terrestrial herbs from a short rootstock or a cluster of fleshy fibers or thickened tubers. Many species produce small white or greenish fragrant flowers, in several spirals forming a dense spike; in some the spike is reduced to a single spiral or becomes straight and unilaterial. The flowers are commonly small, but reach a large size in some tropical American species. The leaves are usually narrow, often grass-like. Six species are natives of the northeastern United States, all late-flowering and some of them then leafless. They are known as *lady's-tresses*, *S. cernua* also locally as *wild tuberose*, and *S. gracilis* as *corkscrew-plant*.

spiranthic (spī-ran'thik), *a.* [*< spiranth-y + -ic.*] Of the nature of or affected with spiranthly.
spiranthly (spī-ran'thi), *n.* [*< Gr. σπειρα, a coil, spire (see spire*²), + *άνθος, a flower.*] In *bot.*, the abnormal dislocation of the organs of a flower in a spiral direction. Thus, Masters describes a curious flower of *Cypripedium insigne*, in which a displacement occurred by a spiral torsion proceeding from right to left, which involved the complete or partial suppression of the organs of the flower. Also spelled *spiranthy*.
spiraster (spī-ras'tēr), *n.* [NL., < Gr. *σπειρα, a coil, spire, + άστήρ, a star.*] In sponges, an irregular polyact spicule in the form of a stout spiral with thick spines; a spinispirula. When these spines or rays are terminal, the spicule is called an *amphiasster*. *Sollas*.

Spirastroza (spī-ras-trō'sā), *n. pl.* [NL.: see *spirastrose*.] In Sollas's classification of sponges, a group of choristidan tetractinellidan sponges, generally provided with spirasters.
spirastrose (spī-ras'trōs), *a.* [*< spiraster + -ose (see -ous).*] Having microscleres or flesh-spicules in the form of spirasters; of or pertaining to the *Spirastroza*: distinguished from *sterastrose*.
spirated (spī-rā-ted), *a.* [*< spire*² + *-ate*¹ + *-ed*².] Formed into or like a spiral; twisted like a corkscrew. See cut under *sasin*. [Rare.]

The males of this species [*Antelope beoartica*] have long, straight, spirated horns nearly parallel to each other, and directed backward. Darwin, Descent of Man, II. 235.

spiration (spī-rā'shon), *n.* [*< LL. spiratio(n)-, a breathing, < L. spirare, pp. spiratus, breathe, blow, exhale: see spire*³.] 1. A breathing.

God did by a kind of spiration produce them. Barrow, Sermons, II. xxxiv.

2. In *theol.*, the act by which the procession of the Holy Ghost is held to take place; also, the relation or notion so constituted.

spire¹ (spīr), *n.* [Also *spear* (formerly also *speer*), now commonly associated with *spear*¹; < ME. *spire, spyre, spir*, < AS. *spīr*, a stalk, = MLG. *spīr*, LG. *spīr*, a point, needle, sprout, = G. *spīer*, a needle, pointer, *spīere*, a spar, = Icel. *spīra*, a spar, stilt, a kind of beaker, = Sw. *spīra*, a spar, scepter, pistil, = Dan. *spīre*, a spar, germ, shoot, *spīr*, a spar, spire (in arch.); perhaps connected with *spike*¹ and *spīne*, or with *spear*¹.] 1. A sprout or shoot of a plant.

An oak comth of alltel spire. Chaucer, Troilus, II. 1335.

2. A stalk of grass or some similar plant; a spear.

Shal neuere spīr springen vp. Piers Plowman (C), xlii. 180.

Pointed Spīres of Flax, when green,
Will Ink supply, and Letters mark usen.
Congreve, tr. of Ovid's Art of Love.

3. The continuation of the trunk in a more or less excurrent tree above the point where branching begins.

No tops to be received, except the spīre and such other top or limb as may be grown on the main piece [British oak for navy contracts]. Laslett, Timber, p. 72.

4. A name of various tall grasses, as the mar-ram, *Ammophila arundinacea*; the reed canary-grass, *Phalaris arundinacea*; and the common reed, *Phragmites communis*. *Britten and Holland, Eng. Plant Names*. [Prov. Eng.]-**5.** In *mining*, the tube carrying the train to the charge in the blast-hole: so called from the spires of grass or rushes used for the purpose. Also called *reed* or *rush*.—**6.** A body that shoots up to a point; a tapering body; a conical or pyramidal body; specifically, in *arch.*, the tapering part of a steeple rising above the tower; the great pinnacle, often of wood covered with lead, frequently crowning the crossing of the nave in large churches. The earliest spires, in the architectural sense, were merely pyramidal or conical roofs, specimens of which exist in some of the oldest Romanesque buildings. These roofs, becoming gradually elongated and more and more acute, resulted at length in the graceful tapering spire. Among the many existing medieval examples, that of Salisbury Cathedral is one of the finest; that of Sens Cathedral, France, though not of great size, is one of the earliest of fully developed spires, and is admired for the purity and elegance of its design. The spires of medieval architecture are generally square, octagonal, or circular in plan; they are sometimes solid, more frequently hollow, and are variously ornamented with bands encircling them, with panels more or less enriched, and with piercings and spire-lights, which are of infinite variety. Their angles are sometimes crocketed, and they are often terminated by a finial. In later examples the general pyramidal outline is obtained by diminishing the diameter of the structure in successive stages, and this has been imitated in modern spires, in which the forms and details of classic architecture have been applied to an architectural creation essentially medieval. The term *spire* is sometimes restricted to signify such tapering structures, crowning towers or turrets, as have parapets at their base, while when the spire rises from the exterior of the wall of the tower, without the intervention of a parapet, it is called a *broach*. See also cuts under *broach*, *10, rood-steeple, and transept*.

Spire of Sens Cathedral, France; early 13th century.

The glorious temple rear'd
Her pile, far off appearing like a mount
Of alabaster, topt with golden spires.
Milton, P. R., IV. 548.

7. The top or uppermost point of a thing; the summit.

To silence that
Which, to the spīre and top of praises vouch'd,
Would seem but modest. Shak., Cor., I. 9. 24.

spire¹ (spīr), *v.*; pret. and pp. *spired, ppr. spir-ing*. [*< ME. spīren, spyren (= Dan. spīre = Sw. spīra, germinate); < spīr*¹, *n.*] **I. intrans.** 1. To sprout, as grain in malting.—**2.** To shoot; shoot up sharply.

Yon cypress spiring high,
With pine and cedar spreading wide
Their darksome boughs on either side.
Wordsworth, White Doe of Rylstone, IV.

II. trans. 1†. To shoot or send forth.

In gentle Ladies breste and bounteous race
Of woman kind it fayrest Flowre doth *spire*.
Spenser, F. Q., III. v. 52.

2. To furnish with a spire or spires.

Like rampired walls the houses lean,
All *spired* and domed and turreted,
Sheer to the valley's darkling green.
W. E. Healey, From a Window in Princes Street.

spire² (spîr), *n.* [*F. spire* = *Sp. Pg. espira* = *It. spira*, < *L. spira*, < *Gr. σπειρα*, a coil, twist, wreath, spire, also a tore or anchor-ring. Cf. *Gr. σπις*, a woven basket, *L. sporta*, a woven basket, *Lith. spartas*, a band. Hence *spiral*, etc.]

1. A winding line like the thread of a screw; anything wreathed or contorted; a coil; a curl; a twist; a wreath; a spiral.

His head . . .
With burnish'd neck of verdant gold erect
Amidst his circling *spires*, that on the grass
Floated redundant. *Milton, P. L., lx. 502.*

2. In *conch.*, all the whorls of a spiral univalve above the aperture or the body-whorl, taken together as forming a turret. In most cases the spire is exerted from the last turn of the shell, giving the ordinary turreted conical or helicoid form of numberless gastropods; and in some long slender forms, of many turns and with small aperture, the spire makes most of the length of the shell, as figured at *Cerithium*, *Cylindrella*, and *Terebra*, for example. In other cases, however, the spire scarcely protrudes from the body-whorl, and it may be even entirely included or contained in the latter, so that a depression or other formation occupies the usual position of the apex of the shell. (Compare cuts under *Coryca*, *Cypræa*, *Cymbium*, and *Ovulum*.) See also cut under *univalve*.

a, Spire of a Univalve (*Unbricaria conica*).

3. In *math.*, a point at which different leaves of a Riemann's surface are connected. Also called a *spiral point*.

spire³ (spîr), *v. i.* [= *OF. spirer*, *espierer*, *esperer* = *Sp. Pg. espirar* = *It. spirare*, < *L. spirare*, breathe. Hence *ult. spirit*, etc., and *aspire*, *conspire*, *expire*, *inspire*, *perspire*, *respire*, *transpire*.] To breathe.

But see, a happy borean blast did *spire*
From faire Pelorus parts, which brought us right.
Vicars, tr. of Virgil (1632). (Nares.)

spire⁴, *v.* A Middle English form of *spere*¹.

spire⁵ (spîr), *n.* [*Cf. spire*¹.] The male of the red deer, *Cervus elaphus*, in its third year.

A *spire* [has] brow [antler] and uprights.
W. W. Greener, The Gun, p. 510.

spire-bearer (spîr' bâr' êr), *n.* In *conch.*, a spirifer.

spired¹ (spîrd), *a.* [*< spire*¹ + *-ed*.] Having a spire.

And Baal's *spired* Stone to Dust was ground.
Cowley, Davidsa, li.

spired² (spîrd), *a.* [*< spire*² + *-ed*.] In *conch.*, having a spire, as a univalve shell; spiriferous; turreted.

spire-light (spîr' lit), *n.* A window or opening of any kind for light in a spire.

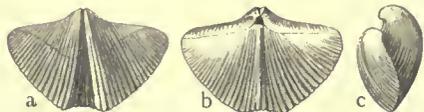

spire-steeple (spîr' stê' pl), *n.* A spire considered as part of a steeple; a spire. [Rare.]

spiric (spîr' ik), *a.* and *n.* [*< Gr. σπειρικός*, *spiric*, < *σπειρα*, a tore, < *σπειρω*, sweep round.] **I. a.** Pertaining to or in the form of a tore or anchoring.—**Spiric body**, a tore.—**Spiric line**. See *line*².

II. n. A curve, the plane section of a tore. Such curves, which are bicircular quartics, were treated by the ancient geometers Eudoxus and Pappus.

spiricle (spîr' i-kl), *n.* [*< NL. spiricula*, dim. of *L. spira*, a spire; see *spire*².] In *bot.*, one of the delicate coiled threads in the hairs on the surface of certain seeds and achenes, which uncoil when wet. They probably serve in fixing small and light seeds to the soil, in order that they may germinate.

Spirifer (spîr' i-fêr), *n.* [*NL. (Sowerby, 1816)*, < *L. spira*, a coil, spire, + *ferre* = *E. bear*¹.] **1.** The typical genus of *Spiriferidae*, having the long brachial appendages coiled into a pair of

Spirifer centronatus.
a, ventral view; b, dorsal view; c, lateral view.

spirals, called the carriage-spring apparatus, supported upon similarly convoluted shelly lamellæ, and the shell impunctate, with a long straight hinge-line. Numerous species range from the Lower Silurian to the Permian. *S. hystericus* is an example. Also called *Spirifera*, *Spiriferus*.

2. [*l. c.*] A member of this genus.

Spiriferidae (spir-i-fer'i-dê), *n. pl.* [*NL.*, < *Spirifer* + *-idae*.] A family of arthropomatus brachiopods with highly developed spiral appendages, typified by the genus *Spirifer*, containing numerous genera, ranging from the Lower Silurian to the Liassic.

spiriferine (spî-rif' e-rin), *a.* [*< Spirifer* + *-ine*.] Bearing brachial appendages in the form of a spiral; of or pertaining to the *Spiriferidae*.

spiriferoid (spî-rif' e-roid), *n.* and *a.* [*< Spirifer* + *-oid*.] **I. n.** A brachiopod of the family *Spiriferidae*.

II. a. Resembling a spirifer; having characters of the *Spiriferidae*.

spiriferous (spî-rif' e-rus), *a.* [*< NL. spirifer*, < *L. spira*, a coil, spire, + *ferre* = *E. bear*¹.] **1.** Having a spire, as a univalved shell; spired; turreted.—**2.** Having spiral appendages, as a brachiopod; spiriferine.—**3.** Containing or yielding fossil spirifers, as a geological stratum. *Encyc. Brit., XXIV. 507.*

spirignath (spîr' ig-nath), *n.* [*< NL. spirignatha* (Latreille, 1796), < **spirignathus*: see *spirignathus*.] The slender spirally coiled antlia or haustellum of lepidopterous insects. Also *spirignatha*, *spiritrompe*.

spirignathous (spî-rig' nâ-thus), *a.* [*< NL. spirignathus*, < *Gr. σπειρα*, a coil, + *γαστήρ*, a jaw.] Having a filiform sucking-tube coiled in a spiral, as a moth or butterfly; haustellate or antliate, as a lepidopterous insect.

spirillar (spîr' i-lâr), *a.* [*< Spirillum* + *-ar*.] In *bot.*, belonging to or resembling the genus *Spirillum*.

Spirillum (spî-ril' um), *n.* [*NL. (Ehrenberg, 1830)*, dim. of *L. spira*, a coil, spire; see *spire*².] A genus or form-genus of *Schizomycetes* or bacteria, having cylindrical or somewhat compressed spirally twisted cells. They are rigid and furnished at each end with a cilium, and multiply by transverse division, the parts soon separating from one another. This genus, which according to some authorities also embraces the genus known as *Vibrio*, contains many species, found in swamp-water, salt water, infusions, etc. See *Schizomycetes*.—**Spirillum fever**. See *fever*¹.

spirit (spîr' it), *n.* [*< ME. spirit*, *spyrte*, *spyrte*, *spyrte* (alt. *spit*, *spite*, > *E. sprite*¹), < *OF. esprit*, *esperit*, *esprit*, *F. esprit* = *Sp. espíritu* = *Pg. spirito* = *It. spirito*, spirit (= *G. Sw. Dan. spiritus*, spirits of wine, etc.), < *L. spiritus*, a breathing or blowing (as of the wind), a breeze, the air, a breath, exhalation, the breath of life, life, mind, soul, spirit, also courage, haughtiness, etc., *LL. a spirit*, ghost, < *spirare*, breathe; see *spire*³. Cf. *sprite*¹, a doublet of *spirit*.] **1.** According to old and primitive modes of thought, an invisible corporeal thing of an airy nature, scarcely material, the principle of life, mediating between soul and body. The primitive and natural notion of life was that it consisted of the breath, and in most languages words etymologically signifying 'breath' are used to mean the principle of life. *Spirit* is one of these, and translates the Greek πνεύμα. The ordinary notion of the Greek philosophers was that the soul is warm air. This was strengthened by the discovery, about the time of Aristotle (who, however, does not share the opinion), of the distinction between the veins and the arteries. It is found elaborately developed in the writings of the Stoics, and especially of Galen. The spirit in the body exists in various degrees of fineness. The coarser kinds confer only vegetative life, and betray themselves in eruptions, etc.; there are, besides, a vital spirit (*πνεύμα ζωοτακόν*) and an animal or psychical spirit (*πνεύμα ψυχικόν*). At birth man was said to possess only vegetative spirit, but as soon as he draws breath this was thought to be carried through the left ventricle and the arteries to every part of the body, becoming triturated, and conveying animal life to the whole. The spirits were also said to be in different states of tension or tone, causing greater or less energy of body and mind. The vital spirits, being carried to the ventricles of the brain, were there further refined, and converted into spirits of sense, or animal spirits. In vision these spirits dart out from the eye to the object, though this be the most distant star, and immediately return laden in some form with information. This doctrine, modified by the addition of an incorporeal soul, and confused with the Hebrew conception of a spirit, was generally believed down to and into the scientific era. Old writers, therefore, who use phrases which are still employed metaphorically must be understood as meaning them literally. See *def. 3*.

There is no malice in this burning coal;
The breath of heaven hath blown his spirit out.
Shak., K. John, iv. 1. 110.

From the kind heat which in the heart doth raise
The spirits of life doe their beginning take;
These spirits of life, ascending to the braine,
When they come there the spirits of sense do make.

These spirits of sense in fantasie's high court
Judge of the formes of objects ill or well;
And so they send a good or ill report
Downe to the heart, where all affections dwell.

Besides, another motive power doth rise
Out of the heart, from whose pure blood do spring
The vital spirits, which, borne in arteries,
Continuall motion to all parts doe bring.
Str J. Davies, Nosce Telpsum.

Adam, now enforced to close his eyes,
Sunk down, and all his spirits became entranced.
Milton, P. L., xl. 419.

Thus much cannot be denied, that our soul acteth not immediately only upon bones, flesh, brains, and other such like gross parts of the body, but, first and chiefly, upon the animal spirits, as the immediate instruments of sense and fancy, as that by whose vigour and activity the other heavy and unwieldy bulk of the body is so nimbly moved. And therefore we know no reason why we may not assent here to that of Porphyrylus: that the blood is the food and nourishment of the spirit; and that this spirit is the vehicle of the soul, or the more immediate seat of life.
Cudworth, Intellectual System, v. § 3.

2. The principle of life conceived as a fragment of the divine essence breathed into man by God. This conception is developed in the Old and New Testaments, in the writings of the Neoplatonists, and by theologians. In Biblical and theological language the spirit is the highest part of human nature, as most akin to the divine, connected medially with the body through the soul, and spoken of alone, or in contradistinction to the body, or as distinguished from both body and soul (see *soul*).

All flesh died that moved upon the earth, . . . all in whose nostrils was the breath of the spirit of life.
Gen. vii. 21, 22.

The spirit of Elijah doth rest on Elisha. *2 Ki. ii. 15.*
My spirit is consumed, my days are extinct, the grave is ready for me. *Job xvii. 1.*

Who among men knoweth the things of a man, save the spirit of the man, which is in him? *1 Cor. ii. 11 (R. V.).*

Our body shall be turned into ashes, and our spirit shall vanish as the soft air. *Wisdom of Solomon, li. 3.*

3. Metaphorically, animation; vivacity; exuberance of life; cheerfulness; courage; mettle; temper; humor; mood; usually in the plural. But in old writers this meaning is not figurative, since they conceived this quality to be due to the tension of animal spirits.

So feeble were his spirits, and so low.
Chaucer, C. T., l. 1361.

Hastings went to the council that morning in remarkably high spirits.
J. Gairdner, Rich. III., ff.

All furnis'd, all in arms; . . .
As full of spirit as the month of May.
Shak., 1 Hen. IV., iv. 1. 101.

I wonder you can have such spirits under so many distresses.
Sheridan, School for Scandal, iv. 1.

4. A peculiar animating and inspiring principle; dominant influence; genius; that which pervades and tempers the conduct and thought of men, either singly or (especially) in bodies, and characterizes them or their works.

O spirit of love! how quick and fresh art thou!
Shak., T. N., i. 1. 9.

This shows plainly the democratical spirit which acts our deputies.
Winthrop, Hist. New England, II. 141.

All seem to feel the spirit of the place,
And by the general reverence God is praised.
Wordsworth, Sonnets, lii. 48.

That is the best part of each writer which has nothing private in it; . . . that which in the study of a single artist you might not easily find, but in the study of many you would abstract as the spirit of them all.
Emerson, Compensation.

And that law of force which governs all the changes of character in a given people at a given time, which we call the Spirit of the Age, this also changes, though more slowly still.
W. K. Clifford, Lectures, I. 80.

5. The essence, real meaning, or intent of any statement, command, or contract: opposed to letter.

Who also hath made us able ministers of the new testament; not of the letter, but of the spirit: for the letter killeth, but the spirit giveth life.
2 Cor. iii. 6.

The scientific principles of Aristotle were in spirit, if not in form, in contrast with those of modern science.
W. Wallace, Epicureanism, p. 171.

6. Incorporeal, immaterial being or principle; personality, or a personality, unconnected or only associated with a body: in Biblical use applied to God, and specifically [*cap.*] to the third person of the Trinity (the Holy Spirit); also to supernatural good and evil beings (angels).

God is a spirit: and they that worship him must worship him in spirit and in truth.
John iv. 24.

But God hath revealed them unto us by his Spirit: for the Spirit searcheth all things, yea, the deep things of God.
1 Cor. ii. 10.

Putting together the ideas of thinking and willing, or the power of moving or quieting corporeal motion, joined to substance, of which we have no distinct idea, we have the idea of an immaterial spirit.
Locke, Human Understanding, II. xxlii. 15.

If we seclude space out of our consideration, there will remain but two sorts of substances in the world: that is, matter and mind; or, as we otherwise call them, body and spirit.
Watts, Logic, I. ii. § 2.

Spirit exists everywhere in nature, and we know of no spirit outside of nature.
Haeckel, Evol. of Man (trans.), II. 455.

7. A person considered with respect to his peculiar characteristics of mind or temper,

especially as shown in action; a man of life, fire, energy, enterprise, courage, or the like, who influences or dominates: as, the leading *spirits* of the movement were arrested.

No place will please me so, no mean of death,
As here by Cæsar, and by you cut off,
The choice and master *spirits* of this age.

Shak., J. C., iii. 1. 163.

8. A disembodied soul, or a soul naturally destitute of an ordinary solid body; an apparition of such a being; a specter; a ghost.

Then shall the dust return to the earth as it was; and the *spirit* shall return unto God who gave it. Eccl. xii. 7.

Whilst he [the child] is young, be sure to preserve his tender mind from all impressions and notions of *spirits* and goblins or any fearful apprehensions in the dark.

Locke, Education, § 133.

9. A supernatural being; an angel, fairy, elf, sprite, demon, or the like.

I am a *spirit* of no common rate, . . .
And I will purge thy mortal grossness so
That thou shalt like an airy *spirit* go.

Shak., M. N. D., iii. 1. 157.

And when Saul inquired of the Lord, the Lord answered him not, neither by dream, nor by Urim, nor by propheta. Then said Saul unto his servants, Seek me a woman that hath a familiar *spirit*.

1 Sam. xxviii. 6, 7.

Why, a *spirit* is such a little, little thing that I have heard a man who was a great scholar say that he'll dance ye a Lancashire hornpipe upon the point of a needle.

Addison, The Drummer.

10. A subtle fluid contained in a particular substance, and conferring upon it its peculiar properties. (a) In Bacon's philosophy, such a fluid for each kind of substance, living or dead.

The *spirits* or pneumatics, that are in all tangible bodies, are scarcely known. . . . *Spirits* are nothing else but a natural body, rarefied to a proportion, and included in the tangible parts of bodies, as in an integument. And they be no less differing one from the other than the dense or tangible parts; . . . and they are never (almost) at rest; and from them and their motions principally proceed arefaction, coagulation, concoction, maturation, putrefaction, vivification, and most of the effects of nature.

Bacon, Nat. Hist., § 98.

(b) In old chem., a liquor obtained by distillation: often in the plural.

11. A strong alcoholic liquor; in a restricted sense, such a liquor variously treated in the process of distillation, and used as a beverage or medicinally, as brandy, whisky, and gin; in the plural, any strong distilled liquor.

They are like too frequent use of *Spirits* in a time of health, which weaken the force of Nature by raising it too high.

Stillingfleet, Sermons, II. ix.

12. A solution of tin in an acid, used in dyeing.—13†. An aspirate; a breathing, as the letter *h*.

But be it [A] a letter or *spirit*, we have great use of it in our tongue, both before and after vowels.

B. Jonson, Eng. Grammar, iv.

spiritualism (spir'i-tù-ál-izm), *n.* [= F. *spiritualisme = Sp. Pg. espiritualismo = It. spiritualismo; as spiritual + -ism.*] 1. The state of being spiritual; spiritual character. *Milman.*—2. In *philos.*, the doctrine of the existence of spirit as distinct from matter, or as the only reality: opposed to *materialism*.—3. The belief that disembodied spirits can and do communicate with the living, especially through the agency of a person particularly susceptible to spiritualistic influences, called a medium; also, the various doctrines and theories, collectively, founded upon this belief. In its modern form, spiritualism originated in the State of New York in the year 1848, and since that time has extended over the United States and Europe. The mediums through whom the supposed communications take place are of various kinds, no fewer than twenty-four different classes being mentioned in the books explanatory of spiritualism. Among the chief methods of communication are rappings, table-lippings, writing, and speaking; in the latter forms of communication the medium is supposed to be fully possessed by the spirit for the time being. Spiritualism has no formal system of theology, and it is contended by many of its advocates that it is not necessarily inconsistent with the maintenance of a faith otherwise Christian, and that spirit-communications are providential interventions for the purpose of inculcating the doctrine of immortality, and counteracting the material tendencies of the age. The meetings for spiritualistic communications are commonly called *séances*. Also *spiritism*.

spiritualist (spir'i-tù-ál-ist), *n.* [= F. *spiritualiste = Sp. Pg. espiritualista = It. spiritualista; as spiritual + -ist.*] 1. One who professes a regard for spiritual things only; also, one whose employment is spiritual.

May not he that lives in a small thatched house . . . preach as loud, and to as much purpose, as one of those high and mighty *spiritualists*?
Echard, Grounds of Contempt of Clergy (1696), p. 140. (Latham.)

2. One who accepts philosophical spiritualism. See *spiritualism*, 2.

We may, as *spiritualists*, try to explain our memory's failures and blunders by secondary causes.
W. James, Prin. of Psychol., I. 2.

3. One who believes that intercourse may be and is held with departed spirits, especially through the agency of a medium; one who claims to hold such intercourse. Also called *spiritist*.

spiritualistic (spir'i-tù-ál-ist'ik), *a.* [*< spiritualist + -ic.*] 1. Of or pertaining to philosophical spiritualism; idealistic.

The deep-lying doctrine of Spiritual Beings, which embodies the very essence of *Spiritualistic* as opposed to *Materialistic* philosophy.
E. B. Tylor, Prim. Culture, I. 384.

2. Of or pertaining to modern spiritualism, or communication with departed spirits; produced by or believed to be due to the agency of departed spirits: as, *spiritualistic* manifestations; a *spiritualistic* séance.

spirituality (spir'i-tù-ál'i-ti), *n.*; pl. *spiritualities* (-ti). [*< ME. spiritalite, spiritalte, < OF. spiritalite, spiritalte, espiritualte, esperituaute, etc., F. spiritalité = Sp. espiritualidad = Pg. espiritalidade = It. spiritalità, < LL. spiritalitas(-t-), < spiritalis, spiritual: see spiritual.*] 1. Spiritual nature or character; immateriality; incorporeality.

A pleasure made for the soul, suitable to its *spirituality*, and equal to all its capacities.
South.

2. Spiritual tendency or aspirations; freedom from worldliness and from attachment to the things of time and sense; spiritual tone; desire for spiritual good.

We are commanded to fast, that we may pray with more *spirituality*, and with repentance.
Jer. Taylor, Sermons, Return of Prayers, I.

No infidel can argue away the *spirituality* of the Christian religion; attacks upon miracles leave that unaffected.
De Quincey, Essenes, I.

His discourses were so valued, and his *spirituality* so revered, that his ministrations were coveted in all that region.
New Princeton Rev., II. 140.

3†. The clergy as a whole; the ecclesiastics; the church.

Five entire subsidies were granted to the king by the *spirituality*.
Fuller.

4. That which belongs to the church or to an ecclesiastic in his official capacity; generally in the plural, and distinguished from *temporalities*: as, *spiritualities* of a bishop (those profits and dues which a bishop receives in his ecclesiastical character).—**Guardian of the spiritualities.** See *guardian*.—**Spirituality of benefices,** the tithes of land, etc.

spiritualization (spir'i-tù-ál-i-zā'shon), *n.* [*< spiritualize + -ation.*] 1. The act of spiritualizing, or the state of being spiritualized.—2. In *old chem.*, the operation of extracting spirit from natural bodies.

Also spelled *spiritualisation*.
spiritualize (spir'i-tù-ál-iz), *v. t.*; pret. and pp. *spiritualized*, ppr. *spiritualizing*. [*< F. spiritaliser = Sp. Pg. espiritualizar = It. spiritalizzare; as spiritual + -ize.*] 1. To make spiritual, or more spiritual; elevate above what is worldly or bodily.

Unless we endeavour to *spiritualize* ourselves, . . . the older we grow the more we are emburied and debased.
Southey, The Doctor, clxxxiv.

2. To infuse spirituality or life into; inform with spirit or life; animate.

This seen in the clear air, and the whole *spiritualized* by endless recollections, fills the eye and the heart more forcibly than I can express.
Carlyle, (Imp. Dict.)

3. To draw a spiritual meaning from, or impart a spiritual meaning to: as, to *spiritualize* a text of Scripture.—4. In *chem.*: (a) To extract spirit from. (b) To convert into spirit, or impart the properties of spirit to.

Also spelled *spiritalise*.
spiritualizer (spir'i-tù-ál-i-zèr), *n.* [*< spiritualize + -er.*] One who spiritualizes, in any sense. Also spelled *spiritaliser*.

The most licentious of the allegorists, or the wildest of the *spiritualizers*.
Warburton, Divine Legation, ix. 2.

spiritually (spir'i-tù-ál-i), *adv.* [*< ME. spyritually; < spiritual + -ly*.] 1. In a spiritual manner; without corporeal grossness, sensuality, or worldliness; with purity of spirit or heart.—2. As a spirit; ethereally.

The sky . . .
Bespangled with those Isles of light,
So wildly, *spiritually* bright.
Byron, Siege of Corinth, xl.

3. In a spiritual sense.

spiritual-minded (spir'i-tù-ál-mìn'ded), *a.* Having the mind set on spiritual things; having holy affections; spiritual.

spiritual-mindedness (spir'i-tù-ál-mìn'ded-ness), *n.* The state of being spiritual-minded; spirituality of mind.

spiritualness (spir'i-tù-ál-ness), *n.* The state or character of being spiritual; spirituality.

spirituality (spir'i-tù-ál-ti), *n.* [*< ME. spiritalite, < OF. spiritalte, etc.: see spirituality.*] The ecclesiastical body; the whole clergy of any national church.

It [the church] is abused and mistaken for a multitude of shaven, shorn, and oiled, which we now call the *spirituality* and clergy.
Tyndale, Ans. to Sir T. More, etc. (Parker Soc., 1850), p. 12.

spirituelle (spir'i-tù-el'), *a.* [F., fem. of *spiriteuel*: see *spiritual*.] Characterized by or exhibiting a refined intellectuality, grace, or delicacy: noting primarily but not exclusively a woman or the ways of women.

I have the air of youth without freshness, but noble, sweet, lively, *spirituelle*, and interesting.
The Century, XL. 654.

spirituousity (spir'i-tù-os'i-ti), *n.* [*< spirituous + -ity.*] 1. Spirituous character or quality: as, the *spirituousity* of beer.—2. Immateriality; ethereality. *Cudworth, Intellectual System, p. 421.*

spirituoso (spir'i-tù-ò'sò), *adv.* Same as *spiritoso*.

spirituous (spir'i-tù-us), *a.* [= Dan. *spirituøs*; < OF. (and F.) *spiriteux = Pg. espirituuoso, spir-*

ituous; cf. G. *spirituosa*, Sw. Dan. *spirituosa*, pl., alcoholic liquors; < ML. **spirituosus*, full of spirit, < L. *spiritus*, spirit: see *spirit*; cf. *spiriteous*.] 1†. Having the quality of spirit; ethereal; immaterial; intangible.—2†. Lively; active; gay; cheerful; enlivening.

Hedon. Weh, I am resolved what I'll do.
Ana. What, my good spirituous spark?

B. Jonson, Cynthia's Revels, iii. 2.

That it may appear airy and spirituous, & fit for the welcome of cheerful guests; the principal difficulty will be in contriving the lights and stair-caeca.

Sir H. Wotton, Reliquiae, p. 42.

3. Containing much alcohol; distilled, whether pure or compounded, as distinguished from fermented; ardent: applied to a liquor for drinking.—Syn. 3. *Spirituosus*, *Spiritual*, *Spirited*. *Spirituosus* is now strictly confined to the meaning of alcoholic: as, *spirituous*, ardent, or intoxicating liquors. *Spiritual* is as strictly confined to that higher field of meaning which is opposed to corporeal or carnal, aecular or temporal. *Spirited* expresses active animal spirits, or that spirit which is a vigorous movement of the feelings and the will: as, a *spirited* horse, boy, reply.

spirituousness (spir'i-tū-us-nes), *n.* The character of being spirituous. *Boyle*.

spiritus (spir'i-tus), *n.*; pl. *spiritus*. [L.: see *spirit*.] 1. A breathing, and an aspirate.—2. In *phar.*, spirit; any spirituous preparation: the official name of various spirits, specified by a qualifying term: as, *spiritus vini Gallici*, spirit of French wine (that is, brandy); *spiritus ætheris compositus*, compound spirit of ether.—**Spiritus asper**, a rough breathing; in *Gr. gram.*, the mark (´) placed over or before an initial vowel, or over the second letter of an initial diphthong, to indicate that it should be preceded by a sound like *h* in English: also placed over *p* when it is initial or is preceded by another *p* (þ).—**Spiritus lenis**, a soft or smooth breathing; in *Gr. gram.*, the mark (˘) denoting the absence of the rough breathing.

spiritweed (spir'it-wēd), *n.* Same as *spiritleaf*.

spirit-world (spir'it-wērld), *n.* The world of disembodied spirits; Hades; the shades.

spirity (spir'it-i), *a.* [*spirit* + *-y*.] Full of spirit; spirited. [*Scotch*.]

spirivalve (spir'i-valv), *a.* [*L. spira*, a coil, spire, + *valva*, door (valve).] Having a spiral shell, as a univalve mollusk; spirally whorled, as a shell.

spirket (spér'ket), *n.* [*Origin obscure*.] In *ship-building*, a space forward and aft between the floor-timbers. *Hanersly*.

spirketing, spirketting (spér'ket-ing), *n.* [*Spirket*.] In *ship-building*, the strokes of plank worked between the lower sills of ports and waterways. *Thearle*, *Naval Arch.*, § 209.

spiriling (spér'ling), *n.* Same as *sparling*¹.

Spirobranchia (spi-rō-brang'ki-ä), *n. pl.* [NL., < *Gr. σπειρα*, a coil, spire, + *βράγχια*, gills.] Same as *Brachiopoda*. Also *Spirobranchiata*.

spirobranchiate (spi-rō-brang'ki-ät), *a. and n.* [*NL. spirobranchiatus*, < *Gr. σπειρα*, a coil, spire, + *βράγχια*, gills.] I. *a.* Of or pertaining to the *Spirobranchiata*; brachiopod.

II. *n.* A brachiopod.

Spirochaeta (spi-rō-kē'tä), *n.* [NL. (Ehrenberg, 1833), < *Gr. σπειρα*, a coil, spire, + *χαίτη*, a bristle.]

A genus of *Schizomycetes* or bacteria, having the cells united in long slender threads which usually show narrow spiral windings. The filaments have the liveliest movements, and clearly propel themselves forward and back, but are also able to bend in various ways. *S. plicatilis* occurs among algae in swamp-water; *S. Obermeieri*, found in the blood of those sick with recurrent fever, is the cause of the disease; *S. Cohnii* is found in the mucus of the teeth, and *S. gigantea* in sea-water. Also *Spirochaeta*.

Spirochaeta Obermeieri.

spirogonimium (spi-rō-gō-nim'i-um), *n.*; pl. *spirogonimium* (-ia). [NL., < *Gr. σπειρα*, a coil, spire, + NL. *gonimium*, q. v.] In *bot.*, a gonimium similar to a hornogonimium, but not moniliform, with the syngonimia subglobose, smaller and more scattered, as in *Omphalaria*.

Spirogyra (spi-rō-jī-rä), *n.* [NL. (Link, 1833), so called with ref. to the spiral bands of chlorophyll in the cells; < *Gr. σπειρα*, a coil, spire, + *γυρος*, a circle, ring.] A genus of fresh-water algae, of the class *Conjugatae* and order *Zygnemaceae*. They are among the commonest of fresh-water algae, forming dense bright-green masses, in both running and stagnant water, and have often a slimy feel, owing to the well-developed mucilaginous sheath in which each filament is enveloped. The cells have one to several parietal chlorophyll-bands spirally winding to the right. Conjugation is acataxial or lateral. There are about 40 species

and very many varieties in the United States. They are popularly called *frog-spit* or *frog-spittle*. See *frog-spit*, and *cuta nodosa chlorophylli* and *conjugation*, 4.

spirolet, spirolet (spi-rōl, -rol), *n.* [*OF. spirole*, a small culverin.] A small culverin.

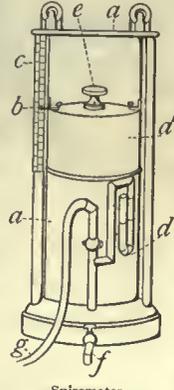

Long pieces of artillery called *basiliska*, and smaller sized ones, known by the name of *spirolets*.

Urquhart, *tr. of Bahelais*, i. 47.

spiroloculine (spi-rō-lok'ū-lin), *a.* Composed of spirally coiled loculi or chamberlets: specifically noting certain foraminifers. *Amer. Jour. Sci.*, No. 160, p. 328.

spirometer (spi-rom'e-tēr), *n.* [*Irreg. < L. spirare*, breathe (see *spire*³), + *metrum*, measure.] A contrivance for measuring the extreme differential capacity of the human lungs.

The instrument most commonly employed consists of an inverted chamber submerged in a water-bath. The breath is conducted by a flexible pipe and internal tube so as to collect in the chamber, which rises in the water, and is fitted with an index which marks the cubic inches of air expired after a forced inspiration. In the accompanying cut, *a, a* is a small gas-holder containing an inverted vessel *a'*; *b*, index, which shows on the scale *c* the number of cubic inches expired; *d*, manometer, which, when *a'* is held down, shows the pressure which the lungs can exert; *e*, plug-vent for outlet of expired air; *f*, cock for outlet of water; *g*, tube through which the expiration is made.

Spirometer.

spirometric (spi-rō-met'rik), *a.* [*As spirometer* + *-ic*.] Of or pertaining to the spirometer; ascertained by means of the spirometer; as tested by the spirometer.—**Spirometric capacity**, extreme differential capacity of the lungs, measured by the total amount of air which can be expired after the fullest possible inspiration.

spirometry (spi-rom'e-tri), *n.* [*As spirometer* + *-y*.] The use of the spirometer in measuring the capacity of the lungs.

Spiromonas (spi-rom'ō-nas), *n.* [NL. (Perty, 1852), < *Gr. σπειρα*, a coil, spire, + *μονάς*, a unit.] A genus of pantostomatous flagellate infusorians, spirally twisted on their long axis (whence the name). These animals are free-swimming or temporarily attached, soft and plastic, with two anterior subequal flagella, one of which is adherent at will. *S. volubilis* is an example. According to Kent, the *Cyclidium distortum* and *Heteromita angustata* of Dujardin are both species of *Spiromonas*.

spirophore (spi-rō-fōr), *n.* [*Irreg. < L. spirare*, breathe, + *Gr. φερος*, < *φέρω* = *E. bear*¹.] An apparatus for producing artificial respiration in cases of suspended animation, as in persons rescued from drowning. It consists of an air-tight case, in which the body is inclosed up to the neck, and an air-pump, for producing at proper intervals a partial vacuum in the case, thus causing the external air to fill the lungs of the patient.

Spirophyton (spi-rof'i-ton), *n.* [NL. (Hall), < *Gr. σπειρα*, a coil, spire, + *φυτόν*, a plant.] A genus of fossil algae, a characteristic plant of a subdivision of the Devonian occurring in the State of New York, and called from this fossil (*Spirophyton cauda-galli*) the *cauda galli grit*. This alga belongs to a group which appeared early in the Silurian, and continued into the Tertiary, but is now extinct. The frond of *Spirophyton* was broad, thin, with a distinct transversal nervation, and spirally convoluted around a slender axis, the convolution widening with the distance from the point of attachment.

spirozoid (spi-rō-zō'id), *n.* [*< Gr. σπειρα*, a coil, spire, + *E. zoid*.] The defensive zoid of certain hydroid hydrozoans, as of *Podocoryne*, a tubularian polyp: so called as coiling or curling spirally when not in action. These zooids are long slender filaments always provided with cilia or iasso-cilia for netting, and are sometimes called *spiralozooids*. Compare *dactylozoid* and *machopopolyp*.

spirt¹, spirt². See *spurt¹, spurt²*.

spirtle, v. and n. See *spurtle*.

Spirula (spir'ū-lä), *n.* [NL. (Lamarck, 1799), < LL. *spirula*, dim. of *L. spira*, a coil, spire: see *spire*².] 1. In *Cephalopoda*: (*a*) A genus of sepoid cuttlefishes, typical of the family *Spirulidae*, having a delicate shell in the hinder part of the body rolled into a flat or discoidal spiral, with discrete whorls whose involute spire presents ventrally, and no guard. There are several species, as *S. levis* and *S. fragilis*. The shells are common, and are sometimes carried by the Gulf Stream to the coast of England,

but specimens of the entire animal are extremely rare. Also *Spirulæa*, *Spirulæa*. (*b*) [*L. c.*; pl. *spirulæ* (-læ).] A member of this genus. *Imp. Dict.*—2. [*L. c.*; pl. *spirulæ* (-læ).] In sponges, an irregular spineless polyact spicule of spiral form.

spirulate (spir'ū-lät), *a.* [*< LL. spirula*, dim. of *L. spira*, a coil, spire (see *Spirula*), + *-atæ*.] Spiral in form, or in disposition of parts; spirally arranged: said of structures, markings, etc.

Spirulidæ (spi-rō'li-dē), *n. pl.* [NL., < *Spirula* + *-idæ*.] A family of cephalopods, typified by the genus *Spirula*. They are squids or sepoids with the mantle supported by a cartilaginous prominence or ridge and a corresponding pit or furrow, the fins small and terminal, and an internal tubular shell partitioned into numerous chambers by transverse septa, and wound in a loose coil.

spirulite (spir'ū-lit), *n.* [*< NL. Spirula* + *-itæ*.] A fossil cephalopod resembling and related to *Spirula*.

spiry¹ (spir'i), *a.* [*Early mod. E. spirie*; < *spire*¹ + *-y*.] 1. Having the form of a spire or pyramid; tapering like a spire.

In these lone walls (their days' eternal bound)
Those moss-grown domes with *spiry* turrets crown'd.
Pope, *Eloisa to Abelard*, l. 142.

2. Abounding in spires or steeples.

And villagea embosom'd soft in trees,
And *spiry* towns by surging columns mark'd
Of household smoke. *Thomson*, *Spring*, l. 963.

spiry² (spir'i), *a.* [*As spire*² + *-y*.] Of a spiral form; spiral; wreathed; curled.

Hid in the *spiry* volumes of the snake.
Dryden, *State of Innocence*, iv. 2.

spiscious†, a. A variant of *spissous*.

spiss† (spis), *a.* [= *OF. espais*, *espois*, *F. épais* = *Sp. espeso* = *Pg. cspesso* = *It. spisso*, < *L. spissus*, thick, compact, dense.] Thick; close; dense.

This *spiss* and *dease*, yet *polish'd*, this copious, yet concise treatise of the variety of languages. *Brerewood*.

spissated (spis'ā-ted), *a.* [*< L. spissatus*, pp. of *spissare*, thicken, condense, < *spissus*, thick, compact: see *spiss*.] Inspissated; thickened, as by evaporation. *Warburton*, *Divine Legation*, ii. 4.

spissed† (spist), *a.* [*< spiss* + *-ed*.] Thickened; condensed; inspissated.

Of such a *spissed* Substance there's a no need.
Heywood, *Hierarchy of Angela*, p. 214.

spissitude (spis'i-tūd), *n.* [*< L. spissitudo*, thickness, density, < *spissus*, thick, compact: see *spiss*.] Density; the denseness or compactness which belongs to substances not perfectly liquid nor perfectly solid; inspissated condition.

From this Grosneas and *Spissitude* of Air proceeds the slow Nature of the Inhabitants. *Howell*, *Letters*, i. l. 8.

spissous† (spis'us), *a.* [*< L. spissus*, thick: see *spiss*.] Thick. *Hist. of Francion* (1655). (*Nares*).

spit¹ (spit), *n.* [(*a*) < *ME. *spitte*, *spytte*, *spette*, earlier *spite*, *spyte*, *spete*, < *AS. spitu*, a spit, = *MD. spit*, *spet*, *spete*, *spete*, *D. spit* = *MLG. spit*, *LG. spitt* = *OHG. MHG. spiz*, *G. spieess* (= *Dan. spid* = *Sw. spett*, < *LG. ?*), a roasting-spit, in G. also the branches of a deer's horn (hence *OF. espoit*, *espoi*, a spit, *espois*, *F. épais*, a deer's horn, = *Sp. Pg. cspeto*, a spit, = *Olt. spito*, *spedo*, a spit); orig. neut. of the adj., *OHG. spizzi*, *MHG. spitze*, *spiz*, *G. spitz*, pointed (*G. spitze*, a point). (*b*) Cf. *LG. speet* (prop. **spiet*), a spear, in humorous use a sword, = *OHG. spioz*, *MHG. spiez*, *G. spieess*, a spear, lance, pike, = *Icel. spjót*, a spear, = *Sw. spjut* = *Dan. spyd*, a spear (hence *OF. espilet*, *espel*, *espie*, also *espoit*, *espoi* = *It. spiedo*, *spiede*, a spear). (*c*) Cf. *Icel. spjita*, a spit, a wooden peg, < *spjót*, a spear. The above forms have been partly confused with one another. (*d*) Cf. *W. pid*, a tapering point.] 1. A slender bar, sharply pointed at the end, to be thrust through meat which is to be roasted in front of the fire. The rotation of the spit brings all parts of the meat in turn to the heat. The ordinary spit is several feet long, and rests on supports at the sides of the fireplace. Shorter spits are used for small birds, kidneys, etc. See cut under *spit-rack*.

With your arms crossed on your thin-belly doublet like a rabbit on a spit.
Shak., *L. L. L.*, iii. l. 20.

He loves roast well
That eats the spit.
Fletcher, *Mad Lover*, ii. l.

2†. A sword. [*Cant.*]

Going naked with a spit on his shoulder.
Purchas, *Pilgrimage*, p. 509.

3†. The obelisk or dagger (†) used as a reference-mark.

Either your starrs or your spits (that I may use Origen's notes) shall be welcome to my margent.
Bp. Hall, *To Hugh Cholmley*. (*Latham*.)

Spirula levis.

spit

4. A small point of land running into the sea, or a long narrow shoal extending from the shore into the sea.

But Hermod rode with Niord, whom he took
To show him *spits* and beaches of the sea.

M. Arnold, Balder Dead, iii.

On a narrow *spit* of sand between the rocks a dozen little girls are laughing, romping, and pattering about.

Kingsley, Two Years Ago, ii.

5. In *weaving*, the spindle or wire which holds the cop, spool, or pirn in the shuttle.

spit¹ (spit), *v.*; pret. and pp. *spitted*, ppr. *spitting*. [*<* ME. *spitten*, *spytten*, *spytten* = MD. *spiten*, *speten*, D. *speten* = MLG. LG. *speten* = OHG. *spizzen*, G. *spissen* = Dan. *spidde* (cf. Sp. Pg. *espeter*), spit, turn on a spit; from the noun.] I. *trans.* 1. To thrust a spit through; pierce, transfix, or impale with or as with a spit; as, to *spit* a loin of veal.

Look to see . . .
Your naked infants *spitted* upon plikes.
Shak., Hen. V., iii. 3. 38.

How lov'd Patroclus with Achilles joins,
To quarter out the ox, and *spit* the loins.
W. King, Art of Cookery, i. 203.

2. To string on a stick and hang up to dry, as herring in a smoke-house.

II. *intrans.* To roast anything on a spit; attend to a spit; use a spit.

spit² (spit), *v.*; pret. and pp. *spit* or *spat*, ppr. *spitting*. [*Under this form are merged several orig. diff. forms: (a) Early mod. E. and dial. also spit, < ME. spitten, spytten (pret. spitte, spytte, sputte, sput), < AS. spitan, *spytan (pret. *spytte) = G. spützen = Sw. spotta = Dan. spytte, spit; (b) late MHG. sputzen, G. spetzen = Icel. spýta, spit; (c) ME. speten (pret. spette, spete, spétide), < AS. spētan (pret. spētte), spit. These forms are supposed to be connected with *spew*, but their relations are not clear. The similar forms, MD. *spicken*, also *spugen*, MLG. *spigen*, *spiggen*, G. *spucken*, spit, are secondary forms of the verb cognate with AS. *spīwan*, E. *spew*: see *spew*. Hence *spattle*¹, *spittle*¹, and prob. ult. spot.] I. *intrans.* 1. To eject saliva from the mouth; expectorate.*

When he had thus spoken, he *spat* on the ground, and made clay of the spittle.
John ix. 6.

Let him but fasting *spit* upon a toad,
And presently it bursts and dies.
Fletcher and Massinger, A Very Woman, iii. 1.

2. To fall in scattered drops, as rain. [*Colloq.*]

"And"—putting her hand out at the window—"I think it's *spitting* already."
Miss Ferrier, Marriage, vii.

It had been *spitting* with rain for the last half-hour, and now began to pour in good earnest.
Dickens, Sketches, Tales, vii.

3. To make a noise as if spitting, like an angry cat.—To *spit* on or upon, to treat with gross insult or ignominy.

II. *trans.* To eject from the mouth; spew; especially, to eject as or with saliva: as, to *spit* blood.

Thus *spittle* I out my venom under hewe
Of holynesse, to seme holy and trewe.
Chaucer, Prol. to Pardoner's Tale, l. 135.

Sir Roger told me that Old Moll had been often brought before him for making Children *spit* Pins, and giving Maids the Night Mare.
Addison, Spectator, No. 117.

To *spit* *spicences*, to spit with a white nummular expectoration from a dry mouth. [*Low.*]

He had thought it rather a dry discourse; and, beginning to *spit* *spicences* (as his saying was), he gave hints to Mr. Wildgoose to stop at the first public-house they should come to.
Graves, Spiritual Quixote, iv. 6. (Davies.)

To *spit* *white*, to spit from a dry or feverish mouth, especially after a debauch. [*Low.*]

If it be a hot day, and I brandish any thing but a bottle,
I would I might never *spit* *white* again.
Shak., 2 Hen. IV., i. 2. 237.

spit² (spit), *n.* [*Early mod. E. and dial. also spyt; < ME. spyt; < spit², v.*] 1. What is ejected from the mouth; saliva; spume.—2. The act of spitting: as, a cat gives an angry *spit*.

The speck'd toad . . .
Defies his foe with a fell *spit*.
Lovelace, Lueasta, Toad and Spider, p. 42.

3. In *entom.*: (a) The spume of certain insects; a frothy, fleecy, or waxy substance secreted by various homopterous bugs from specialized pores scattered over the general surface of the body. (b) An insect which produces such spume: as, the cuckoo-spit, *Ptyelus spumarius*. See *spittle-insect*.—4. A light fall of rain or snow; especially, rain or snow falling in light gusts or scattered drops or flakes.

Spits of rain dashed in their faces.
C. D. Warner, Their Pilgrimage, p. 175.

5. Image; likeness. [*Vulgar.*]

There was a large lithograph of a horse, dear to the remembrance of the old man from an indication of a dog in

the corner. "The very *spit* of the one I had for years; it's a real portrait, sir, for Mr. Hanbart, the printer, met me one day and sketched him."

Mayhew, London Labour and London Poor, II. 488.

spit³ (spit), *r. t.* [*<* D. *spitten*, dig; appar. connected with *speten*, spit: see *spit*¹.] To spade; plant by spading.

Saffron . . . in the month of July, . . . when the heads thereof have been plucked up, and after twenty days *spitted* or set againe under mould.

Holland, tr. of Camden, p. 453. (Davies.)

spit³ (spit), *n.* [*E. dial.; cf. spit³, v.*] A spade; hence, the depth of a spade in the earth; a spading or spadeful. [*Prov. Eng.*]

It [a curious harp] was raised by labourers at the depth of twelve *spits* or spadings under the earth in Coolness Moss, near Newcastle, between Limerick and Killarney.
O'Curry, Anc. Irish, II. xxxiii.

spital, **spittle**² (spit'al, spit'l), *n.* [*<* ME. *spyt-lic*, *spytelle*, by apheresis from *hospital*: see *hospital*.] A hospital; properly, a hospital for lazars.

He is
A *spittle* of diseases, and, indeed,
More loathsome and infectious.
Massinger, Picture, iv. 2.

Kind, pious hands did to the Virgin build
A lonely *Spital*, the belated swain
From the night terrors of that waste to shield.
Wardsworth, Gullit and Sorrow, xvii.

(a) That genus of painted finches of which the common indigo-bird of the United States is the type: synonymous with *Passerina* or *Hortulanus* of Vieillot, and *Cyanospiza* of Baird. See *cut* under *indigo-bird*. (b) Now employed for the silk-buntings, of which the common dickcissel or black-throated hunting, *S. americana*, is the type: synonymous with

Dickcissel (*Spiza americana*).

Euspiza. The male is 6½ inches long, 10½ in extent of wings; the plumage is smooth and compact; the upper parts are grayish-brown, streaked with black on the back; the lower are whitish, shaded with gray, tinged with bright yellow on the breast, and marked with a large black throat-patch; the edge of the wing is yellow; the lesser and middle coverts are bright-chestnut; the lower eyelid is white, the superciliary stripe yellow, and the bill dark horn-blue. The female is similar, but plainer, being less tinged with yellow, and having no black throat-patch, but a few black maxillary or pectoral streaks. This bunting is widely but irregularly distributed in the United States, especially in the eastern half, abounding in some districts, but seldom or never seen in others apparently as eligible. It nests on the ground or in a low bush, and lays four or five plain pale-greenish eggs (rarely speckled). The nuptial male has a quaint monotonous ditty, three notes of which are rendered in the name *dickcissel*—a word which originated in Illinois, and crept into print in or about 1876.

Spizæetus (spī-zā'e-tus), *n.* [NL. (Vieillot, 1816), *Gr. σπιζα*, a finch (see *Spiza*), + *ætos*, an eagle.] A genus of *Falconidae*, including hawks or small eagles having the feet feathered to the bases of the toes, the tail square or little rounded, the wings short and rounded, and the head, in the typical species, with a long occipital crest. The genus is sometimes restricted to such birds as the crested eagle of Brazil, *S. manducati* or *S. ornatus*; in a wider sense, it includes 12 or more species of Central and South America, Africa, India and the Indo-Malayan region, Celebes, Formosa, and Japan. Also *Spizætos*.

Spizella (spī-zel'ā), *n.* [NL. (Bonaparte, 1832), *Gr. σπιζα* + dim. *-ella*.] A genus of small American finches or sparrows, the chipping-sparrows, having the wings pointed, the tail long and emarginate, the back streaked, and the under parts not streaked in the adult. It includes several of the most familiar sparrows of the United States, as the chippy or chip-bird, *S. socialis* or *domestica*; the field-sparrow, *S. agrestis* or *pusilla*; the tree-sparrow, *S. monticola*; the clay-colored bunting and Brewer's bunting, *S. pallida* and *S. breweri*; and the black-chinned sparrow, *S. atricapilla*. See *cut* under *field-sparrow*.

Spizellinae (spī-ze-lī'nē), *n. pl.* [NL., *Gr. Spizella* + *-inae*.] A subfamily of *Fringillidae*, containing a large number of small spotted and streaked sparrows. None of those which occur in the United States have any red, blue, or orange colors. S. F. Baird, 1858.

spizelline (spī-zel'in), *a.* [*Gr. Spizella* + *-ine*¹.] Resembling or related to the chipping-sparrow; of or pertaining to the *Spizellinae*.

8. In *spoil-five*, a drawn game.—**Spoils system**, in *politics*, the practice of treating the public offices not as public trusts, to be administered primarily for the public interest, but as spoils of war, to be taken from members of the defeated party and given to members of the successful party—the emoluments and distinction of holding such offices being regarded as rewards for services rendered to the successful party, and the influence resulting from the possession of the offices being expected to be used for the maintenance of that party in power; a term of depreciation. The name is derived from a remark made in a speech in the United States Senate, in January, 1832, by Mr. Marcy of New York; speaking of and for the New York politicians, he said, "They see nothing wrong in the rule that to the victor belong the spoils of the enemy." This system had previously attained great power in the State of New York; under Jackson's administration it prevailed in national politics, and was soon adopted by nearly all parties, and applied to local as well as State and national offices.—**To shoot to spoil**. See *shoot*. = *Syn. 1. Plunder, Booty*, etc. See *pillage*, *n.*

He is our Advocate—that is, a *spokesman*, comforter, intercessor, and mediator.

J. Bradford, Works (Parker Soc., 1853), II. 294.

spoke-trimmer (spok'trim'er), *n.* A wheelwright's tool for trimming ends of spokes, etc., preparatory to using the spoke-pointer.

spoking-machine (spō'king-mā-shēn'), *n.* An apparatus for adjusting the spokes of a wheel to give them all the same inclination, and thus give the wheel a uniform dish.

spole (spōl), *n.* [A var. of *spool*.] 1. An obsolete or dialectal form of *spool*. Specifically— 2. The small wheel near the distaff in the common spinning-wheel.

Then fly the *spoles*, the rapid axles glow,
And slowly circumsolve the labouring wheel below.
Darwin, Loves of the Plants, II. 103.

spolia, *n.* Plural of *spolium*.

spolia opima (spō'li-ā ō-pī'mā). [L.: *spolia*, pl. of *spolium*, spoil; *opima*, neut. pl. of *opimus*, fat, rich, plump; see *opime*.] In ancient Rome, the choicest spoil taken from an enemy; hence, any valuable booty or pillage.

Milton, however, was not destined to gather the *spolia opima* of English Rhetoric. *De Quincey, Rhetoric*.

spoliary (spō'li-ā-ri), *n.*; pl. *spoliaries* (-riz). [*L. spoliarium*, a room or place, as in the amphitheater, where the bodies of slain gladiators were stripped of their clothes, also a den of robbers, < *spolium*, spoil: see *spoil*.] The place in Roman amphitheaters to which slaughtered gladiators were dragged, and where their clothes and arms were stripped from their bodies.

An Act of the Senate . . . is extant in Lampridius: "Let the Enemy of his Country be depriv'd of all his Titles; let the Parricide be drawn, let him be torn in pieces in the *Spoliary*."
Milton, Ana., to Salmasius.

spoliare (spō'li-āt), *v.*; pret. and pp. *spoliated*, pp. *spoliating*. [*L. spoliatum*, pp. of *spoliare*, spoil: see *spoil*, *v.*] I. *trans.* To plunder; pillage; despoil.

The other great Whig families, . . . who had done something more for it than *spoliare* their church and betray their king. *Dierack, Sybil*, i. 3.

II. *intrans.* To engage in robbery; plunder. **spoliation** (spō'li-ā-shōn), *n.* [*F. spoliation* = *Fr. expoliatio* = *Sp. expoliacion* = *It. spogliagione*, < *L. spoliatio* (-n-), plundering, a spoiling, < *spoliare*, plunder, spoil: see *spoliare*, *spoil*, *v.*] 1. The act of pillaging, plundering, or spoiling; robbery; plunder.

He [Hastings] . . . declared that, if the *spoliation* which had been agreed upon were not instantly carried into effect, he would himself go to Lucknow, and do that from which feebler minds recoil with dismay.
Macaulay, Warren Hastings.

2. The act or practice of plundering in time of war, especially of plundering neutrals at sea under authority.— 3. *Eccles.*, the act of an incumbent in unlawfully taking the fruits of a benefice under a pretended title.— 4. In *law*, intentional destruction of or tampering with (a document) in such way as to impair evidentiary effect.— **French Spoliation Act**, a United States statute of 1835 (23 Stat. at Large, 233) providing for the ascertainment of the French spoliation claims.— **French spoliation claims**, certain claims of citizens of the United States, or their representatives, against France for illegal captures, etc., prior to the treaty of 1800-1 between the United States and France. By this treaty these claims were assumed by the United States. The first appropriation for the payment of them was made in 1891.— **Writ of spoliation**, a writ obtained by one of the parties to a suit in the ecclesiastical courts, suggesting that his adversary has wasted the fruits of a benefice, or unlawfully taken them to the complainant's prejudice.

spoliative (spō'li-ā-tiv), *a.* [= *F. spoliative*; as *spoliare* + *-ive*.] Tending to take away or diminish; specifically, in *med.*, lessening the mass of the blood.

spoliator (spō'li-ā-tōr), *n.* [= *F. spoliator* = *Sp. expoliator*, plunder, < *L. spoliator*, a plunderer, < *spoliare*, spoil: see *spoliare*.] One who commits spoliation; a despoiler; a robber.

Spoliatores (spō'li-ā-tō'rez), *n. pl.* [NL., pl. of *L. spoliator*, a plunderer: see *spoliator*.] In Maegillivray's system of classification, an order of birds, the robbers, as the jagers. [Not in use.]

spoliatory (spō'li-ā-tō-ri), *a.* [*< spoliare* + *-ory*.] Consisting in spoliation; causing spoliation. *Quarterly Rev.*, XLVII. 416.

spolium (spō'li-um), *n.*; pl. *spolia* (-ā). [ML. use of *L. spolium*, spoil: see *spoil*.] In *eccles. law*, the property of a beneficed ecclesiastic which could not be legally disposed of by will at death.— **Jus spoli**, originally, the right claimed in the middle ages by those present at the death of a beneficed ecclesiastic to seize and carry off any portable property of the deceased. This led to such scandals that finally the right was vested by papal constitutions in the church, and all spolia belong to the papal treasury.

spont, *n.* A Middle English form of *spoon*¹.

spondaic (spōn-dā'ik), *a.* [*< OF. spondaïque*, *F. spondaïque* = *Sp. espondeico* = *Pg. espondeico* = *It. spondaico*, < *L. *spondaicus*, incorrect form of *spondiacus*, < *Gr. σπονδιακός*, of or pertaining to a spondee, < *σπονδειος*, a spondee: see *spondee*.] In *anc. pros.*: (a) Of or pertaining to a spondee; constituting a spondee; consisting of spondees. (b) Having a spondee in the fifth place: noting a daetylic hexameter of the exceptional form

— — — | — — — | — — — | — — — | — — — | — — —

the fifth foot being regularly a daetyl.

spondaical (spōn-dā'i-kal), *a.* [*< spondaic* + *-al*.] Same as *spondaic*.

spondal (spōn'dal), *n.* An obsolete erroneous form of *spondyl*.

spondee (spōn'dē), *n.* [Formerly also *spondee* (also, as *L. spondeus* = *D. G. Dan. spondeus*; = *Sw. sponde*, < *F. spondee* = *Sp. Pg. espondeo* = *It. spondeo*, < *L. spondeus*, *spondæus*, < *Gr. σπονδειος*, a spondee, so called as used (probably as double spondee) in hymns accompanying libations, prop. adj. (sc. πούς, a foot), of or pertaining to a libation, < *σπονδή*, a drink-offering, libation to the gods, pl. σπονδαί, a solemn treaty, a truce, < *σπένδειν*, pour out, make a libation; root uncertain. Cf. *L. spondere*, answer: see *sponsor*.] In *anc. pros.*, a foot consisting of two long-times or syllables, one of which constitutes the thesis and the other the arsis: it is accordingly tetrasemic and isorhythmic. The spondee is principally used as a substitute for a dactyl or an anapest. In the former case it is a *daetylic spondee* (— for — — —), in the latter an *anapestic spondee* (— — for — — —). An *irrational spondee* represents a triaemic foot, trochee, or iambus (— — for — —, or — — for — —). It is found in the even places of trochaic lines and in the odd places of iambic lines, also in logæadic verses, especially as representing the initial trochee ("basis"). A foot consisting of two spondees is called a *dispondee*.— **Double spondee**, **greater spondee**, in *anc. pros.*, a foot consisting of two tetrasemic longa (— — — —), and accordingly double the magnitude of an ordinary (single) spondee (— — — —).

Spondiaceæ (spōn-di-ā'sē-ē), *n. pl.* [NL. (Kunth, 1824), < *Spondias* + *-accæ*.] Same as *Spondiææ*.

Spondias (spōn'di-as), *n.* [NL. (Linnaeus, 1737), < *Gr. σπονδιός*, a false reading of *σποδιός*, a tree supposed to be the bullace.] A genus of poly-petalous trees, of the order *Anacardiaceæ*, type of the tribe *Spondiææ*. It is characterized by polygamous flowers with eight or ten stamens and four or five alytes which are free at the apex. There are 5 species, dispersed through tropical regions of both hemispheres. They bear alternate odd-pinnate leaves, often crowded at the ends of the branches, with opposite and often very taper-pointed leaflets. The small short-pedicelled flowers form spreading terminal panicles. Each flower contains four or five spreading petals and a free ovary of as many cells, which becomes in fruit a fleshy yupe with a thick stone. The leaves and bark often yield medicinal and principally astringent preparations; the fruit is often astringent and laxative; that of *S. tuberosa* is valued in Brazil as a remedy in fever. The fruits of several species are known as *hog-plums*. *S. purpurea*, the purple or Spanish plum, is often cultivated in the West India, and is readily propagated by cuttings. *S. lutea*, a tree resembling the ash and reaching 40 or 50 feet, bears yellowish flower-buds, used as a sweetmeat with sugar, and a yellow oval fruit known as *Jamaica plum* or *golden apple*. *S. dulcis*, a similar tree abundant in most Polynesian islands, and known as *Otaheite apple*, yields a large yellow fruit with the smell of apples and an agreeable acid flavor, to the eye contrasting handsomely with the dark-green foliage. The tree is widely cultivated elsewhere in the tropics. A Brazilian tree, reported as *S. tuberosa*, produces long aërial roots which descend and form at the ground large black hollow and cellular tubers containing about a pint of water, supplying in dry weather the needs both of the tree and of travelers. *S. nanguifera* of India is the source of a gum resembling gum arabic, known as *hog-gum*, and of several medicinal remedies. Its smooth yel-

lowish-green fruit is known as *wild mango*, or *amra*, and is eaten parboiled or pickled or made into curries.

Spondiææ (spōn-dī'ē-ē), *n. pl.* [NL. (Bentham and Hooker, 1862), < *Spondias* + *-ææ*.] A tribe of polypetalous plants, of the order *Anacardiaceæ*, distinguished from the other tribe, *Mangiferiææ*, by an ovary with from two to five cells (instead of one), the ovules usually or always pendulous. It includes 47 genera, of which *Spondias* is the type. They are mainly tropical or South African, and are mostly trees with pinnate leaves. Also *Spondiaceæ*, *Spondiææ*.

spondil, *n.* An obsolete spelling of *spondyl*.

spondulics (spōn-dī'liks), *n.* [Also *spondoolics*, *spondoolix*; origin obscure.] Originally, paper money; now, any money; funds. [Slang, U.S.]

spondyl, **spondyle** (spōn'dil), *n.* [Formerly also *spondil*, *spondal*, *spondle*; < *F. spondyle*, < *L. spondylus*, < *Gr. σπόνδυλος*, less correct form of *σπόνδυλος*, a joint of the spine, a vertebra, joint, round stone, etc.] 1. A joint, or joining of two pieces.

Great Sir, the circles of the divine providence turn themselves upon the affairs of the world so that every *spondyl* of the wheels may mark out those virtues which we are then to exercise. *Jer. Taylor, Ductor Dubitantium*, Ded.

2. A joint of the backbone; a vertebra.

A kind of rack
Runs down along the *spondyls* of his back.
B. Jonson, Sad Shepherd, II. 2.

spondylalgia (spōn-di-lal'ji-ā), *n.* [NL., < *Gr. σπόνδυλος*, a vertebra, + *άλγος*, pain.] Pain in the spine; rachialgia.

spondylarthritis (spōn'di-lär-thrī'tis), *n.* [NL., < *Gr. σπόνδυλος*, a vertebra, + *NL. arthritis*, q. v.] Inflammation of the vertebral articulations.

spondylaxarthrosis (spōn-di-leks-är-thrō'sis), *n.* [NL., < *Gr. σπόνδυλος*, a vertebra, + *εξάρθρωσις*, dislocation, < *ἐξ*, out, + *ἄρθρον*, a joint.] Dislocation of the vertebrae.

Spondylidæ¹ (spōn-dil'i-dē), *n. pl.* [NL. (J. E. Gray, 1826), < *Spondylus* + *-idæ*.] A family of marine bivalves, related to the *Limidæ* and to the scallops, typified by the genus *Spondylus*; the thorn-oysters. The valves are dissimilar, the right one being the larger, and attached at the beak, the left generally flat or concave; the ligament is internal. About 70 species are known, inhabiting chiefly tropical seas. The extinct species are numerous. Formerly also *Spondylææ*. See *cut* under *Spondylus*.

Spondylidæ² (spōn-dil'i-dē), *n. pl.* [NL., < *Spondylis* + *-idæ*.] In *entom.*, a family of phytophagous coleopterous insects, typified by the genus *Spondylis*, having deeply impressed sensitive surfaces of the antennæ, and the tarsi not dilated. The family was erected by Le Conte and Horn to receive all the aberrant *Cerambycidæ* of Lacordaire, probably representing in the modern fauna remnants of the undifferentiated types of a former geologic age. The genera and species are few. Also *Spondylitæ*.

Spondylis (spōn'di-lis), *n.* [NL. (Fabricius, 1775), < *Gr. σπόνδυλος*, *σπόνδυλος*, a vertebra, joint: see *spondyl*.] A genus of phytophagous beetles, typical of the family *Spondylidæ*.

spondylitis (spōn-di-lī'tis), *n.* [NL., < *Gr. σπόνδυλος*, a vertebra, + *-itis*.] Arthritis of a vertebra.— **Spondylitis deformans**, arthritis deformans involving the vertebrae.

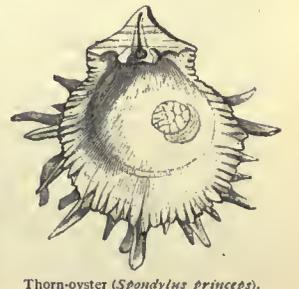

spondylolisthesis (spōn-di-lol-is-thē'sis), *n.* [NL., < *Gr. σπόνδυλος*, a vertebra, + *ὀλισθήσις*, a slipping, < *ὀλισθαίνειν*, slip, < *ὀλισθος*, slipperiness.] A displacement forward of the last lumbar vertebra on the sacrum.

spondylolisthetic (spōn-di-lol-is-thet'ik), *a.* [*< spondylolisthesis* (-et-) + *-ic*.] Pertaining to, of the nature of, or affected with spondylolisthesis.

spondylopathia (spōn'di-lō-path'i-ā), *n.* [NL., < *Gr. σπόνδυλος*, a vertebra, + *πάθος*, suffering.] Disease of the vertebrae.

spondylous (spōn'di-lus), *a.* [*< spondyl* + *-ous*.] Of or pertaining to a spondyl; like a vertebra; vertebral.

Spondylus (spōn'di-lus), *n.* [NL. (Linnaeus, 1758), < *L. spondylus*, < *Gr. σπόνδυλος*, *σπόνδυλος*, a vertebra, joint: see *spondyl*.] 1. A genus of bivalves, representing the family *Spondylidæ*, formerly referred to the *Ostræidæ* or *Pectinidæ*. They are remarkable for the character of their spines and the richness of their coloring. Some are known as *thorn-oysters*, *spring-oysters*, and *water-clams*.

Thorn-oyster (*Spondylus princeps*).

2. [*l. c.*] An oyster of this genus.—3. [*l. c.*] A vertebra.

sponet, *n.* A Middle English form of *spoon*¹.
spong (spong), *n.* [Prob. a form of *spang*, a clasp, brooch taken as a point, a gore ?; see *spang*¹.] A projection of land; an irregular, narrow, projecting part of a field. [Obsolete or prov. Eng.]

The tribe of Judah with a narrow *spong* confined on the kingdom of Edom.

Fuller, Pisgah Sight, II. iv. 2. (Trench.)

sponge (spunj), *n.* [Formerly also *spunge*; < ME. *spunge*, *spunge*, *spoung* (= D. *spungie*, *spons*), < OE. *esponge*, F. *éponge* = Pr. *esponja*, *espona* = Sp. Pg. *esponja* = It. *spugna*, *spugna* = AS. *spunga* = Gael. Ir. *spunc*, < L. *spongia*, < Gr. *σπογγία*, also *σπόγγος* (Attic *σπόγγος*), a sponge, any spongy substance, = L. *fungus*, a mushroom, fungus; perhaps akin to Gr. *σπογγός*, spongy, porous, and to Dan. Sw. *svamp*, a sponge, fungus, = Icel. *svöppr*, a sponge, and so to Goth. *swammis*, a sponge, = OHG. *swam*, *swamp*, MHG. *swam*, *swamp* (*swamb-*), G. *schwamm* = MLG. *swam*, *swamp*, LG. *swamm*, *swamp*, a sponge, fungus; see *swamp*, and cf. *spunk* and *fungus*.]

1. A fixed aquatic organism of a low order, various in form and texture, composed of an aggregate of amœbiform bodies disposed about a common cavity provided with one or more inhalant and exhalant orifices (ostioles and oscules), through which water pours in and out. The proper sponge-substance is traversed by a water-vascular system or set of irrigating canals, and in nearly all cases is supported and strengthened by a skeleton in the form of horny fibers, or silicious or calcareous spicules. The streaming of the water is kept up by the vibration of cilia in the water-vascular system—that is, by the lashing of flagella borne upon the individual sponge-cells. These so much resemble flagellate infusorians that some naturalists regard sponges as compound infusorians, and consequently as protozoans. Those cells which have definite form are spindle-shaped, or flask-shaped, and provided with flagella, round the base of which there may be a little rim or collar, as in those infusorians known as collar-bearing monads, or *Choanoflagellata*. Sponges propagate by budding or gemmation, a process involving cell-fission or ordinary division of cells. They also reproduce sexually by ova and spermatozoa. Sponge-germs resulting from fission are called *gemmules*. The spermatozoa are spindle-shaped. The ova are like ordinary amœbiform cells and are usually shed into the canals and pass out of the system to be developed; in some species they develop in the substance of the parent. The embryo forms a hollow ball with a ciliated cavity, and then acquires inhalant and exhalant pores. The living tissue proper of sponges is disposed in three layers or sets of cells, as in all higher animals. These are an ectoderm, cuticle, or out-layer; an endoderm, innermost layer, or in-layer; and a mesoderm, middle layer, or mid-layer, which may be quite thick. It is from the mid-layer that the reproductive elements, and all the many forms of skeletal elements, are derived. Special sense-organs have been described in some sponges. (See cut under *synoel*.) Sponges as a class or phylum of animals have many technical names—as *Acinodophora*, because they have no cilia or stinging-organs (compare *Cnidaria*); *Amorphozoa*, from their shapelessness, or rather their many shapes; *Parazoa*, from their position with respect to both *Protozoa* and *Metazoa*; *Porifera*, *Poriferota*, *Porozoa*, and *Polysomatata*, from their many pores or openings (see cut under *Porifera*); *Spongia*, *Spongiaria*, *Spongiida*, *Spongiotata*, etc. They are divided into various primary groups, the most tangible of which are two—the chalk-sponges, or *Calcispongiae*, and the fibrous and flinty sponges, or *Silicispongiae*. But the leading authorities differ irreconcilably in the arrangement and nomenclature of the many orders, families, and genera they respectively adopt; and the opinion has been expressed that the sponges are not susceptible of satisfactory treatment by the ordinary methods of zoological classification. See also cuts under *ciliate*, *Spongilla*, *monadiform*, *Euplectella*, and *Hyalonemidæ*.

2. The fibrous framework of a colony of sponge-animalcules, from which the animalcules themselves have been washed out, and from which the gritty or sandy parts of the colony, if there were any, have been taken away. See *skeleton*, 1 (b). The framework of sponges is of different characters in the several orders. The slime-sponges have none, or scarcely any. In the ordinary fibrous sponges the skeleton is a quantity of interlacing fibers and layers, forming an intricate network. This is further strengthened in the chalky and glassy sponges by hard spicules, either separately embedded in the general skeletal substance, called *ceratode*, or solidified in a kind of latticework. (See *Calcispongiae*, *Silicispongiae*.) The chalk-needles or calcareous spicules are either straight or oftener rayed in three-armed or four-armed crosses. The sand-needles or silicious spicules present an extraordinary and beautiful va-

Acetia primordialis, one of the Chalk-sponges; a part of one side of the body removed, exposing the ventriculus. a, osculum, mouth, or exhalant aperture; b, one of the many ostioles or inhalant pores; c, endoderm; d, ectoderm, in which triadial spicules are embedded; g, ova.

riety. Among them are many starchy figures and wheel-like forms, resembling snow-crystals; others are still more curious, in the form of crosses, anchors, grapelets, shirt-studs, bodkins, etc. The six-rayed star is the characteristic shape in the glass-sponges. (See *Hexactinellida*.) Sponge-spicules are named in an elaborate special vocabulary. (See *sponge-spicule*.) The glass-sponges have some commercial value from their beauty as objects of curiosity; but a few of the fibrous sponges are the only others out of many hundreds of species, both fossil and recent, of any economic importance. Sponges, when wetted, swell to a much greater size, and become very flexible; they are therefore used as vehicles and absorbents of water and other liquids, in wiping or cleansing surfaces, erasing marks, as from a slate, etc. See *bath-sponge*, *Euspongia*, and *Hippospongia*.

The *Sponge*, and the *Reed*, of the which the Jewes zaved our Lord Eyselle and Galle, in the Cros. Mandeville, Travels, p. 10.

3. Any sponge-like substance. (a) In *baking*, dough before it is kneaded and formed, when full of globules of carbonic acid generated by the yeast or leaven. (b) A metal when obtained in a finely divided condition, the particles having little coherence, and the mass more or less of a spongy texture. Thus, a "metallic sponge" of iron is obtained by the reduction of brown hematite ore by cementation with charcoal in the so-called "Chenot process" for the manufacture of steel. Spongy iron is also prepared on a large scale by the reduction of various ores, and in this form is used for purifying water. Platinum-sponge may be prepared by gently heating the double chloride of platinum and ammonium. Platinum-black is a black powder not differing much in its properties from platinum-sponge, except that it is less dense; it may be made to take on the spongy character by repeated ignition in a mixture of air and a combustible gas: both are used as oxidizing agents.

4. A tool for cleaning a cannon after its discharge. The sponge used for smooth-bore guns consists of a cylinder of wood covered with sheepskin or some similar woolly fabric, and fitting the bore of the gun rather closely; this is secured to a long handle, or, for field-guns, to the reverse end of the rammer. For modern rifled guns and breech-loaders, sponges of different forms and materials have been introduced. A common form is a cylinder to which bristles are fixed, forming a cylindrical brush, the rounded end being also covered with the bristles. See cut under *gun-carriage*.

5. Figuratively, one who or that which absorbs without discrimination, and as readily gives up, when subjected to pressure, that which has been absorbed.—6. One who persistently lives upon others; a sycophantic or erasing dependant; a hanger-on for the sake of maintenance; a parasite.

Better a penurious Kingdom then where excessive wealth flows into the graceless and injurious hands of common sponges to the impoverishing of good and loyal men. Milton, Reformation in Eng., II.

7. In the *manège*, the extremity or point of a horseshoe answering to the heel.—8. The coral, or mass of eggs, under the abdomen of a crab. [Chesapeake Bay.]—Bahama sponge, one of three species or varieties of bath-sponges procured from the Bahamas.—Burnt sponge, sponge that has been burnt, used in the treatment of gout and scrofulous swellings.—Calcareous sponge, a chalk-sponge.—Crumb-of-bread sponge. See *Haliclondria*.—Dog-head sponge, a kind of bath-sponge, *Spongia agaricina punctata*.—Fibrous sponge, any horny sponge.—Glove-sponge, a finger-sponge; a reef-sponge.—Hardhead sponge, a kind of bath-sponge, the hardhead, *Spongia dura*.—Holy sponge, in the Gr. Ch., a piece of compressed sponge which the deacon uses in the office of prothesis to gather together the portions in the disk under the holy bread, and with which he wipes the disk after communion.—Honeycomb sponge, the grass-sponge, *Spongia equina cerebriformis*.—Horny sponge, a fibrous or fibrillicious sponge; a sponge of the group *Ceratosa*, as distinguished from a chalk-sponge or glass-sponge.—Pyrotechnical sponge. Same as *amadou*.—Red sponge, *Microciona prolifera*, the red beard of the oyster of the northern United States.—Reef-sponge, a kind of bath-sponge, *Spongia officinalis*, var. *tubulifera*, growing on the Florida reefs and in the West Indies.—Sheepswool sponge. See *sheepswool*.—Sponge tent. See *tent*.—Toilet-sponge, a bath-sponge of fine quality; a Turkish sponge.—To set a sponge, in *baking*, to leaven a small mass of dough, to be used in leavening a larger quantity.—To throw up the sponge, in *pugilism*, to toss up the sponge used to freshen a fighter, in acknowledgment of his defeat; hence, in general, to acknowledge that one is conquered or beaten; submit; give up the contest or struggle. [Slang.]—Turkey cup-sponge, *Spongia adriatica*.—Vegetable sponge. See *sponge-gourd*.—Velvet sponge, a fine soft sponge of the West Indies and Florida, *Spongia equina*, var. *meandriiformis*.—Vitreous sponge, a glass-sponge.—Waxed sponge. Same as *sponge tent*.—Yellow sponge, *Simocaca* sponge. See *bath-sponge*. (See also *boring-sponge*, *cup-sponge*, *finger-sponge*, *flint-sponge*, *glass-sponge*, *grass-sponge*, *horse-sponge*, *wool-sponge*.)

sponge (spunj), *v.*; pret. and pp. *sponged*, ppr. *sponging*. [Formerly also *spunge*; = D. *sponzen* = F. *éponger* = Sp. *esponjar*, *sponge*, < LL. *spongiare*, wipe off with a sponge; cf. Gr. *σπογγίζω*, *sponge*; from the noun.] I. *trans.* 1. To cleanse or wipe with a sponge: as, to *sponge* the body; to *sponge* a slate or a cannon.

Brush thou, and *spunge* thy cloaths to,
That thou that day shalt weare.

Babees Book (E. E. T. S.), p. 73.

2. To wipe out with a sponge, as letters or writing; efface; remove with a sponge; destroy all traces of: with *out*, *off*, etc.

Every little difference should not seem an intolerable blemish necessarily to be *sponged out*.

Hooker, Eccles. Polity, v. 19.
Specifically—3. To dampen, as in cloth-manufacturing.—4. To absorb; use a sponge, or act like a sponge, in absorbing: generally with *up*: as, to *sponge up* water that has been spilled.

They *sponged up* my money while it lasted, borrowed my coals and never paid for them, and cheated me when I played at cribbage.

Goldsmith, Citizen of the World, xxvii.

5. To gain by sycophantic or mean arts. Here went the dean, when he's to seek,
To *sponge* a breakfast once a week,
Swift, Richmond Lodge and Marble Hill.

"What else have you been *sponging*?" said Maria. . . . "Sponging, my dear! It is nothing but four of those beautiful pheasants' eggs, which Mrs. Whitaker would quite force upon me." Jane Austen, Mansfield Park, x.

6. To drain; harass by extortion; squeeze; plunder.

How came such multitudes of our own nation . . . to be *sponged* of their plate and money?
South, Sermons, I. xii.

7. In *baking*, to set a sponge for: as, to *sponge* bread.

II. *intrans.* 1. To gather sponges where they grow; dive or dredge for sponges.

There were a few small open boats engaged in *sponging* from Apalachicola, which were not entered upon the custom-house books.
Fisheries of U. S., V. ii. 824.

2. To live meanly at the expense of others; obtain money or other aid in a mean way: with *on*.

She was perpetually plaguing and *sponging* on me.
Swift, To Dr. Sheridan, April 24, 1738.

sponge-animalcule (spunj'an-i-mal'kü'l), *n.* A sponge-cell. See cut under *monadiform*.

sponge-bar (spunj'bär), *n.* A sand-bar or rock bottom on which sponges grow. [Florida.]

sponge-cake (spunj'kāk'), *n.* A very light sweet cake made of flour, eggs, and sugar, flavored with lemon: so called from its light, spongy substance.

sponge-crab (spunj'krab), *n.* A crab with which a sponge is habitually commensal, as a member of the genus *Dromia*. See cut under *Dromia*.

sponge-cucumber (spunj'kü'kum-bér), *n.* Same as *sponge-gourd*.

sponge-diver (spunj'di'vèr), *n.* One who dives for sponges; a sponge-fisher.

sponge-farming (spunj'fär'ming), *n.* The industry of breeding and rearing sponges. *Encyc. Brit.*, XXII. 428.

sponge-fisher (spunj'fish'èr), *n.* One who fishes for sponges, or is engaged in the sponge-fishery.

sponge-fishery (spunj'fish'èr-i), *n.* The process or occupation of fishing for sponges.

sponge-glass (spunj'gläs), *n.* 1. A bucket with a glass bottom, used in searching for sponges. *Fortnightly Rev.*, N. S., XXXIX. 179.—2. The flint-sponge, *Hyalonema mirabilis*, found on the coast of Japan.

sponge-gourd (spunj'görd), *n.* The washing- or towel-gourd, *Luffa cylindrica* (*L. Egyptiaca*), also *L. acutangula*. The netted fiber from the interior of the fruit is used for washing and other purposes, hence called *vegetable sponge* or *dish-rag*. See *Luffa* and *strainer-vine*.

sponge-hook (spunj'hük), *n.* See *hook*.

spongelet (spunj'let), *n.* [*< sponge + -let.*] 1. A little sponge. *Encyc. Dict.*—2. In *bot.*, same as *spongiote*.

sponge-moth (spunj'môth), *n.* The gipsy-moth. [Eng. and (recently) U. S.]

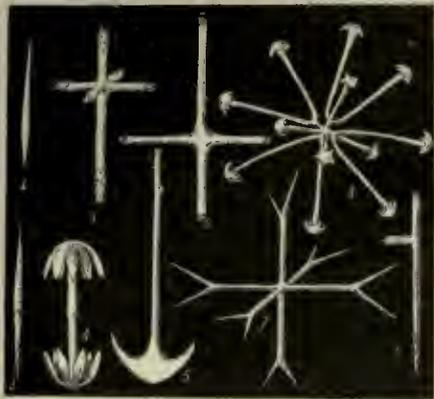

spongeous (spunj'jus), *a.* [*< sponge + -ous.* Cf. *spongiuous*.] Same as *spongy*.

sponger (spunj'jèr), *n.* [Formerly also *spunger*; < *sponge + -er*.] 1. One who uses a sponge.—2. A person or vessel engaged in fishing for sponges. *Fisheries of U. S.*, V. ii. 823.—3. In *cloth-manuf.*, a machine in which cloth is dampened previous to ironing. It has a perforated adjustable cylinder, which is filled with steam, and about which the cloth is rolled.—4. A parasitical dependant; a hanger-on for maintenance; a sponge.

Trencher-flies and *spongers*. Sir R. L'Estrange.

sponge-spicule (spunj'spik'ül), *n.* One of the calcareous or silicious spicules peculiar to sponges. They generally appear in more or less modified geometrical figures, with definite axes represented by a non-skeletal rod or axial canal, around which the lime or silica is deposited in concentric layers. There may be one such axis or several. Sponge-spicules are either calcareous or silicious; according to their position and relations, they are either supporting-spicules or skeleton-spicules (megascleres), or flesh-spicules or tension-spicules (micro-

acleres). Schulze has classified them, according to position, more elaborately into *spicula autoderminata*, *autogastralia*, *basalia*, etc. They are also grouped primarily according to their axes, next according to their rays, and finally ac-

Various Spicules from Glass-sponges (*Hexactinellida*), 1, oxydiact; 2, echinate oxydiact; 3, echinate hexact; 4, amphidisk; 5, anctora; 6, tetract; 7, oxyhexact; 8, discohexaster; 9, triact.

ording to their many individual figures. Thus, both calcareous and silicious spicules are *monaxon*, *diazon*, *triaxon*, or *tetraxon*. Some silicious spicules are anaxon or polyact, giving stellate figures, either regular, as the *oxyaster*, *euastr*, and *sterraster*, or irregular, as the *spiraster*, *spirula*, and *corona*. These anaxon spicules are always flesh-spicules or microscleres. The monaxon spicules are either megascleres or microscleres; of the former are the *strongylus* or *strongylon*, *oxystrongylus*, *oxyus* or *oxyon*, *tylotus*, and *tylostylus*; of the latter are the *toxus* or *toxon*, *tozodragma*, *signa*, *sigmadragma*, *isochela*, *amisochele*, *diancistra*, *trichodragma*, etc. Of triaxon silicious forms are the *oxyhexact*, *oxytetract*, *oxydiact*, and the *hexaster*, *oxyhexaster*, *discohexaster*, *graphohexaster*, *floricome*, and *plumicome*; the *pinula*, *scopula*, *amphidisk*, *uncinate*, and *clavula*. The tetraaxon spicules are divided into *monactinal*, *diactinal*, *triactinal*, and *tetractinal*. The above names and classes (excepting those from Schulze) are substantially according to Lendenfeld. Sollas, the monographer of the sponges in the ninth edition of the "Encyclopædia Britannica," uses a similar set of terms and many others. Among the terms employed by these investigators may be noted *acerella*, *amphaster*, *amphistrella*, *amphitetract*, *amphitriene*, *anatriene*, *anthaster*, *arculus*, *aster*, *calthrops*, *candelabrum*, *chela*, *chiaster*, *cladome*, *cladus*, *cynda*, *desma*, *diancistrum*, *dichotriene*, *echinella*, *ectaster*, *endaster*, *hexaster*, *meniscoid*, *microtrahid*, *microstrongylon*, *microzon*, *orthotriene*, *pentact*, *polyact*, *polyaxon*, *protriene*, *pterozymba*, *pycnaster*, *rhabd* or *rhabdus*, *sandaster*, *sigmaspire*, *signella*, *spheraster*, *spherula*, *spinspirula*, *spirastrella*, *stellate* (n.), *stylus*, *tetract*, *triact*, *triene*, *trichite*, *trichotriene*, *triona*, *tylon*, etc. Sponge-spicules are occasionally absent, as in gelatinous sponges. They are small or few in horny sponges, such as are used for the bath. In the glass-sponges they make magnificent structures, like spun glass, of elegant figures, and constitute most of the bulk of the sponge. See also cuts under *Haliphysma*, *Euplectella*, *Hyalonemidae*, and *sponge*.

sponge-tongs (spun'j tŏngz), *n. sing.* and *pl.* Tongs used for taking sponges.

sponge-tree (spun'j trē), *n.* An evergreen shrub or small tree, *Acacia Farnesiana*, widely diffused through the tropics, and found in the United States along the Gulf of Mexico. It has slender zigzag branches, bipinnate leaves, stipular spines, and bright-yellow heads of very fragrant flowers, much used by perfumers. It is often planted for ornament.

spongewood (spun'j wūd), *n.* 1. The hat-plant, *Æschynomene aspera*, or its pith. See *hat-plant* and *Æschynomene*.—2. A plant with spongy bark, *Gastonia cutispongia*, of the *Araliaceæ*, the only species of its genus. It is an erect shrub with pinnate leaves and a panicle a foot long consisting of crowded branches with the flowers umbel at the ends.

Spongiæ (spun'ji-ē), *n. pl.* [NL., *pl.* of *L. spongia*, a sponge: see *sponge*.] Sponges; the mesodermal class of *Calentera*, having a branching canal-system (the organs of which are developed from cells of the mesogloea, or primary mesoderm), simple epithelia, endodermal collar-cells, and no endoblasts or movable appendages. The class is divided by Lendenfeld into two subclasses: the *Calcarea*, with one order, *Calcispongia*; and the *Silicea*, with three orders, *Hexactinellida*, *Chondrospongia*, and *Cornacispongia*, with many suborders, tribes, etc., and about fifty living families, besides several fossil ones. The class dates back to the Silurian. See *sponge*.

spongian (spun'ji-an), *n.* [*<* *Spongiæ* + *-an*.] A member of the *Spongiæ*; any sponge.

spongiocell (spun'ji-sel), *n.* [*<* *L. spongia*, a sponge, + *cella*, a cell.] A sponge-cell.

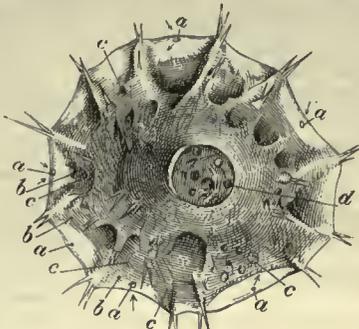

spongiocolous (spun'jik-ŏ-lus), *a.* [*<* *L. spongia*, a sponge, + *colere*, inhabit.] Inhabiting sponges.

Spongiæ, Spongiidæ (spun'ji-dē, spun'ji'i-dē), *n. pl.* [NL., *<* *Spongiæ* + *-idæ*.] 1. Sponges; the *Spongiæ*.—2. A family of horny or fibrous sponges, typified by the genus *Spongia*, to which various limits have been assigned. In the most restricted sense the family is represented by such forms as the bath-sponges, and now called *Euspongiidæ*.

spongiform (spun'ji-fŏrm), *a.* [*<* *L. spongia*, a sponge, + *forma*, form.] 1. Having the form or structure of a sponge; poriferous, as a member of the *Spongiæ*; or of pertaining to the *Spongiæ*. Hence—2. Sponge-like; spongy; soft, elastic, and porous, like an ordinary bath-sponge: noting various objects or substances not sponges.

—**Spongiform quartz**, floatstone.

Spongilla (spun'jil'j), *n.* [NL. (Lamarek, 1816), dim. of *Spongia*, the sponges: see *sponge*.] The only genus of fresh-water sponges, belonging to the group *Fibrospongiæ*. The type-species is *S. fluviatilis*, which grows on the banks of rivers and ponds.

A Small Fresh-water Sponge, *Spongilla fluviatilis*, with one exhalant aperture, seen from above. a and b, ostioles, or inhalant apertures; c, ciliated chambers; d, osculum, or exhalant aperture. (Arrows indicate the direction of the current of water.)

on submerged timber and other supports, forming thick greenish incrustations. It represents a highly specialized and somewhat aberrant family, *Spongillidæ*. See also cuts under *ciliate* and *Porifera*.

Spongillidæ (spun'jil'i-dē), *n. pl.* [NL., *<* *Spongilla* + *-idæ*.] The only family of sponges which are not marine, characterized by their gemmules, and typified by the genus *Spongilla*.

spongilline (spun'ji-lin), *a.* [*<* *Spongilla* + *-inæ*.] Pertaining to the *Spongillidæ*, or having their characters.

spongin (spun'jin), *n.* [*<* *sponge* + *-inæ*.] The proper horny or fibrous substance of sponges; ceratose or ceratode. Also *spongiolin*.

sponginblast (spun'jin-blást), *n.* [*<* *spongin* + *Gr. βλαστός*, a germ.] One of the cells of sponges from which spongin is produced; the formative blastema in which spongin arises. *W. J. Sollas*, *Encyc. Brit.*, XXII. 420. Also *spongioblast*.

sponginblastic (spun'jin-blas'tik), *a.* [*<* *sponginblast* + *-ic*.] Producing spongin, as a sponginblast; formative or germinating, as spongin.

sponginess (spun'ji-nes), *n.* The state or character of being soft and porous, or spongy; porosity: said of various objects and substances not sponges.

sponging-house (spun'jing-hous), *n.* [Formerly also *sponging-house*; *<* *sponging*, verbal *n.* of *sponge*, *v.*, 6, + *house*.] A victualing-house or tavern where persons arrested for debt were kept by a bailiff for twenty-four hours before being lodged in prison, in order that their friends might have an opportunity of settling the debt. Sponging-houses were usually the private dwellings of bailiffs, and were so named from the extortion charges made upon prisoners for their accommodation therein.

A bailiff by mistake seized you for a debtor, and kept you the whole evening in a *sponging-house*. *Swift*, *Advice to Servants* (General Directions).

Spongiocarpeæ (spun'ji-ŏ-kär'pē-ē), *n. pl.* [NL., *<* *Gr. σπογγία*, a sponge, + *καρπός*, a fruit, + *-eæ*.] An order of florideous algæ, founded upon a single species, *Polyides rotundus*. The fronds are blackish-red, cylindrical, cartilaginous, from 3 to 6 inches long, and attached by a disk, with an undivided stipe, which becomes repeatedly dichotomous above. The *cyatocarpa* are in external flesh-colored wart-like protuberances, which are borne on the upper parts of the frond. It grows on stones in deep water.

spongiolate (spun'ji-ŏ-lit), *n.* [= *F. spongiolate*, *<* *L. spongiola*, dim. of *spongia*, a sponge: see *sponge*.] In *bot.*, a former name of the spongy tissue of a root-tip, from its supposed property of sucking up moisture like a sponge. Also called *spongelet*.

spongiolin (spun'ji-ŏ-lin), *n.* [*<* *spongiolate* + *-inæ*.] Same as *spongin*. *W. J. Sollas*, *Encyc. Brit.*, XXII. 416.

spongiolite (spun'ji-ŏ-lit), *n.* [*<* *Gr. σπογγίον*, dim. of *σπόγγος*, sponge (see *sponge*), + *λίθος*, stone.] A fossil sponge-spicule; one of the minute silicious elements of a sponge in a fossil state.

spongiolitic (spun'ji-ŏ-lit'ik), *a.* [*<* *spongiolite* + *-ic*.] Of the nature of a spongiolite; containing spongiolites, or characterized by their presence: as, *spongiolitic flint*.

spongiopiline (spun'ji-ŏ-pil'in), *n.* [*<* *Gr. σπογγίον*, dim. of *σπόγγος*, sponge, + *πίλος*, felt, + *-inæ*.] A substitute for cataplasms. It is a thick cloth into which sponge is incorporated in the weaving, in a manner analogous to that of pile-weaving, to form a uniform pile, and coated on the opposite side with rubber.

spongioplasm (spun'ji-ŏ-plazm), *n.* [*<* *Gr. σπογγίον*, dim. of *σπόγγος*, sponge, + *πλάσμα*, anything formed or molded: see *plasm*.] The substance, resembling neuroglia, which supports the so-called "primitive tubules" or subdivisions of nerve-fiber containing hyaloplasm. *Nansen*, 1886.

The primitive tubes are the meshes in a supporting substance designated as "*spongioplasm*," a substance described as similar to the neuroglia which forms the sheath of the nerve tube or fibre. *Amer. Jour. Psychol.*, I. 487.

spongioplasmic (spun'ji-ŏ-plaz'mik), *a.* [*<* *spongioplasm* + *-ic*.] Of the nature of, or pertaining to, spongioplasm. *Amer. Jour. Psychol.*, I. 487.

spongiouse (spun'ji-ŏs), *a.* [*<* *L. spongiuosus*: see *spongiuosus*.] Same as *spongy*.

spongiuous (spun'ji-us), *a.* [*<* *F. spongieux* = *Sp. Pg. esponjoso* = *It. spugnoso*, *<* *L. spongiuosus*, *spongiuosus*, porous, *<* *spongia*, a sponge: see *sponge*.] Spongy.

spongiozoön (spun'ji-ŏ-zŏ-on), *n.*; *pl. spongiözöa* (-j). [NL., *<* *Gr. σπογγίον*, a sponge, + *ζῷον*, an animal.] A sponge. Also *spongiozoön*.

spongite (spun'jit), *n.* [*<* *L. spongia*, sponge, + *-ite*.] A fossil sponge.

spongitic (spun'jit'ik), *a.* [*<* *spongite* + *-ic*.] Of the nature of a fossil sponge; containing or characterized by the fossil remains of sponges.

spongioblast (spun'gŏ-blást), *n.* [*<* *Gr. σπόγγος*, sponge, + *βλαστός*, germ.] Same as *sponginblast*.

Spongioidæ (spun'gŏ-dī'ŏ-ē), *n. pl.* [NL., *<* *Gr. σπογγώδης*, *σπογγώδης*, sponge-like, spongy (see *spongioid*), + *-eæ*.] An order of siphonocladaceous algæ, typified by the genus *Codium*. They form spongy spherical or cylindrical floating masses, consisting of branched tubes.

spongioid (spun'gŏ-id), *a.* [*<* *Gr. σπογγώδης*, *σπογγώδης* (also *σφογγώδης*, *σφογγώδης*), sponge-like, *<* *σπόγγος*, sponge, + *ειδός*, form.] Spongiiform, in any sense; spongy.

spongiological (spun'gŏ-lŏj'ŏ-ik-al), *a.* [*<* *spongiology* + *-ic-al*.] Of or pertaining to spongiology, or the science of sponges.

spongiologist (spun'gŏ-lŏj'ŏ-ist), *n.* [*<* *spongiology* + *-ist*.] One who is versed in the science of sponges.

spongiology (spun'gŏ-lŏj'ŏ-ji), *n.* [*<* *Gr. σπόγγος*, a sponge, + *-λογία*, *<* *λέγω*, speak: see *-ology*.] The science of sponges; the study of the *Spongiæ*, and the body of knowledge thence obtained.

spongiomeral (spun'gŏ-mēr'al), *a.* [*<* *spongiomere* + *-al*.] Of or pertaining to a spongiomere; choanosomal, as that part of a sponge which is characterized by flagellated chambers.

spongiomere (spun'gŏ-mēr), *n.* [*<* *Gr. σπόγγος*, a sponge, + *μέρος*, a part.] The upper, choanosomal part of a sponge, characterized by the presence of flagellated chambers: distinguished from *hypomere*. *Encyc. Brit.*, XXII. 415.

spongiozoön (spun'gŏ-zŏ-on), *n.* [*<* *Gr. σπόγγος*, sponge, + *ζῷον*, animal.] Same as *spongiozoön*. *Hyatt*.

spongy (spun'ji), *a.* [Formerly also *spungy*; *<* *sponge* + *-y*.] 1. Of the nature or character of a sponge; spongiform or spongioid.—2. Resembling a sponge in certain particulars; soft or elastic and porous; of open, loose, compressible texture, like a bath-sponge; punky, pithy, or soft-grained, as wood; boggy or soggy, as soil; absorbent; imbibitive. See cuts under *cellular* and *cystolith*.

That sad breath his *spongy* lungs bestow'd. *Shak.*, *Lover's Complaint*, l. 326.

Here pits of crag, with *spongy*, plashy base, To some enrich th' uncultivated space. *Crabbe*, *Works*, II. 9.

3+. As it were soaked with drink; drunken. [Rare.]

What not put upon His *spongy* officers, who shall bear the guilt Of our great quell? *Shak.*, *Macbeth*, I. 7. 71.

4+. Moist; wet; rainy. Thy banks with pined and twined brims, Which *spongy* April at thy nest betrima, To make cold nymphs chaste crowns. *Shak.*, *Tempest*, iv. I. 65.

Spongy bones, cancellated bones; specifically, the sphenobasals.—**Spongy cartilage**. Same as *elastic carti-*

lage (which see, under *elastic*).—**Spongy platinum**, platinum-sponge. See *sponge*, n., 3.

spongy-pubescent (spun^hji-pū-bes^hent), *a.* In *entom.*, having a very compact pubescence, resembling the surface of a sponge.

spongy-villous (spun^hji-vil^hus), *a.* In *bot.*, so thickly covered with fine soft hairs as to be spongy or to resemble a sponge.

sponkt, *n.* An obsolete form of *spunk*.

sponnet, **sponnet**, *v.* Obsolete forms of the preterit plural and past participle of *spin*.

sponsal (spon^hsal), *a.* [*L. sponsalis*, pertaining to betrothal or espousal, < *sponsus*, a betrothal: see *spouse*.] Relating to marriage or to a spouse. *Bailey*, 1731.

sponsible (spon^hsi-bl), *a.* [An aphetic form of *responsible*.] 1. Capable of discharging an obligation; responsible. *Scott*, *Rob Roy*, xxvi.—2. Respectable; creditable; becoming one's station.

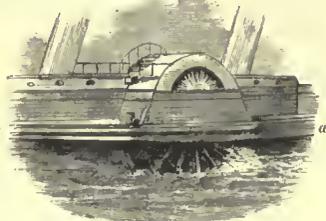

sponsing (spon^hsing), *n.* Same as *sponson*.

sponsion (spon^hshon), *n.* [*L. sponsio*(*n*), a solemn promise or engagement, *securitas*, < *spondere*, pp. *sponsus*, engage oneself, promise solemnly: see *sponsor*.] 1. The act of becoming surety for another.—2. In *international law*, an act or engagement made on behalf of a state by an agent not specially authorized. Such conventions must be confirmed by express or tacit ratification.

sponsional (spon^hshon-al), *a.* [*L. sponsion + -al*.] Responsible; implying a pledge. [Rare.]

He is righteous even in that representative and sponsional person he put on. *Abb. Leighton*, *Sermons*, v.

sponson (spon^hson), *n.* [Also *sponsing*; origin obscure.] *Naut.*, the curve of the timbers and planking toward the outer part of the wing,

a, a, Sponson.

before and abaft each of the paddle-boxes of a steamer; also, the framework itself.—**Sponson-beams**, the projecting beams which contribute to form sponsons.

sponsor (spon^hsor), *n.* [*L. sponsor*, a surety, *LL.* a sponsor in baptism, < *spondere*, pp. *sponsus*, promise; cf. Gr. *σπονδαί* (pl. of *σπονδή*), a truce, < *σπένδεν*, pour a libation, as when making a solemn treaty: see *sponsee*. From *L. spondere* are also ult. *despond*, *respond*, *correspond*, *spouse*, *espousal*, etc.] 1. A surety; one who binds himself to answer for another, and is responsible for his default; specifically, one who is surety for an infant at baptism, professing the Christian faith in its name, and guaranteeing its religious education; a godfather or godmother. The custom of having sponsors in baptism is as old as the second century. See *godfather*.—2. [*cap.*] [NL.] In *entom.*, a genus of coleopterous insects.

sponsorial (spon^hsō^hri-al), *a.* [*L. sponsor + -ial*.] Of or pertaining to a sponsor.

sponsorship (spon^hsor-ship), *n.* [*L. sponsor + -ship*.] The state of being a sponsor.

spontaneity (spon^htā-nē^hi-ti), *n.* [*F. spontanéité* = Sp. *espontaneidad* = Pg. *espontaneidade* = It. *spontaneità*, < *ML. *spontaneita*(*t*)-s, < *LL. spontaneus*, spontaneous: see *spontaneous*.] 1. Spontaneous character or quality; that character of any action of any subject by virtue of which it takes place without being caused by anything distinguishable from the subject itself. *Spontaneity* does not imply the absence of a purpose or external end, but the absence of an external incitement or external efficient cause.

2. In *biol.*, the fact of apparently automatic change in structure, or activity in function, of animals and plants, whereby new characters may be acquired, or certain actions performed, under no influence of external conditions or stimulus; animal or vegetable automatism. (a) The inherent tendency of an individual organism to vary in structure without reference to its conditions of environment, as when a plant or animal sports; spontaneous variability. Some of the most valuable strains of domestic animals and cultivated plants have arisen thus spontaneously. (b) The tendency to purposeless activity of the muscular system of animals, whereby they execute movements independent of external stimulus.

Such actions, though voluntary, lack recognizable motive, and appear to depend upon the tension of a vigorous nervous system refreshed by repose. Such spontaneity is notable in the great activity of children and the gambols of young animals.—**Spontaneity of certain cognitive faculties**, in the philosophy of Kant, the self-activity of those faculties which are not determined to act by anything in the sense-impressions on which they act. But the conception is not made very clear by Kant.

spontaneous (spon^htā-nē-us), *a.* [= *F. spontané* = Sp. Pg. *espontáneo* = It. *spontaneo*, < *LL. spontaneus*, willing, < *L. *spont-*(*t*)-s, will, only in gen. *spontis* and abl. *sponte*, of one's own will, of one's own accord.] 1. Proceeding from a conscious or unconscious internal impulse; occurring or done without the intervention of external causes; in a restricted sense, springing from one's own desire or volition, apart from any external suggestion or incitement. Of late the employment of *spontaneous* in the sense of 'irreflective' or 'not controlled by a definite purpose' is creeping in from the French; but this is an objectionable use of the term.

The spontaneous grace with which these homely duties seemed to bloom out of her character.

Hawthorne, *Seven Gables*, v.

Now my speculation is that advantageous permanent changes are always produced by the spontaneous action of the organism, and not by the direct action of the environment.

W. K. Clifford, *Lectures*, I, 101.

A man whose nature leads him to a spontaneous fulfillment of the Divine will cannot be conceived better.

H. Spencer, *Social Statics*, p. 277.

2. Growing naturally, without previous human care.

Spontaneous flowers take the place of the finished parterre.

Goldsmith, *Citizen of the World*, xxxi.

3. Growing as native; indigenous. [Rare.]

Whence they had their Indian corn I can give no account; for I don't believe that it was spontaneous in those parts.

Beverley, *Hist. Virginia*, iv, ¶ 20.

4. In *biol.*, instinctive or automatic, as some actions of animals which depend upon no external stimulus and are performed without apparent motive or purpose; uninfluenced by external conditions, as a change in structural character. Compare *spontaneity*, 2. Spontaneous actions may be either voluntary, in a usual sense, as the gambols of puppies or kittens, or involuntary and quite uncontrollable by the will. Of the latter class, some are abnormal, as spontaneous (in distinction from *induced*) somnambulism, and these are also called *idiotopathic*.—**Center of spontaneous rotation**. See *rotation*.—**Spontaneous axis**, an axis of rotation of a body under instantaneous forces, in case there is no translation in the first instant.—**Spontaneous cause**, a cause that is moved to causing by the end or the object.—**Spontaneous combustion**. See *combustion*.—**Spontaneous dislocation**. See *dislocation*, 2 (a).—**Spontaneous energy**, free energy, unrepressed and unforced.—**Spontaneous evolution**, in *obstet.*, the spontaneous expulsion of the fetus in a case of shoulder presentation, the body being delivered before the head.—**Spontaneous generation**. See *generation* and *abiogenesis*.—**Spontaneous suggestion**, suggestion by the action of the laws of association, without the intervention of the will.—**Syn.** 1. *Willing*, etc. (see *voluntary*), instinctive, unbidden.

spontaneously (spon^htā-nē-us-li), *adv.* In a spontaneous manner; with spontaneity.

spontaneousness (spon^htā-nē-us-nes), *n.* The character of being spontaneous; spontaneity.

spontoon (spon^htōn), *n.* [Formerly also *espon-ton*; = G. *sponton*, < F. *sponton*, *esponton*, F. dial. *épointon* = Sp. *esponton* = Pg. *espontão*, < It. *spontone*, *spuntone*, a sharp point, a bill, javelin, pike, *spontoon*; cf. *spuntare*, shoot forth, break off the point, blunt; *puntone*, a point, < *punto*, a prick, a point: see *point*.] A kind of halberd or pizaran formerly serving as the distinguishing arm for certain officers of the British infantry. Compare *half-pike*. Also called *demi-pike*.

spook (spök), *n.* [Also *spuke*; < D. *spook*, MD. *spooke* = MLG. *spök*, *spük*, LG. *spook* = G. *spuch* (obs. except in dial. use), also *spuk* (after LG.) = Sw. *spöke* (cf. D. *spooksel*, MD. *spooeksel*, Dan. *spögelse*), a spook, ghost. There is nothing to show any connection with Ir. *púca*, elf, sprite, = W. *púca*, *púci*: see *puck*, *pug*.] A ghost; a hobgoblin. [Now colloq.]

Woden, who, first losing his identity in the Wild Huntman, sinks by degrees into the mere spook of a Suabian baron, finally fond of field-sports.

Lowell, *Among my Books*, 1st ser., p. 118.

spook (spök), *v. i.* [= D. *spoken* = MLG. *spoken* = G. *spuken*, *spuken* = Sw. *spöka* = Dan. *spöge*; from the noun.] To play the spook. [Rare.]

Yet still the New World spooked it in his veins,
A ghost he could not lay with all his pains.

Lowell, *Fitz Adam's Story*.

spookish (spök^hkish), *a.* [*L. spook + -ish*.] 1. Like a spook or ghost; ghostly.—2. Given over to spooks; congenial to ghosts; haunted; as, a spookish house.—3. Affected by a sense or fear of ghosts; suggestive of the presence or agency of spooks: as, a spookish circumstance; a spookish sensation. [Colloq. in all uses.]

spooky (spök^hki), *a.* [*L. spook + -y*.] Same as *spookish*, in any sense. [Colloq.]

spool (spöl), *n.* [*ME. spole* (not in AS.), < MD. *spoelle*, D. *spool*, a spool, quill, = MLG. *spôle*, LG. *spole* = OHG. *spuolo*, *spuolâ*, MHG. *spuole*, G. *spule*, a spool, bobbin, = Icel. *spöla* = Sw. Dan. *spole*, a spool (cf. It. *spola*, *spuola*, bobbin, OF. *epolet*, spindle, < Teut.); perhaps akin to Icel. *spölr*, a rail, a bar: see *spale*.] 1. A small cylinder of wood or other material (with a projecting disk at each end), upon which thread or yarn is wound; a reel.—2. The revolving metal shaft of an anglers' reel, upon which the fishing-line is wound. See cut under *reel*.

spool (spöl), *v. t.* [*See spool, n.*] To wind on a spool.

spool-cotton (spöl^hkot^hn), *n.* Cotton thread wound on spools.

spooler (spöl^hlér), *n.* [*L. spool + -er*.] One who winds, or a machine used in winding, thread or yarn on spools. *Ure*, *Dict.*, IV, 122.

spool-holder (spöl^hhól^hdér), *n.* 1. A stand for one or more spools of sewing-thread, on which the spools are mounted on pins, so as to turn freely as the thread is unwound. Also *spool-stand*.—2. In *warping*, a reel on which spools are placed on skewers.

spooling-machine (spöl^hling-má-shēn^h), *n.* A machine for winding thread on spools.

spooling-wheel (spöl^hling-hwēl), *n.* Same as *spole*, 2. *Halliwel*.

spool-stand (spöl^hstand), *n.* Same as *spool-holder*, 1.

spoom (spöm), *v.* [Supposed to be a var. of *spume*, q. v. Cf. *spoon*.] I. *intrans.* *Naut.*, to sail steadily and rapidly, as before the wind.

We'll spare her our main-top sail;
She shall not look us long, we are no starters.
Down with the fore-sail too! we'll spoom before her.
Fletcher, *Double Marriage*, II, 1.

II. *trans.* To cause to scud, as before the wind.

Spoom her before the wind, you'll lose all else!
Fletcher (and another), *Two Noble Kinsmen*, III, 4.

spooming (spöm^hing), *p. a.* Rushing before the wind: in the quotation perhaps used erroneously in the sense of 'foaming,' 'surging,' 'roaring.'

O Moon! far spooming Ocean bows to thee.
Keats, *Endymion*, III.

spoon (spön), *n.* [*ME. spoon*, *spone*, *span*, *span*, < AS. *spōn*, a splinter of wood, chip, = OFries. *spōn*, *span* = D. *spaan*, *spaan* = MLG. *spōn*, LG. *spoon* = MHG. *spān*, G. *span*, a thin piece of wood, shaving, chip, = Icel. *spānn*, *spōnn* = Sw. *spån* = Dan. *spaan*, a chip; root uncertain. Cf. *span-new*, *spick-and-span-new*.] 1†. A thin piece of wood; a splinter; a chip.

A fyre of sponys, and lowe of gromis
Full soun will be at a nede [an end].
Booke of Precedence (E. E. T. S., extra ser.), p. 41.

2. A utensil consisting of a bowl or concave part and a handle, used for conveying liquids or liquid food to the mouth. Spoons were originally of wood, later of horn or metal. They are now made usually of silver, gold, iron, or mixed metal, of wood, horn, shell, or other materials, in various sizes and shapes, and for a great variety of purposes. Compare *dessert-spoon*, *egg-spoon*, *table-spoon*, etc.

He must have a long spoon that must eat with the devil.
Shak., *C. of E.*, IV, 3, 62.

3. Something wholly or in part like a spoon (def. 2) or the bowl of a spoon in shape. Specifically—(a) The blade of an oar when broad and slightly curved, or an oar with such a curved blade. (b) A bright spoon-shaped piece of metal or other substance, swiveled above hooks, used as a lure or decoy in fishing. It revolves as it is drawn through the water. (c) A piece cut from the horn of an ox or bison, in the shape of an elongated bowl of a spoon, six to eight inches in length. It is used in gold-washing, and for testing the value of any kind of detrital material or pulverized ore. (d) A club the striking-surface of which is somewhat hollowed, used in the game of golf. (e) The spoonbill or paddle-fish. (f) In *ornith.*, the spatulate dilatation at the end of the bill of a spoon-billed bird. (g) In *cotton-manuf.*, a weighted gravitating arm in the stop-motion of a drawing-frame. One of these is held in position by the tension of each sliver, and in case the sliver breaks or the can becomes empty, and the tension is thus relieved, it falls, and, actuating a belt-shifter, causes the driving-belt to slip from the fast pulley to the loose pulley, thus stopping the machine. (h) In *archery*, same as *pelticat*, 5.—**Apostle's spoon**. See *apostle-spoon*.—**Bag and spoon**. See *bag*.—**Deflagrating-spoon**, a small spoon of metal, upon which a substance which is to be deflagrated is subjected to the action of heat.—**Eucharistic spoon**. Same as *labia*.—**Maidenhead spoon**. See *maidenhead*.—**To be born with a silver spoon in one's mouth**. See *born*.—**Wooden spoon**. (a) At Cambridge University, the student whose name stands last in the Mathematical Tripos. (b) At Yale, formerly, the student who took the last appointment at the Junior Exhibition; later, the most popular student in a class.

spoon¹ (spōn), *v.* [*< spoon¹, n.*] **I. trans.** 1. To take up or out with a spoon or ladle; remove with a spoon; empty or clean out with a spoon: often with *up*: as, to *spoon up* a liquid.

Ours, . . .
An age of scum, spooned off the richer part.
Mrs. Browning, Aurora Leigh, v.

2. To lie close to, the face of one to the back of the other, as the bowl of one spoon within that of another. Compare *spoon-fashion*. [Colloq.]

"Now spoon me." Sterling stretched himself out on the warm flag-stone, and the boy nestled up against him.
Harper's Mag., LXXVI, 49.

II. intrans. 1. In *erouet*, to use the mallet as a spoon; push or shove the ball along with the mallet instead of striking it smartly as is required by the strict rules of the game.

Belabour thy neighbour, and spoon through thy hoops.
F. Locker, Mr. Placid's Flirtation.

2. To fish with spoon-bait.—3. To lie spoon-fashion. Compare *I, 2*. [Colloq.]

Two persons in each bunk, the sleepers spooning together, packed like sardines. *Harper's Mag., LXXIV, 781.*

spoon² (spōn), *v. i.* [*A var. or corruption of spoon.*] Same as *spoon*.

Such a storme did arise, they were forced to let slip Cable and Anchor, and put to Sea, spooning before the wind.
Capt. John Smith, True Travels, I, 52.

spoon³ (spōn), *n.* [Usually assumed to be a particular use of *spoon¹*; but rather a back-formation from *spoony*, orig. in allusion to the use of a spoon in feeding an infant.] 1. A foolish fellow; a simpleton; a spoony; a silly lover. [Colloq.]

A man that's fond precociously of stirring
Must be a spoon. *Hood, Morning Meditations.*

What a good-natured spoon that Dodd is!
C. Reade, Hard Cash, Prol.

2. A fit of silliness; especially, a fit of silly love. [Colloq.]—To be spoons on, to be silly in love with. [Slang.]

I ought to remember, for I was spoons on you myself for a week or two.
Harper's Mag., LXXVIII, 749.

spoon³ (spōn), *v. i.* [*< spoon³, n.*] To be a spoon or spoony; to be silly in love. [Colloq.]

spoonager (spō'nāj), *n.* [*< spoon¹ + -age.*] Spoon-meat. *Warner, Albion's England, ii, 10.*

spoon-bait (spōn'bāt), *n.* A trolling-spoon; a revolving metallic lure for the capture of certain kinds of fish, used in trolling; a spinner or propeller.

spoonbeak (spōn'bēk), *n.* Same as *spoonbill, 1 (b)*. [Prov. Eng.]

spoonbill (spōn'bil), *n.* 1. In *ornith.*: (a) A large gallatorial bird of either of the genera *Platalea* and *Aiaia*; so called from the broad, flat, spatulate dilatation of the end of the bill, likened to a spoon. See cuts under *Platalea* and *aiaia*. (b) The shoveler-duck, *Spatula clypeata*. See cut under *shoveler*. (c) The scaup-duck, *Fuligula marila*. See cut under *seap*. [East Lothian.] (d) The ruddy duck, *Erismaura rubida*; the broadbill; more fully called *spoon-billed butterball*. See cut under *Erismaura*. [Massachusetts and New York.]—2. In *ichth.*, the spoon-billed cat, or paddle-fish, *Polyodon spatula*. See cuts under *paddle-fish*.—Roseate spoonbill. See *aiaia*.

spoon-billed (spōn'bild), *a.* 1. In *ornith.*, having a spoon-like or spatulate bill, dilated at the end. See *spoonbill*.—2. In *ichth.*, duck-billed; shovel-nosed; having a long spatulate snout, as a sturgeon. See cuts under *paddle-fish* and *Psephurus*.—Spoon-billed butterball. Same as *spoonbill, 1 (d)*.—Spoon-billed cat. Same as *paddle-fish*.—Spoon-billed duck, teal, or widgeon, the shoveler.—Spoon-billed heron, a spoonbill.—Spoon-billed sand-piper, *Euryrorynchus pygmaeus*, a sandpiper with the bill dilated into a spoon at the end. In other respects this curious little bird is almost identical in form with the stints, or least sandpipers, of the genus *Actodromas*; it is also of about the same size, and its plumage is similar. See cut under *Euryrorynchus*.

spoon-bit (spōn'bit), *n.* A shell-bit in which the piercing-end is drawn to a radial point: same as *dowel-bit*.

spoon-chisel (spōn'chiz'el), *n.* See *chisel², E. H. Knight*.

spoon-drift (spōn'drift), *n.* [*< spoon² + drift.*] *Naut.*, a showery sprinkling of sea-water or fine spray swept from the tops of the waves by the violence of the wind in a tempest, and driven along before it, covering the surface of the sea; scud. Sometimes called *spindrift*.

spooney, *a.* and *n.* See *spoony*.

spoon-fashion (spōn'fash'on), *adv.* Like spoons close together; with the face of one to the back of the other and with the knees bent:

as, to lie *spoon-fashion*. *The Century, XXXV, 771.* [Colloq.]

spoonflower (spōn'flou'ēr), *n.* A plant, *Xanthosoma sagittifolium*, more specifically *arrow-leaved spoonflower*, considerably resembling a calla-lily. It is a native of the West Indies, occurring very sparingly in the southern United States. Its rootstock after boiling is mealy and edible, and for this it is said to be cultivated in Brazil. [Local, U. S.]

spoonful (spōn'fūl), *n.* [*< spoon¹ + -ful.*] As much as a spoon contains.

spoon-gouge (spōn'gouj), *n.* In *carp.*, a gouge with a crooked end, used for hollowing out deep furrows or cuttings in wood.

spoon-hook (spōn'hūk), *n.* A fish-hook with a spoon attached; an anglers' spoon.

spoonily (spō'nī-li), *adv.* In a silly or spoony manner.

spooniness (spō'nī-nes), *n.* Spoony character or state; silliness; especially, silly fondness. *E. H. Yates, Land at Last, I, 107.*

spoon-meat (spōn'mēt), *n.* Food that is or has to be taken with a spoon; liquid food; figuratively, food for babes or weaklings.

Cour. Will you go with me? We'll mend our dinner here? *Dro. S. Master*, if you do, expect *spoon-meat*; or bespeak a long spoon. *Shak., C. of E., iv, 3, 61.*

spoon-net (spōn'net), *n.* A landing-net used by anglers.

spoon-saw (spōn'sā), *n.* A spoon-shaped instrument with a serrated edge, used in gynecological operations.

spoon-shaped (spōn'shāpt), *a.* Shaped like a spoon; spatulate; cochleariform.

spoon-tail (spōn'tāl), *n.* A phyllopod crustacean of the genus *Lepidurus*.

spoon-victuals (spōn'vit'ulz), *n. pl.* Same as *spoon-meat*. [Colloq.]

spoonwood (spōn'wūd), *n.* The mountain-laurel or calico-bush, *Kalmia latifolia*, of the eastern United States. It is commonly a shrub, but in the Alleghanies southward becomes a tree 20 or 30 feet high. Its wood is hard and heavy, and is used for tool-handles, in turnery, and for fuel. The leaves are considered poisonous, and have a slight medicinal reputation. See cut under *Kalmia*.

spoonworm (spōn'wērm), *n.* A gephyrean worm; especially, a sipunculoid worm. See *Gephyrea*, and cuts under *Sipunculus*.—*Nep-tune's spoonworm*. See *Neptune*.

spoonwort (spōn'wōrt), *n.* [*< spoon¹ + wort¹.*] The scurvy-grass, *Cochlearia officinalis*.

spoony (spō'nī), *a.* and *n.* [*Also spoony; cf. spoon³.*] **I. a.** Soft; silly; weak-minded; specifically, weakly or foolishly fond; sentimental. Not actually in love, . . . but only *spoony*. *Lever, Davenport Dunn, ix.*

His grandson was not to his taste; amishle, no doubt, but *spoony*. *Disraeli.*

II. n.; pl. *spoonies* (-niz). A stupid or silly fellow; a noodle; a ninny; a simpleton; especially, a silly fond sentimental fellow. Also *spoon*. [Slang.]

In short, I began the process of rutting myself in the received style, like any other *spoonie*. *Charlotte Brontë, Jane Eyre, xv.*

What the deuce can she find in that *spooney* of a Pitt Crawley? . . . The fellow has not pluck enough to say *Bo* to a goose. *Thackeray, Vanity Fair, xxxiv.*

spoor (spōr), *n.* [*< D. spoor = MLG. spor = OHG. MHG. spor, G. spur = Icel. spor = Sw. spår = Dan. spor, track, = AS. spor, a track, trace, footprint. Cf. spear¹, spur.*] The track or trail of a wild animal or animals, especially such as are pursued as game; slot; hence, scent: used originally by travelers in South Africa.

spoor (spōr), *v.* [*< spoor, n. Cf. spear¹.*] **I. intrans.** To follow a spoor or trail.

After searching and *spooring* about for another hour, we were obliged to abandon pursuit. *The Field, Feb. 17, 1887. (Encyc. Dict.)*

II. trans. To track by the spoor.

The three bulls, according to the natives, have been *spoored* into the dense patch of bush above the kloof. *Harper's Mag., LXXVII, 192.*

spoorer (spōr'ēr), *n.* One who follows or tracks game by the spoor or scent.

Ventvogel . . . was one of the most perfect *spoorers* I ever had to do with. *H. R. Haggard, King Solomon's Mines, iii.*

spoornt, *n.* [Origin obscure.] The name of a fiend or hobgoblin whose nature does not appear to be determinable.

Urchus, Elves, Hags, Satyrs, . . . Kitt-with-the-candlestick, Tritons, . . . the *Spoornt*, the Mare, the Man-in-the-oak. *Middleton, The Witch, I, 2.*

Most antiquarians will be at fault concerning the *spoorne*, Kitt-with-the-candlestick, Boneless, and some others. *Scott, Letters on Demonology, note.*

The scens of fairy revels, . . . the haunt of bulbeegars, witches, . . . the *spoornt*. *S. Judd, Margaret, I, 5.*

sporeaceous (spō-rā'shius), *a.* [*< spore + -aceous.*] In *bot.*, pertaining to spores; contributing to spores.

Sporades (spor'ā-dēz), *n. pl.* [NL., *< Gr. σποράδες*, se. *νήσοι*, 'the scattered islands,' a group of islands off the west coast of Asia Minor, pl. of *σποράς*, scattered; see *sporadic*.] 1. A group of scattered islands in the Greek Archipelago.—2. [*l. e.*] In *anc. astron.*, stars which were not included in any constellation.

sporadial (spō-rā'di-āl), *a.* [*< Gr. σποράς (σποράδ-), scattered (see sporadic), + -ial.*] Scattered; sporadic. [Rare.]

sporadic (spō-rad'ik), *a.* [= F. *sporadique* = Sp. *esporádico* = Pg. *esporádico* = It. *sporádico*, *< NL. sporadicus*, *< Gr. σποραδικός*, scattered, *< σποράς*, scattered, *< σπείρειν*, scatter; see *spore²*.] Separate; single; scattered; occurring singly, or apart from other things of the same kind; widely or irregularly scattered; of exceptional occurrence (in a given locality); straggling.

If there was discontent, it was in the individual, and not in the air; *sporadic*, not epidemic. *Lowell, New Princeton Rev., I, 158.*

Sporadic cholera. See *cholera, 2*.—**Sporadic dysentery**, dysentery occurring in scattered cases, which have no apparent common origin.

sporadical (spō-rad'ik-āl), *a.* [*< sporadic + -al.*] Same as *sporadic*. *Arbutnot.*

sporadically (spō-rad'ik-āl-i), *adv.* In a sporadic manner; separately; singly; dispersedly.

sporadicness (spō-rad'ik-āl-nes), *n.* The quality of being sporadic.

Rare even to *sporadicness*. *W. D. Whitney, Amer. Jour. Philol., V, 287.*

sporal (spō'ral), *a.* [*< spore² + -al.*] Relating to or resembling spores.

sporange (spō-ranj'), *n.* [*< sporangium.*] In *bot.*, same as *sporangium*.

sporangia, *n.* Plural of *sporangium*.

sporangial (spō-ranj'i-āl), *a.* [*< sporangium + -al.*] 1. Of or relating to the sporangium: as, the *sporangial* layer.—2. Containing spores; having the character of a sporangium; pertaining to sporangia.

sporangidium (spō-ranj'id'i-um), *n.*; pl. *sporangidia* (-iā). [NL., dim. of *sporangium*.] In *bot.*: (a) The columella in mosses. (b) A sporangium.

sporangiferous (spō-ranj-if'e-rus), *a.* [*< NL. sporangium + L. ferre = E. bear¹.*] In *bot.*, bearing or producing sporangia.

sporangiform (spō-ranj-if'ō-rum), *a.* [*< NL. sporangium + L. forma, form.*] In *bot.*, having the form or appearance of a sporangium.

sporangiod (spō-ranj'i-oid), *a.* [*< NL. sporangium + Gr. εἶδος, appearance.*] In *bot.*, having the appearance of a sporangium.

sporangiole (spō-ranj'i-ōl), *n.* [*< NL. sporangiolium.*] In *bot.*, same as *sporangiolium*.

sporangiolium (spō-ranj-i'ō-li-um), *n.*; pl. *sporangiola* (-iā). [NL., dim. of *sporangium*.] In *bot.*, a small sporangium produced in certain genera of *Mucorini* in addition to the large sporangium. The spores are similar in both. The term has also been used as a synonym for *ascus*.

sporangiphore (spō-ranj'i-ō-fōr), *n.* [*< NL. sporangioforum, < sporangium + Gr. φέρω, < φέρω = E. bear¹.*] In *bot.*, the axis or receptacle which bears the sporangia; a sporophore bearing sporangia. See *sporophore*.

sporangioforum (spō-ranj-i-ō'fō-rum), *n.*; pl. *sporangiofora* (-iā). [NL.: see *sporangio-phore*.] In *bot.*, same as *sporangiphore*.

sporangiospore (spō-ranj'i-ō-spōr), *n.* [*< Gr. σπορά, σπόρος, seed, + ἄγγειον, vessel, + σπορά, σπόρος, seed.*] In *bot.*, one of the peculiar spores of the *Myxomycetes*. See *Myxomycetes*.

sporangium (spō-ranj'i-um), *n.*; pl. *sporangia* (-iā). [NL., *< spora*, a spore, + *Gr. ἄγγειον, vessel.*] 1. In *bot.*, a spore-case; the case or sac in cryptogamous plants in which the spores, which are the analogues of the seeds of the higher or flowering plants, are produced endogenously. The sporangium receives different names, in accordance with the kind of spores produced: as, *macrosporangium, microsporangium, oösporangium, zoösporangium*, etc. In mosses *sporangium* is usually the same as *capsule*, but by some authors it is restricted to the spore-case or sac lining the cavity of the capsule. See *spore-sac*. 2. In *zool.*, the spore-capsule or spore-receptacle of the *Mycetozoa*. *W. B. Carpenter, Micros., § 334.*

Also *sporange*.

sporation (spō-rā'shon), *n.* [*< spore² + -ation.*] In *biol.*, a mode of generation which consists in the interior division of the body into a mass

of spores or germs, which are freed upon the rupture of the body-wall; also, spore-formation. Usually called *sporulation*.

spore¹, *n.* A Middle English form of *spur*.

spore² (spôr), *n.* [= F. *spore*, < NL. *spora*, a spore, < Gr. *σπορά*, a sowing, seed-time, seed sown, seed, produce, offspring; cf. *σπόρος*, a sowing, seed-time, seed, produce; < *σπερπειν*, sow, scatter; cf. *sperm*¹.] 1. In *bot.*, a single cell which becomes free and is capable of developing directly into a new morphologically and physiologically independent individual. The name is given to all the reproductive bodies of cryptogamous plants, which are the analogues of the seeds of the higher or flowering plants, from which they further differ by having no embryo. In the majority of cases a spore consists of a nucleated mass of protoplasm, inclosing starch or oil as reserve nutritive material, surrounded by a cell-wall. In those cases in which the spore is capable of germination immediately on the completion of its development, the cell-wall is a single delicate membrane consisting of cellulose; but in those cases in which the spore must pass through a period of quiescence before germination, the wall is thick and may consist of two layers, an inner, the *endospore*, which is delicate and consists of cellulose, and an outer, the *exospore*, which is thick and rigid, frequently dark-colored, and beset externally with spines or bosses, and which consists of cutin. In certain plants, as some algae and fungi, spores are produced which are for a time destitute of any cell-wall. They are further peculiar in that they are motile, on which account they are called *zoospores*. In the various divisions of cryptogams the spores are produced in many different ways and under various conditions. See *acidospore*, *ascospore*, *bispore*, *carpospore*, *chlamydospore*, *clinospore*, *conospore*, *microspore*, *oospore*, *protospore*, *pseudospore*, *pycnidiospore*, *stylospore*, *teleutospore*, *tetraspore*, *uredospore*, *zoospore*, *zygospore*, etc.

2. In *zool.*, the seed or germ of an organism, of minute size, and not of the morphological value of a cell, such as one of the microscopic bodies into which the substance of many protozoans is resolved in the process of reproduction by sporiation; a sporule; a gemmule, as of a sponge.—3. In *biol.*, an organic body of extremely minute size, and not subject to ordinary classification; a sporozoid or zoospore; a living germ, as a seed of certain diseases.—4. Figuratively, a germ; a seed; a source of being.

The spores of a great many ideas are floating about in the atmosphere. O. W. Holmes, Old Vol. of Life, p. 46.

Cellular spore, compound spore. Same as *sporidiesm*.—**Cystocarpic spore, a carpospore.**—**Helicoid, aecydary, etc., spores.** See the adjectives.—**Multilocular, plurilocular, or aseptate spore.** Same as *sporidiesm*.

spore-capsule (spôr'kap'sül), *n.* A sporangium; a spore-case.

spore-case (spôr'käs), *n.* 1. In *bot.*, the sporangium, or immediate covering of the spores, of cryptogams.—2. In *zool.*, a spore-capsule.

spore-cell (spôr'sel), *n.* In *bot.*, a spore, or a cell which gives rise to a spore.

spore-formation (spôr'fôr-mä'shon), *n.* In *biol.*, the origination of spores; the vital process whereby spores are produced. (a) A kind of multiple fission or interior subdivision of many unicellular organisms, by which they become converted into a mass of spores or sporules. See *spore*², and cut under *Protomyxa*. (b) The formation of reproductive spores, as of bacilli. See *spore*², 3.

spore-group (spôr'gröp), *n.* In *bot.*, same as *sporidiesm*.

spore-plasm (spôr'plazm), *n.* In *bot.*, the protoplasm of a sporangium that is devoted to the formation of spores.

sporert, *n.* A Middle English form of *spurrier*.

spore-sac (spôr'sak), *n.* In *bot.*, in mosses, the sac lining the cavity of the sporangium, which contains the spores.

sporget. A Middle English form of *spurge*¹ and *spurge*².

sporid (spôr'id), *n.* [< NL. *sporidium*.] In *bot.*, a sporidium.

sporidiesm (spôr'i-dezm), *n.* [< NL. *spora*, spore, + Gr. *δέσμη*, a bundle.] In *bot.*, a pluricellular body which becomes free like a spore,

and in which each cell is an independent spore with the power of germination. Also called *spore-group*, *semen-multiplex*, *compound spore*, *multilocular spore*, *cellular spore*, *plurilocular spore*, *septate spore*, etc. De Bary.

sporidia, *n.* Plural of *sporidium*.

sporidiferous (spô-ri-dif'e-rus), *a.* [< NL. *sporidium* + L. *ferre* = E. *bear*¹.] In *bot.*, bearing sporidia. Also *sporidiferous*.

sporidole (spô-ri-d'i-ol), *n.* [< NL. *sporidolum*.] In *bot.*, same as *sporidolum*.

sporidolum (spô-ri-d'i-ol-um), *n.*; pl. *sporidiola* (-lä). [NL., dim. of *sporidium*.] In *bot.*, one of the minute globose bodies produced upon slender pedicels by germinating spores in certain fungi. They are regarded by Tulasne as spermatia.

sporidium (spô-ri-d'i-um), *n.*; pl. *sporidia* (-ä). [NL., < Gr. *σπορά*, *σπόρος*, seed (see *spore*²), + dim. -*ιδιον*.] In *bot.*: (a) A name restricted by some to the reproductive organs or so-called spores which are borne upon and detached from a promycelium; by others also given to the spores produced in asci or ascospores. (b) A spore. See *promycelium*.

sporiet, *n.* An obsolete form of *spurrier*.

sporiferous (spô-ri-f'e-rus), *a.* [< NL. *spora*, spore, + L. *ferre* = E. *bear*¹.] In *bot.* and *zool.*, bearing or producing spores.

sporification (spô-ri-fi-kä'shon), *n.* [< NL. *spora*, spore, + L. *-ficatio*, < *-ficare*: see *-fy*.] In *bot.* and *zool.*, the process of bearing spores; production of spores; spore-formation.

sporiparity (spô-ri-par'i-ti), *n.* [< *sporiparous* + *-ity*.] Reproduction by means of spores; the character of being sporiparous. See *sporiation*, *sporulation*.

sporiparous (spô-rip'a-rus), *a.* [< NL. *spora*, spore, + L. *parere*, produce.] Reproducing by means of spores or sporular encystment, as an infusorian; sporogenous. W. S. Kent.

sporling (spôr'ling), *n.* A variant of *sparring*¹.

spornet, *v.* and *n.* A Middle English form of *spurn*.

sporoblast (spô'rô-bläst), *n.* [< NL. *spora*, spore, + Gr. *βλαστός*, germ.] 1. In *bot.*, Körber's term for *merispore*.—2. The germ or rudiment of a spore.

Sporobolus (spô-rob'ô-lus), *n.* [NL. (R. Brown, 1810), so called with ref. to the seed, which is loose and readily scattered; < Gr. *σπορά*, *σπόρος*, seed, + *βάλλειν*, cast forth.] A genus of grasses, of the tribe *Agrostideæ*, type of the subtribe *Sporoboleæ*. It is characterized by a diffuse or cylindrical and spike-like panicle, generally containing very numerous and small one-flowered spikelets, each with three awnless glumes, the flowering glume equal to the others or shorter, and the grain free and often readily deciduous from the glumes and palea. In typical species the pericarp, unlike that of most grasses, is a utricle; other species having the usual caryopsis are sometimes separated as a genus *Vilfa* (Beauvois, 1812). There are about 80 species, widely scattered through temperate and warmer regions, numerous in America, but with only one species, *S. pungens*, in Europe. They are commonly perennials, slender or sometimes coarse, the leaves flat or rolled, the panicles various, sometimes inclosed in the leaf-sheaths, the spikelets sometimes minute. They are known in general as *droopseed-grass*, some as *rush-grass* (which see).

sporocarp (spô'rô-kärp), *n.* [< NL. *spora*, spore, + Gr. *καρπός*, fruit.] In *bot.*, a pluricellular body developed as the product of a sexual act, serving essentially for the formation of spores, and ceasing to exist after having once, with comparative rapidity, formed a number of spores. The fructification developed from an archicarp or procarp in *Fungi* and *Rhodophyceæ* is a sporocarp; such, also, is the sporogonium in *Muscinæ*. The term is also used for the capsule-like structure formed by the Inductum inclosing the sporangia in the heterosporous *Filicinae*. Goebel. See *cystocarp*, and cut under *annulus*, *Marsilea*, *mildea*, and *moos*.

Sporocarpeæ (spô-rô-kär'pê-ê), *n. pl.* [NL., < *sporocarp* + *-eæ*, from the nature of the fruit.] A group proposed by late systematists to include certain well-marked classes of fungi, such as the *Ascomycetes* and *Uredineæ*. They are characterized by the production of sporocarps. See cut under *aseus*.

sporocarpium (spô-rô-kär'pi-um), *n.*; pl. *sporocarpia* (-ä). [NL., < *spora*, spore, + Gr. *καρπός*, fruit.] In *bot.*, a sporocarp.

Sporochneææ (spô-rok-nä'sê-ê), *n. pl.* [< *Sporochnus* + *-eææ*.] An order of olive-colored seaweeds, of the class *Phæosporeæ*, taking its name from the genus *Sporochnus*. The fronds are cylindrical or tubular, branching, and composed within of elongated cuboidal cells, which become smaller and roundish at the surface; the fructification is in external scattered sori. The order contains 4 or 5 genera and about 25 species.

Sporochnus (spô-rok'nus), *n.* [NL. (Agardh, 1844), < Gr. *σπορά*, seed, + *χρόος*, *χρῶσις*, down, bloom.] A genus of olive-colored inarticulate

seaweeds, of the class *Phæosporeæ*, giving name to the order *Sporochneææ*. According to Agardh there are 6 species, widely separated in distribution.

sporocyst (spô'rô-sist), *n.* [< NL. *spora*, spore, + Gr. *κύστις*, a bag or pouch: see *cyst*.] In *zool.*: (a) The cyst, sac, or pouch: see *cyst*. (b) A cyst or sac containing spores or germs, such as is developed in the larval state of certain flukes, or trematoid worms, as *Bucephalus*; this state of such worms; a redia containing cercaria. See *redia*, and cut under *cercaria*, *germarium*, and *Trematoda*.

sporocystic (spô-rô-sis'tik), *a.* [< *sporocyst* + *-ic*.] In *zool.*: (a) Containing spores, as a cyst. (b) Contained in a cyst, as spores; encysted. (c) Embryonic and asexual, as a stage of a trematoid worm; of or pertaining to a sporocyst.

sporocyte (spô'rô-sit), *n.* [< NL. *spora*, spore, + Gr. *κύτος*, a hollow.] In *bot.*, the mother-cell of a spore. Goebel.

sporoderm (spô'rô-dêrm), *n.* [< NL. *spora*, spore, + Gr. *δέρμα*, skin.] In *bot.*, the covering or coating of a spore. Compare *exospore*.

sporoduct (spô'rô-duk't), *n.* [< NL. *spora*, spore, + L. *ducere*, carry: see *duct*.] A duct or passage in which spores are lodged, or through which they pass.

sporogen (spô'rô-jen), *n.* [< NL. *spora*, spore, + Gr. *-γενής*, producing: see *-gen*.] In *bot.*, a plant producing spores instead of seed.

sporogenesis (spô'rô-jen'e-sis), *n.* [< NL. *spora*, spore, + Gr. *γένεσις*, generation: see *genesis*.] 1. The origination of spores; spore-formation.—2. Reproduction by means of spores. Also *sporogony*.

sporogenous (spô-roj'e-uns), *a.* [< NL. *spora*, spore, + Gr. *-γενής*, producing: see *-genous*.] Reproducing or reproduced by means of spores; sporiparous; bearing or producing spores.—**Sporogenous layer**, in hymenocytous fungi, same as *hymenium*.—**Sporogenous tissue**, in *bot.*, the tissue from which the spores are developed.

sporogone (spô'rô-gôn), *n.* [< NL. *sporogonium*.] In *bot.*, same as *sporogonium*.

sporogonium (spô'rô-gô'ni-um), *n.*; pl. *sporogonia* (-ä). [< NL. *spora*, spore, + Gr. *γονή*, generation.] In *bot.*, the sporocarp in the *Muscinæ*. It is the capsule or "moss-fruit," with its various appendages, being the whole product of the sexual act, and remaining attached to, but not in organic connection with, the plant bearing the sexual organs. See *Musci*, and cut under *moos*.

sporogony (spô-roj'ô-ni), *n.* [< NL. *spora*, spore, + Gr. *-γονία*, < *-γενος*, producing: see *-gony*.] Same as *sporogenesis*, 2.

sporoid (spô'roid), *a.* [< NL. *spora*, spore, + Gr. *είδος*, form.] Resembling a spore; sporular.

sporologist (spô-rol'ô-jist), *n.* [< **sporolog-y* (< NL. *spora*, spore, + Gr. *-λογία*, < *λέγειν*, speak) + *-ist*.] In *bot.*, a botanist, especially a lichenologist, who gives prominence to the spore as a basis of classification.

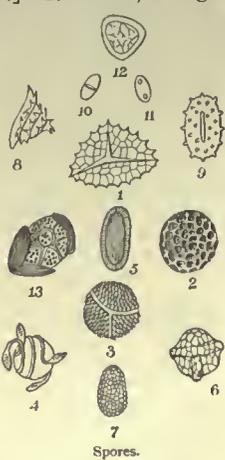

sporont (spô'rönt), *n.* [< Gr. *σπορά*, seed, + *ὄν* (*όντ-*), being, ppr. of *εἶναι*, be: see *ens* and *bel*¹.] A gregarine not provided with an epimerite, or proboscoidiform organ which attaches the parasite to its host: distinguished from *cephalont*.

sporophore (spô'rô-fôr), *n.* [< NL. *spora*, spore, + Gr. *-φόρος*, < *φέρειν* = E. *bear*¹.] In *bot.*: (a) A placenta. (b) The branch or part of the thallus which bears spores or spore mother-cells. The various forms are further distinguished as *gonidiophore*, *sporangiphore*, *ascophore*, etc. (c) In *Archegoniataeæ*, a sporophyte. Also called *encarpium*.—**Compound sporophore**, a sporophore formed by the cohesion of the ramifications of separate hyphal branches.—**Filamentous sporophore**. Same as *simple sporophore*.—**Simple sporophore**, a sporophore consisting of a single hypha, or branch of a hypha.

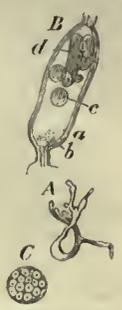

sporophoric (spô-rô-fôr'ik), *a.* [< *sporophore* + *-ic*.] Having the character of a sporophore.

sporophorous (spô-rof'ô-rus), *a.* [As *sporophore* + *-ous*.] In *bot.*: (a) Spore-bearing. (b) Of or pertaining to the sporophore.

sporophyas (spô-rof'i-as), *n.* [NL. (A. Braun), < *spora*, spore, + Gr. *φύειν*, produce.] Same as *sporophydium*.

Spores.
1. Of *Lycopodium clavatum*.
2. Of *Selaginella marginata*, germinating. 3. Of *Isotria lacustris*.
4. Of *Equisetum arvense*. 5. Of *Marsilea quadrifolia*. 6. Of *Salvinia natans*. 7. Of *Marattia fraxinifolia*. 8. Of *Ancinmia* sp. 9. Of *Polypodium aureum*. 10. Of *Parmelia ciliaris*. 11. Of *Parmelia parietina*. 12. Of *Ceramium purpureum*. 13. Of *Coleochaete pultinata*.

A, Ramified Sporocyst of *Bucephalus*; B, part of same, more magnified; c, outer, b, inner coat; c, d, germ masses; C, one of these, more magnified still.

sporophyidium (spō-rō-fid'i-um), *n.*; pl. *sporophyidia* (-iā). [NL. (T. F. Allen, 1888), < *spora*, spore, + Gr. *φύειν*, produce, + *-ίδιον*, dim. suffix.] In *bot.*, in the *Characeae*, a term applied to the whole fruit, including the spore proper, its basal cell, and the enveloping cells. It is the same, or nearly the same, as the *antheridium* of Sachs and Goebel, the *sporophyas* of Braun, the "enveloped oogonium" of Celakowsky, and the *sporangium* of authors in general. See *Spermatocarp.*

sporophyll, sporophyll (spō-rō-fil), *n.* [NL. *sporophyllum*, < *spora*, spore, + Gr. *φύλλον*, a leaf.] In *bot.*, the leaf or leaf-like organ which bears the spores, or receptacles containing the spores, in many of the vascular cryptogams. It is usually more or less modified and unlike the normal leaves, as in the spikes of *Lycopodium*, *Selaginella*, *Ophioglossum*, etc. See *chits* under these words, also under *Osmunda*, *Polypody*, and *Sorus*.

sporophyte (spō-rō-fit), *n.* [NL. *spora*, spore, + Gr. *φυτόν*, plant.] In *bot.*, the segment or stage of the life-cycle of the higher cryptogams (*Pteridophyta*, *Bryophyta*) in which the non-sexual organs of reproduction are borne. It is a stage in what has been called the alternation of generations, and is the fern-plant, club-moss plant, etc., of popular language. It bears the spores in countless numbers. By some authors the word *sporophore* is used for *sporophyte*. Compare *oöphyte* and *oöphore*. See *Musci*.

sporophytic (spō-rō-fit'ik), *a.* [NL. *sporophyte* + *-ic*.] In *bot.*, belonging to, resembling, or characteristic of a sporophyte.

sporosac (spō-rō-sak), *n.* [NL. *spora*, spore, + L. *saccus*, sack; see *sack*².] 1. In *Hydrozoa*, a degenerate medusiform person; one of the simple generative buds or gonophores of certain hydrozoans in which the medusoid structure is not developed. *Eneyc. Brit.*, XII. 554.—2. In *Ferres*, a sporocyst or redia. See *Sporocyst* (b).

sporstegium (spō-rō-stē'ji-um), *n.*; pl. *sporstegia* (-iā). [NL., < *spora*, spore, + Gr. *στέγειν*, cover, roof.] In *bot.*, in the *Characeae*, the characteristic spirally twisted or furrowed shell of the oöspore. It is thick and hard, usually black or brown in color, and consists of five cells which arise from the base of the spore. It is the so-called *Chara-fruit*.

sporous (spō-rus), *a.* [NL. *spore*² + *-ous*.] In *bot.*, of or pertaining to a spore.

Sporozoa (spō-rō-zō'zī), *n. pl.* [NL., < Gr. *σπορά*, seed, + *ζῷον*, an animal.] 1. Mouthless parasitic ciliate protozoans, a class of *Protozoa*, synonymous with *Gregarinida*, but more comprehensive, including many organisms not ordinarily classed with the gregarines. They are parasitic, and occur in almost all animals. Most are very minute, but some attain the largest size by far known among protozoans. The *Sporozoa* have been divided into four subclasses, *Gregarinidea*, *Coccididea*, *Myxosporidia*, and *Sarcocystidia*. Also called *Cytozoa*. 2. [I. c.] Plural of *sporozoön*.

sporozoan (spō-rō-zō'an), *a. and n.* [NL. *Sporozoa* + *-an*.] 1. *a.* Having the characters of the *Sporozoa*; pertaining to the *Sporozoa*. 2. *n.* A member of the *Sporozoa*.

sporozoic (spō-rō-zō'ik), *a.* [NL. *Sporozoa* + *-ic*.] Same as *sporozoan*.

sporozooid (spō-rō-zō'oid), *n.* [Gr. *σπόρος*, seed, + *ζοοϊδ.*] In *biol.*, a zoöspore.

sporozoön (spō-rō-zō'on), *n.*; pl. *sporozoa* (-iā). [NL.: see *Sporozoa*.] An individual of the *Sporozoa*; a sporozoan.

sporran (spor'an), *n.* [Gael. *sporan* = Ir. *sparan*, a purse, pouch.] In Highland costume, the purse hanging down from the belt in front of the kilt. It is commonly of fur. In its present form, as a large and showy adjunct to the dress, it is not very old. See also *cut under purse*.

7. They made a sport of his propheta. *1 Esd.* i. 51.

8. In *zool.* and *bot.*, an animal or a plant, or any part of one, that varies suddenly or singularly from the normal type of structure, and is usually of transient character, or not perpetuated. A sport is generally an individual variation of apparently spontaneous origin. The difference from the normal type is usually slight, but may be quite marked; in either case its tendency is to disappear with the individual in which it arises, though some sports repeat themselves, or may be preserved by careful selection. If perpetuated, it becomes a strain, breed, or variety. Sports are observed chiefly among domesticated animals and cultivated plants. Many of the beautiful or curious hothouse-flowers are mere sports, that are produced by high cultivation, crossing, or accident, and some valued breeds of domestic animals have arisen in like manner. Monstrous characters are sometimes acquired, but mere monstrosities

or malformations are not usually called sports. Compare *spontaneity*, 2 (a), and *freak of nature* (under *freak*²).

9. A sporting man; one who is interested in open-air sports; hence, in a bad sense, a betting man; a gambler; a blackleg. [Colloq.]

I am not in a sportive humour now.
Shak., C. of E., i. 2. 58.

As from the sportive field she goes,
His down-cast eye reveals his inward woes.
Prior, Henry and Emma.

3. Amorous; wanton.

Why should others' false adulterate eyes
Give salutation to my sportive blood?
Shak., Sonnets, cxxi.

4. In bot. and zool., tending to vary from the normal type. See *sport*, *n.*, 8. *Darwin*, Var. of Animals and Plants, p. 407. =Syn. 1. Jocose, jocular, facetious, gamesome, prankish.

Lizie Lindsay (Child's Ballads, IV. 65).

6†. Offspring; race.

Who on all the human *spring* conferred confusion.
Chapman. (*Imp. Dict.*)

7. Water rising to the surface of the earth from below, and either flowing away in the form of a small stream or standing as a pool or small lake. Rivers are chiefly fed, both before and after being joined by their various affluents, by underground springs, and some pools of water large enough to be called ponds or even lakes are supplied in the same way. The conditions under which springs are formed are exceedingly variable, at once as regards the quantity of water, its temperature, the amount and nature of the gaseous and solid substances which it holds in solution, and the manner in which it is delivered at the surface; hence springs are variously designated in accordance with these peculiarities, the most familiar terms used for this purpose being *shallow*, *simple*, *common*, or *surface*; *hot*, *boiling*, *thermot*; *mineral*, *medicinal*; and *spouting*, or *geyser*, as this kind of spring is more generally called. Shallow or surface springs ordinarily furnish water which is pretty nearly pure, can be used for drinking, and does not differ much in temperature from the mean of the locality where they occur. They are due to the fact that the water falling on the surface in the form of rain, or furnished by melting snow, sinks to a certain depth (according as the soil and underlying rocks are more or less porous or permeable), where it is held in greater or less quantity according to the amount of rainfall and the thickness and relative position of the various permeable and impermeable formations with which it is brought in contact, but seeks under the influence of gravitation to escape, and makes its appearance at the surface when the topographical or geological conditions are favorable. Thus, a bed of gravel or sand resting on a mass of clay (the former being very permeable, the latter almost impermeable) will become saturated with water below a certain depth, the distance from the surface of the saturated sand or gravel, or the *line of saturation*, as it is called, varying with the climate and season. If, however, there be an adjacent ravine or valley which is cut deep enough to expose the line of junction of the permeable and impermeable formations, the water will escape along this line in greater or less quantity, giving rise to springs, which will vary in number and copiousness with the varying conditions which present themselves. The water of such springs, not having descended to any great depth, will not vary much in temperature from the mean of the locality. Very different are the conditions in the case of thermal or hot springs, which may have any temperature up to boiling, and of which the water may have been heated either by coming from great depths or by contact with volcanic rocks; hence thermal springs are phenomena very characteristic of volcanic and geologically disturbed or faulted regions, and those hot springs which are of the geyser type (see *geyser*) are most interesting from the scenic point of view. The medicinal properties and curative effects of various hot springs are of great practical importance; and many such springs, in Europe and the United States, are places much resorted to by invalids and pleasure-seekers. The variety of constituents, both solid and gaseous, held in solution by different hot springs is very great. From the medicinal point of view, springs are variously class-

fied, and without regard to temperature, because the nature and quantity of the substance which the water contains are not by any means entirely dependent on temperature, although in general the hotter the water the larger the amount of foreign matter likely to be held in solution, while a high temperature is undoubtedly in many cases an important element in the therapeutic effect produced. A convenient classification of mineral waters, from the medicinal point of view, is into (a) indifferent, (b) earthy, (c) sulphurous, (d) saline, (e) alkaline, (f) purgative, (g) chalybeate. Indifferent waters are such as contain but a small amount of foreign matter—often so little, indeed, that they might well be classed as potable, but they are usually thermal. Their mode of therapeutic action is not well understood, and by some the imagination is thought to play an important part as a curative agency. Examples of well-known and much-visited springs of this class are Schlangenbad in Nassau; Gasteln in Salzburg; Teplitz in Bohemia; Plombières in France; Lebanon, New York; Hot Springs, Bath Court House, Virginia; Clarendon Springs, Vermont; Hot Springs, Arkansas, etc. Earthy waters contain a large amount of mineral matter in solution, calcium sulphate predominating in quantity. Examples: Leuk, Switzerland; Bagnères-de-Bigorre, France; Bath, England; Sweet Springs and Berkeley Springs, West Virginia. Sulphurous waters are weak solutions of alkaline sulphurets, the mineral constituents ranging from a few grains to a hundred or more in the gallon, and the sulphur from a trace to 4 parts in 10,000; some are cold, others hot. Examples: many of the most frequented springs of the Pyrenees, as Cauterets, Eaux-Bonne, Eaux-Chaudes, Bagnères-de-Luchon; Aix-la-Chapelle, Prussia; Harrogate, England; White Sulphur, West Virginia; and many others. Saline springs: these are very numerous, both hot and cold, common salt being the predominating ingredient; but besides this there are usually present salts of lime, magnesia, soda, iron, iodine, and bromine. Examples: Kissingen, Bavaria; Wiesbaden, Baden-Baden, Niederselters, in Germany; St. Catharines, Canada; Saratoga, New York. Alkaline waters: these contain salts of soda, potash, lime, and magnesia; also, more or less commonly, lithia, strontia, and traces of iodine, bromine, fluorin, and arsenic. Examples: Vichy in France; Bilin in Bohemia; Heilbrunn, Ems, in Germany. Purgative waters, containing especially the sulphate of magnesia, and also of soda, often in large quantity, as in the case of the Püllna water, which has 1,986 grains to the gallon, mostly sodium and magnesium sulphate. Examples: Sedlitz, Carlsbad, and Püllna, Bohemia; Cheltenham and Scarborough, England. Chalybeate waters, in which salts of iron are the essential ingredient. Examples: Schwalbach, Nassau; Spa, Belgium; Pyrmont, Germany.

8. Figuratively, any fount or source of supply.

Macb. The spring, the head, the fountain of your blood is stopp'd; the very source of it is stopp'd.
Macd. Your royal father's murder'd.

Shak. Macbeth, ii. 3. 103.

9. An elastic body, as a strip or wire of steel coiled spirally, a steel rod or plate, strips of steel suitably joined together, a mass or strip of india-rubber, etc., which, when bent or forced from its natural state, has the power of recovering it again in virtue of its elasticity. Springs are used for various purposes—as for diminishing concussion, as in carriages; for motive power, as in clocks and watches; for communicating motion by sudden release from a state of tension, as a bow, the spring of a gun-lock, etc.; for measuring weight and other force, as in the spring-balance; as regulators to control the movement of wheel-works, etc.

To the trunk again, and shut the spring of it.
Shak. Cymbeline, ii. 2. 47.

10. In entom., a special elastic organ by which an insect is enabled to spring into the air. (a) The springing-organ of species of the family *Poduridae*. It consists of several bristle-like appendages at the end of the abdomen, which are united at their bases and bent under the body. In leaping, the end of the abdomen is first bent down and then suddenly extended, bringing the elastic bristles with great force against the ground. See cut under *springtail*. (b) The springing-organ of a skipjack beetle, or clater. It consists of a spine extending backward from the prosternum and received in a cavity of the mesosternum. When the insect is placed on its back, it extends the prothorax so as to bring the spine to the edge of the mesosternal cavity; then, suddenly relaxing the muscles, the spine descends violently into the cavity, and the force given by this sudden movement causes the base of the elytra to strike against the supporting surface with such power that the body is thrown into the air. See cut under *click-beetle*.

11. Any active or motive power, physical or mental; that by which action is produced or propagated; motive.

Self-love, the spring of motion, acts the soul.
Pope, Essay on Man, ii. 59.

12. Capacity for springing; elastic power; elasticities, either physical or mental.

Heav'n's! what a spring was in his arm!
Dryden.
Th' elastic spring of an unwearied foot,
That mounts the stile with ease, or leaps the fence.
Cowper, Task, i. 135.

13. *Naut.*: (a) The start, as of a plank; an opening in a seam; a leak.

Each petty hand
Can steer a ship becalmed; but he that will
Govern and carry her to her ends must know . . .
Where her springs are, her leaks; and how to stop 'em.
B. Jonson, Catiline, iii. 1.

(b) A crack in a mast or yard, running obliquely or transversely. (c) A line made fast to the bow or quarter of a ship, in order to pull the head or stern in any required direction. (d)

A rope extending from some part of a ship to another ship, or to a fixed object, to cant or move the ship by being hauled upon.—14. A quick and cheerful tune; a skip. [Obsolete or Scotch.]

We will meet him,
And strike him such new springs, and such free welcomes,
Shall make him scorn an empire.

Fletcher (and another?), *Prophets*, v. 2.

Last night I play'd . . .

"O'er Bogie" was the spring.

Ramsay, *Gentle Shepherd*, l. 1.

15. In falconry, a collection of teal.

A spring of teals. *Strutt*, *Sports and Pastimes*, p. 97.

Presently surprising a spring of teal.

Daily Telegraph, Dec. 26, 1885. (*Encyc. Dict.*)

Atmospheric, bituminous, boiling, caballine spring. See the adjectives.—**Backlash-spring.** See *backlash*.—**Capring.** See *C-spring*.—**Carbonated springs.** See *carbonate*.—**Compound spring,** a spring in which springs of different types are combined.—**Intermittent or intermittent spring.** See *intermittent*.—**Platform-spring,** a form of spring used for heavy vehicles, consisting of four semi-elliptical steel springs arranged as a sort of resilient skeleton platform.—**Pneumatic spring,** a device in which air is confined and made by its elasticity to perform the functions of a spring. It may be a simple air-bag or a cylinder with a close-fitting platon, etc. Also called *air-spring*, *air-cushion*.—**Spiral spring,** a coiled spring used chiefly where the pressure to be resisted is direct and in line with the axis of the spring. See cut under *coil*.—**Spring of a beam or of a deck,** the curve of a beam or deck upward from a horizontal line.—**Spring of pork,** the lower part of the fore quarter, which is divided from the neck, and has the leg without the shoulder.—**Syn. 7. Fountain,** etc. See *well*.

II. a. Pertaining to, suitable for, or occurring or used in the spring of the year: as, *spring fashions*; *spring wheat*.—**Spring canker-worm.** See *canker-worm*.—**Spring cress,** an American bitter-cress, *Cardamine rhomboides*, common in wet places, bearing white flowers in early spring.—**Spring crocus,** an early crocus, *Crocus vernus*, having blue, white, or partly-colored flowers, perhaps the most common garden species.—**Spring fare,** the first fare of fish taken any year. Fishermen make about two fares of cod in a year, and the first or spring fare, which commences early in April, is of a superior quality. [New England.]—**Spring fever.** See *fever*.—**Spring grinder.** See *grinder*.—**Spring lobster.** See *lobster*.—**Spring mackerel.** See *mackerel*.—**Spring safety-valve.** See *safety-valve*.—**Spring snowflake.** See *snowflake*.

springal¹, springald¹ (spring'al, -ald), n. [*ME. springal, spryngal, spryngold, espringold* = *MHG. springal, springolf*, < *OF. espringale, espringalle* (AF. also *springalde*), also *espingalle, espinguale*, and also *espringole, espringarde, espingarde* (= *Pr. spingala* = *Sp. Pg. spingarda* = *It. spingarda*, *ML. spingarda*), a military engine, also a dance, < *espringuier, espringhier, espringier, espinguer, espinguier*, spring, dance (= *It. springare, spingare*, kick about), < *OHG. springan*, spring, jump: see *spring*.] A military engine, resembling the ballista, used in Europe in the middle ages.

Eke withynne the castelle were
Spryngoldes, gunnes, and bows, archers.
Rom. of the Rose, l. 4191.

springal², springald² (spring'al, -ald), n. [Also *springel, springall, springold, springow*, < *spring* + *-ald*, equiv. to *-ard* (the word being then perhaps suggested by *springal¹, springald¹*), or else + *-al*, equiv. to *-el, -le*, *AS. -ol*, as in *E. brittle, newfangle*, etc. Cf. *spring*, n., 5, *springer*, l (b).] A young person; a youth; especially, a young man. [Obsolete or Scotch.]

A *Springald*, adolescens.
Levins, *Manip. Vocab.* (E. E. T. S.), p. 16.

Ha, well done! excellent boy! dainty, fine *springal!*
Middleton, *More Dissemblers Besides Women*, v. 1.

springard¹ (spring'ard), n. Same as *springal¹*.
spring-back (spring'bak), n. In *bookbinding*, a false back put on the sewed sections of a book, which springs upward when the book is opened flat, but returns to its proper position when the book is closed. The outer or true back does not change its outward curve, being kept stiff on library books by sheets of stiff paper, in large blank books by moulded pasteboard or sheets of thin steel.

spring-balance (spring'bal'ans), n. See *balance*.

spring-band (spring'band), n. In a vehicle, a loop or strap used to unite the arms of an elliptic spring.

spring-bar (spring'bär), n. In a vehicle, a bar upon the ends of which the body is supported. It lies parallel with the axle, and rests upon the center of the elliptic spring.

spring-beam (spring'bēm), n. 1. A beam reaching across a wide space, without a central support.—2. In *ship-building*, a fore-and-aft timber uniting the outer ends of the paddle-box beams, and carrying the outboard shaft-bearing.—3. An elastic bar at the top of a tilt-hammer, jig-saw, or mortising-machine, to accelerate

the fall, or afford return motion.—4. In a railroad-car, one of two heavy timbers resting on the springs of a six-wheel ear-truck, and serving to support the bolster-bridges, which, through the bolster, support the ear-body.—5. In *carp.*, the tie-beam of a truss.

spring-beauty (spring'bū'ti), n. 1. A common American wild flower of the genus *Claytonia*, especially *C. virginica*, a low, succulent herb, sending up from a deep-set tuber in early spring a simple stem bearing a pair of narrow leaves and a loose gradually developing raceme of pretty flowers, which are white or rose-colored with deeper veins. See cut under *Claytonia*. The smaller *C. caroliniana*, with spatulate or oval leaves, is more northern except in the mountains.—2. In *entom.*, a beautiful little butterfly of America, *Erora lata*, which appears in spring, and has the hind wings in the male brown bordered with blue, in the female mostly blue. *S. H. Scudder*. [Recent.]

spring-bed (spring'bed), n. 1. A mattress formed of spiral springs or a fabric woven of coiled spiral wire, set in a wooden frame.—2. In a cloth-shearing machine, a long elastic plate of steel fastened to the framing of the machine to press the fibers of the cloth within the range of the cutting edges.

spring-beetle (spring'bē'tl), n. A beetle of the family *Elateridae*; an elater; a click-beetle. See cut under *click-beetle*. Also *springing-beetle*. See *spring*, n., 10 (b).

spring-bell (spring'bel), n. A species of rush-lily, *Sisyrinchium grandiflorum*. See *rush-lily*.

spring-block (spring'blok), n. 1. *Naut.*, a common block or deadeye connected to a ring-bolt by a spiral or india-rubber spring. It is attached to the sheets, so as to give a certain amount of elasticity.—2. In a vehicle, a piece of wood fixed on the axle as a support for the spring.—3. In a car-truck, a distance-piece placed above or below an elliptic spring.

spring-board (spring'bōrd), n. An elastic board used in vaulting, etc.

springbok (spring'bok), n. [*S. African D. spring-bok* (= *G. spring-boek*), a wild goat, < *spring*, = *E. spring*, + *bok* = *E. buck*.] A beautiful gazel, *Gazella euchores*, so called by the Dutch colonists of South Africa, where it abounds,

Springbok (*Gazella euchores*).

from its agility in springing upward when alarmed or as it scours the plain in escaping from its pursuers. It is of lithe and graceful form and handsome coloration; in which a rich tawny brown is varied with pure-white and black. Also *spring-boe*, *spring-buck*, *spring-buck*, and *springer*.

spring-box (spring'boks), n. 1. The box which contains the mainspring of a watch or other mechanism; the barrel.—2. A box or some similar receptacle closed by a lid which opens or shuts by the elasticity of a spring or some similar device. See *palpal*.—3. In *upholstery*, the wooden frame within which the springs, as of a mattress or of the seat of a sofa, are contained.

spring-buck (spring'buk), n. Same as *spring-bok*. *Imp. Dict.*

spring-carriage (spring'kar'āj), n. A wheeled carriage mounted upon springs.

spring-cart (spring'kärt), n. A light cart mounted upon springs.

springe¹ (springj), v. t.; pret. and pp. *springed*, ppr. *springeing*. [*ME. sprengen*, < *AS. sprengan*,

causal of *springau*, spring; see *spring*, and cf. *spreng* (of which *springe* is the proper form (cf. *singe*, as related to *sing*), now only dialectal.) To sprinkle. *Halliwel*. [Prov. Eng.]

springe² (sprinj), *n.* [*ME. springe*, < *springen*, spring; see *spring*, *v.* Cf. *springle*, and *D. spring-net*, a spring-net, OHG. *springa*, MHG. *sprinke*, a bird-snare.] A noose or snare for catching small game; a gin. It is usually secured to an elastic branch, or small sapling, which is bent over and secured by some sort of trigger which the movements of the animal will release, when it flies up and the noose catches the game.

A woodcock to mine own *springe*.

Shak., Hamlet, v. 2. 317.

I will teach thee a *springe*, Tony, to catch a pewit.

Scott, Kenilworth, xli.

springe² (sprinj), *v.*; pret. and pp. *springed*, ppr. *springeing*. [*springe*², *n.*] **I. trans.** To catch in a springe.

We *springe* ourselves, we atnk in our own bags.

Fletcher (and another), Queen of Corinth, iv. 4.

II. intrans. To set springes; catch game by means of springes.

springe³ (sprinj), *a.* [*spring*, *v.*] Active; nimble; brisk; agile. [Prov. Eng.]

The aquire 's pretty *springe*, considering his weight.

George Eliot, Silas Marner, xl.

springer (spring'er), *n.* [*spring* + *-er*]. **1.** One who or that which springs, in any sense. (a) A growing plant, shrub, or tree; a sapling.

The young men and maidens go out into the woods and coppices, cut down and spoil young *springers* to dress up their May-booths.

Evelyn, Sylva, IV. iv. § 4.

(b) A youth; a lad. *Halliwel*. [Prov. Eng.]

2. In *arch.*: (a) The impost or place where the vertical support to an arch terminates, and the curve of the arch begins. (b) The lower voussoir or bottom stone of an arch, which lies immediately upon the impost. (c) The bottom stone of the coping of a gable. (d) The rib of a groined roof or vault. See *cross-springer*.

3. A dog of a class of spaniels resembling the cocker, used, in sporting, to spring or flush game. See *spaniel*.

The *Springer* is smaller than the former (the Water Spaniel), of elegant form, gay aspect, and usually white with red spots, black nose and palate.

Quoted in *N. and Q.*, 7th ser., v. 376.

4. The springbok.—**5.** A grampus.—**Springer antelope**, the springbok.

Springfield gun, rifle. See *gun*¹, *rifle*², also cut under *bullet*.

spring-flood (spring'flud), *n.* [*ME. spring-flood* (= *D. spring-floed* = *G. spring-fluth* = *Sw. Dan. spring-flood*); as *spring* + *flood*.] Same as *springtide*.

Than shal she [the moon] been evene atte fulle alway,
And *spring-flood* laste bothe nyght and day.

Chaucer, Franklin's Tale, l. 342.

spring-fly (spring'fli), *n.* A caddis-fly.

spring-forelock (spring'fôr'lok), *n.* A cotterkey having a spring in the entering end to prevent its accidental withdrawal. *E. H. Knight*.

spring-garden (spring'gär'dn), *n.* A word of doubtful meaning, possibly a corrupt form; perhaps, according to Nares, a garden where concealed springs were made to spout jets of water upon the visitors.

Sophocles [bound]. Thy slave, proud Martius?

... not a vein runs here

From head to foot, but Sophocles would unseam, and
Like a *spring-garden* shoot his scornful blood
Into their eyes durst come to tread on him.

Beau. and Fl., Four Plays in One, Play Ist.

spring-gun (spring'gun), *n.* A gun which is discharged by the stumbling of a trespasser upon it, or against a wire connected with the trigger; also, a gun similarly set for large animals, as bears or wolves.

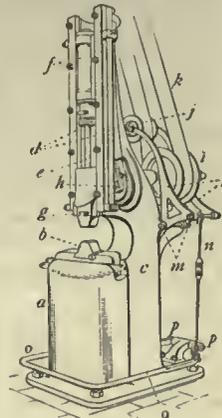

spring-haas (spring'häs), *n.* [*S. African D. spring-haas*, < *spring* (= *E. spring*) + *haas*, a hare, = *E. hare*: see *spring* and *hare*]. The Cape jumping-hare, *Pedetes caffer*, a kind of jerboa, of the family *Dipodidae*. See cut under *Pedetes*.

spring-halt (spring'hält), *n.* [Also, corruptly, *spring-halt*; < *spring* + *halt*.] An involuntary convulsive movement of the muscles of either hind leg in the horse, by which the leg is suddenly and unduly raised from the ground and lowered again with unnatural force; also, the nervous disorder on which such movements depend, and the resulting gait.

One would take it,
That never saw 'em pace before, the spavin
Or *springhalt* reign'd among 'em.

Shak., Hen. VIII., i. 3. 13.

spring-hammer (spring'ham'er), *n.* A machine-hammer in which the blow is partly or wholly made by a spring to which tension has been imparted by mechanism during the lift of the hammer-head. In some hammers the spring is a volume of confined and compressed air. In the accompanying cut *a* is the avvil-hlock; *b*, anvil; *c*, frame; *d*, guide for hammer; *e*, piston-rod; *f*, cylinder; *g*, hammer; *h*, crank (driven by the pulley *i*) which lifts the hammer, at the same time compressing the air in the air-spring cylinder *f*; *j*, idler-pulley which tightens the driving-belt *k* when pressed against the belt by the action of the rock-lever *l*, the rod *n*, and the foot-lever or treadle *o*—the rock-lever *l* being pivoted to the frame at *m*, while the treadle is pivoted to it at *p*. Pressure upon the treadle by the foot tightens the belt, and the hammer is then raised. The treadle is then relieved from pressure, the belt is slackened on the pulley *i*, and the compressed air, acting on the piston, delivers the blow, the belt then slipping easily over the pulley *i*.

Spring-hammer.

spring-hanger (spring'hang'er), *n.* A U-shaped strap of iron serving to support the end of a semi-elliptical car-spring.

spring-head (spring'hed), *n.* **1.** A fountain-head; a source.

Water will not ascend higher than the level of the first *spring-head* from whence it descendeth.

Bacon, Advancement of Learning, l.

2. A clutch, button, or other connecting device at the end of an elliptic carriage-spring.

spring-headed† (spring'hed'ed), *a.* Having heads that spring afresh. [Rare.]

Spring-headed Hydra, and sea-shouldring Whales.

Spenser, F. Q., II. xii. 23.

spring-hook (spring'hük), *n.* **1.** In locomotives, a hook fixing the driving-wheel spring to the frame.—**2.** A latch or door-hook having a spring-catch for keeping it fast in the staple.—**3.** A fish-hook set like a spring-trap, with a supplementary hook, which, on being released, fixes itself in the fish; a snap-hook. Also called *spear-hook*.

spring-house (spring'hous), *n.* A small building constructed over a spring or brook, where milk, fresh meat, etc., are placed in order to be kept cool in or near the running water. [U. S.]

As I was a settin' in the *spring-house*, this mornin',
a-workin' my butter, I says to Dinah, "I'm goin' to carry
a pot of this down to Miss Scudder."

H. B. Stowe, Minister's Wooing, iv.

springiness (spring'ines), *n.* **1.** The state or property of being springy; elasticity.

The air is a thin fluid body endowed with elasticity and *springiness*, capable of condensation and rarefaction.

Bentley.

2. The state of abounding with springs; wetness; sponginess, as of land.

springing (spring'ing), *p. a.* [*ME. springing*, *springyngge*; verbal *n.* of *spring*, *v.*] **1.** The act or process of leaping, arising, issuing, or proceeding; also, growth; increase.

The Foo out of a welle smal

Takeh his firste *springing* and his sora.

Thou visitest the earth, and waterest it. . . Thou makest it soft with showers; thou blessest the *springing* thereof.

Ps. lxx. 10.

2. In *arch.*, the point from which an arch springs or rises; also, a springer.

springing (spring'ing), *p. a.* Liable to arise; contingent: as, *springing* uses. See *use*.

springing-beetle (spring'ing-bê'tl), *n.* Same as *spring-beetle*.

springing-course (spring'ing-körs), *n.* See *course*¹.

springing-hairs (spring'ing-härz), *n. pl.* The locomotory cilia of some infusorians, as the *Halteridæ*, by means of which these animalcules skip about.

springing-line (spring'ing-lin), *n.* The line from which an arch springs or rises; the line in which the springers rest on the imposts, and from which the rise or versed sine is calculated.

springing-time† (spring'ing-tim), *n.* [*ME. springing time*; < *springing* + *time*.] The time of the new growing of plants; spring-time; spring.

[The furst age of man Icoond & light,
The *springyngge tyne* clepe "ver."
Babees Book (E. E. T. S.), p. 169.

springing-tool (spring'ing-töl), *n.* In iron-working, same as *hauling-tool*.

springing-wall (spring'ing-wäl), *n.* In building, a buttress.

spring-jack (spring'jak), *n.* In *teleg.*, a device for inserting a loop in a line-circuit. It usually consists of a plug to be inserted between two spring-contacts, the ends of the loop being joined to metallic strips fixed to the opposite sides of the insulating plug. If the latter is entirely of insulating material, it becomes a *spring-jack cut-out*.

spring-latch (spring'lach), *n.* A latch that snaps into the keeper after yielding to the pressure against it. See cuts under *latch*.

springle (spring'li), *n.* [= *D. G. springel*, a noose, snare, springe, = *Sw. spränkla*, a springle, = *Dan. sprinkel*, trellis; a dim. of *spring*, *springe*, in similar senses: see *spring*, *springe*².] **1.** A springe.

They [woodcocks] arrive first on the north coast, where almost euerie hedge serueth for a roade and euerie plash-oot for *springles* to take them.

R. Carew, Survey of Cornwall, fol. 25.

2. A rod about four feet in length, used in thatching. *Halliwel*. [Prov. Eng.]

springless (spring'les), *a.* [*spring* + *-less*.] Lacking springs or spring. (a) Having no springs, or natural fountain of water. (b) Lacking elastic springs: as, a *springless* wagon.

springlet (spring'let), *n.* [*spring* + *-let*.] A little spring; a small stream.

But yet from out the little hill

Oozes the slender *springlet* still.

Scott, Marmion, vi. 37.

spring-ligament (spring'lig'a-ment), *n.* The inferior calcaneoscapoid ligament of the sole of the foot, connecting the os calcis or heel-bone with the scaphoid, supporting the head of the astragalus, and forming part of the articular cavity in which the latter is received.

springlike (spring'lik), *a.* Resembling spring; characteristic of spring; vernal: as, *springlike* weather; a *springlike* temperature.

There the last blossoms *spring-like* pride unfold.

Savage, Waoderer, v.

spring-line (spring'lin), *n.* In *milit. engin.*, a line passing diagonally from one pontoon of a bridge to another.

spring-lock (spring'lok), *n.* A lock which fastens itself automatically by a spring when the door or lid to which it is attached is shut. Also called *latch-lock*.

spring-mattress (spring'mat'res), *n.* See *mattress* and *spring-bed*.

spring-net (spring'net), *n.* A bird-net which can be shut by means of a spring and trigger; a flap-net. A net of similar form is used for trapping rabbits.

springold†, *n.* Same as *springall*.

springold†, *springow†*, *n.* Same as *springal*².

spring-oyster (spring'ois'ter), *n.* A thorn-oyster. See cut under *Spondylus*.

spring-padlock (spring'pad'lok), *n.* A padlock which locks automatically by means of a spring when the hasp is pressed into its seat.

spring-pawl (spring'päl), *n.* A pawl actuated by a spring.

spring-plank (spring'plangk), *n.* A transverse timber beneath a railway truck-bolster, forming a support for the bolster-springs. *E. H. Knight*.

spring-pole (spring'pöl), *n.* A pole fastened so that its elasticity can be used for some mechanical purpose.—**Spring-pole drilling**, a method of boring holes in rock for oil, water, or any other purpose, in which the rods and drill are suspended from a spring-pole, which by its elasticity lifts them up after every stroke. The down motion is effected by hand-power, or sometimes a stirrup is added to enable the driller to use his feet. Prospecting-holes of from two to three inches in diameter can be bored with this simple apparatus to the depth of one or two hundred feet, or even more.

spring-punch (spring'punch), *n.* A punch which has a spring to throw it back after it has been driven down by pressure. This is usually done only in quick-working punches which are driven by the blow of a hammer, or in hand-punches such as those used by shoemakers, railway conductors, etc.

spring-searcher (spring'ser'cher), *n.* A tool having steel prongs projected by springs, used to detect defects in a cannon-bore.

spring-shackle (spring'shak'l), *n.* **1.** A shackle closed by a spring.—**2.** A shackle connecting two springs, or connecting a spring to a rigid part: used in vehicles, etc.

spring-stay (spring'stä), *n.* *Naut.* See *stay*¹.

spring-stud (spring'stud), *n.* A rod passed through the axis of a coil-spring to hold the

spring in place. The upper end works in a guide. See cut under *oiler*.

springtail (spring'tál), *n.* 1. A collembolous thysanurous insect which leaps or skips about by means of abdominal hairs acting like a spring, as any poduran. In these creatures the anal bristles are united and bent under the body, forming a spring by the aid of which they leap to a great height. They are found in gardens, in hotbeds, on manure-heaps in winter, and on snow, and may also be seen on the surface of water in quiet pools. See *Collembola*, 2, *Podura*, and *Thysanura*.

2. A thysanurous insect of the suborder *Cinura*, oftener called *bristletail*. See *Cinura*, *Lepisma*, and cut under *silversfish*.

3. One of certain minute neuropterous insects of the panorpid genus *Boreus*, found in moss and on the surface of snow; a snow-fly. This insect springs, but not by means of anal appendages.

spring-tailed (spring'táld), *a.* Springing by means of the tail, or having a spring on the tail, as a collembolous insect; thysanurous; podurous.

spring-tide (spring'tíd), *n.* [= D. *spring-tij*, spring-tide, = G. *spring-zeit*, high tide, = Sw. Dan. *spring-tid*, spring-tide; as *spring*, *v.*, rise, + *tid*.] 1. The tide which occurs at or soon after the new and full moon, and rises higher than common tides, the ebb sinking correspondingly lower. At these times the sun and moon are in a straight line with the earth, and their combined influence in raising the waters of the ocean is the greatest, consequently the tides thus produced are the highest. See *tide*.

Hence—2. Figuratively, any great flood or influx.

Yet are they doubly replenished by the first and latter *spring-tides* of devotion. *Sandys*, *Travailes*, p. 160.

springtide (spring'tíd), *n.* [*spring*, *n.*, 3, + *tid*.] Springtime.

Sounds as of the *springtide* they, . . . While the chill months long for May. *D. G. Rossetti*, *Love's Nocturn*.

springtime (spring'tim), *n.* Spring.

Primrose, first-born child of Ver, Merry *spring-time's* harbinger. *Fletcher* (and another), *Two Noble Kinsmen*, l. 1.

spring-tool (spring'töl), *n.* A light tongs closing by a spring, used by glass-blowers.

spring-trap (spring'trap), *n.* 1. A trap working by a spring, which may cause a door or bar to fall when the detent is released by the moving of the bait, or may throttle the victim, as in an ordinary form of mousetrap, etc.—2. A form of steam-trap. *E. H. Knight*.

spring-valve (spring'valv), *n.* 1. A valve fitted with a spring, which holds it to its seat except when it is opened by extraneous force.—2. A safety-valve with which is connected a spring-balance, graduated to any required number of pounds, and acting as a check on the valve until the determined pressure is attained. See cut under *safety-valve*.

For masts, &c., those [firs] of Prussia which we call spruce and Norway are the best. Evelyn, *Sylva*, l. xxii. § 2.

Black spruce, *Picea nigra*, a species of spruce growing 50 or 60 feet high, found through British America, the northern United States, and in the Alleghenies to North Carolina. Its light soft wood is largely made into lumber, and is used in construction. In ship-building, for piles, etc. An essence of spruce is obtained from its branches, used in making spruce-beer.—**Blue spruce**. Same as white spruce (c).—**Double spruce**, the black spruce.—**Douglas spruce**, *Pseudotsuga Douglasii*. See *Pseudotsuga*, and Oregon pine (under pine).—**Essence of spruce**, a thick liquid with a bitterish acidulous astringent taste, obtained by boiling and evaporation from the young branches of the Norway spruce, the black spruce, and perhaps other species. It is used in making spruce-beer.—**Hemlock spruce**. See *hemlock-spruce*.—**Himalayan or Indian spruce**, *Picea Morinda*, of the temperate Himalayas and Afghanistan, a tree 150 feet high, affording a pale straight-grained timber, durable only under shelter.—**New Zealand spruce**, the imou-pine, or red pine, *Dacrydium cupressinum*, a beautiful tree with long weeping branches.

From the young growth Captain Cook made an antiscorbutic spruce-beer. See *imou-pine*.—**Norway spruce**, *Picea excelsa*, a spruce of middle and northern Europe and northern Asia. It attains a height of 150 feet, forms extensive forests, endures severe cold, and on mountains reaches an elevation of 4,500 feet. Its tough and elastic wood is the white deal of Europe, excellent for building, furniture, masts, spars, etc. It is the source of Burgundy pitch. See *pitch*.—**Oil of spruce**, oil of hemlock.—**Red spruce**, a stunted variety (*P. rubra*) of the black spruce, growing in swamps.—**Single spruce**. Same as white spruce (a).—**Spruce bud-louse**, an aphid of the subfamily *Chermesinae*, *Adelges abieticolens*, which deforms the end-shoots of the spruce in the United States, producing large swellings sometimes mistaken for the natural cones. In Europe *A. coccineus* and *A. strobilobius* have the same habit.—**Spruce bud-worm**, the larva of a tortricid moth, as *Tortrix fumiferana*, which eats the end-buds of the spruce in northeastern parts of the United States, especially in Maine. Other spruce bud-worms are the reddish-yellow, *Steganoptycha ratzeburgiana*; the black-headed, *Teras variaria*; and the red, *Gelechia obliquistrigella*.—**Spruce cone-worm**, the larva of a phycid moth, *Pinipectis renicula*, which bores the fresh young cones of spruces in the United States.—**Spruce leaf-hopper**, an oblong shining-black leaf-hopper, *Athyas abietis*, which punctures spruce-needles in May and June in the United States.—**Spruce plume-moth**, *Oxyptilus nigrociliatus*. Its larva feeds on spruce, and it is the only member of the *Pterophoridae* known to infest any conifer.—**Spruce saw-fly**, a common saw-fly, *Lophyrus abietis*, whose pale-green larva defoliates spruce, fir, pine, and cedar in the United States, but especially spruce.—**Spruce timber-beetle**, *Xyloterus bivittatus*, the most injurious of several scolytids which attack the spruce in the United States. spur (spēr), *n.* [*< ME. spure, spore, < AS. spora*, a spur (*hand-spura*, 'hand-spur,' talon), = *MD. spore*, *D. spoor*, a spur, also a track, = *MLG. spore* = *OHG. sporo*, *MHG. spore*, *spor*, *G. sporn* = *Icel. spori* = *Sw. sporre* = *Dan. spore*, *spur* (cf. *OF. esporon, esperon, F. éperon* = *Pr. espero* = *OSP. esporon, Sp. espolon* = *Pg. esporão* = *It. sperone, sprone* (> *E. obs. speron*), also without the suffix, *OSP. espuera*, *Sp. espuela* = *Pg. espورا*, a spur, *< OHG. sporo*, acc. *sporon*); orig. 'kicker,' from its use on the heel; from the root of *spurn*, *v.* Cf. *speer*¹, *speer*, *spoon*, *sporon*, from the same ult. root.] 1. A pointed instrument worn on the heel by a horseman by a horseman to goad the horse. The earliest medieval spurs were without rowels (see *prick-spur*, *goad-spur*); another form had a ball from which a short point projected, and was called the *ball-and-spike spur*. The rowel was first introduced in the thirteenth century, but was not common until the beginning of the fourteenth. The spurs of the fourteenth and fifteenth centuries are sometimes of extraordinary length on account of the projection of the steel blanchers which kept the heel far from the horse's side. See *rowel-spur* (with cut), also cut under *prick-spur*.

Forms of Spurs.
a, knight's spur (12th or 13th century); b, brass spur (Henry IV.); c, long-necked rowel-spur (Edward IV.); d, long-necked brass spur (Henry VII.); e, steel spur (Henry VIII.).

With-ont *spores* other spere spakliche he loked.
Piers Plowman (B), xviii. 12.

Mount thou my horse, and hide thy spurs in him,
Till he have brought thee up to yonder troops,
And here again.
Shak., *J. C.*, v. 3. 15.

2. Anything which goads, impels, or urges to action; incitement; instigation; incentive; stimulus: used in this sense in the phrase *on or upon the spur of the moment*—that is, on a momentary impulse; suddenly; hastily; impromptu.

What need we any *spur* but our own cause
To prick us to redress?
Shak., *J. C.*, II. 1. 123.

If you were my counsel, you would not advise me to answer upon the *spur of the moment* to a charge which the basest of mankind seem ready to establish by perjury.
Scott, *Guy Mannering*, lvi.

3. Some projecting thing more or less closely resembling a horseman's spur in form or position. (a) A root of a tree; a large lateral root.

By the spurs pluck'd up
The pine and cedar.
Shak., *Tempeat*, v. 1. 47.
Yet is thy root sincere, sound as the rock,
A quarry of about spurs and knotted fanga.
Cowper, *Yardley Oak*, l. 117.

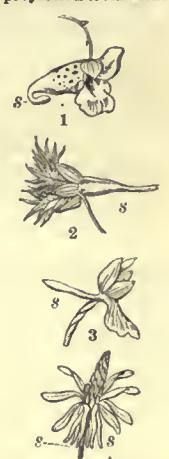

(b) *pl.* Short small twigs projecting a few inches from the trunk. *Hallivell*. [Prov. Eng.] (c) A snag; a spine; spe-

cifically, in *herpet.*: (1) An anal spur. (2) A calcar of some frogs. (d) In *entom.*, a spine or stiff bristle on the leg. (e) In *ornith.*: (1) A horny modification of the integument of a bird's foot, forming an outgrowth of the nature of a claw, usually sharp-pointed and supported on a bony core, and used as a weapon of offense and defense; a calcar. Such a spur differs from a claw mainly in not ending a digit, but being an offset from the side of the metatarsus; it is also characteristic of though not confined to the male, and is therefore a secondary sexual character. It is familiar as occurring on the ahank of the domestic cock and other gallinaceous birds, and is sometimes double or treble, as in *Pavo bicoloratus* and in the genera *Gallopodix*, *Ithaginis*, and *Polyplectron*. See cuts under *calcarate*, *Gallopodix*, *Ithaginis*, *pea-fowl*, *Polyplectron*, *Rasores*, and *tarsonotarsus*. (2) A similar horny outgrowth on the pinnon-bone of the wing in various birds, resembling a claw, but differing in being a lateral offset not terminating a digit. It occurs in certain gulls, plovers, pigeons, and juncos, and is double in the screamer. See cuts under *joana*, *Palamedea*, and *spur-winged*. (f) In *sporting*, a gaff, or sharp piercing or cutting instrument fastened upon the natural spur of a game-cock in the pit. (g) In *mammal.*, the calcar of some bats. (h) In *phys. geog.*, a ridge or line of elevation subordinate to the main body or crest of a mountain-range; one of the lower divisions of a mountain-mass, when this, as is frequently the case, is divided by valleys or gorges. See *mountain-chain*.

The ground-plan of the latter massif (Mont Blanc) is one long ridge, which, except at the two extremities, preserves a very uniform direction, and throws out a series of long spurs to the north-west.

Bonney, *The Alpine Regions*, p. 25.

(i) A climbing-iron used in mounting telegraph-poles and the like. (j) In *carp.*, a brace connecting or strengthening a post and some other part, as a rafter or cross-beam. (k) In *arch.*, any offset from a wall, etc., as a buttress; specifically, the claw or griffe projecting from the torus at each of the angles of the base of early pointed medieval columns. (l) In *bot.*, a calcar; a slender hollow projection from some part of a flower, as from the calyx of columbine and larkspur and the corolla of violeta. It is usually nectariferous, being the nectary (nectarium) of Linnaeus. The term is also rarely applied to a solid spur-like process. See also cuts under *nectary*, *columbine*, and *Delphinium*. (m) In *fort.*, a wall that crosses a part of the rampart and joins it to an anterior work; also, a tower or blockhouse placed in the outworks before the port. (n) In *ship-building*: (1) A shore or piece of timber extending from the bilgeways, and fayed and bolted to the bottom of the ship on the stocks. (2) A curved piece of timber serving as a half beam to support the deck where a whole beam cannot be placed. (3) A heavy timber extended from a pier or wharf against the side of a ship to prevent the ship from striking against the pier. (o) In *hydraul. engin.*, a wing-dam, or projection built out from a river-bank to deflect the current. (p) On a coating, a fin, or projection of waste metal. (q) A small piece of refractory clay ware with one or more projecting points, used in a kiln to support or separate articles in a saggar during firing, and to prevent the pieces from adhering to the saggar and to each other. Also called *still*. *E. H. Knight*.

s, Spur in the flowers of (1) *Impatiens fulva*, (2) *Tropaeolum Moritzianum*, (3) *Orchis mascula*, and (4) *Myosurus minimus*.

(r) In an anger, a projecting point on the edge, which makes the circular cut, from which the chip is removed by the lip. *E. H. Knight*. See cut under *auger*. (s) The prong on the arms of some forms of patent anchors, for the purpose of catching on the bottom and making the fluke bite or take hold more quickly. See cut under *anchor*. (t) In *printing*, a register-point. [Eng.] (u) In *anat.*, the angle at which the arteries leave a cavity or trunk. *Dunghison*. (v) In *mining*, a branch of a vein; a feeder or dropper.—**Anal spurs**. See *anal*.—**Hot o' the spur**. See *hot*.—**Order of the Golden Spur**, an old order of the papal court, of which the badge was a Maltese cross with rays between the arms, and having a small spur hanging from it. Having sunk into neglect, it was superseded in 1841 by the Order of St. Sylvester.—**Scotch spur**, in *her.*, a bearing representing a prick-spur without rowel.—**Spur-pepper**. See *Capeicum*.—**Spur system**, in *hort.*, a method of pruning grape-vines in which the ripened wood of the preceding season is cut back close to the old stem or arm, so as to leave spurs bearing one, two, or three buds, the spurs being so selected as to provide for shoots at equal distances. The growing shoots are trained to a position at right angles to the arm, whether this is horizontal or vertical, and are topped after the formation of one, two, or three bunches of grapes upon each.—**Spur valerian**. See *Centranthus*.—**To win one's spurs**, to gain a title to knighthood (because spurs were given as a reward for gallant or valiant action); hence, to establish a title to honorable recognition and reward.—**With spur and yardt**, with whip and spur—that is, at once.

Truateth wel that I

Chaucer, *Troilus*, II. 1427.

spur (spēr), *v.*; pret. and pp. *spurred*, ppr. *spurring*. [*< ME. sporen, sperren, sporien, spuriem* = *OHG. sporōn*, *MHG. sporen, sporn*, *G. spornen* = *Sw. sporra* = *Dan. spore*, spur; from the noun. Cf. *AS. spyrrian, spyrrian, sperran*, etc., track, follow out, *E. speer*: see *speer*.] I. *trans.* 1. To prick or rasp with the point or rowel of a spur.

He *sporyd* his hors, and theder toke the way.
Generydes (E. E. T. S.), I. 217.

He spurred the old horse, and he held him tight.
Kingsley, The Knight's Leap.

2. Figuratively, to urge or incite.
Remember yet, he was first wrong'd, and honour
Spurr'd him to what he did.
Fletcher (and another), Love's Cure, 1. 3.
3. To hasten. [Rare.]
Lovers break not hours,
Unless it be to come before their time;
So much they spur their expedition.
Shak., T. G. of V., v. 1. 6.
4. (a) To fasten spurs to, as a horseman's boot, or a sollar. (b) To furnish with spurs, as a rider: as, booted and spurred; to furnish with a spur or gaff, as a game-cock.—5. To prop; support. *Halliwel.* [Prov. Eng.]
- II. *intrans.* 1. To prick one's horse with the spur; ride in haste.

Now spurs the lated traveller space
To gain the timely inn.

Shak., Macbeth, iii. 3. 7.

2. Figuratively, to press forward.

Some bold men, though they begin with infinite ignorance and error, yet, by *spurring* on, refine themselves.
Grew.

spur-blind, *a.* [Appar. a var. of *purblind*, simulating *spur*.] *Purblind.*

Madame, I crave pardon, I am *spur-blind*, I could scarce see.
Lyly, Sapho and Phson, ii. 2.

spur-gall (spér'gál), *v. t.* [*spur-gall, n.*] To make a spur-gall on, as a horse.

And yet I beare a burthen like an Asse,
Spur-gall'd and tyr'd by launcing Bullingbrooke.
Shak., Rich. II. (folio 1623), v. 5. 94.

spur-gally (spér'gá'li), *a.* [*spur-gall + -y*.] Spur-galled; wretched; poor. *Halliwel.* [Prov. Eng.]

spurge† (spérj), *v.* [*ME. spurgen, spourgen, spowrgen*, < *OF. espurger, espourger* = *Sp. Pg. expurgar* = *It. spurgare*, < *L. expurgare*, purge, cleanse; see *expurgate*, and cf. *purge*.] I. *trans.* To purge; cleanse; rid.

Of flies men mow hem weyl spurge.
Rob. of Brunne, Handlyng Synne, l. 10918.

II. *intrans.* To purge; froth; emit froth; especially, to work and cleanse itself, as ale.

By reason that . . . the ale and byere haue palled, and were nought by cause such ale and biere hath taken wynde in spurgynge.
Arnold's Chron., p. 85.

spurge² (spérj), *n.* [*ME. sporygen, spourge*, < *OF. spurge, espurge*, spurge, < *OF. espurger*, purge; see *spurge*¹.] A plant of the genus *Euphorbia*. Several species have special names, chiefly used in books; a few related or similar plants also are called *spurges*. Exotic species are better known as *euphorbias*.—**Alleghany-mountain spurge**. See *Pachysandra*.—**Branched spurge**, a rubiaceous shrub, *Ernodia littoralis*, of the sea-shores of the West Indies and Florida, a prostrate smooth plant with four-angled branches, and yellowish flowers sessile in the upper axils.—**Caper-spurge**, *Euphorbia Lathyris*, a smooth glaucous herb native in southern Europe and western central Asia, cultivated in gardens, thence sometimes escaping. It is singular in the genus for its opposite leaves, and has a four-rayed, then forking, umbel. Its young fruit is sometimes substituted for capers, and its seeds contain an oil formerly used in medicine. Also *wild caper*, *mole-tree*, and *myrtle-spurge*.—**Cypress-spurge**, a common garden plant, *Euphorbia Cyparissias*, with tufted stems and yellowish inflorescence, cultivated for its foliage, which consists of crowded linear leaves suggesting cypress. It is a native of Europe, running wild in the eastern United

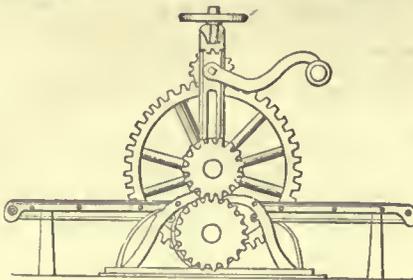

Flowering Spurge (*Euphorbia corollata*).

a, a leaf; *b*, a flower cluster of five male and one female flower; *c*, flower cluster, but younger, showing the cup-like base; *d*, part of the involucre, showing the gland at its base; *e*, a male flower; *f*, the fruit, consisting of three carpels.

States.—**Flowering spurge**, a conspicuous species, *Euphorbia corollata*, of eastern North America, a rather slender plant 2 or 3 feet high, with an umbel of about five forks, the rays repeatedly forking into two or three. The involucre has five white appendages appearing like petals. The root has properties similar to those of the ipecac-spurge. Also (with other species) called *milk-weed*.—**Hyssop-spurge**, the purple spurge, *Euphorbia Peplis*, a European maritime species spreading flat on the sand.—**Indian tree-spurge**. Same as *milk-hedge*.—**Ipecac-spurge**, *ipecacuanha-spurge*, *Euphorbia Ipecacuanha*, found in the United States from Connecticut to Florida, a plant with many low stems from a long perpendicular root. The root has an active emetic and purgative property, but in large doses tends to produce excessive nausea and purging, and is inferior to true ipecac.—**Irish spurge**. See *makinboy*.—**Leafy spurge**, *Euphorbia Esula*, an Old World species resembling the typhoid-spurge, but larger, with commonly lanceolate leaves.—**Myrtle-spurge**. See *caper-spurge*.—**Petty spurge**, a low branching European species, *Euphorbia Peplis*.—**Purple spurge**. See *hyssop-spurge*.—**Sea-spurge**, or *seaside spurge*, *Euphorbia Paralias*, of European sea-shores.—**Slipper-spurge**, the slipper-plant. See *Pedicularis*.—**Spotted spurge**, a prostrate American species, *Euphorbia maculata*, with a dark spot on the leaf; also called *milk-purshane*. The large spotted spurge is *E. Preslii*, sometimes called *black spurge* or *purshane*. See *purshane*.—**Spurge hawk-moth**, a handsome sphinx, *Delphinia euphorbiae*, whose larva feeds on the sea-spurge: an English collector's name.—**Sun-spurge**, *Euphorbia Helioscopia*, an erect annual 6 or 8 inches high, whose flowers follow the sun. Also called *cat's-milk*, *little-good* (Scotland), and *wartweed* or *wartwort* (Prov. Eng.).—**Wood-spurge**, *Euphorbia amygdaloides*, of Europe and western Asia.

spur-gear (spér'gër), *n.* Same as *spur-gearing*.

spurging† (spér'jing), *n.* [Verbal *n.* of *spurge*¹, *v.*] Purging. *B. Jonson*, Masque of Queens.

spur-hawk (spér'hák), *n.* A dialectal form of *sparhawk* for *sparrow-hawk*. [Eng.]

spur-heeled (spér'héld), *a.* In *ornith.*, having a very long straightened hind claw; lark-heeled; specifically noting the coucals or cuckoos of the genus *Centropus*.

spuriæ (spü'ri-è), *n. pl.* [NL., fem. pl. (sc. *penne*, feathers) of *spurius*, spurious; see *spurious*.] The packet of feathers growing on the bastard wing, winglet, or alula; the bastard quills, composing the alula. See cut under *alula*.

spurious (spü'ri-us), *a.* [= *Sp. Pg. spurio* = *It. spurio*, < *L. spurius*, of illegitimate birth, hence in gen. not genuine, false; perhaps akin to *Gr. σπορά*, seed, offspring, < *σπειρω*, sow; see *spore*².] 1. Not legitimate; bastard: as, *spurious* issue.

Her *spurious* first-born. Milton, S. A., l. 391.

2. Not proceeding from the true source or from the source pretended; not being what it pretends or appears to be; not genuine; counterfeit; false; adulterated.

Spurious gems our hopes entice,
While we scorn the pearl of price.
Covet, Self-diffidence (trans.).

3. In *zool.*: (a) False; resembling a part or organ, but not having its function: as, *spurious* eyes or limbs. (b) Having the functions of an organ, but morphologically different from it: as, the *spurious* legs, or prolegs, of a caterpillar.

(c) Aborted or changed so that the normal functions no longer exist: as, the *spurious* or aborted front legs of certain butterflies. (d) Erroneous; incorrectly established: as, a *spurious* genus or species. See *pseudogenus*.—4. In *bot.*, false; counterfeit; apparent only.—**Spurious** Baltimore, the orchard oriole, *Icterus spurius*, formerly supposed to be a variety of the Baltimore oriole. Also called *bastard Laltimore*.—**Spurious claw**, in *entom.*, same as *empodium*.—**Spurious dissepiment**, in *bot.*, a partition in an ovary or pericarp not formed by parts of the carpels, but by an outgrowth commonly from the back of the carpel. See *dissepiment*.—**Spurious hermaphrodites**. See *hermaphrodite*, 1.—**Spurious ocellus**, a circular spot of color without any well-defined central spot or pupil.—**Spurious pareira**. See *pareira*.—**Spurious primary**, in *ornith.*, the first or outermost primary or remex of a bird's wing which has at least ten primaries and the first one very short, rudimentary, or functionless. Also called *spurious quill*.—**Spurious proposition**, rainbow, *stemma*, etc. See the nouns.—**Spurious sarsaparilla**. See *Hardenbergia*.—**Spurious vein**, in *entom.*, a faintly indicated vein or nervure of the wing, traceable only by a strong reflected light, particularly of certain hymenoptera.—**Spurious wing**, in *ornith.*, the ala spuria, or bastard wing; the alula. See *spuria*, and cut under *alula*. [This use of *spurious* has no reference to the condition of a first primary so called. See above.]—**Syn. 2. Spurious, Supposititious**, and *Counterfeit* agree in expressing intent to deceive, except that *counterfeit* may be used with figurative lightness where no dishonorable purpose is implied. *Spurious*, not genuine, expresses strong disapprobation of the deception, successful or attempted. *Supposititious* applies only to that which is substituted for the genuine; it thus expresses a class under the *spurious*: a *supposititious* work of Athanasius is not one that is supposed to have been written by him, but one that is palmed off upon the public as being the genuine text of a work that he is known to have written; a *supposititious* child is a changeling; was the Tichborne claimant the genuine or a *supposititious* Sir Roger? *Counterfeit* applies also to a class under the *spurious*—namely, to that which is made in attempted imitation of something else: as, a *counterfeit* coin, bank-note, signature. Chatterton's manuscripts were *spurious*, but not *supposititious*; as they were not exact imitations of any particular manuscripts of early days, they would hardly be called *counterfeit*. See *facititious*.

spuriously (spü'ri-us-li), *adv.* In a spurious manner; counterfeitedly; falsely.

spuriousness (spü'ri-us-nes), *n.* 1. Illegitimacy; the state of being bastard, or not of legitimate birth: as, *spuriousness* of issue.—2. The state or quality of being spurious, counterfeit, false, or not genuine: as, the *spuriousness* of drugs, of coin, or of writings.

spur-leather (spér'leth'ér), *n.* A strap by which a spur is secured to the foot.

I could eat my very spur-leathers for anger!
B. Jonson, Every Man in his Humour, ii. 1.

spur-legged (spér'leg'éd or -legd), *a.* Having spurs or spines on the legs or feet. The *Leptidæ* are known as *spur-legged* flies.

spurless (spér'les), *a.* [*spur + -less*.] Without a spur, in any sense.

spurling (spér'ling), *n.* A spelling of *spurling*.

spurling-line (spér'ling-lin), *n.* *Naut.*: (a) A line connected with the axis of a wheel by which a telltale or index is made to show the position of the helm. (b) A rope stretched across between the two forward shrouds, having thimbles spliced into it to serve as fair-leadings for the running rigging.

spurn-money (spér'mun'í), *n.* Money exacted for wearing spurs in church. See the quotation.

Our cathedrals (and above all St. Paul's) were, in Jonson's time, frequented by people of all descriptions, who, with a levity scarcely credible, walked up and down the aisles, and transacted business of every kind, during divine service. To expel them was not possible; such, however, was the noise occasioned by the incessant jingling of their spur-rows, that it was found expedient to punish those who approached the body of the church, thus indecently equipped, by a small fine, under the name of *spurn-money*, the exaction of which was committed to the beadles and singing-boys.

Gifford, Note to B. Jonson's Every Man out of his Humour, ii. 1.

spurn¹ (spèrn), *v.* [*ME. spurnen, spornen*, < *AS. speornan* (**spornan*, *ge-speornan*, *ge-spornan*, **spurnan*, in *Somner*, not authenticated), also in comp. *æt-speornan*, *æt-spornan* (pret. *spearn*, pl. *spurnen*, pp. *spornen*) = *OS. spurnan* = *OHG. spurnan* = *Icel. sporna*, *spyrna*, also *sperna*, kick against, spurn with the feet, = *L. spernere*, despise; ult. connected with *spur*.] I. *trans.* 1. To kick against; kick; drive back or away with the foot.

And Galashin with his fote spurned his body to ground.
Merlin (E. E. T. S.), ii. 199.

Am I so round with you as you with me,
That like a football you do spurn me thus?
Shak., C. of E., ii. 1. 83.

2†. To strike against.

Aungis in honda schullen beer thee,
Leat thou spurne thl foot at a stoon,
Hymns to Virgin, etc. (E. E. T. S.), p. 43.

3. To reject with disdain; scorn to receive or consort with; treat with contempt.

O how my soul would *spurn* this ball of clay,
And loathe the dainties of earth's painful pleasure!
Quarles, Emblems, v. 13.

II. intrans. 1. To kick.

I purpose not to *spurn* against the prick, nor labour to set up that which *God* pulleth down.
Bp. of Ely, in J. Gairdner's Richard III., iv.

2f. To dash the foot against something; light on something unexpectedly; stumble.

No wight on it *sporneth*
That erst was nothyng, into nougth it torneth.
Chaucer, Troilus, ii. 797.

The maid . . . ran upstairs, but, *spurning* at the dead body, fell upon it in a swoon.
Martinus Scriblerus, l. 3.

3f. To dash; rush.—4. To manifest disdain or contempt in rejecting anything; make contemptuous opposition; manifest contempt or disdain in resistance.

It is very sure that they that be good will bear, and not *spurn* at the preacher.

Latimer, 3d Sermon bef. Edw. VI., 1549.
Thou art regardless both of good and shame,
Spurning at virtue and a virtuous name.
Fletcher, Faithful Shepherdess, v. 3.

spurn¹ (spɜrn), *n.* [*< ME. spurn, sporn; < spurn¹, v.*] 1. A blow with the foot; a kick.

He tesse that heele a yard above his head
That offers but a *spurne*.
Heywood, Royal King (Works, ed. Pearson, 1874, VI. 31).

2f. A stumble; a fall. *Joseph of Arimathe (E. E. T. S.), p. 19.*—3. Disdainful rejection; contemptuous treatment.

The insolence of office, and the *spurns*
That patient merit of the unworthy takes.
Shak., Hamlet, iii. 1. 73.

4. In *mining*, one of the narrow pillars or connections left between the holings, and not cut away until just before the withdrawal of the sprags. [*South Staffordshire coal-field, England.*]

spurn² (spɜrn), *n.* [*A var. of spur, after spurn¹, v. Cf. G. sporn, spur, orig. an acc. form: see spur, n.*] 1. A spur. [*Prov. Eng.*]—2. A piece of wood having one end inserted in the ground, and the other nailed at an angle to a gate-post, for the purpose of strengthening or supporting it. [*Prov. Eng.*]

spurn² (spɜrn), *v. t.* [*< spurn², n. Cf. spurn¹, v.*] To spur.

The Faery quickly raught
His poynant speare, and sharply gan to *spurne*
His fomy ateed.
Spenser, F. Q., III. 1. 5.

spurn³ (spɜrn), *n.* [*Early mod. E. sporn, sporne; origin obscure.*] An evil spirit.

spurner (spɜrn'ner), *n.* [*< spurn¹ + -er¹.*] One who spurns or rejects.

spurn-point (spɜrn'point), *n.* [*< spurn¹ + point.*] An old game, of uncertain nature.

He stakes heaven at *spurnpoint*, and trips cross and pile whether ever he shall see the face of God or no.
Jer. Taylor, Works (ed. 1835), l. 743.

spurnwater (spɜrn'wɑ'tɛr), *n.* [*< spurn¹, v., + obj. water.*] *Naut.*, a V-shaped barrier or breakwater, from 1 to 2 feet or more high, erected on sea-going vessels forward of the foremast, to shed water coming over the bows.

spur-pruning (spɜrn'pru'ning), *n.* A mode of pruning trees by which one or two eyes of the previous year's wood are left and the rest cut off, so as to leave spurs or short rods. Compare *spur-system*, under *spur*.

spurred (spɜrd), *a.* [*< spur + -ed².*] 1. Wearing spurs: as, a *spurred* horseman.—2. In ornith.: (a) Having unusually long claws: as, the *spurred* towhee, *Pipilo megalonyx*. *S. F. Baird*. [*Rare.*] (b) Having spurs; calcarate. See *spur, n.*, 3 (e) (1). (c) Spur-heeled. (d) Spur-winged.—3. In mammal., herpet., and entom., having spurs of any kind; calcarate.—4. spurwing (spɜr'wing), *n.* A spur-winged bird. Especially—(a) A jacana, or any bird of the family *Jacaniidae* or *Pardidae*, of which the spur on the wing is a characteristic. See cut under *jacana*. (b) A spur-winged goose. See cut under *Plectropterus*. (c) A spur-winged plover. See *Chettusia* and *spur-winged*.

spur-winged (spɜr'wingd), *a.* Having a horny spur on the pinion, as various birds. It is a weapon of offense and defense. It is sometimes double, as is well shown in the cut under *Palamedea*. See also cuts under *jacana* and *Plectropterus*.—**Spur-winged** goose, a species of *Plectropterus*, as *P. gambensis*.—**Spur-winged** plovers, those plovers or lapwings, of the family *Charadriidae*, and of several different genera, in which a spur is developed on the wing (including some species of these genera in which such a spur falls to develop). Wing-spurs are more frequent in this than in any other family of birds (excepting the related *Jacaniidae* or *Pardidae*). None occur, however, in the true plovers (of the genera *Chara-*

drius, *Aegialites*, *Eudromias*, *Squatrola*, etc.); they are commonest among those plovers which are related to the lapwing of Europe (*Vanellus cristatus*, which, however, has none), and which have a hind toe and often wattle on the face. The presence of spurs and wattles is often coincident. South American spur-winged plovers, with hind toe and no wattles, constitute the genus *Belonopterus*; they are two, the Cayenne and the Chilean lapwings, *B. cayennensis* and *B. chilensis*; both are crested. The type of the genus *Hoplopterus* is the Egyptian spur-winged plover, *H. spinosus*, with large spurs, a crest, no hind toe, and no wattles; it has when adult the whole crown, chin, throat, breast, flanks, and legs black, and the greater wing-coverts and some other parts white. It inhabits especially northern Africa, abounds in Egypt and Nubia, and extends into parts of Europe and Asia. It is among the birds supposed to have been a basis of the trochilus of the ancients (compare *crocodile-bird*, *nicnac*, and cut under *Pluvianus*). It is represented in South Africa by the black-backed spurred lapwing, *H. speciosus*, with large spurs and the top of the head white. The Indian spur-winged lapwing, *H. ventralis*, has a black cap, a black patch on the belly in white surroundings, and large spurs. Two South American forms, with spurs, but no wattles, crest, or hind toe, are the Peruvian bronze-winged lapwing, *H. resplendens*, and the little white-winged, *H. cayanus* (or *stotatus*, if the term *cayanus* be thought too near *cayennensis*); each of these has been made the basis of a different generic name. In the type of the genus *Chettusia*, *C. gregaria* (see cut under *Chettusia*), and several related species, a hind toe is present, and neither spurs nor wattles are developed; but the name has been used to cover various species with wattles and spurs, more properly separated under the term *Lobivanellus*. In this group it is the rule that large wattles are associated with well-developed spurs, for in those species which have very small wattles the spurs are almost or quite obsolete. Variations in these respects, and in the presence or absence of the hind toe, have caused the erection of other genera. (See *Sarcophorus*, *Xiphopterus*.) Five of the best-marked species of *Lobivanellus* proper, with large spurs, large wattles, and a hind toe, are the following: *L. senegalus*, of the Ethiopian region north of the equator; *L. lateralis*, of South Africa; *L. cucullatus*, of Java, Sumatra, etc.; *L. personatus*, of northern Australia, New Guinea, and some other islands; and *L. lobatus*, of eastern Australia from Rockingham Bay to Tasmania (see cut under *wattled*).

spurwort (spér'wèrt), *n.* [*spur* + *wort*]. The field-madder, *Sherardia arvensis*: so called from its whorls of leaves, likened to the rowel of a spur.

squadron (skwod'ron), *n.* [= D. *escadron* = Dan. *eskadron*, < OF. *esquadron*, F. *escadron* = Sp. *escuadron* = Pg. *esquadrao* (= G. *schwadrone* = Sw. *squadron*, < It. *squadrone*, a *squadron*, aug. of *squadra*, a *squad*, a *square*: see *squad¹, square¹*.] **1.** A *square*.

Six dayes Iourney from Bezenerge is the place where they get Diamonds; . . . It is a great place, compassed with a wall, and . . . they sell the earth within the wall for so much a *squadron*, and the limits are set how deepe or how low they shall digge. *Hakluyt's Voyages, II. 221.*

2. A body of soldiers drawn up in a *square*, or in regular array, as for battle; specifically, in

modern armies, the principal division of a regiment of cavalry. This corresponds more or less closely to a company in the infantry, and consists of two troops, each commanded by a captain. The actual strength of a *squadron* varies from 120 to 200 men.

The Ordoices, to welcome the new General, had hew'n in peeces a whole *Squadron* of horse.

Milton, Hist. Eng., ll.

3. A division of a fleet; a detachment of ships of war employed on a particular service or station, and under the command of a flag-officer.

—**4.** Generally, any ranked and orderly body or group.—**5.** In early New England records (1636), one of four divisions of town land, probably in the first instance a *square*. The records show that *squadron* was used later in other senses: (a) A division of a town for highway care.

Agreed upon by the selectmen for the . . . calling out of their men to work, that is within their several *squadrons*.

Town Records, Groton, Mass., 1671.

(b) A school district.

Voted and chose a committee of seven men to apportion the school in six societies or *squadrons*, . . . taking the northwesterly corner for one *squadron*.

Town Records, Marlborough, Mass., 1749.

Milton, P. L., xii. 367.

squail, squale (skwāl), *n.* [Also *scale*; perhaps a dial. var. of *skail*, in pl. *skails*, formerly *skayles*, a var. of *kail²*: see *kail²* and *skayles*.] **1.** A disk or counter used in the game of *squails*.

Urge, towards the table's centre,

With unerring hand, the *squail*.

C. S. Calverley, There Stands a City.

2. pl. A game in which disks or counters are driven by snapping them from the edge of a round board or table at a mark in the center.

—**3. pl.** Ninepins. [*Halliwel.* [*Prov. Eng.*]

squail, squale (skwāl), *v.* [*< squail, n.*] **I. intrans.** To throw a stick, loaded stick, disk, flat stone, or other object at a mark: often applied to the throwing of sticks at cocks or geese on Shrove Tuesday, a sport formerly popular in England. *Grose.* [*Prov. Eng. and New Eng.*]

II. trans. To aim at, throw at, or pelt with sticks or other missiles.

"*Squailing* a goose before his door, and tossing dogs and cats on Shrove Tuesday" (Mr. Hunt's "Bristol").

The allusion is to the republican mayor of the city in 1651.

N. and Q., 7th ser., IV. 169.

squail-board (skwāl'bōrd), *n.* The round board upon which the game of *squails* is played.

squailer (skwāl'er), *n.* A kind of throwing-stick, an improvement on that used formerly in *squailing* cocks or geese.

Armed with *squailers*, an ingenious instrument composed of a short stick of pliant cane and a leaded knob, to drive the harmless little squirrel from tree to tree, and lay it a victim at the feet of a successful shot.

Daily Telegraph, Nov. 30, 1881. (Encyc. Dict.)

squaimoust, *a.* See *squamous*.

squaint, *n.* An obsolete dialectal form of *swain*.

squalder (skwol'der), *n.* A kind of jelly-fish. See the quotation.

I have oftentimes mett with two other entities which seeme to bee of a congenerous substance with the aforementioned gellies, both of them to bee found in the salt water. One is flat and round, as broad as a mans palme, or broader, and as thick as the hand, cleare and transparent, convex on one side and somewhat like the gibbous part of the human liver, on the other side concave with a contrivance like a knott in the very middle thereof, but plainly with circular fibers about the verge or edge of it (where it is growne thin) which suffer manifest constriction and dilatation, which doe promote its natation, which is also perceptible, and by which you may discerne it to advance towards the shore, or recede from it. About us they are generally called *squalders*, but are indeed evidently fishes, although not described in any Ichthyology I have yet mett with. *Dr. R. Robinson, To Sir T. Browne, Dec. 12, 1659 (in [Sir T. Browne's Works, I. 423].*

squale, *n.* and *v.* See *squail*.

Squali (skwāl'i), *n. pl.* [NL. (Müller, 1835), pl. of L. *squalus*, a shark: see *Squalus*.] In *ichth.*, a section of elasmobranchiate fishes, or selachians, having the gill-slits lateral and plural, five, six, or seven in number; the sharks proper, as distinguished from the *Raiæ* (rays or skates, with ventral gill-slits) and from the *Holocephali* (chimeras, with gill-slits a single pair). The name has been used for groups of various extent; it is now generally restricted to the plagiostomous fishes with lateral branchial apertures and the pectoral fins regularly curved backward from the base of insertion. The *Squali* are divided into about 12 families and many genera, the nomenclature of which is by no means fixed. See *Selachii* and *shark¹*, and cuts under *selachian* and *dogfish*.

squalid (skwol'id), *a.* [*< L. squalidus*, foul, filthy, < *squalere*, be stiff, rough, or dry (with

anything, esp. be stiff or rough from negligence or want of care, be foul; cf. Gr. *σκέλεω*, be dry (see *skelet*, *skeleton*.)] 1. Foul; filthy; extremely dirty: as, a *squalid* beggar; a *squalid* house.

Uncomb'd his locks, and *squalid* his attire.
Dryden, *Pal. and Arc.*, i. 539.

2†. Rough; shaggy. [Rare.]

Squalidæ (skwāl'i-dē), *n. pl.* [NL., < *Squalus* + *-idæ*.] A family of sharks, typified by the genus *Squalus*, to which various limits have been assigned. By Bonaparte the name was used for all true sharks. By some other writers it has been used instead of *Acanthiæ*. See *dogfish* and *picked*.

squalidity (skwo-lid'i-ti), *n.* [< LL. *squaliditas* (-t)-s, roughness, filth, < L. *squalidus*, rough, filthy; see *squalid*.] The state of being squalid; foulness; filthiness. *Imp. Dict.*

squalidly (skwō'id-li), *adv.* In a squalid or filthy manner. *Imp. Dict.*

squalidness (skwō'id-nes), *n.* Squalidity. *Bailey.*

squaliform (skwā'li-fōrm), *a.* [< L. *squalus*, a shark, + *forma*, form.] Of, or having the characters of, the *Squali*; resembling a shark.

Squalius (skwā'li-us), *n.* [NL. (Bonaparte, 1837), < L. *squalus*, a shark. The European dace was at one time called, for no obvious reason, *Squalus minor*.] A genus of small cyprinoid fishes, many of which are known as *dace*. The type is the European dace, *Cyprinus leuciscus* of the Linnean system, now called *Squalius leuciscus* or *Leuciscus vulgaris*. Numerous American species fall in this genus, and are loosely known as *minnows*, *shiners*, *chubs*, *mullets*, etc. See *cut* under *dace*.

squall¹ (skwāl), *n.* [< Sw. *squäl*, a rush of water (*squäl-regn*), a violent shower of rain, a squall (= Norw. *skval*, a gushing, rippling, rinse-water; cf. Dan. *skyl*, also *skyl-regn*, a violent shower of rain), < *skvala*, dial. *skvala*, *skvåla*, gush out, = Norw. *skvala*, gush out, splash, ripple; also in secondary forms, Norw. *skvelja*, gush, splash; Norw. *skola*, wash, gush, = Icel. *skola*, wash; Icel. *skyla* = Norw. *skylla* = Dan. *skyllø*, wash. The word is generally assumed to be connected with *squall*².] A sudden and violent gust of wind, or a succession of such gusts, usually accompanied by rain, snow, or sleet. In a ship's log-book abbreviated *g.*

A lowering squall obscures the southern sky.
Falconer, *Shipwreck*, ii. 145.

No gladlier does the stranded wreck
See thro' the gray skirts of a lifting squall
The boat that bears the hope of life approach.
Tennyson, *Enoch Arden*.

Arched squall, a remarkable squall occurring near the equator, in which a mass of black clouds collects and rapidly rises, forming a vast arch, or ring-shaped bed of cloud. The ring of cloud enlarges, and above it masses of cloud rise higher and higher until they reach the zenith. Then usually, though not invariably, a violent thunder-storm breaks forth, with vivid zigzag lightning, deafening peals of thunder, and torrents of rain, lasting, perhaps, for half an hour. The phenomenon varies in its details in different seas, but occurs most frequently and on the grandest scale in the southern part of the China Sea, the Gulf of Siam, the Sulu Sea, and particularly in the Straits of Malacca.—**Black squall**, a squall attended with a specially dark cloud.—**Bull's-eye squall**, a white squall of great violence on the west coast of Africa.—**Heavy squall**, a squall in which the wind blows with much force.—**Line-squall**, a squall accompanying the passage of the trough of a V-shaped barometric depression: so named because the squalls form a line coincident with the axis of the trough, which sweeps across the country, broadside on, with the progressive motion of the depression.—**Thick squall**, a squall in which the rain or snow obscures the view.—**To look out for squalls**, to be on one's guard; to be on the watch against trouble or danger. [Colloq.]—**White squall**, a whirlwind of small radius arising suddenly in fair weather without the usual formation of clouds. The only indication of its development is the boiling of the sea beneath the current of ascending air around which the rapid gyrations take place, together with a patch of white cloud, generally formed above it at the level of condensation. These are also the conditions of a waterspout, which may or may not be completely formed, according to the energy of the whirl and the amount of vapor in the atmosphere. White squalls are infrequent, and rarely occur outside of the tropics; in general they are dangerous only to sailing vessels and small craft. = *Syn. Gale*, etc. See *wind*².

squall¹ (skwāl), *v. i.* [< *squall*¹, *n.*] To blow a squall: used chiefly impersonally: as, it *squalled* terribly. [Colloq.]

And the quarter-deck tarpauling
Was shivered in the squalling.
Thackeray, *The White Squall*.

squall² (skwāl), *v.* [Early mod. E. also *squawl*; < Icel. *skvata*, scream, = Sw. dial. *skvata*, *skvåta*, cry out, chatter, = Dan. (freq.) *skvælde*, clamor; cf. Icel. *skella* (pret. *skall*), resound, = G. *schallen*, cry shrilly, Gael. *sgal*, howl. Cf. *squall*¹, and see *squall*¹.] 1. *Intrans.* To cry out; scream or cry violently, as a frightened woman

or a child in anger or distress: used in contempt or dislike.

You can laugh, and *squall*, and romp in full security.
Swift, *Advice to Servants* (General Directions).

"Send that *squalling* little brat about his business, and do what I bid ye, sir," says the Doctor.
Thackeray, *Henry Esmond*, iii. 5.

II. *trans.* To utter in a discordant, screaming tone.

And pray, what are your Town Diversions? To hear a parcel of Italian Eunuchs, like so many Cats, *squall* out somewhat you don't understand.
Tunbridge Walks, in Ashton's *Queen Anne*, i. 323.

squall² (skwāl), *n.* [< *squall*², *v.*] A harsh cry; a loud and discordant scream; a sound intermediate in character between a squawk and a squeal.

There oft are heard the notes of infant woe,
The short thick sob, loud scream, and shriller squall.
Pope, *Imit. of Spenser*, *The Alley*.

squall³ (skwāl), *n.* [Perhaps a particular use of *squall*².] A baby; pet; minx; girl: used vaguely, in endearment or reproach.

A pretty, beautiful, juicy squall.
Middleton, *Michaelmas Term*, i. 2.

The rich gull gallant call's her deare and love,
Ducke, lambe, *squall*, sweet-heart, cony, and his dove.
Taylor's *Workes* (1630).

squaller (skwā'ler), *n.* [< *squall*² + *-er*¹.] One who squalls; one who shrieks or cries aloud.

squally¹ (skwā'li), *a.* [< *squall*¹ + *-y*¹.] 1. Abounding with squalls; disturbed often with sudden and violent gusts of wind: as, *squally* weather.—2. Threatening; ominous: as, things began to look *squally*. [Colloq.]

squally² (skwā'li), *a.* [Perhaps a dial. var. of *squally*¹.] 1. Having unproductive spots interspersed throughout: said of a field of turnips or corn. [Prov. Eng.]-2. Badly woven; showing knots in the thread or irregularities in the weaving: said of a textile fabric.

squaloid (skwā'loid), *a.* [< NL. *Squalus* + Gr. *ειδος*, form.] Like a shark of the genus *Squalus*; selachian or plagiostomous, as a true shark; of or pertaining to the *Squalidæ*; squaliform.

squalor (skwō'lor or skwā'lor), *n.* [< L. *squalor*, roughness, filth, < *squalere*, be stiff or rough, as with dirt; see *squalid*.] Foulness; filthiness; coarseness.

Nastiness, *squalor*, ugliness, hunger. *Burton.*

Squalor carceris, in *Scots law*, the strictness of imprisonment which a creditor is entitled to enforce, in order to compel the debtor to pay the debt, or disclose funds he may have concealed.

Squalus (skwā'lus), *n.* [NL. (Linnaeus, 1748), < L. *squalus*, a kind of sea-fish.] A genus founded by Linnaeus, including all the sharks and shark-like selachians known to him (15 species in 1766). See *Acanthias*, and *cut* under *dogfish*.

squam (skwom), *n.* [< *Annisquam*, a fishing-hamlet in Massachusetts.] An oilskin hat worn originally by fishermen and deep-water sailors; a cheap yellow sou'wester. [U. S.]

squama (skwā'mā), *n.*; pl. *squamæ* (-mē). [NL., < L. *squama*, a scale; see *squamæ*.] 1. In *bot.*, a scale of any sort, usually the homologue of a leaf.—2. In *anat.* and *zool.*: (a) A scale, as of the epidermis. (b) A thin, expansive, scale-like part of a bone: as, the *squama* of the temporal bone (the squamosal); the *squama* of the occipital bone (the supra-occipital).—3. In *ornith.*, a scale-like feather, as one of those upon a penguin's wing or the throat of a humming-bird. See *cut* under *Squamipennes*.—4. In *entom.*, an elytrum.—*Squama frontalis*, the vertical part of the frontal bone.—*Squama occipitis*, the thin expanded part of the occipital bone; the supra-occipital.—*Squama temporalis*, the thin shell-like part, or the squamous portion, of the temporal bone.

squamaceous (skwā-mā'shius), *a.* [< L. *squama*, a scale, + *-aceus*.] Same as *squamous* or *squamosæ*.

Squamata (skwā-mā'tā), *n. pl.* [NL., neut. pl. of LL. *squamatus*, scaly; see *squamate*.] 1. In *herpet.*, the scaly reptiles. (a) An order of *Reptilia*, established by Oppel in 1811. It was composed of the saurians or lizards (including crocodiles) and snakes or ophidians, divided accordingly into *Sauria* and *Ophidia*. Its contents were the modern orders *Crocodylia*, *Lacertilia*, and *Ophidia*, with, however, one foreign element (*Amphisbæna*). (b) In Merrem's system of classification (1820), same as Oppel's *Squamata* exclusive of the crocodiles, or *Loricata* of Merrem. It formed the third order of *Phobidota* or scaly reptiles, divided into *Gradientia*, *Repentia*, *Serpentia*, *Incedentia*, and *Preidentia*. Also called *Lepidosauria*, and formerly *Sauropodia*.

2. In *mammal.*, scaly mammals; a group of the *Entomophaga* or insectivorous edentates, containing the single family *Manididæ*, the scaly

ant-eaters, or pangolins, in which the body is squamated, being covered with horny overlapping scales. The group is now usually ranked as a suborder.

squamate (skwā'māt), *a.* [< LL. *squamatus*, scaly, < L. *squama*, a scale; see *squamæ*.] 1. In *zool.*, scaly; covered with scales or squamæ; squamose or squamigerous; specifically, of or pertaining to the *Squamata*, in any sense.—2. In *anat.*, scale-like; forming or formed like a scale; squamous or squamiform: as, a *squamate* bone; *squamate* scales of cuticle.—3. In *bot.*, same as *squamose*.

squamated (skwā'mā-ted), *a.* [< *squamate* + *-ed*.] Same as *squamate*.

squamation (skwā-mā'shon), *n.* [< *squamate* + *-ion*.] In *zool.*, the state or character of being squamate, squamose, or scaly; the collection or formation of scales or squamæ of an animal: as, the *squamation* of a lizard, snake, or pangolin. Compare *desquamation*.

squam-duck (skwom'duk), *n.* See *duck*².

squamæ (skwām), *n.* [< ME. *squamæ*, < L. *squama*, a scale (of a fish, serpent, etc.), a scale (of metal), scale-armor, a cataract in the eye, hull of millet, etc., LL. fig. roughness; prob. akin to *squalere*, be stiff or rough; see *squalid*.] 1†. A thin layer; a scale.

Orpiment, brent bones, yren *squamæ*.
Chaucer, *Prolog.* to *Canon's Yeoman's Tale*, l. 206.

2. In *zool.*, a scale or squama. *Huxley*, *Crayfish*, p. 172.

squamella (skwā-mel'ā), *n.*; pl. *squamellæ* (-ē). [NL., dim. of L. *squama*, a scale; see *squamæ*.] 1. In *bot.*, same as *squamula*, 2.—2. [cap.] In *zool.*, a genus of zygotrochous rotifers, of the family *Euchlanidae*.

squamellate (skwā-mel'āt), *a.* [< NL. **squamellatus*, < *squamella*, q. v.] Same as *squamulate*.

squamelliferous (skwam-e-lif'e-rus), *a.* [< NL. *squamella*, a little scale, + L. *ferre* = E. *bear*¹.] In *bot.*, furnished with or bearing squamellæ.

Squamifera (skwā-mif'e-rā), *n. pl.* [NL., < F. *Squamifères* (De Blainville, 1816), < L. *squama*, a scale, + *ferre* = E. *bear*¹.] Squamous or scaly reptiles; *Reptilia* proper, as distinguished from *Nudipellifera* or *Amphibia*; also called *Ornithoides*.

squamiferous (skwā-mif'e-rus), *a.* [< L. *squama*, a scale, + *ferre* = E. *bear*¹.] 1. Provided with squamæ or scales; squamate; squamigerous.—2. In *bot.*, bearing scales: as, a *squamiferous* catkin.

squamiflorous (skwā-mi-flō-rus), *a.* [< L. *squama*, a scale, + *flos* (*flor-*), flower.] In *bot.*, having flowers like scales; also, having scales bearing flowers, as in the *Conifera*.

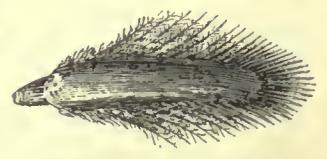

squamiform (skwā-mi-fōrm), *a.* [< L. *squama*, a scale, + *forma*, form.] Having the shape, character, or appearance of a scale; squamate in form or structure; scale-like.

squamigerous (skwā-mij'e-rus), *a.* [< L. *squamiger*, scale-bearing, < *squama*, a scale, + *gerere*, bear, carry.] Provided with squamæ; squamose; squamiferous.

squamipen (skwā-mi-pen), *n.* Any fish of the group *Squamipennes* or *Squamipinnes*.

squamipennate (skwā-mi-pen'āt), *a.* [< L. *squama*, a scale, + *penna*, a wing; see *pennate*.] Having scaly feathers, as a penguin.

Squamipennes (skwā-mi-pen'ēs), *n. pl.* [NL., < L. *squama*, a scale, + *penna*, a wing, fin; see *pen*².] 1. In *ichth.*, same as *Squamipinnes*.—2. In *ornith.*, the penguins, or *Sphenisci*: so called from the scale-like character of the plumage.

Squamipennes.—Scaly feather from anterior edge of wing of penguin (*Aptenodytes longirostris*), enlarged 8 times.

[Rare.] **Squamipinnes** (skwā-mi-pin'ēs), *n. pl.* [NL. (Cuvier, spelled *Squamipennes*): see *Squamipennes*.] In *ichth.*: (a) In Cuvier's system of classification, the sixth family of acanthopterygian fishes: so called because the soft and frequently the spinous parts of their dorsal and anal fins are covered with scales, which render it difficult to distinguish them from the body. The body is generally much compressed; the intestines are long, and the cæca numerous. The group included the families *Chatodontidæ*, *Ephippidæ*, *Zanclidæ*, *Scatopha-*

gidae, *Platacidæ*, *Psettidae*, *Pimelopteridae*, *Bramidae*, *Pempheridae*, and *Toxotidae*. (b) In Günther's system, a family of *Acanthopterygii pereiiformes*, nearly the same as (a), but without the *Zanclidae*, *Platacidæ*, *Psettidae*, *Bramidae*, *Pempheridae*, and typical *Pimelopteridae*.

squamoid (skwā'moid), *a.* [*L. squama*, a scale, + *Gr. εἶδος*, form.] 1. Resembling a squama; squamiform; scale-like.—2. Squamous; scaly; squamate.

squamomandibular (skwā'mō-man-dib'ū-lār), *a.* [*squamo(us)* + *mandibular*.] Of or pertaining to the squamosal and the mandible, or lower jaw-bone: as, the *squamomandibular* articulation, characteristic of mammals. In human anatomy this joint is commonly called *temporomaxillary*.

squamomastoid (skwā-mō-mas'toid), *a.* [*squamo(us)* + *mastoid*.] Of or pertaining to the squamous and mastoid elements of the temporal bone: as, a *squamomastoid* ankylosis.

squamoparietal (skwā'mō-pā-rī'e-tāl), *a.* [*squamo(us)* + *parietal*.] Of or pertaining to the squamosal and parietal bones: as, the *squamoparietal* suture, shortly called *squamous*.

squamopetrosal (skwā'mō-pe-trō'sal), *a.* [*squamo(us)* + *petrosal*.] Of or pertaining to the squamosal and petrosal elements of the temporal bone: as, *squamopetrosal* ankylosis.

squamosal (skwā-mō'sal), *a.* and *n.* [*squamose* + *-al*.] 1. *a.* Scale-like or squamous: noting only the squamosal. See II.

II. *n.* In *zool.* and *anat.*, the squamous division of the temporal bone; the thin, expansive, scale-like element of the compound temporal bone; a membrane-bone, morphologically distinct from other parts of the temporal, filling a gap in the cranial walls, articulating in man and mammals with the lower jaw, in birds and reptiles with the suspensorium (quadrate bone) of the lower jaw, effecting squamous suture with various cranial bones, and forming by its zygomatic process in mammals a part of the zygoma, or jugal bar. It is remarkably expansive in man. See cuts under *Acipenser*, *acrodont*, *Balanidae*, *craniofacial*, *Crotalus*, *Cyclopus*, *Felidae*, *Gallinæ*, *Ichthyosauria*, *Ophidia*, *Physeter*, *Pythonidae*, *Rana*, and *skull*.

squamose (skwā'mōs), *a.* [*L. squamosus*, full of scales, covered with scales, *q. squama*, a scale: see *squame*.] 1. In *bot.*, scaly; furnished with small appressed scales or squamæ; also, scale-like. Also *squamate*, *squamous*.—2. In *zool.*, squamous; squamiferous or squamigerous; covered with scales; scaly; specifically, in *entom.*, covered with minute scales, as the wings of lepidopterous insects; lepidopterous; squamulate.

squamosphenoidal (skwā'mō-sfē-noi'dal), *a.* [*squamo(us)* + *sphenoidal*.] Pertaining to the squamous part of the temporal bone and the sphenoid bone: as, the *squamosphenoidal* suture. Also *squamosphenoid*.

squamotemporal (skwā-mō-tem'pō-ral), *a.* [*squamo(us)* + *temporal*.] Squamosal, as a part of the temporal bone. *Owen*.

squamotympanic (skwā'mō-tim-pan'ik), *a.* Of or pertaining to the squamosal and tympanic bones: as, a *squamotympanic* ankylosis.

squamous (skwā'mus), *a.* [*L. squamosus*, covered with scales: see *squamose*.] 1. In *zool.* and *anat.*: (a) Covered with scales; scaly; squamate; squamous; squamiferous or squamigerous. (b) Scale-like; squamoid; squamiform; specifically, of a bone, same as *squamosal*.—2. In *bot.*, same as *squamose*.—**Squamous bone**, the squamosal.—**Squamous bulb**, in *bot.*, a bulb in which the outer scales are distinct, fleshy, and imbricated; a scaly bulb. See *bulb*.—**Squamous cells**, flattened, dry, thin cells, as seen in the superficial layers of the epidermis.—**Squamous epithelium**, epithelium composed of thin scale-like cells, either in a single layer (*tessellated epithelium*) or in several layers (*stratified scaly epithelium*). See *epithelium*.—**Squamous portion of the temporal bone**, the squamosal: opposed to *petrosal* and *mastoid* portions of the same compound bone.—**Squamous suture**, in *anat.*, a fixed articulation or synarthrosis, in which the thin beveled edge of a squamous bone overlaps another; specifically, the squamoparietal suture and squamosphenoidal suture, those by which the squamosal articulates with the parietal and alisphenoidal bones respectively. See cut under *parietal*.

squamozygomatic (skwā-mō-zī-gō-mat'ik), *a.* and *n.* [*squamo(us)* + *zygomatic*.] I. *a.* In *anat.*, noting the squamous and zygomatic parts of the temporal bone: as, a *squamozygomatic* center of ossification.

II. *n.* A squamozygomatic bone; the squamosal together with its zygomatic process.

squamula (skwam'ū-lā), *n.*; pl. *squamulæ* (-lē). [*L.*, dim. of *squama*, a scale: see *squame*.] 1.

A little scale. Specifically, in *entom.*: (a) One of the flattened scale-like hairs or processes which in many cases clothe the lower surfaces of the tarsal joints. (b) The tegula or scale covering the base of the anterior wing of a hymenopterous insect.

2. In *bot.*: (a) A scale of secondary order or reduced size. (b) Same as *lodicule*. Also *squamella*.

Also *squamule*. **squamulate** (skwam'ū-lāt), *a.* [*NL. *squamulatus*, *L. squamula*, a little scale: see *squamule*.] Having little scales; covered with squamules; minutely scaly or squamose. Also *squamellate*, *squamulose*.

squamule (skwam'ūl), *n.* [*L. squamula*, a little scale, dim. of *squama*, a scale: see *squame*.] In *bot.* and *zool.*, same as *squamula*.

squamuliform (skwam'ū-lī-fōrm), *a.* [*L. squamula*, a little scale, + *forma*, form.] Having the form or character of a squamule.

squamulose (skwam'ū-lōs), *a.* [*NL. *squamulosus*, *L. squamula*, a little scale: see *squamule*.] Same as *squamulate*.

squander (skwon'dēr), *v.* [Not found in early use; perhaps a dial. form, a variant, with the common dial. change of initial *sw-* to *sq-*, of **swadder*, which is perhaps a nasalized form of **swadder*, orig. scatter as water (?) (cf. *MD. swadderen*, dabble in water, = *Sw. dial. skvadra*, gush out, as water), itself a variant of *E. dial. swatter*, *Sc. squatter*, throw (water) about, scatter, squander, *L. squātra*, squander; freq. of *E. dial. swat*, var. *squat*, throw down forcibly; cf. *Icel. skveita* = *Sw. squätta*, throw out, squirt, = *Dan. skvatte*, squirt, splash, squander: see *squat*², *squatter*, *swat*², *swatter*. The word may owe its nasalization to *AS. swindan* (pret. *swand*), vanish, waste, *OHG. swantian*, *G. ver-schwenden*, squander, etc.] I. *trans.* 1. To scatter; disperse. [Archaic.]

Other ventures he hath, *squandered* abroad.
Shak., *M. of V.*, l. 3. 22.

They drive and *squander* the huge Belgian fleet.
Dryden, *Annus Mirabilis*, st. 67.

The fallen timber obstructed the streams, the rivers were *squandered* in the reedy morasses.
C. Elton, *Origins of Eng. Hist.*, p. 223.

2. To spend lavishly, profusely, or prodigally; dissipate; use without economy or judgment; lavish: as, to *squander* one's money or an estate.

How much time is *squandered* away in Vanity and Folly?
Stillingfleet, *Sermons*, III. x.

Is he not a gay, dissipated rake, who has *squandered* his patrimony?
Sheridan, *The Duenna*, ii. 3.

II. *intrans.* 1. To disperse; wander aimlessly; go at random. [Archaic.]

The wise man's folly is anatomized
Even by the *squandering* glances of the fool.
Shak., *As you Like It*, ii. 7. 57.

2. To waste one's substance; go to wasteful expense; spend recklessly.

He was grown needy by *squandering* upon his vices.
Swift, *Change in Queen's Ministry*.

squander (skwon'dēr), *n.* [*squander*, *v.*] The act of squandering. *Imp. Diet.* [Rare.]

squanderer (skwon'dēr-ēr), *n.* [*squander* + *-er*.] One who squanders; one who spends his money prodigally; a spendthrift; a prodigal; a waster; a lavisher.

I say he is an unthrif, a *Squanderer*, and must not expect supplies from me. *Brome*, *Sparagus Garden*, iii. 5.

squanderingly (skwon'dēr-ing-lī), *adv.* In a squandering manner; by squandering; prodigally; lavishly. *Imp. Diet.*

squan-fish (skwon'fish), *n.* A cyprinoid fish, *Ptychochilus lucius*. See *pike*², *n.*, 2 (a).

squanter-squash (skwon'tēr-skwoš), *n.* Same as *squash*². See the quotation.

Yet the clypeate are sometimes called cymnels (as are some others also), from the lenten cake of that name, which many of them very much resemble. Squash, or *squanter-squash*, is their name among the northern Indians, and so they are called in New York and New England.
Beverley, *Hist. Virginia*, iv. ¶ 19.

squap (skwop), *v.* [A dial. var. of *swap*.] To strike. [Prov. Eng.]

squap (skwop), *n.* [*squap*, *v.*] A blow. [Prov. Eng.]

squarable (skwār'ā-bl), *a.* [*square*¹ + *-able*.] In *math.*, capable of being squared. *Hutton's Recreations*, p. 169.

square¹ (skwār), *n.* [Formerly also (esp. in def. 5) *squire*, *squier*; < *ME. square*, *squar*, *square*, *sware*, a square, *squire*, *squyre*, *squyre*, *squyzer*, a carpenters' square, < *OF. esquare*, *esquarre*, *escairre*, *esquierre*, *esquire*, a square, squareness, *F. équerre* = *Sp. esquadra*, a square, *squad*, *squadron*, = *Pg. esquadra*, a squadron, *esquadria*, a square, a rule, *esquadro*, a right angle

It. quadra*, a square, < *L. quadra*, a square, fem. of (*LL.*) *quadrus*, square, four-cornered, < *quatuor*, four, = *E. four*: see *four*, *quadra*¹, *quadrate*, *squad*¹, *squadron*. Cf. *square*¹, *a.*] 1. In *geom.*, a four-sided plane rectilinear figure, having all its sides equal, and all its angles right angles.

I have a parlour
Of a great square, and height as you desire it.
Tomkis (?), *Albumazar*, li. 3.

The hard-grained Muses of the cube and square.
Tennyson, *Princess*, Prolog.

2. A figure or object which nearly approaches this shape; a square piece or part, or a square surface: as, a square of glass.

A third court, to make a square with the front, but not to be built, nor yet enclosed with a naked wall.
Bacon, *Building* (ed. 1887).

He bolted his food down his capacious throat in squares of 3 inches.
Scott.

The casement slowly grows a glimmering square.
Tennyson, *Princess*, iv. (song).

Specifically—(a) In *printing*, a certain number of lines forming a part of a column nearly square: used chiefly in reckoning the prices of newspaper advertisements. (b) A square piece of linen, cloth, or silk, usually decorated with embroidery, fringe, or lace: as, a table-square.

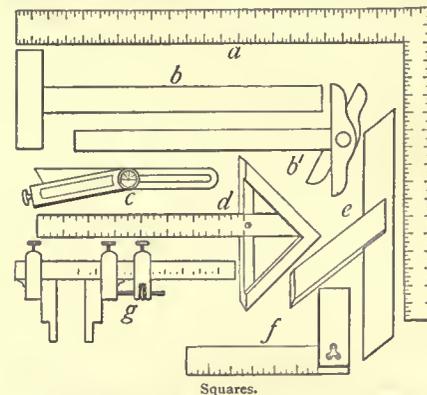

3. A quadrilateral area, rectangular or nearly so, with buildings, or sites for buildings, on every side; also, an open space formed by the intersection of streets; hence, such an area planted with trees, shrubs, or grass, and open to the public for recreation or diversion; a public park among buildings; a common; a green: as, *Union Square* in New York; *Lafayette Square* in Washington; *Trafalgar Square* in London.

The statue of Alexander the Seventh stands in the large square of the town.

Addison, *Remarks on Italy* (Works, ed. Bohn, I. 401).

4. An area bounded by four streets; a block: as, the house is four or five squares further up-town.

—5. An instrument used by artificers, draftsmen, and others for trying or describing right angles. It consists of two rules or branches fastened perpendicularly at one end of their extremities so as to

Squares.
a, carpenters' square (of iron or steel); b, b', draftsmen's T-squares of wood, b' having a head adjustable at any angle; c, bevel-square, the blade of which can be set either square or at any angle; d, center-square; e, miter-square; f, carpenter's try-square; g, square with adjustable heads and with vernier scale for measuring diameters, also called vernier calipers.

form a right angle. Sometimes one of the branches is pivoted, so as to admit of measuring other than right angles. When one rule is joined to the other in the middle in the form of a T, it is called a T-square.

Thou shalt me fynde as just as a *sqyre*.
Chaucer, *Summoner's Tale*, l. 388.

Of all kyne craftes ich contreuede here tooles,
Of carpentrie, of keruere, and contreuede the compas,
And cast out by *sqyre* both lyne and luell.

Piers Plowman (C), xii. 127.

A poet does not work by square or line,
As smiths and joiners perfect a design.
Cowper, *Conversation*, l. 789.

Hence—6. A true measure, standard, or pattern.

This cause I'll argue,
And be a peace between ye, if 't so please you,
And by the square of honour to the utmost.
Fletcher (and another), *Love's Pilgrimage*, ii. 1.

Religion being, in the pretence of their Law, the square of all their (otherwise churlish) actions.
Purchas, *Pilgrimage*, p. 183.

7. In *arith.* and *alg.*, the number or quantity derived from another (of which it is said to be the square) by multiplying that other by itself: thus, 64 is the square of 8, for $8 \times 8 = 64$; x^2 or $x \times x$ is the square of x .

Light diminishes in intensity as we recede from the source of light. If the luminous source be a point, the intensity diminishes as the square of the distance increases. . . . This is the meaning of the law of inverse squares as applied to light. Tyndall, Light and Elect., p. 15.

8. Rule; regularity; exact proportion; hence, integrity of conduct; honest dealing. See phrases on the square (c), out of square, etc.

Read not my blemishes in the world's report: I have not kept my square; but that to come Shall all be done by the rule.

Shak., A. and C., ii. 3. 6.

9. A body of troops drawn up in quadrilateral form. The formation used in the sixteenth century and afterward was a nearly solid body of pikemen, to which the harquebusiers, crossbowmen, etc., formed an accessory, as by being posted on the flanks, etc. In Shakspeare's time troops drawn up in battle array were primarily in squares. At the present time the square is a hollow formation, composed of four fronts, each from two to five ranks deep, having the officers, colors, etc., in the center. This formation is used to repel cavalry, or to resist any superior force which outflanks or surrounds the body of troops. See hollow square, below.

He alone Dealt on lieutenantry, and no practice had In the brave squares of war.

Shak., A. and C., iii. 11. 40.

Dash'd on every rocky square, Their surging charges foam'd themselves away.

Tennyson, Death of Wellington.

10. A name given to various squared projections or shanks to which other parts of machines may be fitted.—11†. Level; equality; generally with the. See on the square (b), below.—12. In astrol., quartile; the position of planets distant 90 degrees from each other. See aspect, 7.

Their planetary motions, and aspects, In sextile, square, and trine.

Milton, P. L., x. 659.

13†. Opposition; enmity; quarrel. See square¹, v. i., 2.—14. A part of a woman's dress. (a) The yoke of a chemise or gown: so called because often cut square or angular. [Still in provincial use.]

The sleeve-hand, and the work about the square on 't [a smock].

Shak., W. T., iv. 4. 212.

(b) A square opening in the upper part of the front of a bodice, or other garment covering the throat and neck. It is usually filled in with another material, except for evening dress.

A round Sable Tippet, about 2 yards long, the Sable pretty deep and dark, with a piece of black silk in the Square of the neck.

Adv't. quoted in Ashton's Reign of Queen Anne, I. 173.

15. A puzzle or device consisting of a series of words so selected that when arranged in a square they may be read alike across and downward. Also called word-square.—

T O A S T

16. In bookbinding, the parts of the cover of a bound book that project beyond the edge of the leaves.—17. The square end of the arbor designed to receive the winding-key of a watch, or the similar part by which the hands of the watch are set.—18. In flooring, roofing, and other branches of mechanical art, an area 10 feet square; 100 square feet.—19. In her., a bearing representing a carpenter's square. (See def. 5.) It is represented with or without the scale.—20. In organ-building, a thin piece of wood, in or nearly in the shape of a right-angled triangle, pivoted at the right or largest angle and connected with trackers at the other angles. It serves to change the direction of the tracker-action from vertical to horizontal, or vice versa.—A deep square, a long projection.—A small square, a narrow projection.—At square, in opposition; at enmity.

Square.

Marry, she knew you and I werc at square;

At least we fell to blowes.

Promos and Caesandra, ii. 4. (Nares.)

She falling at square with hir husband.

Holinshed, Hist. Eng., iv. 8.

By the square, exactly; accurately.

Not the worst of the three but jumps twelve foot and a half by the square.

Shak., W. T., iv. 4. 348.

Why, you can tell us by the square, neighbour,

Whence he is call'd a constable.

B. Jonson, Tale of a Tub, iv. 2.

Cyclical square. See cyclical.—Face of a square. See face¹.—Geometrical square. Same as quadrat, 2.—Gunners' square. Same as quadrant, 5.—Hollow square, a body of infantry drawn up in squares with a space in the middle to receive baggage, colors, drums, etc. When orders or proclamations are to be read to troops, it is usual to form a hollow square, with the files facing inward. See def. 9.—Incuse square. See incuse.—In square¹, square.

Then did a sharped spyre of Diamond bright,

Ten fecte each way in square, appears to mee.

Spenser, Visions of Bellay, I. 30.

Magic square. See magic.—Method of least squares, the method used by astronomers, geodesists, and others of deducing the most probable or best result of their

observations, in cases in which the arithmetical mean of a number of observations of the same quantity is the most probable or best value of that quantity. The adoption of the mean value of a number of observations may be considered as the simplest application of the method of least squares. When the observed values depend upon several unknown quantities, the rule which results from the principle of the arithmetical mean is to adopt such values for the unknown quantities as to make the sum of the squares of the residual errors of the observations the least possible. When there are certain conditions that must be fulfilled, as for example, in geodesy, that the sum of the angles of each triangle must equal two right angles plus the spherical excess, the rules become still more complicated. There are also rules for calculating probable errors, etc.—Nasik squares. See the quotation.

Squares that have many more summations than in rows, columns, and diagonals have been investigated by the Rev. A. H. Frost (Cambridge Math. Jour., 1857), and called Nasik squares from the town in India where he resided; and he has extended the method to cubes (called Nasik cubes), various sections of which have the same singular properties. Encyc. Brit., XV. 215.

Naval square, a rectilinear figure painted on a ship's deck in some convenient place, for the purpose of aiding in taking the bearings of other ships of a squadron or of objects on shore.—Normal square, the mathematical instrument called a square, for determining right angles.—On or upon the square. (a) At right angles; straight: as, to cut cloth on the square, as opposed to bias. Hence, figuratively.—(b) On an equality; on equal terms.

They [the Presbyterians] chose rather to be lorded over once more by a tyrant . . . than endure their brethren and friends to be upon the square with them.

Milton, Ans. to Salmassius, x.

We live not on the square with such as these; Such are our betters who can better please.

Dryden, tr. of Juvenal's Satires, iii. 179.

(c) Honest; just; fairly; honestly.

Keep upon the square, for God sees you; therefore do your duty.

Penn., To his Wife and Children.

"Was the marriage all right, then?" "Oh, all on the square—civil marriage, church—everything."

George Eliot, Felix Holt, xxi.

Optical square, an instrument used in surveying for laying out lines at right angles to each other. It consists of a circular brass box containing two principal glasses of the sextant, viz. the index- and horizon-glasses, fixed at an angle of 45°. The method of using this instrument is obvious. If the observer moves forward or backward in the straight line AB, until the object B seen by direct vision coincides with another object C, seen by reflection, then a straight line drawn to C from the point at which he stands, as D, when the coincidence takes place will be perpendicular to AB.—Out of square. (a) Not drawn or cut to right angles. (b) Out of order; out of the way; irregular; incorrect or incor-

rectly. Herodotus, in his Melpomene, scorneth them that make Europe and Asia equall, affirmynge that Enrope . . . passeth them in latitude, wherin he speaketh not greatly out of square. R. Eden, tr. of Francisco Lopez (First Books on America, ed. Arber, p. 346).

In St. Paul's time the integrity of Rome was famous; Corinth many ways reprov'd; they of Galatia much more out of square. Hooker, Eccles. Polity, iii. 1.

Reducing squares, a method of copying designs or drawings on a different scale. The original is divided into squares by lines drawn at right angles to one another. The surface on which the copy is to be made is divided into the same number of squares, smaller or larger, according to the scale desired, and the lines of the design are drawn on the squares of the copy in the same relative positions that they occupy in the original. Instead of marking the original design with lines, a frame in which crossed threads or wires are set may be laid over it; or such a frame may be used in a similar way in drawing a landscape or any other subject from the original.—Rising-square, a square having a tongue and two arms at right angles to it, used in molding the floor-timbers in wooden ships. The tongue is in width equal to the siding size of the keel; and the seat and throat of the floor-timbers are squared across it, the risings of the floor at the head being squared across the arms. The timber-mold applied to the seating on the tongue and rising on the arm gives the shape of one side of the floor-timber; the mold reversed gives the other.—Solid square (mill), a square body of troops; a body in which the ranks and files are equal.—Square of an anchor, the upper part of the shank.—Square of sense†. See the quotation.

I professe My selfe an enemy to all other loyes, Which the most precious square of sense professes, And find I am alone felicitate In your deere Highnesse lone.

Shak., Lear (folio 1673), I. 1. 76.

[This phrase has been variously interpreted by commentators: Warburton refers it to the four nobler senses—sight, hearing, taste, and smell; Johnson makes it mean "compass or comprehension of sense"; R. G. White, "the entire domain of sensation"; Schmidt, "the choicest symmetry of reason, the most normal and intelligent mode of thinking."—To break no square†, to make no difference. See the next phrase.—To break or breed square†, to break the square†, to throw things out of due or just relation and harmony; make a difference.—To reduce the square (mill). See reduce.—To see how the squares go, to see how the game proceeds, or how matters are going on.

At length they, having an oppertunitie, resolved to send Mr. Winslow, with what beaver they had ready, into England, to see how ye squares went.

Bradford, Plymouth Plantation, p. 268.

One frog looked about him to see how squares went with their new king.

Sir R. L'Estrange.

square¹ (skwâr), a. [*ME. square, esquare, swarc, swarc*, orig. two syllables, *OF. esquare, escarre* (equiv. to *quarré, carré*, *F. carré*), *ML. *exquadratus* (equiv. to *quadratus*), squared, square, pp. of **exquadrare*, make square: see *square¹, v.*, and cf. *square¹, n.*, and *quadrante, quarry¹*.] 1. Having four equal sides and four right angles; quadrate; rectangular and equilateral: as, a square room; a square figure.

Though a wyndow thikke, of many a barre Of iren greet, and square as any sparre.

Chaucer, Knight's Tale, l. 218.

A massy slash, in fashion square or round.

Couper, Task, i. 21.

2. Forming a right angle; having some part rectangular: as, a table with square corners.

Square tools for turning brass are ground in the same manner as triangular tools.

O. Byrne, Artisan's Handbook, p. 29.

3. Cut off at right angles, as any body or figure with parallel sides: as, a square apse or transept; a square (square-headed) window.

The east ends in this architecture [early Pointed in England] are usually square.

C. H. Moore, Gothic Architecture, p. 158.

4. Having a shape broad as compared with the height, with rectilinear and angular rather than curved outlines: as, a man of square frame.

Brode shoulders about, big of his army, A harde breast hade the buerne, & his back square.

Destruction of Troy (E. E. T. S.), l. 3967.

My queene's square brows [forehead];

Her stature to an inch.

Shak., Pericles, v. 1. 109.

Sir Bors it was, . . .

A square-set man.

Tennyson, Holy Grail.

5. Accurately adjusted as by a square; true; just; fitting; proper.

She's a most triumphant lady, if report be square to her.

Shak., A. and C., ii. 2. 190.

Should he retain a thought not square of her,

This will correct all.

Shirley, Love's Cruelty, li. 3.

Hence—6. Equitable; just; fair; unimpeachable.

All have not offended;

For those that were, it is not square to take

On those that are revenges.

Shak., T. of A., v. 4. 96.

Telling truth is a quality as prejudicial to a man that would thrive in the world as square play to a cheat.

Wycherley, Plain Dealer, l. 1.

7. Even; leaving no balance: as, to make the accounts square; to be square with the world.

There will be enough to pay all our debta and pnt us all square.

Disraeli, Sybil, iii. 2.

If a man's got a bit of property, a stake in the country, he'll want to keep things square. Where Jack isn't safe, Tom's in danger.

George Eliot, Felix Holt, xx.

8. Absolute; positive; unequivocal: as, a square refusal; a square contradiction; a square issue.—9. Leaving nothing; thorough-going; hearty.

Vn ferial beuveur. A square drinker, . . . one that will take his liquor soundly.

Cotgrave (1611).

By Heaven, square eaters!

More meat, I say!—Upon my conscience,

The poor rogues have not eat this month.

Fletcher, Bonduca, li. 3.

Hence—10. Solid; substantial; satisfying. [Colloq.]

And I've no idea, this minute,

When next a square meal I can ratso.

New York Clipper, Song of the Tramp. (Bartlett.)

11. Naut., noting a vessel's yards when they are horizontal and athwartships, or at right angles to the keel.—All square, all arranged; all right. Dickens.—A square man†. (a) A consistent, steadfast man. See brick³, etym.

The Prince of Philosophers [Aristotle], in his first booke of the Ethicks, termeth a constant minded man, euen egal and direct on all sides, and not easily ouerthrowne by euery little aduersitie, hominem quadratum, a square man. Pottenham, Arte of Eng. Poesie (ed. Arber), p. 113.

(b) A man who is fair-dealing, straightforward, and trustworthy.

Then they fill

His clerical black gaiters, his somewhat short, strapless trowsers, and his *square-toed* shoes.

Charlotte Brontë, Shirley, xvi.

2. Formal; precise; finical; punctilious; prim. [*Rare.*]

Have we not almost all learnt these expressions of old foibles, and uttered them ourselves when in the *square-toed* state?

Thackeray, Roundabout Papers, xi.

square-toes (skwâr'töz), *n.* A precise, formal, old-fashioned personage.

I have heard of an old *square-toes* of sixty who learned, by study and intense application, very satisfactorily to dance.

Thackeray, Philip, xv.

squaring (skwâr'ing), *n.* [*Verbal n. of square¹, v.*] The act of making square.

squaring-boards (skwâr'ing-hördz), *n. pl.* Thick planks of seasoned wood truly squared, used by bookbinders for cutting boards for single book-covers, or for the square cutting of paper with rough edges.

squaring-plow (skwâr'ing-plou), *n.* In *book-binding*, a hand-tool used to trim the edges of books.

squaring-shears (skwâr'ing-shèrz), *n. sing. and pl.* 1. In *sheet-metal work*, a machine for cutting and tracing sheets of tin-plate. It has an adjustable table with a scale and gage.—2. In *bookbinding*, a pivoted knife for trimming the edges of piles of paper or book-sheets.

squarrose (skwâr'ös), *a.* [*< LL. *squarrosus, given in Festus as an adj. applied to persons whose skin scales off from uncleanness; prob. an error for squamosus, scaly, scurfy: see squamos.*] 1. In *bot.*, rough with spreading processes; thickly set with divergent or recurved, commonly rigid, bracts or leaves, as the involucres of various *Compositæ* and the stems of some mosses; of leaves, bracts, etc., so disposed as to form a squarrose surface. Also *squarrous*.—2. In *entom.*, lacinate and prominent: noting a margin with many long thin projections divided by deep incisions, the fringe-like edge so formed being elevated.

squarrous (skwâr'us), *a.* [*< LL. *squarrosus: see squarrose.*] 1. In *bot.*, same as *squarrose*, I.—2. In *entom.*, irregularly covered with scales, which stand up from the surface at various angles, resembling scurf.

squarrouse (skwâr'ö-lös), *a.* [*Dim. of squarrose.*] In *bot.*, somewhat squarrose; finely squarrose.

squarson (skwâr'sn), *n.* [*< squire (and) (p)arson.*] One who is at the same time a landed proprietor and a beneficed clergyman. [*Ludicrous, Eng.*]

The death has lately occurred of Rev. W. H. Hoare, of Oakfield, Sussex. . . . Mr. Hoare, it is said, was the original of the well-known expression, invented by Bishop Wilberforce, *Squarson*, by which he meant a landed proprietor in holy orders.

Living Church, Aug. 25, 1888.

He held the sacrosanct position of a *squarson*, being at once Squire and Parson of the parish of Little Wentley.

A. Lang, Mark of Cain, ix.

squarsonage (skwâr'son-áj), *n.* [*< squarson + -age.*] The residence of one who is at once squire and parson. [*Ludicrous, Eng.*]

She left the gray old *squarsonage* and went to London.

A. Lang, Mark of Cain, ix.

squash¹ (skwosh), *v.* [*An altered form, conformed to the related quash, of what would prop. be *squatch, < ME. squacchen, squachen, swacchen, < OF. esquacier, escaquier, escaquier, esquacher, escacher, F. écacher, cruch; cf. One of the reapers, approaching. . . made me apprehend that with the next step I should be *squashed* to death under his foot. *Swift*, *Gulliver's Travels*, II. 1.

II. *intrans.* To splash; make a splashing sound. [Prov. or colloq.]

Wet through and through; with her feet squelching and *squashing* in her shoes whenever she moved. *Dickens*, *Hard Times*, xi.

squash¹ (skwosh'), *n.* [*< squash*¹, *v.*] 1. Something soft and easily crushed; something unripe and soft; especially, an unripe pea-pod.

Not yet old enough for a man, nor young enough for a boy; as a *squash* is before 'tia a peacock. *Shak.*, *T. N.*, I. 5. 166.

2. Something that has been crushed into a soft mass.

It seemed churlish to pass him by without a sign, especially as he took off his *squash* of a hat to me. *Harper's Mag.*, LXXVIII. 80.

3. A sudden fall of a heavy soft body; a shock of soft bodies.

My fall was stopped by a terrible *squash*, that sounded louder to my ears than the cataract of Niagara. *Swift*, *Gulliver's Travels*, II. 7.

Lemon squash. See *lemon-squash*.

squash² (skwosh'), *n.* [An abbr. of *squanter-squash*, *squonter-squash*, < Amer. Ind. *askuta-squash*; *asquash*, pl. of *asq*, raw, green.] The fruit of an annual plant of the gourd kind, belonging to one of several species of the genus *Cucurbita*; also, the plant itself. The very numerous and divergent varieties of the cultivated squash are reduced by good authority to three species—*C. maxima*, the great or winter squash; *C. Pepo*, including the pumpkin and also a large part of the ordinary squashes; and *C. moschata*, the musky, China, or Barbary squash. The last has a club-shaped, pear-shaped, or long cylindrical fruit with a glaucous-whitish surface. The other squashes may for practical purposes be divided into summer and winter kinds. Among the latter is the *C. maxima*, of which the fruit is spheroidal in form and often of great size, sometimes weighing 240 pounds. A variety of this is the crowned or turban squash, whose fruit has a circular projection at the top, the mark of the adherent calyx-tube. Other winter squashes are of moderate size, and commonly either narrowed toward the base into a neck which in the "crook-necks" is curved to one side, or egg-shaped and pointed at the ends, as in the (Boston) marrow, long a standard in America, or the still better Hubbard squash. The winter squash can be preserved through the season. The summer squash has a very short vine, hence sometimes called *bush-squash*. Its fruit is smaller, and is either a crook-neck or depressed in form, somewhat hemispherical with a scalloped border (see *stintin*); it is colored yellow, white, green, or green and white. Squashes are more grown in America than elsewhere, but also, especially the winter squashes, in continental Europe, and generally in temperate and tropical climates. In Great Britain the only ordinary squash is the vegetable marrow (see *marrow*), or succade gourd. The summer squash is eaten before maturity, prepared by boiling. The winter squash is boiled or roasted; in France and the East it is largely used in soups and ragouts, in America often made into pica. It is also used as food for animals.

Askutasquash, their Vine-apple, which the English, from them, call *Squashes*.

Roger Williams, Key to Lang. of America (ed. 1643), xvi. (Rhode Isl. Soc. Coll.).

Squashes, but more truly *squonter-squashes*; a kind of melon, or rather gourd.

Josselyn, N. E. Rarities (1672), Amer. Antiq. Soc., IV. 193.

squash³ (skwosh'), *n.* [Abbr. of *musquash* (like *coon* from *raccoon*, or *possum* from *opossum*).] The musquash or muskrat, *Fiber zibethicus*.

The smell of our weasels, and ermine, and polecats is fragrance itself when compared to that of the *squash* and the skink. *Goldsmith*, *Hist. Earth* (ed. 1822), III. 94.

squash-beetle (skwosh'be'tl), *n.* The striped cucumber-beetle, *Diabrotica vittata*, or a similar species, which feeds upon the squash and related plants. See *Diabrotica*.

squash-borer (skwosh'bor'er), *n.* The larva of an agerian or sesiid moth, *Trochilium cucurbitæ*, which bores the stems of squashes in the United States.

squash-bug (skwosh'bug), *n.* An ill-smelling heteropterous insect, *Anasa tristis*, of the family *Coreidae*, found commonly on the squash and other cucurbitaceous plants in North America. There are one or two annual generations, and the bug hibernates as an adult. Throughout its life it feeds upon the leaves of these plants, and is a noted pest.

squasher (skwosh'er), *n.* [*< squash*¹ + *-er*.] One who or that which squashes. [Colloq.]

squash-gourd (skwosh'görd), *n.* Same as *squash*².

squeam† (skwém), *v. i.* [A back-formation, < *squeamish*.] To be squeamish. [Rare.]

This threat is to the fools that *squeam*

At every thing of good esteem.

C. Smart, tr. of *Phedrus* (1765), p. 145.

squeamish (skwék'mish), *a.* [Also dial. *sweamish*, *swaimish*; early mod. E. *squeimish*, *squemish*;

a later form (with suffix *-ish*¹ substituted for orig. *-ous*) of *squeamous*; see *squeamous*. The sense 'apt to be nauseated' may be due in part to association with *qualmish*.] 1. Easily disgusted or nauseated; hence, fastidious; scrupulous; particular; nice to excess in questions of propriety or taste; finical: as, a *squeamish* stomach; *squeamish* notions.

Let none other meaner person despise learning, nor . . . be any whit *squeimish* to let it be published under their names.

Puttenham, *Arte of Eng. Poesie*, p. 17.

The modern civilized man is *squeamish* about pain to a degree which would have seemed effeminate or worse to his great-grandfather.

The Century, XXXVI. 633.

2. Qualmish; slightly nauseated; sickish: as, a *squeamish* feeling.

The wind grew high, and we, being among the sands, lay at anchor; I began to be dizzy and *squeamish*.

Pepys, *Diary*, I. 42.

=**Syn. 1.** *Dainty*, *Fastidious*, etc. (see note), overnice, strait-laced.

squeamishly (skwék'mish-li), *adv.* In a squeamish or fastidious manner; with too much niceness or daintiness.

squeamishness (skwék'mish-nes), *n.* The state or quality of being squeamish; excessive niceness or daintiness; fastidiousness; excessive scrupulousness.

E. *squeamous*, *skoymouse*, < ME. *squaimous*, *squaymouse*, *squaymose*, *skoymous*, *skoymus*, *sweymous*, *disdainful*, fastidious, < *sweme*, *sweem*, E. dial. *sweam*, dizziness, an attack of sickness: see *sweam*. The word has now taken the form *squeamish*. The dial. change of *sw-* to *squ-* (which in ME. further changes to *sk-*) occurs in many words: cf. *squander*.] Same as *squeamish*.

Thou wert not *skoymus* of the maidens wombe.

Te Deum (14th century), quoted in N. and Q., 4th ser., III. 181.

But soth to say he was somde *squaimous*.

Chaucer, *Miller's Tale*.

Thow art not *skoymose* thy fantasy for to tell.

Bale's Kyng Johan, p. 11. (*Hallivell*.)

squean¹, *v. i.* [A var. of *squin*.] To squint.

squean² (skwén), *v. i.* [Prob. imitative; cf. *squeal*¹.] To fret, as the hog. *Hallivell*; *Wright*. [Prov. Eng.]

squeasiness† (skwék'zi-nes), *n.* Queasiness; qualmishness; nausea.

A *squeasiness* and rising up of the heart against any mean, vulgar, or mechanical condition of men.

Hammond, *Works*, IV. 614.

squeasy† (skwék'zi), *a.* [Also *squeazy*; formerly *squeazy*; a var. of *queasy* (with intensive *s-*, as in *splash* for *plash*¹, *squench* for *quench*): see *queasy*.] Queasy; qualmish; squeamish; scrupulous.

His own nice and *squeasy* stomach, still weary of his last meal, puts him into a study whether he should eat of his best dish or nothing.

Rev. T. Adams, *Works*, I. 425.

The women are few here, *squeazy* and formal, and little skilled in amusing themselves or other people.

Gray, *Letters*, I. 202.

squeeze (skwéz), *v.* and *n.* A dialectal form of *squeeze*. *Mayhew*, *London Labour and London Poor*, II. 530.

squeegie (skwék'jē), *n.* [A form of *squilgee*, simulating *squeeze* for *squeeze*.] 1. *Naut.*, same as *squilgee*.—2. In *photog.*, a stout strip of soft rubber set longitudinally in a wooden back which serves as a handle, and beyond which the rubber projects. It is used for expressing moisture from paper prints, for bringing a film into close contact with a glass or mount, etc., and is also made in the form of a roller of soft rubber, much resembling a printer's inking-roller.

squeegie (skwék'jē), *v. i.* [< *squeegie*, *n.*] To treat with a *squeegie* or *squilgee*.

A glaucé finish may easily be obtained by *squeegieing* the washed print on a polished plate of hard rubber.

Sci. Amer., N. S., LX. 53.

squeezability (skwék-za-bil'i-ti), *n.* [< *squeezable* + *-ity* (see *-ility*).] The quality or state of being squeezable. *Imp. Dict.*

squeezable (skwék'za-bl), *a.* [< *squeeze* + *-able*.] 1. Capable or admitting of being squeezed; compressible.—2. Figuratively, capable of being constrained or coerced: as, a *squeezable* government. [Colloq.]

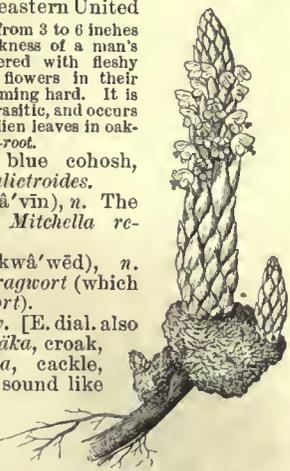

You are too versatile and too *squeezable*; . . . you take impressions too readily.

Savage, *Reuben Medicott*, i. 9. (*Davies*.)

The peace-of-mind-at-any-price disposition of that [Gladstone] Cabinet had rendered it *squeezable* to any extent.

Love, *Bismarck*, II. 230.

squeeze (skwéz), *v.*; pret. and pp. *squeezed*, ppr. *squeezing*. [Early mod. E. also *squize*, *squise*, E. dial. also *squizen* (also perversely *squeege*); with intensive *s-*, < ME. *queisen*,

Squawroot (*Conopholis Americana*), parasitic on the root of oak.

squeeze, < AS. *cwisan*, *cwisan*, *cwisan* (in comp. *tō-cwisan*, *tō-cwisan*), crush; cf. Sw. *gräsa*, squeeze, bruise; D. *kwetsen* = MHG. *quetzen*, G. *quetschen*, G. dial. *quetzen*, crush, squash, bruise; MLG. *quatiern*, *quettern*, squash, bruise; Goth. *kwistjan*, destroy; Lith. *gaiszi*, destroy.]

I. trans. 1. To press forcibly; subject to strong pressure; exert pressure upon: as, to *squeeze* a sponge; hence, to bruise or crush by the application of pressure: as, to *squeeze* one's fingers in a vise; apply force or pressure to for the purpose of extracting something: as, to *squeeze* a lemon.

O Phylax, spare

My *squeezed* Soul, least from herself she start.
Loose, loose the Buckle! If the time be come
That I must die, at least afford me room.

J. Beaumont, *Psyche*, lii. 206.

The people submit quietly when their governor *squeezes* their purses. *Pococke*, Description of the East, II. 1. 151.

The ingredients for punch were all in readiness; but no one would *squeeze* the oranges till he came.

Fielding, *Joseph Andrews*, i. 13.

2. To press in sympathy or affection, or as a silent indication of interest or emotion: as, to *squeeze* one's hand.

He is said to be the first that made love by *squeezing* his hand.

Steele, *Spectator*, No. 109.

With my left hand I took her right — did she *squeeze* it? I think she did.

Thackeray, *Fitz-Boodle Papers*, Dorothea.

3. To produce or procure by the application of pressure; express; extract: usually with *out*: as, to *squeeze* consent from an official.

Queise out the jus. *Reliq. Antiq.*, I. 302.

When day appeared, . . . I began agsline to *queise* out the matter [from a wound], & to annoint it with a little salue which I had.

Guevara, *Letters* (tr. by Hellowes, 1577), p. 146.

He [Canute] *squees'd* out of the English, though now his subjects, not his Enemies, 72, some say 82, thousand pound.

Milton, *Hist. Eng.*, vi.

They can *squeeze* Bourdeaux out of a sloe, and draw Champagne from an apple.

Addison, *Tatler*, No. 131.

4. To thrust forcibly; force: with *into*, or other similar adjunct: as, to *squeeze* a gown *into* a box.

He [Webster] has not the condensing power of Shakespeare, who *squeezed* meaning into a phrase with an hydraulic press.

Louell, *Study Windows*, p. 318.

Schneider had provided himself at the Greenland ports with the entire costume of the Eskimo belle, and, being a small man, was able to *squeeze* himself *into* the garments.

A. W. Greeley, *Arctic Service*, p. 176.

5. To harass or oppress by exactions or the like.

The little officers oppress the people; the great officers *squeeze* them. *Pococke*, Description of the East, I. 171.

The whole convict system is a money-making affair; . . . they all just naturally *squeeze* the convict.

The Century, XL. 221.

6. To obtain a facsimile impression of on paper, by means of water and rubbing or beating. See *squeeze*, *n.*, 3.

But the overhang of the rock makes it extremely difficult to *squeeze* satisfactorily. *Athenaeum*, No. 3284, p. 455.

Squeezed-in vessel, a vessel of pottery or glass whose form indicates that it has been pressed in on opposite sides, as if nipped by the fingers. It is a common form in Roman glass bottles; and many Japanese flasks of stoneware also have this shape.

II. intrans. 1. To press; press, push, or force one's way through or into some tight, narrow, or crowded place; pass by pressing or pushing.

Many a public minister comes empty in; but, when he has crammed his guts, he is fain to *squeeze* hard before he can get off.

Sir R. L'Estrange.

2. To pass (through a body) under the application of pressure.

A concave sphere of gold filled with water, and soldered up, has, upon pressing the sphere with great force, let the water *squeeze* through it and stand all over its outside in multitudes of small drops like dew, without bursting or cracking the body of the gold.

Newton, *Opticks*, il. 3, prop. 8.

squeeze (skwēz), *n.* [*< squeeze, v.*] 1. Pressure, or an application of pressure; a hug or embrace; a friendly, sympathetic, or loving grasp: as, a *squeeze* of the hand.

Had a very affectionate *squeeze* by the hand, and a fine compliment in a corner.

Gray, *Letters*, I. 239.

The Squire shook him heartily by the hand, and congratulated him on his safe arrival at Headlong Hall. The doctor returned the *squeeze*, and assured him that the congratulation was by no means misplaced.

Peacock, *Headlong Hall*, iii.

2. Crush; crowding.

The pair of MacWhiters journeyed from Tours, . . . and, after four-and-twenty hours of *squeeze* in the diligence, presented themselves at nightfall at Madame Smolensk's.

Thackeray, *Philip*, xxvi.

3. A cast or an impression, as of an inscription or a coin, produced by forcing some plastic material into the hollows or depressions of the surface; especially, such a facsimile or impression made by applying sheets of wet unsized paper to the object to be copied, and thoroughly passing over the sheets with light blows of a stiff brush, so as to force the paper into every inequality. The paper, upon drying, hardens, yielding a perfect and durable negative, or reversed copy, of the original. This method is employed by archaeologists for securing faithful transcripts of ancient inscriptions.

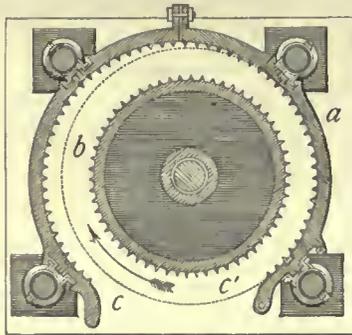

It is to him that we owe the copies and *squeezes* of the Nabathean inscriptions. *Contemporary Rev.*, LIV. 302.

Armed, therefore, with a stock of photographic plates, and with the far more essential stock of paper for making moulds or *squeezes* from the stone, I began work on the temples of Thebes.

Harpur's Mag., LXXVII. 297.

squeezer (skwē'zèr), *n.* [*< squeeze + -er*]. 1.

One who or that which *squeezes*. Specifically—(a) In *iron-working*, a machine employed in getting the puddled ball into shape, or slinging it, without hammering. (See *puddling*.) Squeezers are of two kinds, reciprocating and rotary. The essential feature of the reciprocating form is that a movable arm or lever works against a corresponding fixed jaw, the former representing the

Rotary Squeezer.

a, ridged eccentric casing; b, ridged roller. The ball of metal enters at c, in the direction shown by the arrow, and emerges at c'.

hammer, the latter the anvil, of the old method of slinging with the hammer. In the rotary squeezer the puddled ball is brought into shape by being passed between a cast-iron cylinder and a cylindrical casing, the former being placed eccentrically within the latter so that the distance between their surfaces gradually diminishes in the direction of the rotation. The ball, being introduced at the widest part of the opening, is carried forward and finally delivered at the narrower end, reduced in size and ready for rolling. (b) In *sheet-metal working*, a crumpling-machine for forcing the tops and covers of tin cans over the cylinders which form the sides of the cans. (c) A lemon-squeezer.

2. *pl.* A kind of playing-cards in which the face-value of each card is shown in the upper left-hand corner, and can readily be seen by *squeezing* the cards slightly apart, without displaying the hand.—**Alligator squeezer**. Same as *crocodile squeezer*.—**Crocodile squeezer**, a peculiar form of squeezer, having a long projecting upper jaw armed with teeth. It is used in the manufacture of iron.

squeezing (skwē'zing), *v.* [Verbal *n.* of *squeeze, v.*] 1. The act of pressing; compression.—2. That which is forced out by or as by pressure; hence, oppressive exaction.

The dregs and *squeezings* of the brain.

Pope, *Essay on Criticism*, l. 607.

squeezing-box (skwē'zing-boks), *n.* In *ceram.*, a cylinder of metal, through an opening in the bottom of which plastic clay is forced in a continuous ribbon of any desired section, to form lugs, handles, etc.

squeezyt, *a.* See *squeasy*.

squelch (skwelch), *n.* [Formerly also *squelsh*; prob. a var., with intensive prefix *s-*, of E. dial. *quelch*, a blow, bang.] A crushing blow; a heavy fall. [Colloq.]

But Ralpho, who had now begun

T' adventure resurrection

From heavy *squelch*, and had got up.

S. Butler, *Iludibras*, I. ii. 933.

squelch (skwelch), *v.* [See *squelch, n.*] **I. trans.**

1. To crush down; stamp on as if *squeezing* out something liquid; put an end to. [Colloq.]

'Foot, this Fat Bishop hath so overlaid me,

So *squelch'd* and *squeezed* me.

Middleton, *Game at Chess*, v. 3.

Here, all about the fields, is the wild carrot. You cut off its head, just before it seeds, and you think you have *squelched* it; but this is just what Nature . . . wanted you to do.

J. Burroughs, *The Century*, XIX. 688.

2. To disconcert; discomfit; put down. [Colloq.]

Luke glanced shamefaced at the nosegay in his button-hole, and was *squelched*.

J. W. Palmer, *After his Kind*, p. 120.

II. intrans. To be crushed. [Colloq.]

squelet, *v.* A Middle English form of *squal*.

squeler, **squelery**, *n.* Middle English forms of *sculler*², *scullery*.

squench (skwench), *v. t.* [A var., with intensive prefix *s-*, of *quench*.] To quench. *Beau. and Fl.* [Obsolete or vulgar.]

squerel, **squerrel**, **squerril**, *n.* Obsolete forms of *squirrel*.

squeteague (skwe-tēg'), *n.* [Also *squete*, *squitee*, *squit*; of Amer. Ind. origin.] A salt-water sciaenoid fish, *Cynoscion regalis* (formerly *Otolithus regalis*), also called *weakfish*, *sea-salmon*, and *sea-trout* in common with some other members of the same genus. It is silvery, darker above, with many irregular, small, dark blotches tending to form oblique undulating bars. It is common from Cape Cod southward, and is a valued food-fish. A more distinctly marked fish of this kind is *C. maculatus*, the spotted squeteague, *weakfish*, or *sea-trout*, of more southerly distribution. See *Cynoscion*, and cut under *weakfish*.

squib (skwib), *v.*; pret. and pp. *squibbed*, ppr. *squibbing*. [A var. of **squip*, < ME. *squippen*, a var. of *swip* (ME. *swippen*), move swiftly, sweep, daah; see *swip*, *swipe*.] **I. intrans.** 1. To move swiftly and irregularly.

A battered unmarried bean, who *squibs* about from place to place.

Goldsmith, *Citizen of the World*, lxxxviii.

2. [*< squib, n.*, 3.] To make a slight, sharp report, like that of an exploding squib.—3. [*< squib, n.*, 4.] To resort to the use of squibs, or petty lampoons.

II. trans. 1. To throw (in or out) suddenly; explode.

Thou wouldst neuer *squib* out any new Salt-petre

Iestes against honest Tuca.

Dekker, *Humorous Poet* (Works, ed. Pearson, I. 235).

He [Mr. Brian Twyne] *squibs* in this parenthesis.

Fuller, *Hist. Cambridge University*, i. § 52.

2. [*< squib, n.*, 4.] To attack in squibs; lampoon.

squib (skwib), *n.* [*< squib, v.*] 1. A ball or tube filled with gunpowder, sent or fired swiftly through the air or along the ground, exploding somewhat like a rocket.

Like a *Squib* it falls,

Or fire-wing'd shaft, or sulphur Powder Balls.

Sylvester, tr. of Du Bartas's Weeks, l. 2.

Nor nimble *squib* is seen to make afraid

The gentlewomen.

B. Jonson, *Every Man in his Humour*, Prol.

So *squibs* and crackers fly into the air,

Then, only breaking with a noise, they vanish

In stench and smoke. Ford, *Broken Heart*, ii. 2.

2. A reed, rush, quill, or roll of paper filled with a priming of gunpowder; a tube of some kind used to set off a charge of gunpowder, as at the bottom of a drill-hole. Also called *mote*, *train*, and *match*.—3. A fire-cracker, especially one broken in the middle so that when it is fired the charge explodes without a loud report.—4. A petty lampoon; a short satirical writing or sketch holding up a person or thing to ridicule.

Allowing that . . . [the play] succeeds, there are a hundred *squibs* flying all abroad to prove that it should not have succeeded.

Goldsmith, *Polite Learning*, x.

5. One who writes lampoons or squibs; a petty satirist; a paltry, trifling fellow.

The *squibs* are those who, in the common phrase of the word, are called libellers, lampooners, and pamphleteers.

Steele, *Tatler*, No. 83.

6. A kind of cheap taffy, made of treacle.

And there we had a shop, too, for lollipops and *squibs*.

Hood, *Lines by a Schoolboy*.

squibbish (skwib'ish), *a.* [*< squib + -ish*]. Flashy; light. *T. Mace*, *Music's Monument*. (Davies.)

squid (skwid), *n.* [Origin unknown.] 1. A kind of cuttlefish or calamary; a dibranchiate cephalopod with ten arms, especially of the family *Loliginidæ* or *Teuthididæ*. The name is most frequently given to the small, slender calamaries, a few inches long and with a caudal fin, which are much used as bait, but is extended (with or without a qualifying term) to many other species of different genera and families, some of which, as the giant squids, are the largest of cephalopods. See cuts under *Architeuthis*, *calamary*, *Desmoteuthis*, *Loliginidæ*, *Sepiola*, and *Spirula*, and compare those under *Dibranchiata*, *cuttlefish*, and *Sepia*.

2. An artificial bait or lure of metal. Ivory, etc., used in angling or trolling for fish, often simply a fish-hook on the shank of which a mass of lead is melted in cylindrical or tapering form to imitate a squid (def. 1).—**False squids**, the *Loligopsidæ*.—**Flying squids**, the *Ommastrephidæ*.—**Giant squids**, the very large cephalopods of the genus *Architeuthis*, as *A. harveyi* of the Atlantic coast of North America, among those called *devil-fish*. See cut under *Architeuthis*.—**Long-armed squids**, the *Chiroteuthididæ*.—**Long-finned squids**, species of *Loliginidæ*. See cut under *Loliginidæ*.—**Short-finned squids**, species of *Ommastrephes*, as *O. illecebrosus*, common in New England seas and northward, and a principal source of bait.

squid (skwid), *v. i.*; pret. and pp. *squid*^d, ppr. *squidding*. [*< squid, n.*] To fish with a squid or spoon-bait.

squidding (skwid'ing), *n.* [Verbal *n.* of *squid, v.*] The act, art, or practice of fishing with a squid.

squid-fork (skwid'fôrk), *n.* An instrument used by fishermen in baiting with a squid.

squid-hound (skwid'hound), *n.* The striped-bass, *Roccus lineatus*. See cut under *bass*.

squid-jig (skwid'jig), *n.* A squid-jigger.

squid-jigger (skwid'jig'er), *n.* A device for catching squids, consisting of a number of hooks soldered together by the shanks so that the points radiate in all directions. It is dragged or jerked through the water.

squid-jigging (skwid'jig'ing), *n.* The act of jigging for squids; the use of a squid-jigger; squidding.

squid-thrower (skwid'thrô'er), *n.* A device, on the principle of the catapult, used in trolling to cast a fishing-line seaward. *E. H. Knight*.

squier¹, *n.* An obsolete spelling of *squire*¹.

squier², *n.* An obsolete form of *squarc*¹.

squieriet, *n.* An obsolete spelling of *squiry*.

squiggle (skwig'gl), *v. i.*; pret. and pp. *squiggled*, ppr. *squiggling*. [Appar. a var., with intensive prefix *s-*, of **quiggle*, *E. dial. quicgle*, a var. of *wiggle*: see *wiggle*.] 1. To shake a fluid about in the mouth with the lips closed. [Prov. Eng.]-2. To move about like an eel; squirm; wriggle. [Colloq., U. S.]

squiler, *n.* A Middle English form of *sculler*².

squill (skwil'jê), *n.* [Also *squillagee*, *squillagee*, also *squecgee*, *squegee* (see *squaccgec*); origin obscure; perhaps connected with *swill*, *swile*, wash, rinse; but the term. is not explained.]

1. *Naut.*: (a) An implement somewhat resembling a wooden hoe, with an edge of india-rubber or thick leather, used to scrape the water from wet decks. (b) A small swab. (c) A becket and toggle used to confine a studding-sail while setting it.—2. One of several implements constructed like the nautical implement above defined (1 (a)), used for washing glass, in photographic work, etc. See *squecgee*, 2.

squill (skwil'jê), *v. t.* [*< squill, n.*] *Naut.*, to scrape (the wet decks of a ship) with a squill.

The washing, swabbing, *squillgeeing*, etc., lasts, or is made to last, until eight o'clock, when breakfast is ordered, fore and aft. *R. H. Dana, Jr.*, Before the Mast, p. 100.

squill (skwil'jê), *n.* A toggle with a small line fastened to it, used to secure a strap round a studdingsail while being set, so that by pulling out the squill when the sail is hoisted far enough the sail is released.

squill¹ (skwil), *n.* [*< ME. squille, squylle, squylle, squyle*, *< OF. squille, scille, F. squille, scille = Sp. csquilla = Pg. scilla = It. squilla, < L. squilla, scilla, squill, = Gr. σκίλλα, squill, perhaps for *σκίλλα (as equiv. σκίφος for *σκιδός), and so called from its splitting easily into scales, < σκί-ζεν, split: see schism.*] 1. The medicinal bulb of *Urginea Scilla*, or the plant itself; the official squill. See def. 2.—2. Any plant of the genus *Scilla* (which see). *S. nutans* is commonly called *bluebell*, or *wild hyacinth*. The aprugsquill, *S. verna*, and the autumn squill, *S. autumnalis*, are small European wild flowers of no great merit in cultivation. The star-flowered squill, *S. amoena*, is a distinct early species, the flowers indigo-blue with large yellowish-green ovary, less attractive than the species following. The early squill, *S. bifolia*, produces rich masses of dark-blue flowers very early in the spring. The Spanish squill, *S. Hispanica* (*S. campanulata*), is a fine species of early summer, with a strong pyramidal raceme of large pendent usually light-blue flowers; also called *Spanish bluebell*. The Italian squill, *S. Italica*, has pale-blue flowers with intensely blue stamens. The pyramidal or Peruvian squill, *S. Peruviana*, not from Peru, but from the Mediterranean region, has pale-blue flowers with white stamens, the flowers very numerous in a regular pyramid. The Siberian squill, *S. Sibirica* (*S. amœnula*), not from Siberia, but from southern Russia, is a very choice small early-flowering species, the blossom of a peculiar porcelain-blue. These are all hardy except the pyramidal squill.—**Chinese squill**, a species of *Scilla*, *S. Chinensis*, once classed as *Barnardina*.—**Compound syrup of squill**. See *syrup*.—**Oxymel of squill**. See *oxymel*.—**Pancreatic squill**, a variety of the official squill said to be milder in its action.—**Roman squill**, the Roman hyacinth, *Hyacinthus Romanus*, once classed as *Scilla*, also as *Bellevalia*.—**Wild squill**, the American wild hyacinth, or eastern camass, *Camassia* (*Scilla*) *Fraseri*.

Squill (*Urginea Scilla*).

squill² (skwil), *n.* [*< L. squilla, scilla*, a small fish of the lobster kind, a prawn, shrimp, so called from a supposed resemblance to the

hulb or plant of the same name: see *squill*¹.] 1. A stomatopodous crustacean of the genus *Squilla* or family *Squillidae*; a mantis-shrimp or squill-fish. See cuts under *mantis-shrimp* and *Squillidae*.—2. An insect so called from its resemblance to the preceding; a mantis. Also called *squill-insect*.

Squilla (skwil'ä), *n.* [NL. (Fabricius), *< L. squilla, scilla*, a prawn: see *squill*².] 1. The representative genus of *Squillidae*, containing such crustaceans as *S. mantis*, the common mantis-shrimp or locust-shrimp. The southern squill of the United States is *Coronis glabriuscula*. See cuts under *mantis-shrimp* and *Squillidae*.—2. [*l. c.*] Same as *squill*², 1.—3t. [*l. c.*] Same as *squill*², 2.

The *Squilla*, an insect, differs but little from the fish *Squilla*. *Mouflet*, Theater of Insects, II. xxxvii.

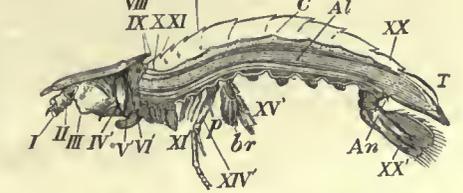

squillagee (skwil'a-jê), *n.* Same as *squillagee*.

squillante (skwil-lan'to), *a.* [*It.*, ppr. of *squillare*, clang, ring.] In music, ringing; bell-like in tone.

squill-fish (skwil'fish), *n.* A squill, or some similar crustacean.

squillian (skwil'i-an), *a.* [= F. *squillien*; as *L. squilla*, squill (see *squill*²), + *-ian*.] Of or pertaining to a squill; belonging or relating to the *Squillidae*.

Squillidae (skwil'i-dê), *n. pl.* [NL., *< Squilla* + *-idae*.] A family of stomatopod crustaceans,

Locust-shrimp (*Squilla scabricauda*), in longitudinal vertical section. 1-XX, the somites; I'-XX', their appendages, of most of which the bases only are seen. *Al*, alimentary canal; *C*, heart; *An*, anus; *T*, telson; *br*, branchiae; *p*, penis.

typified by the genus *Squilla*, to which the *Stomatopoda* are sometimes restricted; the mantis-shrimps or gastrurans. The pseudogenus *Alima* and at least two other spurious genera were named from larval forms of this family. Other good genera than the type are *Coronis* and *Gonodactylus*. Also called *Squilloidea*.

squill-insect^t (skwil'in'sekt), *n.* Same as *squill*², 2. *N. Grew*.

squillitic (skwi-lit'ik), *a.* [*< L. squilliticus, scil-liticus*, *< Gr. σκίλλιτικός*, pertaining to the squill: see *squill*².] Of, pertaining to, or obtained from squills.

A decoction of this kind of worms sodden in *squillitic* vinegar. *Holland*, tr. of Pliny, xxx. 3.

squimble-squamble^t, *adv.* Same as *skimble-scamble*. *Cotgrave*.

squint (skwin), *v. i.* and *t.* [Also *squean*, *skeen*, *sken*, also *squinky*, formerly *squiny*; cf. *squint*.] To squint.

As doctors in their deepest doubt
Stroke up their foreheads hie;
Or men amaze their sorrow frowns
By *squeaning* with the eye.

Armin's Italian Taylor and his Boy (1609). (*Nares*.)

squincet (skwin'ans), *n.* Same as *squincancy*, 1.

squincancy^t (skwin'an-si), *n.* [Also centr. *squincy*, *squinsky*; *< ME. squincacie, squincacie*, *< OF. esquinancie, squincacie, quinsky*: see *quinsky*.] 1. Quinsky.

Diseases that be verie perillous: . . . to wit, the Pleurisie, *Squincacie*, inflammation, sharpe Feuer, or Apoplexie. *Guevara*, Letters (tr. by Hellowea, 1577), p. 235.

2. The quinskywort.

squincancy-berry^t (skwin'an-si-ber'i), *n.* Same as *quinsky-berry*.

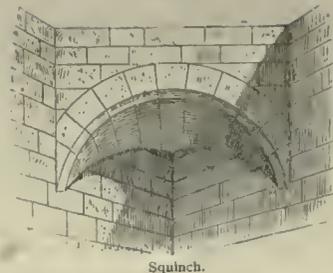

squincancy-wort^t (skwin'an-si-wert), *n.* Same as *quinskywort*.

squincet, *n.* [Early mod. *E. squynce*; var. of *squincy*, etc.] Same as *squincancy*.

Diseases and sicknesses, as *squincies*. *Sir T. Elyot*, The Governour, iii. 22.

squinch¹ (skwinch), *n.* [A var. of *sconce*².] In *arch.*, a small arch, or a series of arches, corbeled out, thrown across an angle, as in a square tower to support the side of a superimposed octagon. In Western architecture it is frequent as performing the function of the Eastern pendentive. The application of the term may be due to the resemblance of this structure to a corner cupboard, which was also called *quinch* or *sconce*. See cut in next column.

squinch² (skwinch), *n.* A dialectal variant of *quince*.

Squinch.

squincy^t, *n.* [A contraction of *squincancy*: see *squincancy*, *quinsky*.] Quinsky.

Shall not we be suspected for the murder,
And choke with a hempen *squincy*?
Randolph, Jealous Lovers, iii. 14.

squin-eyet, *n.* A squinting eye.

squink (skwingk), *v. i.* [A dial. form of *wink*: see *squint* and *wink*.] To wink. [Prov. Eng.]

squinky (skwin'i), *v. i.* [Formerly also *squiny*: see *squin*.] To squint. [Obsolete or prov. Eng.]

I remember thine eyes well enough. Dost thou *squiny* at me?
Shak., Lear, iv. 6. 140.

squint (skwint), *a.* and *n.* [Not found in ME., except as in *asquint*, askew; appar. an extension of the obs. or dial. *squin*, *squean*, *sken*, *schuin*, slant, sloping; perhaps associated with *E. dial. squink*, wink, partly a var. of *wink*, partly *< Sw. svinka*, shrink, finch, nasalized form of *svika*, balk, finch, fail; cf. *Dan. srigte*, bend, fail, forsake; *AS. swican*, escape, avoid. The history of the word is meager, and the forms appar. related are more or less involved.] I. *a.* 1. Looking different ways; characterized by non-coincidence of the optic axes; affected with strabismus: said of eyes.

Some things that are not heard
He mutters to himself, and his *squint* eye
Casts towards the Moon, as should his wits there lye.
Heywood, Dialogues (Works, ed. Pearson, 1874, VI. 190).

2. That looks or is directed obliquely; looking askance; indirect; oblique; sinister.

The pleasure I shall live in, and the freedom,
Without the *squint* eye of the law upon me,
Or prating liberty of tongues that envy!
Fletcher, Rule a Wife, iii. 1.

I incline to hope, rather than fear,
And gladly banish *squint* suspicion.
Milton, Comus, l. 418.

Squint quoin, in *arch.*, an external oblique angle.

II. *n.* 1. An affection of the eyes, consisting in non-coincidence of the optic axes; a squint eye; strabismus (which see).

He's blue eye, and not to be called a *squint*, though a little cast he a certainly got.
Hood, The Lost Hair.

2. An oblique or furtive look; a furtive glance; hence (colloquially), a leaning, an inclination: as, he had a decided *squint* toward democracy.—3. In *arch.*, an oblique opening through the walls of some old churches, usually having for its object to enable a person in the transepts or aisles to see the elevation of the host at the high altar. The usual situation for a squint is on one or both sides of the chancel arch; but they are also found in other positions, though always directed toward an altar. Generally they are not above a yard high, and 2 feet wide, but sometimes they form narrow arches 10 or 12 feet in height, as at *Minster-Lovel*, Oxfordshire. The name *hagioscope* is sometimes applied to them.—**Braid's squint**, the turning of the eyes simultaneously upward and inward, as if trying to look at the middle of one's own forehead, as a means of producing a hypnotic state.

squint (skwint), *v.* [*< squint, n.*] I. *intrans.*

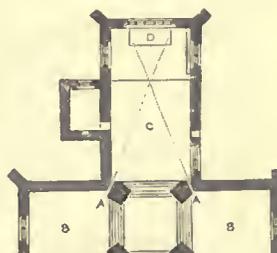

1. To look askew, or with the eyes differently directed; look askance.

He gets a crick in his neck oft-times with *squinting* up at windows and balconies.
Brome, Sparagus Garden, iii. 4.

Some can *squint* when they will.
Bacon.

2. To be affected with strabismus.—3. To run or be directed obliquely; have an indirect reference or bearing.

Not a period of this epistle but *squints* towards another over against it.
Pope.

Squints, *Minster-Lovel Church*, Oxfordshire, England. A A, squints; B B, transepts; C, chancel; D, altar.

Not meaning . . .
His pleasure or his good alone,
But squinting partly at my own.
Couper, To Rev. W. Bull, June 22, 1782.

II. *trans.* 1. To render squint or oblique; affect with strabismus.

Let him but use
An unsway'd eye, not squinted with affectious.
Heywood, Dialogues (Works, ed. Pearson, 1874, VI. 226).
He gives the web and the pin, squints the eye, and makes
the hare-lip.
Shak., Lear, iii. 4. 122.

2. To turn, east, or direct obliquely.
Perkin . . . raised his Siege, and marched to Taunton;
beginning already to squint one eye upon the crowne and
another upon the sanctuary.
Bacon, Hist. Hen. VII., p. 133.

squinter (skwin'tér), *n.* [*< squint + -er.*] One
who squints; a cross- or squint-eyed person.

I pass over certain difficulties about double images,
drawn from the perceptions of a few squinters.
W. James, Mind, XII. 523, note.

squint-eyed (skwint'id), *a.* 1. Having eyes that
squint; having eyes with non-coincident axes.
N. Bailey, tr. of Colloquies of Erasmus, I. 103.
—2. Oblique; indirect; sinister; malignant.

This is such a false and squint-eyed praise,
Which, seeming to look upwards on his glories,
Looks down upon my fears.
Sir J. Denham, The Sophy. (Latham.)

3. Looking obliquely or by side-glances: as,
squint-eyed jealousy or envy.

The hypocrite . . . looks squint-eyed, aiming at two
things at once: the satisfying his own lusts, and that the
world may not be aware of it.
Rev. T. Adams, Works, I. 494.

squintifego (skwin-ti-fé'gō), *a.* [*< squint +*
-ifego, an arbitrary termination.] Squinting.

The timbrel, and the squintifego maid
Of Isis, awe thee.
Dryden, tr. of Persius's Satires, v. 271.

squinting (skwin'ting), *n.* [Verbal *n.* of *squint,*
v.] The act or habit of looking asquint; strab-
ismus.

squintingly (skwin'ting-li), *adv.* With squint
look; by side-glances.

squint-minded (skwint'min'ded), *a.* Deceit-
ful; crooked-minded. *Urquhart, tr. of Rabe-
lais, ii. 34. [Rare.]*

squiny, *v. i.* See *squiny*.

squir (skwér), *v. t. and i.* [Also *squirr*; a var.
of **quir* for *whirr*: see *whirr*.] To throw with
a jerk. [Prov. Eng.]

I saw him *squir* away his watch a considerable way into
the Thames.
Budgett, Spectator, No. 77.

Boys *squir* pieces of tile or flat stones across ponds or
brooks to make what are denominated ducks and drakes.
Halliwel.

squiralty (skwír'al-ti), *n.* [*< squire¹ + -alty,*
after the analogy of *loyalty*.] Same as *squire-
archy*. *Sterne, Tristram Shandy, I. xviii.*
[Rare.]

squirarchy, *n.* See *squirearchy*.

squire¹ (skwir), *n.* [Also dial. *square*; early
mod. E. also *squier*; *< ME. squier, squyer, squier,*
sewier, swyere, by apheresis from esquire: see
esquire¹.] 1. An esquire; an attendant on a
knight.

Than tolde Grisandolus how he dide laugh before the
abbey and in the chapel, for the *squyer* that hadde smyten
his maister, and the dynerse wordes that he hadde spoken.
Martin (E. E. T. S.), iii. 428.

The rest are princes, barons, lords, knights, *squires,*
And gentlemen of blood.
Shak., Hen. V., iv. 8. 94.

2. A gentleman who attends upon a lady; an
escort; a beau; a gallant.

And eke himselfe had craftily devised
To be her *Squire*, and do her service well aguid.
Spenser, F. Q., II. i. 21.

3. A person not noble nor a knight, but who has
received a grant of arms.—4. In England, a
landed proprietor who is also justice of the
peace: a term nearly equivalent to *lord of the*
manor, as meaning the holder of most of the
land in any neighborhood.—5. In the United
States, in country districts and towns, a justice
of the peace, a local judge, or other local dig-
nitary: chiefly used as a title.—**Broom-squire.**
See the quotation.

"Broom-squires?" "So we call in Berkshire squatters
on the moor who live by tying heath into brooms."
Kingsley, Two Years Ago, xiv.

Squire of dames, a man very attentive to women and
much in their company.

Marry, there I'm call'd
The *Squire of Dames*, or Servant of the Sex.
Massinger, Emperor of the East, i. 2.

Squire of the body, a personal attendant, originally on
a knight, but later on a courtizan; a pimp.—**Squire of**
the pad, a footpad; a highwayman.

Sometimes they are *Squires of the Pad*, and now and
then borrow a little Money upon the King's High Way, to
recruit their losses at the Gaming House.
Tom Brown, Works (ed. 1705).

squire¹ (skwir), *v. t.*; pret. and pp. *squired*, ppr.
squiring. [*< ME. *squiren, squeren*; *< squire¹,*
n.] 1. To attend and wait upon, as a squire
his lord.—2. To attend, as a gentleman a lady;
wait upon or attend upon in the manner of a
squire; escort.

For he *squireth* me bothe up and down,
Yet hastow caught a fals snapecuon.
Chaucer, Prol. to Wife of Bath's Tale, l. 305.

To *squire* women about for other folka is as ungrateful
an employment as to tell money for other folka.
Wycherley, Country Wife, iv. 3.

squire², *n.* An old form of *square¹*.

squireage (skwír'áj), *n.* [*< squire¹ + -age.*] The
untitled landed gentry; the squires of a
country taken collectively. *De Morgan, Bud-
get of Paradoxes, p. 46. [Rare.]*

squirearch (skwír'árk), *n.* [*< squirearch-y.*] A
member of the squirearchy.

Man is made for his fellow-creatures. I had long been
diagnosed with the interference of those selfish *squire-
archs*.
Bulwer, Caxton, ii. 11.

squirearchal (skwír'ár-kál), *a.* [*< squirearch*
+ -al.] Of or pertaining to a squirearchy.
Imp. Dict.

squirearchical (skwír'ár-ki-kál), *a.* [*< squire-
arch-y + -ic-al.*] Of, pertaining to, or charac-
teristic of squirearchy or a squirearch. *Bulwer,*
My Novel, i. 10.

squirearchy (skwír'ár-ki), *n.* [Also *squirarchy*;
< squire¹ + Gr. árchia, rule (after analogy of
monarchy, etc.).] 1. In England, government
by the squires, or "country gentlemen"—that
is, the large landed proprietors, most of whom
are justices of the peace, and who, before the
Reform Bill of 1832, and to a certain extent af-
ter it, had great influence in the House of Com-
mons. Hence—2. The squires themselves col-
lectively.

squireen (skwír-én'), *n.* [*< squire¹ + dim. -een,*
common in Ir. words.] In Ireland, a small
landed proprietor: usually contemptuous.

Squireens are persons who, with good long leases or val-
uable farms, possess incomes of from three to eight hun-
dred a year, who keep a pack of hounds, take out a com-
mission of the peace, sometimes before they can spell (as
her ladyship said), and almost always before they know
anything of law or justice. *Miss Edgeworth, Absentee, vii.*

squirehood (skwír'húd), *n.* [*< squire¹ + -hood.*] The
state of being a squire; the rank or posi-
tion of a squire. *Swift, Letter to the King at*
Arms.

squirelet, *n.* An obsolete form of *squirrel*.

squirelet (skwír'let), *n.* [*< squire¹ + -let.*] A
petty squire; a squireling. *Carlyle, Misc., iii.*
56. (Davies.)

squireling (skwír'ling), *n.* [*< squire¹ + -ling.*] A
petty squire; a squirelet.

But to-morrow, if we live,
Our ponderous squire will give
A grand political dinner
To half the *squirelings* near.
Tennyson, Mand, xx. 2.

squirely (skwír'li), *a.* [*< squire¹ + -ly.*] Be-
fitting or characteristic of a squire.

One very fit for this *squirely* function.
Shelton, tr. of Don Quixote, i. 4. (Latham.)

How could that oligarchy [the Southern States of the
United States], with its *squirely* tastes, its free wasteful
outdoor life, its love of landed property, and its contempt
for manual labour, become a trading community?
The Academy, July 20, 1889, p. 32.

squireship (skwír'ship), *n.* [*< squire¹ + -ship.*] Same
as *squirehood*. *Shelton, tr. of Don Quix-
ote, i. 4. (Latham.)*

squires (skwír'es), *n.* [*< squire¹ + -ess.*] The
wife of a squire. *Bulwer, Pelham, vii. (Davies.)*
[Colloq., Eng.]

squirm (skwérn), *v. i.* [Prob. a var. of *squir*,
throw with a jerk, influenced by association
with *swarm* and *worm*: see *squir*.] 1. To wrig-
gle or writhe, as an eel or a worm; hence, to
writhe mentally.

You never need think you can turn over any old false-
hood without a terrible *squirming* and scattering of the
horrid little population that dwells under it.
O. W. Holmes, Autocrat, v.

They [worms in the pupa state] only *squirm* a little
in a feeble way now and then, and grow stiffer, till they
can't *squirm* at all, and then they're mummies, and that's
the end of it till the butterflies are born.
Mrs. Whitney, Leslia Goldthwaite, viii.

2. To climb by wriggling; "shin": as, to *squirm*
up a tree.

squirm (skwérn), *n.* [*< squirm, v.*] 1. A wrig-
gling motion, like that of a worm or an eel.—
2. *Naut.*, a twist in a rope.

squirr, *v.* See *squir*.

squirrel (skwúr'el or skwír'el), *n.* [Early mod.
E. also *squirril, squerrel, squirel, squiril*; *< ME.*

squirel, squyrelle, scurel, swerelle, swyrelle, *< OF. esquirel, escurel, escuirel, escoureil, escureuil, escurieu, F. écureuil = Pr. escuroil = Sp. Pg. esqui-
lo (cf. It. sciojattolo, scojatto), < ML. seuriolus, sciurellus (also, after Rom., scuriolus, seurellius, esurellus, corruptly sirogriulus, cirogriulus, esperiolus, asperiolus, etc.), dim. of L. sciurus, < Gr. σκίουρος, a squirrel, lit. 'shadow-tailed,' < σκιά, shadow, + οπί, tail. For the sense, cf. E. dial. skug, a squirrel, lit. 'shade': see skug.] 1. A rodent quadruped of the family *Sciuridae* and genus *Sciurus*, originally and specifically *Sciurus vulgaris* of Europe. Squirrels have pointed ears and a long bushy tail; they are of active arboreal habits, and are able to sit up on their hind quarters and use the fore paws like hands. *S. vulgaris*, called in England *skug*, is a squirrel 8 or 10 inches long (the tail being nearly*

as much more), with an elegant reddish-brown coat, white below, and the ears tufted or pencilled. It lives in trees, is very agile and graceful in its movements, feeds on all kinds of small hard fruits, nests in a hole, hibernates to some extent in the colder latitudes, and brings forth usually three or four young. It is readily tamed, and makes an interesting pet. The North American squirrel nearest to this one is the chickaree, or red squirrel, *S. hudsonius*. (See cut under *chickaree*.) The common gray squirrel of the United States is *S. carolinensis*. (See cut under *Sciurus*.) Fox- or cat-squirrels are several large red, gray, or black species of North America. (See cut under *fox-squirrel*.) North America (including Mexico and Central America) is very rich in squirrels; southern Asia and Africa are less rich, while South America and Europe have each but a single species of *Sciurus* proper. In the extension of the name *squirrel* to other genera of the family, the species of *Tamias*, *Spermophilus*, and *Cynomys* are distinguished as *ground-squirrels* or *prairie-squirrels*, and some of them are also called *marmot-squirrels* (see cuts under *chipmunk*, *Spermophilus*, *owl*, and *prairie-dog*); those of *Sciuropterus* and *Pteromys* are *flying-squirrels* (see cuts under *flying-squirrel* and *Sciuropterus*). The scale-tailed squirrels of Africa belong to a different family, *Anomaluridae*. (See cut under *Anomaluridae*.) Certain Australian marsupials, as phalangers or petaurists, which resemble squirrels, are improperly so called. (See cut under *Acerobates*.) Some *Sciuridae* have other vernacular names, as *skug*, *asapan*, *taguan*, *jelerang*, *haekee*, *chickaree*, *gopher*, *swek*, *suslik*, *prairie-dog*, *wishtowish*, etc.; but *squirrel*, without a qualifying term, is practically confined to the genus *Sciurus*, all the many members of which resemble one another too closely to be mistaken. See the technical names, and cuts under *taguan* and *Xerus*.

2. In *cotton-manuf.*, one of the small card-covered rollers used with the large roller of a carding-machine. Also called *urchin*.—**Barking squirrel**, the prairie-dog; an early name of this animal as brought to notice by Lewis and Clarke in 1814.—**Burrowing squirrel**, Lewis and Clarke's name (1814) of a prairie-dog, or some related prairie-squirrel.—**Chipping-squirrel**, the chipmunk.—**Federation squirrel**, the thirteen-lined armophole, or striped gopher: so called in allusion to the thirteen stripes of the flag of the original States of the American Union. *S. L. Mitchell, 1821.* See cut under *Spermophilus*.—**Hunt the squirrel**. See *hunt*. (See also *flying-squirrel*, *prairie-squirrel*, *nugar-squirrel*.)

squirrel-bot (skwúr'el-bot), *n.* A bot-fly, *Cutiterebra emasculator*, whose larvæ infest the genital and axillary regions of various squirrels and gophers in the United States, particularly the scrotum and testicles of the male of *Tamias striatus*, the striped chipmunk.

squirrel-corn (skwúr'el-körn), *n.* A pretty spring wild flower, *Dicentra (Dicentra) Canadensis*, of eastern North America. It has elegant dissected leaves, graceful racemes of a few cream-colored heart-shaped blossoms, and separate yellow tubers which resemble kernels of Indian corn. See *Dicentra*. Less commonly called *turkey-corn*.

squirrel-cup (skwúr'el-kup), *n.* The hepatica or liverleaf.

squirrel-fish (skwúr'el-fish), *n.* 1. Any fish of the family *Holocentridæ*, and especially of the genus *Holocentrus*. The numerous species are remarkable for the development of sharp spines almost everywhere on the surface of the body. The name refers to the noise they make when taken out of the water, which suggests the bark of a squirrel. *H. pentacanthus* of the West Indies, occasional on the United States coast, is chiefly of a bright-red color, with streaks shining lengthwise; its bright tints and quick movements make it one of the most conspicuous denizens of rocky tide-pools. See cut under *Holocentridæ*.

2. The serrano, *Diplectrum fasciulare*, distinguished by the segregation of the serrae at the angle of the preoperculum into two groups. It is common in the West Indies, and also along the southern United States coast to North Carolina.—3. A local name of the pinfish, *Lagodon rhomboides*.

squirrel-grass (skwur'el-grās), *n.* Same as *squirreltail*.

squirrel-hake (skwur'el-hāk), *n.* A gadoid fish, *Phycis chuss*; the white hake. See *chuss*, *hake*², 2, and cut under *Phycis*.

squirrel-hawk (skwur'el-hāk), *n.* The ferruginous rough-legged hawk, *Archibuteo ferrugineus*, the largest and handsomest bird of its genus, found in California and most other parts of western North America from British America southward: so called because it preys extensively upon ground-squirrels and related rodents. It is 23 inches long and 55 in extent; when adult the under parts are nearly white, with rich chestnut flags barred with black; the tail is mostly white, clouded with silver-gray, and tinged with bay; and the dark upper parts are much varied with brownish red.

Squirrel-hawk (*Archibuteo ferrugineus*).

squirrel-lemur (skwur'el-lēm'ēr), *n.* A lemur of the subfamily *Galagininae*, and especially of the genus *Galago*. See cut under *Galago*.

squirrel-lock (skwur'el-lok), *n.* Squirrel-fur from the under sides of the body. In gray squirrels it is pale-yellow, and it is used for lining winter garments.

squirrel-monkey (skwur'el-mung'ki), *n.* One of many kinds of small South American monkeys with a long, bushy, and non-prehensile tail: so called from their general aspect. (a) Any member of the family *Haplorhinae* or *Midiæ*; a marmoset. See cut under *Haplorhinae*. (b) Especially, a saimiri or titi of the genus *Chrysothrix*, as the death's-head, *C. sciureus*. See *saimiri*, and compare *saguin*.

Squirrel-monkey (*Chrysothrix sciureus*).

squirrel-mouse (skwur'el-mous), *n.* Same as *dormouse*.

squirrel-petaurist (skwur'el-pe-tā'rist), *n.* A squirrel-phalanger.

squirrel-phalanger (skwur'el-fā-lan'jēr), *n.* An Australian flying-phalanger, or petaurist, as *Petaurus (Belideus) sciureus*, a marsupial mammal resembling a squirrel in some respects.

squirrel-shrew (skwur'el-shrō), *n.* A small insectivorous mammal of the family *Tupaiaidæ*, as a banxing or a pentail. See cuts under *Tupaia* and *Ptilocercus*.

squirreltail (skwur'el-tāl), *n.* One of several grasses of the genus *Hordeum*. (a) In Great Britain, *H. maritimum*, and sometimes *H. murinum*, the wall-barley, and *H. secalinum* (*H. pratense*), the meadow-barley. (b) In the United States, chiefly *H. jubatum*, but in California also *H. murinum*, there naturalized and, as elsewhere, a pest, infesting wool, also the throats, etc., of animals, with its long barbed awns.

squirt (skwért), *v.* [E. dial. also *swirt*; perhaps < LG. *swirtjen*, squirt. The equiv. verb *squitter* can hardly be connected.] **I. trans.** 1. To eject with suddenness and force in a jet or rapid stream from a narrow orifice: as, to *squirt* water in one's face. The hard-featured miscreant . . . coolly rolled his tobacco in his cheek and *squirted* the juice into the fire-grate. *Scott*, *Guy Mannering*, xxxiii.

2. To spatter or bespatter.

They know I dare
To spurn or baffle them, or *squirt* their eyes
With ink. *B. Jonson*, *Apoll. to Poetaster*.

II. intrans. 1. To issue suddenly in a thin jet or jet-like stream, as from a syringe, or a narrow orifice suddenly opened; spurt.

The oars seemed to lash the water savagely, like a connected row of swords, and the spray *squirted* at each vicious stroke. *C. Reade*, *Hard Cash*, i.

2†. To prate; blab. [Old slang.]—**Squirting** cucumber. See *Ecballium*.

squirt (skwért), *n.* [*< squirt, v.*] 1. An instrument with which a liquid may be ejected in a strong jet-like stream; a syringe.

His weapons are a pin to scratch and a *squirt* to bespatter. *Pope*.

2. A small jet: as, a *squirt* of water.—3. A system of motion of a fluid, where the motion is everywhere irrotational, and where there is no expansion except at isolated points.—4. Looseness of the bowels; diarrhea. [Low.]—5. A small, insignificant, but self-assertive fellow; an upstart; a cad. [Colloq.]—6. A hasty start or spurt. [Colloq.]

How different from the rash jerks and hare-brain'd *squirts* thou art wont, Tristram, to transact it with in other humours—dropping thy pen, spurning thy ink about thy table and thy books. *Sterne*, *Tristram Shandy*, iii. 28.

7. A sea-squirt; an ascidian or tunicate.

squirtier (skwér'tēr), *n.* [*< squirt + -er*]. One who or that which squirts. *O. W. Holmes*, *Poet at the Breakfast-Table*, v.

squirt-gun (skwért'gun), *n.* A kind of squirter or syringe used as a toy by boys.

squiry (skwir'i), *n.* [*< ME. squerie, < OF. esquirie, escuierie, escuyerie, escuerie, escurie, < escuier, a squire: see squire*]. 1†. A number of squires or attendants collectively. *Rob. of Brunne*, *Chronicles*.—2. The whole body of landed gentry.

squitch (skwítch), *n.* A variant of *quitch*².

squitee (skwi-tē'), *n.* Same as *squeteague*.

squob. See *squab*¹, *squab*².

squorget, *n.* [ME.; origin obscure.] A shoot.

The *squorges* (tr. *L. flagilla for flagella*) hie and graffes from the folde. *Palladius*, *Husbandrie* (E. E. T. S.), p. 65.

squonket, *n.* An early spelling of *skunk*. *W. Wood*, 1634.

squyncet, *n.* See *squince*.

sqw-. A Middle English fashion of writing *sqw-*.

stab (stab), *v.*; pret. and pp. *stabbed*, ppr. *stabbing*. [*< ME. *staben* (found in the noun); perhaps < Ir. Gael. *stob*, thrust, push, stab, fix a stake in the ground, < *stob*, a stake, pointed iron or stick, stub; cf. *staff*]. **I. trans.** 1. To puncture, pierce, or wound with or as with a pointed weapon, especially with a knife or dagger.

I fear I wrong the honourable men
Whose daggers have *stabbed* Cæsar. *Shak.*, *J. C.*, iii. 2. 157.

He was not to be torn in pieces by a mob, or *stabbed* in the back by an assassin. *Macaulay*, *Hallam's Const. Hist.*

2. To thrust or plunge, as a pointed weapon. [Rare.]

If we should recount
Our baleful news, . . .
Stab poniards in our flesh till all were told.
The words would add more anguish than the wounds. *Shak.*, 3 Hen. VI., ii. 1. 93.

3. Figuratively, to pierce or penetrate; inflict keen or severe pain upon; injure secretly, as by slander or malicious falsehoods: as, to *stab*

one in the back (that is, to slander one behind his back).

Her silence *stabbed* his conscience through and through. *Lowell*, *A Legend of Brittany*, ii. 24.

4. In *masonry*, to pick (a brick wall) so as to make it rough, and thereby afford a hold for plaster.—To *stab armst*. See *arm*¹.—To *stab out*, to cut a continuous incision in with a sharp edge like that of a chisel, by making one cut in line with and in continuation of another, the first guiding the second, and so on.

II. intrans. 1. To aim a blow with a dagger or other pointed weapon, either literally or figuratively: as, to *stab* at a person.

None shall dare
With shortened sword to *stab* in closer war. *Dryden*, *Pal. and Arc.*, iii. 509.

She speaks poniards, and every word *stabs*. *Shak.*, *Much Ado*, ii. 1. 255.

stab (stab), *n.* [*< stab, v.*] 1. A thrust or blow with the point of a weapon, especially a dagger.

Hee neuer reuengeth with lesse than the *stab*. *Nashe*, *Pierce Penilence*, p. 25.

To fall beneath a base assasin's *stab*. *Rowe*, *Ambitious Step-Mother*, ii. 2.

2. A wound made with a sharp-pointed weapon.

His gash'd *stabs* look'd like a breach in nature
For ruin's wasteful entrance. *Shak.*, *Macbeth*, fi. 3. 119.

3. A wound given in the dark; a treacherous injury.

This sudden *stab* of rancour I misdoubt. *Shak.*, *Rich. III.*, iii. 2. 89.

Stabat Mater (stā'bat mā'tēr), [So called from the first words of the Latin text, *Stabat mater*, 'The mother (sc. of Jesus) was standing': *L. stabat*, 3d pers. sing. imperf. ind. of *stare*, stand (see *stand*); *mater* = Gr. *μήτηρ* = E. *mother*: see *mother*.] 1. In the *Rom. Cath. liturgy*, a sequence on the Virgin Mary at the crucifixion, written about 1300 by Jacobus de Benedictis (Jacopone da Todi). It has also been ascribed to Innocent III. and others, and was probably modeled on older hymns such as the stamothotokia of the Greek Church. It is sung after the Epistle on the Feast of the Seven Dolours of the Blessed Virgin Mary on the Friday before Good Friday and on the third Sunday in September.

2. A musical setting of this sequence. Famous examples have been written by Palestrina, Pergolesi, Rossini, Dvořák, and others.

stabber (stab'ēr), *n.* [*< stab + -er*]. 1. One who stabs; one who murders by stabbing.

A lurking, waylaying coward, and a *stabber* in the dark. *Dennis* (?), *True Character of Mr. Pope* (1716).

2. A pricker. (a) *Naut.*, a three-cornered awl used by sailmakers to make holes in canvas. (b) A leather-workers' pegging-awl. (c) An awl used in needlework to make holes for eyelets.

stabbing (stab'ing), *n.* [Verbal *n.* of *stab, v.*] In *bookbinding*, the making of perforations in the inner margins of pamphlets for the insertion of binding-thread or wire. Also called, in England, *holing*.

stabbing-machine (stab'ing-mā-shēn'), *n.* In *bookbinding*, a machine for perforating the inner margins of gathered pamphlets by means of stout steel needles operated by a treadle.

stabbing-press (stab'ing-pres), *n.* In *bookbinding*, same as *stabbing-machine*.

stably, *adv.* An old spelling of *stably*.

stabilify (stā-bil'i-fi), *v. t.*; pret. and pp. *stabilified*, ppr. *stabilifying*. [*< L. stabilis, steadfast, steady* (see *stable*²), + *facere*, make.] To render stable, fixed, or firm; establish. [Rare.]

Render solid and *stabilify* mankind. *Browning*. (*Imp. Dict.*)

stabiliment† (stā-bil'i-ment), *n.* [*< L. stabilimentum, a stay, support, < stabilire, make firm, fix: see stable*², *v.*] 1. Stabilishment; establishment. [Rare.]

If the apostolate, in the first *stabiliment*, was this eminency of power, then it must be so. *Jer. Taylor*, *Works* (ed. 1835), II. 32.

2. Support; prop. [Rare.]

They serve for *stabiliment*, propagation, and shade. *Derham*.

stabilisation, stabilise. See *stabilization, stabilize*.

stabilitate (stā-bil'i-tāt), *v. t.* [*< L. stabilita(-s), steadfastness, firmness* (see *stability*), + *-ate*².] To make stable; establish.

The soul about it self circungyratea
Her various forms, and what she most doth love
She oft before her self *stabilitates*. *Dr. H. More*, *Psychathanasia*, I. fi. 43.

The work reserved for him who shall come to *stabilitate* our empire in the East, if ever he comes at all.

W. H. Russell, *Diary in India*, I. 180.

stability (stā-bil'j-ti), *n.* [In ME. *stabilite*, *stabilete*; < OF. *stabilité*, F. *stabilité* = Sp. *estabilidad* = Pg. *estabilidade* = It. *stabilità*, < L. *stabilitas* (-s), firmness, steadfastness, < *stabilis*, firm, steadfast: see *stable*².] 1. The state or property of being stable or firm; strength to stand and resist overthrow or change; steadiness; firmness: as, the *stability* of a building, of a government, or of a system.

Take myn herte in-to thi ward,
And sette thou me in *stabilite!*
Hymns to Virgin, etc. (E. E. T. S.), p. 26.

What I see in England, in America, in Switzerland, is *stability*, the power to make changes, when change is needed, without pulling the whole political fabric down on the heads of the reformers.

E. A. Freeman, *Amer. Lects.*, p. 396.

2. Steadiness or firmness, as of purpose or resolution; fixity of character; steadfastness: the opposite of *fickleness* and *inconstancy*.

The natural generation and process of all things receive their order of proceeding from the settled *stability* of divine understanding.

Hooker, *Eccles. Polity*, I. 3.

3. Fixedness, as opposed to *fluidity*.

Fluidness and *stability* are contrary qualities. Boyle.

4. Continuance in the same state; permanence; specifically, an additional or fourth vow of continuance in the same profession, and residence for life in the same monastery, imposed upon monks by the Benedictine rule.—5. That character of equilibrium, or of a body in equilibrium, in virtue of which, if the position is disturbed, it tends to be restored. The term is especially used in this sense with reference to ships and floating bodies, in which the distance of the center of gravity below the metacenter is the measure of the *stability*. This may be considered as the difference between the distance of the center of flotation from the metacenter, called the *stability of figure*, and the distance of the center of gravity from the metacenter, called the *stability of load*. The *stability* under sail is also considered.—**Moment of stability**. See *moment*. = Syn. 1 and 2. Imobility, permanence. See *stable*².

stabilization (stab'il-i-zā'ahon), *n.* [*stabilize* + *-ation*.] The act of rendering stable; establishment. Also spelled *stabilisation*.

The transformation of "stable" matter into "unstable" that takes place during the assimilation of food is necessary, because, during the activity of the organism, forces are constantly becoming "fixed," and with this "fixation of force" goes "the *stabilization* of matter."

Mind, XII. 602.

stabilize (stab'il-iz), *v. t.*; pret. and pp. *stabilized*, ppr. *stabilizing*. [*L. stabilis*, firm (see *stable*²), + *-ize*.] To render stable. Also spelled *stabilise*.

A written literature, the habit of recording and reading, the prevalence of actual instruction, work yet more powerfully in the same direction; and when such forces have reached the degree of strength which they show in our modern enlightened communities, they fairly dominate the history of speech. The language is *stabilized*, especially as regards all those alterations which proceed from inaccuracy. Whittey, *Life and Growth of Lang.*, p. 168.

stabilite, *n.* A Middle English form of *stability*.
stable¹ (stā'bl), *n.* [*ME. stable*, *stabil*, < OF. *estable*, F. *étable* = Pr. *estable* = Sp. *establo* = Pg. *establo* = It. *stabbio*, a stable, stall, < L. *stabulum*, a standing-place, abode, habitation, usually in the particular senses, an inclosure for animals, as for cows (a stall), sheep (a fold), birds (an aviary), bees (a beehive), etc., also poet. a flock, herd, also a public house, tavern; < *stare*, stand: see *stand*. Cf. *stall*¹. The word exists also in *constable*.] 1. A building or an inclosure in which horses, cattle, and other domestic animals are lodged, and which is furnished with stalls, troughs, racks, and bins to contain their food and necessary equipments; in a restricted sense, such a building for horses and cows only; in a still narrower and now the most usual sense, such a building for horses only.

And under these Stages ben *Stables* wel y vowed for the Emperours Hors.

Mandeville, *Travels*, p. 17.

Shak., *Much Ado*, iii. 4. 48.

2. In *racine slang*, the horses belonging to a particular racing stable.—**Augean stable**. See *Augean*.

stable¹ (stā'bl), *v.*; pret. and pp. *stabled*, ppr. *stabling*. [*ME. stablen*, < OF. *establer*, < L. *stabulare*, lodge, house, stable, in pass. be lodged, stable, kennel, roost, < *stabulum*, an abode, stable: see *stable*¹, *n.*] *I. trans.* To put or keep in a stable, as horses.

Elizer was besy to serue sir Gawein and *stable* Gringalet, and helped him to vn-arne. Merlin (E. E. T. S.), iii. 555.

Here, *stable* me these steeds, and see them well bedded. Scott, *Monastery*, xiv.

II. intrans. To dwell or lodge in or as in a stable, as beasts.

In their palaces,
Where luxury late reign'd, sea-monsters whelp'd
And *stabled*. Milton, *P. L.*, xl. 752.

stable² (stā'bl), *a.* [*ME. stable*, < OF. *stable*, *estable*, F. *stable* = Sp. *estable* = Pg. *estavel* = It. *stabile*, < L. *stabilis*, firm, steadfast, < *stare*, stand: see *stand*.] 1. Firm; firmly fixed, settled, or established; that cannot be easily moved, shaken, or overthrown; steadfast: as, a *stable* structure; a *stable* government.

But the gode Cristene men that ben *stable* in the Feythe entren welle withouten perille. Mandeville, *Travels*, p. 282.

That all States should be *stable* in proportion as they are just, and in proportion as they administer justly, is what might be asserted. R. Choate, *Addresses*, p. 162.

2. Fixed; steady; constant; permanent.

With the *stable* Eye loke vpon theym rihte. *Babees Book* (E. E. T. S.), p. 3.

I have a *stable* Home-Employment proffered me by my Lord Scroop, Lord President of the North. Howells, *Letters*, I. iv. 26.

3. Fixed or firm in resolution or purpose; not wavering, fickle, or easily diverted: as, a man of *stable* character; also formerly, in a bad sense, obstinate; pertinacious.

Stable and abydyng ya malyce, pervaicax, pertinax. *Prompt. Parv.*, p. 471.

Stable equilibrium, *floatation*, etc. See the nouns. = Syn. 1 and 2. *Durable*, *Permanent*, etc. See *lasting*.

stable² (stā'bl), *v.* [*ME. stablen*, *stabeien*, *stabullen*, < OF. *establiir*, F. *établir* = OSp. *establiir* = It. *stabilire*, < L. *stabilire*, make firm or steadfast, establish, confirm, cause to rest, < *stabilis*, firm, steadfast: see *stable*², *a.* Cf. *stabilish*, *establish*.] *I. trans.* 1. To make stable; establish; ordain.

stacca (stak'ä), *n.* A Welsh dry measure, equal to three Winchester bushels.

staccatissimo (stāk-kā-tis'i-mō), *a.* [It., superl. of *staccato*, detached: see *staccato*.] In *music*, very staccato.

staccato (stāk-kä'tō), *a.* [*It. staccato*, pp. of *staccare*, for *distaccare*, separate, detach: see *detach*.] In *music*, detached; disconnected; abrupt; separated from one another by slight pauses: used both of single tones in a melody and of chords: opposed to *legato*. Three grades of staccato are sometimes recognized—the slightest being marked by dots over or under the notes with a sweeping curve (a), the next by dots without the curve (b), and the greatest by pointed strokes instead of dots (c). In each

case something is subtracted from the duration of each note, and given to a rest or silence. On keyboard-instruments like the pianoforte and organ, a staccato effect is produced by a variation of the usual touch in the action either of the fingers, of the wrist, or of the forearm; in bow-instruments like the violin, by an abrupt detached motion of the bow, or by a springing bow; in wind-instruments, by stopping the mouthpiece with the tongue (sometimes called *linguing*); and in the voice, either by a detached action of the breath or by a closing of the glottis. The word is also used sometimes to note an abrupt emphatic style of speaking or writing.—**Staccato mark**, in *musical notation*, a dot or pointed stroke added over or under a note to indicate a staccato rendering.—**Staccato touch**, in playing the pianoforte or organ, a touch designed to produce a clear and musical staccato effect.

stacher (stäch'ér), *v. i.* A Scotch form of *stacker*¹.

Stachydeæ (stā-kid'ē-ē), *n. pl.* [NL. (Bentham, 1836), < *Stachys* (assumed stem *Stachyd-*) + *-æ*.] A tribe of gamopetalous plants, of the order *Labiatae*. It is characterized by a five- or ten-nerved or -veined calyx, a corolla with the upper lip erect, concave, and commonly galeate or arched, the lower lip three-cleft and spreading, four perfect ascending or included stamens, with the forward pair longer, and a four-parted ovary forming in fruit four dry nutlets fixed by a small basal or slightly oblique scar. It includes 36 genera (of which *Stachys* is the type), classed in the subtribes *Scutellariæ*,

Melittæ, Marrubiceæ, and Lamieæ; other important genera are *Physostegia, Brunella (Prinella), Phlomis, Sideritis, Ballota, Galeopsis, Lamium, Leonurus, and Motueculla*. See cut under *self-heal*.

Stachys (stá'kis), *n.* [NL. (Rivinus, 1690), < L. *stachys*, < Gr. *στάχυς*, a plant, woundwort, *Stachys arvensis*, so called from the spiked flowers; a particular use of *στάχυς*, an ear of corn, a spike, in gen. a plant.] A genus of plants, of the order *Labiatae*, type of the tribe *Stachydeæ*. It is characterized by flowers with the five calyx-teeth equal or the posterior larger, the corolla-tube somewhat cylindrical and either included in or exerted from the calyx, the upper lip usually entire and arched, the anther-cells usually diverging, and the ovary forming nutlets which are obtuse or rounded at the top. Over 200 species have been described, of which about 170 are now thought to be distinct. They are widely dispersed through the temperate zones, occur within the tropics on mountains, and extend in a few cases into frigid and subalpine regions. They are lacking in Australia and New Zealand, and nearly so in Chili and in South Africa. Sixteen species occur in the United States; 5 are eastern, of which *S. aspera* is the most common, and *S. palustris* the most widely diffused. Several species, especially *S. sylvatica* of Europe, are known as *hedge-nettle*, and several others as *woundwort*, particularly *S. Germanica*. For *S. Betonica* see *betony*, and for *S. palustris* see *clown-heal*. Several species are occasionally cultivated for ornament, as *S. lanata*, a woolly-leaved plant much used for edgings. *S. affinis (S. tuberosa)*, an esculent recently introduced from Japan, cultivated in France under the name of *crocosne*, produces numerous small white tubers which may be eaten boiled or fried or prepared as a preserve. The tubers are said to decay rapidly if exposed to the air, and are kept in the ground or packed in sand; their taste is compared to that of the sweet potato, followed by a peculiar piquant flavor.

Stachytarpheta (stak'i-tär-fë'tä), *n.* [NL. (Vahl, 1804), so called from the thick flower-spikes; prob. an error for **Stachytarpheta*, < Gr. *στάχυς*, a spike, + *ταρπέος*, thick, dense, < *τρίφειν*, thicken.] A genus of gamopetalous plants, of the order *Verbenaceæ* and tribe *Verbeneæ*. It is characterized by sessile apical flowers with a narrow five-ribbed five-nerved calyx, a corolla with five spreading lobes, two perfect stamens with divaricate anther-cells, and a two-celled ovary ripening into two hard dry oblong or linear one-seeded nutlets. There are about 45 species, natives of tropical and subtropical America, with one species, *S. Indica*, also dispersed through tropical Africa and Asia. They are herbs or shrubs bearing opposite or alternate toothed and commonly rugose leaves. The flowers are white, blue, purple, or scarlet, solitary in the axils of bracts, and sessile or half-immersed in the axis of the more or less densely crowded terminal spikes. The species are sometimes called *bastard* or *false vervain*. *S. Jamaicensis* (now identified with *S. Indica*) is the *gervao* (which see), from its use sometimes called *Brazilian tea*. This and other species, as *S. mutabilis*, a handsome ever-blooming shrub, are occasionally cultivated under glass.

stack¹ (stak), *n.* [ME. *stack, stacke, stakke, stak, stac*, < Icel. *stakkr*, a stack of hay (cf. *stakka*, a stump), = Sw. *stack* = Dan. *stak*, a stack, pile of hay; allied to *stake*¹, and ult. from the root of *stick*¹. Hence *staggard*².] 1. A pile of grain in the sheaf, or of hay, straw, pease, etc., gathered into a circular or rectangular form, often, when of large size, coming to a point or ridge at the top, and thatched to protect it from the weather.

The whole prairie was covered with yellow wheat *stacks*. *Harper's Mag.*, LXXVIII, 531.

2. A pile of sticks, billets, poles, or cordwood; formerly, also, a pyre, or burial pile.

Against every pillar was a *stack* of billets above a man's height, which the watermen that bring wood down the Seine . . . laid there. *Bacon*, Nat. Hist., § 240.

3. A pile or group of other objects in orderly position. (a) In *printing*, a flat pile of paper, printed or unprinted, in a press-room or bindery. (b) *Milit.*, the pyramidal group formed by a number of muskets with fixed bayonets when stacked. (c) In *paper-making*, four or more calendering-rolls in position. (d) In libraries, a set of book-shelves one above the other, whether placed against a wall or standing in the middle of a room.

4. A number of funnels or chimneys standing together.—5. A single chimney or passage-way for smoke; the chimney or funnel of a locomotive or steam-vessel: also called *smoke-stack*. See cuts under *passenger-engine* and *puddling-furnace*.—6. A high detached rock; a columnar rock; a precipitous rock rising out of the sea. The use of the word *stack* with this meaning is very common on the coast of Scotland and the adjacent islands (especially the Orkneys), and is almost exclusively limited to that region.

Here [in Shetland] also, near 200 yards from the shore, stands the *Stack of Snalda*, a grand perpendicular column of rock, at least sixty, but more probably eighty, feet high, on the summit of which the eagle has annually nested from time immemorial. *Shirreff*, Shetland, p. 5.

7. A customary unit of volume for fire-wood and coal, generally 4 cubic yards (108 cubic feet). The three-quarter stack in parts of Derbyshire is said to be 105 or 106 cubic feet.—8. *pl.* A large quantity; "lots": as, *stacks* of money. [Slang.] = *Syn.* 1. *Shock*, etc. See *sheaf*.

stack¹ (stak), *v. t.* [ME. *stakken* (= Sw. *stakka* = Dan. *stakke*), *stack*; from the noun.] 1. To pile or build in the form of a stack; make into a regularly formed pile: as, to *stack* grain.

Your hay is well brought in, and better *stacked* than usual. *Swift*, To Dr. Sheridan, Sept. 13, 1725.

2. To make up (cards) in a designed manner, so as to secure an unfair advantage; pack.—To *stack arms*, to stand together muskets or rifles with fixed bayonets in definite numbers, as four or six together, so that they form a tent-shaped group.

stack² (stak). An obsolete or dialectal pret-erit of *stick*¹ (and *stick*²).

stackage (stak'áj), *n.* [< *stack*¹ + *-age*.] 1. Grain, hay, etc., put up in stacks. [Rare.] *Imp. Diet.*—2. A tax on things stacked. *Imp. Diet.*

stack-borer (stak'bör'er), *n.* An instrument for piercing stacks of hay, to admit air, where the hay is in danger of damage from heating.

stacken-cloud† (stak'n-klood), *n.* A cumulus cloud. The rapid formation and disappearance of small cumuli is a process constantly going on in particular kinds of weather. These little *stacken-clouds* seem to form out of the atmosphere, and to be resolved again as rapidly into it. *Forster*, Atmospheric Phenomena, p. 58.

stacker¹ (stak'er), *v. i.* [Sc. also *stakker, stacker*; < ME. *stakern*, also *stakelen*, < Icel. *stakra*, push, stagger, freq. of *staka*, push, punt; cf. *stjaka*, punt, push with a stake (*stjaki*, a punt-pole), = Dan. *stage* = Sw. *staka*, push, punt with a stake, = MD. *staken, stacken*, set stakes, dam up with stakes, give up work, = E. *stake*¹: see *stake*¹, *v.* Doublet of *stagger*.] 1. 2†. To stammer. *Prompt. Parv.*, p. 471.

stacker² (stak'er), *n.* [< *stack*¹ + *-er*.] An attachment to a threshing-machine for raising and delivering the straw from the machine, either upon a wagon or upon a stack. It consists of an endless-belt elevator running in a trough that can be placed at any angle, the whole being mounted on wheels, and connected by belting with the thresher, or with the engine or other motor. Also called *straw- or hay-elevator*, and *stacking-machine*. Another form of stacker consists of a portable derrick used with a hay-fork, and commonly called a *stacking-derrick*.

stacket (stak'et), *n.* [< G. *stacket*, a palisade, stockade; appar. connected with *stack*¹.] A stockade. *Scott*.

stack-funnel (stak'fun'el), *n.* A pyramidal open frame of wood in the center of a stack. Its object is to allow the air to circulate through the stack, and prevent the heating of the grain. See *stack-stand*.

stack-guard (stak'gård), *n.* A covering for a haystack or rick, whether for the top or the exposed side. Sometimes it is suspended from posts temporarily set up.

Stackhousiæ (stak-hou'si-ä), *n.* [NL. (Sir J. E. Smith, 1798), named after John Stackhouse, an English botanist (died 1819).] A genus of plants, type of the order *Stackhousiæ*. It consists of about 20 species, all Australian except 2, which are natives, one of New Zealand, the other of the Philippine Islands. They are small herbs with a perennial herbaceous or woody rootstock, producing unbranched or slightly divided flower-bearing stems and alternate linear or spatulate leaves, which are entire and slightly fleshy or coriaceous. The flowers are white or yellow, borne in spikes terminating the branches, or in clusters along the main stem. Each flower consists of a small three-bracted calyx, an elongated often gamopetalous corolla with five included stamens, a thin disk, and a free ovary with from two to five styles or style-branches.

Stackhousiæ (stak-hou-si-ä), *n. pl.* [NL. (H. G. L. Reichenbach, 1828), < *Stackhousia* + *-æ*.] An order of plants, of the polypetalous series *Discifloræ* and cohort *Celastrales*. It is characterized by a hemispherical calyx-tube, having five imbricated lobes, five erect imbricated and often united petals, and as many alternate stamens. From the related orders *Celastrineæ* and *Rhamnaceæ* it is especially distinguished by its lobed ovary, which is sessile, roundish, and from two- to five-celled, and ripens from two to five indehiscent globose or angled one-seeded carpels, which are smooth, reticulated, or broadly winged. It consists of the genus *Stackhousia* and the monotypic Australian genus *Macgregoria*. Also *Stackhousiaceæ*.

stacking-band (stak'ing-band), *n.* A band or rope used in binding thatch or straw on a stack.

stacking-belt (stak'ing-belt), *n.* Same as *stacking-band*.

stacking-stage (stak'ing-stäj), *n.* A scaffold or stage used in building stacks.

stack-room (stak'röm), *n.* In libraries, a room devoted to stacks of book-shelves; a book-room.

stack-stand (stak'stand), *n.* A basement of timber or masonry, sometimes of iron, raised on props and placed in a stack-yard, on which to build a stack. Its object is to keep the lower part of the stack dry, and exclude vermin. Such stands are

more common in European countries than in the United States.

stack-yard (stak'-yård), *n.* [< *stack*¹ + *yard*². Cf. *staggard*².] A yard or inclosure for stacks of hay or grain.

stacte (stak'tē), *n.* [< L. *stacte, stacta*, < Gr. *στακτή*, the oil that trickles from fresh myrrh or cinnamon, fem. of *στακτός*, dropping, oozing out, < *στάζειν*, drop, let fall drop by drop.] One of the sweet spices which composed the holy incense of the ancient Jews. Two kinds have been described—one, the fresh gum of the myrrh-tree, *Balsamodendron Myrrha*, mixed with water and squeezed out through a press; the other, the resin of the storax, *Styrax officinale*, mixed with wax and fat.

Take unto thee sweet spices, *stacte*, and onycha, and galbanum. *Ex.* xxx. 34.

stactometer (stak-tom'e-tēr), *n.* [Also *stactometer*; < Gr. *στακτός*, dropping, oozing out (see *stacte*), + *μέτρον*, a measure.] A glass tube having a bulb in the middle, and tapering to a fine orifice at one end, used for ascertaining the number of drops in equal bulks of different liquids. Also called *stalagmometer*.

stadd. A Middle English form of the past participle of *stead*.

stadda (stad'ä), *n.* [Origin obscure.] A double-bladed hand-saw, used for cutting comb-teeth. Also called *steady*.

staddle (stad'l), *n.* [Also *stadle*, and more orig. *staihel*, Sc. *staiheil*, contr. *stail*, *stale*, < ME. *stathel*, < AS. *stathol, stathul, stathel*, a foundation, base, seat, site, position, firmament (= OS. *stadal* = OFries. *stathul* = MLG. *stadel* = OHG. *stadal*, MHG. MHG. stapfen*, also OHG. *staphôn*, MHG. *stapfen*, step, tread, = *E. step*: see *step*, and cf. *OBulg. stopa*, a spur. The notion reflected on the def. as given in most dictionaries, that *staffier* means a 'staff-bearer,' and is connected with *staff*, is erroneous.] A footman; an attendant.

Before the dame, and round about,
March'd whiffers and staffiers on foot,
With lackies, grooms, valets, and pages,
In fit and proper equipages.

S. Butler, Hudibras, II. II. 650.

staffish (stáf'ish), *a.* [In Sc. corruptly *staffage*; *< staff + -ish*¹.] Like a staff; rigid; hence, intractable. *Ascham, Toxophilus* (ed. 1864), p. 111.

staff-man (stáf'man), *n.* A workman employed in silk-throwing.

staff-notation (stáf'nō-tā'shōn), *n.* In musical notation, the entire system of signs used in connection with the staff: opposed, for example, to the *tonic sol-fa notation*, in which no staff is used.

staff-officer (stáf'of'i-sér), *n.* An officer forming part of the staff of a regiment, brigade, army, or the like; in the United States navy, an officer not exercising military command.

staff-sergeant (stáf'sär'jent), *n.* A non-commissioned officer having no position in the ranks of a company, but attached to the staff of a regiment. In the United States service the staff-sergeants are the sergeant-major, ordnance-sergeant, hospital-steward, quartermaster-sergeant, and commissary-sergeant.

staff-sling (stáf'sling), *n.* [ME. *staffeslyngce, staffslyngce*; *< staff + sling*¹.] A weapon consisting of a sling combined with a short staff. The staff was held with both hands and whirled around. The weapon seems to have thrown larger missiles than the ordinary sling and with greater force. Distinguished from *cord-sling*. Also called *justibale, justibalus*.

Staff-sling, about the 16th century. (From Viollet-le-Duc's "Dict. du Mobilier français.")

This gaunt at him stonca caste

staff-surgeon (stáf'sér'jōn), *n.* A senior grade of surgeons in the British navy.

staff-tree (stáf'trē), *n.* A vine or tree of the genus *Celastrus*. The best-known species is the American *C. scandens*, a twiner with ornamental fruit, otherwise named *climbing bitter-sweet, wax-work, staff-vine, and fever-wig* (see the last, and cut under *bittersweet*). The seeds of the East Indian *C. paniculata* have long been in repute among Hindu physicians for their stimulating and acrid properties, and are applied externally or internally for the relief of rheumatism, etc. They yield an expressed oil, also an empyreumatic, known as *oleum nigrum*.

staff-vine (stáf'vīn), *n.* See *staff-tree*.

stag (stag), *n.* [*E. dial. also stag, Sc. also stag*; early mod. *E. stagg, stagge*; *< ME. steg, stagge*, *< Icel. steggr, steggi*, a male animal (a male fox, cat, a gander, drake, etc.), lit. 'mouther,' *< stüga* = *AS. stügan*, mount; see *styl*. Hence *staggard*¹, *staggon*.] 1. The male of various animals, especially of the deer tribe. Specifically—(a) The male red-deer or a deer of other large species of the genus *Cervus* in a restricted sense; a hart, of which the female is a hind; and particularly the adult hart, at least five years old, with antlers fully developed (compare *staggard*¹, and see cuts under *antler*); in heraldry, a horned deer with branched antlers. The stag of Europe is *Cervus elaphus*, now found wild in Great Britain only in the Highlands of Scotland. It is a magnificent animal, standing 4 feet high at the shoulder, with the antlers 3 feet long, having sometimes ten points and palmated at the crown: sometimes known as a *stag of ten*. The hind is hornless and smaller. The corresponding animal in North America is the wapiti, there called *elk (Cervus canadensis)*, larger than the European stag, with much-branched antlers sometimes upward of 4 feet long, not palmated at the end. (See cut under *wapiti*.) There are several Asiatic stags, among them the rusine deer (see *Rusa*, *sambur*). (b) A bull castrated when half-grown or full-grown; a bull-stag; a bull-segg. (c) A male fox; a dog-fox. (d) A young horse; a colt (sometimes a filly). (e) A gander. (f) A drake. (g) A pit or exhibition game-cock less than one year old; the cockerel of the game-fowl. (h) A turkey-cock. (i) The wren. [Local, Eng.] (j) A stag-beetle. [In most of these uses prov. Eng.]

2. In *com. slang*: (a) An outside irregular dealer in stocks, not a member of the exchange. (b) A person who applies for the allotment of shares in a joint-stock company, not because he wishes to hold the shares, but because he hopes to sell the allotment at a premium. If he fails in this he forbears to pay the deposit, and the allotment is forfeited.—3. A romping girl; a hoyden. [Prov. Eng.]—4. The color of the stag; a red dirty-brown color.

Come, my Cub, doe not scorne mee because I go in Stag,
in Buffe; heer's velvet too; thou seest I am worth thus
much in bare velvet.

Dekker, Satiromastix, I. 220 (ed. Pearson).

Royal stag, a stag that has antlers terminating in twelve or more points.

stag (stag), *v.*; pret. and pp. *staged*, ppr. *staging*. [*< stag, n.*] I. *intrans.* In *com. slang*, to act as a stag on the stock exchange. See *stag, n.*, 2.

II. *trans.* To follow warily, as a deer-stalker does a deer; dog; watch. [Slang.]

So you've been *staging* this gentleman and me, and listening, have you?

II. *Kingsley, Geoffry Hamlyn, v. (Davies).*

staggart, *n.* An obsolete spelling of *staggard*¹.

stag-beetle (stag'bō'tl), *n.* A lamellicorn coleopterous insect of the genus *Lucanus* or restricted family *Lucanidae* (which see), the males of which have branched mandibles resembling the antlers of a stag. *L. cervus* is the common stag-beetle of Eu-

Stag-beetle (*Lucanus cervus*), one half natural size.

ropc, and *L. elaphus* is the stag-beetle of the United States. The former is one of the largest of British beetles, distinguished by the enormous size of the horny and toothed mandibles in the male, and by the rather long elbowed antennae, which end in a perfoliated club, and are composed of ten joints, the first being very long. It is common in some localities in the neighborhood of London, and is often 2 inches long, of a black color. Other species are numerous in various parts of the world. See also cut under *Platycerus*.

stag-bush (stag'būsh), *n.* The black haw, *Viburnum prunifolium*.

stag-dance (stag'dāns), *n.* A dance performed by men only. [Colloq., U. S.]

stage (stāj), *n.* [*< ME. stage, < OF. estage, estaiqe, estauge, astage*, etc., a story, floor, stage, a dwelling-house, *f. étage*, story, stage, floor, loft, = *Pr. estaiqe*, a stage, = *It. staggio*, a stake, prop, banisters (ML. reflex *stadium, estagium*), *< ML. *statium*, lit. 'a place of standing,' or (as in *It. staggio*) 'that which stands,' *< L. stare*, pp. *status*, stand; see *statc*, *stand*. Cf. *étage*. In the sense of 'the distance between two points,' the word was prob. confused with *OF. estage*, *< L. stadium*, *< Gr. στάδιον*, a measure of distance; see *stadium*, *stade*², *stadie*.] 1. A floor or story of a house.

The Erie ascended into this tour quickly,
As soon as he myght to hiest stage came.
Rom. of Parthenay (E. E. T. S.), I. 4925.

Titul John stode at a window in the mornyng,
And lokid forth at a stage.
Robin Hood and the Monk (Child's Ballads, V. 8).

2. A house; building.

Ther buth aerlauna in the stage
That serueth the maiden of parage.
King Horn (E. E. T. S.), p. 58.

3. In *arch.*, the portion between a projection and the retreat next above it in a medieval buttress; also, one of the horizontal divisions of a window separated by transoms.—4. A floor or platform elevated above the ground or common surface, for the exhibition of a play or spectacle, for public speakers or performers, or for convenience of view, use, or access: as, a *stage* for a mountebank; a *stage* for speakers in public.

Give order that these bodies
High on a stage be placed to the view.
Shak., Hamlet, v. 2. 380.

Specifically—(a) A floor elevated for the convenience of performing mechanical work and the like; a scaffold; a staging: as, seamen use floating *stages*, and *stages* suspended by the side of a ship, for calking and repairing. (b) In *printing*, a low platform on which stacks of paper are piled. (c) A shelf or horizontal compartment, as one of the stages of a court-cupboard.

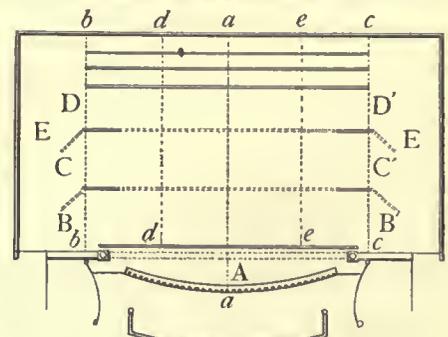

The number of *stages* in the buffet or sideboard indicates the rank of the owner.
S. K. Handbook, Corporation and College Plate.

(d) The platform on which an object is placed to be viewed through a microscope. (e) A wooden structure on a beach to assist in landing; a landing-place at a quay or pier. It sometimes rises and falls with the tide, or is lowered or raised to suit the varying height of the water.

Getting ye starte of ye ships that came to the plantation,
they tooke away their stage, & other necessary provisions
that they had made for fishing at Cap-Anne ye year before.

Bradford, Plymouth Plantation, p. 196.

(f) A raised platform on which theatrical performances are exhibited; the flooring in a theater on which the actors perform. In modern theaters the stage includes not only the part which can be seen from the auditorium, but

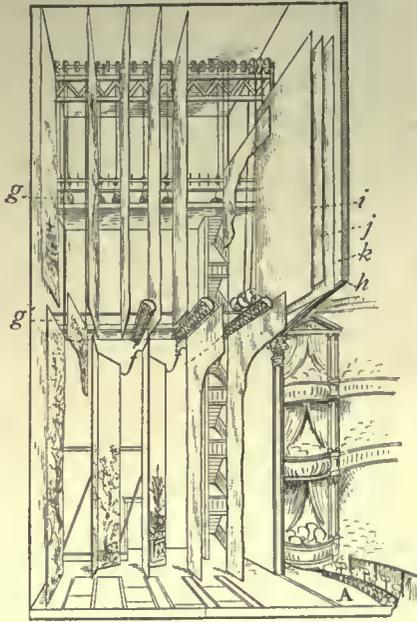

Floor-plan of Stage.

A, proscenium; B, C, D, first, second, and third prompt-entrances respectively; B', C', D', first, second, and third opposite-prompt-entrances respectively; E, wings; a, a, center; b, b, prompt-side; c, c, o.-p.-side; a', a', prompt-center; c', c', o.-p.-center.

also the spaces on each side, behind the proscenium-arch, which are used for shifting the wings or side-acenes, and are themselves called the *wings*. The part extending back from the orchestra to the proscenium-arch is called the *proscenium*. That side of the stage which is on the extreme left of the spectator is called the *prompt-side*, because in theaters which have no prompt-box the prompter stands there. The corresponding position to the spectator's right is called the *opposite-prompt-side* (or, briefly, *o.-p.-side*). Half-way between the center and the prompt-side is the *prompt-center*, the corresponding position to the

right being called the *opposite-prompt-center* (or, briefly, *o.-p.-center*). The stage is thus divided laterally into five parts, called in order the *prompt-side*, the *prompt-center*, the *center*, the *o.-p.-center*, and the *o.-p.-side*, and these designations extend through the whole depth of the stage, as well as up into the flies: thus the five ropes by which a drop-scene is raised or lowered are known as the *prompt-side*

Section of Stage, as seen from Prompt-side.

ropes, *prompt-center rope*, *center-rope*, etc. As regards depth, the stage is divided into *entrances* varying in number according to the number of the wings or side-scenes. That between the proscenium and the first wing is called on one side the *first prompt-entrance*, and on the other the *first o.-p.-entrance*. From the first wing to the next is the *second prompt-entrance* or *second o.-p.-entrance*, and so on. Everything above the stage from the top of the proscenium-arch upward is called the *flies*, and includes the borders, border-lights, all needed ropes, pulleys, and cleats, the beams to which these are attached, and the fly-galleries, from the lowest of which the drop-scenes are worked. The ancient Greek theater in its original form, as developed in the fifth century B. C., had no raised stage, the actors appearing in the orchestra amid the chorus.

All the world 's a stage,
And all the men and women merely players.
Shak., As you Like it, ii. 7. 139.

Mirth. Pray you help us to some stools here.
Pro. Where, on the stage, ladies?
Mirth. Yes, on the stage; we are persons of quality, I assure you, and women of fashion, and come to see and to be seen.
B. Jonson, Staple of News, Ind.
Hence—5. With the definite article, the theater; the drama as acted or exhibited, or the profession of representing dramatic compositions: as, to take to the stage; to regard the stage as a school of elocution.

There were also Poets that wrote onely for the stage, I meane playes and interludes, to recreate the people with matters of disporte.
Puttenham, Arte of Eng. Poesie, p. 20.

Lo! where the stage, the poor degraded stage,
Holds its warped mirror to a gaping age.
Sprague, Curiosity.

6. A place where anything is publicly exhibited; a field for action; the scene of any noted action or career; the spot where any remarkable affair occurs.

When we are born, we cry that we are come
To this great stage of fools. *Shak., Lear, iv. 6. 187.*

7. A place of rest on a journey, or where a relay of horses is taken, or where a stage-coach changes horses; a station.

I have this morning good news from Gibson; three letters from three several stages, that he was safe last night as far as Royston, at between nine and ten at night.
Pepys, Diary, June 14, 1667.

Hence—8. The distance between two places of rest on a road: in some countries a regular unit.

'Tis strange a man cannot ride a stage
Or two, to breathe himself, without a warrant.
Beau. and FL., Philaster, ii. 4.

Our whole Stage this day was about five hours, our Course a little Southerly of the West.
Maunderell, Aleppo to Jerusalem, p. 2.

9. A single step of a gradual process; degree of advance or of progression, either in increase or decrease, in rising or falling, or in any change of state: as, stages of growth in an animal or a plant; the stages of a disease; in *biol.*, a state or condition of being, as one of several

successive steps in a course of development: as, the larval, pupal, and imaginal stages of an insect; several stages of an embryo.

A blysfyl lyf thou says I lode,
Thou woldest knaw ther-of the stage.
Aliterative Poems (ed. Morris), l. 410.

stage-micrometer (stāj'mi-krom'e-tēr), *n.* In *microscopy*, a micrometer attached to the stage, and used to measure the size of an object under examination.

stage-plate (stāj'plāt), *n.* A glass plate with a narrow ledge along one edge, used on the stage of a microscope to hold an object when the microscope is inclined, and sometimes as the bottom plate of a growing-slide. *E. H. Knight.*

stage-play (stāj'plā), *n.* Originally, a dramatic performance; hence, a play or drama adapted for representation on the stage, as distinguished from a reading- or closet-play.

If the devil, or his instruments, should then tell him [a dying man] of a cup of sack, of merry company, of a stage-play, or a morris-dance, do you think he would then be so taken with the motion? *Baeter, Saints' Rest, iv. 3.*

stage-player (stāj'plā'ēr), *n.* An actor on the stage; one whose occupation is to represent characters on the stage.

Among slaves who exercised polite arts none sold so dear as stageplayers or actors. *Arbuthnot, Ancient Colina.*

stager (stāj'jēr), *n.* [*< stage + -er*.] 1†. A player.

Dare quit, upon your oaths,
The stagers and the stage-wrights too (your peers).
B. Jonson, Just Indignation of the Author.

2. One who has long acted on the stage of life; a person of experience, or of skill derived from long experience: usually with *old*.

Here let me, as an *old stager* upon the theatre of the world, suggest one consideration to you.
Chesterfield, To his Son, Dec. 20, O. S. 1748.

3. A horse used for drawing a stage-coach.

stage-right (stāj'rit), *n.* The proprietary right of the author of a dramatic composition in respect to its performance; the exclusive right to perform or authorize the performance of a particular drama. Compare *copyright*.

stagerite†, *n.* [*< stager + -ite*?; with a pun on *Stagirite*.] A stage-player. [Humorous.]

Thou hast forgot how thou amblest . . . by a play-wagon, in the high way, and took at mad Jeronmoes part, to get serulice among the Mimickes; and when the *Stagerites* banish't thee into the Isle of Dogs, thou turn'dst *Ban-dog*.
Dekker, Satiro-mastix, I. 229 (ed. Pearson).

stagery† (stāj'jēr-i), *n.* [*< stage + -ery*.] Exhibition on the stage.

Likening those grave controversies to a piece of *Stagery*, or Scene-work. *Milton, An Apology, etc.*

stage-setter (stāj'set'ēr), *n.* One who attends to the proper setting of a play on the stage.

M. Sardou is a born *stage-setter*, but with a leaning to "great machines," numbers of figurants, and magnificence.
The Century, XXXV, 544.

stage-struck (stāj'struk), *a.* Smitten with a love for the stage; possessed by a passion for the drama; seized by a passionate desire to become an actor.

"You are a precious fool, Jack Bunce," said Cleveland, half angry, and, in despite of himself, half diverted by the false tones and exaggerated gesture of the *stagestruck* pirate.
Scott, Pirate, xxxix.

stag-evil (stag'ē'vl), *n.* Tetanus or lockjaw of the horse.

stage-wagon (stāj'wag'on), *n.* 1. A wagon for conveying goods and passengers, by stages, at regularly appointed times.—2†. A stage-coach.

My sight *staggers*; the walls shake; he must be—do angels ever come hither?
Landor, Imag. Conv., Galileo, Milton, and a Dominican.

2. To hesitate; begin to doubt or waver in purpose; falter; become less confident or determined; waver; vacillate.

He *staggered* not at the promise of God through unbelief.
Rom. iv. 20.

It was long since resolved on,
 Nor must I *stagger* now in't.
Massinger, Unnatural Combat, II. 1.

The enterprise of the . . . newspapers stops at no expense, *staggers* at no difficulties.
Harper's Mag., LXXVII. 687.

=Syn. 1. *Totter*, etc. See *reel*.

II. *trans.* 1. To cause to reel, totter, falter, or be unsteady; shake.

I have seen enough to *stagger* my obedience.
Fletcher, Valentinian, III. 1.

Strikes and lock-outs occur, which *stagger* the prosperity, not of the business merely, but of the state.
N. A. Rev., CXXXIX. 515.

2. To cause to hesitate, waver, or doubt; fill with doubts or misgivings; make less steady, determined, or confident.

The question did at first so *stagger* me.
Shak., Hen. VIII., II. 4. 212.

'Tis not to die, sir,
 But to die unreveng'd, that *staggers* me.
Fletcher, Double Marriage, IV. 1.

3. To arrange in a zigzag order; specifically, in *wheel-making*, to set (the spokes) in the hub alternately inside and outside (or more or less to one side of) a line drawn round the hub. The mortise-holes in such a hub are said to be *dogging*. A wheel made in this manner is called a *staggered wheel*. The objects sought in this system of construction are increased strength and stiffness in the wheel.

stagger (stag'ér), *n.* [*< stagger, v.*] 1. A sudden tottering motion, swing, or reel of the body as if one were about to fall, as through tripping, giddiness, or intoxication.

Their trepidations are more shaking than cold ague-fits; their *staggers* worse than a drunkard's.
Rev. T. Adams, Works, I. 127.

The individual . . . advanced with a motion that alternated between a reel and a *stagger*.
G. A. Sala, Dutch Pictures, The Ship-Chandler. (Latham.)

2. *pl.* One of various forms of functional and organic disease of the brain and spinal cord in domesticated animals, especially horses and cattle: more fully called *blind staggers*. A kind of *staggers* (see also *gid* and *sturdy*) affecting sheep is specifically the disease resulting from a larval brain-worm. (See *cœnure* and *Tœnia*.) Other forms are due to disturbance of the circulation in the brain, and others again to digestive derangements. See *stomach-staggers*.

How now! my galloway nag the *staggers*, ha!
B. Jonson, Bartholomew Fair, IV. 3.

Hence—3. *pl.* A feeling of giddiness, reeling, or unsteadiness; a sensation which causes reeling.

John. And a kind of whimsle—
Mere. Here in my head, that puts me to the *staggers*.
B. Jonson, Fortunate Isles.

4. *pl.* Perplexities; doubts; bewilderment; confusion.

I will throw thee from my care for ever,
 Into the *staggers* and the careless lapse
 Of youth and ignorance.
Shak., All's Well, II. 3. 170.

Blind staggers. See def. 2, above.—**Grass-staggers**, the loco-disease in horses. See *loco*, 2, and *loco-weed*.

Stagger-bush (*Andromeda Mariana*). 1, flowering branch; 2, the fruits.

stagger-bush (stag'ér-bùsh), *n.* The shrub *Andromeda (Pieris) Mariana* of the middle and southern United States, whose leaves have been supposed to give the staggers to animals. Its fascicles of waxy pure-white or pinkish urn-shaped flowers are very beautiful, the habit of the bush less so. See cut in preceding column.

staggerer (stag'ér-ér), *n.* [*< stagger + -er*]. 1. One who or that which staggers.—2. A statement or argument that staggers; a poser; whatever causes one to stagger, falter, hesitate, or doubt. [*Colloq.*]

This was a *staggerer* for Dive's literary "gent," and it took him nearly six weeks to get over it and frame a reply.
Athenæum, Oct. 26, 1880, p. 560.

stagger-grass (stag'ér-grás), *n.* The *atamascolily*, *Zephyranthes Atamasco*: so called as supposed to cause staggers in horses.

Stanhurst, Descrip. of Eng., III. 4.

stag-headed (stag'hed'ed), *a.* Having the upper branches dead: said of a tree.

They were made of particular parts of the growth of certain very old oaks, which had grown for ages, and had at length become *stag-headed* and half-dead.
Harper's Mag., LXXVIII. 787.

stag-horn (stag'hörn), *n.* 1. A common clubmoss, *Lycopodium clavatum*. Also *stag's-horn*.

Or with that plant which in our date
 We call *stag-horn*, or fox's tail.
Wordsworth, Idle Shepherd-Boys.

2. A madreporic coral, *Madrepora cervicornis* and related species, used for ornament. See cut under *Madreporic*.—**Stag-horn fern**, a fern of the genus *Platyterium*, but especially *P. alcicornis*: so called from the fact that the fertile fronds are dichotomously forked like a stag's horn. The genus is small but widely diffused. The name is also sometimes applied to certain species of *Ophioglossum*.—**Stag-horn moss**. Same as *stag-horn*, 1.—**Stag-horn sumac**. See *sumac*.

stag-horned (stag'hórnd), *a.* Having long serrate antennæ, as the longicorn beetle *Acanthophorus serraticornis*.

staghound (stag'hound), *n.* A hunting-dog able to overtake and cope with a stag. (a) The Scotch deerhound or wolf-dog, of great speed, strength, and courage, standing 28 inches or more, with a shaggy or wiry coat, usually some shade of gray. They hunt chiefly by sight, and are used in stalking the red deer, for running down the game. (b) A large kind of fox-hound, about 25 inches high, trained to hunt deer by scent.

staginess (stá'ji-nes), *n.* [*< stagy + -ness*]. 1. Stagy or exaggerated character or style; conventional theatricality. Also *stageyness*.—2. A certain stage or state of an animal; by implication, that stage when the animal is out of condition, as when a fur-bearing animal is shedding. [*Colloq.*]

Those signs of shedding and *staginess* so marked in the seal.
Fisheries of U. S., V. II. 488.

staging (stá'jing), *n.* [Verbal *n.* of *stage, v.*] 1. A temporary structure of posts and boards for support, as in building; scaffolding.—2. The business of running or managing stage-coaches, or the act of traveling in them.

stagiōn, *n.* [Appar. an altered form of *staging*, simulating *stacion* (ME. *stacion*, *< OF. stacion, estacon, estachon, estagon, etc.*): see *stacion*.] Stage; a staging; a pier.

In these tydes there must be lost no lot of time, for, if you arrive not at the *stagiōns* before the tyde be spent, you must turne backe from whence you came.
Hakluyt's Voyages, II. 234.

Stagirite (staj'i-rit), *n.* [Also, erroneously, *Stagyrite*; = F. *Stagyrite* = Sp. Pg. *Estagirita* = It. *Stagirita*, *< L. Stagirites, Stagerites*, *< Gr. Σταγειριτης*, an inhabitant or a native of Stagira (applied esp. to Aristotle), *< Σταγειρα, Σταγειρος* (L. *Stagira*), a city of Macedonia.] A native or an inhabitant of Stagira, a city of Macedonia (Chalcidice), situated on the Strymonic Gulf; specifically, Aristotle, the "prince of philosophers" (384–322 B. C.), who was born there, and is frequently referred to as "the Stagirite."

The mighty *Stagyrite* first left the shore,
 Spread all his sails, and durst the deep explore;
 He steer'd securely, and discover'd far,
 Led by the light of the Mæonian star.
Pope, Essay on Criticism, I. 645.

stagnancy (stag'nán-si), *n.* [*< stagnan(t) + -cy*]. 1. The state of being stagnant or with-

out motion, flow, or circulation, as a fluid; stagnation.

There is nowhere stillness and *stagnancy*.
The Century, XXVII. 174.

2. *Pl. stagnancies* (-siz). Anything stagnant; a stagnant pool.

Though the country people are so wise
 To call these rivers, they're but *stagnancies*,
 Left by the flood.
Cotton, Wonders of the Peaks (1681), p. 55.

stagnant (stag'nánt), *a.* [*< F. stagnant = It. stagnante, < L. stagnan(t)-s*, ppr. of *stagnare*, form a pool of standing water, cause to stand; see *stagnate*.] 1. Standing; motionless, as the water of a pool or lake; without current or motion, ebb or flow: as, *stagnant water*; *stagnant pools*.

Where the water is stopped in a *stagnant* pond
 Danced over by the midge.
Bronning, By the Fireside.

2. Inert; inactive; sluggish; torpid; dull; not brisk: as, business is *stagnant*.

The gloomy slumber of the *stagnant* soul.
Johnson.

stagnantly (stag'nánt-li), *adv.* In a stagnant or still, motionless, inactive manner.

stagnate (stag'nát), *v. i.*; and *pp.* *stagnated*, ppr. *stagnating*. [*< L. stagnatus*, pp. of *stagnare* (*> It. stagnare = F. stagner*), form a pool of standing water, stagnate, be overflowed, *< stagnum*, a pool, swamp. Cf. *stank*.] 1. To cease to run or flow; be or become motionless; have no current.

I am fifty winters old;
 Blood then *stagnates* and grows cold.
Cotton, Anacreontic.

In this flat country, large rivers, that scarce had declivity enough to run, crept slowly along, through meadows of fat black earth, *stagnating* in many places as they went.
Bruce, Source of the Nile, I. 372.

2. To cease to be brisk or active; become dull, inactive, or inert: as, business *stagnates*.

Ready-witted tenderness . . . never *stagnates* in vain lamentations while there is room for hope.
Scott.

B. Jonson, Bartholomew Fair, i. 1.

4. To color by a process other than painting or coating or covering the surface. (a) To color (as glass) by something which combines chemically with the substance to be colored. (b) To color by the use of a thin liquid which penetrates the material, as in dyeing cloth or staining wood. (c) In *microscopy*, to impregnate with a substance whose chemical reaction on the tissue so treated gives it a particular color. The great value of staining for this purpose results from the fact that some tissues are stainable by a certain reagent to which others respond but feebly or not at all, so that some points, as the nucleus of cells, etc., may be more distinctly seen by the contrast in color. Many different preparations are used for the purpose in different cases.

5. To print colors upon (especially upon paper-hangings). [*Eng.*—] **6†.** To darken; dim; obscure.

Clouds and eclipses *stain* both moon and sun.
Shak., Sonnets, xxxv.

Hence—**7†.** To eclipse; excel.

O voyce that doth the thrush in shrillness *stain*.
Sir P. Sidney, Arcadia, iiii.

Her beauty shin'd most bright,
Far *staining* every other brave and comely dame
That did appear in sight.
Patient Grissel (Child's Ballads, IV. 209).

stalactite (stā-lak'tit), *n.* [= *F. stalactite*, *NL. stalactites*, *Gr.* *σταλακτός*, dropping, oozing out in drops: see *stalactic*.] 1. A deposit of carbonate of lime, usually resembling in form a huge icicle, which hangs from the roof of a cave or subterranean rock-opening, where it has been slowly formed by deposition from calcareous water trickling downward through cracks or openings in the rocks above. Water containing carbonic acid in solution, which it has gained in filtering through the overlying soil, has the power of dissolving carbonate of lime, which it deposits again upon evaporation; stalactites are hence common in regions of limestone rocks. They are sometimes white, and nearly transparent, showing the broad cleavage-surfaces of the calcite, as those of the cave near Matanzas in Cuba; but commonly they have a granular structure with concentric bands of pale-yellow to brown colors. In some caverns the stalactites are very numerous and large, and of great beauty in their endless variety of form, especially in connection with the stalagmites, the corresponding depositions accumulated beneath the stalactites upon the floor of the caverns. The caves of Adelsberg in Carniola and of Luray in Virginia are among the most celebrated for the beauty of their stalactites.

The grotto is perfectly dry, and there are no petrifications or stalactites in it.

Pococke, Description of the East, II. i. 41.

2. A similar form of some other mineral species, such as are occasionally observed, for example, of chalcodony, limonite, etc., but only sparingly and on a small scale.—3. A like form of lava sometimes observed in connection with volcanic outflows. Lava stalactites have been noted hanging from the roofs of lava caverns in the crater of Kilauea in Hawaii; and slender forms of a nearly uniform diameter of one fourth of an inch, and from a few inches to 20 or 30 inches in length, ornament the roofs of caverns in the lava stream which descended from Mauna Loa in the same island in 1881. Stalagmites of lava rise from the lava floor beneath.

stalactited (stā-lak'ti-ted), *a.* [*stalactite* + *-ed²*.] Covered with stalactites; also, formed in more or less semblance of stalactites.—**Stalactited work.** See *rustic work*, under *rustic*.

Chambers's Journal, No. 627.

U. S. Sturdy and steadfast in partizanship: in U. S. politics [*cap.*], noting various sections of the Republican party. See the phrase.

The epithet *Stalwart* as applied to a class of politicians was first used by Mr. Blaine in 1877 to designate those Republicans who were unwilling to give up hostility and distrust of the South as a political motive. In the present contest at Albany it has by a curious transformation been appropriated by the followers of Mr. Conkling to distinguish politicians faithful to his Machine.

The Nation, June 16, 1881.

Stalwart Republican, in *U. S. hist.*, a decided or thorough-going member of the Republican party; specifically, a member of that wing of the Republican party in the State of New York which in 1880 advocated the renomination of Grant as President for a third term and in 1881 supported Roscoe Conkling in his opposition to the administration of Garfield, and antagonized the "Half-Breeds" in 1881 and following years.—*Syn.* 4. *Stout, Sturdy*, etc. (see *robust*), sinewy, brawny, muscular, strapping, powerful, valorous, resolute.

II. n. 1. A strong or sturdy person.

stalworth (stâl'wérth), a. [*Early mod. E. also stalwoorth, stalworthe; < ME. stalworth, stalward, stalworthe, stalwurthe, stalwoorthe, stalewurthe, stelewurthe, stelewurthe, also stalworthy, stalwurthy (see stalworthy), < AS. stælwyrthe, found only once, in pl. stælwyrthe, in the sense 'good' or 'serviceable,' applied to ships; a compound peculiar to AS.: (a) prob. a contraction of *stathalwyrthe, lit. 'steadfast,' 'well-based,' 'firm-set,' etc., hence 'stout,' < stathal, stathel, foundation, base, seat, site, position, E. staddle, Sc. also contracted stail, stail (cf. AS. stælan, contracted from statholian, found, establish), + wyrthe, weorth, wurth, good, excellent, worth: see staddle and worth². Cf. the equiv. statholfæst, steadfast, firm, stable (< stathol, foundation, + fæst, firm, fast), and stedfæst, E. stead-*

fast (the AS. *weorth* and *fæst* as the second element of adj. compounds being used rather as adj. formatives than as independent words). Such contraction is not common in AS., and the form *stælwyrthe* has generally been otherwise explained: (b) *< stalu* (in comp. *stæl-*), stealing, theft, + *weorth, wurth*, worth, worthy (see *stale¹* and *worth²*), but the sense 'worthy of theft,' 'worth stealing,' hence 'worth taking for use' ('*captu dignæ*,' Gibson), cannot apply to men, and the sense 'good at stealing,' suggested by some, even if it were etymologically admissible, could not apply to ships. (c) In another view, lit. 'worthy of place,' i. e. fit for its place or use, serviceable, *< AS. steal, steall*, also sometimes, esp. in comp., *stæl*, a place, stall, + *weorth, wurth*, worth, worthy (see *stall¹* and *worth²*). The full form *stall-* occurs in ME. *stalhorthely*, a var. of *stalworthy*, and in the mod. surname *Stallworthy*. In any view, the ME. forms *staleworth, stalewurthe, stelewurthe, stalwurthe*, with medial *e*, must be regarded as irregular. In fact the orig. meaning of the compound appears to have been lost, and the ME. variations must be due to simulation of one or other of the words above considered. Hence, by further variation, *stalwarth*, and now *stalwart*, which is no longer regarded as a compound.] I. Steadfast; firm-based.

Transverse section of the anther of *Isopyrum*, showing the dehiscence and the pollen-grains.

sac or body of two cells placed side by side and filled with a powdery substance, the pollen. This pollen, when mature, is discharged from the anther through various openings or pores. Theoretically the stamen is the homologue of a leaf, in which the two cells of the anther represent the folded halves of the blade, while the connective represents the midrib and the filament the petiole of the leaf. The pollen represents the parenchyma of the leaf. The stamens of a flower are collectively called the *androcæcium*. When both stamens and pistils are present in the same flower it is said to be hermaphrodite or perfect; when only stamens are present the flower is said to be staminate or male. The number of stamens varies in different plants from one to one hundred or more, but is generally constant for the same species, and forms an important element in the system of classification. The classes in the Linnean sexual system were based upon the number and position of the stamens; and in the natural system they are still an important factor. In regard to their insertion, stamens may be hypogynous, epigynous, or perigynous, or the flower may be gynandrous (see these words). See also *ents under anther, anthophore, diadelphous, epigynous, extrorse, introrse*, and many plant-names.—**Barren stamen**. Same as *sterile stamen*.—**Included stamens**. See *include*.—**Stamina of reason**, first truths.—**Sterile stamen**, in bot., an organ or body which belongs to the series of stamens, or androcæcium, but which does not produce pollen; an imperfect stamen, as that produced by certain plants of the family *Scrophulariaceæ*; a staminodium.

Stamerynge lu goyng, idem quod *stakerynge*, *waverynge*.
Prompt. Parv., p. 472.

=**Syn. 1.** *Falter*, *Stammer*, *Stutter*. He who *falters* weakens or breaks more or less completely in utterance; the act is occasional, not habitual, and for reasons that are primarily moral, belong to the occasion, and may be various. He who *stammers* has great difficulty in uttering anything; the act may be occasional or habitual; the cause is confusion, shyness, timidity, or actual fear; the result is broken and inarticulate sounds that seem to stick in the month, and sometimes complete suppression of voice. He who *stutters* makes sounds that are not what he desires to make; the act is almost always habitual, especially in its worst forms; the cause is often excitement; the result is a quick repetition of some one sound that is initial in a word that the person desires to utter, as c-c-c-c-catch.—**Stammering bladder**, a bladder whose muscles act irregularly and spasmodically, causing painful urination. *Payet*.

II. trans. To utter or pronounce with hesitation or imperfectly; especially, to utter with involuntary breaks or catches: frequently with *out*.

16. *pl.* Legs. [Old slang.]—**Atmospheric stamp.** See *atmospheric*.—**Ball stamp**, a peculiar form of stamp (so named from the inventor) in use at the mines on Lake Superior. It is a direct-action stamp, the stem of the stamp being the continuation of the piston-rod of the steam-engine which is the motive power.—**Leavitt stamp**, an improved form of Ball stamp, used chiefly in the Lake Superior mines. One head is capable of crushing 250 tons of ore in 24 hours. This stamp works like the Naamth hammer, the force of gravity being aided by steam-pressure.—**Stamp Act**, an act imposing or regulating the imposition of stamp-duties; in *American colonial history*, an act, also known as *Grenville's Stamp Act*, passed by the British Parliament in 1765, providing for the raising of revenue in the American colonies by the sale of stamps and stamped paper for commercial transactions, real-estate transfers, lawsuits, marriage licenses, inheritances, etc.: it also provided that the royal forces in America should be billeted on the people. The act was to go into effect November 1st, 1765, but it aroused intense opposition, led by the assemblies of Virginia, Massachusetts, and other colonies. A "Stamp Act Congress," with delegates from many of the colonies, met at New York in October, 1765, and a petition against this and other repressive measures was sent to England. The Stamp Act was repealed in March, 1766, but the agitation was one of

the leading causes in effecting the revolution.—**To put to stamp**, to put to press; begin printing. Hall, Hen. VIII., an. 25.

stampage (stamp'pāj), *n.* [*stamp* + *-age*.] An impression; a squeeze.

No copy [of the rock inscription] was obtained until October, 1838, when the traveller Masson most carefully and perseveringly made a calico stampage and an eye-copy.
Encyc. Brit., XIII. 118.

stamp-album (stamp'al'būm), *n.* A blank book or album used by collectors for the classification and display of postage- and revenue-stamps.

stamp-battery (stamp'bat'ēr-i), *n.* A series of stamps in a machine for comminuting ores. E. H. Knight.

stamp-block (stamp'blok), *n.* A hollow wooden block in which meales are pounded before being cooked. [South Africa.]

stamp-collecting (stamp'kō-lek'ting), *n.* The act or practice of collecting postage- or revenue-stamps. See *philately*.

stamp-collector (stamp'kō-lek'tor), *n.* 1. A collector or receiver of stamp-duties.—2. One who collects postage- or revenue-stamps as articles of interest or curiosity; a philatelist.

stamp-distributor (stamp'dis-trib'ū-tēr), *n.* An official who issues or distributes government stamps.

stamp-duty (stamp'dū'ti), *n.* A tax or duty imposed on the sheets of parchment or paper on which specified kinds of legal instruments are written. Stamp-duties on legal instruments, such as conveyances and deeds, are chiefly secured by prohibiting the reception of them in evidence unless they bear the stamp required by the law. Stamp-duties were first levied in England in the reign of William and Mary.

stampede (stamp-pēd'), *n.* [Formerly also *stampido*; < Amer. Sp. *estampida*, a stampede, a particular use of Sp. *estampido*, *estampido* (= *Sp. estampido*), a crack, crash, loud report; connected with *estampar*, stamp: see *stamp*, *v.*] 1. A sudden fright seizing upon large bodies of cattle or horses, and causing them to run for long distances; a sudden scattering of a herd of cattle or horses; hence, any sudden flight or general movement, as of an army, in consequence of a panic.

With every herd this stampede occurs; and, watching the proceedings, I hold that a drover ought to have rather more patience than Job.

Mortimer Collins, Thoughts in my Garden, II. 131.

2. Any sudden unconcerted movement of a number of persons actuated by a common impulse: as, a stampede in a political convention for a candidate who seems likely to win. Stampedes in American politics have been common since the Democratic convention of 1844.

At the first ring of the bell a general stampede took place; some twenty hungry souls rushed to the dining-room.
L. M. Alcott, Hospital Sketches, p. 63.

stampede (stamp-pēd'), *v.*; pret. and pp. *stampeded*, ppr. *stampeding*. [*stampede*, *n.*] **I. intrans.** 1. To become generally panic-stricken; take suddenly to flight, as if under the influence of a panic; scamper off in fright: said of herds or droves.—2. To move together, or take the same line of conduct, under the influence of any sudden and common impulse. See *stampede*, *n.*, 2.

II. trans. 1. To cause to break and run as if panic-stricken; disperse or drive off suddenly through panic or terror.

Those most trying times when . . . the cattle are stampeded by a thunder-storm at night.

T. Roosevelt, Hunting Trips, p. 7.

2. To cause to move or act in a mass through some sudden common impulse: as, to stampede a political convention for a candidate.

stampedo (stamp-pē'dō), *n.* Same as *stampede*.

A sudden stampedo or rush of horses. Irving.

stamper (stamp'pēr), *n.* [*stamp* + *-er*]. 1. One who stamps: as, a stamper in the post-office.—2. An instrument for stamping; a stamp.—3. *pl.* The feet; also, shoes. [Old slang.]

Strike up, Piper, a merry, merry dance,
That we on our stampers may foot it and prance.

Brome, The Jovial Crew, i.

4. A stamping-machine. (a) A machine for cleaning textile fabrics, consisting of a tub revolving horizontally, and a series of wooden stamps or pestles operated by suitable machinery. (b) In *gunpowder-manuf.*, a machine used in small mills, consisting of ten or twelve stamps of hard wood, arranged in a row, each stamp having a bronze shoe. The material to be pulverized is placed in cavities in a block of solid oak. (c) In *porcelain-manuf.*, a mill for pulverizing calcined flints preparatory to treatment in the grinding-vat.

5. *pl.* In *ornith.*, the *Calcatores*.

stamp-hammer (stamp'ham'ēr), *n.* A direct-acting hammer where the hammer-block is lifted

vertically, either by cams or friction-rollers, or, as is more commonly the case, by steam- or water-pressure acting on a piston in a closed cylinder. Percy.

stamp-head (stamp'hēd), *n.* In a stamp, the rectangular or cylindrical mass of iron at the end of the stamp-stem, which by its weight gives force to the blow. To the lower end of the stamp-head is attached the shoe, a thinner piece of chilled iron or steel, which can easily be replaced, when too much worn for service, without the necessity of replacing the whole stamp-head.

stamping (stamp'ping), *n.* [*ME. stampyng*; verbal *n.* of *stamp*, *v.*] 1. The act of pounding, beating, or impressing as with a stamp.—2. Something stamped, or made by stamping-machinery.

Groups of U-shaped soft iron stampings.
Electrical Rev., XXII. 174.

3. Same as *blocking*, 1 (a).
stamping-ground (stamp'ping-ground), *n.* A place of habitual resort; a customary haunt. [Slang, U. S.]

It's with them fellows as it is with wild animals. You can just keep clear of them if you want, stay far out of their stamping-ground, hold yourself aloof all the time.
W. M. Baker, New Timothy, p. 176.

stamping-machine (stamp'ping-mā-shēn'), *n.* A machine for forming articles of hard materials, as metal, whether for the first rough shaping, or for decorative finishing.

stamping-mill (stamp'ping-mīl), *n.* Same as *stamp-mill*, 1.

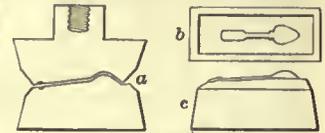

stamping-press (stamp'ping-pres), *n.* 1. In *sheet-metal work*, a power-machine for making hollow ware, as pans, bowls, kitchen-utensils, etc. Machines of this class are a development of the earlier stamping-machines, the direct blow or stamp having been replaced

in many instances by a continuous pressure. The essential features of the machine are two dies brought one over the other by a direct blow or by pressure. Where a continuous pressure is used by the employment of a screw, cam, toggle-joint, or eccentric, forcing one die slowly upon the other, the sheet of metal is pressed and stretched into shape. The dies are often compound—one part cutting out the blank from the sheet and another part compressing it gradually into shape—or so arranged that one part takes the blank, and holds it firmly by the edges, while a central part stretches it to the required shape. In some forms of these machines a series of dies are used successively, the blanks being pressed in part, then annealed and re-pressed until the final shape is secured. Also called *stamping-machine*.

2. A small hand-press or seal-press used by public officials and others for impressing stamps upon or affixing them to documents, either in obedience to legal requirement or as a matter of convenience or custom. Compare *seal-press*.—3. Same as *blocking-press*. See also *arming-press*.

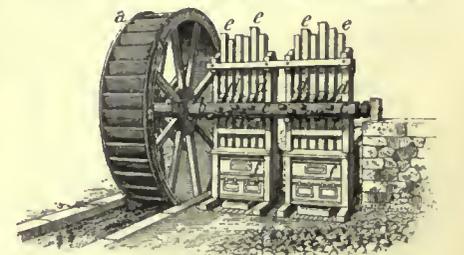

stamp-machine (stamp'mā-shēn'), *n.* In *paper-manuf.*, a machine for beating rags, etc., into pulp. It consists of a number of rods fixed into a stout oak beam, and working alternately with a set below, the water passing off through an opening covered with a fine sieve. The machine is of German origin, and is used only in small factories.

stamp-mill (stamp'mīl), *n.* 1. In *metal*, a crushing-mill employing stamps or pestles to crush ores or rock to powder preparatory to treatment for extracting metals. The stamps, which are often of great size and weight, are arranged in

Die used in a Stamping-press.

a, vertical section of die for forming a spoon;
b, plan of upper die; c, side view of lower die.

Stamp-mill.

a, undershot water-wheel; b, shaft; c, cams; d, wipers; e, lifters of pine, beach, or oak, with chilled cast-iron stamps; f, kofers (otherwise called mortars or battery-boxes) which receive the "stuff" or broken ore and retain it until reduced to the required degree of fineness. The ore is fed to the stamps from an inclined platform at the rear of the kofers.

a row, and are usually raised by means of wipers and cams on a revolving shaft turned by steam- or water-power. The cams release the stamps in turn, and they fall on the ore placed in chambers below, the sides of these chambers being perforated to allow the escape of the crushed mate-

rial as soon as reduced to the required fineness, while a stream of water sweeps the almea away as they are produced. Such a row of stamps is also called a *stamp-battery*. In another form of stamp-mill the stamp is placed at the end of the piston-rod of a steam-cylinder, on the principle of the steam-hammer. Also called *stamping-mill*.

2. An oil-mill employing a pestle or pestles to crush seeds and fruits.

stamp-note (stamp'nōt), *n.* In com., a memorandum delivered by a shipper of goods to the searcher, which, when stamped by him, allows the goods to be sent off by lighter to the ship, and is the captain's authority for receiving them on board. *Simmonds*.

stamp-office (stamp'of'is), *n.* An office where government stamps are issued, and stamp-duties and taxes are received.

stance (stans), *n.* [Early mod. E. also *staunce*; < OF. *stance*, *estance*, a station, situation, condition, also a stanchion, = Pr. *estansa*, station, condition, = Sp. Pg. *estancia*, a dwelling, = It. *stanza*, a station, stanza, etc., < ML. *stantia*, a chamber, a house, lit. a standing, < L. *stan(t)-s*, ppr. of *stare*, stand; see *stand*. Cf. *stanza*.] 1. A station; a site; an area for building; a position; a stand. [Scotch.]

He fetched a gambol upon one foot, and, turning to the left hand, failed not to carry his body perfectly round, just into its former stance.

Urquhart, tr. of Rabelais, i. 35. (*Davies*.)

The boy answered his invitation with the utmost confidence, and danced down from his stance with a galliard sort of step.

Scott, Kenilworth, x.

2†. Space; gap; distance.

Since I can do no better, I will set such a stance between him and Pasiphala that all this town shall not make them friends.

Gascoigne, tr. of Ariosto's *Supposes*, ii. 3.

3†. A stave or stanza.

The other voices sung to other music the third stance.

Chapman, Maak of Middle Temple and Lincoln's Inn.

stance (stans), *v. t.* [*stance*, *n.*] To station; place.

He ne'er advanc'd from the place he was stand'd.

Battle of Sheriff-Muir (Child's Ballads, VII. 162).

stanch¹, **staunch¹** (stānch, stānch), *v.* [*ME. stanchen*, *staunchen*, *stawnchen*, *stonchen*, < OF. *estancher*, *estanchier*, *stanchier*, etc., cause to cease flowing, stop, stanch, F. *étancher*, stanch, = Pr. Sp. Pg. *estancar* = It. *stancare* (ML. *stancare*), stānch, < L. *stagnare*, stagnate, cause to cease flowing, make stagnant, ML. also stanch (blood), L. *stagnare*, cease flowing, become stagnant, < *stagnum*, a pool, standing water; see *stagnant*, *stagnate*. Cf. *stank¹*, *staunch²*, *stanchion*.] 1. *trans.* 1. To cause to cease flowing; check the flow of.

I will *stanche* his floudes, and the great waters shal be restryaned.

Bible of 1551, Ezek. xxxi.

Over each wound the balm he drew,
And with cobweb lint he stanch'd the blood.

J. R. Drake, Culprit Fay, p. 34.

2. To stop a flow from; dry, as a wound, by the application of a styptic.

Then came the hermit out and bare him in,
There stanch'd his wound.

Tennyson, Lancelot and Elaine.

3. To quench; allay; assuage. [Obsolete or archaic.]

Al were it that a riche covoytes man hadde a ryver fleyng al of gold, yit shoulde it never *staunchen* his covytesyte.

But helpe to *stanche* hom of malice.

Babees Book (E. E. T. S.), p. 307.

II. intrans. 1. To stop flowing; be stanch'd. [Rare.]

Immediately her issue of blood *stanch'd*. *Luke* viii. 44.

2†. To stop; cease.

And the wynde *stanchede* and blew no more,
And the meyt trunde into a bryzt cloude.

Chron. Vilodun., p. 127. (*Halliwel*.)

stanch¹, **staunch¹** (stānch, stānch), *n.* [*ME. stanch¹*, *staunch¹*, *v.*] That which stanches; that which quenches or allays.

O frendship, flour of flowers, O lively sprite of lyfe,
O sacred bond of blissful peace, the stalworth *stanch* of strife.

Poems of Vncertaine Auctors, On Frendship. (*Richardson*.)

stanch² (stānch), *n.* [An assimilated form of *stank¹*; < OF. *cstanchc*, a pool, fish-pond, etc.: see *stank¹*.] A flood-gate in a river for accumu-

lating a head of water to float boats over shallows; a weir. See *stank¹*. *E. H. Knight*.

Formerly rivers used to be penned in by a series of *stanches* near shoal places, which held up the water, and, when several boats were collected in the pool above a *stanch*, it was suddenly opened, and the sudden rush of water floated the boats over the shallows below.

Encyc. Brit., XX. 573.

stanch³, **staunch²** (stānch, stānch), *a.* [*ME. staunche*, < OF. *estanc*, fem. *cstanche*, *estene*, *estenck*, *estain*, dried, dry, exhausted, wearied, tired, vanquished, F. *étanche*, stanch, water-tight, = Pr. *estane*, still, unchangeable, = Sp. *estanco* = Pg. *estancoque*, stanch, water-tight, = It. *stanco*, tired; from the verb shown under *stanch¹*, *staunch¹*. By reason of the fundamental nature of the notion 'stand' and its innumerable phases, and of the phonetic stability of the syllable *sta*, this root has produced an immense number of derivatives, which are in E. chiefly from the L. source—namely, from the E., *stand*, *n.*, *perstand*, etc., *understand*, *withstand*, etc.; from Scand., *stau¹*; from the L. Band-stand, a balcony or raised platform in a hall or park for the accommodation of a band or company of musicians.—**Brazier-stand**, a stand, usually consisting of a ring mounted on three feet, to support a brazier.—**Conducting-stand**, a rack or frame of wood or metal for holding a score for the conductor of a chorus or an orchestra.—**Grand stand**, in any place of public resort, the principal stand from which spectators view races, games, or any other spectacle.

We . . . will follow Mr. Egremont to the *grand stand*, where ladies now sit in their private boxes much as they sat some eighteen hundred years ago to smile on the dying gladiator in the amphitheatres.

Whyte Melville, White Rose, II. iv.

Stand of ammunition. See *ammunition*.—**Stand of armor, stand of arms**, a suit of armor and weapons taken together, or, in modern times, the arms and accoutrements sufficient for one man. See *arm², n.*—**Stand of colors**, a single color or flag. *Wilhelm*.—**To be at a stand**, to be brought to a standstill; be checked and prevented from motion or action.—**To get a stand**. See the quotation.

Occasionally these panic fits . . . make them [buffalo] run together and stand still in a stupid, frightened manner. . . . When they are made to act thus it is called in hunters' parlance *getting a stand* on them; and often thirty or forty have been killed in one such stand, the hunter hardly shifting his position the whole time.

T. Roosevelt, Hunting Trips, p. 274.

To make a stand. (a) To come to a stop; stand still.

When I beheld this hill, and how it hangs over the way,
I suddenly made a stand, lest it should fall on my head.

Bunyan, Pilgrim's Progress, p. 95.

(b) To take a position for defense or resistance; stop and fight.—**To put to a stand**, to stop; arrest by obstacles or difficulties: as, he was *put to a stand* for want of men and money.

standage¹ (stan'dāj), *n.* [*< stand + -age.*] 1†. A stall.

Such strawe is to bee given to the draughte oxen and cattell at the *standage* [read *standage*] or the barnedores.
Archæologia, XIII. 383.

2. In *mining*, a place underground for water to stand or accumulate in; a lodge or sump.

standard¹ (stan'dård), *n.* [Early mod. E. also *standerd*; < ME. *standard, standert, stonard*, < late AS. *standard* (= MD. *standaerd*, D. *standaard* = MLG. *stanthart*, LG. *standere* = MHG. *standert, stanthart, G. standarte* (perhaps < It.) = Sw. *standar* = Dan. *standart*), < OF. *estandard, estendard*, an ensign, standard, a point of rallying, F. *étendard*, an ensign, standard, flag, = Pr. *estandard, estandard* = Sp. *estandarte* = It. *estandardo*, an ensign, standard (cf. OF. *estandard, estandelle, standale* = It. *stendale*, an ensign); ML. *standardum*, an ensign, standard (cf. *standardus*, a stronghold, a receptacle of water): (a) either < OHG. *stantan* (MHG. *standen*), stand, = E. *stand*, etc., + *-art*, or (b) < ML. **stendere* (It. *stendere* = OF. *estendre*, etc.), < L. *extendere*, spread out, extend; see *extend*. The connection with *stand* is certain in the other uses: see *standard², standard³*.] 1. *Milit.*, a distinctive flag; an ensign. Specifically—(a) The principal ensign of an army, of a military organization such as a legion, or of a military chieftain of high rank. In this sense it may be either a flag or a solid object carried on a pole, as the Roman eagle, or the dragon shown in the Bayeux Tapestry, or a combination of a flag with such an object. (b) A large flag, long in the fly in proportion to its hoist, carried before princes and nobles of high rank, especially when in military command or on occasions of ceremony. A standard of Edward III. was shaped like a long pennon, swallow-tailed, and bearing the royal arms at the hoist, the rest of the pennon being covered with fleurs-de-lis and lions semé. A standard of the Earl of Warwick, carried during the Wars of the Roses, had a cross of St. George, with the rest of the flag covered with small copies of the badge of the Nevilles, a bear and ragged staff. At the present time the word is used loosely. The so-called royal standard of Great Britain, though a standard in function, is properly a banner in form. The flags of the British cavalry regiments are called *standards*, to distinguish them from the *colors* of the infantry regiments. In the United States army a silk standard goes to every mounted regiment; it bears the national arms on a blue ground, with the number and name of the regiment underneath the eagle. See cut under *tabarum*.

2. In *bot.*, same as *banner*, 5.—3. In *ornith.*: (a) Same as *vexillum*. (b) A feather suggesting a standard by its shape or position. See cuts under *Semioptera* and *standard-bearer*.—4†. A standard-bearer; an ensign or ancient. [Rare.]

Thou shalt be my lieutenant, monster, or my *standard*.
Shak., Tempest, iii. 2. 18.

To slope the standard. See *slope*.

standard² (stan'dård), *n.* and *a.* [*< ME. *standard*, < OF. *estandard, estendard*, also (AF.) *estander*, ML. (AL.) *standardum*, standard of weight and measure; appar. a particular use in England of OF. *estandard*, etc., an ensign, standard, as 'that to which one turns,' or, as in *standard³*, 'that which is set up': see *stan-*

ard¹, standard³.] *I. n.* 1. A weight, measure, or instrument by comparison with which the accuracy of others is determined; especially, an original standard or prototype, one the weight or measure of which is the definition of a unit of weight or measure, so that all standards of the same denomination are copies of it. The only original standard of the United States is a Troy pound. See *pound, yard, meter*.

It is . . . necessary to have recourse to some visible, palpable, material *standard*, by forming a comparison with which all weights and measures may be reduced to one uniform size.
Blackstone, Com., I. vii.

2. In coinage, the proportion of weight of fine metal and alloy established by authority. The standard of gold coins in Great Britain is at present 22 carats—that is, 22 parts of fine gold and 2 of alloy; and the sovereign should weigh 123.274 grains Troy. The standard of silver coins is 11 ounces 2 pennyweights of pure silver and 18 pennyweights of alloy, making together 1 pound Troy; and the shilling should weigh 87.273 grains. The gold and silver coins in current use in the United States are all of the fineness 900 parts of the precious metal in 1,000, the gold dollar weighing 25.8 grains, and the silver dollar 412.5 grains.

That precise weight and fineness, by law appropriated to the pieces of each denomination, is called the *standard*.
Locke, Considerations concerning Raising [the Value of Money].

3. That which is set up as a unit of reference; a form, type, example, instance, or combination of conditions accepted as correct and perfect, and hence as a basis of comparison; a criterion established by custom, public opinion, or general consent; a model.

Let the judgment of the judicious be the *standard* of thy merit.
Sir T. Browne, Christ. Mor., II. 8.

Let the French and Italians value themselves on their regularity; strength and elevation are our *standard*.
Dryden, Epic Poetry.

The degree of differentiation and specialization of the parts in all organic beings, when arrived at maturity, is the heat *standard* as yet suggested of their degree of perfection or highness.
Darwin, Origin of Species, p. 313.

[The respiratory act] ranging, during the successive periods of life, from 44 respirations per minute in the infant soon after birth, to the average *standard* of 18 respiratory acts in the adult aged from thirty to sixty years.
J. M. Carnoehan, Operative Surgery, p. 126.

Measuring other persons' actions by the *standards* our own thoughts and feelings furnish often causes misconception.
H. Spencer, Study of Sociol., p. 114.

4. A grade; a rank; specifically, in British elementary schools, one of the grades or degrees of attainment according to which the pupils are classified. The amount of the parliamentary grant to a school depends on the number of children who pass the examination conducted by government inspectors—the rate per pupil differing in the different standards.

Every boy in the seventh and sixth *standards* would have held out his hand, as they had been well drilled on that subject.
N. and Q., 7th ser., VIII. 51.

Average standard, in *copper-mining*. See *average²*.—**Double standard**, a monetary standard based upon both gold and silver as the materials of the circulating medium, as distinguished from a *single standard* based upon either gold or silver.—**Dutch standard**, a set of samples of sugar put up in bottles bearing the official seal and label of the Dutch government (whence the name), and recognized as the standard of the commercial world in fixing the quality of sugars. The set comprises 16 different grades, numbered, according to the different colors of the samples, from 5 (the darkest color) to 20 (the most refined) inclusive. The quality of the sugar to be tested is determined by comparison with the samples or the standard, and the sugar is named accordingly as No. 10, 13, etc.—**Gold standard**, a monetary standard based upon gold as the material of the unit of value.—**Metallic standard**, a gold or silver standard.—**Multiple standard**, a monetary standard representing a considerable number of important articles in frequent use, the fluctuations in their value neutralizing one another and thus causing a substantial uniformity of value among them.—**Mural standard**, any standard set up on a wall, as, for instance, a standard of measurement for convenience in testing rules, tapes, measuring-chains, etc.—**Photometric standard**. See *photometric*.—**Silver standard**, a monetary standard based upon silver as the material of the monetary unit.—**Single standard**. See *double standard*.—**Tabular standard**. Same as *multiple standard*.

II. *a.* Serving as a standard or authority; regarded as a type or model; hence, of the highest order; of great worth or excellence.

In comely Rank call ev'ry Merit forth;

See *cell*, 8.—**Standard arrow**, an arrow used in the latter part of the fifteenth century, and probably the heavier arrow conformed to certain regulations: it is distinguished from the *flight-arrow*.—**Standard battery**, a battery in which the electromotive force is perfectly constant, so that it can be used as a standard.—**Standard compass**. See *compass*.—**Standard pitch**. See *pitch*, 3.—**Standard solution**, a standardized solution (which see, under *solution*).—**Standard star**, a star whose position and proper motion is particularly well known, and on that account is recom-

mended for use in determining the positions of other stars, instrumental constants, time, latitude, and the like.—**Standard time**, the reckoning of time according to the local mean time on the nearest or other conventionally adopted meridian just an even number of hours from the Greenwich Royal Observatory. See *time*.

standard² (stan'dård), *v. t.* [*< standard², n.*] To bring into conformity with a standard; regulate according to a standard.

To *standard* gold or silver is to convert the gross weight of either metal, whose fineness differs from the standard, into its equivalent weight of standard metal.

Bithell, Counting-House Dict. (Encyc. Dict.)

standard³ (stan'dård), *n.* and *a.* [Early mod. E. also *standerd, standert*; < ME. **standard* (?), < MD. *standaerd*, a post, pillar, column, mill-post, trophy (cf. OF. *estandard*, a kind of torch, < D.); a var., conformed to *standaerd*, an ensign, etc., of *stander*, a post, mill-post, etc.: see *stander*. The E. *standard³* is thus a var. of *stander*, with various senses, mostly modern. It has been more or less confused with *standard¹* and *standard²*.] *I. n.* 1. An upright; a small post or pillar; an upright stem constituting the support or the main part of a utensil. Specifically—(a) The upright support or stem of a lamp or candlestick; hence, also, a candlestick; especially, a candelabrum resting on the floor in a church.

A small pipe inserted into an opening in a water-main.—3. An upright gas-pipe connecting the retort and the hydraulic main.—4. In a steam-engine, a boiler supply-pipe elevated enough to cause water to flow into the boiler in spite of the pressure of steam.—5. A pipe on the eduction-pipe of a steam-pump to absorb the concussions due to the pulsation and irregularities caused by the necessary use of bends and changes in the direction of pipes.—6. An upright pipe, open at the top, used in connection with a hot-water heating system to allow room for the expansion of the water when heated; an expansion-pipe.—7. A portable pipe used to afford a high head of water at fires. One section of a pipe is secured to trunnions, while other sections are kept in a rack, and attached when required. When the hose is coupled, the long pipe is raised by means of a wheel, and the lower end is connected with the water-supply. Another more recent form is a derrick, elevated by two cylinders and pistons analogous in construction to these parts in a steam-engine; but the pistons are moved by the pressure of carbonic acid gas, generated, immediately as wanted, from the reaction of sulphuric acid upon a solution of sodium bicarbonate in a suitable generator. The pipe is elevated above the derrick by a wire rope, pulleys, and a hand-winch. A movable butt or nozzle, which can be inclined to any desired angle up or down, or turned in any direction horizontally, is controlled by a man on the lower platform of the derrick, and a copious stream can thus be poured into or upon the top of a tall building. Also called *water-tower*.

standpoint (stand'point), *n.* [Tr. G. *stand-punkt*; as *stand* + *point*]: a word objected to by purists.] The point at which one stands; especially, the position from which one's observations are taken and one's opinions formed or delivered; the point of view; the mental situation.

The attraction of different speakers from Sunday to Sunday stimulates thought, each treating his theme from his own *standpoint*.

A. B. Alcott, Table-Talk, p. 91.

The great snare of the psychologist is the confusion of his own *standpoint* with that of the mental fact about which he is making his report.

W. James, Prin. of Psychol., I. 196.

stand-rest (stand'rest), *n.* A stool, bracket, or the like serving to support a person in an almost upright position, as the miserere in medieval stalls: applied especially to a contrivance like a high stool, but with the top or seat sloping instead of horizontal.

standstill (stand'stil), *n.* and *a.* [Cf. *stand still*: see *stand*, *v.*, and *still*, *a.*] 1. *n.* A halt; a pause; a stop, especially in consequence of obstruction, exhaustion, or perplexity.

In consequence of this fancy the whole business was at a *standstill*.

Greville, Memoirs, Nov. 29, 1823.

II. a. Deficient in progress or advancement; unprogressive: as, a *standstill* policy.

stand-up (stand'up), *a.* 1. Standing; erect; upright; high.

He was a tall youth now; . . . he wore his full-coat and his *stand-up* collars, and watched the down on his lip with eager impatience.

George Eliot, Mill on the Floss, II. 7.

2. Specifically, in *pugilism*, noting a fair boxing-match, where the combatants stand manfully to each other, without false falls: as, a fair *stand-up* fight.

His face marked with strong manly furrows, records of hard thinking and square *stand-up* fights with life.

O. W. Holmes, Poet at the Breakfast Table, I.

stane (stān), *n.* An obsolete and dialectal (Scotch) form of *stone*.

stane-raw (stān'rā), *n.* [Also *staniraw*, *stein-raw*, *stancy-raw*, rock-liverwort, appar. < *stane*, stone, + *raw* (origin obscure).] A foliaceous lichen, *Parmelia saxatilis*, used in the Scotch Highlands for dyeing brown; black erottles. [Orkney.]

stang¹ (stang), *n.* [Cf. ME. *stange* (prob. in part < Scand.), < AS. *stang*, *steng*, *stonge*, a pole, rod, bar, stick, stake, = MD. *stanghe*, D. *stang* = MLG. *stange* = OHG. *stanga*, MHG. *stange*, G. *stange*, a pole, = Icel. *stǫng* (*stang*) = Sw. *stång* = Dan. *stang*, a pole, *stang* (cf. It. *stanga*, a bar, spar, < G.); < *stingan* (pret. *stang*), pierce, sting: see *sting*¹. Cf. *stang*².] 1. A wooden bar; a pole. [Obsolete or prov. Eng. or Scotch.]

He halchez al hole the halucz to-geder, & sythen on a stiff *stange* stoutly hem henges.

Str. Garwayne and the Green Knight (E. E. T. S.), I. 1614.

"Ye strake ower hard, Steenie—I doubt ye foundered the child." "Ne'er a bit," said Steenie, laughing; "he has braw broad shouthers, and I just took the measure o' them wi' the *stang*."

Scott, Antiquary, xxvi.

2. The bar of a door. *Florio*.—3. A rod, pole, or perch used in the measurement of land. *Scrib't*, Gulliver's Travels, i. 2. [Prov. Eng.]—**Riding the stang**, in Scotland and the north of England, a mode of punishing brutal or unfaithful (or, sometimes, henpecked) husbands, or other offenders, by carrying them mounted on a stang through the town, with an accompaniment of jeers and rough music. The culprits have sometimes suffered by proxy, or, latterly, only in effigy.

stang¹ (stang), *v. t.* [Cf. *stang*¹, *n.*] To cause to ride on a stang.

This Word *Stang*, says Ray, is still used in some Colleges in the University of Cambridge, to *stang* Scholars in Christmas Time being to cause them to ride on a Colt-staff or Pole, for missing of Chapel.

Bourne's Pop. Antiq. (1777), p. 410.

stang² (stang), *n.* [Cf. ME. *stange*, a sting; < *sting* (pret. *stang*), sting: see *sting*¹.] 1. A sting. [Obsolete or Scotch.]

Quen the stanged muzi se
The neddor on the tree ther hange,
Thai ware al warisht of their *stange*.

Holy Rood (ed. Morris), p. 117.

My curse upon thy venom'd *stang*,
That shoots my tortured gums along.

Burns, Address to the Toothache.

2. The weever, a fish. Also *stangster*. [Prov.] **stang**² (stang), *v.* [Cf. Icel. *stanga*, sting, goad, < *stǫng*, a pole, stake: see *stang*², *n.*, and cf. *stang*¹.] 1. *trans.* To sting.

The neddres that ware fel
Stanged the folk of israel.

Holy Rood (E. E. T. S.), p. 117.

II. intrans. 1. To throb with pain; sting. *Hallivell*.—2. To cause a sharp, sudden pain; inflict a sting.

But for how lang the flee may *stang*,
Let inclination law thai.

Burns, Jolly Beggars.

[Obsolete or dialectal in all uses.]

stang³. An obsolete or dialectal preterit of *sting*¹.

stang⁴, *n.* An obsolete form of *stank*¹.

Stangeria (stan-jě'ri-ä), *n.* [NL. (T. Moore, 1853), named after Dr. *Stanger* of Natal, one of the first to collect specimens of the plant.] A genus of gymnospermous plants, of the order *Cycadaceæ* and tribe *Zamiæ*, made by some a tribe *Stangeriæ*. It is characterized by a strobile with scales imbricated in alternating series, a thick naked napiform caudex, and leaf-segments with a strong midrib and numerous unbranched or forking nerves. There are one or two species, natives of Natal. They are singular plants with the smooth irregular trunk only about a foot high or nearly subterranean, from which rise a few coarse long-stalked pinnate fern-like leaves, inflexed in the bud, the leaflets straight in the bud, linear-lanceolate, scalloped, spiny-toothed or cleft, and traversed by parallel forking veins. The fruit, a thick downy strobile or cone, is borne on a stalk surrounded by circular concave woolly bracts overlapping in two or three ranks. The male plants bear cylindrical cones with numerous stamens on the under side of their compound scales. *S. paradoxa*, in allusion to its thick, round caudex, is called *Hottentot's-head*; small articles, as necklaces and snuff-boxes, are sometimes made from its seeds.

stanhope (stan'hōp), *n.* [So called after a Mr. *Stanhope*, for whom it was orig. contrived.] A light two-wheeled carriage without a top.

When the carriages met again, he stood up in his *stanhope*, . . . ready to doff his hat.

Thackeray, Vanity Fair, xix.

Stanhopea (stan-hō'pē-ä), *n.* [NL. (Frost, 1829), named after Philip Henry, Earl *Stanhope*, president of the London Medicobotanical Society.] A genus of orchids, of the tribe *Vandææ*, type of the subtribe *Stanhopeæ*. It is characterized by a loose raceme of a few large flowers with spreading and nearly equal sepals, a thick fleshy lip which is commonly wavy or twisted, a straight erect or incurved column usually prolonged and two-winged above, and pollinia with flattened stalks and scale-shaped glands. The peculiar lip is highly polymorphous and complex, bearing lateral lobes which are often thickened into a solid mass forming a spherical, oblong, or saccate hypochilium, a middle lobe or epichilium which is itself often three-lobed and attached by a distinct joint, and sometimes at its base other appendages, lobes or horns—the metachilium. There are about 20 species, natives of tropical America from Brazil to Mexico. They are epiphytes with very short stems bearing many sheaths and a single large plicate leaf. The stem soon thickens into a fleshy pseudobulb, from the base of which the flower-stem proceeds. The flowers are very remarkable for their structure, size, and rich colorings, usually brown-spotted, yellow, or purple; for their great fragrance, whence the recently introduced perfume called *stanhopea*; and for their growth downward, not upward as in ordinary plants—a habit first discovered by the accidental breaking of a flower-pot in which the blossoms had buried themselves in the earth. They are now cultivated under glass in hard-wood baskets with interstices through which the flowers protrude.

Stanhope lens, press. See *lens, press*¹.

stanhoscope (stan'hō-skōp), *n.* [Cf. *Stanhope lens*] + Gr. *σκοπεῖν*, view.] A form of simple magnifying-glass, a modification of the *Stanhope lens*, in which the surface away from the eye is plane instead of convex.

staniel (stan'yel), *n.* [Also *stanyel*, *stannyel*, also (with the consonant *i* or *y* following *n* assimilated to *n*) *stannel*, formerly *stannell*, or assimilated to *ch*, *stanchel*, *stanchil*; < ME. *staniel*, *stanyel*, earlier **stanzelle*, < AS. *stāngella*, *stāngilla*, a kestrel (erroneously used to gloss L. *pellicanus*) (= G. *stingall*, a staniel), < *stān*, stone, rock, + **gella*, **gilla*, < *gellan*, *gillan*, *giellan*, yell, scream, a secondary form related to *galan*, sing: see *stone* and *yell*, *gale*¹. The word is thus nearly similar in its second element to *nightingale*¹. The E. form *stone-gall* is partly from the AS, with the long vowel retained, and partly (as to the 2d element) due to the G. form; the form *standgall*, with the same terminal syllable, simulates *stand*, and the form *standgale* (as if equiv. to *windhover*) is a simulated form, as if < *stand* + *gale*¹.] The kestrel or windhover, *Falco tinnunculus* or *Tinnunculus alaudarius*. See cut under *Tinnunculus*.

Fab. What a dish o' poison has she dressed him!
Sir To. And with what wing the *staniel* checks at it!
Shak., T. N., II. 5. 124.

stanielry (stan'yel-ri), *n.* [Cf. *staniel* + *-ry*.] The art or practice of hawking with staniels; ignoble falconry. *Lady Althony*, sig. I. 4. (*Nares*.) **stank**¹ (stangk), *n.* [E. dial. also assimilated *stanch* (see *stanch*²); < ME. *stank*, *stanc*, *stauk*, *stang*, < OF. *estanc*, F. *étang* (Walloon *estank*, *stank*) = Pr. *estanc* = Sp. *estanque* = Pg. *tanque* (ML. *stanca*), a dam to hem in water, < L. *stagnum*, a pool of stagnant water: see *stagnate*, *stagnant*. Cf. *stanch*¹; also cf. *tank*.] 1. A body of standing water; a pool; a pond. [Obsolete or prov. Eng.]

And allie be it that men clepen it a See, zit ia it nouth
See ne Arm of the See; for it is but a *Stank* of fresche
Watir, that is in lengthe 100 Furlonges.

Manderiville, Travels, p. 115.

Chaucer, Parson's Tale.

2. A tank; a ditch. [Prov. Eng. or Scotch.]

stank¹ (stangk), *v. t.* [Cf. *stank*¹, *n.*, or perhaps an unassimilated form of the related verb *stanch*¹, *q. v.*] To dam up. *Fletcher, Poems*, p. 154. [Obsolete or prov. Eng.]

stank² (stangk), *a.* [Early mod. E. also *stanch*, *stank*; < OF. *estanc*, tired, = Pr. *estanc*, still, immovable, = It. *stanco*, tired; cf. Sp. *estanco*, = Pg. *estanque*, water-tight, *stanch*: see *stanch*³, *staunch*², a doublet of *stank*².] Exhausted; weary. *Florio*; *Spenser, Shep. Cal., September*.

stank³ (stangk), *n.* Old preterit of *stink*.

stank-hen (stangk'hen), *n.* [Cf. *stank*¹ + *hen*¹.] The moor-hen or gallinule, *Gallinula chloropus*. [Scotch.]

stankie (stangk'ki), *n.* Same as *stank-hen*. [Scotch.]

stannaburrow (stan'a-bur'ō), *n.* [Prop. *stannaburrow*, < *stanner* + *burrow*², 1, 2.] See the quotation (the etymology there suggested is erroneous).

Leaving the stream a little to the right, we shall notice several small heaps of stones placed at intervals along the slope. These little mounds, which are met with in various parts of Dartmoor, are called by the moor-men *stannaburrows*, which name is probably derived from the same root as the word *stannary*, and they were probably tin bounds set up by the miners.

W. Crossing, Ancient Crosses of Dartmoor, p. 69, quoted in N. and Q., 7th ser., V. 45.

stannary (stan'a-ri), *a.* and *n.* [Also *stannery*; < ML. *stannaria*, a tin-mine, < L. *stannum*, tin: see *stannum*.] 1. *a.* Relating to tin, tin-mines, or the working of tin: as, "stannary courts," *Blackstone, Com., III. vi.*—**stannary court**, a court instituted at a very early period in English history for the purpose of regulating the affairs of the tin-mines and tin-miners of Cornwall.

II. n.; pl. *stannaries* (-riz). A region or district in which tin is mined: the English form of the Latin *stannaria* (or *stammaria*, as written in a charter of the third year of King John, 1201). The miners themselves were called *stannatores* or (rarely) *stammatores*.

For they wrongfully claim all the County of Devon to be their *Stannary*.

Petition to Parliament, 1 Ed. III., MS. in Rec. Office, [quoted in De La Beche's Geol. Rep. on Cornwall.]

If by public laws the mint were ordained to be only supplied by our *stannaries*, how currently would they pass for more precious than silver mines!

Bp. Hall, Select Thoughts, § 17.

stannate (stan'āt), *n.* [Cf. *stannic* + *-ate*¹.] A salt of stannic acid.

stannel (stan'el), *n.* See *staniel*.

stanner (stan'er), *n.* [Origin obscure.] A small stone; in the plural, gravel. *Jamieson*. [Scotch.]

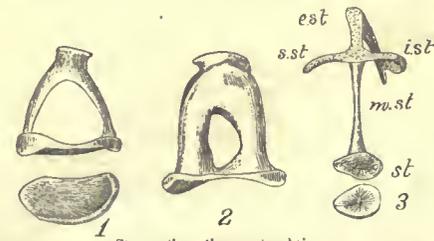

stannery¹, *a.* and *n.* See *stannary*.
stannery² (stan'ér-i), *a.* [M.E. *stann[e]ry*; < *stanner* + *-y*.] Gravelly; stony. *Palladius*, *Husbandrie* (E. E. T. S.), p. 86. [Obsolete or Scotch.]
stannic (stan'ik), *a.* [= F. *stannique*; < L. *stannum*, tin, + *-ic*.] Of or pertaining to tin; procured from tin: specifically applied to those compounds in which tin appears as a quadrivalent atom: as, *stannic acid*, SnO(OH)₂, a hydrate obtained from stannous oxid, which unites with bases to form salts called *stannates*.
stanniferous (sta-nif'ér-us), *a.* [< L. *stannum*, tin, + *ferre* = E. *bear*.] Containing or affording tin.
stannine (stan'in), *n.* [< L. *stannum*, tin, + *-ine*.] A brittle steel-gray or iron-black ore of tin, of a metallic luster, consisting of the sulphides of tin, copper, and iron, and generally zinc, found in Cornwall; tin pyrites. Also called, from its color, *bell-metal ore*.
stannite (stan'it), *n.* [< L. *stannum*, tin, + *-ite*.] Same as *stannine*.
stannotype (stan'ô-tip), *n.* [< L. *stannum*, tin, + Gr. *τύπος*, type.] In *photog.*, a picture taken on a tin plate; a tin-type or ferrotype. *Imp. Dict.*
stannous (stan'us), *a.* [< L. *stannum*, tin, + *-ous*.] Of, pertaining to, or containing tin: specifically applied to those compounds in which tin appears as a bivalent atom: as, *stannous oxid*, or protoxid of tin (SnO).
stannum (stan'um), *n.* [L. *stannum*, *stagnum*, tin, also an alloy of silver and lead (> It. *stagno* = Sp. *estanho* = Pg. *estanho* = Pr. *estanh* = F. *étain*, *tain*, tin); perhaps the same as L. *stagnum*, pool, applied to a mass of fluid metal: see *stank*¹, *stagnate*. Cf. Bret. *stean* = Corn. *stean* = W. *ystaen* = Gael. *staoin* = Manx *stainny*, tin (< L. ?): see *tin*.] Tin.
stannyel, *n.* See *staniel*.
stant¹. A contracted form of *standeth*, third person singular present indicative of *stand*.
stant² (stant), *n.* Same as *stent*².
stantion† (stan'shôn), *n.* [Appar. a var. of *stantion*.] Same as *stemion*.
stanza (stan'zä), *n.* [Formerly also *stunzo*, *stanze* (= Sp. *estancia* = G. *stanz* = F. *stanc*), in def. 2; < It. *stanza*, OIt. *stantia*, prop. an abode, lodging, chamber, dwelling, stane, also a stanza (so called from the stop or pause at the end of it), < ML. *stantia*, an abode: see *stane*.] 1. Pl. *stanze* (-ze). In *arch.*, an apartment or division in a building; a room or chamber: as, the *stanze* of Raphael in the Vatican.—2. In *versification*, a series of lines arranged in a fixed order of sequence as regards their length, metrical form, or rimes, and constituting a typical group, or one of a number of similar groups, composing a poem or part of a poem. *Stanza* is often used interchangeably with *strophe*—*strophe*, however, being used preferably of ancient or quantitative, and *stanza* of modern or accentual and rimed poetry. In the latter the stanza often consists of lines identical in form throughout, the arrangement of rimes alone defining the group of lines. Such a stanza is not properly a *strophe*. A couplet is not regarded as a stanza, and a triplet is rarely so designated. Compare *verse*. Abbreviated *st.*
 Horace . . . confines himself strictly to one sort of verse, or *stanza*, in every Ode. *Dryden*, *Misc.*, Pref.
stanzaed (stan'zäd), *a.* [< *stanza* + *-ed*.] Having stanzas; consisting of stanzas: as, a two-stanzaed poem.
stanzaic (stan-zä'ik), *a.* [< *stanza* + *-ic*.] Consisting of or relating to stanzas; arranged as a stanza. *E. C. Stedman*, *Viet. Poets*, p. 381.
stanzic (stan'zik), *a.* [< *stanz* + *-ic*.] Same as *stanzaic*. *E. Wadham*, *Eng. Versification*, p. 92.
stanzo† (stan'zô), *n.* An obsolete form of *stanza*. *Shak.*, As you Like it, ii. 5. 18.
stapet, *a.* See *stapen*.
stapedial (stā-pē'di-äl), *a.* [< NL. *stapedius* + *-al*.] 1. Stirrup-shaped: as, the *stapedial* bone of the ear.—2. Pertaining to the stapes or its representative, whatever its form.—**Stapedial ligament**, the annular ligament of the stapes, connecting the foot or base of the stirrup with the margin of the fenestra ovalis.—**Stapedial muscle**, the *stapedius*.—**Stapedial nerve**, a tympanic branch of the facial which innervates the *stapedial* muscle.
Stapedifera (stap-ē-dif'ē-rä), *n. pl.* [NL. (Thacher, 1877), neut. pl. of *stapedifer*: see *stapediferous*.] Those animals which have a stapes, as mammals, birds, reptiles, and amphibians; all vertebrates above fishes.
stapediferous (stap-ē-dif'ē-rus), *a.* [< NL. *stapedifer*, < ML. *stapes*, a stirrup, + L. *ferre* =

E. *bear*.] Having a stapes; of or pertaining to the *Stapedifera*.
stapedius (stā-pē'di-us), *n.*; pl. *stapedii* (-i). [NL., < ML. *stapes*, a stirrup: see *stapes*.] The *stapedial* muscle; a muscle of the tympanum actuating the stapes of some animals. In man the *stapedius* arises from a cavity hollowed out in the pyramid of the petrosal bone; its tendon passes out of a little hole in the apex of the pyramid, and is inserted into the neck of the stapes. Its action draws the head of the stapes backward, and also causes the stapes to rotate a little on a vertical axis drawn through its own center. The name is correlated with *incudius* and *malleolus*. See cut under *hyoid*.
Stapelia (stā-pē'li-ä), *n.* [NL. (Linnæus, 1737), named after J. B. van Stapel, a Dutch physician and botanist (died 1636).] A genus of gamopetalous plants, of the order *Asclepiadaceæ*, type of the tribe *Stapeliæ*. It is characterized by flowers with a wheel-shaped or reflexed corolla without appendages between the five valvate lobes, and with the tube short and broadly bell-shaped or almost wanting, and by a double corona, the outer of five horizontally spreading lobes alternate with the anthers, the inner of five scales produced into erect or arching horns. There are over 70 species, natives of South Africa. Their short fleshy leafless stems are produced into four prominent angles, which are coarsely toothed, sometimes bearing transient rudiments of leaves at the apex of the new growths. Numerous dark tubercles give the stems a grotesque appearance. Some are cultivated under glass for their beautiful and varied flowers, which are commonly very large, some reaching 12 inches (*S. gigantea* sometimes 14 inches) in diameter, of singular structure and often exquisitely marbled or dotted. In other species they are dry or unattractive, usually coarse, thick, fleshy, and short-lived, and in most species exhale transiently a fetid odor as of carrion, attracting flies, which deposit their eggs upon them in large quantities. Their colors are largely the livid-purple and lurid-reddish, yellow, and brownish hues which are associated with disagreeable odors also in *Rafflesia*, *Aristolochia*, *Amorphophallus*, and others of the largest flowers. They are sometimes called *carrion-flowers*; *S. buxifolia* is known, from its blotches, as *toad-flower*; and *S. Asterias*, from its spreading narrow-parted corolla, as *starfish-flower*.
Stapeliæ (stap-ē-li'ē-ē), *n. pl.* [NL. (Endlicher, 1836), < *Stapelia* + *-æ*.] A tribe of gamopetalous plants, of the order *Asclepiadaceæ*. It is characterized by valvate and commonly fleshy corolla-lobes, waxy erect or laterally placed pollen-masses solitary in each anther-cell, and obtuse or retuse unappendaged anthers, closely incumbent over the disk of the stigma or partly immersed in it. The 16 genera are plants commonly with short, thick, fleshy stems, coarsely angled or tubercled, without leaves except in the East Indian genus *Frerea*; one genus, *Boucerosia*, extends into Europe in Spain and Sicily; the others, as *Stapelia*, the type, are mostly South African.

Stapelia variegata.

stapet, *a.* Stepped; advanced. *Chaucer*, *Merchant's Tale*, l. 270.
stapes (stā'pēz), *n.* [NL., < ML. *stapes*, a stirrup, < OHG. *stapf*, *stapf* = D. *stap*, etc., a step: see *step*, and cf. *staffer*.] In *zool.* and *anat.*, the inmost one of the three auditory ossicles of man and other mammals, situated in the tympanum, or middle ear. The stapes is connected on the one hand with the incus, and on the other with the fenestra ovalis, and is moved by a small muscle called the *stapedius*. The name is derived from the close resemblance in shape of the human stapes to a stirrup.

1. Of Man (the surface of its foot separately shown). 2. Of Seal (*Phoca vitulina*). 3. Of Chick (its foot separately shown, and cartilaginous parts in dotted outline); *ms.st.*, mediostapedial part, forming with *st* the stapes proper (columella); *est*, extrastapedial part; *is.t*, infrastapedial part; *s.st.*, suprastapedial part.

In man the bone presents a *head*, with a little fossa for movable articulation with the orbicular incudal bone; a *neck* or constricted part; two branches, *legs* or *crura*; and an oval base or *foot*. This bone is morphologically one of the proximal elements of the hyoidean arch. The corresponding element in birds and reptiles is very differently shaped, and is sometimes called *stapes*, oftener *columella*. It is rod-like or columellar, with an expanded base fitting the fenestra ovalis, the other end usually showing a cross-bar. Parts of such a stapes are distinguished as *mediostapedial*, the main shaft; *extrastapedial*, the part beyond the cross-bar; *infrastapedial*, the lower arm of the cross-bar; and *suprastapedial*, the upper arm

of the cross-bar—the last being supposed to represent the incus of mammals. Some of these parts may be wanting, or only represented by a ligament, or coalesced with a part of the mandibular arch. The stapes or columella furnishes the primitive actual or virtual connection of the hyoidean arch with the petriotic capsule. See *stapedial*, *columella*, 3 (b), and cuts under *hyoid*, *Pythondæ*, and *lynx*.—**Annular ligament of the stapes**. See *ligament* and *stapedial*.
Staphisagria (staf-i-sag'ri-ä), *n.* [NL. (Tragus, 1546), < ML. *staphisagria*, *staphysagria*, *stafisagria*, etc.; prop. two words, *staphis* *agria*, < Gr. as if *σταφίς ἀγρία*: *σταφίς*, a dried grape, a raisin, also (in L. *staphis*) the plant *stavesacre*; *ἀγρία*, fem. of *ἀγριος*, wild, < *ἀγρός*, a field, the country. The E. form of the name is *stavesacre*, q. v.] A former genus of polypetalous plants, of the order *Ranunculaceæ*. It is now classed as a section of the genus *Delphinium*, and as such distinguished by a short spur, from three to five ovaries forming bladderly few-seeded capsules, and biennial habit. See *Delphinium* and *stavesacre*, also *ointment of stavesacre* (under *ointment*).
staphisagric (staf-i-sag'rik), *a.* [< *Staphisagria* + *-ic*.] Contained in or derived from *Staphisagria*. *Encyc. Diet.*
staphisagrine (staf-i-sag'rin), *n.* [< *Staphisagria* + *-ine*.] A poisonous amorphous alkaloid, soluble in ether and in water, obtained from *Delphinium Staphisagria*, or *stavesacre*.
staphyle (staf'i-lē), *n.* [NL., < Gr. *σταφυλή*, a bunch of grapes, also the uvula when swollen.] The uvula.
Staphylea (staf-i-lē'ä), *n.* [NL. (Linnæus, 1737), abridged from *Staphylocladon* (Tournefort, 1700), < L. *staphylocladon*, a shrub thought to have been *S. pinnata*; prob. so named from its clustered fruit, < Gr. *σταφυλή*, a bunch of grapes, + *δένδρον*, a tree.] A genus of polypetalous plants, type of the order *Staphyleaceæ*. It is characterized by an ovary which is two- or three-parted to the base, contains numerous biseriate ovules, and ripens into an inflated and bladderly membranous capsule, discharging its few seeds at the apex of the two or three lobes. There are 4 species, natives of Europe, the Himalayas, Japan, and North America. They are shrubs with numerous roundish branches, bearing opposite stipulate leaves, each composed of from three to five leaflets, which are involute in the bud and are furnished with stipels. The white flowers, with five erect petals, hang from nodding panicles or racemes. The large and peculiar fruit is the source of the common name *bladder-nut*. (See cut under *nectary*.) *S. pinnata*, also called *bag-nut*, common in hedgerows and thickets in Europe, bears hard smooth nuts sometimes used for rosaries.
Staphyleaceæ (staf'i-lē-ä-sē-ē), *n. pl.* [NL. (A. P. de Candolle, 1825), < *Staphylea* + *-aceæ*.] An order of polypetalous plants, of the cohort *Sapindales*, long classed as a suborder of the *Sapindaceæ*, from which it is distinguished by its regular bisexual flowers with the five stamens inserted outside of the base of the disk, by albuminous and sometimes arillate seeds with a straight embryo, and by opposite simple or compound leaves. It includes 16 species, of 4 genera, of which *Staphylea* is the type; of the others, *Turpinia* includes a number of small trees and shrubs with roundish berry-like fruit, mostly of tropical Asia and America, and *Euscaphis* a few Japanese shrubs bearing coriaceous foli-les. See cut under *bladder-nut*.
staphyline (staf'i-lin), *a.* [< Gr. *σταφυλίνας*, of or pertaining to a bunch of grapes, < *σταφυλή*, a bunch of grapes, also the uvula.] 1. Having the form of a bunch of grapes; botryoidal.—2. Pertaining to the uvula or to the entire palate.—**Staphyline glands**, palatine glands.
staphylinid (staf-i-lin'id), *n.* and *a.* I. *n.* A rove-beetle, as a member of the *Staphylinidæ*. II. *a.* Of or pertaining to the family *Staphylinidæ*; staphylinine.
Staphylinidæ (staf-i-lin'i-dē), *n. pl.* [NL. (Leach, 1817), < *Staphylinus* + *-idæ*.] A large and important family of brachelytrous clavicorn beetles, commonly called *rove-beetles*. They resemble the *Pselaphidæ* in having short elytra, but differ in having the abdomen flexible and consisting of eight ventral segments. The antennæ are generally eleven-jointed, the labial palpi three-jointed, and the maxillary four-jointed. The short truncate elytra usually leave most of the abdomen exposed, and this, when the beetles are disturbed, is turned up over the back, as if the insects were about to sting. A familiar example is the *Oxypterus*, known as the *cocktail* and *devil's coach-horse*. (See *Goerius*, and cut under *devil*.) Some species discharge an odoriferous fluid from the tip of the abdomen. The larvae resemble the adults, and are found under bark, in fungi, decaying plants, and the excrement of animals, in ants' nests, hornets' nests, and the nests of certain birds. It is one of the largest and most wide-spread of the families of *Coleoptera*. About 1,000 species are known in America north of Mexico, and about 5,000 in the whole world. Also *Staphylinidæ*, *Staphylini*, *Staphylinicæ*, *Staphylinida*, *Staphyliniæ*, *Staphylinites*. See cuts under *Homalium* and *rove-beetle*.
staphyliniform (staf-i-lin'i-fôrm), *a.* [< NL. *Staphylinus*, q. v., + L. *forma*, form.] Resembling a rove-beetle; related to the *Staphylinidæ*.
staphylinine (staf-i-lin'in), *a.* Of or pertaining to the *Staphylinidæ*.

Staphylinus (staf-i-lī'nus), *n.* [NL. (Linnæus, 1758), < Gr. *σταφυλίνοσ*, a kind of insect, < *σταφυλή*, a bunch of grapes.] The typical genus of the family *Staphylinidae*, formerly corresponding to that family in a broad sense. Used with various limitations, it is now made type of the restricted family, and characterized by having the maxillary palpi with the fourth joint equal to or longer than the third, the marginal lines of the thorax united near the apex, the ligula emarginate, the middle coxæ slightly separate, and the abdomen narrowed at the tip. The species are numerous, and among them are the largest forms in the family. Twenty-one are known in America north of Mexico, and about 100 in the whole world.

staphyllon (stā-fil'i-on), *n.* [NL., < Gr. *σταφύλιον*, dim. of *σταφυλή*, the uvula: see *staphyle*.] The median point of the posterior nasal spine. *Török*.

staphylitis (staf-i-lī'tis), *n.* [*staphyle*, the uvula, + *-itis*.] Uvulitis.

staphyloma (staf-i-lō'mā), *n.*; pl. *staphylomata* (-mā-tā). [NL., < Gr. *σταφύλωμα*, a defect in the eye, < *σταφυλή*, a bunch of grapes.] A name given to certain local bulgings of the eyeball. — **Staphyloma corneæ**, a protrusion involving more or less of the corneæ, such as may result from preceding ulceration. Also called *anterior staphyloma*. — **Staphyloma corneæ pellucidum**, conical cornea. Also called *staphyloma pellucidum*. — **Staphyloma posticum**, posterior staphyloma; sclerochoroiditis in the back part of the eye, resulting in a thinning of the coats and consequent bulging and progressive myopia.

staphylomatic (staf'i-lō-mat'ik), *a.* [*staphyloma*(*t*) + *-ic*.] Characterized or affected by staphyloma.

staphylomatous (staf-i-lom'ā-tus), *a.* [*staphyloma*(*t*) + *-ous*.] Pertaining to or of the nature of staphyloma.

staphyloplasty (staf'i-lō-plas'ti), *n.* [*Gr. σταφυλή*, the uvula, + *πλάσσειν*, form, shape: see *plastic*.] In *surg.*, an operation for restoring the soft palate when it is defective.

staphylorrhaphy (staf-i-lor'ā-fi), *n.* [*Gr. σταφυλή*, the uvula, + *ράφή*, a sewing.] In *surg.*, the plastic operation for cleft palate, consisting in uniting the mucous membrane across the cleft. Also called *eionorrhaphia*, *palatorrhaphy*.

staphylotome (staf'i-lō-tōm), *n.* [*Gr. σταφυλοτόμων*, a knife for excising the uvula, < *σταφυλή*, the uvula, + *τέμνειν*, *ταμείν*, cut.] In *surg.*, a knife for operating upon the uvula or the palate.

staphylootomy (staf-i-lō'tō-mi), *n.* [*Gr. σταφυλοτομία*, the excision of the uvula, < *σταφυλή*, the uvula, + *-τομία*, < *τέμνειν*, *ταμείν*, cut: see *-otomy*.] In *surg.*, amputation of the uvula.

staple¹ (stā'pl), *n.* [*ME. stapel, stapil, staphyle, stapul*, < *AS. stapel, stapol, stapul*, a prop, post (= *OS. stapal* = *OFries. stapul, stapel* = *MD. stapel, D. stapel*, a prop, foot-rest, a seat, pile, heap, = *MLG. LG. stapel* (> *G. stapel*), a pile, staple, stocks, = *OHG. staffal, staphal, MHG. staffel, stapfel*, *G. staffel*, a step, = *Sw. stapel*, a pile, heap, stocks, = *Dan. stabel*, a pile, stack, stocks (on which a ship is built), hinge), < *stapan*, step: see *step*. Cf. *staple*².] 1†. A post; a prop; a support.

Under eeh *stapel* of his bed,
That he niste, four that hid.

The Sevyng Sages, 201. (*Hallivell*.)

2. A loop of metal, or a bar or wire bent and formed with two points, to be driven into wood to hold a hook, pin, or bolt.

Maasy *staples*,
And corresponsive and fulfilling bolts.

Shak., T. and C., *Pro*, l. 17.

3. In *founding*, a piece of nail-iron with a flat disk riveted to the head, and pointed below, used in a mold to hold a core in position. *E. H. Knight*.—4. Of a lock, same as *box*², 13.—5. In musical instruments of the oboe class, the metallic tube to which the reeds are fastened, and through which the tone is conveyed from them into the wooden body of the instrument.—6. In *coal-mining*, a shallow shaft within a mine. [North. Eng.]—**Seizin by hasp and staple**. See *hasp*. — **Staple of a press**, the frame or uprights of a hand printing-press. *C. T. Jacob*, *Printers' Vocab*.

staple¹ (stā'pl), *v. t.*; pret. and pp. *stapled*, ppr. *stapling*. [*staple*², *n.*] To support, attach, or fix by means of a staple or staples. *Elect. Rev.*, XVI. 5.

staple² (stā'pl), *n.* and *a.* [Early mod. E. *staple*; < *OE. estaple, estape*, *F. étape* (*ML. stapula*), a market, store, store-house, = *G. stapel* (*Sw. stapel*, *Dan. stabel*, in comp.), < *MD. stapel* = *MLG. LG. stapel*, a market, emporium, appar. a particular use of *stapel*, a pile, heap: see *staple*¹.] I. *n.* 1. A settled mart or market; an emporium; a town where certain commodities are chiefly taken for sale. In England, formerly, the

king's staple was established in certain ports or towns, and certain goods could not be exported without being first brought to these ports to be rated and charged with the duty payable to the king or the public. The principal commodities on which customs were levied were wool, skins, and leather, and these were originally the staple commodities.

The first ordination of a *Staple*, or of one onely settled Mart-towne for the vitering of English woolls & woollen felis, instituted by the sayd K. Edward.

Hakluyt's Voyages, To the Reader.

Hence—2. A general market or exchange.

Tho. O sir, a *Staple* of News! or the New *Staple*, which you please.

P. Jun. What 'a that?

Fash. An office, sir, a brave young office set up. . . .

P. Jun. For what?

Tho. To enter all the News, sir, of the time.

Fash. And vent it as occasion serues.

B. Jonson, *Staple of News*, l. 1.

3. A commercial monopoly formed by a combination of merchants acting under the sanction of the royal privilege of fairs and markets. *Foreign staple* was the system of trade carried on by this monopoly on the continent; *home staple* was the business organized by it in leading towns in England.

Their ayme in this edict is, if possible, to draw for the lone of currents the *staple* of dinera merchandise to that city.

Sir Thomas Roe, *Negotiations* (London, 1740).

4. The principal commodity grown or manufactured in a locality, either for exportation or home consumption—that is, originally, the merchandise which was sold at a staple or mart.

The prices of bread-stuffs and provisions, the *staples* of the North, and of cotton and tobacco, the *staples* of the South, were high, not only absolutely, but relatively.

Taussig, *Tariff History*, p. 19.

5. The principal element of or ingredient in anything; the chief constituent; the chief item.

He has two very great faults, which are the *staple* of his bad side.

Politics, theology, history, education, public improvements, personal matters, are conversational *staples*.

Harper's Mag., LXXX. 466.

6. The material or substance of anything; raw or unmanufactured material.—7. The fiber of any material used for spinning, used in a general sense and as expressive of the character of the material: as, wool of short *staple*; cotton of long *staple*, etc.—**Corrector of the staplet**. See *corrector*.—**Merchant of the staplet**. See *merchant*. — **Ordinance of Staple**. Same as *Statute of Staple*. — **Staple of land**, the particular nature and quality of land.—**Statute of Staple, or Ordinance of Staple**, an English statute of 1353 (27 Edw. III., st. 2), recognizing the ancient custom of staple, and confirming the rights and privileges of merchants under it.—**Statute staple**. See *statute*.

II. *a.* 1. Pertaining to or being a mart or staple for commodities: as, a *staple town*.

Flanders is *Staple*, as men tell mee,
To all nations of Christianitie.

Hakluyt's Voyages, I. 189.

2. Mainly occupying commercial enterprise; established in commerce: as, a *staple trade*.—

3. According to the laws of commerce; marketable; fit to be sold.

Will take off their ware at their own rates, and trouble not themselves to examine whether it be *staple* or no.

Swift.

4. Chief; principal; regularly produced or made for market: as, *staple commodities*.

staple² (stā'pl), *v.*; pret. and pp. *stapled*, ppr. *stapling*. [*staple*², *n.*] I. *intrans.* To erect a staple; form a monopoly of production and sale; establish a mart for such purpose. *Hakluyt's Voyages*, I. 437. [Rare.]

II. *trans.* 1. To furnish or provide with a staple or staples.

Fleeces *stapled* with such wool

As Lemnster cannot yield more finer stuff.

Greene, *Friar Bacon and Friar Bungay*.

2. To sort or classify according to the length of the fiber: as, to *staple* wool.

staple-house (stā'pl-hous), *n.* [*MD. stapelhuys*; as *staple*² + *house*¹.] A warehouse where commodities chargeable with export duties were stored. See *staple*², *n.*, 1.

In their large *staple-house* on the Thames . . . were stored the collections of raw produce—wool, tin, and hides the chief of them—which England sent away to foreign countries.

F. Martin, *Hist. of Lloyd's*, p. 2.

staple-punch (stā'pl-punch), *n.* A bifurcated punch used for pricking holes in blind-slats and rods for the reception of staples.

stapler (stā'plēr), *n.* [*staple*² + *-er*¹.] 1†. A merchant of the staple; a monopolist. See *staple*², 3.

You merchants were wont to be merchant *staplers*.

Middleton, *Family of Love*, l. 3.

2. One employed in assorting wool according to its staple.

Mr. Glegg retired from active business as a wool-stapler.

George Eliot, *Mill on the Floss*, l. 12.

staple-right (stā'pl-rit), *n.* A right, possessed by municipalities of the Netherlands, and thence introduced into the New Netherlands (New York), of compelling passing vessels either to stop and offer their merchandise for sale first of all in the market-place of the town, or to pay a duty.

star¹ (stār), *n.* [(*a*) < *ME. starre, sterre, storre, steorre* (pl. *starres, sterres, steores, sterren, steorren*), < *AS. steorra* = *OS. sterro* = *OFries. stera* = *MD. sterre, starre*, *D. ster, star* = *MLG. sterre* = *OHG. sterro*, *MHG. sterre*, a star; with formative *-ra* (perhaps orig. *-na*, *-r-na* being assimilated to *-r-ra*, the word being then orig. ult. identical with the next). (b) *E. dial. starn, stern*, < *ME. stern, sterne* (perhaps < *Scand.*) = *MD. sterne* = *MLG. sterne, stern*, *LG. steern* = *OHG. sterno*, *MHG. sterne* (also *OHG. MHG. stern*), *G. stern*, < *Icel. stjarna* = *Sw. stjerna* = *Dan. stjerne* = *Goth. stainno*, a star; with a formative *-na*, *-no* (seen also in the orig. forms of *sun* and *moon*), from a base **ster*; cf. *L. stella* (for **sterila*) (> *It. stella* = *Sp. Pg. estrella* = *OF. estoile*, *F. étoile*, *star*, = *Gr. ἀστὴρ* (*ἀστερ-*), a star, *ἀστρον* (> *L. astrum*), usually in pl. *ἀστροα*, the stars (with prothetic *α-*), = *Corin. Bret. steren* = *W. seren* (for **stere*) = *Skt. tāra* (for **stārā*), a star, *star*, pl., the stars, = *Zend star*, *star*; root unknown. If, as has been often conjectured, *star* has a connection with *strew*, it must be rather as 'strown' or 'sprinkled' over the sky than as 'sprinkler' of light.] 1. Any celestial body which appears as a luminous point. In ordinary modern language *star* is frequently limited to mean a fixed star (see below). In astrology the stars, especially the planets, are supposed to exercise an influence upon human destinies.

His eye twynkled in his heed aryght,

As doon the *sterres* in the frosty nyght.

Chaucer, *Gen. Pro*, to C. T., l. 268.

There shall be signs in the sun, and in the moon, and in the stars.

Luke xxi. 25.

The fault, dear Brutus, is not in our stars,

But in ourselves, that we are underlings.

Shak., *J. C.*, i. 2. 140.

You are, thanks to your stars, in mighty credit.

Dekker, *Gull's Hornbook*, p. 114.

Hence—2. **Destiny**. [Rare.]

I was not born unto riches, neither is it, I think, my star to be wealthy. *Sir T. Browne*, *Religio Medici*, ll. 13.

3. Anything which resembles a star.

His charger trampling many a prickly star
Of sprouted thistle on the broken stones.

Tennyson, *Geraint*.

Specifically—(a) A star-shaped figure made of silver, gold, or both, sometimes set with jewels, worn usually upon the breast as one of the insignia of a higher class of an honorary order. See *insignia*, and *cuts* under *bath*, *garter*, and *Order of St. Michael* (under *order*).

While peers, and dukes, and all their sweeping train,
And garters, stars, and coronets appear.

Pope, *R. of the L.*, l. 85.

(b) The asterisk (*). See *asterisk*. (c) In *pyrotechny*, a small piece of inflammable composition, which burns high in air with a colored flame, and presents the appearance of a star. (d) A group of cracks or flaws radiating from a center.

Three times slipping from the outer edge,
I bump'd the ice into three several stars.

Tennyson, *The Eplc*.

(e) A spot of white or light color on the forehead of an animal.

Onward, caballito mio,
With the white star in thy forehead!

Longfellow, *Spanish Student*, ll. 6.

(f) In *zool.*: (1) A star-animal; a starfish, or other ectoderm of obviously radiate figure, as a brittle-star, feather-star, lily-star, sand-star, or sun-star. See the compounds. (2) A stellate sponge-apicule; an aster. (g) In a copper-plate or lithographic printing-press, the radial spokes on the roller, which serve as handles. *E. H. Knight*.

4. Figuratively, a person of brilliant or attractive qualities; one who shines preëminently; specifically, the chief and preëminent actor or actress of a dramatic or operatic company.

Sole star of all that place and time,
I saw him—in his golden prime,
The Good Haroun Alraschid.

Tennyson, *Arabian Nights*.

If I were now to receive a message from the planet Mars offering me a star engagement, I could not be more astonished than I was on that day. *J. Jefferson*, *Autobiog.*, ill.

5. In *her.*, same as *estoile*.—6. In *fort.*, a small fort having five or more points, or salient or reëntering angles flanking one another. Also called *star-fort*.—7. An additional life bought by a player in the game of pool. [Eng.]

Only one star is allowed in a pool; and when there are only two players left in, no star can be purchased.

See *falling star*.—**Fixed star**, a self-luminous body at so vast a distance from the earth as to appear a point of light, almost motionless except for the diurnal revolution of the heavens. To the naked eye the brighter stars appear to have radiating lines of light; but these are due to imperfections of vision, and are different for different observers. All the fixed stars twinkle (see *twinkling*). In a good telescope on a fine night a star shows a minute round disk surrounded by concentric rings; but these phenomena are mere effects of diffraction, and no instrument yet constructed can enable the eye to detect a star's real breadth. The stars differ in brilliancy, and in this respect are said to have different magnitudes (see *magnitude*, 5). These in many cases are changeable (see *variable star*). The number of stars in the whole heavens brighter than a given magnitude m may be approximately calculated by the formula $(3.3)^{10.5-m}$. The stars are very irregularly distributed in the heavens, being greatly concentrated toward the Milky Way. This is particularly true of first-magnitude stars, and again of faint telescopic stars. There are many clusters of stars, among which the Pleiades, the Hyades, Praesepe, Coma Berenices, and the cluster in the sword-handle of Perseus are visible to the naked eye. Other stars are associated in systems of two, three, or more. (See *multiple star*.) To most eyes the stars appear yellow, but some are relatively pale, others chromatic yellow, and still others ruddy. There are many ruddy stars in the part of the Galaxy near Lyra. L. M. Rutherford of New York first showed that in reference to their spectral lines the fixed stars fall under several distinct types. Type I, according to the usual nomenclature, embraces spectra showing strong hydrogen-lines, all others being very faint. These belong without exception to pale stars, such as Sirius, Vega, Procyon, Altair, Spica, Fomalhaut, Regulus, Castor. Type II embraces spectra showing many strong metallic lines, like the sun. Almost all such stars are chrome, as Arcturus, Capella, Aldebaran, Pollux; but a few are pale, as Deneb and Elwald, and a few ruddy. Type III consists of banded spectra, the bands shading away toward the red. These stars are all ruddy, and probably all variable. They embrace Betelgeuze, Antares, Mira Ceti, Sheat, Menkar, Pihopal, Rasalgethi. Type IV consists of spectra having three broad bands shaded away toward the blue end. These all belong to very ruddy stars, of which none are bright, and none seem to be variable. Type V consists of spectra showing bright lines. Such stars are few; their magnitudes and colors are variable. Upon careful comparison of the spectra of stars with those of the chemical elements they contain, it is found that the lines are shifted a little along the spectrum toward one end or the other, according as the star is receding from or approaching the earth. The apparent places of the fixed stars are affected in recognized ways by diurnal motion, precession, nutation, aberration, and refraction. In addition, each star has a very slow motion of its own, called its *proper motion*. There are very few cases in which this is so great as to have carried the star over the breadth of the moon's disk since the beginning of the Christian era. Many stars in one neighborhood of the heavens show, in many cases, like proper motions—a phenomenon first remarked by R. A. Proctor, and termed by him *star-drift*. But the average proper motion of the stars is away from a radiant under the left hand of Hercules, showing that the solar system has a relative motion toward that point. This is sufficient to carry a sixth-magnitude star 4."4 in a century. The parallax (that is to say, the amount by which the angle at the earth between the star and the sun falls short of 90° when the angle at the sun between the star and the earth is equal to 90°) has been measured only for a few stars, and these few have been selected with a view of finding the largest parallaxes. That of a Centauri, which is the largest, is nearly a second of arc. It is so difficult to measure parallax otherwise than relatively, and to free its absolute amount from variations of latitude, diurnal nutation, refraction, etc., that very little can be said to be known of the smaller parallaxes. It appears, however, that small stars have nearly as great parallaxes as the bright ones where the proper motions are not large. The various methods of ascertaining the distances of the stars depend upon three independent principles. The first method is from the parallax, by means of which the distance of the star is calculated by trigonometry. The second method depends on the ascertaining of the speed at which the star is really moving by the shifting of the spectral lines, and then observing its angular motion. In the case of a double star, its motion in the line of sight at elongation can be measured with the spectroscope; and from this, its orbit being known, its rate of motion at conjunction can be deduced. The third method supposes the ratio of the amount of light emitted by the star to that emitted by the sun to be known in some way, whereupon the ratio of apparent light will show the relative distances. All these methods show that even the nearest stars are hundreds of thousands of times as remote as the sun. In order to reach more exact results it may be necessary to combine two methods so as to determine and eliminate the constant of space, or the amount by which the sum of the angles of a triangle of unit area differs from two right angles. For the present, no decisive result has been reached. The distances of stars having been ascertained, the weights of double stars may be deduced from their elongations and periods. These weights seem to be of the same order of magnitude as that of the sun, not enormously greater or smaller.—**French stars**, three asterisks arranged in this form $\star\star\star$, used as a mark of division between different articles in print.—**Gloaming, golden, informed, lunar, Medicean star**. See the adjectives.—**Lone Star State**, the State of Texas.—**Meridian altitude of a star**. See *altitude*.—**Morning star**, a planet, as Jupiter or Venus, when it rises after midnight. Compare *evening star*.—**Multiple star**, a group of two to six fixed stars within a circle of 15' radius; in a few cases, however, stars distant a minute or more from one another are considered to form a double star. Thus, ϵ and 5 Lyrae, distant from one another upward of 3', and separable by the naked eye, each of these consisting of two components distant about 34" from one another, with some other stars between them, are sometimes called collectively a *multiple star*. The multiple stars are distinguished as *double* [tr. of Gr. *ἀστὴρ διπλός*],

triple, quadruple, quintuple, and sextuple. Many of the double stars are merely the one in range of the other, without having any physical connection, and these are called *optical doubles*. The components of other double stars revolve the one round the other, apparently under the influence of gravitation, forming systems known as *binary stars*. The orbits of about forty of these are known. Thus, the two stars of a Centauri, distant from one another by 17."5, revolve in about 80 years. In many cases the two components of a double star have complementary colors.—**Nebulous star**. See *nebula*.—**North star**, the north polar star. These stars are of five classes. Class I comprises the "new" or temporary stars, about a dozen in number, which have suddenly appeared very bright, in several cases far outshining Sirius, and after a few months have faded almost entirely away. All these stars have appeared upon the borders of the following semicircle of the Milky Way. They show bright lines in their spectra, indicating incandescent hydrogen. Such was the star which appeared 133 B. C. in Scorpio, and led Hipparchus to the study of astronomy, thus inaugurating sound physical science; others appeared in 1572, 1604, and 1866. Class II embraces stars which go through a cycle of changes, more or less regular, in from four to eighteen months, most of them being at least a hundred times as bright at their maxima as at their minima. These stars are for the most part ruddy. Class III embraces irregularly variable stars, without any definite periods, and commonly undergoing very moderate changes. Class IV embraces stars which in a few days, or a month at most, go through changes of one or two magnitudes, sometimes with two maxima and two minima. Class V embraces stars which remain of constant brightness for some time, and then almost suddenly, at regular intervals, are nearly extinguished, afterward as quickly regaining their former brilliancy.**

star¹ (stär', v.; pret. and pp. *starred*, ppr. *star-ring*. [*< star*¹, n.] I. trans. 1. (a) To set with stars, literally or figuratively.

Budding, blown, or odour-faded blooms,
Which *star* the winds with points of coloured light.
Shelley, Prometheus Unbound, lili. 3.

Fresh green turf, *starred* with dandelions.
B. Taylor, Northern Travel, p. 231.

Hence—(b) To set with small bright bodies, as gems, spangles, or the like. (c) To set with figures of stars forming a sowing or sprinkle.
—2. To transform into a star or stars; set in a constellation. [Rare.]

Or that *starr'd* Ethiope queen that strove
To set her beauty's praise above
The Sea-Nymphs, and their powers offended.
Milton, Il Penseroso, l. 19.

3. To affix a star or asterisk to (a written or printed word) for a distinctive purpose, especially, in a list, to distinguish the name of a deceased person. [Colloq.]—4. To crack so as to produce a group of radiating lines.—**To star a glaze**, to cut out a pane of glass. *Tufts*, Glossary, 1798. [Theives' jargon.]

II. intrans. 1. To shine as a star; be brilliant or prominent; shine above others; especially (*theat.*), to appear as a star actor.

Doggett . . . had been playing for a week [1699] at the above [Lincoln's Inn Fields] theatre for the sum of £30. This is the first instance I know of the *starring* system.
Doran, Annals of the Stage, I. 138.

2. In the game of pool, to buy an additional life or lives. *Encyc. Brit.*, III. 677. [Eng.]—**To star it** (*theat.*), to appear as a star, especially in a provincial tour.

star² (stär'), n. [Also *starr*; Heb. (Chal.) *shetar*, *shetar*, a writing, deed, or contract, *< shetar*, cut in, grave, write.] An ancient name for all deeds, releases, or obligations of the Jews, and also for a schedule or inventory. See *star-chamber*. Also spelled *starr*.

star-animal (stär'an'i-mäl'), n. A radiate, especially a starfish.

star-anise (stär'an'is), n. 1. The aromatic fruit of a Chinese shrub or small tree long supposed to be the *Illicium anisatum* of Linnæus, but recently determined to be a distinct species, *I. verum* (named by J. D. Hooker). The fruit is a stellate capsule of commonly eight carpels, each of which contains a single brown shining seed. The seeds contain four per cent. of a volatile oil with the odor and flavor of aniseed, or rather of fennel. Star-anise is used in China as a condiment and spice, and in continental Europe to flavor liquors. Also *Chinese anise*.

2. The tree which yields star-anise.—**Star-anise oil**, the aromatic essential oil of star-anise seed. The commercial anise-oil is chiefly obtained from the star-anise.

star-apple (stär'ap'l), n. The fruit of the West Indian *Chrysophyllum Cainito*, or the tree which produces it. The fruit is edible and pleasant, of the size of an apple, a berry in structure, having ten or eight cells, which, when cut across before maturity, give the figure of a star. Also called *cainito*.

Star-apple (*Chrysophyllum Cainito*).
a, the fruit, transverse section.

starbeam (stär'bēm'), n. A ray of light emitted by a star. *Watts*, Two Happy Rivals. [Rare.]
star-bearer (stär'bär'er'), n. Same as *Bethlehemite*, 3 (a).

star-blasting (stär'bläs'ting'), n. The pernicious influence of the stars. *Shak.*, Lear, iii. 4. 60.

starblind (stär'blind'), a. [*< ME. *starblind*, *< AS. stærblind* (= OFries. *starblind*, *stareblind*, *starubind* = MD. See *port*⁴.

He took his voyage directly North along the coast, hauling upon his *steerboard* always the desert land, and upon the leeward the maine Ocean. *Hakluyt's Voyages*, I. 4.

II. a. *Naut.*, pertaining to the right-hand side, or being or lying on the right side, of a vessel.
starboard (stär'börd or -bërd'), v. t. [*< starboard*, n.] To turn or put to the right or starboard side of a vessel: as, to *starboard* the helm (when it is desired to have the vessel's head go to port).

starboard (stär'börd or -bërd'), adv. [*< starboard*, a.] Toward the right-hand or starboard side. *Sylvestre*, tr. of Du Bartas's Weeks, ii., The Trophies.

starbowlines (stär'hō'linz'), n. pl. *Naut.*, the men of the starboard watch.

starbright (stär'brīt'), a. Brilliant; bright as a star. *Emerson*, The Day's Ration.

star-bush (stär'būsh'), n. A middle-sized South African evergreen, *Grewia occidentalis*.

star-buzzard (stär'buz'ärd'), n. An American buteonine hawk of the genus *Asturina*, having a system of coloration similar to that of the goshawks or star-hawks, but the form and proportions of the buzzards.

The star-buzzards are a small group of handsome hawks peculiar to America. The gray star-buzzard, *Asturina plagiata*, is found in the United States.

Gray Star-buzzard (*Asturina plagiata*).

star-capsicum (stär'kap'si-kum), *n.* See *Solanum*.

star-catalogue (stär'kat'ä-log), *n.* An extended list of fixed stars, as complete as possible within specified limits of magnitude, place, etc., with their places and magnitudes.

starch¹ (stärch), *a.* [*<* ME. **starche*, *starch*, assimilated form of *stark*, *sterk*, strong, stiff: see *stark¹*.] 1†. Strong; hard; tough.

Nis non so strong, ne *starch*, ne kene,
That mal ago deatnes wither blench.

M.S. Cott. Calig., A. ix. f. 243. (Halliwell.)

2. Rigid; hence, precise.

When tall Suannah, maiden *starch*, stalk'd in.
Crabbe, Works, IV. 85.

starch² (stärch), *n.* [*<* ME. *starche* (= MHG. *sterke*, G. *stärke*), *starch*; so called from its use in stiffening; *<* *starch¹*, *a.*, stiff: see *starch¹*, *a.*] 1. A proximate principle of plants, having the formula C₆H₁₀O₅, or a multiple of that formula. It is a white opaque glistening powder, odorless, tasteless, and insoluble in cold water, alcohol, or ether. Aqueous solutions containing free iodine impart to starch an intense and very characteristic blue color. It is not crystalline, but occurs naturally in fine granules, which are always made up of fine concentric layers. Whether the grains contain a small quantity of another chemical body, allied to but not identical with starch, called *starch cellulose* or *farinose*, is a disputed question. When heated with water to 60°-70° C., starch swells up and forms a paste or jelly. When heated in the dry state to 150°-200° C., it is converted into dextrine, a soluble gum-like body much used as a cheap substitute for gum arabic. Heated with dilute mineral acids, or digested with saliva, pancreatic juice, diastase, or certain other enzymes, starch dissolves, and is resolved into a number of products, which are chiefly dextrine, maltose, and dextrose—the last two being fermentable sugars. The malting of barley by brewers effects this change in the starch of the grain, and so prepares it for vinous fermentation. Starch is widely distributed, being formed in all vegetable cells containing chlorophyll-grains under the action of sunlight, and deposited in all parts of the plant which serve as a reserve store of plant-food. Hence grains and seeds contain an abundance of it, also numerous tubers and rhizomes, as the potato and the arrowroot, and the stem and pith of many plants, as the sago-plant. The chief commercial sources of supply are wheat, corn, and potatoes. From these it is manufactured on an extensive scale, being used in the arts, for laundry purposes, sizing, finishing calicos, thickening colors and mordants in calico-printing, and for other purposes. Starch forms the greatest part of all farinaceous substances, particularly of wheat-flour.

2. A preparation of commercial starch with boiling (or less frequently cold) water, used in the laundry or factory for stiffening linen or cotton fabrics before ironing. In the sixteenth and seventeenth centuries the starch used for ruffs, cuffs, etc., was frequently colored, yellow being at one time extremely fashionable. Blue starch was affected by the Puritans. A certain kind of liquid matter which they call *starch*, wherein the devil hath willed them to wash and dive their ruffs, which, when they be dry, will then stand stiffe and inflexible about their necks. Stubbes, Anat. of Abuses.

3. A stiff, formal manner; starchedness. [*Colloq.*] This professor is to give the society their stiffening, and infuse into their manners that beautiful political *starch* which may qualify them for levees, conferences, visits. Addison, Spectator, No. 305.

The free-born Westerner thinks the blamed Yankee puts on a yard too much style—the Boys don't approve of style—and suavely proposes to take the *starch* out of him. Great American Language, Cornhill Mag., Oct., 1888, p. 375.

Animal starch. Same as *glycogen*, 1.—**Glycerite of starch**, one part of starch and nine of glycerin, triturated into a smooth mixture.—**Poland starch**, blue starch.—**Starch bandage**, a bandage stiffened, after application, with starch.—**Starch bath**, a hot-water bath containing starch, used in eczema.

starch² (stärch), *v. t.* [*<* *starch²*, *n.*] To stiffen with starch.

She made her wash, she made her *starch*.
Queen Eleanor's Fall (Child's Ballads, VII. 296).

star-chamber (stär'chäm'bër), *n.* [Early mod. E. *starre-chamber* (poetically *chamber of starres* (Skelton), late AF. *chambre des estoilles*), *<* late ME. *sterre-chambre* (Rolls of Parliament, 1450-1460, cited by Oliphant, in "New English," I. 293), also *sterred chamber*, i. e. 'starred chamber' (ML. *camera stellata*); so called because the roof was orig. ornamented with stars, or for some other reason not now definitely known (see the quot. from Minshew); *<* *star¹* + *chamber*. The statement, made doubtfully by Blackstone and more confidently by other writers (as by J. R. Green, "Short Hist. of the Eng. People," p. 115), that the chamber was so called because it was made the depository of Jewish bonds called *stars* or *starrs* (*<* Heb. *shetar*) rests on no ME. evidence, and is in-

consistent with the ME. and ML. forms of the name; it is appar. due to the tendency of some writers to reject etymologies that are obvious, on the unacknowledged ground that being obvious they must be "popular" and therefore erroneous.] 1. [*cap.*] In *Eng. hist.*, a court of civil and criminal jurisdiction at Westminster, constituted in view of offenses and controversies most frequent at the royal court or affecting the interests of the crown, such as maintenance, fraud, libel, conspiracy, riots resulting from faction or oppression, but freely taking jurisdiction of other crimes and misdemeanors also, and administering justice by arbitrary authority instead of according to the common law. Such a jurisdiction was exercised at least as early as the reign of Henry VI., the tribunal then consisting of the Privy Council. A statute of 3 Henry VII. authorized a committee of the council to exercise such a jurisdiction, and this tribunal grew in power (although successive statutes from the time of Edward IV. were enacted to restrain it) until it fell into disuse in the latter part of the reign of Henry VIII. In 31 Henry VIII., c. 8, a statute declared that the King's proclamation should have the force of law, and that offenders might be punished by the ordinary members of the council sitting with certain bishops and judges "in the Sterr Chamber at Westm. or elsewhere." In 1640 the court of Star Chamber was abolished by an act of 16 Charles I., c. 10, reciting that "the reasons and motives inducing the erection and continuance of that court [of Star Chamber] do now cease." As early as the reign of Edward III., a hall in the palace at Westminster, known as the "Chambre des Eatoyer" (or "Etoilles"), was occupied by the king's council; and about the reign of Henry VII. appear records of "the Lords sitting in the Star Chamber," or "the Council in the Star Chamber," from which time it seems to have been regarded as the court of the Star Chamber. There is a difference of opinion whether the tribunal sitting under the act of 3 Henry VII. should be deemed the same court or not.

Starre-chamber, Camera stellata, is a Chamber at the one end of Westminster Hall, so called, as Sir Thomas Smith coniectureth, lib. 2. cap. 4, either because it is so full of windowes, or because at the first all the rooffe thereof was decked with Images of guldred starres. The latter reason is the likelier, because Anno 25. Hen. 8. cap. 1. it is written the *sterred chamber*. Now it hath the signe of a Starre ouer the doore, as you one way enter therein. Minshew (1617).

2. Any tribunal or committee which proceeds by secret, arbitrary, or unfair methods: also used attributively: as, *star-chamber* proceedings; *star-chamber* methods.

starch-cellulose (stärch'sel'ü-lös), *n.* See *cellulose²*.

starch-corn† (stärch'körn), *n.* Spelt. **starched** (stärch'ched), *p. a.* [*<* *starch²* + *-ed²*.] 1. Stiffened with starch.—2†. Stiffened, as with fright; stiff.

Some with black terrors his faint conscience baited,
That wide he star'd, and starched hair did stand.

P. Fletcher, Purple Island, vii.

3. Stiff; precise; formal.

Look with a good *starched* face, and ruffle your brow like a new boot. B. Jonson, Every Man out of his Humour, i. 1.

starchedly (stär'ched-li), *adv.* Stiffly; as if starched. *Stormonth*.

starchedness (stär'ched-nes), *n.* The state of being starched; stiffness in manners; formality. L. Addison, West Barbary, p. 105.

starcher (stär'chër), *n.* [*<* *starch²* + *-er¹*.] One who starches, or whose occupation it is to starch: as, a clear *starcher*. Heywood, Fair Maid of the Exchange.

starch-gum (stärch'gum), *n.* Same as *dextrine*.

starch-hyacinth (stärch'hi'ä-sinth), *n.* See *hyacinth²*.

starchiness (stär'chi-nes), *n.* The quality of being starchy, or of abounding in starch.

starchly (stärch'li), *adv.* [*<* *starch¹* + *-ly²*.] In a starchy manner; with stiffness of manner; formally.

I might . . . talk *starchly*, and affect ignorance of what you would be at. Swift, To Rev. Dr. Tisdall, April 20, 1704.

starchness (stärch'nes), *n.* Stiffness of manner; preciseness. *Imp. Dict.*

starchroot (stärch'röt), *n.* See *starchwort*.

starch-star (stärch'stär), *n.* In *Characeæ*, a bulblet produced by certain species of *Chara* for propagative purposes: it is an underground node.

starch-sugar (stärch'shüg'är), *n.* Same as *dextrose*.

starchwoman† (stärch'wüm'an), *n.* A woman who sold starch for the stiffening of the great ruffs worn in the sixteenth century. The starch-woman was a favorite go-between in intrigues. See the quotation.

The honest plain-dealing jewel her husband sent out a boy to call her (not bawd by her right name, but *starch-woman*); into the shop she came, making a low counterfeit curtsy, of whom the mistress demanded if the starch were pure gear, and would be stiff in her ruff.

Middleton, Father Hubbard's Tales.

starchwort† (stärch'wört), *n.* The wake-robin, *Arum maculatum*, whose root yields a starch once used for fine laundry purposes, later prepared as a delicate food under the name of *English* or *Portland arrowroot*. This was chiefly produced in the Isle of Portland, where the plant is called *starchroot*. See cuts under *Araceæ* and *Arum*.

starchy¹ (stär'chi), *a.* [*<* *starch¹* + *-y¹*.] Stiff; precise; formal in manner.

Nothing like these *starchy* doctors for vanity! . . . He cared much less for her portrait than his own.

George Eliot, Middlemarch, xxii.

starchy² (stär'chi), *a.* [*<* *starch²* + *-y¹*.] Consisting of starch; resembling starch.

star-clerk† (stär'klërk), *n.* One learned in the stars; an astronomer. [Rare.]

If, at the least, *Star-Clarks* be credit worth.

Sylvester, tr. of Du Bartas's Weeks, i. 3.

star-cluster (stär'klus'tër), *n.* A compressed group of six or more fixed stars; but most of the collections so called contain a hundred stars or more.

star-connet† (stär'kon'ëër), *n.* [*<* *star¹* + *conner¹*.] A star-gazer. *Gascoigne*, Fruits of Warre. **starcraft** (stär'kräft), *n.* Astrology. *Tennyson*, Lover's Tale, i.; *O. Cockayne*, Leechdoms, Wort-cunning, and Starcraft of Early England [title]. [Rare.]

star-cross† (stär'krös), *a.* Same as *star-crossed*. *Middleton*, Family of Love, iv. 4.

star-crossed (stär'kröst), *a.* Born under a malignant star; ill-fated. *Shak.*, R. and J., Prol., l. 6.

star-diamond (stär'di'ä-mönd), *n.* A diamond that exhibits asterism.

star-drift (stär'drift), *n.* A common proper motion of a number of fixed stars in the same part of the heavens. See *fixed star*, under *star¹*.

star-dust (stär'düst), *n.* Same as *cosmic dust* (which see, under *cosmic*).

Mud gathers on the floor of these abysses [of the ocean] . . . so slowly that the very *star-dust* which falls from outer space forms an appreciable part of it.

A. Geikie, Geological Sketches, xlii.

Piers Plowman's Creed (E. E. T. S.), l. 553.

Her fylre eyea with furious sparkes did *stare*.
Spenser, F. Q., III. vii. 39.

4. To be unduly conspicuous or prominent, as by excess of color or by ugliness. Compare *staring³*.

The homeliness of the sentiment *stares* through the fantastic encumbrance of its fine language, like a clown in one of the new uniforms! Sheridan, The Critic, l. 1.

=Syn. 1. *Gaze*, *Gape*, *Stare*, *Gloat*. *Gaze* is the only one of these words that may be used in an elevated sense. *Gaze* represents a fixed and prolonged look, with the mind absorbed in that which is looked at. To *gape* is in this connection to look with open mouth, and hence with the bumpkin's idle curiosity, listlessness, or ignorant wonder: one may *gape* at a single thing, or only *gape* about. *Stare* expresses the intent look of surprise, of mental weakness, or of insolence; it implies fixedness, whether momentary or continued. *Gloat* has now almost lost the meaning of looking with the natural eye, and has gone over into the meaning of mental attention; in either sense it means looking with arid or even rapture, often the delight of possession, as when the miser *gloats* over his wealth.

II. *trans.* To affect or influence in some specified way by staring; look earnestly or fixedly

The apple and pear were still unclothed and stark.
H. W. Preston, Year in Eden, 1.

starken (stär'ku), *v. t.* [*< stark¹ + -en¹.*] To make unbending or inflexible; stiffen; make obstinate. *Sir H. Taylor, Edwin the Fair, iv. 4.*

Starkey's soap. See *soap*.
starkly (stärk'li), *adv.* In a stark manner; stiffly; strongly; rigidly. *Shak., M. for M., iv. 2. 70.*

stark-naked (stärk'nä'ked), *a.* See *stark¹, adv., and start-naked.*
starkness (stärk'nes), *n.* Stiffness; rigidity; strength; grossness.

How should we have yielded to his heavenly call, had we been taken, as they were, in the starkness of our ignorance?
Milton, On Def. of Humb. Remonat.

starless (stär'les), *a.* [*< star¹ + -less.*] Having no stars visible, or no starlight: as, a starless night.

starlet (stär'let), *n.* [*< star¹ + -let.*] 1. A small star.

Nebulae may be comparatively near, though the starlets of which they are made up appear extremely minute.
H. Spencer.

2. A kind of small starfish.
starlight (stär'lit), *n.* and *a.* [*< star¹ + light¹.*] 1. *n.* 1. The light proceeding from the stars.

Nor walk by moon
Or glittering starlight without thee is sweet.
Milton, P. L., iv. 656.

Hence—2. A faint or feeble light.

Scripture only, and not any star-light of man's reason.
Hooker, Eccles. Polity, iii. 11.

II. *a.* Lighted by the stars, or by the stars only.

A starlight evening, and a morning fair.
Dryden, tr. of Virgil's Georgics, i. 548.

starlike (stär'lik), *a.* [*< star¹ + like².*] 1. Resembling a star; stellular; radiated like a star: as, starlike flowers.—2. Bright; lustrous; shining; luminous: as, starlike eyes.

starling¹ (stär'ling), *n.* [*< ME. starling, sterling, sterynge; < stare (< AS. star), a stare, starling (see stare²), + -ling¹.*] 1. An oscine passerine bird, of the family Sturnidae and genus Sturnus, as *S. vulgaris* of Europe. The common starling or stare is one of the best-known of British birds. It is 8½ inches long when adult; black, of metallic luster, iridescent dark-green on some parts, and steel-blue, purplish, or violet on others, and variegated nearly throughout with pale-buff or whitish tips of the feathers. The

Common European Starling (*Sturnus vulgaris*).

wings and tail are duller-black, the exposed parts of the feathers frosted or silvered, with velvety-black and buff edgings. The bill is yellowish, and the feet are reddish. Immature, winter, and female birds are less lustrous, and more variegated with the ochery or tawny-brown, and have the bill dark-colored. Starlings live much about buildings, and nest in holes of walls, crannies of rock, openings in hollow trees, etc. They are sociable and gregarious, sometimes going in large flocks. They are often caged, readily tamed, and may be taught to whistle tunes, and even to articulate words. The name *starling* is extended to all birds of the family Sturnidae, and some others of the sturnoid series; also, erroneously, to the American birds of the family Icteridae, sometimes known collectively as *American starlings*. The last belong to a different series, having only nine primaries, etc. The bird with which the name is especially connected in this sense is *Agelaius phoeniceus*, the common marsh-blackbird, often called *red-winged starling*. The name of *meadow-starling* is often applied to *Sturnella magna*. See also cuts under *Agelaius* and *meadow-lark*.

Looking up, I saw . . . a starling hung in a little cage. "I can't get out—I can't get out," said the starling.
Sterne, Sentimental Journey (The Passport).

2. One of a breed of domestic pigeons which in color resemble the starling.—3. Same as *rock-trout*, 2.—**American starlings.** See def. 1.—**Black starling,** a melanistic variety of the common starling.—**Cape starling or stare** (Latham, 1783), the black and white Indian starling of Edwards (1751), the contra from Bengal of Albin (1740), *Sturnopastor contra*: so called as erroneously described from the Cape of Good Hope (as l'étonneau du Cap de Bonne Espérance

of Brisson, 1760), but found chiefly in India. It is 9 inches long; the ground-color of the plumage is black, much glossed with greenish and bronze tints and varied with white; the bill and a bare space above the eyes are orange.—**Chinese starling** (Edwards, 1743), the so-called crested grackle (Latham, 1783), *Acridotheres cristatellus* of central and southern China, and also the Philippine island Luzon (where it is supposed to have been introduced). It is 10½ inches long; the bill is yellow with rose-colored base; the feet and eyes are orange; the plumage is glossy-black with various aheen, and also varied with white; and the head is crested.—**Cockscomb-starling or -stare** (Latham, 1783), a remarkable African and Arabian starling, *Dilophus carunculatus*, having in the adult male the head mostly bare, with two erect caruncles or combs on the crown, and a pendent wattle on each side of the face; the plumage is chiefly isabelline gray, with black wings and tail, the former varied with white.—**Glossy starlings**, various birds, chiefly African, forming a subfamily Lamprotrornithinae (or *Juidinae*) of the family

Glossy Starling (*Spreo bicolor*).

Sturnidae, as of the genera *Lamprotrornis*, *Lamprocolius*, *Spreo* (or *Notauges*). Of the last-named there are several species, as *S. bicolor* of South Africa and *S. pulchra* of West Africa. They are mainly of extremely iridescent plumage.—**Meadow-starling.** See def. 1.—**Red-winged starling.** See def. 1.—**Rose or rose-colored starling,** a bird of the genus *Pastor*, as *P. roseus*, which used to be called *rose or carnation ouzel, rose-colored thrush*, etc. See cut under *pastor*.—**Silk starling** (Brown, 1770), or *stare* (Latham, 1783), the Chinese *Poliopar sericeus*, 8 inches long, the bill bright-red tipped with white, the feet orange, the eyes black, the plumage ashy-gray varied with black, white, green, brown, purplish, etc.—**Talking starling,** one of several different sturnoid birds of India, etc.; a religious grackle; a mina. See *mina², Acridotheres*, and cut under *Eulabes*.

starling² (stär'ling), *n.* [Also *sterling*; cf. Sw. *Dan. stór*, a pole, stake, prop; Sw. *störa*, prop up with sticks or poles, = *Dan. stare*, put corn on poles to dry.] 1. In *hydraul. engin.*, an inclosure like a coffer-dam, formed of piles driven closely together, before any work or structure as a protection against the wash of the waves. starvation (stär-vä'shən), *n.* [*< starve* + *-ation*. The word is noted as one of the first (*flirtation* being another) to be formed directly from a native E. verb with the L. term. *-ation*. It was first used or brought into notice by Henry Dundas, first Viscount Melville (hence called "Starvation Dundas"), in a speech on American affairs, in 1775.] The state of starving or being starved; extreme suffering from cold or hunger; hence, deprivation of any element essential to nutrition or the proper discharge of the bodily functions: often used figuratively of mental or spiritual needs.

Starvation Dundas, whose pious policy suggested that the devil of rebellion could be expelled only by fasting.

Walpole, *To Rev. W. Mason*, April 25, 1781.

Starvation was an epithet applied to Mr. Dundas, the word being, for the first time, introduced into our language by him, in a speech, in 1775, in an American debate, and thenceforward became a nickname: . . . "I shall not wait for the advent of *starvation* from Edinburgh to settle my judgment." *Milford*, in *Walpole's Letters* (ed. Cunningham), VIII. 30, note.

Whether an animal be herbivorous or carnivorous, it begins to starve from the moment its vital food-stuffs consist of pure amyloids, or fats, or any mixture of them. It suffers from what may be called nitrogen *starvation*.

Huxley and *Youmans*, *Physiol.*, § 170.

starve (stärv), *v.*; pret. and pp. *starved*, ppr. *starving*. [Early mod. E. also *sterve*; *< ME. sterven, steorven* (pret. *starf, sterf*, pp. *starven, storven, i-storve, y-storve*), *< AS. steorfan* (pret. *stearf*, pl. *sturfon*, pp. *storfen*), die, = OS. *sterbhan* = OFries. *sterva* = D. *sterren* = MLG. *sterven*, LG. *starven*, *sterren* = OHG. *sterban*, MHG. stasion (stas'i-mon), n.; pl. *stasima* (-mä). [*Gr. στάσιον* (see def.), < *στάσις*, a standing, station.] In *anc. Gr. lit.*, any song of the chorus in a drama after the parodos. The parabasis of a comedy is not, however, called a stasion. Some authorities limit the use of the term to tragedy. The name is derived not, as stated by scholiasts, from the chorus's standing still during a stasion (which cannot have been the case), but from the fact that it was sung after they had taken their station in the orchestra.

stasimorphy (sta'si-mòr-fi), n. [*Gr. στάσις*, standing, + *μορφή*, form.] Deviation of form arising from arrest of growth. Cooke, Manual.

10†. Estate; income; possession.

I judge them, first, to have their *states* confiscated. E. Jonson, *Castiline*, v. 8.

11. The whole people of one body politic; the commonwealth: usually with the definite article; in a particular sense, a civil and self-governing community; a commonwealth.

In Aleppo once, Where a malignant and a turban'd Turk Beat a Venetian and traduced the *state*. Shak., *Othello*, v. 2. 354.

A *State* is a community of persons living within certain limits of territory, under a permanent organization, which aims to secure the prevalence of justice by self-imposed law. Woolsey, *Introd. to Inter. Law*, § 36.

12. The power wielded by the government of a country; the civil power, often as contrasted with the ecclesiastical: as, the union of church and *state*.—13. One of the commonwealths or bodies politic which together make up a federal republic, which stand in certain specified relations with the central or national government, and as regards internal affairs are more or less independent. In this sense the word *state* is used chiefly with reference to the several States (generally *cap.*) of the American Union, the United States of America. The relations between the individual states and the national or central government of Mexico, Brazil, and various other republics of the American continent are formed more or less closely on the model of the United States. Current designations or epithets of the States of the American Union are the following: Badger State, Wisconsin; Bay State, Massachusetts; Bayou State, Mississippi; Bear State, Arkansas; California, Kentucky; Big-bend State, Tennessee; Blue-hen State, Delaware; Bine-jaw State, Connecticut; Buckeye State, Ohio; Bullion State, Missouri; Centennial State, Colorado; Corn-cracker State, Kentucky; Cracker State, Georgia; Creole State, Louisiana; Dark and Bloody Ground, Kentucky; Diamond State, Delaware; Empire State, New York; Empire State of the South, Georgia; Excelsior State, New York; Freestone State, Connecticut; Garden State, Kansas; Golden State, California; Gopher State, Minnesota; Granite State, New Hampshire; Green Mountain State, Vermont; Gulf State, Florida; Hawkeye

[= D. staatsman = G. staatsmann = Sw. statsman = Dan. statsmand; as state's, poss. of state, + man.] **1.** A man who is versed in the art of government, and exhibits conspicuous ability and sagacity in the direction and management of public affairs; a politician in the highest sense of the term.

It is a weakness which attends high and low: the statesman who holds the helm, as well as the peasant who holds the plough.
South.

The Eastern politicians never do anything without the opinion of the astrologers on the fortunate moment. . . . Statesmen of a more judicious presence look for the fortunate moment too; but they seek it, not in the conjunctions and oppositions of planets, but in the conjunctions and oppositions of men and things.

Burke, Letter to a Member of the Nat. Assembly, 1791.

2. One who occupies his own estate; a small landholder. [Prov. Eng.]

The old statesmen or peasant proprietors of the valley had for the most part succumbed to various destructive influences, some social, some economical, added to a certain amount of corrosion from within.

Mrs. Humphry Ward, Robert Elsmere, l. ii.

=**Syn. 1.** See politician.

To raise fresh sums: she 's a great *stateswoman*!

B. Jonson.

stathe (stāth), *n.* [Also *staithe*, *staithe*; early mod. E. also *stayth*, *steyth*; < ME. *stathic* (AF. *stathe*), < AS. *stæth*, later *steth*, bank, shore, = Icel. *stóðl*, a harbor, roadstead, port, landing; akin to AS. *stede*, stead; see *stead*.] A landing-place; a wharf. [Obsolete or prov. Eng.]

stathmograph (stath'mō-gráf), *n.* [< Gr. *σταθμῶν*, measure, + *γράφειν*, write.] An instrument for indicating and registering the velocity of railroad-trains: a form of velocimeter. E. H. Knight.

static (stat'ik), *a.* [< Gr. *στατικός*, causing to stand, pertaining to standing, < *στατός*, verbal adj. of *στάναι*, mid. and pass. *ιστάσθαι*, stand: see *stasis*, *stand*.] 1. Pertaining to weight and the theory of weight.—2. Same as *statical*.—**Static ataxia**, inability to stand without falling or excessive swaying, especially with closed eyes, as in tabes.—**Static gangrene**, gangrene resulting from mechanical obstruction to the return of blood from a part.—**Static refraction**. See *refraction*.

statical (stat'ikal), *a.* [< *static* + *-al*.] 1. Pertaining to bodies at rest or to forces in equilibrium.—2. Acting by mere weight without producing motion: as, *statical pressure*.—**Statical electricity**. See *electricity*.—**Statical induction**. See *induction*, 6.—**Statical manometer**. See *manometer*.

statically (stat'ikal-i), *adv.* In a statical manner; according to statics.

Statice (stat'isē), *n.* [NL. (Tournefort, 1700), < Gr. *στατική*, an astringent herb, fem. of *στατικός*, causing to stand: see *static*.] A genus of gamopetalous plants,

of the order *Plumbaginæ*, type of the tribe *Staticeæ*. It is characterized by its aculeoscent or tufted herbaceous or somewhat shrubby habit, flat alternate leaves, inflorescence commonly cymose and composed of one-sided spikes, stamens but slightly united to the petals, and styles distinct to the angles of the ovary, with capitate, oblong, or linear stigmas. Over 120 species have been described, natives of the sea-shore and of desert sands, mostly of the Old World, and of the northern hemisphere, especially of the Mediterranean region. A smaller number occur in America, South Africa, tropical Asia, and Australia. They are usually perennials; a few are diminutive loosely branched shrubs. They are smooth or covered with scurf or dust. The leaves vary from linear to obovate, and from entire to pinnatifid or dissected; they form a rosette at the root, or are crowded or scattered upon the branches. The short-pedicelled corolla consists of five nearly or quite distinct petals with long claws, and is commonly surrounded by a funnel-shaped calyx which is ten-ribbed below, and scarious, plicate, and colored above, but usually of a different color from the corolla, which is often white with a purple or lavender calyx and purplish-brown pedicel. They are known in general as *sea-lavender*. The common European *S. Linonitum* is also sometimes called *marsh-beef* from its purplish root; it is the *red behen* of the old apothecaries. Its American variety, *Caroliniana*, the marsh-rosemary of the coast from Newfoundland to Texas, is also known as *canker-root*, from the use as an astringent of its large bitter fleshy root, which also contains tannic acid (whence its name *ink-root*). The very large roots of *S. latifolia* are used for tanning in Russia and Spain, and those of *S. mucronata* as a nervine in Morocco under the name of *saffra*. Other species also form valued remedies, as *S. Brasiliensis*, the guaycura of Brazil and southward. Many species are cultivated for their beauty, as *S. latifolia*, and *S. arborescens*, a shrub from the Canaries. In Afghanistan, where several species grow in desert regions, they form a source of fuel.

Flowering Plant of *Statice Linonitum*, var. *Caroliniana*, a, the flower with its bracts.

Staticeæ (stā-tis'ē-ē), *n. pl.* [NL. (Endlicher, 1836), < *Statice* + *-æ*.] A tribe of plants, of the order *Plumbaginæ*, distinguished from the other tribe (*Plumbagææ*) by flowers with a commonly spreading, scarious, and colored calyx-border, stamens united to the petals at the base or higher, and styles distinct to the middle or the base. It includes 5 genera, of which *Statice* is the type. They are commonly aculeoscent plants, very largely maritime, and of the Mediterranean region.

statics (stat'iks), *n.* [Pl. of *static* (see *-ics*). Cf. F. *statique*, < Gr. *στατική*, the art of weighing, fem. of *στατικός*, causing to stand: see *static*.] That branch of mechanics which treats of the relations of strains and stresses, or of the figures of bodies in equilibrium and of the magnitudes and directions of the pressures.—**Chemical, graphical, social statics**. See the adjectives.

station (stā'shon), *n.* [< ME. *stacion*, < OF. *station*, *stacion*, *estacion*, *estacion*, etc., F.

station = Sp. *estacion* = Pg. *estação* = It. *stazione* = D. G. Sw. Dan. *station*, < L. *statio(n)-*, a standing, place of standing, station, a post, abode, dwelling, position, office, etc., < *stare*, stand: see *state*, *stand*.] 1. A standing still; a state of rest or inactivity. [Obsolete or archaic.]

Her motion and her *station* are as one.

Shak., A. and C., III. 3. 22.

Man's life is a progress, and not a *station*.

Emerson, Compensation.

2. Manner of standing; attitude; pose: rare except in the specific uses.

An eye like Mars to threaten and command;

A *station* like the herald Mercury;

New-lighted on a heaven-kissing hill.

Shak., Hamlet, III. 4. 58.

Specifically—(a) In *med.*, the steadiness (freedom from swaying) with which one stands. (b) The manner of standing or the attitude of live stock, particularly of exhibition game fowls: as, a duckwing game-cock of standard high *station*.

3. The spot or place where anything habitually stands or exists; particularly, the place to which a person is appointed and which he occupies for the performance of some duty; assigned post: as, a life-boat *station*; an observing-*station*; the *station* of a sentinel; the several *stations* of the officers and crew of a ship when the fire-signal is sounded.

If that service ye now do want,

What *station* will ye be?

Blanchefleur and Jellyflower (Child's Ballads, IV. 297).

One of our companions took his *station* as sentinel upon the tomb of the little mosque.

O'Donovan, Merv, xx.

4. The place where the police force of any district is assembled when not on duty; a district or branch police office. See *police station*, under *police*.—5. The place where the British officers of a district in India, or the officers of a garrison, reside; also, the aggregate of society in such a place: as, to ask the *station* to dinner. Yule and Burnell, Anglo-Indian Glossary.

The little hills done by the rich bunneahs, the small and great pecuniary relations between the *station* and the bazaar.

W. H. Russell, Diary in India, I. 194.

6. The condition or position of an animal or a plant in its habitat, or its relation to its environment: often used synonymously with *habitat* (but *habitat* is simply the place where an animal or plant lives, *station* the condition under which it lives there).

The males and females of the same species of butterfly are known in several cases to inhabit different *stations*, the former commonly basking in the sunshine, the latter haunting gloomy forests.

Darwin, Descent of Man, I. 391.

7. In *surv.*: (a) The place selected for planting the instrument with which an observation is to be made. (b) A fixed uniform distance (usually the length of a chain of 100 feet, or 66 feet, or half the length of a twenty-meter chain) into which a line of survey is divided. The stations are consecutively numbered.—8. A stock-farm. [Australia.]—9. A regular stopping-place. (a) One of the stages or regular stopping-places at which pilgrims to Rome or other holy place were wont to stop and rest, as a church or the tomb of a martyr. (b) One of the places at which ecclesiastical processions pause for the performance of an act of devotion, as a church, the tomb of a martyr, or some similar sacred spot. Hence—(c) The religious procession to and from or the service of devotion at these places. (d) One of the representations of the successive stages of Christ's passion which are often placed round the naves of churches, and by the sides of the way leading to sacred edifices, and which are visited in rotation. (e) In the *early church*, the place appointed at church for each class of worshippers, more especially for each grade of penitents; hence, the status, condition, or class so indicated. (f) A place where railway-trains regularly stop for the taking on of passengers or freight; hence, the buildings erected at such a place for railway business; a depot.

10. *Eccles.*: (a) In the *early church*, an assembly of the faithful in the church, especially for the celebration of the eucharist. (b) The fast and service on Wednesday and Friday (except between Easter and Pentecost), in memory of the council which condemned Christ, and of his passion. These are still maintained by the Greek Church, but the fast of Wednesday in the Western Church has been abrogated. (c) Among Roman Catholics, a church where indulgences are to be obtained on certain days.—11. Situation; position.

The head has the most beautiful appearance, as well as the highest *station*, in a human figure.

Addison, Spectator, No. 98.

12. Status; rank; standing; specifically, rank or standing in life; social state or position; condition of life; hence, high rank or standing.

They in France of the best rank and *station*.

Shak., Hamlet, I. 3. 73.

He never courted men in *station*.

Swift, Death of Dr. Swift.

Content may dwell in all *stations*.

Sir T. Browne, Christ. Mor., I. 27.

Given as a tonic, but not worthy an official *station*.

Dunghison, Med. Dict.

See *outside*, = *Syn. 9* (f). See *depot*.

station (stā'shon), *v. t.* [< *station*, *n.*] To assign a station or position to: as, to *station* troops on the right or left of an army; to *station* a sentinel on a rampart; to *station* one's self at a door.

Not less one glance he caught

Thro' open doors of Ida *station'd* there

Unshaken, clinging to her purpose.

Tennyson, Princess, v.

stational (stā'shon-al), *a.* [< L. *stationalis*, standing still, fixed, < *statio(n)-*, a standing still, a post: see *station*.] Of or pertaining to a station.

stationariness (stā'shon-ā-ri-nes), *n.* Stationary character or quality; fixity: as, the *stationariness* of the barometer; the *stationariness* of rents. J. S. Mill, On Liberty, iii.

stationary (stā'shon-ā-ri), *a.* and *n.* [= F. *stationnaire* = Sp. Pg. *estacionario* = It. *stazionario*, < L. *stationarius*, pertaining to a post or station, < *statio(n)-*, a post, station: see *station*.] 1. *a.* 1. Having a particular station or place; remaining in a certain place; not movable, or not intended to be moved; not moving, or appearing not to move; technically, without velocity, whether this condition is only instantaneous, or whether the body spoken of remains motionless for an interval of time. A planet is said to be stationary at a turning-point of its motion, when its longitude is neither increasing nor diminishing. The sun is said to be stationary when it reaches one of the tropics and begins to turn toward the equinoctial.

2. Remaining in the same condition or state; making no progress; without change; with neither increase nor decrease of symptoms, intensity, etc.: as, a *stationary* temperature.

The ancient philosophy disdained to be useful, and was content to be *stationary*.

Macaulay, Bacon.

Stationary air, the amount of air which remains constantly in the lungs in ordinary respiration.—**Stationary contact, diseases, engine**. See the nouns.—**Stationary motion**, such a motion of a system that no particle continually departs further and further from its original position, nor does its velocity continually increase or diminish. *Clavius*.—**Stationary point**, on a curve, a point where the point generating the curve is stationary and turns back; a cusp; a binode whose two tangents coincide.—**Stationary tangent of a curve**, a tangent where the moving tangent generating the curve is stationary and turns back; an inflection.—**Stationary tangent plane of a surface**, a tangent plane which has stationary contact with the surface.

II. n.; pl. stationaries (-riz). 1. A person or thing which remains or continues in the same place or condition; specifically, one of a force of permanent or stationary troops.

The *stationaries* are mine already. So are the soldiery all the way up the Nile.

station-pointer (stā'shon-poin'tēr), *n.* In *surv.*, an instrument for expeditiously laying down on a chart the position of a place from which the angles subtended by three distant objects, whose positions are known, have been measured; a three-armed protractor.

station-pole, station-staff (stā'shon-pōl, -stāf), *n.* In *surv.*, same as *leveling-staff*. *L.*

statism (stā'tizm), *n.* [*<* state + -ism.] The art of government; hence, in a depreciative sense, policy. [Rare.]

Hence it is that the enemies of God take occasion to blaspheme, and call our religion *statism*.

South, Sermons, I, iv.

statist (stā'tist), *n.* [= *G. statist* = *Sw. statist*, a statesman, politician, = *Sp. Pg. estadista*, a statesman, politician, also a statistician, = *It. statista*, a statesman; as *state* (*L. status*) + -ist.] 1. A statesman; a politician; one skilled in government. [Obsolete or archaic.]

Next is your *statist's* face, a serious, solemn, and supercilious face, full of formal and square gravity.

B. Jonson, Cynthia's Revels, II, 1.

2. A statistician.

The keen *statist* reckons by tens and hundreds; the genial man is interested in every slipper that comes into the assembly.

Emerson, Success.

statistic (stā-tis'tik), *a.* and *n.* [*I. a.* = *F. statistique* = *Sp. estadístico* = *Pg. estadístico* = *It. statistico* (cf. *G. statistisch* = *Sw. Dan. statistisk*), lit. pertaining to a statist or to matters of the state; as *statist* + -ic. *II. n.* = *F. statistique* = *Sp. estadística* = *Pg. estadística* = *It. statistica*, statistics, = *G. statistik*, political science, statistics, = *Sw. Dan. statistik*, statistics; from the adj.] *I. a.* Statistical.

II. n. 1. Same as *statistics*.—2. A statistical statement.—3. A statistician.

Henley said you were the best *statistic* in Europe.

Southey, 1804, in Robberd's Mem. of Taylor of Norwich, I, 508.

statistical (stā-tis'ti-kāl), *a.* [*<* statistic + -al.] Of or pertaining to statistics; consisting of facts and calculations or such matters: as, *statistical tables*; *statistical information*.—**Primary statistical number**, the number of a class ascertained by direct counting.—**Statistical inference**. See *inference*.—**Statistical method**, a scientific method in which results are deduced from averages as data. Political economy, the kinetic theory of gases, and Darwinian evolutionism pursue statistical methods, which are also now applied to psychology.—**Statistical proposition**. See *proposition*.—**Statistical ratio**, the number of one class of things which are found associated upon the average with each one of another class of things: thus, the number of children per family is a *statistical ratio*; so is the average duration of life.

statistically (stā-tis'ti-kāl-i), *adv.* In a statistical manner; by the use of statistics; from a statistical point of view.

statistician (stat-is'tish'an), *n.* [= *F. statisticien*; as *statistic* + -ian.] One who is versed in or collects statistics.

statistics (stā-tis'tiks), *n.* [*Pl.* of *statistic* (see -ics).] 1. A systematic collection of numbers relating to the enumeration of great classes, or to ratios of quantities connected with such classes, and ascertained by direct enumeration. Thus, a table of the populations of the different States of the American Union is called a *table of statistics*; so is a table showing the percentages of farms in different parts of the country that are mortgaged, provided these percentages have been ascertained from direct sampling, and not calculated by dividing the number of mortgaged farms by the total number of farms.

The word *statistics*, as the name of a peculiar science, was first engrafted into our language by Sir John Sinclair. It comprehends, according to the practice of the German writers, from whom it was adopted, all those topics of inquiry which interest the statesman.

Monthly Rev., 1796, App., p. 553 (N. and Q., 6th ser., XI, [404].)

2. The study of any subject, especially sociology, by means of extensive enumerations; the science of human society, so far as deduced from enumerations.—**Bureau of Statistics**. See *bureau*.—**Vital statistics**, a collection of statistical ratios relating to the average course of life, including the death-rates at different ages, liability to different diseases, etc.

statistology (stā-tis-tol'ō-jī), *n.* [Irreg. *<* *statist* (ics) + *Gr. -λογία*, *<* λέγειν, speak: see -ology.] A discourse or treatise on statistics.

stative (stā'tiv), *a.* [= *OF. statif*, *<* *L. stativeus*, standing still, *<* stare, stand: see *state*.] 1. Pertaining to a fixed camp or military post or quarters.—2. In *Heb. gram.*, indicating a physical state, or mental, intransitive, or reflexive action: said of certain verbs.

statize (stā'tiz), *v. i.* [*<* state + -ize. Cf. *statist*.] To meddle in state affairs. *Davies*.

Secular . . . mysteries are for the knowledge of *statizing* Jesuits.

Rev. T. Adams, Works, II, 168.

statlich, *a.* A Middle English form of *stately*.

statoblast (stat'ō-blāst), *n.* [*<* *Gr. στατός*, standing, fixed (see *static*), + *βλαστός*, a bud, germ.] One of the peculiar internal asexual buds developed in the body-cavity of the fresh-water or phylactolematous polyzoans, comparable to the gemmules of the fresh-water sponges, and serving for reproduction. These germs of new individuals to be reproduced agamogenetically by internal gemmation are formed in the funiculus or mesentery of the polyzoan; on the death of the parent organism, they are ruptured, and give exit to a young animal essentially like the parent. The fact that statoblasts contain no germinal vesicle, and never exhibit the phenomena of segmentation or yolk-cleavage, is conclusive against their being ova or eggs; and, moreover, an ovary producing ova occurs elsewhere in the same individual that produces statoblasts. Also called *winter bud*. See cut under *Plumatella*.

statoblastic (stat'ō-blas'tik), *a.* [*<* *statoblast* + -ic.] 1. Having the character or nature of a statoblast; of or pertaining to statoblasts: as, *statoblastic capsules*; *statoblastic reproduction*.—2. statoscope (stat'ō-skōp), *n.* [*<* *Gr. στατός*, standing, fixed (see *static*), + *σκοπεῖν*, view.] A form of aneroid barometer for registering minute variations of atmospheric pressure. It consists of a sensitive metallic diaphragm exposed on the outside to the changes of atmospheric pressure, and connecting on the inside with a closed reservoir of air, of four or five liters capacity, protected from temperature-changes by non-conducting walls filled with felt and wool. Registration is effected by a long index-needle on the cylinder of a chronograph. At the beginning of observation the index is brought to zero of the scale by opening a stop-cock connecting the reservoir with the outside air, and the absolute pressure at the moment is observed with a mercurial barometer. The stop-cock is then closed, and the index-needle shows variations of pressure as small as .01 millimeter of mercury. The total limit of change that can be registered is about 5 millimeters; for pressures beyond this the instrument must be reset.

statute (stat'ūt), *n.* [*< ME. statut, < OF. statut, estatut, statu, F. statut = Pr. statut = Sp. Pg. estatuto = It. statuta, statuto = D. statuut = G. Sw. Dan. statut, < LL. statutum, a statute, prop. neut. of L. statutus, pp. of statuere, set up, establish: see stand.*] 1. An ordinance or law; specifically, a law promulgated in writing by a legislative body; an enactment by a legislature; in the United States, an act of Congress or of a State or Territorial legislature passed and promulgated according to constitutional requirements; in Great Britain, an act of Parliament made by the Sovereign by and with the advice of the Lords and Commons. Some early statutes are in the form of charters or ordinances, proceeding from the crown, the consent of the Lords and Commons not being expressed. Statutes are either public or private (in the latter case affecting an individual or a company); but the term is usually restricted to public acts of a general and permanent character. Strictly speaking, an ordinance established by either house of the legislature, or by both, without the assent of the executive, as a resolution, or joint resolution, is not a statute. The word has sometimes, however, been interpreted to include municipal ordinances. See also *act, article, bill, by-law, charter, code, decree, edict, law, ordinance, petition, provision*.

Ac whiles Hunger was her maister there wolde none of hem chydre,
Ne stryne agaynes his *statut* so aterneliche he lokede.

Piers Plowman (B), vi. 321.

The *statutes* of the Lord are right. Pa. xix. 8.

Girded with frumps and curtall gibes, by one who makes sentences by the *Statute*, as if all above three inches long were confiscated. *Milton, Apology for Smectymnus*.

What are called in England constitutional statutes, such as Magna Charta, the Bill of Rights, the Act of Settlement, the Acts of Union with Scotland and Ireland, are merely ordinary laws, which could be repealed by Parliament at any moment in exactly the same way as it can repeal a highway act or lower the duty on tobacco.

J. Bryce, American Commonwealth, I. 237.

2. The act of a corporation or of its founder, intended as a permanent rule or law: as, the

statutes of a university.—3. In foreign and civil law, any particular municipal law or usage, though not resting for its authority on judicial decisions or the practice of nations. *Burrill; Worcester*.—4. A statute-fair. [Prov. Eng.]—

Bloody statute, an occasional name of the Act of the Six Articles. See the *Six Articles*, under *article*.—**Declaratory statute**. See *declaratory*.—**Directory statute**. See *equity*.—**Estate by statute**, more fully *estate by statute merchant*, or *estate by statute staple*, in *Eng. law*, the estate or tenancy which a creditor acquired in the lands of his debtor by their seizure on judgments by confession in forms now obsolete. See *statute merchant and statute staple*, below.—**General statute**, a statute which relates directly to the government or the general public interest, or to all the people of the state or of a particular class, condition, or district therein. See *legislation*, also *public statute* and *local statute*.—**Local statute**. See *local legislation*, under *local*.—**Mandatory statute**. See *mandatory*.—**Penal statutes**. See *penal*.—**Private statutes**. (a) See *private acts*, under *private*. (b) Same as *special statute*.—**Public statutes**. See *public acts*, under *public*.—**Remedial statutes**, statutes the main object of which appears directly beneficial, by supplying some defect in the law or removing inconveniences, as distinguished from those the immediate aspect of which is to impose punishment or penalty, which are called *penal statutes*. Some statutes partake of both characters, for a statute which is penal as against an offender may be remedial as toward those whom it is intended to protect.—**Retrospective statute**. See *retroactive*.—**Special or private statute**, a statute which the courts will not notice unless pleaded and proved like any other fact; also, a particular or peculiar statute: as, there is a *special statute* regulating chattel mortgages on canal-boats.—**Statute against benevolences**, an English statute of 1483-4 (1 Rich. III. c. 2) abolishing the peculiar system of raising money by solicitation, called *benevolences*, and declaring that such exactions should not be taken for precedent.—**Statute cap**. See *cap*.—**Statute de Donis**, more fully *Statute de Donis Conditionalibus*, an English statute of 1285 (13 Edw. I. befog the Statute of Westminster, ii. c. 1) intended to put an end to the common-law doctrine that under a gift to a man and the heirs of his body he acquired absolute title by having issue, even though none should survive. The act prescribed instead that the condition stated by the giver of reversion in failure of issue should be carried into effect. Also sometimes called *statute of entail*.—**Statute labor**. See *labor*.—**Statute lace**. See *lace*.—**Statute law**, a law or rule of action prescribed or enacted by the legislative power, and promulgated and recorded in writing; also, collectively, the enactments of a legislative assembly, in contradistinction to *common law*. See *law*.—**Statute merchant**, in law, a bond of record, now obsolete, acknowledged before the chief magistrate of some trading town, on which, if not paid at the day, an execution might be awarded against the body, lands, and goods of the obligor. See *pocket-judgment*.

A certaine blinde retaylor, called the *Dieuel*, used to lend money vpon pawnea or anie thing, and would let one for a neede haue a thousand poundes vpon a *statute-merchant* of his soule. *Nashe, Pierce Penilesse*, p. 9.

Statute of bread and ale. See *bread*.—**Statute of charitable uses**, an English statute of 1601 (43 Eliz. c. 4), sometimes called the *statute of Elizabeth*, for the protection of property devoted to charities. It authorized the lord chancellor to appoint commissioners to inquire into the management of such property, with power to correct abuses.—**Statute of Circumpecte Agatis**, an English statute of 1285 (13 Edw. I.) in the form of a writ addressed to the judges: so named from its first two words. It directed that the king's prohibition should not lie in spiritual matters, and that the jurisdiction of the spiritual courts should be exercised in cases of demands by a parson for tithes, mortuaries, pensions, etc., notwithstanding such prohibition.—**Statute of false pretenses**, an English statute of 1757 (30 Geo. II. c. 24) which defines and punishes the crime of false pretenses.—**Statute of fraudulent conveyances**, sometimes called the *statute of Elizabeth*. (a) An English statute of 1571 (13 Eliz. c. 5), enacted in nearly all of the United States, which declares all conveyances of property with intent to delay, hinder, or defraud creditors to be void as against such creditors. (b) An English statute of 1685 (27 Eliz. c. 4) making void all conveyances of land made with intent to deceive purchasers.—**Statute of Gloucester**, an English statute of 1278 (6 Edw. I.), passed at Gloucester, and relating to local franchises and Judicature, damages to real property, waste, trespass, etc.—**Statute of laborers**, an English statute of 1349 (23 Edw. III.) designed to compel workmen and servants to work for the wages commonly paid in the year 1346: enacted because the pestilence had seriously decreased the number of servants, and the survivors demanded exorbitant wages.—**Statute of Lincoln**, an English statute of 1315-16 (9 Edw. II., at. 2), so called because the Parliament sat at Lincoln. It prescribed the qualifications of sheriffs. Also known as the *statute of sheriffs*.—**Statute of Marlborough** (Marlberge, Marlbridge), an English statute of 1267 (62 Hen. III.), so called because made at Marlborough, containing twenty-nine chapters or sections relating principally to distress suits, landlord and tenant, courts, writs, etc. It is one of the earliest written laws, after the Great Charter, and is said to have been intended to defeat attempts to evade feudal dues on succession at death made by gifts *inter vivos*.—**Statute of merchants** (also known as the *statute of Aton Burrell*, from the place of its enactment). (a) An English statute or ordinance of 1283 (11 Edw. I.) for the collection of debts. (b) Another of 1285 (13 Edw. I.) for the same purpose.—**Statute of Merton**. Same as *provisions of Merton* (which see, under *provision*).—**Statute of military tenures**. See *military*.—**Statute of monopolies**. Same as *Monopoly Act* (which see, under *monopoly*).—**Statute of Northampton**, an English statute of 1328 (2 Edw. III.) relating to felonies, sheriffs, etc.—**Statute of Quia Emptores**, an English statute of 1289, 1290 (18 Edw. I.), which, because purchasers of land had

evaded their feudal dues to the chief lord by claiming to hold under the seller as their lord, provided that upon all sales or feoffments of land in fee simple the feeoffee should hold, not of his immediate feoffor, but of the next lord paramount of whom the feoffor himself held, and by the same service, thus putting an end to subinfeudation for several centuries.—**Statute of Rageman**, an English statute of 1276 (4 Edw. I.) requiring Justices to "go throughout the land" to try suits for trespasses.—**Statute of Rutland, Ruddian, or Rothlan**, an English royal ordinance of 1254 (12 Edw. I.), made at Rutland, which, among other things, forbade suits in the Exchequer except such as concerned the king and his officers, and referred to the keeping of the rolls, etc. Also called *provisions made in the Exchequer*.—**Statute of sheriffs**. Same as *statute of Lincoln*.—**Statute of Stamford**, an English statute of 1309 (3 Edw. II.) which confirmed an act of 28 Edw. I. abolishing the taking of goods, etc., by the king when on a journey except upon payment, and also abolished certain customs duties.—**Statute of Winchester or Winton**, an English statute of 1285 (13 Edw. I.) containing police regulations such as concern lesser crimes and the hue and cry, and prohibiting fairs and markets in churchyards.—**Statute of York**, an English statute of 1318 (12 Edw. II.) which relates to the administration of justice.—**Statutes of liveries**, English statutes, the first of which were in 1377 (1 Rich. II. c. 7), 1392-3 (16 Rich. II. c. 4), and 1396-7 (20 Rich. II., cc. 1 and 2), for the better preservation of the peace: so called because directed against the practice of giving distinctive liveries to retainers and partizans, whereby confederacies and hostile parties were engendered.—**Statutes of Westminster**, early English statutes, so called because made at Westminster. "The first" (1275), comprising fifty-one chapters, relates to freedom of elections, amercements, bail, extortion by officers, aid taken by lords, etc. "The second" (1285), including fifty chapters, relates to gifts, writs, plea, court-proceedings, etc. Also known as *Statute de Donis* (which see, above). "The third" was the statute "Quia Emptores" (which see, above).—**Statute staple**, in law, a bond of record, now obsolete, acknowledged before the mayor of the staple or town constituting a grand mart, by virtue of which the creditor might forthwith have execution against the body, lands, and goods of the debtor on non-payment.

There is not one gentleman amongst twenty but his land be engaged in twenty *statute-staple*.

Middleton, Family of Love, l. 8.

The Great Statute, an English code of customs law of 1660 (12 Car. II. c. 4) imposing duties which were termed the "old subsidy." (As to noted statutes on particular subjects, such as *statute of distributions, statute of enrolment, statute of fines, statute of frauds, statutes of jeoffail, statute of Jewry, statute of limitations, statutes of mortmain, statute of murders, statute of non-claim, statute of preemption, statute of provisors, statute of staple, statute of tillage, statute of uses, statute of wills*, see the word characterizing the statute.) = *Syn. In *base-ball*, to secure, as a base or run, without an error by one's opponents or a base-hit by the batter; to run successfully to, as from one base to the next, in spite of the efforts of one's opponents: as, to *steal* second base: sometimes used intransitively with *to*: as, to *steal* to second base.—10. In *netting*, to take away (a mesh) by netting into two meshes of the preceding row at once. *Encyc. Brit.*, XVII. 359.—**To steal a by**. See *byl*.—**To steal a march**, to march secretly; anticipate or forestall, or otherwise gain an advantage stealthily, or by address.—**To steal overt**, to smuggle.

In the Flushing and Low Country's troublesome disorders, some few (by *stealing over* of victuals and other things from this commonwealth) have made themselves privately rich. *Dr. J. Dee* (Arber's Eng. Garner, II. 60).

=**Syn. I.** To filch, pilfer, purloin, embezzle. See *pillage*, *n.*

II. intrans. 1. To practise or be guilty of theft.

Thou shalt not steal. Ex. xx. 15.

2. To move stealthily or secretly; creep softly; pass, approach, or withdraw surreptitiously and unperceived; go or come furtively; slip or creep along insidiously, silently, or unperceived; make insinuating approach: as, to *steal* into the house at dusk; the fox *stole* away: sometimes used reflexively.

Age is so on me stolen that y mote to god me glide.
Hymns to Virgin, etc. (E. E. T. S.), p. 72.

Fix'd of mind . . . to fly all company, one night she stole away.
Sir P. Sidney.

He will steal himself into a man's favour, and for a week escape a great deal of discoveries.
Shak., All's Well, iii. c. 98.

But what has made Sir Peter steal off? I thought he had been with you. *Sheridan*, School for Scandal, iv. 3.

Ever does natural beauty steal in like air, and envelop great actions.
Emerson, Misc., p. 25.

steal¹ (stēl), *n.* [*< steal*¹, *v.*] An act or a case of theft: as, an official *steal*; specifically, in *base-ball*, a stolen or furtive run from one base to another: as, a *steal* to third base. See *steal*¹, *v.*, t. 9.

steal² (stēl), *n.* Same as *stale*².

stealer (stēl'ēr), *n.* [*< steal*¹ + *-er*¹.] 1. One who steals, in any sense; especially, a thief: as, a cattle-stealer.

The transgression is in the stealer.
Shak., Much Ado, ii. 1. 233.

Specifically—2. In *ship-building*, the foremost or aftmost plank in a strake, which is dropped short of the stem or stern-post and butts against a notch or jog in another plank. Also called *stealing-strake*.

When the girth of the ship at the midship section is so much in excess of each or either of those at the extremities as to cause the plates to be very narrow if the same number were retained right fore and aft, it becomes necessary to introduce *stealers*—that is to say, to cause certain plates to stop somewhere between the extremities and midships, and thus reduce the number of strakes which end on the stem and stern post.
Thearle, Naval Arch., § 138.

stealing (stēl'ing), *n.* [*Verbal n.* of *steal*¹, *v.*]

1. The act of one who steals; theft.

Men are apt to condemn whatever they hear called *stealing* as an ill action, disagreeing with the rule of right.
Locke, Human Understanding, II. xxviii. 16.

2. That which is stolen; stolen property: used chiefly in the plural: as, his *stealings* amounted to thousands of dollars.

Shak., Macbeth, ii. 1. 54.

Footfalls of *stealthy* men he acemed to hear.
William Morris, Earthly Paradise, III. 321.

See where the *stealthy* panther left his tracks!
O. W. Holmes, A Family Record.

steam (stēm), *n.* [*< ME. steem, stem*, *< AS. stēdm*, vapor, smell, smoke, = *Fries. stoame* = *D. stoom*, steam; origin unknown.] 1. Vapor; a rising vapor; an exhalation.

Fough! what a steam of brimstone
Is here!
B. Jonson, Devil is an Ass, v. 4.

2. Water in a gaseous state; the gas or vapor of water, especially at temperatures above 100° C. It has a specific gravity of .625 as compared with air under the same pressure. It liquefies at 100° C. (212° F.), under a pressure of 14.7 pounds upon a square inch, or the mean pressure of the atmosphere at the sea-level. The temperature at which it liquefies diminishes with the pressure. Steam constantly rises from the surface of liquid water when not obstructed by impervious inclosures or covered by another gas already saturated with it. Its total latent heat of vaporization for 1 pound weight under a pressure of 76 centimeters of mercury (or 14.7 pounds to the square inch) is 965.7 British thermal units, or 536.5 calories for each kilogram. Its specific heat under constant pressure is .4805. (*Regnault*.) It is decomposed into oxygen and hydrogen at temperatures between 1,000° and 2,000° C. (*Deville*.) In addition to the surface evaporation of water, the change from the liquid to the gaseous state takes place beneath the surface (the gas escaping with ebullition) whenever the temperature of the liquid is raised without a corresponding increase of pressure upon it. The temperature at which this occurs under any particular pressure is the *boiling-point* for that pressure. The boiling-point of water under the atmospheric pressure at the sea-level is 100° C. or 212° F. Saturated steam has the physical properties common to all gases whose temperatures are near those of their liquefying-points, or the boiling-points of their liquids. Saturated steam when isolated, and superheated at temperatures from 100° to 110° C., and under constant pressure, expands with a given increase of temperature about five times as much as air, and at 186° C. about twice as much as air; and it must be raised to a temperature much higher than this before it will expand uniformly like air. The large quantity of latent heat in steam, its great elasticity, and the ease with which it may be condensed have rendered its use in engines more practicable than that of any other gaseous medium for the generation and application of mechanical power.

3. Water in a visible vesicular condition produced by the condensation of vapor of water in air.—4. Figuratively, force; energy. [*Colloq.*]

5†. A flame or blaze; a ray of light.

Steam, or lowe of fyre. *Flamma*. *Prompt. Parv.*, p. 473.

Absolute steam-pressure. See *pressure*.—**Dead steam**. Same as *exhaust-steam*.—**Dry steam**, saturated steam without any admixture of mechanically suspended water.—**High-pressure steam**, low-pressure steam. See *pressure*.—**Live steam**, steam which has performed no work, or only part of its work, or which is or might be available for the performance of work in an engine.—**Saturated steam**, steam in contact with water at the same temperature. In this condition the steam is always at its condensing-point, which is also the boiling-point of the water with which it is in contact. In this it differs from superheated steam of equal tension, which has a temperature higher than its condensing-point at that tension, and higher than the boiling-point of water under the same pressure.—**Specific steam-volume**, in *thermodynamics*, the volume which a unit of weight of steam assumes under specific conditions of temperature and pressure.—**Steam fire-engine**. See *fire-engine*, 2.—**Steam jet-pump**. See *pump*.—**Steam vacuum-pump**. See *vacuum-pump*.—**Superheated steam**, steam which at any stated pressure has a higher temperature, and for any particular weight of it a greater volume, than saturated steam (which see, above) at the same pressure. Also called *steam-gas*.—**Total heat of steam**. Same as *steam-heat*, 1.—**Wet steam**, steam holding water mechanically suspended, the water being in the form of spray or vesicles, or both.

steam (stēm), *v.* [*Early mod. E.* also *steem*; *< ME. stemen*, *< AS. stēman*, *stjman* (= *D. stoomen*), steam, *< steam*, vapor, steam: see *steam*, *n.*] **I. intrans.** 1. To give out steam or vapor; exhale any kind of fume or vapor.

Ye mista, . . . that . . . rise
From hill or steaming lake.
Milton, P. L., v. 186.

2. To rise in a vaporous form; pass off in visible vapor.

When the last deadly smoke aloft did *steeme*.
Spenser, F. Q., I. xii. 2.

3. To move or travel by the agency of steam: as, the vessel *steamed* into port.

We *steamed* quietly on, past . . . the crowds of yachta at Ryde, and dropped anchor off Cowes.
Lady Brassey, Voyage of Sunbeam, I. i.

4†. To flame or blaze up.

His eyes steepe and rolling in his heede,
That stemed as for a forneys a leede.
Chaucer, Gen. Pro. to C. T., l. 202.
Stemyn, or lowyn vp. Flammo. Prompt. Parv., p. 473.
Two stemynge eyes. Wyatt, Satires, l. 53.

II. trans. 1. To exhale; evaporate. [Rare.]

In slouthfull sleepe his molten hart to steme.
Spenser, F. Q., ll. vi. 27.

2. To treat with steam; expose to steam; apply steam to for any purpose: as, to steam cloth; to steam potatoes instead of boiling them; to steam food for cattle; steamed bread.

steamboat (stēm'bōt), *n.* A vessel propelled by steam-power.

steamboat-bug (stēm'bōt-bug), *n.* A water-beetle of large size, or otherwise conspicuous. [Local, U. S.]

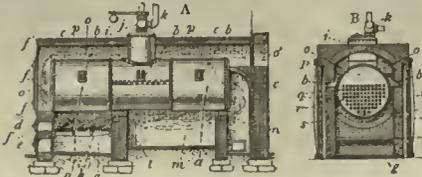

steamboat-coal (stēm'bōt-kōl), *n.* Coal broken small enough to pass between bars set from 6 to 8 inches apart, but too large to pass between bars less than 5 inches apart. This is the variation of size in different collieries in the Pennsylvania anthracite regions, where this size of coal is rarely prepared except to fill special orders, and where alone this term is in use.

steamboating (stēm'bō'ting), *n.* 1. The business of operating steamboats.—2. Undue hurrying and slighting of work. [Colloq.]—3. A method of cutting many boards for book-covers at one operation, instead of cutting them singly.

steamboat-rolls (stēm'bōt-rōlz), *n. pl.* The largest rolls used in breaking coal for the market. Also called *crushers* and *crusher-rolls*. See *steamboat-coal*. [Pennsylvania anthracite regions.]

steam-boiler (stēm'boi'ler), *n.* A receptacle or vessel in which water is heated and boiled to generate steam; particularly, a receptacle or vessel in which the water is confined, or isolated from the external air, in order to generate steam under a pressure equal to or exceeding that of the atmosphere, for the conversion of its expansive force into work in a steam-motor or -engine, or for heating purposes. The kinds of steam-boilers in use are very numerous and may be variously classified. In some the parts are rigidly joined together by rivets, bolts, stays, tubes expanded into heads, etc.; in others the parts are easily detachable one from the other, as in what are known as *sectional boilers*. Another division may be made, with reference to the treatment of the contained water, which in one class of steam-boilers is heated principally in a single mass of considerable cubic capacity, and in another is distributed in small spaces connected with each other and with the steam-space, as in what are known as *sectional safety-boilers*. A third ground of classification is the mode of applying heat. (See *cylindrical steam-boiler*, *return-flue boiler*, *horizontal tubular boiler*, *fire-tube boiler*, etc., below.) Boilers are made of wrought-iron or steel plates and tubes, or of cast-iron, or partly of wrought-iron or steel and of cast-iron. Steel of moderate tensile strength has lately been much used for boilers in which high pressures are maintained; and the present tendency of engineering in power-boilers is toward the use of as high pressures as is compatible with good lubrication, or the use of steam at as high a temperature as can be employed without decomposition of lubricants. Sectional boilers are often made partly or wholly of cast-iron, the sections being bolted or screwed together; and cast-iron is also very largely employed for low-pressure boilers used for steam-heating.—**Circulating steam-boiler**, a compound boiler in which the connected parts are unequally heated, the water rising in the more intensely heated parts, and descending in the cooler parts, to insure a rapid circulation of the water constantly in one direction.—**Compound steam-boiler**. (a) A battery of two or more single steam-boilers having their steam- and water-spaces connected, and acting together to supply steam to a heating-apparatus or a steam-engine. (b) A single boiler, or a battery of boilers, combined with other apparatus, as a feed-water heater or a superheater, for facilitating the production or for the superheating of steam. (c) A sectional boiler.—**Cornish steam-boiler**, the cylindrical flue-boiler invented by Smeaton. See *return-flue steam-boiler*.—**Corrugated furnace steam-boiler**, a boiler in which the plates exposed to the direct radiation from the fire and to the hot gases in the furnace are corrugated to give increased strength and to present a more extended heating-surface to the fire.—**Cylindrical steam-boiler**, a boiler with an exterior cylindrical shell, having flanged heads of much thicker iron fastened to the shell by rivets.—**Fire-tube steam-boiler**, a boiler in which the heat of the furnace is partly or wholly applied to the interior of tubes which pass through the water-space of the boiler.—**Flue steam-boiler**, a general name for all steam-boilers with an internal flue or flues, whether vertical, horizontal, or of other construction.—**Horizontal flue steam-boiler**, a horizontal steam-boiler with one or more flues through its length. (Also called *return-flue boiler*.) If cylindrical also, it is a *horizontal cylindrical flue or return-flue boiler*.—**Horizontal steam-boiler**, a steam-boiler in which the flues or tubes are in a horizontal position.—**Horizontal tubular steam-boiler**, a horizontal boiler with fire-tubes, through which the gases of combustion pass in a manner analogous to their passage through flues, for which the tubes are substitutes, presenting a greater extent of heating-surface than can be obtained in the same space by flues, and effectively tying the heads of the boiler together. A modern form of this boiler is shown in the cuts, which also show the method of setting it in brickwork. *a* is the shell; *b*, *b*, saddles for supporting the boiler in the masonry; *c*, *d*, the furnace-door; *e*, ash-pit door; *f*, clean-out door in the boiler-front; *g*, by which the

tubes are reached for cleaning; *g*, ash-pit; *h*, grate; *i*, steam-dome; *j*, safety-valve; *k*, steam-pipe; *l*, bridge-wall; *m*, combustion-chamber; *n*, back connection for passage of

Horizontal Cylindrical Tubular Steam-boiler. A, vertical longitudinal section; B, vertical cross-section.

the gases of combustion into the rear ends of the tubes; *o*, flue in the masonry; *o'*, uptake; *p*, flanged head; *q*, tubes; *r*, side-pieces which support the masonry; *s*, dead-air spaces in the masonry in which the air acts as a heat-insulator. The course of the gases of combustion is indicated by arrows.—**Locomotive steam-boiler**, a tubular boiler which has a contained furnace and ash-pit, and in which the gases of combustion pass from the furnace directly into horizontal interior tubes (instead of passing first under the boiler, as in the horizontal cylindrical tubular boiler), and after passing through the tubes are conveyed directly into the smoke-box at the opposite end of the tubes. The name is derived from the use of such boilers on locomotive engines, but it is typical in its application to all boilers having the construction described, and used for generating steam for stationary or portable engines, as well as for locomotives.—**Marine steam-boiler**, a boiler specially designed and adapted for supplying steam to marine engines. Compactness, as little weight as is consistent with strength, effective steaming capacity, and economy in consumption of fuel are the prime requisites of marine boilers. They are usually tubular, and short in proportion to their width, and have water-legs at the sides and water-spaces below and at the backs of their furnaces—that is, their furnaces are entirely surrounded by water-spaces except at the openings for the doors. Marine boilers are now sometimes used with forced draft—that is, air is forced from the outside into the boiler or fire-rooms (which are sometimes made air-tight) or immediately into the fire by powerful blowers.—**Return-flue steam-boiler**, a horizontal flue-boiler with one or more interior flues through which the gases of combustion are returned to the front end of the boiler after having passed to the rear from the furnace over the bridge-wall and under the bottom of the shell.—**Rotary tubular steam-boiler**. See *rotary*.—**Sectional safety steam-boiler**, a sectional boiler in which the water is divided into numerous small masses connected with one another by passages large enough for free circulation from one to the other, but not large enough to permit so sudden a release of pressure, in case of rupture of one of the sections, as to cause an explosion.—**Tubular steam-boiler**, a boiler a prominent feature of which is a series of either fire- or water-tubes.—**Vertical steam-boiler**, a steam-boiler in which the heating-surface of the tubes or flues is in a vertical position. When constructed with fire-tubes, it is called a *vertical tubular boiler*.

steam-box (stēm'boks), *n.* A reservoir for steam above a boiler; a steam-chest.

steam-brake (stēm'brāk), *n.* A brake applied by the action of steam admitted to a steam-cylinder the piston of which is connected by rods to the levers which apply the brake-shoes.

steam-car (stēm'kär), *n.* A car drawn or driven by steam-power; a railway-car. [U. S.]

steam-carriage (stēm'kar'āj), *n.* A road-carriage driven by steam-power.

steam-case (stēm'käs), *n.* Same as *steam-chest*.

steam-chamber (stēm'chäm'bēr), *n.* 1. A box or chamber in which articles are placed to be steamed.—2. A steam-chest.—3. A steam-dome.—4. The steam-room or steam-space in a boiler or engine.

steam-chest (stēm'chest), *n.* 1. The chamber in which the slide-valve of a steam-engine works. See cuts under *passenger-engine*, *rock-drill*, and *slide-valve*.—2. In *calico-printing*, a metallic vessel or tank in which printed cloths are steamed to fix their colors.

steam-chimney (stēm'chim'ni), *n.* An annular chamber around the chimney of a boiler-furnace for superheating steam.

steam-cock (stēm'kok), *n.* A faucet or valve in a steam-pipe.

steam-coil (stēm'koil), *n.* A coil of pipe, either made up flat with return bends or in spiral form, used to impart heat to a room or other enclosed space or to a liquid, or, by exposure of its exterior surface to air-currents or contact of cold water, to act as a condenser.

steam-color (stēm'kul'or), *n.* In *dyeing*, a color which is developed and fixed by the action of steam after the cloth is printed.

steam-crane (stēm'krän), *n.* A crane worked by steam, frequently carrying the steam-engine upon the same frame.

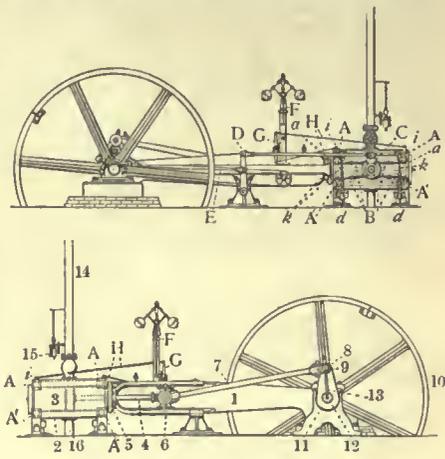

steam-cutter (stēm'kut'er), *n.* A ship's boat, smaller than a launch, propelled by steam.

steam-cylinder (stēm'sil'in-dēr), *n.* The cylinder in which the piston of a steam-engine reciprocates.—**Starting steam-cylinder**. Same as *starting-engine*.

steam-dome (stēm'dōm), *n.* A chamber connected with the steam-space and projecting above the top of a steam-boiler. From it the steam passes to the cylinder of a steam-engine, or to steam-heating apparatus. See cut under *steam-boiler*.

steam-dredger (stēm'drej'er), *n.* A dredging-machine operated by steam.

steam-engine (stēm'en'jin), *n.* An engine in which the mechanical force arising from the elasticity and expansive action of steam, or from its property of rapid condensation, or from the combination of the two, is made available as a motive power. The invention of the steam-engine has been ascribed by the English to the Marquis of Worcester, who published an account of it about the middle of the seventeenth century. By the French the invention has been ascribed to Papin, toward the close of the same century. Papin's plan contained the earliest suggestion of a vacuum under a piston by the agency of steam. The first actual working steam-engine of which there is any record was invented and constructed by Captain Savery, an Englishman, to whom a patent was granted for it in 1698. This engine was employed to raise water by the expansion and condensation of steam. The steam-engine received great improvements from the hands of Newcomen, Belgham, and others. Still it was imperfect and rude in its construction, and was chiefly applied to the draining of mines or the raising of water. Up to this time it was properly an atmospheric engine (see *atmospheric*), for the actual moving power was the pressure of the atmosphere, the steam only producing a vacuum under the piston. The steam-engine was brought to a high state of perfection by James Watt about the year 1782. The numerous and vital improvements introduced by him, both in the combination of its mechanism and in the economy of its management, have rendered the steam-engine at once the most powerful, the most easily applied and regulated, and generally speaking the least expensive of all prime movers for im-

Steam-engine (Corliss Engine). (The upper figure is a front view, the under a rear view.)

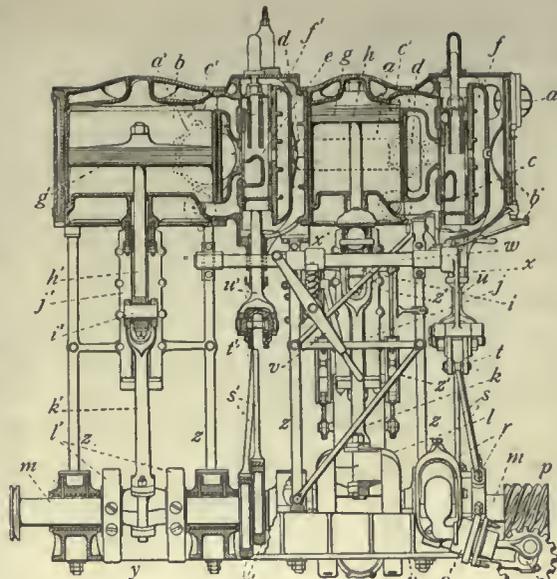

The steam-valve A and exhaust-valve A' are independent of each other, and have cylindrical bearing-surfaces. An oscillatory motion is given to them by rods B, connecting with an oscillating disk (wrist-plate) upon the side of the steam-cylinder, which is worked by an intermediate rock-lever D, driven by the eccentric-rod E, connected with an eccentric upon the main shaft. The motions of the exhaust-valves are positive, but those of the inlet-valve are varied by means of spring-catches G, which are adjustable to determine the points of opening and the range of motion of the valves, and are also controlled in their disengagement of the valve-stems by the governor F, rock-lever G, connecting-rods H, and rock-levers I, all connected together in such a manner that an extremely small increase or decrease of speed in the rotation of the fly-wheel shaft causes the inlet-valves to be released and to close correspondingly earlier or later in the stroke. The closing is performed by exterior weights suspended from short levers on the valve-stems by the rods K, the motion of closing being controlled by dash-pots at L, only the covers of which are shown. The other parts of the engine, which are common to most reciprocating engines, are 1, the bed-plate; 2, cylinder; 3, piston; 4, piston-rod; 5, stuffing-box; 6, sliding-block or cross-head; 7, connecting-rod or pitman; 8, rod-end fitted to 9, the crank-wrist; 10, fly-wheel; 11, crank keyed to 12, the crank-shaft; 13, centrifugal lubricating tube; 14, steam-pipe; 15, lubricator; 16, exhaust-pipe.

PELLING machinery of every description. The steam-engine is properly a heat-engine, and the total work L is expressed theoretically by the equation

$$L = QG(T_1 - T) / AT_1,$$

in which Q represents the total heat converted into work per unit of weight, G weight of steam, and A the thermal equivalent of a unit of work, while T₁ and T are respectively the higher and lower limits of temperature between which the steam is worked, T₁ being the absolute temperature at which the steam is induced to the engine, and T the absolute temperature at which it is exhausted from it. Inspection of the equation shows that the work performed must vary directly as the factor (T₁ - T) varies—that is, the greater the difference which can be maintained between the temperature of induction and that of ejection the greater is the amount of work performed by any given weight of steam. It is in accordance with this law that much higher steam-pressures are now adopted than were formerly employed. The factor (T₁ - T) is commonly called the *temperature range or fall*. The varieties of steam-engines are extremely numerous. (For names of various types, with explanations of their characteristic features, see below.) The specific differences between steam-engines of the same type of construction consist chiefly in their valve-gear. (See *valve-gear*, *governor*, 6, *regulator*, *n*, *slide-valve* (with cut), and *piston-valve*.) Of the total steam-power employed in modern industry on land, that supplied by steam-engines of the horizontal type far exceeds that furnished by steam-engines of all

other types put together. Vertical direct-acting engines of large size are little used, but small engines of this type are much employed. Steam-engines of the rotary type are scarcely used except for some kinds of steam hoisting-engines. Double, triple, and quadruple expansion steam-engines are now largely used in marine engineering. Many double expansion stationary engines are in use, and the economical value of the compound system has been demonstrated both theoretically and practically. — **Agricultural steam-engine**, a portable engine with a boiler, often specially adapted to burn light fuel, as chaff or straw, either by itself or in connection with wood or coal. — **Annular steam-engine**, a steam-engine having an annular piston working in an annular steam-cylinder, and having two diametrically placed piston-rods connected with the cross-head, the latter also being connected by rods to a guide-block working in the hollow cylinder forming the center of the annular steam-cylinder, this guide-block being connected with the crank by a pitman. — **Atmospheric steam-engine**. See *atmospheric engine*, under *atmospheric*. — **Beam steam-engine**, an engine in which a working-beam connects the connecting-rod with the crank-pitman, and transmits power from one to the other. See *beam-engine*. — **Compound steam-engine**, a steam-engine having two steam-cylinders of unequal size, from the smaller of which the steam, after use, passes into the larger cylinder, and completes its work by expanding against the piston in the latter. — **Concentric steam-engine**. Same as *rotary steam-engine*. — **Condensing steam-engine**, a steam-engine in which the exhaust-steam is condensed, for the purpose of removing the back-pressure of the atmosphere from the exhaust, and also to economize fuel by saving heat otherwise wasted. See *condenser*, and cut under *pulsometer*. — **Cornish steam-engine**, a single-acting condensing steam pumping-engine, first used in the mines of Cornwall. It is also used as a pumping-engine for supplying water to cities. Steam-pressure is not used to raise the water, but to lift a long loaded pump-rod, whose weight in its descent is the power employed to force up the water. The motion is regulated by a kind of hydraulic regulator invented by Smeaton, and called a *cataract*. — **Direct-acting steam-engine**, a steam-engine in which the power of the piston is transmitted to the crank without the intervention of levers, side-beams, or a working-beam. — **Disk steam-engine**, a form of rotary engine in which the steam-pistons act successively against a revolving disk set at an angle to the plane of rotation, thus imparting a gyratory motion to a central shaft upon which the disk is mounted, the end of this shaft being connected with a crank turning in the plane of rotation. — **Double-acting steam-engine**, the ordinary form of steam-engine, in which the steam acts upon both sides of the piston. — **Double-cylinder steam-engine**, a steam-engine having two steam-cylinders acting in combination with each other. See *compound steam-engine*. — **Double expansion steam-engine**. (a) A double-cylinder steam-engine in which steam is used expansively. (b) A compound steam-engine. — **Double steam-engine**, a steam-engine having two cylinders in which the pistons make either simultaneous or alternate strokes and are connected with the same crank-shaft. — **Duplex steam-engine**. Same as *double steam-engine*. — **High-pressure steam-engine**. See *high pressure*, under *pressure*. — **High-speed steam-engine**, a somewhat indefinite name for a reciprocating engine working at a high speed as compared with the much slower speed of engines with the Corliss and other

Double Expansion Marine Steam-engine.

a, high-pressure cylinder; b, low-pressure cylinder; c, induction- and eduction-valve for a in position of exhaust from lower end and of induction to upper end of cylinder; d, passage for steam from a to b; e, induction- and eduction-valve for b; f, f', balance-plates for valves of a and b; g, g', pistons; h, h', piston-rods; i, i', cross-heads; j, j', slipper-guides for cross-heads; k, k', connecting-rods; l, l', cranks; m, crank-shaft; n, shaft which drives feed-pump o and also bilge-pump (not shown) on the opposite side; p, worm on main shaft gearing into worm-wheel q on the shaft n, and actuating pump-plungers by crank and pitman connection; r, r', eccentrics; s, s', eccentric-rods; t, t', links connected by link-blocks with valve-stems u, u'; v, crank-lever which turns a segmental worm-gear, keyed to the rock-shaft w carrying the rocker-arms x, x', for reversing high-pressure and low-pressure valves respectively; y, bed-plate; z, columns supporting the cylinders; z', tie-rods for stiffening the columns; a', exhaust from low-pressure cylinder to the condenser (not shown); a'', butterfly throttle-valve; b', gear for operating throttle-valve; c', relief-valves.

piston. The name is sometimes given to reciprocating engines which have a fly-wheel and crank-shaft. E. H. Knight. — **Rotary steam-engine**. Same as *rotary engine*. — **Semi-portable steam-engine**, a steam-engine which is movable with its foundation-plate, as distinguished from an engine mounted on wheels, and from one resting on a fixed foundation. — **Triple expansion steam-engine**, a steam-engine that expands its steam in three successive stages and in three separate and distinct cylinders, one taking its steam from the exhaust of the cylinder working at the next higher pressure. This type of marine engine is found at the present time on many of the swift steamships, but may be in turn superseded by the quadruple expansion-engine. — **Vertical steam-engine**, a steam-engine whose piston reciprocates vertically.

steamer (stē'mēr), n. [*steam* + *-er*]. One who or that which steams, in any sense. Specifically—(a) A steam-box. (b) A person employed in steaming oysters in shucking them for canning. (c) In *calico-printing*, one who steams printed cloth for fixing steam-colors. (d) One who steams wood for bending, etc. (e) A steam-generator or boiler: as, the boiler is an excellent steamer. (f) Especially, a vessel propelled by steam; a steamship. (g) A fire-engine the pumps of which are worked by steam. (h) A vessel in which articles are subjected to the action of steam, as in washing or cookery. See *steam-chest*, 2. (i) In *paper-making*, a vessel in which old paper, fiber, etc., are treated in order to soften them. (2) An apparatus for steaming grain preparatory to grinding. (c) A locomotive for roads. See *road-steamer*.

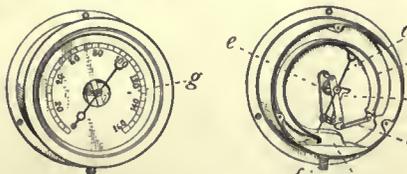

steamer-cap (stē'mēr-kap), n. Same as *fore-and-aft*, 2.

steamer-duck (stē'mēr-duk), n. A South American duck of the genus *Micropterus* (or *Tachyeres*); a race-horse. See *Micropterus*, 2. This duck becomes when adult incapable of flight, but swims very rapidly, with a movement which has suggested the action of a side-wheel steamboat (whence the name).

steam-excavator (stēm'eks'kă-vă-tōr), n. Same as *navvy*, 3.

steam-fountain (stēm'foun'tān), n. See *fountain*.

steam-gage (stēm'gāj), n. An attachment to a boiler to indicate the pressure of steam; a pressure-gage. There are many forms. One of the older is a bent tube partially filled with mercury, one end of which connects with the boiler, so that the steam raises

Steam-gage (Ashcroft's).

a, hollow bent tube attached to case at a', and receiving condensed water or steam under pressure through the opening at f'; b, link connecting end of tube a with short arm of rock-lever c, which has at the upper end a small rack intermeshing with a pinion on the spindle of the index d; e, small coiled spring which acts upon the spindle of the index or pointer in a direction opposed to the action of the rack and pinion; g, dial, on which the figures indicate pressures (in pounds) above the atmospheric pressure.

the mercury according to the amount of pressure. A very common form of gage is that known as Bourdon's, which consists essentially of a flattened metal tube, closed at one end and bent circularly, into which the steam is admitted. As such a tube tends to straighten itself out by the force of the steam, the amount of pressure can easily be ascertained by an attached index-apparatus. — **Electric steam-gage**, an attachment to a steam-boiler for indicating at a distance the pressure of the steam. The form consists of a bent tube filled with mercury, which, as it rises under the pressure, closes a series of electrical circuits after the manner of a thermostat. Another form employs the expansion or movement of an ordinary steam-gage diaphragm as a circuit-closer. The closing of the circuit in each case serves to sound an alarm.

steam-gas (stēm'gās), n. Same as *superheated steam* (which see, under *steam*).

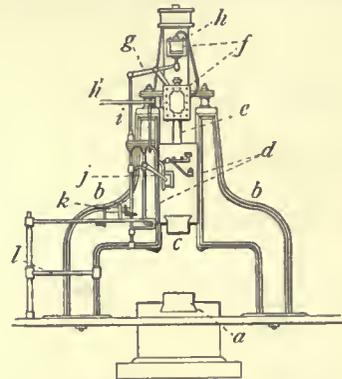

steam-generator (stēm'jen'gē-rā-tōr), n. A steam-boiler.

steam-governor (stēm'gūv'ēr-nōr), n. See *governor*, 6.

steam-gun (stēm'gūn), n. A gun the projectile force of which is derived from the expansion of steam issuing through the shotted tube.

steam-hammer (stēm'ham'ēr), n. A forging-hammer operated by steam-power. It has assumed several forms, but now consists of a vertical and inverted steam-cylinder with piston and piston-rod (the rod passing through the lower cylinder-head and carrying at the end a mass of metal which forms the hammer), an anvil directly beneath the hammer and cylinder, a supporting framework, and suitable valves for the control of the steam. Steam is used to raise and may also be used to drive down the hammer. By means of the valve-system, steam is admitted below the piston to raise the hammer and to sustain it while the metal to be forged is placed on the anvil. To deliver a blow, the steam is exhausted below the piston, and the hammer is allowed to fall by its own weight. To augment the blow, live steam may be admitted above the piston to assist in driving it downward. To deliver a gentle blow, the exhaust-steam below the piston may be retained to act as a cushion. Blows can be delivered

at any point of the stroke, quickly or slowly, lightly or with the full power of the combined weight of the hammer and force of steam-pressure; or the machine may be used as a vise or squeezer. All modern steam-hammers of the type described are modifications of the original Nasmyth steam-hammer illustrated in the cut. Steam-

Steam-hammer (Nasmyth's).

a, anvil; b, frame; c, hammer-head; d, guides; e, piston-rod; f, valve-chests containing valves that control induction of steam to and eduction from the cylinder; g, h, steam-pipe; i, rock-lever (moved by the rod i) connected with the valve-stems and moving the valves; j, tripping-mechanism by which the hammer is caused to descend from any part of the upstroke, the adjusting gear k being manipulated by a workman standing on the platform l.

hammers of the largest class have been made with hammers weighing eighty tons. Another type of steam-hammer consists of two horizontal steam-cylinders placed in line, the hammers meeting over an anvil on which the forging rests.

steam-heat (stēm'hēt), n. 1. In *thermodynamics*, the total heat required to produce steam at any tension from water at 0° C. or 32° F. It is the sum of the sensible heat and the latent heat expressed in thermal units. — 2. Heat imparted by the condensation of steam in coils, pipes, or radiators.

steam-hoist (stēm'hoist), n. A lift or elevator operated by a steam-engine.

steam-house (stēm'hous), n. In oyster-canning, a house or room where oysters are steamed.

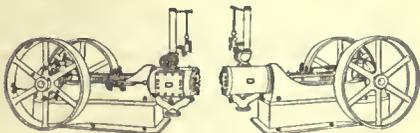

steaminess (stē'mi-nes), n. Steamy or vaporous character or quality; mistiness.

steam-jacket (stēm'jak'et), n. An inclosure adapted for receiving steam, and applying the heat of the steam to a kettle, tank, steam-cylinder, etc., surrounded by such inclosure.

steam-jet (stēm'jet), n. A blast of steam caused to issue from a nozzle.

steam-joint (stēm'joint), n. A joint that is steam-tight.

steam-kettle (stēm'ket'l), n. A vessel heated by steam, and used for various purposes. The

High-speed Steam-engine.

types of valve-gears. In general it may be said that engines of considerable power, making one hundred turns per minute and upward, are high-speed engines. — **Horizontal steam-engine**, a steam-engine in which the piston works horizontally. — **Inclined-cylinder steam-engine**, a form of marine engine having cylinders inclined to the horizontal. — **Inverted-cylinder steam-engine**, a steam-engine in which the cross-head is placed below the cylinder. This construction is much used for marine engines, and to some extent for stationary engines. — **Low-pressure steam-engine**. See *low pressure*, under *pressure*. — **Marine steam-engine**, a steam-engine specially designed for marine propulsion. The best modern types are condensing, short-stroke, double, triple, or quadruple expansion-engines of the inverted-cylinder type. Marine engines for steam-tugs are for the most part single and often non-condensing. See cut in next column. — **Non-condensing steam-engine**, an engine that exhausts its steam without condensation. See *non-condensing*. — **Oscillating steam-engine**, a steam-engine whose cylinder oscillates on trunnions and has its piston-rod directly connected with the crank. Double engines of this type have been considerably used for marine propulsion, and some are still employed. — **Overhead steam-engine**. See *overhead*. — **Quadruple expansion steam-engine**, a steam-engine which, taking its steam at high pressure, expands it in four different operations successively, and in four distinct and separate steam-cylinders. The pistons of the cylinders are connected by piston-rods, cross-heads, and connecting-rods with cranks attached to a common shaft, to which rotary motion is imparted by the coacting pistons. — **Reciprocating steam-engine**, a steam-engine in which the power of steam is applied to a reciprocating piston. — **Revolving-cylinder steam-engine**, a steam-engine of which the cylinder is so mounted that it is caused to rotate by the reciprocation of the piston. Compare *rotary steam-engine*. — **Rotary steam-engine**, a steam-engine in which the piston rotates in the cylinder, or the cylinder upon the

steam for heating is usually applied by induction to a steam-jacket surrounding the sides and inclosing the bottom of the kettle.

steam-kitchen (stēm'kich'en), *n.* An apparatus for cooking by steam.

steam-launch (stēm'lānch), *n.* See *launch*.

steam-motor (stēm'mō'tōr), *n.* A steam-engine.

steam-navigation (stēm'nav-i-gā'shōn), *n.* The art of applying the power of steam to the propulsion of boats and vessels; the art of navigating steam-vessels.

steam-navvy (stēm'nav'i), *n.* A digging-machine or excavator actuated by steam.

steam-organ (stēm'ōr'gan), *n.* Same as *cal-lope*, 2.

steam-oven (stēm'uv'n), *n.* An oven heated by steam at high pressure.

steam-packet (stēm'pak'et), *n.* A packet propelled by steam. Compare *packet*, *n.*, 2.

steam-pan (stēm'pan), *n.* A vessel with a double bottom forming a steam-chamber. See *vacuum-pan*.

steam-pipe (stēm'pip), *n.* Any pipe in which steam is conveyed. Specifically—(a) A pipe which leads from a boiler to an engine, pan, tank, etc., or from the boiler to a condenser or to the open air. (b) In a steam-heating or -drying apparatus or system, a name given to any one of the steam-supply pipes, in contradistinction to the corresponding return-pipe through which water of condensation is returned to the boiler.

steam-plow (stēm'plou), *n.* A gang-plow designed to be drawn by a wire rope, and operated by steam-power. Such a plow has usually eight shares arranged in a frame, four pointing in one direction and four in the other. The frame is balanced on a pair of wheels in the center, and forms an angle in the middle, so that when one half the plows are in use the others are raised above the ground. Steam-plows are used with either one or two engines. If with two engines, the plow is drawn forward and backward between them, each engine being advanced the width of the furrows after each passage of the plow. If one engine only is used, snatch-blocks and movable anchors are employed to hold the rope, the anchors being automatically advanced after each passage of the plow. Traction-engines also have been used to drag plows. See *anchor*, *porter*, 2, and *plow*.

steam-port (stēm'pōrt), *n.* 1. In a slide-valve steam-engine, the name given to each of two oblong passages from the steam-chest to the inside of the cylinder, which afford passage to the steam to and from the cylinder, and act alternately as an induction-port and an education-port. See cut under *slide-valve*.—2. A passage for steam into or out of any inclosure.

steam-power (stēm'pou'ēr), *n.* The power of steam applied to move machinery or produce any other result.

steam-press (stēm'pres), *n.* A press actuated by steam-power acting directly or intermediately; specifically, a printing-press worked by steam.

steam-printing (stēm'prin'ting), *n.* Printing done by machinery moved by steam, as opposed to printing by hand-labor on hand-presses.

steam-propeller (stēm'prō-pel'ēr), *n.* Same as *screw propeller* (which see, under *screw*).

steam-pump (stēm'pump), *n.* See *pump*¹ and *vacuum-pump*.

steam-radiator (stēm'rā'di-ā-tōr), *n.* A nest or collection of iron pipes in ranks or coils, through which steam is passed to heat a room, etc. See cuts under *radiator*.

steam-ram (stēm'ram), *n.* See *ram*, 2.

steam-regulator (stēm'reg'ū-lā-tōr), *n.* See *regulator*, 2.

steam-room (stēm'rōm), *n.* In a steam-engine, etc., the space which is occupied by steam.

steamship (stēm'ship), *n.* A ship propelled by steam.

steam-space (stēm'spās), *n.* A space occupied, or designed to be occupied, by steam only; particularly, in a steam-boiler, the space allowed above the water-line for holding a quantity of steam.

steam-table (stēm'tā'bl), *n.* 1. A bench or table fitted with shallow steam-tight tanks; used in restaurants, etc., to keep cooked dishes warm.—2. A tabular arrangement of data relating to steam-pressures, temperatures, and quantities of heat.

steam-tank (stēm'tangk), *n.* A chamber or inclosed vessel in which materials of any kind are treated either by direct contact with steam or with steam-heat by means of pipes coiled in the tank or a steam-jacket. Such tanks are used in many industries, and are made in many forms, as for steaming wood, paper-stock, lard, etc. See *rendering-tank*.

steam-tight (stēm'tit), *a.* Capable of resisting the passage of steam, as a joint in a steam-pipe.

steam-toe (stēm'tō), *n.* In a steam-engine, a projection on a lifting-rod, which is raised by it through the action of a cam, tappet, or wiper.

steam-trap (stēm'trap), *n.* A contrivance for permitting the passage of water of condensation out of pipes, radiators, steam-engine cylinders, etc., while preventing that of steam.

steam-tug (stēm'tug), *n.* A steamer used for towing ships, boats, rafts, fishing-nets, oyster-dredges, etc. Such vessels are furnished with engines very powerful in proportion to the size of their hulls, and usually carry only sufficient coal for short trips.—**Steam-tug heart-murmur**, the combination of an aortic regurgitant with an aortic obstructive murmur.

steam-valve (stēm'valv), *n.* A valve which controls the opening of a steam-pipe or steam-port.

steam-vessel (stēm'ves'el), *n.* Same as *steam-ship*.

steam-wagon (stēm'wag'ōn), *n.* Same as *steam-carriage*.

steam-wheel (stēm'hwel), *n.* A rotary steam-engine. See *steam-engine*.

steam-whistle (stēm'hwis'l), *n.* A sounding device connected with the boiler of a steam-

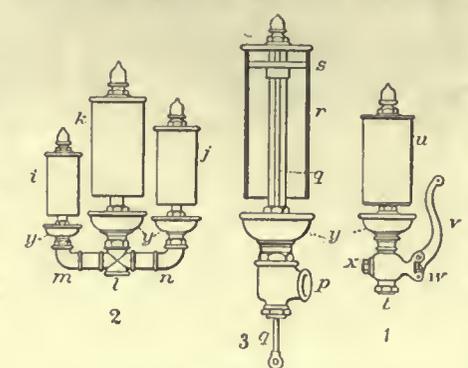

Fig. 1 is the simplest form of steam-whistle, with adjustable lever v, which acts on the valve x, its motion being limited by a stop-pin at w. Steam passes through a pipe connected at t when the valve x is opened. The steam issues through openings in the base y, and passing over the lower edge of the bell u, causes a powerful vibration producing the sound, the pitch of which depends upon the length of the bell. Fig. 2 is a chime-whistle consisting of three bells, i, j, k, tuned to emit the common chord or some inversion of it. It receives steam at l, and by branches m, n, together with j, distributes it to the several bases y. Fig. 3 is a piston-whistle. Its base y and bell u operate as described for the other whistles, the steam entering at t. The tone of the whistle is changed by moving up and down the piston s by means of the stem q.

engine, either stationary, locomotive, or marine, for the purpose of announcing hours of work, signaling, etc.

steam-winch (stēm'winch), *n.* A form of winch or hoisting-apparatus in which rotatory motion is imparted to the winding axle from the piston-rod of a steam-engine, directly, or indirectly by means of bevel-gearing, the direct action giving most rapidly, the indirect most power.

steam-worm (stēm'wērm), *n.* A spiral steam-coil. Such coils are used in tanks for heating liquids, as tan-liquor in tanneries, water in laundries, dye-works, etc., the liquid being placed in the tank enveloping the coil, while steam is passed through the latter. They are also used in some forms of calorimeter.

steamy (stē'mi), *a.* [*< steam + -y.*] Consisting of or abounding in steam; resembling steam; vaporous; misty.

The bubbling and loud hissing urn Throws up a steamy column. *Couper*, *Task*, iv. 39. I found an evening hour in the steamy heat of the Harum equal to half a dozen afternoons. *R. F. Burton*, *El-Medinah*, p. 272.

steam-yacht (stēm'yot), *n.* A yacht propelled by steam, or by steam and sails.

steal. See *steal*¹, *steal*², *stone*.

steaming, *n.* See *steening*.

steapsin (stēp'sin), *n.* A ferment of the pancreatic secretion which to some extent resolves fats into fatty acids and glycerin.

stearate (stē'ā-rāt), *n.* [*< stear(ic) + -ate.*] A salt of stearic acid. The neutral stearates of the alkalis are soaps.

stearic (stē-ar'ik), *a.* [*Irreg. for *stearic, < Gr. stear(ōn), stiff fat, tallow, suet; see stearitic.*] Of or pertaining to suet or fat; obtained from stearin.—**Stearic acid**, C₁₈H₃₆O₂, a monobasic acid, forming brilliant white scaly crystals. It is inodorous, tasteless, insoluble in water, but soluble in alcohol and ether. It burns like wax, and is used for making candles. Its compounds with the alkalis, earths, and metallic oxides are called *stearates*. Stearic acid exists in combination with glycerin as stearin, in beef- and mutton-fat, and in several vegetable fats, such as the butter of cacao. It is obtained from stearin by saponification and decomposition by an acid of the soap formed, and also from mutton-suet by a similar process.

stearin (stē'ā-rin), *n.* [*< stear(ic) + -in.*] 1. An ether or glyceride, C₃H₅O₃(C₁₈H₃₅O₂)₃,

formed by the combination of stearic acid and glycerin. When crystallized it forms white pearly scales, soft to the touch but not greasy, and odorless and tasteless when pure. It is insoluble in water, but soluble in hot alcohol and ether. When treated with superheated steam it is separated into stearic acid and glycerin, and when boiled with alkalis is saponified—that is, the stearic acid combines with the alkali, forming soap, and glycerin is separated. When melted it resembles wax. There are three stearins, which may all be regarded as derivatives of glycerin in which one, two, or three OH groups are replaced by the radical stearyl. Natural stearin is the tristearyl derivative of glycerin. It is the chief ingredient in suet, tallow, and the harder fats, and may be prepared by repeated solution in ether and crystallization. Candle-pitch, chandlers' gum, or residuary gum, used in the manufacture of roofing-cements, is a by-product of this manufacture.

2. A popular name for stearic acid as used in making candles.—**Lard-stearin**, the residue left after the expression of the oil from lard.

stearinery (stē'ā-rin-ēr-i), *n.* [*< stearin + -ery.*] The process of making stearin from animal or vegetable fats; the manufacture of stearin or stearin products.

stearone (stē'ā-rōn), *n.* [*< stear(ic) + -one.*] A substance (C₃₅H₇₀O) obtained by the partial decomposition of stearic acid. It is a volatile liquid, and seems to be stearic acid deprived of two equivalents of carbonic acid.

stearoptene (stē-ā-rōp'tēn), *n.* [*Irreg. < Gr. stēar, stiff fat, tallow, suet, + πτερός, winged (volatile).*] The solid crystalline substance separated from any volatile oil on long standing or at low temperatures. See *cleoptene*.

stearyl (stē'ā-ril), *n.* [*< stear(ic) + -yl.*] The radical of stearic acid (C₁₈H₃₅O).

steatin (stē'ā-tin), *n.* Same as *stearin*.

stearinum (stē-ā-ti-num), *n.* [*NL., < Gr. στεάτινον, neut. of στεάτινος, of or pertaining to tallow or suet, < stēar(ōn), stiff fat, tallow, suet; see stearitic.*] A name given to certain pharmaceutical preparations similar to cerates, but containing considerable tallow.—**Stearinum iodoforni**, stearinum composed of mutton-tallow 18 parts, expressed oil of nutmeg 2 parts, powdered iodoform 1 part.

stearite (stē'ā-tit), *n.* [= *F. stéatite, < L. stéatilis, < Gr. στεάτινος, used only as equiv. to στεάτινος, stearinos, of dough made of flour of spelt, < stēar(ōn), also stēar, also contr. stēar (with rare gen. stēarōs, also stēar-), stiff fat, tallow, suet, also dough made of flour of spelt, prob. < ιστάται (√ στα), cause to stand, fix; see stand.*] Soapstone: an impure massive variety of talc. Also called *potstone*.

stearitic (stē-ā-tit'ik), *a.* [*< stearite + -ic.*] Of or pertaining to stearite or soapstone; made of stearite.

steatogenous (stē-ā-toj'e-nus), *a.* [*< Gr. stēar(ōn), fat, + -γενής, producing; see -genous.*] Tending to produce steatosis (see *steatosis*, 2): as, *steatogenous* processes.

steatoma (stē-ā-tō'mā), *n.*; pl. *steatomata* (-mā'tā). [*< Gr. στεάτωμα, a kind of fatty tumor, < stēar(ōn), fat, tallow, suet.*] A lipoma.

steatomatous (stē-ā-tōm'ā-tus), *a.* [*< steatoma(-t) + -ous.*] Of the nature of a steatoma.

steatopyga (stē'ā-tō-pi'gā), *n.* [*NL., < Gr. stēar(ōn), fat, tallow, suet, + πύγη, the rump.*] An accumulation of fat on the buttocks of certain Africans, especially Hottentot women.

steatopygous (stē'ā-tō-pi'gus), *a.* [*< NL. steatopyga + -ous.*] Affected with or characterized by steatopygia; having enormously fat buttocks. *R. F. Burton*, *El-Medinah*, p. 60.

steatopygy (stē'ā-tō-pi'ji), *n.* [*< steatopygous + -y.*] The development of steatopygia, or the state of being steatopygous. *Jour. Anthropol. Inst.*, XVIII, 17.

Steatornis (stē-ā-tōr'nis), *n.* [*NL. (Humboldt, 1817), < Gr. stēar(ōn), fat, tallow, suet, + ὄρνις, a bird.*] The representative genus of *Steatornithidæ*. The only species is *S. caripensis*, the guacharo or oil-bird of South America, found from Venezuela to Peru, and also in Trinidad, of frugivorous and nocturnal habits. The bird resembles and is usually classed with the goatsuckers. It is so fat that the natives prepare from it a kind of oil used for butter. See cut under *guacharo*.

steatornithic (stē'ā-tōr'nith'ik), *a.* Having the characters of *Steatornis*.

Steatornithidæ (stē'ā-tōr'nith'i-dē), *n. pl.* [*NL., < Steatornis (-ōrnith-) + -idæ.*] A family of picarian birds, represented by the genus *Steatornis*. It is related to the *Caprimulgidæ*, and is often associated with them, but differs in many important characters, and in some respects approaches the owls. The sternum has a single notch on each side behind. The palate is desmognathous, with united maxillopalatines and peculiarly shaped palatines. There are basipterygoid processes, and the rostrum of the skull is compressed. The second pectoral muscle is smsh, and the femoro-caudal is wanting. The syrinx is entirely bronchial, and hence paired. The oil-gland is very large. The plumage is not aftershafed, and the rectrices are ten. There is only one genus and one species. See cut under *guacharo*.

steatornithine (stē-ā-tōr'ni-thīn), *a.* [*Stea-* (*tor-nis* (-ornith-) + *-ine*².) Steatornithic; of or pertaining to the *Steatornithidae*.

steatorrhea, steatorrhœa (stē'ā-tō-rē'ā), *n.* [NL., < Gr. *στειρά* (*stear-*), fat, suet, tallow, + *ρῆα*, a flow, < *ρῆν*, flow.] 1. Seborrhea.—2. The passage of fatty stools.

steatosis (stē-ā-tō'sis), *n.* [NL., < Gr. *στειρά* (*stear-*), fat, tallow, suet, + *-osis*.] 1. Fatty degeneration or infiltration.—2. Any disease of the sebaceous glands. Also called *steatopathia*.

Steatozōon (stē'ā-tō-zō'on), *n.* Same as *Demodex*.

stedt, *n.* An obsolete form of *stead*.

stedfast, stedfastly, etc. See *steadfast*, etc.

steed (stēd), *n.* [*ME. stede*, < *AS. stēda*, a stud-horse; stallion, war-horse (cf. *gestēd-hors*, stud-horse; Icel. *stedd* for **stēdda*, a mare; Sw. *sto*, a mare), < *stōd*, a stud: see *stud*¹. Cf. *stot*¹, *stote*, *stot*¹.] A horse: now chiefly poetical.

The kyng alighte of his stede.
King Horn (E. E. T. S.), p. 2.

The fiend, . . . like a proud steed rein'd, went haughty on,
Champing his iron curb.
Milton, P. L., iv. 553.

steedless (stēd'les), *a.* [*steed* + *-less*.] Having no steeds or horses. *Whittier*, *The Norseman*.

steedyokest, *n. pl.* Reins; thongs. [Rare.]

Sorrowful hector . . .
Harried in steedyokes as of earst.
Stanburst, Æneid, ii.

steek (stēk), *v.* [Also *steik*; obs. or dial. (Sc.) form of *stitch*¹.] *I. trans.* 1. To pierce with a sharp-pointed instrument; stitch or sew with a needle.—2. To close or shut: as, to *steek* one's eyes. *Burns*. [Obsolete or Scotch in both uses.]

But doors were steek'd, and windows bar'd,
And name was left him in.
Wylie and May Marjaret (Child's Ballads, II. 172).

II. intrans. To close; shut.

It es called cloyster for it cloyss and steskeys, and warly
sall be loked.
Religious Pieces (E. E. T. S.), p. 50.

steek (stēk), *n.* [Also *steik*; a dial. (Sc.) form of *stitch*.] The act of stitching with a needle; a stitch. [Scotch.]

steel¹ (stēl), *n.* and *a.* [*ME. steel*, *stel*, *stiel*, *stīl*, < *AS. *stēle*, *stīle*, earliest forms *stēli*, *stēli* = *MD. stael*, *D. staal* = *MLG. stāl*, *LG. staal* = *OHG. stahal*, *stāl*, *MHG. stahel*, *stachel*, *stāl*, *G. stahl* = *Icel. stāl* = *Sw. stål* = *Dan. stål* = *Goth. *stahla* = *OPruss. stakla*, steel; root unknown.

The words *gold* and *silver* also have no *L.* or *Gr.* or other cognate terms outside of Teut. and Slavic.] *I. n.* 1. A modified form of iron, not occurring in nature, but known and manufactured from very early times, and at the present time of the highest importance in its various applications to the wants of man. For certain purposes, and especially for the manufacture of tools and weapons, there is no metal or metallic alloy which could take the place of steel. The most essential features of steel as compared with iron are elasticity and hardness, and these qualities can be varied in amount to a very extraordinary degree, in the same piece of steel, by slight changes in the manipulation. Steel can be hardened so as to cut glass, by rapid cooling after being strongly heated, and it can be tempered, by reheating after hardening, so as permanently to take the precise degree of hardness best adapted to the use to which it is to be applied. (See *temper*.) Steel has been known from very early times, but where and how first manufactured is not known. That it has long been in use in India, and that it is still manufactured in that country by methods precisely similar to those in use long ago are well-known facts. (See *wootz*.) It is thought by some to have been known to the pyramid-builders; but this has not yet been demonstrated, and the same is true of the ancient Semites. The words translated 'steel' in the authorized version of the Old Testament signify 'copper' or 'bronze,' and are usually rendered 'brass,' 'brazen.' That steel was clearly recognized as something distinct from iron by the author or authors of the Homeric poems cannot be proved. The earliest known and simplest method of reducing iron from its ore—the so-called "direct process"—is capable also of furnishing steel, although a sufficiently homogeneous product cannot be easily obtained by this method. This would explain how steel became known at an early period, and why it was so long before it became an article of general use, with well-established methods of manufacture. Steel is a form of iron in which the amount of carbon is intermediate between that in wrought- and that in cast-iron, and this carbon does not exist in the steel in the form of graphite, but is either combined with or dissolved in it; but the subject of the relation of carbon to iron is one of difficulty, and is now undergoing investigation at the hands of various skilled metallurgical chemists. Other ingredients besides carbon are also present in steel—namely, silicon, manganese, sulphur, and phosphorus. Of these the two first mentioned are probably never entirely wanting, and they are not especially undesirable or injurious, as is the case with the two others, of which only traces can be permitted in the best quality of steel. They are all, however, different from carbon, which latter is regarded as an essential element of steel, while the others may be looked upon as being more or less of the nature of impurities. The quality of steel varies with the amount of carbon present, and

the effect of this latter element varies with the amount of impurity (silicon, etc.) present in the steel. The larger the amount of impurity, the larger is the quantity of carbon required to give to the iron the character of steel. In the case of the best bar-iron, a little over 0.3 per cent. of carbon is sufficient to give it a steely character; from 0.5 to 0.65 per cent. of carbon, according to the purity of the iron, gives a steel which can be hardened so as to strike fire with flint. Iron containing from 1 to 1.5 per cent. of carbon gives steel which, after tempering, combines the maximum hardness with the maximum tenacity. One per cent. of carbon gives, on the whole, the most generally useful steel. With more than 1.5 per cent. of carbon the tenacity and weldability of the steel are diminished, although the hardness may be increased. With more than 1.74 per cent. of carbon the steel ceases to be weldable, and is with difficulty drawn out under the hammer; and from 1.8 to 2.0 per cent. is usually considered as the limit between steel and cast-iron, the steel with that amount breaking when hammered after softening by heat. Since steel is intermediate between wrought- and cast-iron in the amount of carbon which it contains, it is evident that it might be made either by carburizing the former or decarburizing the latter. The method of carburizing, or *cementation* as it is generally called, is one of the oldest, perhaps the most ancient, as, although differing greatly in the details, in the essentials it is the same as the process by which the Indian wootz is manufactured. The cementation process was described in detail by Réaumur in a work published in 1722. By this method blister-steel is obtained, and this is further worked up into spring, shear-, and double-shear steel by one or more processes of fagoting, welding, and hammering or rolling, the object of this being to give the metal greater homogeneity. A great addition to the value of this process was the invention by Huntsman, in 1740, of cast-steel, the product of the fusion in crucibles, under suitable manipulation, of blister-steel, which process is still in use as first arranged almost without change. By this method, when iron of a sufficiently high grade is used, the finest quality of steel is produced, and it is only steel manufactured in this way which can be used for the best tools, weapons, and cutting instruments of all kinds. The methods of producing steel by the decarburization of pig-iron are numerous and varied. The Styrian method of decarburization in the open-hearth finery, whereby a material called *raw steel* is produced, was once of very considerable importance, but is now little used. The method of decarburizing pig-iron by puddling, which is similar in principle to the ordinary puddling process used for converting pig- into wrought-iron, is also somewhat extensively employed, especially on the continent of Europe, the product being called *puddled steel*, this being drawn into bars, which are cut up and remelted, as is done with blister-steel in manufacturing cast-steel. There are various methods for producing steel by fusing pig-iron with iron ores, or with wrought-iron, or with both together. The Uchatius process belongs to this class of processes, but is of comparatively small importance; but the processes known as the "Siemens," the "Martin," and the "Siemens-Martin" are extensively employed. The steel made by any of these processes is generally called *open-hearth steel*, as the work of decarburizing the pig is done in the open-hearth regenerative furnace. The difference between these processes is simply that in the first-named the pig-iron is treated with certain iron ores without the addition of wrought-iron (scrap-iron); in the second the pig is melted with scrap-iron; and in the third both scrap and ore are used together; hence the names by which the first two of these modifications of what is essentially the same process are known—*pig-and-ore*, *pig-and-scrap*—the third, or the "Siemens-Martin," being the most commonly employed. By far the most important of all steel-producing processes, if only the amount of the metal produced is considered, is the "pneumatic" or "Bessemer" process, invented by Sir Henry Bessemer about 1856, which consists in blowing air through molten pig-iron in a "converter," or vessel of iron lined with a refractory material—the oxidation of the carbon and silicon which the pig contains, together with a small part of the iron itself, furnishing sufficient heat to keep the material in a fluid state while the operation of decarburization goes on. After complete decarburization of the iron, a certain amount of carbon is restored to the metal by the introduction of spiegel-eisen or ferromanganese; this extremely important addition to the Bessemer process, without which it would hardly have been a success, was contributed by R. F. Mushet. The Bessemer process, as conducted in a converter lined with the ordinary silicious or "acid" material, is suited only for working iron which is practically free from phosphorus and sulphur, or such as is made from ore like that of Lake Superior, from which all, or nearly all, the Bessemer steel made in the United States is manufactured. By the so-called "basic" or "Thomas-Gilchrist" process, the converter having a basic (calcined dolomite) lining, iron containing a considerable amount of phosphorus is treated, and a fair quality of steel produced, the phosphorus passing into the slag during the operation, as is the case in puddling. The metal produced by the Bessemer process is generally called *Bessemer steel*, but some consider it more correct to call it *ingot-iron*. It can be produced of various grades by varying the amount of carbon which it contains, and is a material of the highest value for structural purposes—as being cheaper, and having more durability, than wrought-iron made by puddling—although of no value for the purposes for which the older higher-class steels are employed. Its principal use is for rails, and during the past few years from seventy to eighty per cent. of the Bessemer steel made in the United States has been used for that purpose.

Tennyson, *Princess*, vi.

A single span of the Forth Bridge is nearly as long as two Eiffel Towers turned horizontally and tied together in the middle, and the whole forms a complicated steel structure weighing 15,000 tons, erected without the possibility of any intermediate support, the lace-like fabric of the bridge soaring as high as the top of St. Paul's. The steel of which

the compression members of the structure are composed contains 1% of carbon and 1% of manganese. The parts subjected to extension do not contain more than 1% of carbon.
W. C. Roberts-Austen, *Nature*, XLI. 36.

2. Something made of steel. Specifically—(a) A cutting or piercing weapon; especially, a sword. Compare *cold steel*, below.

Shall I Sir Pandarus of Troy become,
And by my side wear steel?

Shak., *M. W. of W.*, i. 3. 83.

(b) A piece of steel for striking sparks from flint to ignite tinder or match. (c) A mirror.

We spake of armour,
She straight replies, Send in your steel combs, with
The steel you see your faces in.

Cartwright's Lady Errant (1651). (*Nares*.)

(d) A cylindrical or slightly tapering rod of steel, sometimes having fine parallel longitudinal lines, used for sharpening carving-knives, etc. (e) A strip of steel used to stiffen a corset, or to expand a woman's skirt.—**Berard steel**, steel made by adding hydrogen gas to the air-blast in the Bessemer process, to remove arsenic, sulphur, and phosphorus.—**Bessemer steel**, steel made by the Bessemer process. See *def. 1.*—**Blistered steel**. Same as *blister-steel*.—**Carbon steel**, ordinary steel; not "special steel," but steel in which carbon is clearly the element which gives the iron those peculiar properties which justify its designation by the term *steel*.—**Chrome steel**, steel alloyed with a small amount of chromium. Various alloys called by the name of *chrome* or *chromium steel* have been introduced, but none have come into general use. They are said to be hard and malleable, and to possess great strength, but to oxidize on exposure more readily than ordinary steel.—**Cold steel**, a cutting- and thrusting-weapon; a weapon or weapons for close quarters, as distinguished from firearms.—**Compressed steel**, steel which is made more dense, tenacious, and free from blow-holes by being condensed by pressure while in a fluid state. This pressure is produced in various ways, as by hydraulic machinery, by steam, by centrifugal force, by the use of liquefied carbonic acid, etc.—**Crinoline-steels**. See *crinoline*.—**Crucible steel**. Same as *cast-steel*.—**Damask steel**. See *damask*.—**Garb of steel**. See *garb*².—**German steel**, steel from Germany. The phrase has now no definite meaning other than geographical. It formerly meant steel made in the finery from spathic ore.—**Homogeneous steel**. Same as *cast-steel*.—**Indian steel**. Same as *wootz*.—**Manganese steel**, a variety of special steel made by the addition of manganese, which element is present in various manganese steels which have been analyzed in quantity ranging from less than 1 per cent. to over 21 per cent. The qualities vary greatly with its composition.—**Mask of steel**. See *mask*³.—**Mild steel**, steel containing a small amount of carbon (Bessemer steel is frequently so designated); a metal which has some of the qualities of steel, but does not admit of being tempered, or only imperfectly so. See *def. 1.*—**Native steel**, the name sometimes given to small masses or buttons of steel, steely iron, or iron which has occasionally been formed by the ignition of coal-seams adjacent to deposits of iron ore.—**Nickel steel**, a variety of special steel recently introduced, and thought by some to surpass the best carbon steel in certain important respects. It has not yet been sufficiently tried to justify a decided statement as to its value. The high price of nickel, and the small likelihood of any considerable reduction in the price of this metal, would seem to bear heavily against the chances of the general introduction of an alloy of which it should form any considerable part.—**Run steel**, a trade-mark name (in England) of various small articles, such as bridle-bits and stirrups, made of cast-iron which has been to a certain extent rendered malleable by partial decarburization by cementation. The method is one which has been long known, but which has not come into extensive use till comparatively modern times. Also called *malleable cast-iron*.—**Silicon steel**, a variety of special steel which has been experimented with to some extent, but which has not yet become of importance.—**Special steel**, steel in which the element which gives the iron its peculiar qualities, or what distinguishes it from iron, is not carbon, but some other substance. The principal special steels are chrome, manganese, nickel, silicon, titanium, and tungsten steels, all of which have been much experimented with in recent years. While some authorities appear to maintain that the carbon in special steels is so overpowered by the special element used that its effects are entirely neutralized, others believe that some carbon is absolutely necessary that iron may become converted into what can properly be called steel.—**Styrian special steel**, steel from Styria: steel made by the Styrian process, which closely resembles the Styrian process of making malleable iron in the finery.—**Tungsten steel**, a variety of special steel, now largely employed in the manufacture of the harder grades of crucible steel. "Mushet's," "special," "imperial," and "crescent-hardened" are brands of tungsten steel now sold in the American markets. Steel may contain a much larger proportion of tungsten than it can of carbon without losing its power of being forged. In a table of thirteen analyses of tungsten steel given by H. M. Howe in his "Metallurgy of Steel" (1891), the tungsten ranges from 1.94 to 11.63 per cent.; the carbon, from 0.33 to 2.15; the manganese, from a trace to 2.66; the silicon, from .05 to .52. Tungsten steel is exceedingly hard and very brittle; it is used chiefly for the tools of lathes and planers designed for heavy work.

II. a. 1. Made of steel: as, a *steel plate* or *buckle*.
The average strength [of the Bessemer steel used in building the Forth Bridge] is one-half greater than that of the best wrought iron, and the ductility of the *steel plates* is fully three times that of corresponding iron plates.
Sir John Fowler and Benjamin Baker, *Nineteenth Century*, July, 1859, p. 39.

2. Hard as steel; inflexible; unyielding.
Prison my heart in thy steel bosom's ward.
Shak., *Sonnet*, cxxxiii.

Smart as a steel trap. See *smart*¹.—**Steel bonnet**, a head-piece made of a Scotch bonnet lined with steel, as with a skeleton cap. Compare *secret*, 9.—**Steel bronze**.

See bronze, 1.—**Steel hat.** Same as *chapel-de-fer*.—**Steel rail.** See *rail*.—**Steel saddle,** the saddle of the man-at-arms in the middle ages, having the bow and sometimes the pommel guarded with steel.—**Steel toys,** among manufacturers, small articles, such as corkscrews, buckles, button-hooks, and boot-hooks, when made of polished steel.—**Steel trap.** See *trap*.

steel¹ (stēl), *v. t.* [*<* ME. *stelen*, *stilen*, *<* AS. **stylan* (= D. *stalen* = MLG. *stalen*, *stelen* = G. *stählen* = Icel. *stæla*), make hard like steel; from the noun.] 1. To fit with steel, as by pointing, edging, overlaying, electroplating, or the like.

Believe her not, her glass diffuses
False portraiture; . . .
Her crystal 's falsely steel'd; it scatters
Deceitful beams; believe her oot, she flatters.
Quarles, *Emblems*, II. 6.

Give me my steel'd coat. I'll fight for France.
Away with these disgraceful wailing robes!
Shak., 1 Hen. VI., I. 1. 55.

2. To iron (clothes). *Halliwel.* [Prov. Eng.]
—3. To make hard as steel; render strong, rigid, inflexible, determined, etc.; make firm or stubborn.

Thy resolution would steel a coward.
Beau. and Fl., *Little French Lawyer*, I. 2.

Ximenes's heart had been steel'd by too stern a discipline to be moved by the fascinations of pleasure.
Prescott, *Ferd. and Isa.*, II. 5.

4. To cause to resemble steel in smoothness or polish.

Lo! these waters, steel'd
By breezeless air to smoothest polish.
Wordsworth, *Sonnets Dedicated to Liberty*, II. 5.

steel², *n.* An obsolete form of *steel*², *stale*².
steel-blue (stēl'blū), *a. and n.* I. *a.* Of a lustrous dark-bluish color, resembling steel tempered blue.

II. *n.* A lustrous dark-bluish color; a darker shade than Berlin blue and less chromatic, but nearly of the same hue. See *blue*.

steel-bow (stēl'bow), *a.* [Origin and distinctive sense obscure.] See the phrase.—**Steel-bow goods,** in *Scots law*, corn, cattle, straw, and implements of husbandry, delivered by the landlord to his tenant, by means of which the tenant is enabled to stock and labor the farm, and in consideration of which he becomes bound to return articles equal to quantity and quality at the expiration of the lease.

steelboy (stēl'boy), *n.* [Prob. *<* *steel*¹ in the phrase "hearts of steel," used by the insurgents in a remonstrance entitled "Petition of the Hearts of Steel" (Record Office, London).] A member of a band of insurgents in Ulster, Ireland, who committed various agrarian and other outrages about 1772-4. *Lecky*, *Eng.* in 18th Cent., xvi.

steel-clad (stēl'klad), *a.* Clothed in armor of steel.

steelent, *a.* [*<* ME. *stelen*, *<* AS. *stylan* (= D. *stalen*, *stelen*), *<* *stȳle*, **stēle*, steel: see *steel*¹ and *-ent*².] Of steel; made of steel.

The *stelen* broad. *Layamon*, I. 7634.

steel-engraving (stēl'en-grāv'ving), *n.* 1. The art of engraving on steel plates for the purpose of producing prints or impressions in ink on paper and other substances.—2. The design engraved on the steel plate.—3. An impression or print taken from the engraved steel plate.

steel-finch (stēl'finch), *n.* A book-name of the small finch-like birds of the genus *Hypochaeris*.
steelhead (stēl'hed), *n.* 1. The ruddy duck, *Eristamura rubida*: so called from the steel-blue of the head, or perhaps for the same reason that it is called *hardhead*, *hickory-head*, and *toughhead*. See cut under *Eristamura*. [*Maryland*.]—2. The rainbow-trout, *Salmo irideus*. See cut under *rainbow-trout*. [*Local*, U. S.]

steel-head† (stēl'hed), *a.* Tipped with steel. *Spenser*, *F. Q.*, III. ix. 16.

steelification (stēl'i-fi-kā'shon), *n.* The process of converting iron into steel. *Jour. Franklin Inst.*, CXXV. 304.

steelify (stēl'i-fi), *v. t.*; pret. and pp. *steelified*, ppr. *steelifying*. [*<* *steel*¹ + *-i-fy*.] To convert into steel. *Jour. Franklin Inst.*, CXXV. 304.

steeliness (stēl'i-nes), *n.* The state or character of being steely.

steeling (stēl'ing), *n.* [Verbal *n.* of *steel*¹, *v.*] 1. The process of welding a piece of steel on that part of a cutting-instrument which is to receive the edge.—2. The process of depositing a film of iron on engraved copperplates. The plates are placed in a bath of sulphate of iron and ammonium chloride, a plate of iron submerged in the solution being connected to the copper pole of the battery, and the engraved copperplate to the zinc pole. From such steeled plates from 5,000 to 15,000 impressions can be taken. The same method has been successfully applied to stereotype plates.

steelmaster (stēl'mās'tēr), *n.* A manufacturer of steel. *The Engineer*, LXIX. 343.

steel-mill (stēl'mil), *n.* A contrivance for giving light, in use previous to the invention of the safety-lamp, in English coal-mines infested with fire-damp. It consisted of a disk of steel which was made to revolve rapidly, a flint being held against it, from which a shower of sparks was given off and a feeble light furnished. This method of obtaining light was for a time quite popular.

steel-ore (stēl'ōr), *n.* A name given to various iron ores, and especially to spathic iron (siderite), because that ore was supposed to be particularly well adapted for making steel. Much of the so-called German steel was in fact formerly made from that ore.

steel-press (stēl'pres), *n.* A special form of press designed for compressing molten steel to form solid and dense castings.

steel-saw (stēl'sā), *n.* A disk of soft iron, revolving with great rapidity, used for cutting cold steel.

steelware (stēl'wār), *n.* Articles, collectively, made of steel. *The Engineer*, LXVIII. 642.

steelwork (stēl'wērk), *n.* Steel articles or objects, or such parts of any work as are made of steel. *The Engineer*, LXIX. 191.

steel-worker (stēl'wēr'kēr), *n.* One who works in steel.

steel-works (stēl'wērks), *n. pl. or sing.* A furnace or other establishment where iron is converted into steel. *The Engineer*, LXV. 38.

steely (stēl'i), *a.* [*<* *steel*¹ + *-y*¹.] 1. Consisting of steel; made of steel.

Full ill (we know, & every man may see)
A steely helme & Cardinals cap agree.
Times' Whistle (E. E. T. S.), p. 120.

A steely hammer crushes 'em to pieces.
Ford, *Perkin Warbeck*, I. 1.

2. Resembling steel in some of its essential properties; hard; firm; stubborn.

When he can beat it [Truth] off with most steely prowess, he thinks himself the bravest man; when in truth it is nothing but exsanguine feeble exility of spirit.
N. Ward, *Simple Cobler*, p. 74.

That steely heart [of Judas] yet relents not.
Bp. Hall, *Contemplations*, iv. 27.

3. Resembling steel in color, metallic luster, or general appearance; having more or less imperfectly the qualities or composition of steel: as, *steely iron*.

The beating of the steely sea.
W. Morris, *Earthly Paradise*, Apology.

Steely iron, a mixture of iron and steel; imperfect steel. *Bloxam and Huntington*, *Metals*, p. 109.

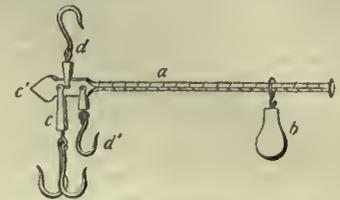

Steelyard¹ (stēl'yārd, colloq. stil'yārd), *n.* [Early mod. E. also *Stilyard*, *Stüliard*, *Steeleard*, *Steleard*, *Styliard*, and as two words *Steel yard*, *Stele yarde* (also *Steel house*, *Stele house*); explained as orig. "the yard in London where steel was sold by German merchants," as if *<* *steel*¹ + *yard*²; but in fact an imperfect translation of the MD. *staelfhof*, later *staalhuf*, = MLG. *stalhof*, an office or hall where cloth was marked with a leaden seal as being properly dyed, *<* MD. *staet*, a specimen, sample, test of dyeing, D. *staal*, a sample, = MLG. *stale*, LG. *stal*, *>* G. dial. *stahl*, a sample, pattern (hence MD. *staelen* = MLG. *stalen*, mark cloth with a leaden seal as being properly dyed) (connected with MD. *staelen*, *stallen* = MLG. *stallen* (OF. *estaler*, *etaler*), expose for sale on a stall, display or show on a stall, *<* MD. *stal*, etc., a stall: see *stall*¹), + *hof*, yard, court: see *have*¹. The notion that the MD. *staelfhof* is a contraction of **stapelhof* (which, moreover, does not occur; cf. *stapelhuys*, E. *staple-house*) is untenable.] A place in London, comprising great warehouses called before the reign of Edward IV. *Gildhalla Teutonico-rum*, 'Gildhall of the Germans,' where, until expelled in 1597, the merchants of the Hanseatic League had their English headquarters; also, the company of merchants themselves. The merchants of the Steelyard were bound by almost monastic guild-rules, under a separate jurisdiction from the rest of London, were exempt from many exactions and restrictions, and for centuries controlled most of the foreign trade of England.

This yere corn was verie dere, & had ben dearer if marchantes of y^e stilyarde had not ben & Dutche shippes restrained, & an abstynace of warre betwene Englande & Flaunders.
Fabyan, *Chron.*, an. 1528-9.

From him come I, to entreat you . . . to meet him this afternoon at the Rhenish wine-house iⁿ the Stüliard.
Webster, *Westward Ho*, II. 1.

steelyard² (stēl'yārd or stil'yārd), *n.* [Early mod. E. *stilyard*, *stüliard*, *stüliard*; appar. lit. 'a rod of steel,' *<* *steel*¹ + *yard*¹; but prob. an altered form, due to popular etymology, of the

equiv. early mod. E. *stelleere*, supposed to stand for *stiller* or **steller* (= G. *steller*, regulator): see *stiller*¹. The word seems to have been confused with *Steelyard*¹, and is generally explained, without evidence, as orig. the balance or weight used by the merchants of the Steelyard.] A kind of balance with two unequal arms, consisting of a lever in the form of a slender iron bar with

Steelyard.

a, rectangular bar, graduated both above and below; *b*, adjustable counterpoising weight; *c*, hook for supporting articles to be weighed (this can be turned easily over the end of the bar at *c*); *d* and *d'*, hooks for support of the steelyard, according as one or other of the graduations is turned to the upper side for use in weighing.

one arm very short, the other divided by equidistant notches, having a small crosspiece as fulcrum, to which a bearing for suspension is attached, usually a hook at the short end, and a weight moving upon the long arm. It is very portable, without liability to become separated, and the process of weighing is very expeditious. It is much used for cheap commodities, but owing to its simple construction it is liable to be so made as to give false indications. Often used in the plural. Also called *Roman balance* or *beam*. Compare *Danish balance* (sometimes called *Danish steelyard*), under *balance*.

Crochet, a small hook. . . . A Romans beame or *stelleere*, a beame of yron or wood, full of nickes or notches, along which a certaine peize of lead, &c., playing, and at length setting towards the one end, shewes the just weight of a commodity hanging by a hooke at the other end.

Cotgrave.
A pair of steelyards and a wooden sword.
Halleck, *Fsony*.

steem¹, *n.* An old form of *steam*. *Prompt. Par.*
steen¹ (stēn), *v. t.* [Also *steam*, Sc. *stein*; *<* ME. *stēnen*, east stones, *<* AS. *stēnan* (= OHG. *steinōn* = Goth. *stainjan*), stone, *<* *stān*, stone: see *stone*, *n.* Cf. *stone*, *v.*, of which *steen*¹ is a doublet.] 1. To stone; pelt with stones.

Te stones that me [men] stenede him mide.
Ancren Riwle, p. 122.

2. To fit with stones; mend, line, pave, etc., with stones. *Halliwel.* [Prov. Eng. and Scotch in both senses.]

steen¹ (stēn), *n.* [Also *stean*; a dial. var. of *stone*, due to the verb *steen*¹.] A stone. [Prov. Eng. and Scotch.]

steen² (stēn), *n.* [Also *stean*, *stein*; *<* ME. *steene*, *stene*, a stone jar, *<* AS. *stēna* (= OHG. *steinna*), a stone crock (cf. *stēnen*, of stone: see *stone*), *<* *stān*, stone: see *stone*.] 1. A kind of jar or urn of baked clay or of stone, of the general type of the sepulchral urns of the Romans. *Jour. Brit. Archæol. Ass.*, XXXV. 105.

Nevertheleste ther weren not maad of the same monce the *stenys* [hydriæ, Vulgate] of the temple of the Lord.
Wyclif, 4 Kl [2 Kl.] xii. 13.

Upon an huge great Earth-pot *steane* he stood.
Spenser, *F. Q.*, VII. vii. 42.

2. A large box of stones used for pressing cheese in making it. *Halliwel.* [Prov. Eng.]
steenbok (stān'- or stēn'bok), *n.* [*<* D. *steenbok* = G. *steinbock*, the wild goat, *<* D. *steen*, = G. *stein* = E. *stone*, + D. *bok* = G. *bock* = E. *duck*: see *stone* and *duck*¹.] One of several small Afri-

Steenbok (*Nanotragus tragulus*).

can antelopes of the genus *Nanotragus*, fond of rocky places (whence the name). The common steenbok is *N. tragulus*, generally distributed in South Africa, about 3 feet long and 20 inches tall, with straight horns about 4 inches long in the male, none in the female,

large ears, and no false hoofs. It is of a general reddish-brown color, white below. The gray steenbok is *N. melanotis*. *N. oreotragus* is the klip-springer (which see, with cut). Also *steenbok*, *steinbock*. Compare *steinbock* and *stonebuck*.

steening (stē'ning), *n.* [Also *steaning*; verbal *n.* of *steep*, *v.*] 1. Any kind of path or road paved with small round stones. *Halliwel.* [Prov. Eng.]—2. In arch., the brick or stone wall or lining of a well or cesspool, the use of which is to prevent the irruption of the surrounding soil. Also *steining*.

steenkirck (stēn'kĕrk), *n.* [Also, less prop., *stein-kirk*; so called in allusion to the battle fought in 1692 near *Steenkerke*, *F. Steinkerque* (lit. 'stone church'), a town in Belgium.] A name brought into fashion, after the battle of Steenkirk, for several articles, especially of dress, as wigs, buckles, large neckties, and powder; especially, a cravat of fine lace, loosely and negligently knotted, with long hanging ends, one of which was often passed through a buttonhole.

Mrs. Calico. I hope your Lordship is pleased with your *Steenkirck*.

Lord F. In love with it, atop my vitals! Bring your Bill; you shall be paid to-morrow. *Fanbrugh, The Relapse*, i. 3.

I had yielded up my cravat (a smart *Steenkirck*, by the way, and richly laced). *Scott, Rob Roy*, xxxi.

Ladies also wore them (neckcloths), as in "The Careless Husband" Lady Easy takes her *Steenkirck* from her Neck and lays it gently over his Head.

Ashton, Social Life in Reign of Queen Anne, i. 148.

steenstrupine (stēn'strup-in), *n.* [Named after K. J. V. *Steenstrup*, a Danish naturalist.] A rare mineral occurring in massive forms and rhombohedral crystals of a brown color in the sodalite syenite of Greenland. It is a silicate of the rare metals of the cerium group, also thorium, and other elements.

steep¹ (stēp), *a.* and *n.* [*<* ME. *stepe*, *step*, *stēp*, *steap*, *<* AS. *stēap*, *steep*, high, = OFries. *stāp*, *steep*; cf. Icel. *steypthir*, *steep*, lofty; Norw. *stup*, a steep cliff; akin to *stoop*: see *stoop*¹, and cf. *steep*², *steep*.] **I. a.** 1. Having an almost perpendicular slope; precipitous; sheer.

Two of these Islands are *steep* and upright as any wall, that it is not possible to climb them.

Purchas, Pilgrimage, p. 748.

Thou far our ascent was easy; but now it began to grow more *steep*, and difficult.

Maunderell, Aleppo to Jerusalem, p. 119.

2†. Elevated; high; lofty.

To a room they came,
Steep and of estate. *Chapman, (Imp. Dict.)*

3. Excessive; difficult; forbidding: as, a *steep* undertaking; a *steep* price. [Colloq.]

Perhaps if we should meet Shakspeare we should not be conscious of any *steep* inferiority.

Emerson, Essays, 1st ser., p. 302.

Neither priest nor squire was able to establish any *steep* difference in outward advantages between himself and the commons among whom he lived. *Froude, Sketches*, p. 164.

4†. Bright; glittering; fiery.

His eyes *steep* and rollynge in his heede.
Chaucer, Gen. Prolog. to C. T., l. 201.

His Eye [eyes] lenaund with light as a low lyn,
With streamy [gleams] full attine in his *stepe* loke.
Destruction of Troy (E. E. T. S.), l. 7724.

II. n. A steep or precipitous place; an abrupt ascent or descent; a precipice.

Suddenly a splendor like the morn
Pervaded all the beetling gloomy *steeps*.

Keats, Hyperion, ff.

Yet up the radiant *steeps* that I survey
Death never climbed. *Bryant, To the Apennines*.

steep² (stēp), *v.* [*<* ME. *steppen*, *<* Icel. *steypa*, east down, overturn, pour out, cast (metals), refl. tumble down, = Sw. *stōpa* = Dan. *stōbe*, cast (metals), steep (corn); causal of Icel. *stūpa* = Sw. *stupa*, fall, stoop: see *stoop*¹, and cf. *steep*¹.] **I. trans.** 1. To tilt (a barrel). *Halliwel.* [Prov. Eng.]—2. To soak in a liquid; macerate: as, to *steep* barley; to *steep* herbs.

A day afore her [almonds] setting, hem to *steep*

The Greeks' preserver, great Machaon, bore.

Pope, Iliad, xi. 728.

4. To imbue or impregnate as with a specified influence; cause to become permeated or pervaded (with): followed by *in*.

la thia a time to *steep*
Thy brains in waateful slumbers?
Quartus, Emblems, i. 7.

Thou art so *steep'd* in misery,
Surely 'twere better to be.
Tennyson, The Two Voices.

The habitual criminal, *steeped* in vice and used to ignominy, cares very little for disgrace, and accepts punishment as an incident in his career.
Bibliotheca Sacra, XLVII. 594.

II. intrans. To be bathed in a liquid; soak.
And now the midnight draught of sleep,
Where wine and spices richly *steep*,
In maasive bowl of silver decp,
The page presents on knee.
Scott, Marmion, l. 30.

steep² (stēp), *n.* [*<* *steep*², *v.*] 1. The process of steeping; the state of being steeped, soaked, or permeated: used chiefly in the phrase *in steep*.

Strait to each house she hasted, and sweet sleep
Pou'd on each wooer; which so laid in *steep*
Their drowsie temple that each brow did nod.

Chapman, Odyssey, ff. 578.

Whilst the barley is in *steep* it is ganged by the excise officers, to prevent fraud.
Encyc. Brit., IV. 267.

2. That in which anything is steeped; specifically, a fertilizing liquid in which seeds are soaked to quicken germination.

When taken from the white bath, the skins, after washing in water, are allowed to ferment in a bran *steep* for some time in order to extract a considerable portion of the alum and salt.
C. T. Davis, Leather, p. 665.

3. Rennet: so called from being steeped before it is used. [Prov. Eng.]—*Rot's steep*, in bleaching cotton goods, the process of thoroughly saturating the cloth. The name is due to the former practice of allowing the flour or size with which the goods were impregnated to ferment and putrefy. Also called *wetting-out steep*.

steep-down (stēp'doun), *a.* Having a sheer descent; precipitous.

Wash me in *steep-down* gulfs of liquid fire!
Shak., Othello, v. 2. 280.

You see Him till into the *steep-down* West
He throws his course. *J. Beaumont, Psyche*, iii. 14.

steepen (stē'pn), *v. i.* [*<* *steep*¹ + *-en*.] To become steep.

As the way *steepened*, . . . I could detect in the hollow of the hill some traces of the old path.
Hugh Miller, (Imp. Dict.)

steeper (stē'pēr), *n.* [*<* *steep*² + *-er*.] A vessel, vat, or cistern in which things are steeped; specifically, a vat in which the indigo-plant is steeped to macerate it before it is soaked in the beating-vat.

steepful (stēp'fūl), *a.* [*<* *steep*¹ + *-ful*.] Steep; precipitous.

Anon he stalks about a *steepfull* Rock,
Where som, to shun Death's (never shunned) stroak,
Had clambred vp.

Sylvester, tr. of Du Bartas's Weeks, II, The Vocation.

steep-grass (stēp'grās), *n.* The butterwort, *Pinguicula vulgaris*: so called because used like rennet. Also *steepweed*, *steepwort*. *Britten and Holland, Eng. Plant Names*.

steepiness (stē'pi-nēs), *n.* The state or quality of being steepy or steep; steepness. [Rare.]

The craggineas and *steepiness* of places up and down . . . makes them inaccessible. *Howell, Forreine Travell*, p. 132.

steep (stē'pl), *n.* [*<* ME. *steple*, *stepl*, *stepylle*, *stepul*, *<* AS. *stēpel*, *stjēpel*, a steeple, *<* *stēp*, steep, high: see *steep*¹.] 1. A typically lofty structure attached to a church, town-house, or other public edifice, and generally intended to contain the bells of such edifice. *Steeple* is a general term applied to every secondary structure of this description, whether in the form of a simple tower, or, as is usual, of a tower surmounted by a spire.

Ydeleblaise is the grete wynd that thrauth down the greate tours and the hege *steeples* and the greate beches ine wodes thrauth to grounde.

Ayenbite of Inwytt (E. E. T. S.), p. 23.

Lod. What does he ith middle looke like?
Asto. Troth, like a spire *steep*le in a Country Village ouer-peering so many thatcht houaes.

Dekker and Middleton, Honest Whore, ff. 1.

At Paris all *steeples* are clangouring not for sermon.
Carlyle, French Rev., III. i. 4.

2. A lofty head-dress worn by women in the fourteenth century. See *hennin*.

Some of the more popular of these strange varieties of head-gear have been distinguished as the "horned," the "mitre," the "steepel"—in France known as the "hennin"—and the "butterfly."
Encyc. Brit., VI. 469.

3. A pyramidal pile or stack of fish set to dry. Also called *pack*. See the quotation under *pack*¹, 10 (b).

steepelbush (stē'pl-būsh), *n.* The hardhack; also, *Spiræa sativifolia*. See *Spiræa*.

steepchase (stē'pl-chās), *n.* A horse-race across a tract of country in which ditches,

hedges, and other obstacles must be jumped as they come in the way. The name is supposed to be originally due to any conspicuous object, such as a church-steeple, having been chosen as a goal, toward which those taking part in the race were allowed to take any course they chose. The limits of the steepchase-course are now marked out by flags.

steepchaser (stē'pl-chā'sēr), *n.* 1. One who rides in steepchases.—2. A horse running or trained to run in a steepchase.

"If you do not like hunting, you are to affect to," says Mamma. "You must listen to Captain Breakneck's stories at dinner, laugh in the right places, and ask intelligent questions about his *steepchaser*."

Nineteenth Century, XXVI. 780.

steepchasing (stē'pl-chā'sing), *n.* [*<* *steepchase* + *-ing*.] The act or sport of riding in a steepchase.

steep-crown (stē'pl-kroun), *n.* A steep-crowned hat.

And on their heads old *steep-crowns*.
Hudibras Redivivus (1700). (*Nares*.)

steep-crowned (stē'pl-kround), *a.* Having a high peaked crown resembling a steeple: noting various articles of head-gear.

The women wearing the old country *steep-crowned* hat and simply made gowns.

Ashton, Social Life in Reign of Queen Anne, II. 138.

steepled (stē'pld), *a.* [*<* *steep* + *-ed*.] 1. Furnished or adorned with a steeple or steeples.

As we neared the provincial city [Worcester], we saw the *steepled* mass of the cathedral, long and high, rise far into the cloud-freckled blue. *H. James, Jr., Pass. Pilgrim*, p. 44.

2. Having the form of a steeple; peaked; towering.

An old doublet and a *steep hat*. *Eronning, Stratford*.

steep-house (stē'pl-hous), *n.* A church edifice: so called by the early members of the Society of Friends, who maintained that the word *church* applies properly only to the body of believers.

The reason why I would not go into their *steep-house* was because I was to bear my testimony against it, and to bring all off from such places to the Spirit of God, that they might know their bodies to be the temples of the Holy Ghost.

George Fox, Journal (1814), p. 167.

There are *steep houses* on every hand,
And pulpit that bless and ban;
And the Lord will not grudge the single church
That is set apart for man.

Whittier, The Old South.

Stegocephala (steg-ō-sef'ā-lā), *n. pl.* [NL., neut. pl. of **stegocephalus*: see *stegocephalous*.] Same as *Labyrinthodontia*. Also *Stegocephali*.

stegocephalian (steg'ō-se-fā'li-an), *a. and n.* [*< Stegocephala + -ian.*] I. *a.* Stegocephalous.

II. *n.* A member of the *Stegocephala*.

stegocephalous (steg-ō-sef'ā-lus), *a.* [*< NL. *stegocephalus*, *< Gr. stéyeiv*, cover, + *κεφαλή*, the head.] Having the head mailed, loricated, or cataphract, as a labyrinthodont; having the characters of, or pertaining to, the *Stegocephala*.

Stegodon (steg'ō-don), *n.* [NL. (Falconer, 1857), *< Gr. stéyeiv*, cover, + *ὄδοντος (odont-)* = E. tooth.] 1. A genus of fossil elephants of the Tertiaries of India, intermediate in their dental characters between the existing elephants and the mastodons. They are, however, most nearly related to the former, belonging to the same subfamily, *Elephantinæ*. *S. insignis* is an example.

2. [*l. c.*] An elephant of this genus.

stegognathous (ste-gog'nā-thus), *a.* [*< Gr. stéyeiv*, cover, + *γνάθος*, jaw.] In *conch.*, having a jaw composed of imbricated plates: noting the *Bulimulidæ*.

Stegoptera† (ste-gop'tē-rā), *n. pl.* [NL., neut. pl. of **stegopterus*: see *stegopterous*.] An order of neuropterous insects; of roof-winged insects. It included the *Panorpidæ* or scorpion-flies, the *Rhaphididæ* or snake-flies, the *Manispidæ* or mantis-flies, the *Myrmeleontidæ* or ant-lions, the *Hemerobidæ* or lacewings, the *Sialidæ* or May-flies, and the *Phryganidæ* or caddis-flies. The order is now broken up.

stegopterous (ste-gop'tē-rus), *a.* [*< NL. *stegopterus*, *< Gr. stéyeiv*, cover, + *πτερόν*, wing, = E. feather.] In *entom.*, roof-winged; holding the wings deflexed when at rest; of or pertaining to the *Stegoptera*.

Stegosauria (steg-ō-sā'ri-ā), *n. pl.* [NL., *< Gr. stéyeiv*, cover, + *σαῦρος*, a lizard.] An order or suborder of dinosaurs, represented by the families *Stegosauriæ* and *Scelidosauriæ*.

stegosaurian (steg-ō-sā'ri-an), *a. and n.* [*< Stegosauria + -ian.*] I. *a.* Of or pertaining to the *Stegosauria*, or having their characters.

II. *n.* A dinosaur of the order *Stegosauria*.

Stegosauridæ (steg-ō-sā'ri-dē), *n. pl.* [NL., *< Stegosaurus + -idæ.*] A family of herbivorous dinosaurs, typified by the genus *Stegosaurus*, with biconcave vertebrae, ischia retrorse and meeting in mid-line, the astragalus coalesced with the tibia, and the metatarsals short. They were Jurassic reptiles of great size.

stegosauroid (steg-ō-sā'roid), *n. and a.* [*< Stegosaurus + -oid.*] Same as *stegosaurian*.

Stegosaurus (steg-ō-sā'rus), *n.* [NL. (Marsh, 1877), *< Gr. stéyeiv*, cover, + *σαῦρος*, a lizard.]

1. The typical genus of *Stegosauridæ*. It contained species some 30 feet long, mailed with enormous bucklers and spines.—2. [*l. c.*] A dinosaur of this genus.

steik, *v. t.* See *steek*.

steillt, *n.* An obsolete Scotch spelling of *stale¹*.

steint, *v. and n.* An obsolete Scotch spelling of *steen¹*, *steen²*.

Steinberger (stīn'bēr-gēr), *n.* A white wine grown on the Rhine, near Wiesbaden in Prussia. The vineyard belongs to the Prussian national domain. Steinberger ranks in estimation second only to the Johannisberger, and in some years is considered better by connoisseurs.

steinbok (stīn'hok), *n.* [G.: see *steenbok*.] 1. The ibex.—2. Same as *steenbok*.

Steinerian (stī-nē'ri-an), *a. and n.* [Named by Cremona from *Steiner* (see *def.*)] I. *a.* Pertaining to the discoveries of the German geometer Jacob Steiner (1796–1863).—**Steinerian polygon**. See *polygon*.

II. *n.* In *math.*, the locus of points whose first polars with respect to a given curve have double points.

Steiner's surface. See *surface*.

steing, *n.* Same as *sting²*.

steinhellite (stīn'hī-lit), *n.* A variety of *iolite*.

steining (stī'ning), *n.* Same as *steening*, 2.

Steinitz gambit. See *gambit*.

steinkirk (stīn'kērk), *n.* See *steenkirk*.

steinmannite (stīn'mān-it), *n.* [Named after *Steinmann*, a German mineralogist.] A variety of *galena* containing some arsenic and antimony. It commonly occurs in octahedral crystals.

steirk, *n.* See *stirk*.

steive, *v.* A variant of *stive²*.

steket, *v.* An obsolete form of *stick¹*.

stelt. An obsolete form of *steel¹*, *steal²*, *stale²*, etc.

stela (stē'lā), *n.* Same as *stela³*.

stele¹. An old spelling of *steel¹*, *steal²*.

stele², *n.* An obsolete form of *stale²*.

stèle³ (stē'lē, sometimes stēl), *n.*; pl. *stēlæ* or *stēlai*. [= F. *stèle*, < L. *stela*, < Gr. *στῆλη*, an upright slab or pillar, < *ιστάνα*, stand, set: see *stand* and *stool*.] In *archæol.*: (a) An upright slab or pillar, often crowned with a rich anthemion, and sometimes bearing more or less

stella (stēl'ā), *n.*; pl. *stēlæ* (-ē). [NL., < L. *stella*, a star: see *star*¹.] A stellate spongespicule; an aster; a stellate.

stellar (stēl'ār), *a.* [= F. *stellaire* = Sp. *estrelar* = It. *stellare*, < LL. *stellaris*, pertaining to a star, starry, < L. *stella*, a star: see *stella*.] Of or pertaining to stars; astral: as, *stellar* worlds; *stellar* space; *stellar* regions.

These soft fires
Not only enlighten, but . . . shed down
Their stellar virtue on all kinds that grow.
Milton, P. L., iv. 671.

Stellaria (stē-lā'ri-ā), *n.* [NL. (Linnaeus, 1753), name transferred, on account of the star-like blossoms, from a *Corispermum* so named by Dillenius (1719); < L. *stella*, a star.] A genus of polypetalous plants, of the order *Caryophyllaceae* and tribe *Astineae*. It is characterized by the absence of stipules, by flowers usually with five deeply two-cleft petals and three styles, and by a one-celled globose or oblong capsule which commonly splits into three two-cleft or completely parted valves. There are about 85 species, scattered throughout the world; in the tropics they occur only on mountains. Seven species occur in

England and about 20 in North America, of which 7 are natives of the northeastern United States. They are com-

monly diffuse herbs, with weak, smooth, or hairy stems, loosely ascending or growing in matted tufts. Their flowers are usually white, and form terminal paniced cymes, sometimes mixed with leaves. Several species are known as *chickweed*, and several others as *starwort* or *stitchwort*, especially *S. Holostea* (see *stitchwort*), a common English species, bearing such local names as *albone*, *break-bones*, *shirt-bullocks*, *spap-jack*. *S. longifolia*, the long-leaved stitchwort, frequent in the Northern Atlantic States, forms delicate tangled masses of light green overtopped by numerous small white flowers. *S. pubera*, the great chickweed or starwort, the most showy Atlantic species, forms conspicuous dark-green tufts along shaded banks in earliest spring, from Pennsylvania southward. See also cut under *oary*.

stellary (stēl'ā-ri), *a.* Same as *stellar*.

stellate (stēl'āt), *a.* and *n.* [*L. stellatus*, pp. of *stellare*, set or cover with stars, < *stella*, star: see *stella*.] 1. *a.* Star-like in form; star-shaped; arranged in the form of a conventional star; radiating from a common center like the rays or points of a star: as, *stellate* leaves; the *stellate* groups of natrolite crystals.—**Stellate bristle** or **hair**, a bristle or hair which branches at the end in a star-shaped manner. See cut under *hair*, 4.—**Stellate fracture**, a fracture, occurring usually in a flat bone, in which several fissures radiate from the central point of injury.—**Stellate leaves**, leaves, more than two in number, surrounding the stem in a whorl, or radiating like the spokes of a wheel or the points of a star. Also called *verticillate leaves*. See cut under *pipissewa*.—**Stellate ligament**, a costovertebral ligament; the anterior costocentral ligament uniting the head of a rib with the body of a vertebra: so called from the radiated figure in man.—**Stellate spicule**, an aster; a stellate.—**Stellate veins**, very minute venous radicles situated just under the capsule of the kidney, arranged in a radiating or stellate manner.

II. *n.* A stellate microscelere, or flesh-spicule in the form of a star. *Encyc. Brit.*, XXII. 417.

stellated (stēl'ā-ted), *a.* [*stellate* + *-ed*².] Same as *stellate*.—**Stellated polygon**, **polyhedron**, etc. See the nouns.

stellately (stēl'āt-li), *adv.* Radiately; like a star; in a stellate manner.

stellate-pilose (stēl'āt-pī'lōs), *a.* In *bot.*, pilose with stellate hairs.

stellation (stē-lā'shōn), *n.* [*ML. stellatio(n)-* (?), < L. *stella*, a star: see *stellate*.] 1. The act or process of becoming a star or a constellation.

The skaly Scorpion's fixt amongst the rest, . . .
The cause of it's *stellation* to enquire,
And why so beautify'd with heavenly fire,
Comes next in course.
Heywood, Hierarchy of Angels, p. 138.

2. Same as *constellation*.

Stars, and *stellations* of the heavens.
Rev. T. Adams, Works, II. 4.

stellature (stēl'ā-tūr), *n.* [*ML. *stellatura*, irreg. taken as equiv. to *stellionate*: see *stellionate*.] Same as *stellionate*.

Extortion and cozenage is proverbially called *crimen stellionatus*, the sin of *stellature*.
Rev. T. Adams, Works, I. 79.

stelled† (stēld), *p. a.* [*PP. of stell*: see *stell*, and cf. *stalled*, pp. of *stall*.] Fixed.

The sea, with such a storm as his bare head
In hell-black night endured, would have buoy'd up,
And quench'd the *stelled* fires. *Shak.*, Lear, iii. 7. 61.

[Some commentators define the word as 'stellated,' 'starry.']

stelleert, **stelleeret**, *n.* [See *steelyard*².] Same as *steelyard*². *Cotgrave*.

Stelleria (stē-lē'ri-ā), *n.* [NL., named after G. W. Steller: see *stellerine*.] In *ornith.*, a genus of sea-ducks, the type of which is Steller's eider, *S. dispar*, usually called *Polysticta stelleri*. *Bonaparte*, 1838.

Stellerida (stē-ler'i-dā), *n. pl.* [NL., prop. *Stellarida*, < *stellaris*, starry, + *-ida*.] A class or other large group of echinoderms of obviously radiate figure; the starfishes and brittle-stars: synonymous with *Asteroidea*, 2.

stelleridan (stē-ler'i-dān), *a.* and *n.* [*Stellerida* + *-an*.] I. *a.* Of or pertaining to the *Stellerida*.

II. *n.* A member of the *Stellerida*, as a starfish or brittle-star.

stelleridean (stē-lē-rid'ē-ān), *n.* Same as *stelleridan*.

stellerine (stēl'e-rin), *n.* [Named after G. W. Steller, the traveler (1709-45).] The arctic or Steller's sea-cow, *Rhytina stelleri*. See *sea-cow*, 2, and cut under *Rhytina*.

Steller's eider. See *Polysticta*, 1, and *Stelleria*.

Steller's jay. A jay of northwestern North America, *Cyanocitta stelleri*, crested like the common blue jay, but chiefly of a blackish color, shading into dull blue on some parts.

Steller's sea-cow. See *sea-cow*, 2, and cut under *Rhytina*.

Steller's sea-lion. The northern sea-lion. See *Eumetopias* (with cut).

stellet, *n.* An obsolete form of *stylet*, 1. *Dalyell*, Frag. of Scottish History.

stelliferous (stē-lif'e-rus), *a.* [*L. stellifer*, starry, < *stella*, a star, + *ferre* = E. *bear*¹.] Having or abounding with stars.

stelliform (stēl'i-fōrm), *a.* [*L. stella*, a star, + *forma*, form.] Star-like in shape; stellate in form; asteroid; radiated.

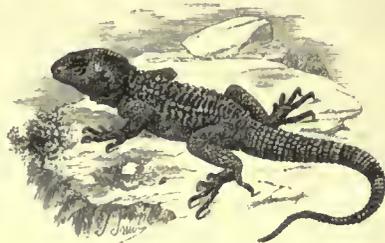

stellify† (stēl'i-fī), *v. t.* [*ME. stellifyen*, < OF. *stellifier*, < ML. *stellificare*; place among the stars, convert into a constellation, < L. *stella*, a star, + *facere*, make, do (see *-fy*).] To turn into or cause to resemble a star; convert into a constellation; make glorious; glorify.

No wonder is thogh Jove her *stellifye*.
Chaucer, Good Women, l. 525.

Some thinke this flood to be Nilus, which is also Gyon; and therefore *stellified*, because it directeth his course from the Meridian. It consisteth of many stars, and lieth lust beneath the star called Canopus, or Ptolomæa.

Heywood, Hierarchy of Angels, p. 176.

Stellio (stēl'i-ō), *n.* [NL., < L. *stellio(n)-*, a lizard: see *stellion*.] 1. A genus of agamid lizards, giving name to the *Stellionidae*. They have acrodont dentition, naked tympanum, no pores, and

the scales of the tail disposed in whorls or verticils. There are several species, ranging from countries bordering the Mediterranean to India. The common stellion or star-lizard, the hardim of the Arabs, *S. vulgaris*, is abundant in ruins. *S. tuberculatus* is an Indian species.

2. [l. c.] A lizard of this genus.

stellion (stēl'yōn), *n.* [*L. stellio*, a newt, a lizard marked with star-like spots, also a crafty, knavish person (cf. *stellionate*), < *stella*, a star: see *stella*.] An agamid lizard of the genus *Stellio* or family *Stellionidae*; a star-lizard.

When the *stellion* hath cast his skin, he greedily devours it again.
Rev. T. Adams, Works, I. 79.

stellionate (stēl'yōn-āt), *n.* [*LL. stellionatus*, cozenage, trickery, < L. *stellio(n)-*, a crafty, knavish person, lit. a newt, lizard: see *stellion*.] In *Scots* and *civil law*, a word used to denote all such crimes in which fraud is an ingredient as have no special names to distinguish them, and are not defined by any written law.

Stellionidae (stēl-i-on'i-dē), *n. pl.* [NL., < *Stellio(n)-* + *-idae*.] A family of Old World acrodont agamid lizards, named from the genus *Stellio*, properly merged in *Agamidae*; the stellions or star-lizards. See cut under *Stellio*.

stellular (stēl'ū-lār), *a.* [*L. stellula*, a little star, dim. of *stella*, a star: see *stella*.] Finely or numerously stellated, as if spangled with little stars; stelliferous, as the surface of a coral; shaped like a little star; resembling little stars; small and stelliform in figure or appearance. *Encyc. Brit.*, XVI. 370.

stellulate (stēl'ū-lāt), *a.* [*L. stellula*, a little star (see *stellular*), + *-ate*¹.] Resembling little stars or a little star; stellular.

Stellwag's symptom. See *symptom*.

Stelmatopoda (stē-mat-op'ō-dā), *n. pl.* A division of *Polyzoa* or *Bryozoa*, corresponding to the *Gymnolenmata*: contrasted with *Lophopoda*.

stelochite (stel'ō-kīt), n. See stielechite.
stelography (stē-log'ra-fi), n. [L Gr. στήλογραφία, an inscription on a stele or upright slab, < Gr. στήλη, a stele (see stela), + γράφειν, write.] The practice of writing or inscribing on steles or pillars.

Jacob's pillar . . . thus engraved . . . gave probably the origin to the invention of stelography.
Stackhouse, Hist. Bible, p. 323.

stem¹ (stem), n. [ME. stem, stam, < AS. stemm, stefn, stæfn, also stofn (> E. dial. stovin), stem, trunk (of a tree), = D. stam, stem, trunk, stock (of a tree or family), = MLG. stam, stamme, stem, stock, = OHG. stam (stamm-), G. stamm, stem (of a tree), trunk, tree, stock, race, = Icel. stofn, stömn, stem, trunk of a tree, = Sw. stam = Dan. stamme (in comp. stam-), stem, trunk, stock (of a tree), stock, race, family (also with some variation of form in a particular sense, 'the prow of a vessel': see stem²); = OIr. tamon, Ir. tamhán (for *stamon), stem, trunk; cf. Gr. στῆμων, an earthen jar; with formative -m-, < √ sta, stand: see stand. Not related to staff, except remotely.] 1. The body of a tree, shrub, or plant; the firm part which supports the branches; the stock; the stalk; technically, the ascending axis, which ordinarily grows in an opposite direction to the root or descending axis. The stem is composed of fibrous, spiral, and cellular tissues, arranged in various ways; it typically assumes a cylindrical form and a perpendicular position, and bears upon it the remaining aerial parts of the plant. Its form and direction, however, are subject to much variation in particular cases. In regard to internal structure, there are three principal modifications of stems characteristic of three of the great natural classes into which the vegetable kingdom is divided—namely, exogens, endogens, and acrogens. Stems are herbaceous or woody, solid or hollow, jointed or unjointed, branched or simple. Sometimes they are so weak as to be procumbent, although more generally firm and erect; sometimes weak stems are upheld by twining or by other methods of climbing. In some plants the stem is so short as to seem to be wanting, the leaves and flower-stalks appearing to spring from the top of the root. There are also stems, such as the rhizome and tuber, which, being subterranean, have been mistaken for roots. See cuts under baobab, esparto, internode, pipsisewa, snakeroor, rhizome, and tuber.
2. The stalk which supports the flower or the fruit of a plant; the peduncle of the fructification, or the pedicel of a flower; the petiole or leaf-stem. See cuts under pedicel, peduncle, and petiole.

Two lovely berries moulded on one stem.
Shak., M. N. D., iii. 2. 211.
For I mean crush among the stoure
Thy slender stem.
Burns, To a Mountain Daisy.

3. The stock of a family; a race; ancestry.
Ye may all, that are of noble stem,
Approach, and kiss her sacred vesture's hem.
Milton, Arcades, l. 82.

4. A branch of a family; an offshoot.
Richard Plantagenet, . . .
Sweet stem from York's great stock.
Shak., 1 Hen. VI., ii. 5. 41.

5. Anything resembling the stem of a plant. Specifically—(a) The handle of a tool. Halliwell, [Prov. Eng.] (b) That part of a vase, cup, or goblet which unites the body to the foot or base, in examples where the body is not immediately set upon the latter.

Wine-glasses or goblets are classified by the nature of their stems, or by the nature of their feet.
H. J. Powell, Glass-Making, p. 61.

(c) In type-founding, the thick stroke or body-mark of a roman or italic letter. See cut under type. (d) In a vehicle, a bar to which the bow of a falling hood is hinged. (e) The projecting rod of a reciprocating valve, serving to guide it in its action. See cut under slide-valve. (f) In zoöl., and anat., any slender, especially axial, part like the stem of a plant; a stalk, stipe, rachis, footstalk, etc. (g) In ornith., the whole shaft of a feather. (h) In entom., the base of a clavate antenna, including all the joints except the enlarged outer ones: used especially in descriptions of the Lepidoptera.

6. In musical notation, a vertical line added to the head of certain kinds of notes. Of the kinds of note now in use, all but two, the breve and the semi-breve, have stems. It may be directed either upward or downward, thus, ♯. When two voice-parts are written on the same staff, the stems of the notes belonging to the upper part are often directed upward, and those of the lower part downward, particularly when the parts cross, or both use the same note (see figure). The latter note is said to have a double stem. See note!, 13. Also called tail.

7. In philol., a derivative from a root, having itself inflected forms, whether of declension or of conjugation, made from it; the unchanged part in a series of inflectional forms, from which the forms are viewed as made by additions; base; crude form.—Aerial stem, the above-ground axis of a plant, as opposed to the rootstock or other subterranean form of the stem.—Ancipital, compound, erect, herbaceous, pitudary, secondary, etc., stem. See the adjectives.

stem¹ (stem), v. t.; pret. and pp. stemmed, ppr. stemming. [< stem¹, n.] To remove the stem of; separate from the stem: as, to stem tobacco.

stem² (stem), n. [< ME. *stem, stam, < AS. *stemm, stefn, *stæfn, also stefna, stæfna, the prow of a ship (stórstefn, the poop, lit. 'steer-stem'), = OS. stamm = D. steven = MLG. I.G. steven, prow of a ship (> G. steven, stem (vorder-steven, 'fore stem,' prow, hinter-steven, 'hind stem,' stern-post)), = Icel. stafn, stamn, also stefni, stemni, stem of a ship (prow or stern), = Dan. stern, stavn = Sw. stäf, prow (fram-stam, 'fore stem,' prow, bakstam, 'back stem,' stem); a particular use, with variations of form, of AS. stemm, stefn, E. stem¹, etc., stem, trunk, post: see stem¹. The naut. use in E. is prob. in part of Scand. origin.] 1. A curved piece of timber or metal to which the two sides of a ship are united at the foremost end. The lower end of it is scarfed or riveted to the keel, and the bowsprit, when present, rests on its upper end. In wooden ships it is frequently called the main stem, to distinguish it from the false stem, or cutwater. The outside of the stem is usually marked with a scale showing the perpendicular height from the keel, for indicating the draft of water forward. See also cut under forecaul.

Stem and allied parts. S, stem; K, keel; A, apron; D, deadwood; SS, stenson; DH, deck-hooks; BH, breast-hooks; SH, stem-piece, or independent piece; MP, main piece, or lace-piece; BWS, bowsprit; G, gripe; F, false keel. (The dotted lines show bolts.)

Pretious jewels fecht from far
By Italian marchants that with Russian stemes
Plous up huge furrowes in the Terren Maine.
The Taming of the Shrew, p. 22. (Halliwell.)

2. The forward part of a vessel; the bow.
Turnynge therefore the stemmes of his shypes towards the Easte, he affirmed that he had founde the Hlande of Ophir.
Peter Martyr (tr. in Eden's First Books on America, ed. Arber, p. 66).

False stem, a stem fitted closely to the forward side of the main stem, generally sharp, and introduced for the purpose of decreasing a vessel's resistance and increasing her speed; a cutwater.—From stem to stern, from one end of the ship to the other, or through the whole length.

They skip
From stem to stern; the boatswain whistles.
Shak., Pericles, iv. 1. 64.

stem² (stem), v.; pret. and pp. stemmed, ppr. stemming. [< stem², n.] 1. To dash against with the stem (of a vessel).
They stood off again, and returning with a good gale, they stemmed her upon the quarter, and almost overset her.
Winthrop, Hist. New England, I. 226.

2. To keep (a vessel) on its course; steer.
He is the master of true courage that all the time sedately stems the ship.
Cornelius Nepos in English (1723), Ded. (Encyc. Dict.)

3. To make headway against by sailing or swimming, as a tide or current; hence, in general, to make headway against (opposition of any kind).
The breathless Muse awhile her wearied wings shall ease,
To get her strength to stem the rough Sabrinian seas.
Drayton, Polyolbion, lll. 434.

II. intrans. 1. To make headway (as a ship); especially, to make progress in opposition to some obstruction, as a current of water or the wind.
They on the trading flood,
Through the wide Ethiopian to the Cape,
Ply, stemming nightly toward the pole.
Milton, P. L., ll. 642.

2. To head; advance head on.
At first we could scarce lie S. W., but, being got a degree to the Southward of the Line, the Wind veer'd most Easterly, and then we stemmed S. W. by S.
Dampier, Voyages, I. 79.

stem³ (stem), v. t.; pret. and pp. stemmed, ppr. stemming. [< ME. stemmen; < Icel. stemma = Sw. stänna = Dan. stemme, stem, = OHG. MHG. stemmen, stemen, G. stemmen, stänmen, stop, stem, dam; < √ stam in stam², stammer, etc.: see stammer. Not connected with stem¹ or stem².] 1. To stop; check; dam up, as a stream.

And loke ze stemme no stepe [step], bot strechez on faste,
Til ze reche to sreset [stopping-place], rest ze neuer.
Alliterative Poems (ed. Morris), ll. 905.

The best way is, ever, not to attempt to stem a torrent, but to divert it.
A. Hamilton, To Washington (Works, I. 345).

He who stems a stream with sand.
Scott, L. of the L., lll. 23.

He sat down to his milk-porridge, which it was his old frugal habit to stem his morning hunger with.

2. To tamp; make tight, as a joint, with a lute or cement.

stem⁴, n. and v. An old spelling of steam.
stemapod (stem'a-pod), n. [< Gr. στήμα, filament (see stamen¹), + ποδς (pod-) = E. foot.] One of the caudal filaments of the caterpillars of certain moths, as Ceryra and Heterocampa, whose last pair of legs are thus modified into deterrent or repugnatorial organs. A. S. Packard.

stem-character (stem'kar'ak-tēr), n. In gram., same as characteristic letter (which see, under characteristic).

stem-clasping (stem'klás'ping), a. Embracing the stem with its base; amplexicaul, as a leaf or petiole.

stem-climber (stem'klí'mēr), n. In bot., see climber¹, 2.

stemet, v. t. A Middle English form of steam.
stem-eelworm (stem'el'wēr), n. A minute nematoid, Tylenchus devastatrix, which causes stem-sickness in certain plants. See Tylenchus.

stem-end (stem'end), n. That part or point in a fruit which is attached to the stem: opposed to the blossom-end, which frequently bears the remains of the calyx, as in a pear or an apple. The stem-end is usually inferior to the blossom-end in sweetness and flavor.

stem-head (stem'hed), n. In ship-building, the top of the stem, or continuation of the forward extreme of the keel.

stem-knee (stem'nō), n. In ship-building, a knee uniting the stem with the keel.

stem-leaf (stem'léf), n. A leaf growing from the stem; a cauline leaf.

stemless (stem'les), a. [< stem¹ + -less.] Having no stem; having the stem so little developed as to appear to be wanting; acaulescent.—Stemless lady's-slipper, thistle, violet. See the nouns.

stemlet (stem'let), n. [< stem¹ + -let.] A little stem or stalk; a young stem.

Gives insertion to two multiarticulate stemlets.
English Cyc., Nat. Hist. Division (1855), III. 87.

stemma (stem'mä), n.; pl. stemmata (-a-tä). [< L. stemma, < Gr. στέμμα, a wreath, garland, < στέφειν, put around, encircle, wreath, crown.] 1. A family tree, or pedigree; specifically, such a pedigree made more or less decorative with heraldic or other ornaments; also, pedigree in general; order of descent; family: as, a man of the stemma of the Cecils.—2. The simple as distinguished from the compound eye of an invertebrate; an ocellus: always sessile and immovable.—3. One of the facets or corneules of a compound eye.—4. In entom., the tubercle from which an antenna arises.—Spurious stemma, a small flat space, covered with semi-transparent membrane, above the bases of the antennæ of certain Orthoptera: it has been supposed to represent a stemma, or simple eye, in a rudimentary form.

Stemmatopteris (stem-a-top'te-ris), n. [NL., < Gr. στέμμα(τ-), a wreath, + πτερίς, a fern.] A genus of fossil plants, established by Corda, under which various stems or trunks of tree-ferns have been grouped, but little being known in regard to them, except the form of the scars or impressions marking the points of attachment of the petioles. Lesquereux describes members of this kind under the names of Stemmatopteris, Caulopteris, Megaphyton, and Paronius; but, as he remarks, they could all have been described without inconvenience under the name of Caulopteris. These fossil remains are common in the coal-measures. See Caulopteris.

stemmatous (stem'a-tus), a. [< stemma(t-) + -ous.] Pertaining to a stemma, or having its character; ocellar.

stemmed (stemd), a. [< stem¹ + -ed².] Furnished with or bearing a stem: used chiefly in composition: as, a straight-stemmed plant.

stemmer (stem'ēr), n. [< stem³ + -er¹.] 1. Same as blasting-needle. [Eng.]—2. An implement used in making joints tight by means of cement.

stemmery (stem'ēr-i), n.; pl. stemmeries (-iz). [< stem¹ + -ery.] A factory where tobacco is stripped from the stem. New York Herald, July 17, 1884. [Local, U. S.]

stemming (stem'ing), n. [Verbal n. of stem³, v.] 1. The operation of tamping.—2. The material used in tamping. [Eng. in both uses.]

Stemodia (stē-mō'di-ä), n. [NL. (Linnæus, 1763), shortened from Stemodiaca (P. Browne, 1756), so called from the two-forked stamens; < Gr. στήμων, taken for 'stamen' (see stamen¹),

+ *δίσ*, *δι-*, two-, + *ἄκρον*, a point, tip.] A genus of gamopetalous plants, of the order *Scrophulariaceae* and tribe *Gratiolaceae*, type of a subtribe *Stemodieae*. It is characterized by flowers with five nearly equal calyx-lobes, and four perfect didynamous stamens included within the corolla-tube, and by a capsule splitting partly or completely into four valves, the two placentae separating or remaining united in a column. There are about 30 species, mostly tropical, occurring in all continents except Europe. They are glandular-hairy or downy herbs, sometimes shrubby and often aromatic. They bear opposite or whorled leaves and solitary or spiked and crowded, usually bluish flowers, sometimes with bracted pedicels. *S. maritima* is known in Jamaica as *bastard* or *seaside germander*, and *S. durantifolia* as *goatweed*; the latter, a low clammy plant with purplish spiked flowers, extends also from southern Arizona to Brazil.

Stemona (stē'mō-nā), *n.* [NL. (Loureiro, 1790), so called from the peculiar stamens; < Gr. *στῆμων*, taken for 'stamen.'] A genus of monocotyledonous plants, type of the order *Stemonaceae*. It is distinguished by erect ovules and seeds, and stamens with very short filaments more or less united into a ring, having linear erect anthers with a thickened connective, continued above into an erect appendage. There are 4 or 5 species, natives of India, Malaysia, and tropical Australia. They are smooth, lofty-climbing twiners, growing from a fusiform tuberous root, and bearing shining alternate leaves which are cordate, ovate, or narrower, with three or more nerves and numerous cross-veinlets. The flowers form racemes, or are few or solitary in the axils; the perianth-segments are rather large, distinct, and erect, marked by many nerves. Formerly called *Roxburghia*.

Stemonaceae (stē-mō-nā'sē-ē), *n. pl.* [NL. (Durand, 1888), < *Stemona* + *-aceae*.] A small order of monocotyledonous plants, of the series *Coronarieae*, by many formerly called *Roxburghiaceae*. It is characterized by regular bisexual flowers with a four-parted perianth of two rows, with four stamens and a one-celled ovary which contains two or more ovules and ripens into a two-valved capsule. It includes 8 species, belonging to 3 genera, of which *Stichoneuron* and *Stemona* (the type) are largely Indian; the other genus, *Croonia*, includes one species in Japan, and another, *C. pauciflora*, in Florida and adjacent States.

Stemonitaceae (stē'mō-nī-tā'sē-ē), *n. pl.* [NL., < *Stemonitis* + *-aceae*.] A family of myxomycetous fungi, belonging, according to the classification of Rostafinski, to the order *Amaurochætae*, which has a single sporangium or aethalium, without the peculiar deposits of lime carbonate that characterize the fructification of other orders, and the spores, capillitium, and columella usually uniformly black, or rarely brownish-violet.

Stemonitis (stē'mō-nī'tis), *n.* [NL. (Gleditsch), < Gr. *στῆμων*, taken for 'stamen.'] A genus of myxomycetous fungi, giving name to the family *Stemonitaceae*.

stem-pessary (stem'pēs'ā-ri), *n.* A pessary with a rod or stem which is passed into the cervix uteri.

stem-piece (stem'pēs), *n.* In *ship-building*, a piece between the stem and the chocks, also called *independent piece*. See *cut* under *stem*².

stemple (stem'pl), *n.* [Cf. D. *stempel* = MHG. *stempfel*, G. *stempel* (< D.), a mark, stamp; see *stamp*.] In *mining*, a small timber used to support the ground by being laid across the stulls, or in other ways: in some mining districts of England nearly the same as *lacing* or *lagging*.

stem-sickness (stem'sik'nēs), *n.* A disease of clover in England. It is caused by a nematoid worm, *Tylenchus devastatrix*, known as the *stem-eelworm*, and brings about first a stunted condition and finally the death of the plant.

stemson (stem'sōn), *n.* [Perhaps a var. of *stanchion*, confused with *stem*². Cf. *keelson*, *sternson*.] In *ship-building*, a piece of curved timber fixed on the after part of the apron inside. The lower end is scarfed into the keelson, and receives the scarf of the stem, through which it is bolted.

stem-stitch (stem'stich), *n.* In *pillow-lace-making*, a stitch by which a thick braid-like stripe is produced: used for the stems of flowers and sprigs, tendrils, etc.

stem-winder (stem'win'dēr), *n.* A watch which is wound up or regulated by means of a contrivance connected with the stem, and not by a key.

sten, *v.* and *n.* See *stend*.

stench¹ (stench), *n.* [ME. *stench*, *stunch*, < AS. *stenc* (= OHG. *stanc*, *stanch*, MHG. *stanc*, *stenke*, G. *stank* = Sw. Dan. *stank*), a smell, odor (pleasant or unpleasant), < *stincan*, smell: see *stink*, *v.*, and cf. *stink*, *n.* Cf. Icel. *stækja*, a stench.] An ill smell; an offensive odor.

In our way to Tivoli I saw the rivulet of Salfonata, formerly called Albula, and smelt the stench that arises from its waters some time before I saw them.

Addison, Remarks on Italy (Bohn), I. 482.

=Syn. *Stink*, etc. See *smell*.

stench¹ (stench), *v. t.* [< *stench*¹, *n.*] To cause to emit a stench; cause to stink.

Dead bards stench every coast.

Young, Resignation, l. 24.

stench² (stench), *v. t.* An obsolete variant of *stench*¹. Harvey.

stenchful (stench'fūl), *a.* [< *stench*¹ + *-ful*.] Full of bad odors. Rev. T. Adams, Works, II. 56.

stencil (sten'shil), *n.* A Scotch form of *stanchion* for *stanchion*.

stencil-pipe (stencil'pīp), *n.* In *plumbing*, an extension of a soil-pipe through and above the roof of a house, to allow foul gases to escape.

stencil-trap (stencil'trap), *n.* In a drain, a depression or hollow in which water lies, introduced to prevent the reflex passage of foul air or gas.

stency (sten'shi), *a.* [< *stench*¹ + *-y*.] Having a stench or offensive smell. Dyer, The Fleece, l.

stencil¹ (sten'sil), *v. t.*; pret. and pp. *stenciled*, *stencilled*, ppr. *stenciling*, *stencilling*. [Origin uncertain: (a) According to Skeat, prob. < OF. *estinceller* (for **escinteller*), cover with stars, powder (used in heraldry), lit. 'sparkle,' F. *étinceler*, sparkle, < L. *scintillare*, sparkle: see *scintillate*. Cf. *insel*.] (b) In another view, orig. as a noun, identical with *stencil*², a dial. var. of *stanchion*, var. of *stanchion*, ult. < OF. *estance*, a support: see *stance* and *stanchion*.] To mark out or print by means of a stencil.

stencil¹ (sten'sil), *n.* [See *stencil*¹, *v.*] 1. A thin plate or sheet of any substance in which a figure, letter, or pattern is formed by cutting through the plate. If the plate thus cut is placed upon a surface and rubbed with color or ink, the pattern or figure will be marked on the underlying substance. For many purposes, the letters, etc., are cut through completely; by transferring a pattern, as in embroidery, the lines of the pattern are often indicated by small holes. In wall-decoration, etc., both these plans are employed. Different stencils are often used to the same design, each for a different color.

2. The coloring matter used in marking with a stencil-plate. C. T. Davis, Bricks and Tiles, p. 90.—3. In *ceram.*, a preparation laid upon the biscuit to keep the oil used in transfer-printing or enameling from adhering to the surface; hence, the pattern traced by this preparation, reserving a panel or medallion of the unaltered color of the biscuit.

stencil² (sten'sil), *n.* [A var. of *stanchion*.] A door-post; a stanchion. Halliwell. [Prov. Eng.] **stencil**, **stenciller** (sten'sil-ēr), *n.* [< *stencil*¹ + *-er*.] One who works with a stencil, especially a decorative painter who applies patterns with a stencil.

stencil-pen (sten'sil-pen), *n.* A pricking-machine for perforating paper to form a stencil. It consists of a hollow stylus carrying a needle having a reciprocating motion. See *electric pen*, under *pen*².

stencil-plate (sten'sil-plāt), *n.* A stencil.

stend (stend), *v. i.* [< OF. *estendre*, F. *étendre* = It. *stendere*, < L. *extendere*, stretch forth, extend: see *extend*.] 1. To extend. [Prov. Eng.]—2. To walk with long steps.—3. To leap; bound; rear; spring. Also *sten*. [Scotch and prov. Eng.] **stend** (stend), *n.* [< *stend*, *v.*] A leap; a spring; a long step or stride. Also *sten*. Burns, Tam Glen. [Scotch and prov. Eng.]

Stenelytra (stē-nel'i-trā), *n. pl.* [NL., neut. pl. of **stenelytrus*: see *stenelytrous*.] In *entom.*, in Latreille's system, the third family of heteromerous *Coleoptera*, divided into 5 tribes, corresponding to the old genera *Helops*, *Cistela*, *Diræa*, *Edemera*, and *Mycterus*.

stenelytrous (stē-nel'i-trus), *a.* [< NL. **stenelytros*, < Gr. *στενός*, narrow, strait, + *ἐλύτρον*, a cover: see *elytrum*.] Having narrow elytra; of or pertaining to the *Stenelytra*.

Stenobothrus (sten-ō-both'rus), *n.* [NL. (Fischer, 1853), < Gr. *στενός*, narrow, strait,

ing such species as *S. maculipennis*. This is a common grasshopper in most parts of the United States, and resembles the hateful grasshopper or Rocky Mountain locust (*Melanoplus spretus*) so closely that it has often been mistaken for the latter.

stenocardia (sten-ō-kār'di-ā), *n.* [NL., < Gr. *στενός*, narrow, + *καρδία*, the heart.] Angina pectoris.

Stenocarpus (sten-ō-kār'pus), *n.* [NL. (R. Brown, 1810), so called from the usually narrow fruit; < Gr. *στενός*, narrow, + *καρπός*, fruit.] A genus of apetalous trees, of the order *Proteaceae* and tribe *Embothriaceae*. It is characterized by umbellate flowers, and numerous ovules downwardly imbricated and ripening into seeds which are winged below. There are 14 species, 11 of which are natives of New Caledonia and 3 of Australia. They are trees with alternate or scattered leaves, which are entire or deeply divided into a few pinnate segments, and mostly yellow or red flowers with a somewhat irregular perianth-tube and a nearly globular recurved and at length divided border, disposed in terminal or axillary umbels which are solitary or clustered in a short raceme or a compound umbel, and are followed by coriaceous stalked follicles. *S. sinuatus* is known in Queensland as *tulip-tree* and *fire-tree*. *S. subignus*, native of the same regions, is known as *beefwood*, *silly oak*, and *meleyn*.

stenocephalous (sten-ō-sef'a-lus), *a.* [< Gr. *στενός*, narrow, + *κεφαλή*, head.] Narrow-headed. **steno-chromy** (sten-ō-krō-mi), *n.* [< Gr. *στενός*, narrow, + *χρῶμα*, color.] The art of printing several colors at one impression. This is accomplished by various methods: (1) by dividing the ink-fountain of a printing-press into compartments, one for each color, and allowing the rollers to blend the inks on the distributing-table; (2) by cutting or trimming the rollers of a printing-press in such a way that only the desired parts may take and distribute ink—a different color for each roller or set of rollers; (3) by lithographic methods.

steno-coronine (sten-ō-kō-rō-nin), *a.* [< Gr. *στενός*, narrow, + *κόρωνα*, a crown, also a crown.] Having narrow-crowned molars: noting the hippopotamine type of dentition, as distinguished from the eury-coronine or dinotherian. Falconer.

steno-derm (sten-ō-dēr-m), *n.* [< *Stenoderma*.] A bat of the genus *Stenoderma*; a stenodermine. — **Spectacled stenodermin**, *Stenoderma perspicillatum*, a tropical American bat marked about the eyes as if wearing spectacles. Also called *spectacled vampire*.

Stenoderma (sten-ō-dēr'mā), *n.* [NL. (Geoffroy), < Gr. *στενός*, narrow, + *δέρμα*, skin, hide.] A genus of American phyllostomine bats, of the subfamily *Phyllostomatinae*, having a short, broad, obtuse muzzle, the short but distinct nose-leaf, no tail, and the interfemoral membrane concave behind. *S. achradophilum* of the West Indies is so called from its fondness for the berries of *Achras zapota*, the naseberry.

Stenodermata (sten-ō-dēr'mā-tā), *n. pl.* [NL.: see *Stenoderma*.] A section of phyllostomine bats, of which the genera *Stenoderma*, *Artibeus*, and *Centurio* are leading forms. It includes about 20 species, of 9 genera, of Neotropical bats. See *cut* under *Centurio*.

steno-dermatous (sten-ō-dēr'mā-tus), *a.* Pertaining to the *Stenodermata*, or having their characters; resembling a stenodermin.

steno-dermine (sten-ō-dēr'min), *a.* and *n.* [< *Stenoderma* + *-ine*.] I. *a.* Having a contracted wing-membrane, as a bat; of or pertaining to the *Stenodermata*.

II. *n.* A stenodermine bat; a stenodermin.

Stenodus (sten-ō-dus), *n.* [NL. (Richardson, 1836), < Gr. *στενός*, narrow, + *ὄδός* = E. *tooth*.] A genus of salmonoid fishes, related both to *Salmo* and to *Coregonus*, having an elongate body, projecting lower jaw, and weak teeth. The inconnu, or Mackenzie river salmon, is *S. mackenzi*, attaining a weight of 20 pounds or more, esteemed as a food-fish. See *cut* under *inconnu*.

steno-graph (sten-ō-gráf), *n.* [< Gr. *στενός*, narrow, + *γράφειν*, write.] 1. A character used in stenography; a writing, especially any note or memorandum, in shorthand.

I saw the reporters' room, in which they redact their hasty stenographs. Emerson, Eng. Traits, p. 265.

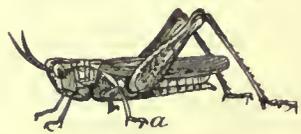

2. A stenographic machine; a form of typewriter in which signs and marks of various kinds—dots, dashes, etc.—are used in place of ordinary letters. A number of different machines have been made, essentially type-writers operated by means of a keyboard.

steno-graph (sten-ō-gráf), *v. i.* [< *steno-graph*, *n.*] To write or represent by stenography. Ill. London News. [Rare.]

steno-grapher (stē-nog'ra-fēr), *n.* [< *steno-graph* (y) + *-er*.] One who writes shorthand.

steno-graphic (sten-ō-gráf'ik), *a.* [= F. *sténographique*; as *steno-graphy* + *-ic*.] Of or pertaining to stenography; shorthand.—**Steno-graphic machine**. Same as *steno-graph*, 2.

steno-graphical (sten-ō-gráf'ik-āl), *a.* [< *steno-graphic* + *-al*.] Same as *steno-graphic*.

Stenobothrus maculipennis.
a, mature insect; b, pupa; c, larva. (All natural size.)

close, + *βῆρος*, a hole.] A notable genus of grasshoppers, of the family *Acridiidae*, contain-

stenographically (sten-ō-graf'ī-kal-i), *adv.* In shorthand; by means of stenography.

stenographer (stē-nog'ra-fist), *n.* [*< stenograph-y + -ist.*] A stenographer; a shorthand-writer.

stenography (stē-nog'ra-fi), *n.* [= *F. sténographie*, *< Gr. stenós, narrow, close, + -γραφία, < γράφω, write.*] The art of writing by means of brief signs which represent single sounds, groups of sounds, whole words, or groups of words; shorthand; brachygraphy: a generic term embracing all systems of shorthand, or brief writing.

The cradle age
Did through the Seats, the Boxes, and the Stage

Heywood, If you Know not Me (Works, ed. Pearson, I. 191).
Sure 'tis Stenographie, everie Character a word, and here
and there one for a whole sentence.
Brome, Northern Lass, iii. 2.

Stenonian duct. See *Stenson's duct*.

stenopaic, stenopæic (stē-nō-pā'ik, -pē'ik), *a.* [*< Gr. stenós, narrow, + ὅπη, an opening, + -ic.*] Having a small or narrow opening.—**Stenopaic slit**, a narrow slit in an opaque Ismia, placed before an eye to test the degree of its astigmatism by determining the difference of its refraction in different meridians.—**Stenopaic spectacles**, spectacles having an oval metal plate with a small central aperture.

Stenopelmatus (stē-nō-pel'ma-tus), *n.* [NL. (Burmeister, 1838), *< Gr. stenós, narrow, + πέλμα, the sole of the foot.*] A eurious genus of *Locustidae*, containing forms known in the western United States as *sand-cricket*s. They are fierce-looking insects with large head and jaws, and live under stones or in burrows in the sand. They are carnivorous, and in New Mexico are commonly but erroneously reputed to be poisonous. Several species are known in the western

Sand-cricket (*Stenopelmatus fasciatus*), about half natural size.

United States, of which *S. fasciatus* is the commonest. The genus is also represented in Mexico, South America, and Australia.

stenopetalous (stē-nō-pet'ā-lus), *a.* [*< Gr. stenós, narrow, + πέταλον, a leaf (petal): see petal.*] In *bot.*, having narrow petals; narrow-petaled.

stenophyllous (stē-nō-fil'us), *a.* [*< Gr. στενόφυλλος, narrow-leaved, < stenós, narrow, close, + φύλλον, a leaf.*] In *bot.*, having narrow leaves.

Stenopsis (stē-nop'sis), *n.* [NL. (John Cassin, 1851), *< Gr. stenós, narrow, + ὄψις, look, appearance.*] A genus of South American setirostral goatsuckers, of the family *Caprimulgidae*, containing numerous species, as *S. cayennensis*.

Stenorhynchinae (stē-nō-rīng-kī'nē), *n. pl.* [NL., *< Stenorhynchus + -inae.*] A subfamily of *Phocidae*, or seals, typified by the genus *Stenorhynchus* (or *Ogmorhinus*); the sternicks. These seals exclusively inhabit southern seas, for *Monachus*, sometimes considered stenorhynchine, does not belong here. The only genera besides the type are *Lobodon*, *Leptonychotes* (or *Leptonyx* of Gray, not of Swainson), and *Ommatophoca*. As explained under *sea-leopard*, the current name is untenable. See cut under *sea-leopard*.

stenorhynchine (stē-nō-rīng'kin), *a.* [*< Stenorhynchus + -ine.*] Of or pertaining to the *Stenorhynchinae*.

stenorhynchous (stē-nō-rīng'kus), *a.* [*< Gr. stenós, narrow, + ῥύγχος, snout.*] In *ornith.*, narrow-billed; having a compressed beak.

Stenorhynchus (stē-nō-rīng'kus), *n.* [NL., *< Gr. stenós, narrow, + ῥύγχος, snout.*] In *zool.*: (a) A genus of crabs, containing the British spider-crab, *S. phalangium*: same as *Maeropodia*. Latreille, 1819. (b) A genus of seals. See *Stenorhynchinae*. *F. Currier*, 1826. (c) A name of other genera, of birds, reptiles, and insects respectively.

Steno's duct. See *Stenson's duct*.

stenosed (stē-nōst'), *a.* [*< stenosis + -ed.*] Characterized by stenosis; morbidly narrowed.

stenosis (stē-nō'sis), *n.* [NL., *< Gr. στενωσις, a straitening, < στενωίν, make narrow, straiten, < στενός, narrow, strait, close.*] The pathological narrowing of a passage.

Stenostomata (stē-nō-stō'ma-tā), *n. pl.* [NL., *< Gr. στενός, narrow, + στόμα(-τ-), mouth.*] A suborder of etenophorans, containing the saecate, lobate, and tentate comb-jellies, collectively contrasted with the *Eurystomata* (which see). Most of the comb-bearers belong to this division.

stenostomatous (stē-nō-stom'a-tus), *a.* [NL., *< Gr. στενός, narrow, + στόμα(-τ-), mouth.*] Having a small, narrow, or contracted mouth; not eurystomatous. Also *stenostomous*.

Stenotaphrum (stē-nō-taf'rum), *n.* [NL. (Trinius, 1820), so called in allusion to the alternate notches of the rachis, in which the flowers are embedded; *< Gr. στενός, narrow, + τάφρος, a ditch or trench.*] A genus of grasses, of the tribe *Panicææ*. It is characterized by flowers with only three glumes or with a fourth smaller one, the spikelets acute, borne in small fascicles sessile or half-immersed in excavations along a flattened or angled rachis. There are 3 or 4 species, very widely dispersed along sea-shores of tropical regions, and most frequent on the islands of the Indian and South Pacific Oceans. They are creeping grasses sending up short ascending and often compressed branches with spreading, flat, or convolute leaves, and a terminal spike of flowers. *S. Americanum*, locally known as *buffalo-grass*, is valued as a means of covering shifting sands with a firm turf, and has proved useful as a fodder-plant, especially on Ascension Island. See *St. Augustine grass* (under *saint*), and cut under *petiole*.

stentelegraphy (stē-nō-tē-leg'ra-fi), *n.* [*< Gr. στενός, narrow, + E. telegraphy.*] A rapid telegraphic transmission of words and sentences by a system of shorthand.

stenterous (stē-not'e-rus), *a.* [*< Gr. στενώτερος, compar. of στενός, narrow, strait, close.*] Becoming more and more contracted from the center to the circumference, relatively to the radii represented.—**Stenterous map-projection**. See *projection*.

stentotic (stē-not'ik), *a.* [*< stenosis (-ot-) + -ic.*] Pertaining to or of the nature of stenosis.

Stenotomus (stē-not'ō-mus), *n.* [NL. (Gill, 1865), *< Gr. στενός, narrow, + τόμος, a cut, slice.*] A genus of sparoid fishes, or a section of *Diplodus*, having the incisor teeth very narrow and entire. The type is *S. argyriops*, the common seup, seuppang, or porgy. See cut under *seup*.

stentype (stē-nō-tip), *n.* [*< Gr. στενός, narrow, + τύπος, type.*] An ordinary type-letter—capital, lower-case, or italic—used to denote a shorthand character or outline. *J. E. Munson*, *Diet. of Phonography*, Int.

stentypic (stē-nō-tip'ik), *a.* [*< stentype + -ic.*] Of or pertaining to stentypy; printed according to the rules of stentypy.

stentypy (stē-nō-ti-pi), *n.* [*< stentype + -y.*] A method of representing or describing shorthand characters and outlines by ordinary type-letters. It is used for illustrating phonographic textbooks and literature, and also as a system of shorthand for typewriters. Capital letters are used to represent stems; small or lower-case letters stand for adjuncts; and an inverted period shows where a vowel-sound or sign comes in.

Stenson's duct. 1. The duct of the parotid gland (see *parotid*): so named from Nil Stenson, or Nicolaus Stenonianus, of Copenhagen (1638–86). Also *Stenonian duct*, *Steno's duct*.—2. See *ducts or canals of Stenson*, under *duct*.

stent¹ (stent), *v. and n.* An obsolete or dialectal variant of *stint*.

stent² (stent), *v. t.* [A var. of *stend*, ult. of *extend*, after the noun *stent²*.] 1. To stretch.—2. To straiten.—3. To confine. [Scotch in all senses.]

stent² (stent), *n.* [A var. of *stend*, in def. 2 of *extent*: see *stend, n., stent², v., and extent*.] 1. A stretcher; a stenter (which see).—2. Extent; limit; in some English mining districts, the limits of a pitch or bargain.

stent³ (stent), *n.* [See also *stent¹*; *< ME. stente, estent, taxation, valuation, < ML. extenta, valuation: see extent*.] In *Scots law*, a valuation of property in order to taxation; a taxation; a tax.

stent³ (stent), *v. t.* [*< stent³, n.*] In *Scots law*, to assess; tax at a certain rate.

stent⁴ (stent), *n.* [ME. *stent*, stopping-place. Cf. Dan. *stente*, a stile; ult. *< stand, v.*] A stopping-place.

stent⁵ (stent), *n.* [Origin obscure.] In *mining*, same as *attle*. [Rare, Eng.]

stenter (stēnt'ēr), *n.* [*< stent² + -er.*] A machine or apparatus for stretching or stentering muslins and other thin fabrics. Also called *stenter-hook*.

stenter (stēnt'ēr), *v. t.* [*< stenter, n.*] To operate upon (thin cotton fabrics, as hook-muslins, etc.) in a manner to impart to them a so-called elastic finish. This work as originally performed by hand was executed by holding the fabric edge-wise by the selvages, and pulling it backward and forward while it was subjected to the action of heated air. The various modern machines and frames now employed are designed to produce the same effect upon the goods by an analogous movement and treatment in a current of heated air.

stenting (stēnt'ing), *n.* Same as *stenton*.

stent-master (stēnt'mās'tēr), *n.* A person appointed to allocate the stent or tax on the persons liable. [Scotch.]

stenton (stēnt'on), *n.* A short heading at right angles to a cross-cut. [North of England coal-fields.]

stentor (stēnt'or), *n.* [*< L. Stentor, < Gr. Στένωρ, a Greek herald in the Trojan war, who, according to Homer, had a voice as loud as that of fifty other men together.*] 1. A person having a very powerful voice.

British noises
(For gain, lust, honour, in litigious prose),
Are bellow'd out, and cracke the barbarous voices
Of Turkish stentors.

Chapman, *Iliad*, To the Reader, l. 222.

2. In *mammal*: (a) The ursine howler, *Myecetes ursinus*, a platyrrhine monkey of South America; an aouate; any species of *Myecetes*. See cut under *howler*. (b) [*cap.*] The genus of howlers: same as *Myecetes*. *Geoffroy*, 1812.—

3. In *Protozoa*: (a) A trumpet-animalcule, or so-called funnel-like polyp. (b) [*cap.*] The typical genus of *Stentoridae*, of elongate, trumpet-like, or infundibuliform figure, with rounded peristome. They are of large size, often brilliant color, social habits, and wide distribution, among the longest- and best-known of infusorians. They were formerly mistaken for or classed with polyps. *S. polymorphus* is a leading species; *S. niger* is another. See also cut under *Infusoria*.

Stentor polymorphus, twenty times natural size.

stentorian (stēntō'ri-an), *a.* [*< stentor + -ian.* Cf. LL. *Stentorius, Stentorian.*] 1. Resembling the voice of Stentor (see *stentor*, etymology); extremely loud or powerful in sound.

They echo forth in stentorian clamours.

Sir T. Herbert, *Travels*, p. 326.

He had a stentorian voice, and thundered it out.

Aubrey, *Lives* (Ralph Kettle).

2. Able to utter a very loud sound: as, *stentorian lungs*.

Stentoridae (stēntō'ri-dē), *n. pl.* [NL., *< Stentor + -idae.*] The trumpet-animalcules or funnel-like infusorians, a family of heterotrichous *Infusoria*, typified by the genus *Stentor*.

stentorin (stēntō'ri-n), *n.* [*< Stentor + -in.*] The blue pigment or coloring matter of infusorians of the genus *Stentor*. *E. R. Lankester*, 1873.

stentorine (stēntō'ri-n), *a.* [*< Stentor + -ine.*] Of or pertaining to the *Stentoridae*.

stentorious (stēntō'ri-us), *a.* [*< stentor + -ious.* Cf. L. *Stentoreus, < Gr. Στενώρειος, pertaining to Stentor, < Στένωρ, Stentor.*] *Stentorian*. *Fuller*, *Ch. Hist.*, X. iv. 61.

stentorophonic (stēntō'rō-fōn'ik), *a.* [*< Gr. στενωρόφωνος, loud-voiced like Stentor, < Στένωρ, Stentor (see stentor), + φωνή, voice.*] Speaking or sounding very loud. *S. Butler*, *Hudibras*, III. i. 252.

stent-roll (stēnt'rōl), *n.* The eess-roll. [Scotch.]

Stenus (stē'nus), *n.* [NL. (Latreille, 1796), *< Gr. στενός, narrow, strait.*] A large and cosmopolitan genus of coleopterous insects, typical of the old family *Stenidae*, which is now included in the *Staphylinidae*. More than 200 species are known, all of small size and active habits, found usually on the banks of streams or ponds.

step (step), *v.*; pret. and pp. *stepped* or *stept*, ppr. *stepping*. [*< (a) ME. steppen, stappan, < AS. steppan, stæppan = OFries. steppa = MD. steppen, stippen, stappan, D. stappen = MLG. stappen = OHG. stephan, stephen, steffen, stepfen, MHG. steppen, also OHG. staphōn, MHG. staphen, staffen, stapfen, go, step; secondary forms (in part from the noun) of (b) ME. stapen, < AS. *stapan (not found in the inf., for which appears the form steppan or stæppan, above, which has the same pret. stōp, pp. stapen) = OS. stapan = OFries. stapa = MLG. stapen, go, advance; Teut. √ stap, appearing nasalized in stamp, q. v.; cf.  The meteor of a splendid season, she . . .
Slept thro' the stately minut of those days.
Tennyson, Aylmer's Field.

5. To go in imagination; advance or recede mentally: as, to *step* back to the England of Elizabeth.

They are *stepping* almost three thousand years backward into the remotest antiquity.
Pope, Illiad, Pref.

To *step aside*. (a) To walk to a little distance; retire for the occasion. (b) To deviate from the right path; err.
 To *step aside* is human.
Burns, To the Unco Guid.

To *step awry*. See *awry*.—To *step out*, to increase the length of the step and the rapidity of motion.
 Jack or Donald marches away, . . . *stepping out* briskly to the tune of "The Girl I left behind me."
Thackeray, Vanity Fair, xxx.

II. *trans.* 1. To set; plant, as in stepping: as, *step* your foot on this thwart; he has never *stepped* foot in the city. [Familiar.]—2. To measure by stepping: as, to *step* off the distance.—3. To perform by stepping, as a dance: as, he *stepped* a stately galliard.—4. To place or set (two or more cutting-tools) in a tool-post or rest in such manner that they simultaneously make successive cuts each respectively deeper than the preceding one, so that these cuts present the appearance of a series of ledges or steps.—5. *Naut.*, to fix the foot of (a mast) in its step, as in readiness for setting sail.

step (step), *n.* [*ME. steppē, AS. stæpe, a step, footstep, = MD. stappe, steppē, stap, step, D. stap = OHG. stopfo, staffo, MHG. G. stappē (> It. staffa, a stirrup, > ult. E. staffer), a footstep, footprint; from the verb.*] 1. A pace; a completed movement made in raising the foot and setting it down again, as in walking, running, or dancing.

I'll . . . turn two mincing *steps*
 Into a manly stride.
Shak., M. of V., iii. 4. 67.
 An inadvertent *step* may crush the small.
Cowper, Task, vi. 564.

Hence—2. In the plural, walk; passage; course or direction in which one goes by walking.

Conduct my *steps* to find the fatal tree
 In this deep forest.
Dryden, Æneid, vi. 276.
 But not by thee my *steps* shall be,
 For ever and for ever.
Tennyson, A Farewell.

3. A support for the foot in ascending or descending: as, *steps* cut in a glacier; a structure or an appliance used to facilitate mounting from one level to another, whether alone or as one of a series: as, a stone *step* (a block of stone having a horizontal surface for the foot); a *step* of a staircase (one of the gradients composed of the tread and riser taken together); the *step* of a ladder (one of the rungs or rounds, or one of the treads or foot-pieces in a step-ladder).

The breadth of every single *step* or stair [should] be never less than one foot.
Sir H. Wotton, Reliquiæ, p. 36.
 An hundred winding *steps* convey
 That conclude to the upper day.
Scott, Marmion, ii. 33.

On the *step* of the altar, in front of the railing, were kneeling a band of the Fratres Penitentis.

C. E. Norton, Travel and Study in Italy, p. 6.
 Specifically—(a) *pl.* A step-ladder. Also called *pair of steps* and *set of steps*. (b) A foot-piece for entering or alighting from a vehicle.

4. The space passed over or measured by one movement of the foot, as in walking; the distance between the feet in walking when both feet are on the ground; a half-pace.

If you move a *step*
 Beyond this ground you tread on, you are lost.
Fletcher, Spanish Curate, v. 3.

The gradus, a Roman measure, may be translated a *step*, or the half of a passus or pace.
Arbutnot.

5. An inconsiderable space; a short distance; a distance easily walked.

'Tis but a *step*, sir, just at the street's end.
Cowper, To Joseph Hill, Esq.

It is but a *step* from here to the Wells, and we can walk there.
Thackeray, Book of Snobs, xxxv.

6. Gradation; degree.
 The Turkes . . . stude their phrosne Diuinitie and Law, and haue among them nine several *steps* or degrees vnto the highest dignitie.
Purchas, Pilgrimage, p. 313.

7. Degree in progress or advance; particularly, a forward move; gain or advantage; promotion; rise; a grade, as of rank.

Every age makes a *step* unto the end of all things.
Sir T. Browne, To a Friend.

To earn a garter or a *step* in the peerage.
Macaulay, Hist. Eng., xxii.

"General Tufto . . . and I were both shot in the same leg at Talavera." "Where you got your *step*," said George [punning].
Thackeray, Vanity Fair, xxviii.

The Silver Bill of 1800 . . . was declared to be a long *step* toward the goal of free coinage of silver.
New York Times, Jan. 15, 1891.

8. Print or impression of the foot; footprint; footstep; track.

And zit apperen the *Steppes* of the Asses feet, in 3 places of the Degrees, that ben of fullie harde Ston.
Manderiville, Travels, p. 81.

He seigh the *steppes* brode of a leoun.
Chaucer, Good Womea, l. 829.

9. Gait; manner of walking; sound of the step; foot; footfall: as, to hear a *step* at the door.

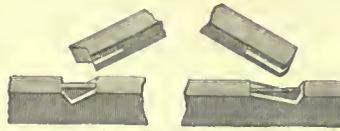

A foot more light, a *step* more true,
 Ne'er from the heath-flower dash'd the dew.
Scott, I. of the L., l. 18.

10. A proceeding, or one of a series of proceedings; measure; action: as, a rash *step*; to take prompt *steps* to prevent something.

It is no vicious blot, murder, or foulness,
 No unchaste action, or dishonour'd *step*,
 That hath depriv'd me of your grace and favour.
Shak., Lear, l. 1. 231.

Beware of desperate *steps*. The darkest day,
 Live till to-morrow, will have pass'd away.
Cowper, The Needless Alarm.

11. *Naut.*, a socket of wood or metal, or, in large ships, a solid platform on the keelson, supporting the heel of a mast.—12. In *carp.*, any

G. stiefvater = Icel. stjúpafadr = Sw. styf-fader = Dan. stifafader), < steóp-, step-, + fæder, father: see step- and father.*] A man who is the husband of one's mother, but is not one's father.

I schel the telle alfofadre,
 Beten Ichaue me stífadre.
Beeves of Hamtoun, l. 464.

"He was delighted at his mother's marriage." "Odd, for he knew already what a *stepfather* was."
Jean Ingelow, Off the Skelligs, xvii.

step-fault (step'fált), *n.* One of a series of small, nearly parallel faults by which strata have been dislocated so as to occupy a position resembling a series of steps or stairs.

step-gage (step'gāj), *n.* A gage, arranged in the form of steps, for testing and correcting fixed caliper-gages, etc. See *cut* under *gage*².

step-grate (step'grät), *n.* See *grate*².

stephane (stef'a-nē), *n.* [*Gr. στέφανη, the brim of a helmet, a stephane (see def.), crown. Cf. στέφανος, a wreath, garland, crown: see stephanos.*] In *Gr. archæol.*, a head-dress or ornament consisting of a band or coronet typically high in the middle, over the brow, and diminishing toward either side of the head. It is characteristic of the goddess Hera, though often represented as worn by other goddesses, as well as by mortals, and is frequently ornamented with an anthemion, as in the example figured on the following page.

stephanial (ste-fā'ni-əl), *a.* [*Gr. stephanion + -al.*] Of or pertaining to the stephanion: as, a *stephanial* point.

stephanic (ste-fan'ik), *a.* [*Gr. στέφανος, a wreath, crown: see stephanos.*] Same as *stephanial*.

Hera Ludovisi, wearing Stephane.

The arch of the top of the cranium is markedly flat, giving the *stephanic* region a somewhat angular appearance. *H. O. Forbes, Eastern Archipelago, p. 262.*

stephanion (ste-fā'ni-on), *n.*; pl. *stephania* (-iā). [NL., < Gr. *στέφανιον*, dim. of *στέφανος*, a wreath: see *stephanos*.] In *craniom.*, the point where the coronal suture crosses the temporal ridge. An upper *stephanion* and a lower are distinguished, corresponding to the upper and lower temporal ridges. See cut under *craniometry*.

stephanite (ste-fā'nīt), *n.* [Named after *Stephan*, Archduke of Austria.] A native sulphid of silver and antimony, a mineral of iron-black color and metallic luster. It crystallizes in the orthorhombic system, and is often pseudohexagonal through twinning. Also called *black silver* or *brittle silver ore*.

stephanome (ste-fā'nōm), *n.* [For **stephanonome*, < Gr. *στέφανος*, crown (corona), + *μέτρον*, take, *νόμος*, law.] An instrument for measuring the angular dimensions of fog-bows—for example, as observed at mountain observatories. See the quotation.

This instrument, named a *stephanome*, consists of a graduated bar, at one end of which the eye is placed, and in which slides a cross-bar carrying certain projections. With its aid faint objects, for which a sextant would be useless, may be measured to within 5 minutes. *Phil. Mag., 5th ser., XXIX, 464.*

Stephanophorus (ste-fā-nof'ō-rus), *n.* [NL. (Strickland, 1841), < Gr. *στέφανος*, crown, + *φάρεον* = *E. bear*.] 1. In *ornith.*, a monotypic Neotropical genus of tanagers, having a short, turgid, almost pyriform bill. *S. leucocephalus* is bluish-black, with the lesser wing-coverts blue, the vertical crest crimson, the hindhead

Stephanophorus leucocephalus.

silky-white, the forehead, lores, and chin black. The length is seven inches. The bird is confined to southern Brazil, Paraguay, Uruguay, and northern parts of the Argentine Republic.

2. In *entom.*, a genus of coleopterous insects. *Chevrolet, 1873.*

stephanos (ste-fā'nos), *n.*; pl. *stephanoi* (-noi). [< Gr. *στέφανος*, a wreath, crown, < *στέφειν*, put around, encircle, wreath, crown. Cf. *stemma*.] In *Gr. archaeol.*: (a) A wreath awarded as a prize to the victor in a public contest, or as a token of honor, especially in recognition of some public service. Such wreaths

Stephanos (b). Head of Hera on Silver Stater of Elis; 5th century B.C.

were sometimes of natural leaves, as of the olive, laurel, oak, parsley, or pine, and sometimes of leaves of metal, as gold, and their award was a very usual distinction among the Greeks. In this sense very commonly expressed by the translators as 'crown,' as in the famous oration "On the Crown" of Demosthenes. (b) A head-ornament or crown akin to the *stephane*, from which it differs in that it preserves the same height all round, instead of diminishing toward the sides. See cut in preceding column.

Stephanotis (ste-fā'nō'tis), *n.* [NL. (Thouars, 1806), so called in allusion to the corona of five flattish petaloid bodies or auricles; < Gr. *στέφανος*, a crown, + *οὐς* (ὄτρ-), ear.] 1. A genus of asclepiadaceous plants, of the tribe *Marsdenieae*, distinguished from *Marsdenia* by its large white salver-shaped or funnelform corolla. There are about 14 species, of which 5 are natives of Madagascar, 5 of the Malay archipelago and southern China, 3 of Cuba, and 1 of Peru. They are smooth shrubby twiners, often high-climbing, bearing opposite deep-green fleshy or coriaceous leaves, and beautiful fragrant waxy flowers in umbelliform cymes between the petioles. The cylindrical corolla-tube is dilated at the base and often again at the throat, and spreads into five overlapping oblique lobes. The fruit consists of two thick horizontal follicles, with numerous comose seeds. *S. floribunda* is a favorite evergreen greenhouse climber, commonly known by its generic name *stephanotis*, also as *waxflower*, and sometimes, from its native country, as *Madagascar jasmine* or *chaplet-flower*.

2. [l. e.] A plant of this genus. **step-ladder** (ste-p'lad'ēr), *n.* A ladder having flat steps, or treads, in place of rungs, and usually provided with an adjustable supporting frame. **stepmother** (ste-p'muth'ēr), *n.* [< ME. *stepmoder*, *stepmodyr*, < AS. *stēpmōdor* (= OFries. *stēpmōder* = D. *stiefmōder* = MLG. *stiefmōder* = OHG. *stiuftmōter*, MHG. *stiefmōter*, G. *stiefmutter* = Icel. *stjúpmóðir* = Sw. *stiefmōder* = Dan. *stiefmōder*), < *stēop*, step-, + *mōdor*, mother.] 1. A woman who is the wife of one's father, but is not one's mother.

No, he assured you shall not find me, daughter,
After the slander of most *stepmothers*,
Evil-eyed unto you. *Shak., Cymbeline, l. 1. 71.*

2. A horny filament shooting up by the side of the nail. *Halliwel.* [Prov. Eng.]—3. The pansy. *Britten and Holland, Eng. Plant Names.* [Prov. Eng.]—**stepmother's blessing**, a hangnail. *Halliwel.* [Prov. Eng.] **stepmotherly** (ste-p'muth'ēr-li), *a.* [< *stepmother* + *-ly*.] Pertaining to or befitting a stepmother; hence, figuratively, harsh or neglectful: in allusion to the behavior popularly attributed to stepmothers.

step-parent (ste-p'pār'ēt), *n.* A stepfather or stepmother.

steppe (stepp), *n.* [= F. D. G. Dan. *steppe* = Sw. *stepp*, < Russ. *stepl*, a waste, heath, steppe.] A more or less level tract devoid of trees: a name given to certain parts of European and Asiatic Russia, of which the most characteristic feature is the absence of forests. The word *steppe* was introduced into the scientific literature of western Europe by Humboldt, in whose "Ansichten der Natur"—a work widely circulated, and translated into all the most important European languages—there is a chapter entitled "Steppen und Wüsten" (Steppes and Deserts). The *steppe* region in Europe begins on the borders of Holland, and extends through northern Germany—where such lands are called *Heiden* (heaths)—into Russia in Europe, and beyond the Ural Mountains almost to the Pacific Ocean, for a distance of about 4,500 miles. Although the steppes are in general characterized by the lack of an arboreal and the presence of a grassy vegetation, and by a pretty uniformly level surface, there are many breaks in this botanical and topographical monotony, in the form of forests extending along the streams, large patches of dense and sometimes tall shrubbery, lakes (both fresh and saline), rolling hills, ridges, barren sands, and patches covered with saline efflorescence. The general character of the region is pastoral, and the population (especially of the Asiatic steppes) nomadic; but all this has been to a considerable extent interfered with by the spread of Russian civilization and the domination of Russian authority. The Russian and Siberian steppes pass southward into the deserts of central Asia, and northward into the tundra region of the extreme north. Humboldt, in the work named above, occasionally uses the term *steppe* in describing the pampas and llanos of South America, and the plains, prairies, and barrens of the northern division of the New World, and his example has been followed to a certain extent by other physical geographers writing in regard to America; but the word *steppe* is nowhere in popular use except as to places where Russian is the dominating language.

Some of the Asiatic *Steppes* are grassy plains; others are covered with succulent, evergreen, articulated sodaplants: many glisten from a distance with flakes of exuded salt which cover the clayey soil, not unlike in appearance to fresh fallen snow. *Humboldt, Aspects of Nature (trans.).*

Steppe murrayi, rinderpest.

stepped (stept), *a.* [< *step* + *-ed*.] 1. Formed in or forming a step or a series of steps.—2. Supported, as a vertical shaft, by a step, step-like bearing, or shoe.—**Stepped cone**. Same as *con-*

pulley.—**Stepped gable, gage, gearing**. See the nouns. —**Stepped pyramid**, a form of pyramid of which the faces, instead of continuing in one slope from base to apex,

Stepped Pyramid, Sakkarah, Egypt.

are formed in a more or less even series of enormous steps. Some of the oldest of the Egyptian pyramids present this form.

stepper (ste-p'ēr), *n.* [< *step* + *-er*.] One who or that which steps (with a certain gait or carriage expressed or implied); specifically, a fast horse: often in composition: as, a *high-stepper*; that horse is a *good stepper*.

The mares a *stepper*, and Phil Kling knows how to handle the ribbons. *The Century, XXXVIII, 377.*

stepping (ste-p'ing), *n.* 1. Collectively, the steps of a joint in which the parts at their junction form a series of reëntrant angles, thus resembling a flight of steps, as in the fitting of the doors to the front frames of safes.—2. Collectively, a series of step-like bearings, as the bearings for the spindles of a spinning-frame or spooling-machine, or of a ball-winding machine.

stepping-point (ste-p'ing-point), *n.* Same as *bearding*, 1.

stepping-stone (ste-p'ing-stōn), *n.* 1. A raised stone in a stream or in a swampy place designed to save the feet in walking.—2. A horse-block. *Halliwel.* [Prov. Eng.]—3. An aid or means by which an end may be accomplished or an object gained; an assistance to progress.

stepsister (ste-p'sis'tēr), *n.* [< ME. *stepsystyr* (= D. *stiefzuster* = MHG. G. *stiefschwester* = Sw. *stiefsyster* = Dan. *stiefsøster*); < *step* + *sister*.] One's stepfather's or stepmother's daughter by a former marriage.

stepson (ste-p'sun), *n.* [< ME. *stepson*, *stepsone*, < AS. *stēopsunu* (= D. *stiefsohn* = MLG. *stiefsohn* = OHG. *stiufsun*, MHG. *stiefsohn*, G. *stiefsohn* = Icel. *stjúpson* = Sw. *stufson* = Dan. *stifson*), < *stēop*, step-, + *sunu*, son.] A son of one's husband or wife by a former marriage.

step-stone (ste-p'stōn), *n.* Same as *stepping-stone*. [Rare.]

step-vein (ste-p'vān), *n.* In *mining*, a vein filling a fissure, consisting alternately of flats, or horizontal, and steeply inclined or vertical parts, resembling in form a flight of steps.

-ster. [< ME. *-ster*, *-stre*, *-estere*, < AS. *-estre*, used fem. of *-ere*, as in *webbestre*, a female weaver (*E. webster*), *fithelstre*, a female fiddler, *reitegestre*, a female prophet, etc.; = D. *-ster*, as in *spinster*, a female spinner (= *E. spinster*), etc., = LL. *-ster*, as in *poetaster* (see *-aster*, *poetaster*, *criticaster*, etc.), also in *olcater*; < Indo-Eur. *-as* + *-tar*.] A termination denoting occupation, as in *maltster*, *gamester*, *spinster*, *songster*, etc. In the earliest times, and up to about the end of the thirteenth century, it was generally the sign of the feminine gender, corresponding to the masculine *-ere* or *-er*. In the fourteenth century it began to give place as a feminine termination to the Norman *-ess*, with which it was later often combined, as in *seamstress*, *sempstress*, *songstress*, or, if it survived, was used chiefly as masculine, and took on new meanings of contempt or depreciation, as in *trickster*, *gamester*, *punster*, etc., or indicated simple agency or existence, as in *deemster*, *doomster*, *luckster*, *tapster*, *teaster*, *upholster*, *roadster*, *youngster*, etc. Some of the older nouns with this suffix survive as surnames, as *Baxter*, *Webster*, *Sangster*, *Dempster*, etc.

ster. An abbreviation of *sterling*?

steracle, *n.* [Early mod. E., also *sterracle*, *sterakel*; < ME. *steracle*; origin obscure.] A strange thing, sight, or performance; a prank.

When thou art sett upon the pynnsacle,
Thou shalt there pleya a qweyt *steracle*,
Or ellys shewe a grett *meracle*,
Thyself from hurte thou save. *Cowcuntry Mysteries, p. 208. (Halliwel.)*

stercobilin (stēr'kō-bil-in), *n.* [< L. *stercus* (*stercor*), dung, + *bilis*, bile, + *-in*.] The brown coloring matter of the feces.

stercoraceous (stēr'kō-rā'shius), *a.* [< L. *stercus* (*-or*), dung, + *-aceous*.] 1. Pertaining to, composed of, or in any way resembling dung, ordure, or feces; excrementitious; fecal.—2. In *entom.*, frequenting or feeding on dung, as many beetles, flies, etc.—**stercoraceous vomiting**, in *pathol.*, vomiting of fecal matter.

stercoraemia, *n.* See *stercoraemia*.

stercoral (stér'kō-rāl), *a.* and *n.* [*< L. stercus (-or-), dung, + -al.*] *I. a.* Of or pertaining to feces; stercoraceous.

II. † n. Dung; excrement.
Stercoranism (stér'kō-ran-izm), *n.* [*< Stercoran-ist + -ism.*] In *ecclēs. hist.*, the doctrine or belief of the Stercoranists. Also *Stercorianism, Stercorarianism.*

Stercoranist (stér'kō-ran-ist), *n.* [= *F. stercoraniste, < ML. Stercoranistæ, < L. stercus (-or-), dung.*] A name applied by opponents to various persons in the church who were said to hold a grossly materialistic conception of the Lord's Supper. They were alleged to believe that the Lord's body was, like other food consumed, digested and evacuated. The word was first used by Cardinal Humbert in 1054. Also *Stercorianist, Stercorarian.*

stercoraceous (stér'kō-rā'rē-us), *a.* Same as *stercoraceous.*

Stercorarian (stér'kō-rā'-ri-an), *n.* [*< L. stercorarius, pertaining to dung (< stercus (-or-), dung), + -an.*] Same as *Stercoranist.*

Stercorarianism (stér'kō-rā'-ri-an-izm), *n.* [*< Stercorarian + -ism.*] Same as *Stercoranism.*

Stercorariinæ (stér'kō-rā'-ri-ī-nē), *n. pl.* [*NL., < Stercorarius + -inæ.*] The dung-hunters, a subfamily of *Laridæ*, typified by the genus *Stercorarius*; same as *Lestrinæ*. See cuts under *skua* and *Stercorarius*.

Stercorarius (stér'kō-rā'-ri-us), *n.* [*NL. (Brisson, 1760), < L. stercorarius, pertaining to dung: see stercorary.*] The dung-hunters, skuas, or jagers, a genus of *Laridæ*, typical of the subfamily *Stercorariinæ*. Also called *Lestris*. The name is used (*a*) for all the species of the subfamily; (*b*) for the larger species, as *S. skua*, the smaller being called *Lestris* (see cut under *skua*); (*c*) for the smaller species, *S.*

Parasitic Jaeger (*Stercorarius parasiticus*).

pomatorhinus, S. parasiticus, and others, the larger being called *Buphagus* or *Megalestria*.

stercorary (stér'kō-rā-ri), *a.* and *n.* [*< L. stercorarius, pertaining to dung (ML. neut. *stercorarium, a place for dung), < stercus (stercor-), dung.*] *I. a.* Pertaining or relating to dung or manure; consisting of dung. *D. G. Mitchell, Wet Days, p. 17.*

II. n.; pl. stercoraries (-riz). A place, properly secured from the weather, for containing dung.

stercorate (stér'kō-rāt), *v. t.; pret. and pp. stercorated, ppr. stercorating.* [*< L. stercoratus, pp. of stercorare, dung, manure, < stercus (-or-), dung.*] To manure or dung. *Scott, Pirate, iv.*

stercorate† (stér'kō-rāt), *n.* [*< stercorate, v.*] Dung; excrement. *Imp. Dict.*

stercoration† (stér'kō-rā'shōn), *u.* [*< L. stercoratio(-n-), a dunging or manuring, < stercorare, pp. stercoratus, dung, manure, < stercus (-or-), dung.*] The act of manuring with dung. *Evelyn, To Mr. Wotton.*

stercoremia, stercoræmia (stér'kō-rē'mi-ä), *n.* [*NL. stercoræmia, < L. stercus (-or-), dung, + Gr. αἷμα, blood.*] Contamination of the blood from retained feces.

Stercorianism, Stercorianist (stér'kō'-ri-an-izm, -ist). Same as *Stercoranism, Stercoranist.*

stercoricolous (stér'kō-rik'ō-lus), *a.* [*< L. stercus (-or-), dung, + colere, inhabit.*] Inhabiting excrement; dwelling in dung. *Encyc. Brit., XIX, 842.*

Stercorist (stér'kō-rist), *n.* [*< L. stercus (-or-), dung, + -ist.*] A Stercoranist.

stercorite (stér'kō-rit), *n.* [*< L. stercus (-or-), dung, + -ite².*] A hydrous phosphate of ammonium and sodium, found in guano on the island Ichaboe, off the west coast of Africa.

stercory† (stér'kō-ri), *n.* [*< L. stercus (-or-), dung.*] Excrement; dung. *Mir. for Mags., III, 246.*

Sterculia (stér'kū'li-ä), *n.* [*NL. (Linnæus, 1753), so called from the fetid flowers or fruit of certain species; < L. Sterculius, a deity so*

named, *< stercus (stercor-), excrement.*] *1. A* genus of plants, type of the order *Sterculiaceæ* and of the tribe *Sterculiæ*. It is characterized by a stamen-column usually with fifteen anthers crowded without regular order, a five-celled ovary with two or more

ovules in each cell, and a fruit of distinct spreading dehiscent carpels. There are about 85 species, natives of warm climates, especially of tropical Asia. They are most commonly large trees, with simple feather-veined leaves, and unisexual flowers in drooping panicles, with a colored bell-shaped calyx, and a fruit of five radiating woody follicles opening on the upper edge; but none of these characters is universal. Their inner bark is composed of a tough fiber which is not affected by moisture, and is in many species a valuable material for cordage, mats, bags, paper, or tow for upholstery. Their seeds are filled with an oil which may be used for lamps, and are slightly acrid but often edible. They are mucilaginous, and often exude an abundance of gum resembling gum tragacanth, swelling into a jelly in cold water without dissolving. *S. urens*, and perhaps other species, furnish a share of the Indian tragacanth, or kutera gum; *S. Tragacantha* of western Africa yields the African or Senegal tragacanth. *S. acrifolia* of New South Wales, a large tree sometimes 80 feet high and 8 feet in girth, with large lobed leaves and racemes of showy red flowers, is known as *flame-tree*, and also as *lacebark* from its beautiful lace-like inner bark, which becomes 2 inches thick and is valued for many uses. *S. diversifolia*, the Victorian bottle-tree, or currijong, is a stout tree with coarser fiber: for the similar *S. rupestris*, see *bottle-tree*, and for *S. villosa*, see *oadd*. *S. lurida*, the sycamore of New South Wales, also yields a fiber, there made into fancy articles. *S. quadrifida*, the calcol of eastern and northern Australia, produces clusters of brilliant scarlet fruits, each with ten or eleven black seeds resembling filberts in taste, and eaten as a substitute for them. *S. Carthaginensis* (*S. Chicha*), the chicha or pansma, yields seeds eaten as nuts in Brazil and northward; it is a handsome tree with yellowish purple-spotted flowers. *S. foetida* (see *stercoraceous*) is the source of some native remedies in Java. *S. alata* has been called *Buddha's cocoonut*; *S. platanifolia* of Japan and China, *sultan's parasol*. See *mahoe* and *cassoumba*.

2. In entom., a genus of coleopterous insects. Laporte, 1835.

Sterculiaceæ (stér'kū-li-ä'sē-ē), *n. pl.* [*NL. (Ventenat, 1799), < Sterculia + -aceæ.*] An order of polypetalous plants, of the cohort *Malvales*, intermediate between the two orders *Malvaceæ* and *Tiliaceæ*, resembling the former in its variety of habit and foliage and its frequently monadelphous stamens, and the latter in its two-celled anthers. It includes about 730 species, belonging to 49 genera, classed in 3 tribes, natives mostly of the tropics, or occurring further to the south in Africa and Australia.

sterculiaceous (stér'kū-li-ä'shius), *a.* Of or pertaining to the plant-order *Sterculiaceæ*.

sterculiad (stér'kū'li-ad), *n.* A plant of the order *Sterculiaceæ*. *Lindley.*

Sterculiæ (stér'kū-li-ä'sē-ē), *n. pl.* [*NL. (A. P. de Candolle, 1824), < Sterculia + -æ.*] A tribe of plants, of the order *Sterculiaceæ*. It is characterized by unisexual or polygamous flowers without petals, commonly with a colored calyx, and five to fifteen anthers adnate at the summit of a long or short column of united filaments, and either crowded or arranged in a definite series or a ring. It includes 8 genera, of which *Sterculia* is the type. They are natives mostly of tropical Asia and Africa, extending into Australis and Java. See *Sterculia*.

stere¹, *stoor²*. A Middle English form of *steer¹, steer²*.

stere² (stär), *n.* [= *F. stère, < Gr. στερεός, solid, cubic; prob. < √ sta as in istáva, stand.*] A cubic meter: the French unit for solid measure, equal to 35.31 cubic feet. The word *stere* is but little used, except with reference to cordwood, cubic meter being the expression in universal use for the solid unit.

Sterelmintha† (ster-el-min'thā), *n. pl.* [*NL., irreg. < Gr. στερεός, stiff, hard, solid, + ἔλμινξ (él-*

μινθ-), a worm.] The parenchymatous endoparasitic worms, having no intestinal canal. They formed one of two main divisions, the other being *Celēmintha*, into which the *Entozoa* were divided by Owen in 1843, corresponding to the parenchymatous intestinal worms or *vers intestinaux parenchymataux* of Cuvier. They are such as the cestoid and trematoid worms, or tapes and flukes.

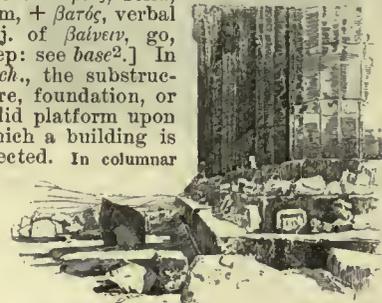

sterelminthic (ster-el-min'thik), *a.* [*< Sterelmintha + -ic.*] Of or pertaining to the *Sterelmintha*.

sterelminthous (ster-el-min'thus), *a.* Same as *sterelminthic*.

stereo- (stér'ē-ō, also, especially in trade use, sté'rē-ō). An element of Greek origin, meaning 'solid.'

stereo (stér'ē-ō), *n.* and *a.* [Short for *stereotype*.] Same as *stereotype*: as, a *stereo* plate; *stereo* apparatus.

stereobate (stér'ē-ō-bāt), *n.* [= *F. stéréobate, < Gr. στερεός, solid, firm, + βάσις, verbal adj. of βαλνν, go, step: see base².*] In *arch.*, the substructure, foundation, or solid platform upon which a building is erected. In columnar

Stereobate of the Parthenon, east front (illustrating the convex curvature of the best Greek Doric temple-foundations).

buildings it includes the *stylobate*, which is the uppermost step or platform of the foundation upon which the columns stand.

stereobatic (stér'ē-ō-bat'ik), *a.* [*< stereobate + -ic.*] Of, pertaining to, or resembling a stereobate; of the character of a stereobate. *Encyc. Brit., II, 408.*

stereoblastula (stér'ē-ō-blas'tū-lā), *n.; pl. stereoblastulæ (-læ).* [*NL., < Gr. στερεός, solid, + βλαστός, a germ.*] A solid blastula; a blastula in which there is no cavity. *J. A. Ryder.*

stereochrome (stér'ē-ō-krōm), *n.* [*< Gr. στερεός, solid, + χρώμα, color.*] A stereochromic picture. See *stereochromy*.

stereochromic (stér'ē-ō-krō'mik), *a.* [*< stereochromy + -ic.*] Of or pertaining to stereochromy; produced by stereochromy.—**Stereochromic process**, the method of painting by stereochromy.

stereochromy (stér'ē-ō-krō-mi), *n.* [*< Gr. στερεός, solid, + χρώμα, color.*] A method of painting in which water-glass serves as the connecting medium between the color and its substratum.

stereo-clumps (stér'ē-ō-klump), *n. pl.* [*< stereo + clump.*] Sectional blocks of type-metal or wood, usually three fourths of an inch high, made of different sizes so that they can be combined to fit and uphold any size of stereotype plate. When clamps are added, they keep the plate secure in the process of printing. [*Eng.*]

stereo-electric (stér'ē-ō-lek'trik), *a.* [*< Gr. στερεός, solid, + E. electric.*] Noting the electric current which ensues when two solids, especially two metals, as bismuth and antimony, are brought together at different temperatures.

stereogastrula (stér'ē-ō-gas'trō-lā), *n.; pl. stereogastrulæ (-læ).* [*NL., < Gr. στερεός, solid, + NL. gastrula, q. v.*] A solid gastrula; a form of gastrula in which no cleavage-cavity is developed. *J. A. Ryder.*

Stereognathus (ster-ē-ōg'nā-thus), *n.* [*NL. (Charlesworth, 1854), < Gr. στερεός, solid, + γνάθος, jaw.*] A genus of fossil mammals of problematical character from the Lower Oolite of Oxfordshire, England, later identified with *Microlestes*. The original fossil was named *S. ooliticus*.

stereogram (stér'ē-ō-gram), *n.* [*< Gr. στερεός, solid, + γράμμα, a writing, < γράφειν, write: see gram².*] A diagram or picture which represents objects in such a way as to give the impression of relief or solidity; specifically, a double photographic picture or a pair of pictures mounted together for the stereoscope; a stereoscopic picture.

stereograph (stér'ē-ō-gráf), *n.* [*< Gr. στερεός, solid, + γράφειν, write.*] Same as *stereogram*.

stereographic (stér'ē-ō-gráf'ik), *a.* [= *F. stéréographique; as stereograph-y + -ic.*] Showing the whole of a sphere on the whole of an

infinite plane, while preserving the angles.—

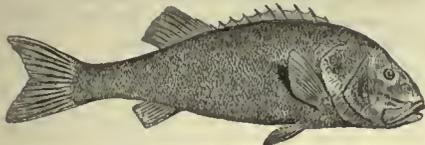

Stereographic map-projection. See *projection*.

stereographical (ster'ē-ō-graf'i-kal), *a.* [*stereographic* + *-al*.] Same as *stereographic*.

stereographically (ster'ē-ō-graf'i-kal-i), *adv.* In a stereographic manner; by delineation on a plane.

stereography (ster'ē-ōg'ra-fi), *n.* [= *F. stéréographie*, < *Gr. στερεός*, solid, + *-γραφία*, < *γράφειν*, write.] The art of delineating the forms of solid bodies on a plane; a branch of solid geometry which demonstrates the properties and shows the construction of all solids which are regularly defined.

Stereolepis (ster'ē-ōl'e-pis), *n.* [NL. (Ayres, 1859), < *Gr. στερεός*, solid, + *λεπίς*, a scale.] 1. A genus of serranoid fishes of enormous size in comparison with related forms. *S. gigas*, the jewfish or black sea-bass of the Californian coast, reaches a

Jew-fish (*Stereolepis gigas*).

length of 5 feet. It is brownish- or greenish-black with large black blotches, most evident in the young. 2. [*l. c.*] A fish of this genus.

sterome (ster'ē-ōm), *n.* [*Gr. στερέωμα*, a solid body, < *στερεός*, solid.] In *bot.*, a name proposed by Schwendener for those elements which impart strength to a fibrovascular bundle. Compare *mestome*.

stereometer (ster'ē-ōm'e-tēr), *n.* [*Gr. στερεός*, solid, + *μέτρον*, a measure.] 1. An instrument for measuring the solid capacity of a vessel.—2. An instrument for determining the specific gravity of liquids, porous bodies, etc.

stereometric (ster'ē-ō-met'rik), *a.* [*stereometry* + *-ic*.] Pertaining to or performed by stereometry.—**Stereometric function.** See *function*.

stereometrical (ster'ē-ō-met'ri-kal), *a.* [*stereometric* + *-al*.] Same as *stereometric*.

stereometrically (ster'ē-ō-met'ri-kal-i), *a.* By or with reference to stereometry.

stereometry (ster'ē-ōm'e-tri), *n.* [= *F. stéréométrie*, < *Gr. στερεός*, solid, cubic, + *-μετρία*, < *μέτρον*, measure.] 1. The art of measuring volumes.—2. The metrical geometry of solids.—3. The art or process of determining the specific gravity of liquids, porous bodies, powders, etc.

stereo-mold (ster'ē-ō-mōld), *n.* [*stereo* + *mold*.] A mold used in stereotyping.

stereomonoscope (ster'ē-ō-mon'ō-skōp), *n.* [*Gr. στερεός*, solid, + *μόνος*, single, alone, + *σκοπεῖν*, view.] An instrument with two lenses for exhibiting on a screen of ground glass a single picture so as to give it all the effect of solidity.

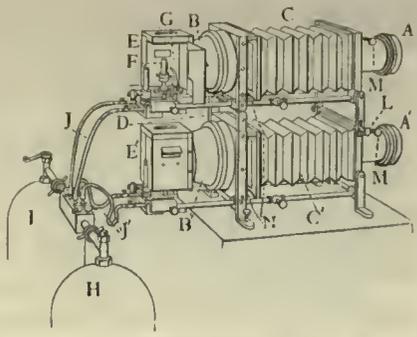

stereoneural (ster'ē-ō-nū'ral), *a.* [*Gr. στερεός*, solid, + *νεῦρον*, a nerve.] Having the nervous center, if any, solid.

stereoplasm (ster'ē-ō-plazm), *n.* [*NL. stereoplasma*, < *Gr. στερεός*, solid, + *πλάσμα*, anything molded or formed; see *plasm*.] 1. In corals, a delicate endothelial structure occupying different positions in the corallite, often forming vertical processes in the interseptal loculi or encircling septa, or acting as true endotheca. This substance, which connects septa (enviroung their free edges in some paleozoic corals), stretches across interseptal loculi irregularly, and sometimes fills up the lower part of the inside of the corallum, constituting a solid mass there. It is to be distinguished from the true endotheca. 2. In *bot.*, same as *stereoplasma*.

stereoplasma (ster'ē-ō-plas'mā), *n.* [NL.: see *stereoplasma*.] 1. Same as *stereoplasma*. 1. *Lindström*.—2. In *bot.*, a term proposed by Naegeli for the solid part of protoplasm. Compare *hygroplasma*.

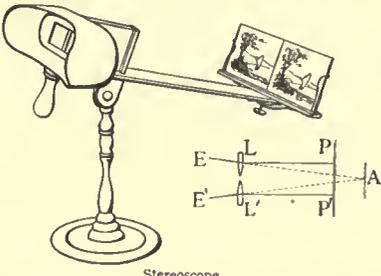

stereoplasmic (ster'ē-ō-plaz'mik), *a.* [*stereoplasma* + *-ic*.] Of the nature of or formed by stereoplasma; consisting of that substance.

stereopticon (ster'ē-ōp'ti-kon), *n.* [*Gr. στερεός*, solid, + *οπτικός*, pertaining to seeing or sight; see *optis*.] An improved form of magic lantern, consisting essentially of two complete lanterns matched and connected. The object of the reduplication is to permit the pictures shown to pass from one to the next by a sort of dissolving effect which is secured by alternate use of the two lenses, and at the same time to avoid the delay or the unpleasant sliding of the pictures across the field in view of the audience, but imperfectly avoidable when the simple magic lantern is used. The two lanterns may be either superposed or

Double-tier Stereopticon.

placed side by side. Some forms of stereopticon are made with three lanterns. See *triplezion*.
stereoscope (ster'ē-ō-skōp), *n.* [= *F. stéréoscope*, < *Gr. στερεός*, solid, + *σκοπεῖν*, view.] An optical instrument illustrating the phenomena of binocular vision, and serving to produce from two nearly similar pictures of an object the effect of a single picture with the appearance of relief and solidity belonging to ordinary vision. It depends upon the fact that in ordinary vision, while the respective images of an object formed upon the retinae of the two eyes differ slightly because of the divergence of the rays from each point of the object, yet the effect upon the brain is that of a single object seen in perspective relief which the monocular image lacks. The slide of the stereoscope shows two pictures side by side taken under a small difference of angular view, each eye looking upon one picture only; thus, as in ordinary vision, two images are conveyed to the brain which unite into one, exhibiting the objects represented under a high degree of relief. A reflecting form of stereoscope was invented by Sir Charles Wheatstone in 1838. Subsequently Sir David Brewster invented the lenticular or refracting stereoscope, based on the refractive properties of semi-double-convex lenses. This is the one now in general use. There are many forms of it, one of which is shown in the figure. The action is illustrated by

Stereoscope.

the diagram beneath. The light-rays from corresponding points of the two pictures P and P' are refracted in passing through the lenses L, L', and their directions changed so that they now seem to the eyes E, E' to diverge from a common point A beyond the plane of the card. By special effort a skilled observer can combine stereoscopic pictures into one without the use of the instrument, each eye being directed to one picture only and (to produce the normal stereoscopic effect) the one on its own side; the process may be facilitated by interposing a card screen between the pictures so that, for example, the left picture is entirely cut off from the right eye, etc. If the eyes are crossed so that the right eye sees the left picture and the left eye the right only, and the images combined by special effort, the usual stereoscopic effect is reversed—a convex surface becomes concave, etc. A similar pseudo-scope result is obtained with the ordinary stereoscope if the positions of the two pictures are exchanged.

stereoscopic (ster'ē-ō-skōp'ik), *a.* [= *F. stéréoscopique*; as *stereoscope* + *-ic*.] Of, pertaining to, or resembling the stereoscope; adapted to the stereoscope; having the form in relief, or proper perspective, as of an object seen in the stereoscope: as, *stereoscopic pictures*; *stereoscopic views*.—**Stereoscopic camera, diagrams, projection.** See the nouns.

stereoscopical (ster'ē-ō-skōp'i-kal), *a.* [*stereoscopic* + *-al*.] Same as *stereoscopic*.

stereoscopically (ster'ē-ō-skōp'i-kal-i), *adv.* By or as by a stereoscope.

stereoscopist (ster'ē-ō-skōp'ist), *n.* [*stereoscope* + *-ist*.] One versed in the use or manufacture of stereoscopes.

stereoscopy (ster'ē-ō-skōp'i), *n.* [= *F. stéréoscopie*, < *Gr. στερεός*, solid, + *-σκοπία*, < *σκοπεῖν*, view.] The use or construction of stereoscopes.

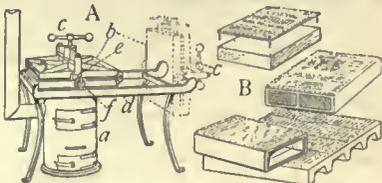

stereotomic (ster'ē-ō-tom'ik), *a.* [*stereotomy* + *-ic*.] Pertaining to or performed by stereotomy.

stereotomical (ster'ē-ō-tom'i-kal), *a.* [*stereotomic* + *-al*.] Same as *stereotomic*.

stereotomy (ster'ē-ō-tō-mi), *n.* [= *F. stéréotomie*, < *Gr. στερεός*, solid, + *-τομία*, < *τέμνειν*, τμήν, cut.] The science or art of cutting solids into certain figures or sections.

stereotrope (ster'ē-ō-trōp), *n.* [*Gr. στερεός*, solid, + *τροπή*, a turning, < *τρέπειν*, turn.] An instrument by which an object is perceived as if in motion and with an appearance of solidity or relief as in nature. It consists of a series of stereoscopic pictures, generally eight, of an object in the successive positions it assumes in completing any motion, affixed to an octagonal drum revolving under an ordinary lenticular stereoscope, and viewed through a solid cylinder pierced in its entire length by two apertures, which makes four revolutions for one of the picture-drum. The observer thus sees the object constantly in one place, but with its parts apparently in motion and in solid and natural relief.

stereotype (ster'ē-ō-tīp), *n.* and *a.* [= *F. stéréotype*, < *Gr. στερεός*, fixed, + *τύπος*, impression, type; see *type*.] 1. The duplicate, in one piece of type-metal, of the face of a collection of types composed for printing. Three processes are used. (a) The plaster process, in which a mold taken from the composed types in fluid plaster of Paris is baked until dry, and is then submerged in melted type-metal. The cast taken in this mold, when cooled, is shaved to proper thickness, making the stereotype plate. (b) The clay process, in which the mold, taken by a press on a prepared surface of stiff clay, is

A, Stereotype Founding Apparatus. B, Stereotype Plates from the Mold. a, furnace by which the water-jacketed mold is uniformly heated. The mold is supported on the frame d and on the rollers f; the parts of the mold are held together by a clamping-screw c; the water is supplied to the water-jacket through the funnel e. In pouring the metal, the mold is placed in position shown in dotted outline.

baked until dry, and filled by pouring into it fluid metal. (c) The papier-maché process, in which the mold is made by covering the type with a preparation of paper-pulp and clay, which is beaten into the interstices of the type-surface by a stiff brush. This mold when baked by steam-heat is put in a casting-box, which is filled with melted metal. This is the rudest but quickest process. Stereotypes for daily newspapers are usually made in fifteen minutes. For newspaper-work the plates for rotary presses are molded and cast with a curved surface that fits them to the impression-cylinder. The practice of stereotyping is now confined to newspapers and the cheaper forms of printed work. Plates of books, woodcuts, and the finer forms of printing are now made by the electrolyte process. (See *electrotype*.) Stereotype plates were first made, but imperfectly, by William Ged, at Edinburgh, in 1725. The plaster process, which was the first to become popular, was invented by Willdon and Lord Stanhope in 1810. 2. Loosely, an electrotype.—3. The art of making plates of fixed metallic types; the process of producing printed work by means of such plates.

II. *a.* Of or pertaining to stereotype, or stereotyping, or stereotype printing: as, *stereotype work*; *stereotype plates*.

stereotype (ster'ē-ō-tīp), *v. t.*; pret. and pp. *stereotyped*, ppr. *stereotyping*. [*stereotype, n.*]

1. To cast a stereotype plate from: as, to *stereotype* a page or a form.—2. To prepare for printing by means of stereotype plates: as, to *stereotype* the New Testament.—3. To fix or establish firmly or unchangeably.

If men cannot yet entirely obey the law, . . . it does not follow that we ought therefore to *stereotype* their incompetency, by specifying how much is possible to them and how much is not. H. Spencer, *Social Statics*, p. 506.

stereotype-block (ster'ē-ō-tīp-blok), *n.* A block of iron or of hard wood, bound with brass, about three fourths of an inch high, on which a stereotype plate is fixed for use.

stereotyped (ster'ē-ō-tīpt), *p. a.* 1. Made or printed from stereotype plates.—2. Formed in an unchangeable manner; fixed; set: as, *stereotyped opinions*.

The entablatures show considerable progress, but the capitals were so *stereotyped* that it is evident, if any Greek or Roman artists had designed capitals in Gandhara during the period just alluded to, we could predicate exactly what they would have been. J. Fergusson, *Hist. Indian Arch.*, p. 178.

stereotype-metal (ster'ē-ō-tīp-met'al), *n.* An alloy for stereotype plates; type-metal.

stereotyper (ster'ē-ō-tī-pēr), *n.* [*stereotype* + *-er*.] One who stereotypes, or who makes stereotype plates.

stereotypery (ster'ē-ō-tī'pēr-i), *n.* [*< stereotype + -ery.*] 1. The art or work of making stereotype plates.—2. Pl. *stereotyperies* (-iz). A place where stereotype plates are made; a stereotype foundry.

stereotypic (ster'ē-ō-tī'p'ik), *a.* [*< stereotype + -ic.*] Of or relating to stereotype or stereotype plates.

stereotyping (ster'ē-ō-tī'p'ing), *n.* The art, act, or process of making stereotypes.—**Paper process of stereotyping.** See *paper*.

stereotypist (ster'ē-ō-tī'p'ist), *n.* [*< stereotype + -ist.*] One who makes stereotype plates; a stereotypist.

stereotypographer (ster'ē-ō-tī'pog'ra-fēr), *n.* [*< stereotypograph-y + -er.*] A stereotype-printer.

stereotypography (ster'ē-ō-tī'pog'ra-fī), *n.* [*< Gr. στερεός, fixed, + E. typography.*] The art or practice of printing from stereotype. *Imp. Diet.*

stereotypy (ster'ē-ō-tī'p'i), *n.* [= *F. stéréotypie*; as *stereotype* + *-y*.] The art or business of making stereotype plates.

sterhydraulic (stēr-hī-drā'lik), *a.* [*Irreg. < Gr. στερεός, solid, + E. hydraulic.*] Pertaining to or having an action resembling that of a sterhydraulic press. See the phrase.—**Sterhydraulic press,** a peculiar form of hydraulic press in which pressure is generated in a hydraulic cylinder by the displacement of a part of the contained liquid through the entrance into its mass of a rod working through a stuffing-box, a screw working in a packed nut, or in some cases a rope wound upon a barrel in the inclosure and pulled into it through a packed hole, the shaft of the winding-barrel or drum also extending through a stuffing-box in the side of the cylinder, and fitted on the exterior with a winch or a driving-wheel. Of these forms that using a screw is the simplest and best.

sterigma (stē-rig'mā), *n.*; pl. *sterigmata* (-mā-tā). [*NL., < Gr. στήριγμα, a prop, support, < στήριζειν, prop.*] In *bot.*, a stalk or support of some kind: a term of varying application. (a) Same as *basidium*. (b) The stalk-like branch of a basidium which bears a spore. (c) The footstalk of a spore, especially of a spore of minute size. (d) The cell from which a spermatium is cut off. (e) A ridge or foliaceous appendage proceeding down the stem below the attachment of a decurrent leaf.

sterigmatic (ster-ig-mat'ik), *a.* [*< sterigma(t) + -ic.*] In *bot.*, resembling, belonging to, or of the nature of a sterigma.

sterile, *a.* An obsolete spelling of *sterile*.

sterile (ster'il), *a.* [Formerly also *steril*; *< F. stérile* = *Sp. Pg. esteril* = *It. sterile*, *< L. sterilis*, unfruitful, barren; cf. *Gr. στερεός*, stiff, hard, solid, *στέριφος*, hard, unfruitful, barren.] 1. Unfruitful; unproductive; not fertile.

Indeed it goes so heavily with my disposition that this goodly frame, the earth, seems to me a sterile promontory. *Shak., Hamlet, ii. 2. 310.*

It is certain that in *sterile* years come sown will grow to another kind. *Bacon, Nat. Hist., § 525.*

2. Barren; not reproducing its kind.

She is grown *sterile* and barren, and her births of animals are now very inconsiderable. *Dr. H. More, Antidote against Athelam.*

3. In *bot.*, of a flower, producing only stamens—that is, staminate or male (compare *neutral*); of a stamen, having no anther, or a functionless one; of an anther, without pollen; of an ovary, without perfect seeds; of a seed, without an embryo; of a frond, without sori. See cuts under *Onoclea*, *Ophioglossum*, *sassafras*, and *smoke-tree*.

—4. Free from living germs.

I at first suspected that the biologically *sterile* tube might not be chemically clean. *Medical News, XLIX. 400.*

5. Leading to no results; fruitless; profitless; useless.

I will endeavour that the favour conferred on me rest not *sterile*. *Abbé Mann, in Ellis's Lit. Letters, p. 431.*

6. Lacking richness of thought or expression; bald; bare: as, a *sterile* style; *sterile* verse.—**Sterile wood** a shrub or small tree, *Coprosma foetidissima*, of the *Rubiaceae*, found in New Zealand. It is extremely fetid when drying, though inodorous when alive and growing.

sterilisation, sterilise, etc. See *sterilization, etc.*

sterility (ste-ril'i-ti), *n.* [*< F. stérilité* = *Sp. esterilidad* = *Pg. esterilidad* = *It. sterilità*, *< L. sterilitas* (t-), unfruitfulness, barrenness, *< sterilis*, barren, sterile: see *sterile*.] The state or character of being sterile. (a) Lack of fertility; unproductiveness; unfruitfulness, as of land, labor, etc.

For the Soil of Spain, the Fruitfulness of their Vallies recompenses the Sterility of their Hills. *Hovell, Letters, I. iii. 32.*

(b) Lack of fecundity; barrenness: said of animals or plants.

Suspend thy purpose, if thou didst intend
To make this creature fruitful!
Into her womb convey sterility!

Shak., Lear, I. 4. 300.

(c) Fruitlessness; profitlessness.

The truthness of this formula is only equalled by its sterility for psychological purposes.

W. James, Prin. of Psychol., I. 551.

(d) Deficiency in ideas, sentiments, or expression; lack of richness or luxuriance, as in literary style; poverty; baldness; meagerness.

He had more frequent occasion for repetition than any poet; yet one cannot ascribe this to any sterility of expression, but to the genius of his times, which delighted in these reiterated verses. *Pope, Essay on Homer.*

sterilization (ster'il-i-zā'shon), *n.* [*< sterilize + -ation.*] The act or operation of making sterile; specifically, the process of freeing from living germs. Also spelled *sterilisation*.

Sterilization of cow's milk must and will be a most valuable preventive of summer diarrheas. *Medical News, LIII. 12.*

sterilize (ster'il-iz), *v. t.*; pret. and pp. *sterilized*, ppr. *sterilizing*. [= *F. stériliser* = *Sp. Pg. esterilizar*; as *sterile* + *-ize*.] To render sterile or unproductive in any way; specifically, in bacteriology, to render free from living germs, as by heating or otherwise. Also spelled *sterilise*.

No, no—such wars do thou, Ambition, wage!
Go sterilize the fertile with thy rage!

Whole nations to depopulate is thine. *Savage, Public Spirit.*

Prof. Tyndall found that he could not sterilize an infusion of oil hay . . . without boiling it continuously for several hours. *W. B. Carpenter, Micros., § 300.*

sterilizer (ster'il-i-zēr), *n.* [*< sterilize + -er.*] One who or that which sterilizes; especially, any apparatus for rendering substances free from living germs, as by means of heat. Also spelled *steriliser*.

sterkt. An old spelling of *stark*, *stirk*.

sterlet (stēr'let), *n.* [*< F. sterlet* = *Dan. sterlet* = *Sw. sterlett*, *< G. sterlet*, *< Russ. sterlyadi*, a sterlet.] A species of sturgeon, *Acipenser ruthenus*. It is of small size and slender form, with a long sharp snout and fringed barbels, and from sixty to seventy lateral shields. It rarely reaches a length of two

Sterlet (*Acipenser ruthenus*).

feet, and is generally not more than a foot long. It inhabits the Black Sea, Sea of Azov, Caspian Sea, and the rivers of Asiatic Russia, as well as certain rivers of Siberia. It is highly esteemed for its flavor, and its roe makes a superior caviar. Compare also cuta under *Acipenser*.

Sterletus (stēr'le-tus), *n.* [*NL. (Rafinesque, 1820), < F. sterlet*, *< Russ. sterlyadi*, sterlet: see *sterlet*.] A genus of sturgeons, the type of which is the sterlet, having the spines of the dorsal shield posterior, no stellate plates, and the lip emarginate.

sterling¹, *n.* An obsolete form of *starling*¹.

sterling² (stēr'ling), *n.* and *a.* [*< ME. sterling, sterlinge, sterlynge, starling*, the coin so called; cf. *D. sterling* = *Sw. Dan. sterling*, sterling (as in mod. E. use), = *Icel. sterlingr*, a sterling (the English coin so called), = *MHG. sterline, sterline* (-ling), a coin so called, *G. sterling* (as in mod. E. use); = *OF. esterlin*, a sterling (the English coin so called), *sterlin, esterlin, estellin, estelin*, a weight of twenty-eight grains (of gold), the twentieth part of an ounce, = *Sp. Pg. esterlino*, in *libra esterlina*, a pound sterling, = *It. sterlino*, in *lira sterlina*, a pound sterling, also as a noun, *sterlino*, sterling coin, standard rate (of coin); *ML. sterlingus, sterlingum, sterlinus, stellinus, stelligus, sterlingus, sterlingus, esterlingus, estrilingus*, a sterling (the English coin so called), also a weight of twenty-eight grains, the twentieth part of an ounce; all *< E.*, unless, as Kinge asserts, the *E.* itself (and so in part the *OF.* and *ML.*) is *< MHG. sterline, sterline* (-ling), which is then *< sterl-* or *ster-*, origin unknown, + *-ing*³ or *-ling*¹ as in *shilling, farthing* (*AS. feorthing, feorhtling*), *peany* (*AS. pening*, etc.).] In this view the word must have been introduced into *ME.* use by the Hanse merchants in London, who, according to the story, first stamped the coin in England. The accepted statement is that these merchants were called *Easterlings* as coming from "the east parts of Germany" (Camden), and that the coin received its name from them; but the similarity appears to be accidental, and the statement, besides other deficiencies, fails to explain the *MHG.* name, which could not have meant 'Easterling.' It seems more probable that the *MHG.* word is, like the rest, derived from the *ME.* word, which must then be due, in spite of unexplained difficulties, to *Easter-*

ling, or else is derived, as asserted in a statement quoted by Minshew from Linwood, from the figure of a starling (*ME. sterling*) at one time engraved on one quarter of the coin so called: see *starling*¹. Historical evidence of the truth of this assertion is as yet lacking.] **I. n.** 1. A silver coin struck by English (and Scottish) kings from the time of Richard I. (1190).

Faste comen out of halle
And shoken nobles and sterlinges.
Chaucer, House of Fame, l. 1315.

The oldest pieces [of the coinage of Scotland] are silver pennies or *sterlings*, resembling the contemporary English money, of the beginning of the 12th century. *Encyc. Brit., XVII. 656.*

2. English money. [Rare.]

And Roman wealth in English *sterling* view. *Arbuthnot.*

II. a. 1. Of fixed or standard national value; conforming to the national standard of value; said of English money, and, by extension, of the precious metals: as, a pound *sterling*; a shilling *sterling*. Abbreviated *ster.*, *stg.*

In the Canon Law mention is made of 5 shillings *sterling*, and a merke *sterling*, cap. 3. de Arbitris, & c. constitut. 12. de procurator. *Minshew, 1617.*

When a given weight of gold or silver is of a given fineness, it is then of the true standard, and called *esterling* or *sterling* metal. *Blaekstone, Com., I. vii.*

I lost between seven and eight thousand pounds *sterling* of your English money. *J. S. Le Fanu, Dragon Volant, v.*

2. Of acknowledged worth or influence; authoritative.

If my word be *sterling* yet in England,
Let it command a mirror hither straight;
That it may show me what a face I have.
Shak., Rich. II., iv. 1. 264.

3. Genuine; true; pure; hence, of great value or excellence.

His *sterling* worth, which words cannot express,
Lives with his friends, their pride and their distress.
Crabbe, Works, II. 27.

I might recall other evidence of the *sterling* and unusual qualities of his public virtue. *R. Choate, Addresses, p. 321.*

sterling³ (stēr'ling), *n.* See *starling*².

Sterling's formula. See *formula*.

stern¹ (stērn), *a.* [*< ME. stern, sterin, sterne, sturne*, *< AS. styrne*, severe, austere, stern (also in comp. *styrn-mōd*, stern-minded); akin to *OHG. stornēn*, be astonished, *sturni*, stupor; perhaps related to *OHG. storren*, *MHG. storren*, stand out, project, = *Goth. *staurran*, in comp. *and-staurran*, murmur against, also to *D. stuursch*, stern, = *Sw. stursk*, refractory, and to *Icel. stūra*, gloom, despair, *stūra*, mope, fret.] 1. Severe in disposition or conduct; austere; harsh; rigorous; hard.

No Man was more gentle where there was Submission; where Opposition, no Man more stern. *Baker, Chronicles, p. 132.*

And sterner hearts alone may feel
The wound that time can never heal.
Byron, The Giaour.

2. Characterized by severity or rigor; especially, resulting from or expressive of harshness: as, a *stern* reply; a *stern* glance; a *stern* rebuke.

He herd thair strakes, that war ful *sterin*.
Yvaine and Gawain, l. 3219. (Halliwell.)

It wolves had at thy gate howl'd that *stern* time,
Thou shouldst have said, "Good porter, turn the key."
Shak., Lear, iii. 7. 63.

Gods and men
Fear'd her *stern* frown. *Milton, Comus, l. 446.*

3. Grim or forbidding in aspect; gloomy; repelling.

In passing through these *stern* and lofty mountains,
their path was often along the bottom of a baranco, or deep rocky valley. *Irving, Granada, p. 83.*

4. Rough; violent; tumultuous; fierce.

The werre wox in that won wonderly *stern*.
Alisaunder of Macedoine (E. E. T. S.), l. 337.

Those *stern* waves, which like huge mountains roll.
Drayton, Polyolbion, l. 435.

5. Rigid; stringent; strict.

Subjected to *stern* discipline by the rigid enforcement of uniform motives. *Maudsley, Body and Will, p. 8.*

6. Stout; strong; heavy.

The hamur bothe *stern* and gret
That drof the nayles thorow hnd and fete.
Holy Rood (E. E. T. S.), p. 184.

Of bak & of brest al were his bodi *sturne*.
Sir Gawayne and the Green Knight (E. E. T. S.), l. 143.

7. Firm; unyielding; inflexible; hard.

When that the poor have cried, Cesar hath wept:
Ambition should be made of *sterner* stuff.
Shak., J. C., iii. 2. 97.

The sterner sex. See *sex*¹. = **Syn. 1.** Severe, Harsh, Strict, etc. See *austere*.—1 and 2. Unrelenting, uncompromising, inflexible.

stern² stérn, *n.* [*< ME. stern, steerne, steorn* (not found in AS., where only *stéor*, a rudder, appears: see *steer*¹, *n.*) = *OFries. stiorn, stiarne*, a rudder, = *Icel. stjörn*, a steering, steerage, rudder; with formative *-n*, from the root of AS. *stéor*, E. *steer*, etc., a rudder: see *steer*¹, *n.* and *r.*] 1†. The rudder or helm of a vessel.

git he ne rise the rather and rauhte to the *stearne*,
The wynt wolde with the water the hot omer-throwe.
Piers Plouman (A), ix, 30.

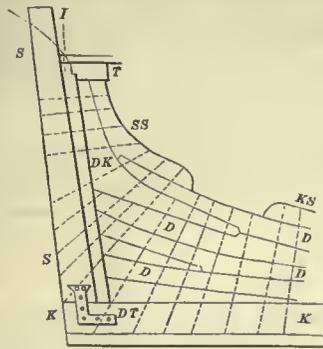

But to preserve the people and the land,
Which now remain as shippe without a *stearne*.
Norton and Sackville, *Ferrex and Porrex*, v. 2.

2†. Hence, figuratively, any instrument of management or direction; a guiding agent or agency; also, a post of direction or control.

The father held the *stearne* of his whole obediance.
Ascham, *The Scholemaster*, p. 43.

Not a few of them [the eunuchs] have come to sit at the stern of State.
Sandys, *Travailes*, p. 55.

3. The hinder part of a ship or boat, where the rudder is placed; the part furthest removed

Lower part of Ship's Stern.

S, stern-post; K'S, keelson; K, keel; DT, dovetail-plates; I, longer stern-post; D, deadwood; DK, deadwood-knee; SS, sternson; T, deck-transom; F, false keel. (The dotted lines show bolts.)

from the stem or prow. See also cut under *poop*.

So, when the first bold vessel daved the seas,
High on the *stern* the Thracian raised his strain.
Pope, *Ode on St. Cecilia's Day*, l. 39.

4. The hinder parts, backside, buttocks, or rump; the tail of an animal.

He [the dragon] . . . gan his sturdy *stearne* about to weld,
And him so strongly stroke that to the ground him feld.
Spenser, *F. Q.*, l. xi, 23.

We don't want to deceive ourselves about them, or fancy them cherubs without *stearns*.
Booke of Precedence (E. E. T. S., extra ser.), Forewords, [p. xxiii].

By the *stern*. See *by*¹.—**False stern**, an addition made to the stern of a vessel for strength or protection.—**From stem to stern**. See *stem*².—**Square stern**, a stern less rounded or elliptical than is usual.—**Stern foremost**, backside foremost; with the stern advanced.—**Stern on**, the position of a vessel when her stern is presented toward the observer.—**To make a stern board**. See *board*.—**To moor head and stern**. See *moor*².

stern² (stérn), *v.* [*< stern*², *n.*] I. *trans.* 1†. To steer; guide.

Hulke tower . . . is a notable marke for pilots, in directing them which waie to *stearne* their ships, and to eschew the danger of the craggie rocks.
Stanhurst, *Descrip. of Ireland*, liii. (*Holinshead*.)

2. To back (a boat) with the oars; back water; row backward.—**Stern all stern hard!** orders to back water given by the officer of a boat to the crew. Also simply *stern!*

II. *intrans.* To draw back; back water: said of a boat or its crew.

Mesntime Mr. Norton, the mate, having struck the fast whale, he and the second mate *sterned* off to wait for the whale to get quiet.
Fisheries of U. S., V. ii, 273.

stern³ (stérn), *n.* Same as *stern*¹.
stern⁴ (stérn), *n.* [A var. of *tern*: see *tern*, and cf. *Sterna*.] A tern.

Sterna (stér'ni-ä), *n.* [NL. (Linnaeus, 1758), appar. based on E. *tern*.] A Linnaean genus of *Laridae*, typical of the subfamily *Sterninae*, and containing all the terns or sea-swallows, or variously restricted. It is now commonly confined to species of moderate and large size, white with usually pearly-blue mantle and black cap, and having a long deeply-forked tail, whose outer feathers are more or less narrowly linear for much of their length. The species are numerous, and are found all over the world, as *S. hirundo*, the common tern of Europe and America; *S. arctica*, the arctic tern of the northern hemisphere; *S. paradisea* or *dougalli*, the roseate tern (see cut under *roseate*), very widely distributed; and *S. forsteri* and *S. trudeauti* of America. Among the large species, representing a subgenus *Thalasseus*, are *S. ischegrava* or *caspia*, the Caspian tern of Asia, Europe, and America; *S. maxima*, the royal tern (smaller than the last, in spite of its name) of America; *S. elegans*, the dual tern of America. (See cut under *Thalasseus*.) A group of small species,

such as *S. minuta* of Europe and *S. antillarum* of America, are called *least terns*, and all have a white frontal crescent in the black cap: these represent a subgenus

Common Tern (*Sterna hirundo*).

Sterna. (See cut under *Sterna*.) Some middle-sized terns with dark upper parts, widely distributed in tropical and warm temperate regions, are the subgenus *Itaipiana*, as the common sooty and bridled terns, *S. fuliginosa* and *S. anæsthetica*. (See cut under *sooty*.) Gull-billed terns form a section *Galechidion* (see cut there). The wholly white terns, the black terns, and the noddies belong to other genera. See *Sterninae* and *tern*.

sternadiform (stér'na-di-fórm), *a.* [*< NL. sternum*, the breast-bone, + *L. ad*, to, + *forma*, form.] In *ichth.*, characterized by a tendency to expansion or extension of the thoracic or sternal region, as exemplified in the John-dory and the *Serranidae*. *Gill*.

sternage (stér'näj), *n.* [*< stern*² + *-age*.] Steerage; direction; course, as of a ship or fleet.

Follow, follow:
Grapple your minds to *sternage* of this navy,
And leave your England, as dead midnight still.
Shak., *Hen. V.*, iii. Prol., l. 18.

sternal (stér'näl), *a.* [= *F. sternal*, *< NL. sternalis*, *< sternum*, the breast-bone: see *sternum*.]

1. Of or pertaining to the sternum, especially the breast-bone of vertebrates: as, the *sternal* end of the clavicle; the *sternal* keel of a bird's breast-bone; *sternal* articulation; a *sternal* segment.—2. In *Invertebrata*, of or pertaining to a sternite; sternitic.—3. Ventral; hemal; on the ventral surface or aspect, where the sternum is situated; on the same side with the sternum; in man, anterior; in other animals, inferior: opposed to *dorsal*, *tergal*, or *neural*.—**Sternal band**, in *embryol.*, of insects, a longitudinal thickening of the ovum, which gives rise to the sternal region of the body.—**Sternal canal**, in *Crustacea*, a median passage between each pair of endosternites, arched over by the meeting of the mesopragmal apophyses of the apodemes of opposite sides. The sternal canal conveys the chain of nervous ganglia and the sternal artery. See cut under *Astacidae*.—**Sternal glands**, a chain of six to ten small lymphatic glands, situated along the course of the internal mammary blood-vessels.—**Sternal line**, the vertical line on the front of the chest lying over the edge of the sternum.—**Sternal region**, the region of the front of the chest lying between the sternal lines. It is divided into a *superior* and an *inferior sternal region* by a line passing through the uppermost points of the junctions of the third costal cartilages with the sternum.—**Sternal rib**, (a) A true or fixed rib; one that joins the sternum by its hemapophysis, or costal cartilage, as distinguished from a false rib. See cut under *endoskeleton*. (b) The hemapophysis of a rib, as distinguished from the pleurapophysis; that part of a hony jointed rib answering to the costal cartilage of a mammalian rib, reaching from the end of the pleurapophysis to the sternum or toward it, as distinguished from a vertebral rib, which is the pleurapophysis alone. See cuts under *epipleura* and *interclavicle*.

sternalgia (stér-näl'ji-ä), *n.* [NL., *< Gr. στέρνον*, the breast-bone, + *ἄλγος*, pain.] 1. Pain about the sternum or breast-bone.—2. Specifically, angina pectoris. See *angina*.

sternalgic (stér-näl'jik), *a.* [*< sternalgia* + *-ic*.] Pertaining to or affected with sternalgia; especially, affected with angina pectoris.

sternalis (stér-näl'ia), *n.*; pl. *sternales* (-léz). [NL., sc. *musculus*, muscle: see *sternal*.] A sternal or preternal muscle; specifically, the rectus sternalis of various animals, more especially called *sternalis brutorum* and *rectus thoracicus superficialis*. It is not infrequently present in man.

Sternaspida (stér-nas'pi-dä), *n. pl.* [NL., irreg. *< Sternaspis* (-aspid-) + *-ida*.] An order of gephyreans, represented by the genus *Sternaspis*: distinguished from an order *Echiurina*, both being referred to a subclass *Echiuromorpha* of the class *Gephyrea*. Compare *Echiuroidea*.

Sternbergia (stér-nér'ji-ä), *n.* [NL. (Waldstein and Kitaibel, 1805), named after Count Kaspar Maria von Sternberg, 1761–1838, author of various botanical and paleontological works.] A genus of monocotyledonous plants, of the order *Amaryllidaceæ* and tribe *Amaryllidæ*. It is characterized by a commonly solitary funnel-shaped perianth without a corona and with somewhat spreading lobes, and by a fleshy nearly indehiscent fruit with roundish and

often strophilate seeds. About 12 species have been described, now by some reduced to 5, all native of Europe and the Mediterranean region. They produce a short flower-stalk from a coated bulb, with leaves at the same time or earlier. *S. lutea* and several other dwarf species with handsome yellow flowers are cultivated under the name of *star-flower*. *S. lutea* is also known as *winter daffodil*, and *S. Alvensis* as *Mount Etna Lily*; these are often sold under the name of *amaryllis*.

sternbergite (stér'n-berg-it), *n.* [Named after Count K. M. von Sternberg: see *Sternbergia*.] An ore of silver, a sulphid of silver and iron, having a pinchbeck-brown color and metallic luster. It occurs foliated, the laminae being soft and flexible. It leaves a mark on paper like that of graphite.

stern-board (stér'n'börd), *n.* *Naut.*, a backward motion of a vessel. See *to make a stern board*, under *board*.

stern-cap (stér'n'kap), *n.* An iron cap to protect the stern of a boat.

stern-chase (stér'n'chäs), *n.* A chase in which two vessels sail on one and the same course, one following in the wake of the other: as, a *stern-chase* is a long chase.

stern-chaser (stér'n'chäs'sér), *n.* A cannon placed in a ship's stern, pointing backward, and intended to annoy a ship that is in pursuit.

Sternææ (stér'n-ä-ä), *n. pl.* [NL., *< Sterna* + *-ææ*.] A subdivision of *Sterninae*, containing all the sea-awallows with forked tails and emarginate webs, as distinguished from the *Amoerææ* or noddies; the typical terns. *Coues*, 1862.

sternerber (stér'n-ä-ber), *n.* [*< NL. sternebra*, *< sternum* + (*vert*)*ebra*.] One of the pieces of which the breast-bone of a vertebrate usually consists; a bony segment of the sternum; a sternite, or sternbral element. The sternum is a serially segmented bone, made up of pieces, primitively separate bones, corresponding to pairs of ribs, every one of which is a sternerber. Thus, in man the manubrium sterni and the xiphoid or ensiform cartilage are each a sternerber; and the gladiolus, the middle part of the breast-bone, is composed of four other sternerbera.

sternerbral (stér'n-ä-bräl), *a.* [*< sternerber* + *-al*.] Entering into the composition of the breast-bone; of or pertaining to a sternerber.

sterned¹ (stérnd), *a.* [*< stern*² + *-ed*².] Having a stern (of a specified character). *Chapman*, *Iliad*, xi.

sterned² (stérnd), *a.* [ME., *< stern*³ + *-ed*².] Starred; starry. *Hampole*, *Priek of Conscience*.

sterner† (stér'nér), *n.* [*< stern*² + *-er*¹.] A steersman; a guide or director. [Rare.]

He that is "regens aldera, the *sterner* of the stars."
Dr. Clarke, *Sermons* (1837), p. 15. (*Latham*.)

stern-fast (stér'n'fást), *n.* A rope or chain used to confine the stern of a ship or other vessel to a wharf or quay.

stern-frame (stér'n'främ), *n.* The several pieces of timber or iron which form the stern of a ship—the stern-post, transoms, and fashion-pieces.

sternfully† (stér'n'fü-l-i), *adv.* [*< *sternful* (irreg. *< stern* + *-ful*) + *-ly*².] Sternly. *Stanhurst*, *Conceites*. [Rare.]

stern-gallery (stér'n'gal'ë-ri), *n.* *Naut.* See *gallery*, 9.

stern-hook (stér'n'hük), *n.* In *ship-building*, a curved timber built into the stern of a ship to support the stern-frame.

Sternidææ (stér'ni-d-ä), *n. pl.* [NL., *< Sterna* + *-idææ*.] The *Sterninae* rated as a family apart from *Laridææ*.

Sternidius (stér-nid'i-us), *n.* [NL. (Le Conte, 1873).] A genus of longicorn beetles, of the family *Cerambycidææ*, equivalent to *Liopus* (*Leiopus* of Serville, 1835). *S. acutifernus* is a common North American species now placed in *Leptostylus*. Its larva burrows under the bark of various trees.

Sternidius acutifernus.

sterniform (stér'ni-fórm), *a.* [*< NL. sternum*, the breast-bone, + *L. forma*, form.] In *entom.*, having the form or appearance of a thoracic sternum.—**Sterniform process** or **horn**, an anterior projection of the first ventral segment of the abdomen, between the bases of the posterior legs: it is more commonly called the *intercozal process*.

Sterninae (stér-ni'n-ä), *n. pl.* [NL., *< Sterna* + *-inææ*.] A subfamily of *Laridææ*, typified by the genus *Sterna*, containing all the terns or sea-swallows. It differs from *Laridææ* in the average smaller size, slenderer form, relatively longer wings and tail, the forking of the tail, the small feet, and the slender sharp bill. The bill is paragnathous (not epignathous as is usual in *Laridææ*), with continuous horny covering, usually long and slender, very sharp, with straight commissure or nearly so, gently curved culmen, long gonyes, and slight symphyseal eminece. The wings are extremely long, narrow,

and pointed, with the first primary much the longest, and the secondaries all short. The tail is usually long, and forked or forficated, with attenuated outer feathers. The feet are small, and scarcely ambulatorial. There are 60 or more species, of all parts of the world. They are divided into two groups, the *Sternæ* or terns proper, including nearly all of the *Sterninae*, and the noddies or *Anoëtæ*. Most of the species fall into the single genus *Sterna*. Other genera are *Hydrochelidon*, *Phaethusa*, *Procelsterna*, *Gygis*, *Inca*, and *Anous*. See *Sterna*, and cuts there noted.

sternine (stér'nin), *a.* [*<* NL. *sterninus*, *<* *Sterna*, tern.] Resembling or related to a tern; of or pertaining to the *Sterninae*.

sternite (stér'nit), *n.* [*<* NL. *sternum*, the breast-bone, + *-ite*².] 1. In *Arthropoda*, as an insect or a crustacean, one of the median ventral sclerites of the crust or body-wall; the median ventral piece of any segment, somite, or metamere, whether a distinct piece or only that undistinguished ventral part or region which lies between the insertions of any pair of legs or other appendages. The sternites are primitively and typically all alike, but may be variously modified in different regions of the body, or coalesced with one another or with other pieces of the exoskeleton, or appressed. See cut under *Cephalothorax*.

2. In *entom.*, specifically, the under or ventral sclerite of an abdominal segment. [Rare.]—3. One of the pieces of the sternum or breast-bone of a vertebrate; a sterneber. [Rare.]—**Antennary sternite.** Same as *epistoma* (b).

sternitic (stér-nit'ik), *a.* [*<* *sternite* + *-ic*.] Of or pertaining to a sternite; sternal, as a sclerite of an arthropod.

stern-knee (stér'nē), *n.* The continuation of a vessel's keelson, to which the stern-post is secured by bolts. Also called *sternson* and *sternson-knee*.

stern-light, *n.* [*<* *stern*³ + *light*¹.] Starlight.

It was mirk mirk night, and there was nse *stern light*.
Thomas the Rhymer (Child's Ballads, I. 112).

sternly (stér'li), *adv.* [*<* ME. *sternelich*, *sterneliche*, *sturneliche*, *<* AS. *styrnlíce*, *<* *styrne*, stern; see *stern*¹ and *-ly*².] In a stern manner; with severity, harshness, austerity, or rigor.

sternmost (stér'n'móst), *a.* *superl.* [*<* *stern*² + *-most*.] Furthest in the rear; furthest astern; as, the *sternmost* ship in a convoy.

sterness (stér'nēs), *n.* [*<* ME. *sternesse*, *sternesse*; *<* *stern* + *-ness*.] The quality or character of being stern.

With *sterness* 3c commandide to hem, and with power.
Wyche's, Ezek. xxxiv. 4.

= *Syn.* See *stern*¹, *a.*
sternochondroscapularis (stér-nō-kon-drō-skap-ū-lā'ris), *n.*; pl. *sternochondroscapulares* (-rēz). [NL. (sc. *museulus*, muscle), *<* Gr. *stérpov*, the breast-bone, + *χόνδρος*, cartilage, + NL. *scapularis*, q. v.] A muscle of some mammals, not infrequent in man, arising from the first costal cartilage and the sternum, and inserted into the superior border of the scapula. Also called *chondroscapularis*, *scapulocostalis minor*, *costoscapularis*, *subclavius posticus*.

sternoclavicular (stér'nō-klā-vik'ū-lār), *a.* [*<* NL. *sternoclavicularis*, *<* Gr. *stérpov*, the breast-bone, + NL. *clavicula*; see *clavicular*.] Pertaining to the sternum and the clavicle. Also *sternoclidal*, and sometimes *clidosternal*.—**Sternoclavicular fibrocartilage.** See *fibrocartilage*.—**Sternoclavicular ligament,** a band of ligamentous fibers uniting the sternum and the clavicle; an anterior and a posterior are distinguished in man.

sternoclavicularis (stér'nō-klā-vik'ū-lā'ris), *n.*; pl. *sternoclavicularis* (-rēz). [NL.: see *sternoclavicular*.] One of two anomalous muscles in man, anterior and posterior, extending over the sternoclavicular articulation.

sternoclidal (stér-nō-klī'dal), *a.* [*<* Gr. *stérpov*, the breast-bone, + *κλειδί* (*klēidō*), key (clavicle), + *-al*.] Same as *sternoclavicular*.

sternoclidomastoid (stér-nō-klī-dō-mas'toid), *a.* and *n.* [*<* NL. *sternoclidomastoides*, *<* *sternum*, q. v., + *clidomastoides*, q. v.] 1. *a.* In *anat.*, of or belonging to the sternum, the clavicle, and the mastoid process. The sternoclidomastoid muscle arises from the summit of the sternum and the inner section of the clavicle, and is inserted into the mastoid process of the temporal bone. It is also called *sternomastoid*, *mastoides colli*, and *nutator capitis*. See cut under *Muscle*¹.

II. *n.* The sternoclidomastoid muscle.
sternoclidomastoides (stér'nō-klī'dō-mas'toi'dē-us), *n.*; pl. *sternoclidomastoides* (-ī). [NL.: see *sternoclidomastoid*.] The sternoclidomastoid muscle.

sternocoracoid (stér-nō-kor'ā-koid), *a.* and *n.* [*<* NL. *sternocoracoides*, *<* *sternum*, q. v., + *coracoides*, q. v.] 1. *a.* Of or pertaining to the sternum and the coracoid; as, the *sternocoracoid* articulation of birds and reptiles; a *sternocoracoid* muscle.

II. *n.* The sternocoracoides.

sternocoracoides (stér-nō-kor'ā-koi'dē-us), *n.*; pl. *sternocoracoides* (-ī). [NL.: see *sternocoracoid*.] The sternocoracoid muscle of various animals, arising from the sternum and inserted in the coracoid. It is represented in man by the pectoralis minor.

sternocostal (stér-nō-kos'tal), *a.* [*<* NL. *sternocostalis*, *<* *sternum*, q. v., + *L. costa*, rib; see *costal*.] Of or pertaining to the sternum and the ribs or costal cartilages; costosternal.

sternocostalis (stér'nō-kos-tā'lis), *n.*; pl. *sternocostales* (-lēz). [NL.: see *sternocostal*.] A thin median fan-shaped muscle within the thorax, behind the costal cartilages and breast-bone, arising from the lower part of the sternum. Also called *transversus thoracis*, and usually *triangularis sterni*.

sternocoxal (stér-nō-kok'sal), *a.* [*<* NL. *sternocoxalis*, *<* *sternum*, q. v., + *L. coxa*, the hip; see *coxal*.] Of or pertaining to the sternites and coxae of an arthropod.

sternofacial (stér-nō-fā'shal), *a.* and *n.* [*<* NL. *sternofacialis*, *<* *sternum*, q. v., + *L. facies*, face; see *facial*.] 1. *a.* Of or pertaining to the sternum and the face; as, a *sternofacial* muscle.

II. *n.* The sternofacialis.

sternofacialis (stér-nō-fā-shi-ā'lis), *n.*; pl. *sternofaciales* (-lēz). [NL.: see *sternofacial*.] A muscle of the hedgehog, arising over the fore part of the sternum and passing to the side of the lower jaw and integument of the face; it assists the action of the orbicularis panniculi.

sternoglossal (stér-nō-glos'al), *a.* and *n.* [*<* NL. *sternoglossalis*, *<* Gr. *stérpov*, breast-bone, + *γλῶσσα*, tongue.] 1. *a.* Of or pertaining to the sternum and the tongue; as, a *sternoglossal* muscle.

II. *n.* The sternoglossus.

sternoglossus (stér-nō-glos'us), *n.*; pl. *sternoglossi* (-ī). [NL.: *<* Gr. *stérpov*, the breast-bone, + *γλῶσσα*, the tongue.] 1. A long retractor muscle of the tongue, as of the great ant-eater, *Myrmecophaga jubata*, attached behind to the sternum, and antagonizing the action of the protractor muscles, the genioglossus and stylohyoideus.—2. [*cap.*] In *entom.*, a genus of coleopterous insects.

sternohyoid (stér-nō-hi'oid), *a.* and *n.* [*<* NL. *sternohyoideus*, *<* *sternum*, q. v., + *hyoides*; see *hyoid*.] 1. *a.* Of or pertaining to the sternum and the hyoid bone.—**Sternohyoid muscle,** a ribbon-like muscle arising from the manubrium sterni and inner extremity of the clavicle, and inserted into the body of the hyoid bone. It is innervated from the ansa hypoglossal, and its action draws down or back the hyoid bone and larynx. See cut under *Muscle*¹.

II. *n.* The sternohyoid muscle.

sternohyoidean (stér'nō-hi-oi'dē-an), *a.* [*<* *sternohyoid* + *-an*.] Same as *sternohyoid*.

sternohyoideus (stér'nō-hi-oi'dē-us), *n.*; pl. *sternohyoidei* (-ī). [NL.: see *sternohyoid*.] The sternohyoid.

sternomastoid (stér-nō-mas'toid), *a.* and *n.* [*<* NL. *sternomastoides*, *<* *sternum*, q. v., + *mastoides*, q. v.] 1. *a.* Of or pertaining to the sternum and the mastoid process of the temporal bone.—**Sternomastoid artery.** (a) A superficial descending branch of the superior thyroid artery, which is distributed to the sternomastoid, platysma, and the muscles attached to the thyroid cartilage. (b) A small muscular branch of the occipital artery which supplies the sternoclidomastoid.—**Sternomastoid muscle.** (a) That portion of the sternoclidomastoid which arises from the sternum. (b) The entire sternoclidomastoid, without distinction.

II. *n.* The sternomastoid muscle.

sternomastoides (stér'nō-mas-toi'dē-us), *n.*; pl. *sternomastoides* (-ī). [NL.: see *sternomastoid*.] The sternomastoid muscle.

sternomaxillaris (stér-nō-mak-si-lā'ris), *n.*; pl. *sternomaxillares* (-rēz). [NL.: see *sternomaxillary*.] The sternomaxillary muscle.

sternomaxillary (stér-nō-mak'si-lā-ri), *a.* [*<* NL. *sternomaxillaris*, *<* *sternum*, q. v., + *L. maxilla*, jaw; see *maxillary*.] Pertaining to the sternum and the mandible; applied to the sternomastoid muscle when, as in the horse, its anterior end is fixed to the mandible.

sternon (stér'non), *n.* [NL.: see *sternum*.] Same as *sternum*. *Wiseman*, Surgery. [Rare.]

sternopagus (stér-nop'ā-gus), *n.*; pl. *sternopagi* (-jī). [NL.: *<* Gr. *stérpov*, breast, chest, + *πάγος*, that which is firmly set.] In *teratol.*, a double monster with union at the sternum.

Sternoptychidæ (stér-nop-tik'i-dē), *n. pl.* [NL.: *<* *Sternoptyx* (-ptych-) + *-idæ*.] A family of inosomous fishes, typified by the genus *Ster-*

noptyx. (a) In Günther's system it includes the typical *Sternoptychidæ* and other families. (b) In Gill's system, a family of inosomous fishes with a compressed ventradiform body, carinated contour, deeply and obliquely cleft or subventral mouth whose upper margin is constituted by the supramaxillaries as well as intermaxillaries, branchiostegal arch near and parallel with lower jaw, scapular arch with an inferior projection, and one or more of the neural spines abnormally developed and projecting above the back in advance of the dorsal fin. There are 3 genera and about 7 species, small deep-sea fishes of remarkable appearance and organization, representing 2 subfamilies, *Sternoptychinae* and *Argyropelecinae*. Also *Sternoptyges*, *Sternotidi*, and *Sternoptogoidæ*.

sternoptychoid (stér-nop'ti-koid), *a.* and *n.* [*<* *Sternoptyx* (-ptych-) + *-oid*.] 1. *a.* Of, or having characteristics of, the *Sternoptychidæ*.

II. *n.* A fish of the family *Sternoptychidæ*.

Sternoptyx (stér-nop'tiks), *n.* [NL. (Hermann, 1781), *<* Gr. *stérpov*, breast, chest, + *πτύξ*, a fold.] A genus of fishes, so named from the transverse folds on the pectoral or sternal region, typical of the *Sternoptychidæ*.

sternorhabdite (stér-nō-rab'dit), *n.* In *entom.*, one of the lowermost or sternal pair of rhabdites.

sternoscapular (stér-nō-skap'ū-lār), *a.* and *n.* [*<* NL. *sternoscapularis*, *<* *sternum*, q. v., + *L. scapula*, shoulder-blade; see *scapular*.] 1. *a.* Of or pertaining to the sternum and the scapula; as, a *sternoscapular* muscle.

II. *n.* The sternoscapularis.

sternoscapularis (stér-nō-skap-ū-lā'ris), *n.*; pl. *sternoscapulares* (-rēz). [NL.: see *sternoscapular*.] A muscle of many animals, connecting the sternum and the scapula, and forming with the serratus magnus and the levator anguli scapulae a sling in which the fore part of the body is supported upon the anterior extremities.

Sternothæridæ (stér-nō-thē'ri-dē), *n. pl.* [NL.: *<* *Sternothærus* + *-idæ*.] A family of pleurodirous tortoises, typified by the genus *Sternothærus*, to which different limits have been assigned. As generally understood, they have eleven plastral bones, mesoplastrals being distinct, and the skull has no bony temporal roof. The species are confined to Africa and Madagascar.

Sternothærus (stér-nō-thē'rūs), *n.* [NL. (Bell, 1825), *<* Gr. *stérpov*, breast, chest, + *θάρος*, the hinge of a door or gate.] A genus of tortoises, having a hinged plastron (whence the name).

sternothere (stér'nō-thēr), *n.* [*<* NL. *Sternothærus*, q. v.] An African turtle of the genus *Sternothærus*. P. L. *Seclater*.

sternothyroid (stér-nō-thi'roid), *a.* and *n.* [*<* NL. *sternothyroideus*, *<* *sternum*, q. v., + *thyroideus*.] 1. *a.* In *anat.*, of or pertaining to the sternum and the thyroid cartilage.—**Sternothyroid muscle,** a small muscle beneath the sternohyoid on either side, arising from the manubrium sterni, and inserted into the oblique line on the outer side of the thyroid cartilage; it is innervated from the ansa hypoglossal.

II. *n.* The sternothyroid muscle.

sternothyroideus (stér'nō-thi-roi'dē-us), *n.*; pl. *sternothyroidei* (-ī). [NL.: see *sternothyroid*.] The sternothyroid muscle.

sternotracheal (stér-nō-trā'kē-al), *a.* and *n.* [*<* NL. *sternotrachealis*, *<* *sternum*, q. v., + *trachea*; see *tracheal*.] 1. *a.* Of or pertaining to the sternum and the trachea; connecting the breast-bone and the windpipe, as a muscle.

II. *n.* The sternotrachealis.

sternotrachealis (stér-nō-trā'kē-ā'lis), *n.*; pl. *sternotracheales* (-lēz). [NL.: see *sternotracheal*.] A muscle which in birds passes from the sternum to the trachea or windpipe; one of a pair, or one pair of two pairs, of long slender muscular slips attaching the trachea to the sternum or the clavicle, or both.

sternotribe (stér'nō-trib), *a.* [*<* Gr. *stérpov*, the breast, + *τρίβειν*, rub.] In *bot.*, touching the breast, as of an insect; noting those zygomorphous flowers, especially adapted for cross-fertilization by external aid, in which the stamens and styles are so arranged as to strike the visiting insect on the breast. Compare *nototribe*, *pleurotribe*.

Sternoxi (stér-nok'si), *n. pl.* [NL., irreg. *<* Gr. *stérpov*, breast, + *ὄξις*, sharp.] In *entom.*, in Latreille's system, a section of *Serricornes*, containing two tribes, the buprestids and elaterids, having the prosternum produced in front and pointed behind; distinguished among the serricorn beetles from *Malocodermi* and *Axylotrugi*. It corresponds to the modern families *Buprestidæ* and *Elateridæ* in a broad sense. See cut under *Agrius*, *Buprestis*, *click-beetle*, *Pyrophorus*, and *wireworm*. Also *Sternoxia*.

sternoxian (stér-nok'si-an), *a.* and *n.* [*<* *Sternoxi* + *-an*.] Same as *sternoxine*.

sternoxine (stér-nok'sin), *a.* and *n.* [*< Sternoxi + -ine.*] **I. a.** Pertaining to the *Sternoxi*, or having their characters.

II. n. A member of the *Sternoxi*.

stern-port (stér'n-pòrt), *n.* A port or opening in the stern of a ship.

stern-post (stér'n-pòst), *n.* The principal piece of timber or iron in a vessel's stern-frame. Its lower end is tenoned into or riveted to the keel, and to it the rudder is hung and the transoms are bolted. See cuts under *rudder* and *stern²*.—**Stern-post knee**, a large knee which unites the stern-post and the keel. See cut under *stern²*.

stern-sheets (stér'n-shèts), *n. pl.* The space in a boat abaft the thwarts on which the rowers sit.

sternsman (stér'n-z'man), *n.* [*< stern's*, poss. of *stern²*, + *man.*] A steersman; a pilot.

Off from the sterns the sternsman diving fell,
And from his sinews flew his soul to hell.
Chapman, Odyssey, xli, 582.

sternson (stér'n'son), *n.* [Appar. *< stern²* + *-son* as in *keelson.*] Same as *stern-knee*.

Sternula (stér'nù-là), *n.* [NL. (Boie, 1822), *< Sterna* + dim. *-ula.*] The least terns, a genus of *Sternineæ* containing species of the smallest size, with moderately forked tail, a white frontal crescent in the black cap, and the bill yellow tipped with black; of cosmopolitan distribution. *S. minuta* inhabits Europe, Asia, etc.; *S. balaenarum* is South African; *S. nereis*, *S. placens*, and *S. melanacten* are Asiatic, East Indian, Australian, and Polynesian; *S. superciliosa* is South American. The common bird of the United States and middle America is *S. antillarum*.

American Least Tern (*Sternula antillarum*).

larum, which is very abundant along the Atlantic coast. It is 9 inches long and 20 in extent of wings, white with pearly-blue mantle over all the upper parts, a black cap, and the usual white nunnle.

sternule (stér'nùl), *n.* A sea-swallow of the genus *Sternula*.

sternum (stér'nùm), *n.*; *pl. sterna* (-nà) or *sternums* (-numz). [NL., also *sternon*, *< Gr. στέρνον*, the breast-bone.] **1.** The breast-bone of man and many other vertebrates; a bone or longitudinal series of bones in the middle line of the ventral aspect of the body, chiefly in its thoracic section, completing the thoracic wall by articulation with more or fewer ribs, or elements of the scapular arch, or both: theoretically, in Owen's system, the hemal spines of a series of vertebræ. (a) In man and most mammals the sternum consists of an anterior piece, the "handle," manubrium, or presternum; of several (in man four) segments or sternebrae constituting the body of the sternum, gladiolus, or mesosternum; and of a terminal piece, the xiphoid or ensiform cartilage, or xiphisternum. It articulates in man with the clavicles and with seven costal cartilages. The sternebrae of a mammalian sternum may remain perfectly distinct, or be ankylosed in one. (See cut under *mesosternum*.) In cetaceans and sirenians the sternum is much reduced, and may be a single bone or quite rudimentary. In the monotrematous mammals a small median bone called proosteon is developed in front of the

sternway (stér'n-wā), *n.* The movement of a ship backward, or with her stern foremost.—**To fetch sternway.** See *fetch*.

stern-wheel (stér'n-hwè'lér), *n.* A steam-vessel propelled by one wheel, similar to a side-wheel, mounted astern: used for navigating shallow or narrow waters.

Steropus (stér'ò-pus), *n.* [NL. (Megerle, 1821), appar. *< Gr. στρεπός*, solid, + *πόσις* = *E. foot*.] A genus of beetles of the family *Carabidæ*, containing about 100 species, widely distributed throughout Europe, northern Africa, Asia, Australia, and both Americas.

sterquilinous (stér-kwi-lí-nus), *a.* [*< L. sterquilinum, sterquilinum, sterquilinum, sterquilinum, a dunghill or dung-pit, < stercus, dung.*] Pertaining to a dunghill; hence, mean; dirty; paltry. *Howell, Letters, ii, 48.*

sterraster (ste-ras'tér), *n.* [*< Gr. στρεπός*, var. of *στρεπός*, solid, + *ἀστὴρ*, star.] A form of spongespicule characteristic of the family *Geodimidæ*. It is of the polyaxon type, having many rays coalesced for the greater part of their lengths, but ending in separate hooklets.

Sterrastro (ster-as-trò'si), *n. pl.* [NL.: see *sterraster*.] In Sollas's classification, a group of choriastidan tetractinellid sponges, in which sterrasters are present, usually in addition to simple asters, as in the families *Geodimidæ* and *Placospongiidæ*: distinguished from *Spirastro* and *Eustastro*.

sterrastrose (ste-ras'tròs), *a.* [*< NL. sterrastrosus, < sterraster, q. v.*] Provided with sterrasters, as a sponge; or of pertaining to the *Sterrastro*: distinguished from *spirastrose*.

sterret, *n.* A Middle English form of *start*.

sterrinck (stér'ingk), *n.* A seal of the genus *Stenorhynchus* (*Ogmorhinus*) or of the subfamily

Stenorhynchinae: as, the saw-toothed or crab-eating *sterrinck*, *Lobodon careinophagus*.

sterro-metal (stér'ò-met'al), *n.* An alloy of about three parts of copper with two of zinc, to which a small amount of iron and tin is added. This alloy is not in general use, but is said to be superior to gun-metal in tenacity, while at the same time less expensive. It has been used in Austria for the pumps of hydraulic presses.

stert¹ (stért), *v.* A dialectal spelling of *start*.

stert², *n.* A Middle English form of *start*.

stertet. [Inf. *sterte(n)*, pret. *sterte*, pp. *stert.*] An obsolete preterit of *start*.

stertor (stér'tor), *n.* [*< NL. stertor, < L. stertere, snore.*] A heavy snoring sound which accompanies inspiration in certain diseases. Compare *stertorous*.

stertorious (stér-tò-ri-us), *a.* [*< stertor + -ous.*] Same as *stertorous*. *Poe, Prose Tales, I, 125.*

stertoriousness (stér-tò-ri-us-nes), *n.* Same as *stertorousness*. *Poe, Prose Tales, I, 125.*

stertorous (stér'tò-rus), *a.* [*< stertor + -ous.*] Characterized by a deep snoring sound, such as characterizes the laborious breathing which frequently accompanies certain diseases, as apoplexy.

stertorously (stér'tò-rus-li), *adv.* In a stertorous manner.

stertorousness (stér'tò-rus-nes), *n.* The quality or state of being stertorous.

stertvet, *v.* A Middle English form of *starve*.

Stesichorean (ste-sik-ò-rè'an), *a.* [*< LL. Stesichorius, Stesichorius, < Gr. Στεσιχόριος, Stesichorean, < Στεσιχος, Stesichorus* (see def.).] Of or pertaining to the Greek lyric poet Stesichorus (Tisias) of Himera (about 632-550 B. C.), inventor of epodic composition; specifically, in *anc. pros.*, noting (a) a trochaic trimeter of the form — — — | — — — | — — —; (b) an encomiologic verse; (c) a line consisting of two dactylic tetrapodies, the last foot a spondee.

stet (stet), [*L., 3d pers. sing. pres. subj. act. of stare, stand: see stand.*] Let it (that is, the original) stand: a proof-reader's order to cancel an alteration previously made by him. It is indicated by putting a line of dots under what is crossed out, and writing "stet" in the margin. Abbreviated *st.*

stet (stet), *v. t.*; pret. and pp. *stetted*, ppr. *stetting*. To mark with the word "stet"; direct or cause to remain, after deletion, as printed; forbear to delete. [Colloq.]

stetch (stech), *n.* A ridge between two furrows, as in plowed land. [Prov. Eng.]

stetch (stech), *v. t.* [*< stetch, n.*] To form into ridges with a plow: followed by *up*. *Hall'sell.* [Prov. Eng.]

stethiæum (steth-i-è'um), *n.*; *pl. stethiæa* (-à). [NL., *< Gr. στήθαιος*, of the breast. *< στήθος*, the breast.] In *ornith.*, the entire anterior half of a bird: opposed to *uræum*. [Rare.]

stethidium (stè-thid'i-um), *n.*; *pl. stethidia* (-à). [NL., dim. of *Gr. στήθος*, the breast.] In *entom.*, the thorax. *Illiger.*

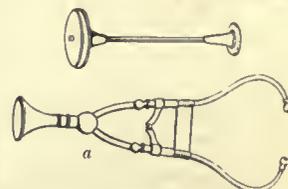

stethograph (steth-ò-gráf), *n.* [*< Gr. στήθος*, the breast, + *γράφειν*, write.] An instrument for recording the respiratory movements of the thorax. Also called *pneumograph*.

stethographic (steth-ò-gráf'ik), *a.* [*< stethograph + -ic.*] Of or pertaining to, or obtained by means of, the stethograph. *Nature, XLII, 581.*

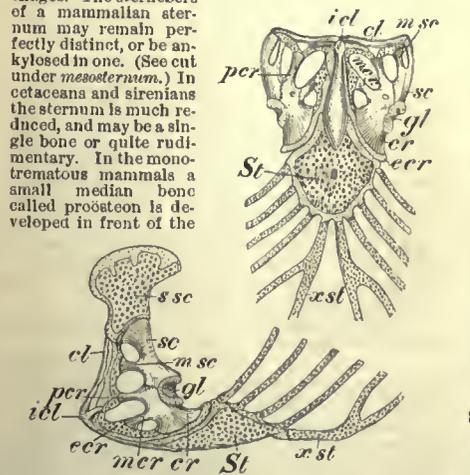

stethometer (stè-thom'e-tér), *n.* [*< Gr. στήθος*, the breast, + *μέτρον*, a measure.] An instrument for measuring the respiratory movements of the walls of the chest. In one form a cord or band is extended round the chest, and its extension, as the thorax is expanded, is shown by an index on a dial-plate.

Stevia (stē'vi-ä), *n.* [NL. (Cavanilles, 1797), named after *Estevé*, a Spanish scientist.] 1. A genus of composite plants, of the tribe *Eupatoriaceæ* and subtribe *Agerateæ*. It is characterized by crowded corymbose or loosely panicle heads with five or six nearly equal involucre bracts, five flowers, appendaged anthers, and a variable pappus of several scales or awns or of both mingled in the same head. Over one hundred species have been described, natives of the warmer parts of America from Buenos Ayres to Mexico, and especially numerous westward; absent in tropical Brazil and nearly so to Guiana. They are herbs or shrubs, often somewhat rigid, or rarely diffuse. Their leaves are usually opposite, three-nerved, and serrate, sometimes entire or three-parted. The flowers are white or purplish, forming slender heads. Several species are cultivated as border-plants in Europe. In the United States *S. compacta* and *S. serrata*, bearing a profusion of small white fragrant flowers, the latter flowering later, are grown under glass in great quantities for cutting and for winter use in houses. *S. serrata* and five other species extend within the United States into Arizona or Texas.

2. [L. c.] A plant of this genus.

5. In the *early church*, same as *econome* or *economus*.—6. A fiscal agent of certain bodies; specifically, in the Methodist Church, an officer having charge of the finances and certain other material interests of the church.—**Hospital steward**. See *hospital*.—**Lord high steward of England**, one of the former great officers of state; his chief functions were at an early date assumed by the Justiciar. This office was the inheritance of the Earls of Leicester, till forfeited by Simon de Montfort to Henry III., at the close of whose reign it was abolished as a permanent dignity. A lord high steward is now created only for particular occasions—namely, a coronation or the trial of a peer—the office to cease when the business requiring it is ended. In the former case the lord high steward is commissioned to settle matters of precedence, etc.; in the latter, to preside in the House of Lords.—**Lord steward of the household**, in England, one of the chief officers of the royal household. He is the head of the court called the Board of Green Cloth, which has the supervision of the household expenses and accounts and their payment, the purveyance of provisions, etc.; but his duties are practically performed by a permanent official called the master of the household. The lord steward is a peer and a member of the ministry.—**Steward, or high steward of Scotland**, an ancient officer of the crown of the highest dignity and trust. He had not only the administration of the crown revenues, but the chief oversight of all the affairs of the household, and the privilege of the first place in the army, next to the king, in battle.—**Steward of the Chiltern Hundreds**. See *Chiltern Hundreds*, under *hundred*.

stick¹ (stik), *v.*; pret. and pp. *stuck*, ppr. *stick-ing*. [A verb confused in form and meanings with *stick*², *stick*¹ being more prop. *steek* (as in dial. uses) or **steak* (after the analogy of *break*, *speak*, etc.); E. dial. *steek*, *Se. steik*, etc.; < ME. *stiken*, prop. *steken* (pret. *stak*, pp. *steken*, *i-steken*, *y-steke*, *stiken*, *stoken*; also, by conformity with *stick*², pret. *stiked*, *stikede*, pp. *stiked*), < AS. **stecan* (pret. **stæc*, pp. **steccon*), pierce, stab, = OS. *stekan* (pret. *stak*) = OFries. *steka* = MD. D. *steken* = MLG. LG. *steken* = OHG. *stechan*, *stehan*, MHG. G. *stechen* (pret. *stach*, pp. *gestochen*), pierce; not found in Scand. or Goth. (the Goth. form would be **stikan*; cf. Goth. *staks*, a mark, stigma, *stiks*, a point, a moment of time); Tent. \sqrt{stik} = L. \sqrt{stig} (in *instigare*, prick, instigate, **stingere* (in comp. *distingere*, distinguish, *extingere*, extinguish), *stimulus*, a prick, goad, *stilus*, a point, style, etc.) = Gr. \sqrt{stiy} (in *στίζω*, prick, *στίγμα*, a prick, mark, spot) = Skt. \sqrt{tij} for **stij*, be sharp. From this root are ult. E. *stick*², *stick*³, *stitch*, *steak*, *sting*, etc.,

and, through OF., *ticket, etiquette* (from a collateral Teut. root, *stak¹, stock¹, stang¹, stoke², stoker*, etc.); from the L. root are ult. E. *style¹, distinguish, extinguish, distinct, extinct, instinct, stimulate, stimulus, instigate, prestige*, etc. The verb *stick¹*, pierce, has been confused, partly in ME. and completely in mod. E., with its derivative *stick²*. The reg. mod. pret. of *stick¹* would be **stak* or **stake* (as in ME.), but the pret. has yielded to the influence of the pp., and, becoming **stoke*, appears in mod. E. with shortened vowel *stuck*, as also in the pp. (cf. *break*, pret. *broke*, now *broke*, pp. *broken*; *speak*, pret. *spake*, now *spoke*, pp. *spoken*—verbs phonetically parallel to *stick¹*.) I. *trans.* 1. To pierce or puncture with a pointed instrument, as a dagger, sword, or pin; pierce; stab.

spines of the back. They are small fishes, a few inches long, of 5 genera, *Gasterosteus*, *Pugosteus*, *Eucalia*, *Apeltes*, and *Spinachia*, but very pugnacious and rapacious, being especially destructive to the spawn and fry of many larger fishes. They inhabit fresh waters and sea-arms of northern Europe, Asia, and North America

to the number of nearly 20 species. The common two- or three-spined stickleback, banstickle, burnstickle, or tit-tiebat, is *G. aculeatus*, 4 inches long. Another is the nine- or ten-spined, *Pygosteus pungitius*. The fifteen-spined stickleback, or sea-stickleback, is *Spinachia vulgaris*, of the northerly coasts of Europe, a marina species, from 5 to 7 inches long, of very slender elongate form, with a tubular snout. They are among the most characteristic fishes of the northern hemisphere in the colder regions. Except in the breeding season, they live in shoals, and are sometimes numerous enough to become of commercial value for their oil or for manure. They are noted for the construction of elaborate nests which the male builds for the eggs, in which several females often or generally deposit their burden. The eggs are comparatively few, and while being hatched are assiduously guarded by the male. The local or popular synonyms of the sticklebacks are numerous, among them *prickleback*, *sprickleback*, *stickling*, and *sharpling*.

stigma¹ (stig'mā), *n.*; E. pl. *stigmata* (stig'māz), used chiefly in senses 1, 2, and 6; L. pl. *stigmata* (stig'mā-tā), used more or less in all the senses. [= F. *stigmat* = Sp. Pg. *estigma* = It. *stimate, stigma* = G. *stigma*, *< NL. stigma*, *< L. stigma*, *< Gr. στίγμα, pl. stigmata, a mark, esp. of a pointed instrument, a spot, brand, < στίξω, mark (with a point), prick, brand*: see *stick¹.*] 1. A mark made with a red-hot iron, formerly in many countries upon criminals as a badge of infamy; a brand impressed on slaves and others.

The Devil, however, does not imprint any stigma upon his new vassal, as in the later stories of witch-compacts.
Lovel, Among my Books, 1st ser., p. 95.

2. Any mark of infamy, slur, or disgrace which attaches to a person on account of evil conduct.

Happy is it for him that the blackest stigma that can be fastened upon him is that his robes were whiter than his brethren's.
Ep. Hall, Remains, Pref.

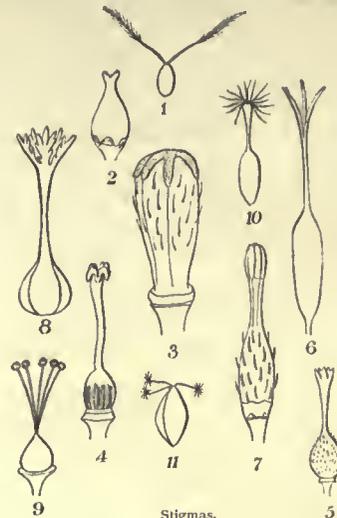

3. In *anat.* and *zool.*, a mark; a marked point or place: variously applied to marks of color, as a spot, and to many different pores or small holes. Specifically—(a) A birth-mark; a nevus. (b) The point or place on the surface of an ovary where a na-

ture Graafian follicle ruptures. (c) In *ornith.*, the place where the calyx or ovisac of the ovary ruptures to discharge an ovum into the oviduct. See *calyx, 3 (b)*. (d) In *entom.*: (1) The exterior orifice of a trachea; a spiracle. See cuts under *pulmonary, flesh-fly, sheep-bot, and Acarida.* (2) A chitinous spot or mark on the anterior margin of the forewings of many insects, formed by a special enlargement of a vein; a pterostigma. (e) In *Protozoa*, a spot of pigment; the so-called eye of an Infusorian. (f) In *Annelida*, one of the pores or openings of the segmental organs. (g) In *Hydrozoa*, the pore by which a pneumatocyst opens to the exterior. See cut under *Hydrozoa.* (h) In *Pharyngopneusta*, as an ascidian, one of the ciliated openings by which the cavity of the pharynx is placed in communication with that of the atrial canal. See cuts under *Appendicularia* and *Tunicata.*

4. A place or point on the skin which bleeds periodically or at irregular intervals during some mental states. The spontaneous appearance of stigmata was formerly regarded superstitiously.—5. *pl.* In the *Rom. Cath. Ch.*, marks said to have been supernaturally impressed upon the bodies of certain persons in imitation of the wounds on the crucified body of Christ.

In the life of St. Francis of Assisi we have the first example of the alleged miraculous infliction of stigmata.
Encyc. Brit., XXII. 549.

6. In *bot.*, a modified part of the style or, when that is wanting, of the surface of the ovary, which in impregnation receives the pollen. In

1. Of *Cynodon Dactylon*. 2. Of *Pitis Labrusca*. 3. Of *Papaver Argemone*. 4. Of *Gordonia pubescens*. 5. Of *Tilia Americana*. 6. Of *Silene Pennsylvanica*. 7. Of *Tribulus cistoides*. 8. Of *Dionaea muscipula*. 9. Of *Linum Virginianum*. 10. Of *Parietaria officinalis*. 11. Of *Rumex obtusifolius*.

the latter case the stigma is said to be sessile, as in the poppy and the tulip. When the style is present, the stigma may be terminal, occupying its summit, as in the plum and cherry, or lateral, running down its face in one or two lines, as in *Ranunculus*. Its form and appearance are very various. In many plants there is only one stigma, while in others there are two, three, five, or many, according to the number of styles or style-branches. The stigma is composed of delicate cellular tissue; its surface is destitute of true epidermis, and is usually moist. See *pistil* (with cut) and *pollen-tube*.

stigma² (stig'mā), *n.* [Gr. *στίγμα*, the ligature ς , an altered form, to bring in σ , of *σίγμα* or *σίγμα*, the letter ς , sigma: see *sigma*. The ligature was also called *σζ*.] In *Gr. gram.* and *palaeog.*, a ligature (ς) still sometimes used for σ (*st*), and also used as a numeral (6).

stigma-disk (stig'mā-disk), *n.* In *bot.*, a disk forming the seat of a stigma, sometimes produced by the fusion of two or more style-apices; as in *Asclepias*.

stigmatal (stig'māl), *a.* [*< stigma¹ + -al.*] Of or pertaining to a stigma; stigmatic. Specifically applied in entomology to a vein of the wings of some insects, whose modification makes a stigma (pterostigma).

Stigmara (stig-mā'ri-ā), *n.* [NL., *< L. stigma*, a mark (see *stigma¹*), + *-aria*.] A former genus of fossil plants, very abundant in many regions in the coal-measures, and especially in the under-clay, or clayey material (often mixed with more or less sand) by which most seams of coal are underlain; also [*l. e.*], a plant of this genus. These plants are cylindrical root-like bodies, usually starting from a center in four main branches, and afterward bifurcating irregularly, and extending sometimes to great distances. The bodies are covered with small round depressions or scars arranged in lozenge-shaped patterns, and each the point of attachment of a ribbon-shaped filament or rootlet. In some cases the stigmarias have been found attached to trunks of *Stigmaria*, in such a position as would naturally be occupied by the roots with reference to the stem of the plant or tree; hence they have been admitted by most paleobotanists to be in fact the roots of the widely distrib-

nted coal-plant called *Sigillaria*. Some who maintain this, however, admit that the relation of the stigmarias to the plant itself was peculiar; while others believe that they were floating stems, able under favorable conditions to play the part of roots. This opinion has for its support the fact that thick beds of under-clay are frequently found almost entirely made up of remains of stigmarias, while not even a fragment of *Sigillaria* can be found in the vicinity.

Stigmarian (stig-mā'ri-an), *a.* [*<* *Stigmara* + *-an*.] Relating to, containing, or consisting of *Stigmara*. *Geol. Mag.*, No. 267, p. 407.

stigmarioid (stig-mā'ri-oid), *a.* [*<* *Stigmara* + *-oid*.] In *bot.*, resembling *Stigmara*.

stigmata, *n.* Latin plural of *stigma*¹.

stigmatal (stig'ma-tal), *a.* [*<* *stigmata* + *-al*.] In *entom.*, pertaining to, near, or containing the stigmata or breathing-pores; stigmatic: as, the *stigmatal* line of a caterpillar.

stigmatic (stig-mat'ik, formerly also stig'ma-tik), *a.* and *n.* [*<* ML. *stigmaticus*, *<* L. *stigma*, *<* Gr. *στίγμα*, a mark, brand: see *stigma*¹.] **I.** *a.* Of or pertaining to a stigma, in any sense of that word. Specifically—(a) Having the character of a brand; ignominious.

Print in my face
The most stigmaticke title of a villainie.
Hegwood, Woman Killed with Kindness (Works, II. 110).
(b) Marked with or as with a stigma or brand; repulsive; abhorrent.

So the world is become ill favoured and shrewd-pated,
as politic in brain as it is stigmatic in limbs.
Rev. T. Adams, Works, I. 19.

(c) In *nat. hist.*, belonging to or having the character of a stigma; stigmat. *Huxley, Anat. Invert.*, p. 374. (d) In *bot.*, receptive of pollen: said of parts of the style which have the function without the form of a stigma, as the "silk" of maize. (e) Bearing the stigmata; stigmatized. See *stigma*¹, 5.—**Stigmatic cells**, in *bot.*, same as *lid-cells*.

II. *n.* 1. A person who is marked with stigmata, in the ecclesiastical or the pathological sense; a stigmatist.—2. A criminal who has been branded; one who bears upon his person the marks of infamy or punishment; a notorious profligate.

Convaide him to a justice, where one swors
He had been branded stigmatic before.
Philomythie (1616). (Nares.)

3. One on whom nature has set a mark of deformity.

But like a foul, mis-shapen stigmatic,
Mark'd by the destinies to be avoided.
Shak., 3 Hen. VI., ii. 2. 136.

stigmatical (stig-mat'i-ka), *a.* [*<* *stigmatic* + *-al*.] Same as *stigmatic*. *Shak.*, C. of E., iv. 2. 22.

stigmatically (stig-mat'i-ka-li), *adv.* With stigmata; with a mark of infamy or deformity.

If you spye any man that has a looke,
Stigmatically drawne, like to a furie,
(Able to fright) to such I'll give large pay.
Dekker, Wonder of a Kingdom, iii. i.

stigmatiferous (stig-ma-tif'e-rus), *a.* [*<* NL. *stigma*(t-), a stigma, + L. *ferre* = E. *bear*¹.] In *bot.*, stigma-bearing.

stigmatiform (stig'ma-ti-fōrm), *a.* [*<* NL. *stigma*(t-), stigma, + L. *forma*, form.] In *entom.*, having the structure or appearance of a stigma, spiracle, or breathing-pore; spiraculiform.

stigmatisation, *stigmatise*, etc. See *stigmatisation*, etc.

stigmatist (stig'ma-tist), *n.* [*<* Gr. *στίγμα*(τ-), a mark, a brand (see *stigma*¹), + *-ist*.] One on whom the stigmata, or marks of Christ's wounds, are said to be supernaturally impressed.

stigmatization (stig'ma-ti-zā'shon), *n.* [*<* *stigmatize* + *-ation*.] 1. The act of stigmatizing, or the condition of being stigmatized; specifically, the supposed miraculous impression of the marks of Christ's wounds on the bodies of certain persons.—2. The act, process, or result of producing, as by hypnotic suggestion, on the surface of the body points or lines which bleed. [Recent.]

Also spelled *stigmatisation*.
stigmatize (stig'ma-tiz), *v. t.*; pret. and pp. *stigmatized*, ppr. *stigmatizing*. [*<* F. *stigmatiser* = Sp. *estigmatizare* = Pg. *estigmatizar* = It. *stigmatizzare*, *<* ML. *stigmatizare*, *<* Gr. *στίγματιζεν*, mark, brand, *<* *στίγμα*(τ-), a mark, brand: see *stigma*¹.] 1. To mark with a stigma or brand.

They had more need some of them . . . to have their cheeks stigmatized with a hot iron.
Burton, Anat. of Mel., p. 474.

2. To set a mark of disgrace on; disgrace with some mark or term of reproach or infamy.

It was thought proper to restrain it [comedy] within bounds by a law enacting that no person should be stigmatized under his real name.
Goldsmith, Essay, Origin of Poetry.

3. To produce red points, sometimes bleeding, in or on: as, a person or the skin stigmatized by hypnotic suggestion. [Recent.]

Also spelled *stigmatise*.
stigmatized (stig'ma-tīzd), *p. a.* 1. Marked with a stigma; branded; specifically, marked with the stigmata of the passion.—2. Resembling stigmata: as, the stigmatized dots on the skin in measles.

Also spelled *stigmatised*.

Still.

a, alembic; b, hot-water jacket; c, head; d, rostrum or beak, e, e, warm; f, refrigerator; g, funnel-tube for supplying cold water to the refrigerator; h, h, tubes for conveying away the warm upper stratum of water, which is heated by the condensation of vapor into the worm.

containing them, and recondensing them into the liquid form. It assumes many forms, according to the purposes for which it is used; but it consists essentially of two parts, a vessel in which the substance to be distilled is heated, and one in which the vapor is cooled and condensed. The most important use of stills is for the distillation of spirituous liquors. See *distillation*, and cut under *petroleum-still*.

2. A house or works in which liquors are distilled; a distillery. *S. Judd*, *Margaret*, l. 15.—

3. In *bleaching*, a rectangular vessel made of slabs of freestone or flagstone with rabbeted and stemmed joints held together by long bolts, and provided with a steam-chamber below, and with a manhole for introducing the materials for making chlorid of manganese solution, called *still-liquor*.

stillage (stil'āj), *n.* [Origin uncertain.] A stout support, in the nature of a stool, for keeping something from coming in contact with the floor of a shop, factory, bleachery, etc. Specifically—(a) In *bleaching*, a stout low stool or bench to keep textiles or yarns from the floor, and to permit the moisture to drain out of them. (b) In the packing of cloths and other goods for shipment, etc., a stool or bench for supporting the goods taken out of a stock to be packed. Some

stillages are made so that they can be tilted, and allow articles placed on them to slide off into packing-boxes, etc.

still-hunt (stil'hunt), *v.* [*< still-hunt*: see under *hunt*.] *I. trans.* To hunt stealthily; stalk; lie in ambush for.

The only way to get one [a grizzly] is to put on moccasins and still-hunt it in its own haunts.
T. Roosevelt, *Hunting Trips*, p. 327.

The best time to still-hunt deer is just before sunset, when they come down from the hills to drink.
Sportman's Gazetteer, p. 81.

II. *intrans.* To hunt without making a noise; pursue game stealthily or under cover.

The best way to kill white-tail is to still-hunt carefully through their haunts at dusk.
T. Roosevelt, *Hunting Trips*, p. 118.

An inferior sort of still-hunting, as practised, for instance, on Norwegian islands for the large red-deer.
Fortnightly Rev., N. S., XLI. 394.

still-hunter (stil'hun'tēr), *n.* One who pursues game stealthily and without noise; one who hunts from ambush or under cover; a stalker. *W. T. Hornaday*, *Smithsonian Report*, 1887, ii. 430.

Stilliard¹, *n.* See *Steelyard*¹.

stilliard², *n.* An old spelling of *steelyard*².

stillicide (stil'i-sid), *n.* [*< F. stillicide*, < *L. stillicidium, stillicidium*, a falling of drops, dripping, falling rain, < *stilla*, a drop (see *still²*), + *cadere*, fall.] 1. t. A continual falling or succession of drops.

The stillicides of water, . . . if there be water enough to follow, will draw themselves into a small thread, because they will not discontinue; but if there be no remedy, then they cast themselves into round drops.
Bacon, *Nat. Hist.*, § 24.

2. In *Rom. law*: (a) The right to have the rain from one's roof drop on another's land or roof.

(b) The right to refuse to allow the rain from another's roof to drop on one's own land or roof.

stilliciduous (stil-i-sid'i-us), *a.* [*< stillicide + -i-ous*.] Falling in drops. *Sir T. Browne*, *Vulg. Err.*, ii. 1.

stillicidium (stil-i-sid'i-um), *n.* [*L.*: see *stillicide*.] A morbid dripping or trickling.—*Stillicidium lacrymarum*, the trickling of tears down over the lower lids from obstruction of the lacrymal passages.—*Stillicidium urinæ*, a discharge of urine in drops. + *forma*, form.] Drop-shaped.

stilling (stil'ing), *n.* [Also *stillion*; appar. a variant of *E. dial. stelling*, a shed for cattle (= *LG. stelling* = *G. stellung*, a stand, scaffold; cf. *Ice. stilling*, management, < *steil* + *-ing*.] 1. A stand for casks.—2. In a brewery, a stand on which the rounds or cleansing-vats are placed in a trough, which serves to carry off the over-

flowing yeast.—3. A stand on which pottery is placed in the drying-kiln preparatory to firing.

Stillingia (sti-liu'ji-ā), *n.* [*NL.* (Linnaeus, 1767), named after Benjamin Stillingfleet, an English botanist who published botanical papers in 1750.] 1. A genus of apetalous plants, of the order *Euphorbiaceae*, tribe *Crotonaceae*, and subtribe *Hippomaneae*. It is characterized by monocious flowers in terminal bracted spikes, each bract bearing two glands—the male flowers having a small calyx with two or three broad shallow lobes, and two or rarely three free exerted stamens, and the female flowers bearing an ovary of two or three cells, which terminate in undivided styles united at the base, and ripen into two-valved carpels which on falling leave the receptacle armed with three hard spreading horns. There are about 13 species, natives of North and South America, the Mascarene Islands, and the Islands of the Pacific. They are mostly smooth shrubs, usually with alternate short-petioled leaves and a few small female flowers solitary under the lower bracts of the dense sterile spike, which bears usually three male flowers under each of the short and broad upper bracts. One species, *S. sylvatica*, occurs from Virginia southward, for which see *queen's-delight* and *silver-leaf*.

2. [*I. c.*] A plant of the above genus, especially the officinal *S. sylvatica*.

stillion (stil'yōn), *n.* Same as *stilling*. *G. Scamell*, *Breweries and Maltings*, p. 92.

stillitory, *n.* An erroneous spelling of *stillatory*.

still-life, *n.* See *still life*, under *still*¹.

still-liquor (stil'lik'or), *n.* Bleaching-liquor prepared by the reaction of hydrochloric acid upon manganese binoxid in large stone chambers called stills (whence the name). It is a solution of manganese chlorid.

stillness (stil'nes), *n.* [*< ME. stillnesse*, < *AS. stillnes, stillnes* (= *OFries. stillnese, stillnisse* = *MLG. stillnisc* = *OHG. stillnissi, stillnessi*, *MHG. stillnisse, stillnesse*), < *stille*, still: see *still¹* and *-ness*.] The state or character of being still. (a) Rest; motionlessness; calmness: as, the stillness of the air or of the sea. (b) Noiselessness; quiet; silence: as, the stillness of the night. (c) Freedom from agitation or excitement: as, the stillness of the passions. (d) Habitual silence; taciturnity.

still-peering† (stil'pēr'ing), *a.* Appearing still.

O you leaden messengers,
That ride upon the violent speed of fire,
Fly with false aim; move the still-peering air,
That slings with piercing.
Shak., *All's Well*, iii. 2. 113.

[A doubtful word, by some read *still-peering*.]

still-room (stil'rōm), *n.* 1. An apartment for distilling; a domestic laboratory.—2. A room connected with the kitchen, where coffee, tea, and the like are made, and the finer articles supplied to the table are made, stored, and prepared for use. [*Eng.*]

still-stand (stil'stand), *n.* A standstill; a halt; a stop. [*Rare.*]

The tide swell'd up unto his height,
That makes a still-stand, running neither way.
Shak., 2 *Hen. IV.*, ii. 3. 64.

still-watcher (stil'woch'ēr), *n.* In *distilling*, a reservoir in which the density of the liquid given over is tested by a hydrometer in order to follow the progress of the distillation.

stilly (stil'i), *a.* [*< ME. stillich*, < *AS. stillie* (= *MLG. stillich, stillik*); as *still¹ + -ly¹*.] Still; quiet.

Of in the stilly night,
Ere Slumber's chain has bound me,
Fond Memory brings the light
Of other days around me.
Moore, *Irish Melodies*.

stilly (stil'i), *adv.* [*< ME. stilliche*, < *AS. stillicc* (= *MD. stillick*, also *stillekens* = *MLG. stilliken, stillken*); as *still¹ + -ly²*.] 1. Silently; without uproar.

And he a-roos as stilliche as he myght.
Merlin (*E. E. T. S.*), ii. 180.

The hum of either army stilly sounds.
Shak., *Hen. V.*, lv., *Prolog.*, l. 5.

2. Calmly; quietly; without agitation.

He takes his own, and stilly goes his way.
Dr. H. More, *Cupid's Conflict*, st. 47.

stilogonidium (sti'lō-gō-nid'i-um), *n.*; pl. *stilogonidia* (-ā). [*NL.*, < *L. stilus*, a pointed instrument, + *NL. gonidium*, q. v.] In *bot.*, a gonidium cut off or separated from the end of a sterigma.

stilp (stilp), *v. i.* [With variation of vowel, < *stulp*, a prop: see *stulp*.] 1. To stalk; take long, high steps in walking.—2. To go on stilts or crutches. [*Scotch.*]

stilpers (stil'pērz), *n.* pl. [*< stilp + -er¹*.] Stilts; crutches. [*Scotch.*]

stilpnomelane (stilp-nom'e-lān), *n.* [*< Gr. στίλπνος*, glittering (< *στίλβω*, glitter, glisten), + *μέλας* (*melas*), black, dark.] A black, greenish-black, or bronze-colored mineral occurring in foliated plates or thin scales sometimes

forming a velvety coating (the variety chalco-dite), also in fibrous forms. It is essentially a hydrous silicate of iron.

stilpnosiderite (stilp-nō-sid'ē-rīt), *n.* [*Gr.* *στῆλπνός*, glittering, + *E. siderite*.] Same as *limonite*.

stilt (stilt), *n.* [Early mod. *E.* also *stytte*; < *ME. stiltte, stytte*, < *Sw. styllta*, a prop, stilt, = *Dan. stytte* (cf. *Norw. stylltra*), a stilt, = *D. stelt*, a stilt, wooden leg, = *MLG. LG. stelte* = *OHG. stelza*, *MHG. G. stelze*, a prop, crutch; perhaps akin to *stale², stalk²*.] 1†. A prop used in walking; a crutch.

Verely she was heled, and left her *styttes* thore,
And on her fete went home resonably well.

Joseph of Arimathe (E. E. T. S.), p. 47.

I have laughed a-good to see the cripples
Go limping home to Christendom on *stills*.

Martocce, *Jew of Malta*, ff. 3. 215.

2. One of two props or poles, each having a step or stirrup at some distance from the lower end, by means of which one may walk with the feet raised from the ground, and with a longer stride: used for crossing sandy or marshy places, streams, etc., and by children for amusement. Stills were sometimes merely props fastened under the feet, as if very high-heeled shoes. Those used by children are slender poles about 6 feet long, with steps or stirrups 12 inches or more from one end; the longer end of the pole can be held by the hand or passed behind the arm. In a modified form the upper end of the pole is much shorter, and is fitted with a cross-handle which can be grasped by the hand, or is strapped to the leg below the knee. Stills are used by the shepherds of the marshy Landes in southwestern France.

The doubtful fords and passages to try

Drayton, *Barons' Wars*, l. 43.

3. In *hydraul. engin.*, one of a set of piles forming the back for the sheet-piling of a starling. *E. H. Knight*.—4. The handle of a plow. *Scott*, *Kenilworth*, xv.—5. In *ceram.*, a support, generally of iron, used to hold a piece of pottery in the kiln, to allow the fire free access to the bottom of the piece. Also called *cockspur* and *spur* (which see).—6. [Abbr. of *stilt-bird*.] In *ornith.*, any bird of the genus *Himantopus*: so called from the extremely long, slender legs. The bill is likewise very slender, straight, and sharp. The body is slender, the neck long, the wings are long and pointed, and the tail is short. The stilt is a wading-bird living in marshes. They are white below, with most of the upper parts glossy-black, the bill is black, and the legs are of some bright tint. They are very generally distributed over the world, nest on the ground, and lay four dark-colored, heavily spotted eggs. Their food consists of small soft animals found in the mud and water, which they explore with their probe-like bills. The common stilt of the Old World is *H. candidus* or *melanopectus*; that of the United States is *H. mexicanus*, a rare bird in the eastern regions of the coun-

try, but abundant in some parts of the west. It is about 15 inches long, and 30 in extent of wings; the bill 2½ inches; the legs, from the feathers to the toes, 7½ inches. There are only three toes, which are semipalmated. This species is locally called *longshanks* and *lawyer*. The South American stilt is *H. nigricollis*; the Australian, *H. leucocephalus*. A related bird of Australia to which the name extends is *Cladorhynchus pectoralis*, having the toes webbed like those of the avocet.—**Stilt prolegs**, in *entom.*, the prolegs of a caterpillar when they are unusually long, so that the body over them is much raised above the surface on which the insect walks.

stilt (stilt), *v. t.* [*Stilt*, *n.*] To raise above the ordinary or normal position or surface, as if by the use of stilts.

The fluted columns [of San Moisé] are *stilted* upon pedestals, and their lines are broken by the bands which encircle them like broad barrel-hoops.

Howells, *Venetian Life*, xviii.

stilt-bird (stilt'bērd), *n.* 1. The stilt or stilt-plover.—2†. *pl.* Wading birds collectively; the grallatorial birds, constituting the old order *Grallæ* or *Grallatores*. Also called *stilt-walkers*.

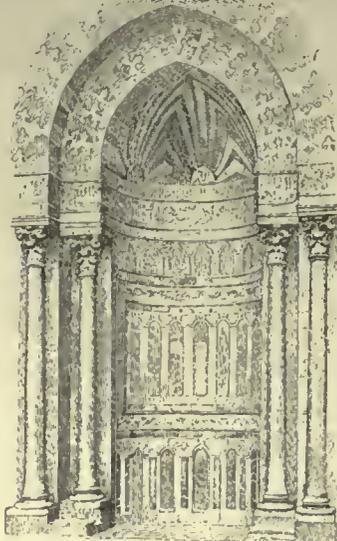

stilted (stil'ted), *p. a.* Elevated, as if on stilts; hence, pompous; inflated; formal; stiff and

bombastic; said especially of language: as, a *stilted* mode of expression; a *stilted* style.

His earliest verses have a *stilted*, academic flavor.

stiltedness (stil'ted-ness), *n.* Stilted character; pompous stiffness. *Athenæum*, No. 3195, p. 94.

stiltify (stil'ti-fī), *v. t.*; pret. and pp. *stiltified*, ppr. *stiltifying*. [*Stilt* + *-i-fy*.] To raise as on stilts; elevate or prop up, as with stilts. [Rare.]

Skinny dwarfs ye are, cushioned and *stiltified* into great fat giants.

C. Reade, *Cloister and Hearth*, lxxv.

Stilton cheese. See *cheese* 1.

stilt-petrel (stil'tet'rel), *n.* A stormy petrel of the genus *Fregatta*: so called from the length of the legs. *F. grallaria* is an example.

stilt-plover (stil'tpluv'ēr), *n.* The stilt or stilt-bird: so called because it has only three toes on each foot, like a plover.

stilt-sandpiper (stil'tsand'pī-pēr), *n.* A long-legged sandpiper of America, *Micropalama himantopus*. The adult in summer is blackish above, with each feather edged and tipped with white, or tawny and bay; the under parts are mixed reddish, whitish, and black in streaks on the throat, elsewhere in bars; the ear-coverts are chestnut, the upper tail-coverts white with dusky bars, and the bill and feet greenish-black. The length is 8½ inches, the extent 16½. The young and the adults in winter are quite different, being ashy-gray above, with little or no trace of the reddish and black; a line over the eye and the whole under parts are white; and the jugulum and sides are suffused with ashy, and streaked with dusky. The bird inhabits North America, breeding in high latitudes, and migrating in the fall to Central and South America. See cut under *Micropalama*.

stilt-walker (stil'twā'kēr), *n.* 1. One who walks on stilts. *Amer. Nat.*, Nov., 1889, p. 943.—2. A grallatorial bird; a stilt-bird.

stilty (stil'ti), *a.* [*Stilt* + *-y*.] Inflated; pompous; stilted. *Quarterly Rev.*

stilus, *n.* See *stylus*.

Stilwell act. See *act*.

stime (stim), *n.* [Also *styme*; < *ME. stime*; a var. of *steem, stem*, a ray of light (see *steam*).] It is otherwise explained as perhaps a var., due to some interference, of *shim*, < *AS. scima*, a light, brightness, a gleam of light (see *shim*¹, *shime*).] A ray of light; a glimmer; a glimpse: not now used except in negative expressions. [Now only Scotch.]

Ne he lwis might se a *stime*.

stimulant (stim'ū-lant), *a.* and *n.* [= *F. stimulant* = *Sp. Pg. estimulante* = *It. stimolante*, < *L. stimulan(t)-s*, ppr. of *stimulare*, prick, urge, stimulate: see *stimulate*.] **I. a.** Stimulating; serving to stimulate, incite, or provoke; specifically, in *physiol.*, temporarily quickening some functional or trophic process.—**Stimulant balsam**, a mixture of oil of turpentine 8 parts and flour mustard 1 part.

II. n. 1. That which stimulates, provokes, or incites; a stimulus; a spur.

The *stimulant* used to attract at first must be not only continued, but heightened to keep up the attraction.

Mrs. H. More, *Cælebs*, xxv.

2. In *physiol.*, an agent which temporarily quickens some functional or trophic process. It may act directly on the tissue concerned, or may excite the nerves which effect the process or paralyze the nerves which inhibit it. Stimulants comprise certain medicinal substances, as ammonia, alcohol, ethylic ether, as well as physical conditions, such as warmth, cold, light, or electricity, esthetic effects, as music and other products of art, and emotions of various kinds, as joy, hope, etc. Stimulants have been divided into *general* and *topical*, according as they affect directly or indirectly the whole system or only a particular part.—**Diffusible stimulants**, those stimulants, as ether or ammonia, which have a speedy and quickly transient effect.

stimulate (stim'ū-lāt), *v.*; pret. and pp. *stimulated*, ppr. *stimulating*. [*L. stimulare*, pp. of *stimulare* (> *It. stimolare* = *Sp. Pg. estimular* = *F. stimuler*), prick, urge, stimulate, < *stimulus*, a goad: see *stimulus*.] **I. trans.** 1. To prick; goad; excite, rouse, or animate to action or more vigorous exertion by some effective motive or by persuasion; spur on; incite.

The general must *stimulate* the mind of his soldiers to the perception that they are men, and the enemy is no more.

Emerson, *Courage*.

Mystery in nature *stimulates* inquiry; why should it not do so in religion? *J. F. Clarke*, *Self-Culture*, p. 149.

2. In *physiol.*, to quicken temporarily some functional or trophic process in.—3. Specifically, to affect by the use of intoxicating drinks.

We were all slightly *stimulated* [with arrack] before a move was made toward the dinner table.

O'Donovan, *Merv*, xl.

Stimulating bath, a bath containing aromatic astringent or tonic ingredients.—**Syn. I.** To encourage, impel, urge, instigate, provoke, whet, foment, kindle, stir up.

II. intrans. To act as a stimulus.

Urg'd by the *stimulating* goad,

I drag the cumbrous waggon's load.

Gay, *To a Poor Man*, l. 87.

stimulation (stim'ū-lā'shqn), *n.* [= *F. stimulation* = *Sp. estimulacion* = *Pg. estimulação* = *It. stimolazione*, < *L. stimulatō(n)-s*, a pricking, incitement, < *stimulare*, prick, goad, stimulate: see *stimulate*.] 1. The act of stimulating, or the state of being stimulated; urging; encouragement; incitement; increased or quickened action or activity.

The providential *stimulations* and excitations of the conscience.

Bp. Ward, *Sermon*, Jan. 30, 1674. (*Latham*.)

A certain length of *stimulation* seems demanded by the inertia of the nerve-substance.

W. James, *Prin. of Psychol.*, I. 648.

2. In *med.*, the act or method of stimulating; the condition of being stimulated; the effect of the use of stimulants.

The latent morbid predisposition [to delirium tremens] engendered in the nervous system by prolonged and abnormal *stimulation* is evoked or brought into activity by the depressing influence of the shock [of a corporeal injury].

J. M. Carnochan, *Operative Surgery*, p. 153.

= *Syn.* 1. See *stimulate*.

stimulative (stim'ū-lā-tiv), *a.* and *n.* [= *It. stimolativo*; as *stimulate* + *-ive*.] **I. a.** Having the quality of stimulating; tending to stimulate.

II. n. That which stimulates; that which rouses into more vigorous action; a stimulant or incentive.

Then there are so many *stimulatives* to such a spirit as mine in this affair, heides love!

Richardson, *Clarissa Harlowe*, I. 225. (*Davies*.)

stimulator (stim'ū-lā-tor), *n.* [= *F. stimulateur* = *It. stimolatore*, < *LL. stimulator*, an instigator, < *L. stimulare*, prick, goad: see *stimulate*.] One who or that which stimulates.

stimulatress (stim'ū-lā-tres), *n.* [= *F. stimulateurice* = *It. stimolatrice*, < *L. stimulatricis*, fem. of (*LL.*) *stimulator*: see *stimulator*.] A woman who stimulates or animates.

stimulose (stim'ū-lōs), *a.* [*Stimuleux* = *It. stimoloso*, < *L. stimulosus*, abounding with prickles, < *stimulus*, a prick, goad, prickle: see *stimulus*.] In *bot.*, covered with stings or stimuli.

stimulus (stim'ū-lus), *n.*; pl. *stimuli* (-lī). [= *F. stimulus*, *stimule* = *Sp. estímulo* = *Pg. estímulo* = *It. stimolo*, *stimulo*, < *L. stimulus*, a goad, a pointed stake, fig. a sting, pang, an incitement, spur, stimulus, < *√ stig-*, also in *instigare*, set on, incite, urge, = *Gr. στίγειν*, pierce, prick, = *AS. *stecan*, pierce: see *stick* 1.] 1. Literally, a goad.—2. In *bot.*, a sting; as, the nettle is furnished with *stimuli*.—3. The point at the end of a crozier, pastoral staff, precentor's staff, or the like. In the staves of ecclesiastical authority the stimulus or point is regarded as the emblem of judgment or punishment.

4. Something that excites or rouses the mind or spirits; something that incites to action or exertion; an incitement or incentive.

We went to dine last Thursday with Mr. —, a neighboring clergyman, a haunch of venison being the *stimulus* to the invitation. *Sydney Smith*, in *Lady Holland*, vi.

The infinitely complex organizations of commerce have grown up under the *stimulus* of certain desires existing in each of us. *H. Spencer*, *Social Statics*, p. 28.

5. In *physiol.*, something which evokes some functional or trophic reaction in the tissues on which it acts.

Light does not act as a *stimulus* to the nervous substance, either fibres or cells, unless it have an intensity which is nearly deadly to that substance.

G. T. Ladd, *Physiol. Psychology*, p. 179.

Absolute stimulus difference, in *psychophysics*, the actual difference in strength between two stimuli.—**Relative stimulus difference**, in *psychophysics*, the ratio of the difference between two stimuli to their mean.—**Stimulus receptivity**, in *psychophysics*, the power of appreciating stimuli, measured by the least intensity of stimulus giving the greatest conscious effect.—**Stimulus scope**, in *psychophysics*, the difference between the measure of stimulus receptivity and the stimulus threshold.—**Stimulus susceptibility**, in *psychophysics*, the power of perceiving a stimulus, so that the greater the stimulus susceptibility the lower the stimulus threshold.—**Stimulus threshold**, in *psychophysics*, the minimum amount of stimulus required to produce a conscious effect.

stinch, *v. t.* [A var. of *stanch*.] To stanch.

First, the blood must be *stunched*, and howe was that done? *Bretton*, *Miseries of Maullilla*, p. 39. (*Davies*.)

stine (*stin*), *n.* A dialectal form of *styan*.

sting¹ (*sting*), *v.*; pret. and pp. *stung* (pret. formerly *stang*), ppr. *stinging*. [ME. *stingen* (pret. *stang*, *stong*, *stonge*, pp. *stungen*, *stongen*, *stongen*, *y-stongen*, *y-stonge*), < AS. *stingan* (pret. *stang*, pp. *stungen*) = Icel. *stinga* = Sw. *stinga* = Dan. *stinge*; cf. Goth. *us-stiggan*, push, push out, = L. **stingere*, quench: see *stick*¹, *v.*] **I. trans.**

14. To pierce; prick; puncture.

To the hert with a sharpe spere ye hym *stonge*, & with .iii. nayles made hym shede his gittles blode. *Joseph of Arimathe* (E. E. T. S.), p. 33.

Thei ben y-sewed with whigt silk, . . . *Y-stongen* with stiches. *Piers Plowman's Crede* (E. E. T. S.), l. 553.

24. To impale.

He *stingeth* him upon his speres orde. *Chaucer*, *Good Women*, l. 645.

3. To prick severely; give acute pain to by piercing with a sharp point; especially, to pierce and wound with any sharp-pointed weapon supplied with acrid or poisonous fluid, as a fang or sting, with which certain animals and plants are furnished; bite; urticate: as, to be *stung* by a bee, a scorpion, or a nettle, or by a serpent or a sea-nettle.

What, wouldst thou have a serpent *sting* thee twice? *Shak.*, *M. of V.*, iv. l. 60.

I often have been *stung* too with curst bees. *E. Jonson*, *Sad Shepherd*, ii. 2.

4. To pain acutely, as if with a sting; goad: as, a conscience *stung* with remorse.

Unhappy Psyche, *stung* by these reproaches, Profoundly feels the wound dive in her heart. *J. Beaumont*, *Psyche*, v. 14.

5. To stimulate; goad.

She was trying to task herself up to her duty. At last she *stung* herself into its performance by a suspicion. *Mrs. Gaskell*, *North and South*, xxxviii.

II. intrans. 1. To have a sting; be capable of wounding with a sting; use the sting: literally or figuratively: as, horns *sting*; epigrams often *sting*; a *stinging* blow.

At the last it biteth like a serpent, and *stingeth* like an adder. *Prov.* xxiii. 32.

2. To give pain or smart; be sharply painful; smart: as, the wound *stung* for an hour.

Under the dust, beneath the grass, Deep in dim death, where no thought *stings*. *A. C. Swinburne*, *Félice*.

sting¹ (*sting*), *n.* [= Icel. *stingi*, a pin, a stitch in the side, = Sw. *sting*, a sting (in sense 4), = Dan. *sting*, stitch; from the verb.] 1. A sharp-pointed organ of certain insects and other animals, capable of inflicting by puncture a painful wound.

I bring no tales nor flatteries; in my tongue, sir, I carry no fork'd *stings*. *Fletcher*, *Loyal Subject*, ii. 1.

In *zool.*, specifically—(a) The modified ovipositor of the females of certain insects, as bees, wasps, hornets, and many other *Hymenoptera*; an aculeus; a terebra. This weapon is generally so constructed as to inflict a poisoned as well as a punctured wound, which may become inflamed and very painful or even dangerous; an irritating fluid is injected through the tubular sting when the thrust is given. See cut under *Hymenoptera*. (b) The mouth-parts of various insects which are formed for piercing and sucking, as in the mosquito and other gnats or midges, gadflies, fleas, bedbugs, etc. In these cases the wound is often poisoned. See cuts under *gnat* and *mosquito*. (c) A stinging hair or spine of the larvae of various moths, or such organs collectively. See cuts under *bag-moth*, *saddleback*, and *stinging*. (d) The fangs of spiders, with which these creatures bite—in some cases, as of the katipo or malmignat, inflicting a very serious or even fatal wound. See

cuts under *chelicera* and *jalz*. (e) The curved or claw-like telson of the tail of a scorpion, inflicting a serious poisoned wound. See cuts under *scorpion* and *Scorpionida*. (f) One of the feet or claws of centipeds, which, in the case of some of the larger kinds, of tropical countries, inflict painful and dangerous wounds. (g) The poison-fang or venom-tooth of a venomous serpent; also, in popular misapprehension, the harmless forked tongue of any serpent. See cuts under *Crotalus* and *snake*. (h) A fin-spine of some fishes, capable of wounding. In a few cases such spines are connected with a venom-gland whence poison is injected; in others, as the tall-spines of sting-rays, the large bony sting, several inches long and sometimes jagged, is smeared with a substance which may cause a wound to fester. See cuts under *stone-cat*, *sting-ray*. (i) An urticating organ, or such organs collectively, of the jellyfishes, sea-nettles, or other coelenterates. See cut under *nematocyst*.

2. In *bot.*, a sort of sharp-pointed hollow hair, seated upon or connected with a gland which secretes an acrid or poisonous fluid, which, when introduced under the skin, produces a stinging pain. stingless (*sting'les*), *a.* [< *sting*¹ + *-less*.] Having no sting, as an insect. *Shak.*, *J. C.*, v. 1. 35.—**Stingless nettle**, the richweed or clearweed, *Pilea pumila*. See *clearweed*.

sting-moth (*sting'môth*), *n.* The Australian *Doratifera vulnerans*, whose larva is capable of inflicting a stinging wound.

stingo (*sting'gō*), *n.* [With a simulated It. or Sp. or L. termination, < *sting*¹: in allusion to its sharp taste.] Strong malt liquor. [Colloq.]

Come, let 's in and drink a cup of *stingo*. *Randolph*, *Hey for Honesty*, ii. 6.

sting-ray (*sting'rā*), *n.* [Also, corruptly, *stingaree*, *stingoree*; < *sting*¹ + *ray*².] A batoid fish of the family *Trygonidae*, as *Trygon* (or *Dasybatis*)

pastinact, having a long, smooth, flexible, lash-like tail armed near the base with a bony spine several inches long, sharp at the point, and serrated along the sides. It is capable of inflicting a severe and very painful wound, which appears to be poisoned by the slime with which the sting is covered. There are many species of sting-rays, in some of which there are two or three spines bundled together. The British species above named is locally known as *fire-flare* or *fiery-flare*. The commonest sting-ray of the North Atlantic coast of the United States is *T. centrura*, locally known as *clam-cracker*, and corruptly called *stingaree*.

T. sabina is a similar southern species. The name extends to any ray with a tail-spine. See *Myliobatidae* (a).

stingtail (*sting'tāl*), *n.* A sting-ray.

Fletcher, Humorous Lieutenant, III. 7.

Stinking badger, the stinkard or teledn.—**Stinking bunt**.
 Same as *stinking smut*.—**Stinking camomile**.
 Same as *mayweed*.—**Stinking cedar**, a coniferous tree of
 the genus *Torreya*; so named from the strong peculiar
 odor of the wood and foliage, especially when bruised
 or burnt. Most properly so called is *T. taxifolia*, an ex-
 tremely local tree of western Florida, an evergreen of
 moderate size, with bright yellow (or in old trees red-
 dish) wood susceptible of a fine polish, very durable in
 contact with the soil, and, where found, largely used for
 fence-posts. Also called *savin*. See cut under *Torreya*.
 The similar *T. californica* is the California nutmeg (see
nutmeg). *T. grandis* of China, called *kaya*, affords a good
 timber. *T. nucifera*, a smaller Japanese species, yields
 a wood valued by coopers and turners, and a food-oil is
 expressed from its nuts. Also *stinking yew*.—**Stinking**

stinkpot, 4. [*Local, U. S.*]

stink-shad (stingk'shad), *n.* Same as *mud-*
shad.

stinkstone (stingk'stôn), *n.* A variety of lime-
 stone which gives off a fetid odor when quar-
 ried or struck by a hammer. This odor comes from
 the escape of sulphureted hydrogen, and in most cases it
 seems to be caused by the decomposition of embedded or-
 ganic matter. In some quarries in the Carboniferous lime-
 stone of Ireland the smell has been found so overpowering
 that the men were sickened by it, and had to leave off work
 for a time. (*Jukes*.) Also called *fetid limestone*, and *svine-*
stone.

stink-trap (stingk'trap), *n.* A contrivance to
 prevent the escape of effluvia from the open-
 ings of drains; a stench-trap.

stink-turtle (stingk'tèr'tl), *n.* The musk-tur-
 tle. See *stinkpot*, 4.

stinkweed (stingk'wèd), *n.* 1. An ill-smelling
 cruciferous plant, *Diplotaxis muralis*, of south-
 ern Europe. [*Prov. Eng.*].—2. The jimson-
 weed.

stinkwood (stingk'wùd), *n.* One of several
 trees with fetid wood. (a) In South Africa, *Ocotea*
bullgta (see *Ocotea*) and *Celtis Kraussiana*, the latter a tree
 20 feet high and 2 feet in diameter, with a tough yellowish-
 white wood used for planks, cooperage, etc. (b) In Tas-
 mania, a shrub or tree, *Zieria Smithii*, also found in Aus-
 tralia, and sometimes called *sand-fly bush*. (c) In the
 Mascarene Islands, *Fetidia Mauritiana* of the *Myrtaceæ*,
 a tree from 20 to 40 feet high, whose wood is used for
 foundations, not being attacked by white ants.

stint (stint), *v.* [Also obs. or dial. *stent*; <

Mertin (E. E. T. S.), II. 154.

3. To forbear; cease.

Art thou a seruing man? then serue sgaime,
 And *stint* to steale as common scoldours do.
Gascogne, Steele Glas (ed. Arber), p. 67.

Spare not to spur, nor *stint* to ride,
 Until thou come to fair Tweedsidde.
Scott, L. of L. M., I. 22.

4. To limit; restrain; restrict; hence, to limit
 or confine to a scanty allowance: as, to *stint*
 one's self in food; to *stint* service or help.

[He] trauels half a day without any refreshment then
 water, whereof wisely and temperately he *stinted* himself.
 Quoted in *Capt. John Smith's Works*, II. 135.

Was the infinite One to be confined to this narrow space?
 Could His love be *stinted* to the few to whom He had es-
 pecially revealed His Will? *Channing*, Perfect Life, p. 61.

 serve (a mare) successfully; get with foal. See
 the quotation under *stinted*, 2.

II. intrans. 1. To cease; desist; stay; stop;
 hold.

Of this cry they wolde neuer *stenten*.
Chaucer, Knight's Tale, I. 45.

He *styntid* not, nor neuer wold he sece,
 And with his swerd where that his stroke glynt,
 Owt of ther sadllil full redely they went.
Geueydes (E. E. T. S.), I. 2420.

And swears she'll never *stint*. *Shak.*, Pericles, IV. 4. 42.

2. To be saving or careful in expenditure.

It's in things for show they cut short; while for such as
 me, it's in things for life we're *stint*.
Mrs. Gaskell, Mary Barton, xxxvii.

stint (stint), *n.* [Also obs. or dial. *stent*; < *stint*,
v.] 1. Limit; bound; limitation; restriction;
 restraint: as, common without *stint* (that is,
 without limitation or restriction as to the ex-
 tent of the pasturage, the number of cattle to
 be pastured, or the period of the year).

If the summe which the debter oweth be above the
stint, he shall not be released. *Coryat*, Crndities, I. 167.

I know not how, Divine Providence seemeth to hane set
 those Scythian *stints* to the Persian proceedings.
Purchas, Pilgrimage, p. 352.

By rallying round the throne the whole strength of the
 Royalists and High-Churchmen, and by using without
stint all the resources of corruption, he [Danby] flattered
 himself that he could manage the Parliament.
Macaulay, Sir W. Temple.

2. Fixed amount or quantity; allowance; pre-
 scribed or allotted task or performance: as,
 a certain *stint* of work.

Put me to a certsin *stint*, sir; sllow me but a red her-
 ring a-day. *Fletcher* (and another), Love's Cure, II. 1.

In the divided or social state, these functions are par-
 celled out to individuals, each of whom aims to do his
stint of the joint work. *Emerson*, Misc., p. 72.

Margaret had a new *stint* at quilting.
S. Judd, Margaret, I. 2.

If you are sick or weak, and can't finish your *stent*, you
 are given twenty blows with the cat.
The Century, XXXVII. 36.

3. One of several small species of sandpiper,
 especially of the genus *Actodromas*; a sandpeep.
 The common stint is the dunlin, purr, or ox-bird, *Pelidna*
alpina. (See *dunlin*.) This is an early, if not the first, ap-
 plication of the name, as by Ray, who called this bird also

American Least Stint (*Actodromas minutilla*).

ozeys and *least snipe*. The little stint is *Actodromas minuta*; the least stint is *A. minutilla*, which abounds in North America, and is also known as *Wilson's sandpiper*. Temminck's stint is *A. temminckii*; the red-necked, *A. ruficollis*. There are several others of the same genus. The broad-billed sandpiper, *Limicola platyrhynchos*, is a kind of stint, and the spoon-billed, *Euryorhynchus pygmaeus*, is another. Extension of the name to the sanderling and to phalaropes is unusual.

stintancet (stin'tans), *n.* [*stint* + *-ancet*.] Stint; limit; restriction; restraint. *London Prodigal*, p. 7. (*Hallivell*.) [Rare.]

stinted (stin'ted), *p. a.* 1. Limited; scanty; scrimped.

Oh! trifle not with wants you cannot feel,
Nor mock the misery of a stinted meal.
Crabbe, Works, I. 9.

2. In foal. See *stint*, *v. t.*, 6. (*Hallivell*.) [Prov. Eng.]

Stinted, 'in foal.' The word was printed, in this sense, in a catalogue of live-stock for sale at Nashville a year or two ago [1886]. *Hallivell* and *Wright* give it as an adjective, meaning in foal, used in the West of England. *Trans. Amer. Philol. Ass.*, XVII. 44.

stintedness (stin'ted-nes), *n.* The character or condition of being stinted.

stinter (stin'ter), *n.* [*stint* + *-er*.] One who or that which stints, checks, or puts a stop to; as, a *stinter* of strife.

He gets glimpses of the same *stintless* hospitality.
The Century, XXVII. 201.

stinty (stin'ti), *a.* [*stint* + *-y*.] Restricted; grudging; illiberal. [Rare.]

Those endowments which our Anglo-Saxon forefathers made to win for themselves and kindred such ghostly aids in another world were neither few nor *stinty*.
Rock, *Church of our Fathers*, ii. 327.

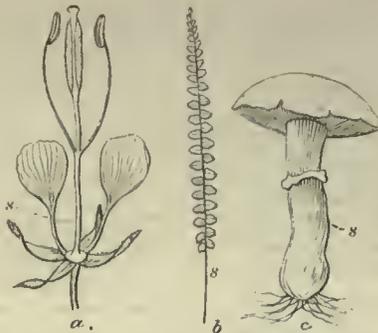

stiony, *n.* See *styany*.

Stipa (sti'pä), *n.* [NL. (Linnaeus, 1753), named from the flaxen appearance of the feathery awns of *S. pennata*; < L. *stipa*, *stupa*, *stuppa*, the coarse part of flax, tow; see *stupa*.] A genus of grasses, of the tribe *Agrostideæ*, type of the sub-tribe *Stipeæ*. It is characterized by one-flowered panicle spikelets, with their pedicels not continued beyond the flower, which contains three or perhaps sometimes only two lodicules and a narrow acuminate flowering glume indurated closely around the grain and prolonged, usually by a joint, into a long and commonly conspicuously twisted or bent awn. There are nearly 100 species, widely dispersed through both tropical and temperate regions. They are tufted grasses, usually tall, with convolute leaves and a slender, sparingly branched panicle of rather long scattered spikelets, with awns sometimes extremely attenuated. A general name of the species is *feather-grass*, applying particularly to the highly ornamental *S. pennata* of Europe. The only common species of the eastern United States is *S. avenacea*, the black oat-grass; westward the species are numerous—several, known as *bunch-beard*, or *feather-grass*, being somewhat valuable wild forage-plants of the mountains and great plains. Among these are *S. comata* (*silk-grass*) and *S. spartea* (*porcupine-grass*), the latter remarkable for its hygrometric awns, which are coiled when dry, but uncoil under moisture and, when resisted, tend to push the seed into the ground. *S. viridula*, var. *robusta*, of Mexico, New Mexico, etc., is reported to have a narcotic effect upon horses, and is called *sleepy-grass*. *S. aristiglumis* of Australia is a valuable fodder-plant, of remarkably rapid growth; *S. micrantha* of Queensland borrows the name of bamboo. *S. tenacissima* and *S. arenaria*, on account of their large membranous spikelets and two-cleft flowering glume, are sometimes separated as a genus, *Macrochloa* (Kunth, 1835). See *esparto*, *alfa*, and *atocha-grass*.

stipate (sti'pät), *a.* [*L. stipatus*, pp. of *stipare*, crowd, press together. Cf. *constipate*.] In bot., crowded.

stipe¹ (stip), *n.* [A dial. var. of *steep*¹. Cf. *Stiper Stone group*.] A steep ascent. (*Hallivell*.) [Prov. Eng.]

stipe² (stip), *n.* [*F. stipe*, a stipe, = Sp. *estipite*, a door-post, = It. *stipite*, a stock, trunk, post, door-post, < L. *stipes* (*stipit-*), a stock, trunk, post, poet, a tree, a branch of a tree; perhaps cognate with *E. stiff*.] 1. In bot., a stalk or support of some sort, the word being variously employed. (a) In flowering plants, the stalk formed by the receptacle or some part of it, or by a carpel. To distinguish further this kind of stipe, various other terms are employed, as *theophore*, *gynophore*, *gonophore*, *anthophore*, *gynobase*, and *carpopore*. See cut under *Arachis*. (b) The stalk or petiole of a frond, especially of a fern or seaweed. See cut under *seaweed*. (c) In fungi, especially of the genus *Agaricus*, the stalk or stem which supports the pileus or cap. (d) The caudex of a tree-fern. Also *stipes*. See cut in next column.

 Evelyn, *Diary*, Sept. 14, 1644.

Stiper Stone group. [*Stiper Stones* (see def.).] In geol., a subgroup, the equivalent of the Arenig series in Carnarvonshire; so called from the name *Stiper Stones* given to a prominent ridge of quartzose rocks rising above the moorland in Shropshire, and extending for about ten miles in length. The Arenig or Stiper Stone group, according to Murchison's original classification (1833-4), formed the base of the Silurian system. It is now considered to be the base of Lapworth's Ordovician, of the Cambro-Silurian of Jukes, and of the Middle Cambrian of other English geologists.

stipes (sti'péz), *n.* [NL., < L. *stipes*, *stips* (*stipit-*), a stock, trunk; see *stipe*².] 1. In bot., same as

*stipe*².—2. In zool., a stalk or stem, as an eye-stalk or a footstalk; a stipe. Specifically—(a) In entom., the footstalk of the maxilla of an insect, the outer or main division of that organ; and the second joint of the maxilla, borne upon the cardo, and through the palpi and subgalea bearing the palpus, galea, and lacinia, when these organs exist. Also called *shaft*. See cuts under *galea* and *Insecta*. (b) In *Myriapoda*: (1) The proximal or median one of two pieces of which the protomala, or so-called mandible, consists, the other being the *cardo*. See *protomala*, and figure under *epilobrum*. (2) One of two sets, an inner and an outer, of broad plates into which the deutomala, or second pair of mouth-appendages, of a myriapod is divided. See *deutomala*. *A. S. Packard*, *Proc. Amer. Philos. Soc.*, June, 1883, pp. 198, 200.

stipiform (sti'pi-förm), *a.* [*L. stipes*, *stips* (*stipit-*), a stock, trunk, + *forma*, form.] In bot. and zool., having the form or appearance of a stipe or stipes. See *stipe*², *stipes*.

stipitiform (stip'i-ti-förm), *a.* [*L. stipes* (*stipit-*), a stock, trunk (see *stipe*²), + *forma*, form.] In bot. and zool., having the form or character of a stipe or stipes; stipiform; stalk-like.

stipiture (stip'i-tür), *n.* A bird of the genus *Stipiturus*; an emu-wren.

Stipiturus (stip-i-tür'us), *n.* [NL. (Lesson, 1831), < L. *stipes* (*stipit-*), a stock, trunk, + Gr. *οὐρά*, tail.] An Australian genus of warbler-like birds, assigned to the *Malurus* or placed elsewhere, having the tail curiously formed of ten feathers with stiffened shafts and loose decomposed barbs (whence the name); the emu-wrens.

Emu-wren (*Stipiturus malacurus*).

S. malacurus is a small brownish bird streaked with black, and with a blue throat, described by Latham in 1801 as the *soft-tailed flycatcher*. The immediate affinities of the genus are with such forms as *Sphenæacus* and *Sphenura* (see these words), and

the true position of all these forms seems to be among or near the reed- or grass-warblers, especially such as have but ten tail-feathers. See *warbler*.

stipple (stip'l), *v. t.*; pret. and pp. *stippled*, ppr. *stippling*. [*D. stippele*, speckle, dot over (cf. *stippel*, a speckle, dim. of *stip*, a point), freq. of *stippen* (> G. *stippen*), prick, dot, speckle, < *stip*, MD. *stip*, *stup*, a point, dot.] To produce gradation in color or shade in (any material) by means of dots or small spots. See *stippling*.

The interlaying of small pieces can not altogether avoid a broken, *stippled*, spotty effect.
Milman, *Latin Christianity*, xiv. 10.

stipple (stip'l), *n.* [*stipple*, *v.*] 1. In the *fine arts*, same as *stippling*.—2. In *decorative art*, an intermediate tone or color, or combination of tones, used to make gradual the passage from one color to another in a design.—**Stipple-engraving process**, the process of making an engraved plate by stippling. The first step is to lay an etching-ground on a copperplate; the next, after the subject has been transferred as in etching, is to dot in the outline; after which the darker parts are marked with dots, which are laid in larger and more closely in the deeper shades. The plate is then bitten in, the ground is removed, and the lighter parts are laid in with dry-point or the stipple-graver.

stippled (stip'ld), *p. a.* Spotted; shaded or modeled by means of minute dots applied with the point of the brush or in a similar way.

stipple-graver (stip'l-grä'vër), *n.* An engraver's tool of which the point is bent downward so as to facilitate the making of small dots or indentations in the surface of a copperplate.

stippler (stip'lër), *n.* [*stipple* + *-er*.] 1. One who stipples.—2. A brush or tool used for stippling; as, a *stippler* made of hog's hair.

stippling (stip'ling), *n.* [Verbal *n.* of *stipple*, *v.*] In the *fine arts*, dotted work of any kind, whether executed with the brush-point, the pencil, or the stipple-graver.

stipula (stip'ü-lä), *n.*; pl. *stipulæ* (-lä). [NL., < L. *stipula*, a stalk; see *stipule*.] In ornith., same as *stipule*.

stipulaceous (stip-ü-lä'shius), *a.* [*stipula* + *-aceous*.] In bot., same as *stipular*.

stipular (stip'ü-lär), *a.* [*NL. stipula* + *-ar*.] In bot., of, belonging to, or standing in the

place of stipules; growing on stipules, or close to them: as, *stipular glands*.—**Stipular buds**, buds which are enveloped by the stipules, as in the tulip-tree. **stipulary** (stip'ū-lā-ri), *a.* [*< NL. stipula + -ary.*] In *bot.*, relating to stipules; stipular. **stipulate**¹ (stip'ū-lāt), *v. t.*; pret. and pp. *stipulated*, ppr. *stipulating*. [*< L. stipulatus*, pp. of *stipulare* (*>*) *It. stipulare* = *Sp. Pg. estipular* = *F. stipuler*], exact, bargain for; origin doubtful: by some referred to *OL. *stipulus*, firm; by others to *L. stipula*, a straw.] To arrange or settle definitely, or by special mention and agreement, or as a special condition: as, it is *stipulated* that A shall pay 5 per cent.

Henry the Fourth and the king my master had *stipulated* with each other that, whosoever any one of them died, the survivor should take care of the other's child.

Lord Herbert of Chesham, *Life* (ed. Howells), p. 129.

Those Articles which were *stipulated* in their Favour.

Howell, *Letters*, I. iii. 20.

It is *stipulated* also that every man shall be bound to obey his own lord "conveniently," or so far as is fitting and right.

Encyc. Brit., XXII. 782.

Stipulated damages. (a) In a general sense, a sum named in a contract or obligation as the damages to be paid in case of non-performance. (b) As commonly used in law, damages liquidated by a stipulation—that is, a sum fixed by a contract or obligation in such manner as to be the sum payable in case of breach, without any further question as to the amount of the actual damages.

stipulate² (stip'ū-lāt), *a.* [*< NL. *stipulatus*, *< L. stipula*, a stalk, stipule: see *stipule*.] In *bot.*, having stipules: as, a *stipulate* stalk or leaf.

Stipulateæ (stip'ū-lā'tē-ē), *n. pl.* [*NL. (J. von Sachs)*, *< *stipulatus*, stalked (see *stipulate*²), + *-æ*.] Sachs's name for the esporangiate ferns, a division which embraces the *Ophioglossaceæ* and *Marattiaceæ*. The name is now abandoned, as it is known that there are no stipules in the *Ophioglossaceæ*, and that they are sometimes wanting in the *Marattiaceæ*.

stipulation¹ (stip'ū-lā'shən), *n.* [*< F. stipulation* = *Sp. estipulación* = *Pg. estipulação* = *It. stipulazione*, *< L. stipulatio* (*n.*), a promise, bargain, covenant, *< stipulari*, demand a formal promise, bargain, covenant, stipulate: see *stipulate*.] 1. The act of stipulating, agreeing, or covenanting; a contracting or bargaining.

—2. That which is stipulated or agreed upon; a contract or bargain, or a particular article or item in a contract: as, the *stipulations* of the allied powers to furnish each his contingent of troops; a contract containing so many *stipulations*.—3. In law, specifically—(a) An agreement between counsel or attorneys in a cause, affecting its conduct. (b) An undertaking in the nature of bail taken in the admiralty courts. (c) In Roman law, a contract in which the form consisted in a question and answer, formalities which in course of time came to be recognized as making a valid contract which might dispense with the ceremonies required by the earlier law.

stipulation² (stip'ū-lā'shən), *n.* [*< L. stipula*, a stalk: see *stipule*.] In *bot.*, the situation and structure of the stipules.

stipulator (stip'ū-lā-tor), *n.* [*< L. stipulator*, one who stipulates, *< stipulari*, demand a formal promise, bargain, stipulate: see *stipulate*.] One who stipulates, contracts, or covenants; in *Rom. law*, one to whom a stipulation or promise was given in the form of contract known as *stipulatio*. See *stipulation*¹, 3 (c).

stipule (stip'ūl), *n.* [= *F. stipule* = *It. stipula*, *< L. stipula*, a stalk, stem, blade, dim. of *stipes*, stock, trunk: see *stipe*².] 1. In *bot.*: (a) One of a pair of lateral appendages found at the base of the petiole of many leaves. Stipules are normally flat organs, leaf-like in appearance and use, or colorless and scale-like, and without function—sometimes,

however, as in the magnolia, fig, and beech, serving as bud-scales and falling when the leaves expand. Stipules may be free from the petiole, or adnate by one edge, then passing by grades into mere wing-like expansions of its base; they may be free from one another, or variously united, sometimes so as to clasp the stem, sometimes between it and the leafstalk (then intrapetiole), sometimes sheathing the stem, as in *Polygonum*, then forming ocreæ (see *ocrea*). The adjacent members of two opposite pairs may become connate around the stem, as in many *Rubiaceæ*. Stipules are sometimes reduced to mere bristles, or take the form of spines, as in the common locust; in *Smilax* they appear to be converted into tendrils. They are often wholly wanting, but where present they generally characterize whole families, as they do the *Mabaceæ*, *Leguminosæ*, and *Rosaceæ*. (b) In the *Characeæ*, one of certain unicellular tubes, of greater or less length, on the inner and outer sides of the so-called leaf. (c) Same as *paraphyllum* (b).—2. In *ornith.*, a newly sprouted feather; a pin-feather. Also *stipula*.

stipuled (stip'ūld), *a.* [*< stipule + -ed*.] In *bot.*, furnished with stipules, or lateral leafy appendages.

stipuliform (stip'ū-li-fōrm), *a.* [*< L. stipula*, a stalk, + *forma*, form.] In *bot.*, having the form of a stipule.

stir¹ (stēr), *v.*; pret. and pp. *stirred*, ppr. *stirring*. [*Also dial. steer* (and *stoor*); early mod. stirrup (stir' or stèr'up), *n.* [Early mod. E. also *stirrop*, *stiroop*, *sterope*; < ME. *stirrop*, *styroop*, *styrope*, *sterepe*, < AS. *stirāp*, *stigrāp*, *stigerāp* (= MD. *stegerep*, *steghrecp*, also *stegelrecp* = OHG. *stegareif*, MHG. G. *stegreif* = Icel. *stegreiþ*), lit. 'mounting-rope,' < *stigan*, mount, + *rāp*, rope: see *styl*¹ and *ropel*. Cf. D. *stijg-beugel* = G. *stieig-bügel* = Sw. *stig-byggel* = Dan. *stig-bøjle*, a stirrup, lit. a ring or loop for mounting (see *bail*¹).] 1. A support for the foot of a person mounted on a horse, usually a metal loop with the bottom part flat and corrugated or finished with points to give a hold to the sole of the boot and to aid in mounting.

The metal loop is suspended from the saddle by a strap or thong, which in modern saddles is adjustable in length. The stirrup of Arab or other Eastern horsemen has a very broad rest for the foot; this projects sometimes beyond the heel, and the sharp edge of it serves instead of a spur. The stirrups of some modern military saddles have a strong front piece of leather or other material which prevents the foot from passing too far into the loop and protects the front of the leg. See also cut under *saddle*.

1, Stirrup for poulaine; 2, modern stirrup; 3, Mexican wooden stirrup; 4, Mexican wooden stirrup with taps.

Our hosts upon his stirrups stood anon. *Chaucer*, *Prof.* to *Shipman's Tale*, l. 1.

I'll hold your stirrup when you do alight, And without grudging wait till you return. *Beau. and Fl.*, *Honest Man's Fortune*, iv. 1.

2. *Naut.*, a rope with an eye at its end, through which a foot-rope is rove, and by which it is supported. The ends of stirrups are secretly fastened to the ystd, and they steady the men when reefing or furling sails.

3. In *mach.*, any piece resembling in shape and functions the stirrup of a saddle, as the iron loop by which a mill-saw hangs from the

muley-head or in the sash.—4. In *carp.*, etc., an iron loop-strap or other device for securing a rafter-post or -strut to a tie, or for supporting a beam, etc.—5. A hold for the foot at the end of the stock of a large crossbow, to keep it firm while the bow is bent and the string drawn to the notch. See cut under *abalister*.—6. In *anat.*, the stapes or stirrup-bone.

stirrup-bar (stir'up-bär), *n.* The spring-bar or other device on a riding-saddle to which the upper end of the stirrup-strap is fastened.

stirrup-bone (stir'up-bön), *n.* The stapes of a mammal: so called from its shape.

stirrup-cup (stir'up-kup), *n.* A cup of wine or other liquor presented to a rider when mounted and about to take his departure; a parting-cup.

stirrup-hose (stir'up-höz), *n. pl.* Heavy stockings worn over the other garments for the legs by men traveling on horseback in the seventeenth century, and probably earlier. They are described as made very large at the top, and secured by points to the girdle or the bag-breeches.

stirrup-iron (stir'up-ir'ern), *n.* The stirrup proper—that is, the metal loop in which the foot is placed, as distinguished from the leather strap which suspends it.

stirrup-lantern (stir'up-lan'tèrn), *n.* A small lantern with an iron frame fastened below the stirrup to light the road at night and also to warm the rider's feet: a contrivance used in the fifteenth century and later.

stirrup-leather (stir'up-leth'èr), *n.* The leather strap by which a stirrup hangs from the saddle.

stirrup-muscle (stir'up-mus'l), *n.* The stapedius.

stirrup-oil (stir'up-oil), *n.* A sound beating; a drubbing. *Halliwel*. [Prov. Eng.]

stirrup-piece (stir'up-pès), *n.* In *carp.*, *mach.*, etc., anything which performs the office of a stirrup, in hanging from a fixed point of support and supporting anything else which lies in its loop or hollow.

stirte, **stirt**. Obsolete forms of the preterit and past participle of *start*¹.

stitch (stich), *n.* [*stiche*, *stiche*, < AS. *stice*, a pricking sensation (also in comp. *instice*, an inward stitch, *fær-stice*, a sudden stitch or twinge, *stic-ād*, *stic-wærc*, stitch in the side), not found in lit. sense 'pricking,' 'piercing,' = OFries. *sticke*, *stek* = OHG. *stich*, MHG. G. *stich*, a pricking, prick, sting, stab, stitch, = Goth. *stiks*, a point of time; from the verb, AS. **stecan*, etc., prick, sting, stiek: see *stick*¹, *stick*².] 1. An acute sudden pain like that produced by the thrust of a needle; a sharp spasmodic pain, especially in the intercostal muscles: as, a stitch in the side. Such pains in the side may be myalgic, neuralgic, pleuritic, or due to muscular cramp.

'Twas but a stitch into my side, And sair it troubles me. *The Queen's Marie* (Child's Ballads, III. 117).

Corporal sickness is a perpetual monitor to the conscience, every pang a reproof, and every stitch reads a lesson of mortality. *Rev. T. Adams*, *Works*, I. 441.

2. A contortion; a grimace; a twist of the face.

If you talk, Or pull your face into a stitch again, As I love truth, I shall be very angry. *Beau. and Fl.*, *Captain*, ii. 2.

3. In *sewing*: (a) One movement of a threaded needle, passing in and out of the fabric, and uniting two parts by the thread, which is drawn tight after each insertion. (b) The part of the thread left in the fabric by this movement.—

4. In *knitting*, *netting*, *crochet*, *embroidery*, *lace-making*, etc.: (a) One whole movement of the implement or implements used, as knitting-needles, bobbin, hook, etc. (b) The result of this movement, shown in the work itself.—5. The kind or style of work produced by stitching: as, buttonhole-stitch; cross-stitch; pillow-lace stitch; by extension, a kind or style of work with the loom. For stitches in lace, see *point*¹. See also *whip-stitch*.—6. Distance passed over at one time; stretch; distance; way.

How far have ye come to-day? So they said, From the house of Gaius our friend. I promise you, said he, you have gone a good stitch; you may well be weary; sit down. *Bunyan*, *Pilgrim's Progress*, p. 314.

7. In *agri.*, a space between two double furrows in plowed ground; a furrow or ridge.

And many men at plough he made, that drave earth here and there, And turn'd up stiches orderly. *Chayman*, *Iliad*, xviii. 495.

8. A bit of clothing; a rag: as, he had not a dry stitch on. [Colloq.]—9. In *bookbind-*

ing, a connection of leaves or pieces of paper, through perforations an inch or so apart, with thread or wire. A *single stitch* is made with two perforations only, the thread being tied near the entering place of the stitching-needle. A *double stitch* has three and sometimes four perforations, the thread being reversed in and out on the upper and under side at each perforation. A *saddle-back stitch* has its perforations in the center of the creased folded double leaves. A *side-stitch* has perforations through the sides of the leaves, about one eighth of an inch from the back fold. A *French stitch* has two perforations only in each section of the pamphlet, the second perforation of the first section ending where the first perforation of the second section begins, in which diagonal line the stitching-needle is put through each succeeding section, and is then reversed and locked at the end. A *machine-stitch* is a succession of ordinary locked stitches made by the sewing-machine. A *wire stitch* has short staples of turned wire, which are forced through the leaves and clamped by one operation of the wire-stitching machine. See *kettle-stitch*.—**Blind stitch.** See *blind*.—**Damask stitch.** See *damask*.—**Dotted stitch.** Same as *dot-stitch*.—**False stitch,** in *pillow-lace making*, same as *false pinhole* (which see, under *pinhole*).—**Fancy, Flemish, German, glovers', gobelin, herring-bone, honeycomb, idiot, Irish, overcast stitch.** See the qualifying words.—**Outline-stitch.** See *outline*.—**Plaited stitch.** See *plaited*.—**Raised stitch.** See *raise*.—**Royal stitch.** See *royal*.—**Russian stitch.** A kind of ribbed stitch in crochet. **Dict. of Needlework.**—**Short stitch,** a kind of needlework used in embroidery of the simplest kind, where the ground is partly covered by single stitches of a thread usually of different color, the ground not so covered generally forming the pattern.—**Slanting stitch.** See *slant*.—**To go through stitch with,** to prosecute to the end; complete.

And in regard of the main point, that they should never be able to go through stitch with that war.

Urquhart, tr. of Rabelais, Gargantua, l. 47.

R. L. Stevenson, Will o' the Mill.

2. A wooden block; a block; a log; hence, something lifeless and senseless.

He swore hire yis, by stokkes and by stones,
And by the godde that in hevene dwells.

Chaucer, Troilus, iii. 539.

There was an exe, and a stoke, and oon of the lewdeste of the shippe badde hym ley down his hedde, and he should be fair ferd wyth, and dye on a swerd.

Paston Letters, I. 125.

More than dead stocks would startle at such beauty.

Chapman, Blind Beggar of Alexandria.

And those made thee forsake thy God,
And worship stocks and stones.

Wanton Wife of Bath (Child's Ballads, VIII. 155).

3. A person who is as dull and senseless as a block or a log.

Let's be no stoics nor no stocks. *Shak.*, T. of the S., I. 1. 31.

Such a stock of a child, such a statue! Why, he has no kind of feeling either of body or mind.

Brooke, Fool of Quality, iii.

What a phlegmatic sot it is! Why, sirrah, you'r an anchorite—a vile insensible stock.

Sheridan, Rivals, iii. 1.

4. A dull object or recipient of action or notice, as of wonder, scorn, or laughter; a butt; generally the second element in a compound: as, a gazing-stock; a laughing-stock.

Howsoever we are all accounted dull, and common jesting stocks for your gallants, there are some of us do not deserve it.

Beau. and Fl., Woman-Hater, iii. 3.

Thou art the stock of men, and I admire thee.

Fletcher, Rule a Wife, iii. 5.

I know, and may presume her such,
As, out of humour, will return no love;
And therefore might indifferently be made
The courting-stock for all to practise on.

B. Jonson, New Inn, i. 1.

5. The stalk, stem, or trunk of a tree or other plant; the main body, or fixed and firm part.

Though the root thereof wax old in the earth, and the stock thereof die in the ground.

Job xiv. 8.

There, in the stocks of trees, white fates do dwell.

B. Jonson, Sad Shepherd, ii. 2.

You know him—old, but full
Of force and cholier, and firm upon his feet,
And like an oaken stock in winter woods.

Tennyson, Golden Year.

6. A stem in which a graft is inserted, and which is its support; also, a stem, tree, or plant that furnishes slips or cuttings.

You see, sweet maid, we marry
A gentler scion to the wildest stock.

Shak., W. T., iv. 4. 93.

The scion ever over-ruleth the stock.

Bacon, Nat. Hist., Int. to § 477.

Hence—7. The original progenitor of a family or race; the person from whom any given line of descent or inheritance is derived. See *stock of descent*, below.

This firste stok was ful of rightwisnesse,
Trew of his word, aobre, pitous, and free.

Chaucer, Gentleme, l. 8.

Brave soldier, yicld, thou stock of arms and honour.

Fletcher, Bondage, v. 5.

8. Direct line of descent; race; lineage; family: as, children of the stock of Abraham.

What things are these! I shall marry into a fine stock!
Brome, Northern Lass, li. 2.

In his actions and sentiments he belied not the stock to which he pretended.

Lamb, Two Races of Men.

They sprang from different stocks. They spoke different languages.

Macaulay, Hist. Eng., vi.

9. The principal supporting or holding part; the part in which other parts are inserted, or to which they are attached in order to furnish a firm support or hold. Specifically—(a) The wooden support to which the barrel and lock of a rifle or like firearm are attached, or upon which the bow of the crossbow is mounted. See cuts under *gun* and *gun-carriage*. (b) The handle by which a boring-bit is held and turned; a bit-stock; a brace. See cut under *brace*. (c) The block of wood which constitutes the body of a plane, and in which the cutting iron is fitted. See cuts under *plane*, *rounding-plane*, and *router*. (d) The support of the block on which an anvil is fitted, or of the anvil itself. (e) The crosspiece of an anchor, perpendicular to the shank, formerly of wood, when the shank was passed through a hole cut in the stock, or the latter was made in two parts joggled to receive the shank: now usually of iron, in which case the stock slips through a hole made in the shank. See cut under *anchor*. (f) An adjustable wrench for holding screw-cutting dies. (g) That part of a plow to which the handles, irons, etc., are attached. (h) A beater, as used in a fulling-mill, in the manufacture of chamois-leather, etc. (i) An arm of a bevel-gage or of a square. (j) The wooden frame in which the wheel and post of a spinning-wheel are supported.

10. A stiff band of horsehair, leather, or the like, covered with black satin, cambric, or similar material, and made to imitate and replace the cravat or neckband: formerly worn by men generally, and, in some forms, still in military use. It was sometimes fastened behind with a buckle, which was often an ornamental object.

Military Stock, 18th century.

A shining stock of black leather supporting his chin.

Irving, Knickerbocker, p. 321.

He wore a magnificent stock, with a liberal kind of knot in the front; in this he stuck a great pin.

W. Besant, Fifty Years Ago, p. 98.

11. The front part, especially the front side-piece, of a bed. [Scotch.]

I winna lie in your bed,
Either at stock or wa'.

Capt. Wedderburn's Courtship (Child's Ballads, VIII. 12).

12. *pl.* An apparatus for the confinement of vagrants and petty offenders, formerly in use in different parts of Europe, and retained until recently in country villages in England. It consisted of two heavy timbers, one of which could be raised,

Stocks.

and when lowered was held in place by a padlock or the like; notches in these timbers, forming round holes when the upper timber was shut down in place, held firmly the legs of those upon whom this punishment was inflicted; in some cases a second row of openings could be used to restrain the hands, and even the neck, also. Compars *pillory*.

This yere was ordeyned in enery ward [of London] a peyr stocks.

Arnold's Chronicle, p. xxxvi.

Mars got drunk in the town, and broke his landlord's head, for which he sat in the stocks the whole evening.

Stede, Tatler, No. 4.

13. The frame or timbers on which a ship rests while building; hence, generally, on the stocks,

in course of construction or preparation.—14. That part of the tally which the creditor took away as evidence of the king's debt, the part retained in the Exchequer being called the counterstock. See *tally*.

It was the custom when money was borrowed for State purposes to record the transaction by means of notches on a stick (commonly hazel), and then to split the stick through the notches. The lender took one half as a proof of his claim against the Exchequer, and it was called his *Stock*. The Exchequer kept the other half, which was called the counterstock, and which answered the same purpose as was served in after-times by the counterfoil.

Bithell, Counting-House Dict., p. 290.

15. In finance: (a) The money represented by this tally; money lent to a government, or a fund consisting of a capital debt due by a government to individual holders who receive a fixed rate of interest. In modern usage, especially in Great Britain, the name is applied to a capital of which payment cannot be claimed, but on which interest is paid in perpetuity at a given rate; hence, to *buy stock* is simply to buy the right to this interest on a certain amount of this capital debt—a right which may be sold again. The various kinds of stocks are called the *public funds*. See *fund*¹, *n.*, 2.

I have known a Captain rise to a Colonel in two days by the fall of stocks.

Steele, quoted in Ashton's Reign of Queen Anne, II. 206.

The term *Stock* was originally applied to the material sign and proof of money lent. But as the thing signified was of greater importance to both parties than the sign, it was at length transferred to the money itself, or rather to the right to claim it. In this way *Stock* came to be understood as money lent to the government, and eventually to any public body whatever.

Bithell, Counting-House Dict., p. 290.

(b) The share capital of a corporation or commercial company; the fund employed in the carrying on of some business or enterprise, divided into shares of equal amount, and owned by individuals who jointly form a corporation; in the plural, shares: as, bank stock; railway stock; stocks and bonds.—16. The property which a merchant, a tradesman, or a company has invested in any business, including merchandise, money, and credits; more particularly, the goods which a merchant or a commercial house keeps on hand for the supply of customers.

Who trades without a stock has naught to fear. *Cibber*.

"We must renew our stock, Cousin Hepzibah!" cried the little saleswoman. "The gingerbread figures are all gone, and so are those Dutch wooden milkmaids, and most of our other playthings."

Hawthorne, Seven Gables, v.

17. Fund; sum of money.

Mr. John Whittson being Mayor, with his brethren the Aldermen, and most of the Merchants of the City of Bristol, raised a stock of 1000*l.* to furnish out two Barkes.

Quoted in *Capt. John Smith's Works*, I. 108.

It's proverbial He gave them an alms-penny, for which reason Judas carried the bag that had a common stock in it for the poor.

Barnard, Heylin, § 104.

The money is raised out of the interest of a stock formerly made up by the nobility and gentry.

Butcher, quoted in Strutt's Sports and Pastimes, p. 103.

18. Hoard or accumulation; store; supply; fund which may be drawn upon as occasion demands: as, to lay in a stock of provisions; a stock of information.

Though all my stock of tears were spent already
Upon Ptsano's loss.

Shirley, Traitor, v. 1.

He set up as a Surgeon upon his bare natural stock of knowledge, and his experience in Kibes. But then he had a very great stock of confidence withal, to help out the other.

Dampier, Voyages, I. 383.

A great stock of parliamentary knowledge.

Macaulay, Hist. Eng., vi.

19. Share; portion.

Whilst we, like younger Brothers, get at best
But a small stock, and must wot out the rest.

Conley, To Lord Falkland.

Therefore nothing would satisfy him [a young prodigal] unless he were intrusted with the *Stock* which was intended for him, that he might shew the difference between his Father's Conduct and his own.

Stillingfleet, Sermons, III. 1.

20. Ground; reason; evidence; proof.

He pities our infirmities, and strikes off much of the account upon that stock.

Jer. Taylor, Works (ed. 1835), I. 914.

21. The part of a pack of cards which in certain games is not dealt out, but left on the table, to be drawn from as occasion requires.

Nay, then, I must buy the stock; send me good carding! I hope the prince's hand be not in this sport.

Fletcher, Humorous Lieutenant, l. 1.

22. In *agri.*: (a) The horses, cattle, sheep, and other useful animals raised or kept on a farm or ranch: distinctively known as *live stock*: as, a farmer's land and stock. The term is extended to any animals, as fish or oysters, artificially propagated.

Brandy was produced, pipes lighted, and conversation returned to the grand staple Australian subject—*stock*.
A. C. Grant, Bush Life in Queensland, I. 141.

(b) The implements of husbandry stored for use. Also called *dead stock*.—23. The raw material from which anything is made; stuff; material: as, *paper-stock* (rags, fiber, wood-pulp, etc.); *soap-stock*.

In its natural state, fat of animals is always associated with cellular tissue and other foreign matters, which must be separated before it can be used as candle *stock*.

Workshop Receipts, 1st ser., p. 350.

24. The liquor or broth prepared by boiling meat, with or without vegetables, etc., so as to extract the nutritious properties, and used as a foundation for different kinds of soup. Also called *soup-stock*.—25. A good kind of red and gray brick, used for the exterior of walls and the front of buildings.—26. A name of several cruciferous garden-flowers. (a) One of several species of *Matthiola*, or sometimes the species in general: originally *stock-gillyflower*. (b) By extension, the somewhat similar *Malcolmia maritima*, the Mahou stock, a low diffuse annual, in England called *Virginia* or *virgin stock*, though from the shores of the Mediterranean. The name has been applied also to the genus *Heliophila*.

27. A covering for the leg; a stocking. Compare *nether-stocks*.

A linen *stock* on one leg, and a kersey boot-hose on the other.
Shak., T. of the S., iii. 2. 67.

28. In *her.*, the stump of a tree used as a bearing: represented as cut square on top and eradicated—that is, torn up by the roots—with at least the main roots indicated.—29. (a) The pillar or post on which the holy-water vessel was fixed. *E. Peacock*. Hence—(b) A holy-water vessel, or aspersorium.

Item. cone holywater *stocke* of glasse with a bayle.
Inventary 34, Henry VIII.

30. The proceeds of the sale of the catch of a fishing-trip; the net value of a cargo of fish. [*New Eng.*]—31. *pl.* A frame in which a horse or other animal can be secured or slung for shoeing or for a veterinary operation.—32. In *mining*, sometimes used as the equivalent of the German *stock* (plural *stöcke*), especially in translating from that language. A "stock" is a mass of ore of irregular form, but usually thick in proportion to its other dimensions, and not having the characters of a true vein, but belonging more properly to the class of segregated veins or masses. Some "stöcke" resemble very nearly the "carbonas" of the Cornish miner; others are akin to the "flats" of the north of England.

33. In early forms of feudalism, commendation. See to *accept stock*, below.—34. In *zoöl.*, a compound, colonial, or aggregate organism; an aggregate of persons forming one organic whole, which may grow by budding or cast off parts to start a new set of persons: as, a *poly-stock*. A polyplidom, a polyzoary, a chain of sals or doliolids, etc., are examples. Haeckel extends *stock* in this sense to the broader biological conception which includes those plants that propagate by buds or shoots. See *teology*.—*Dead stock*. See def. 22.—*Drop of stock*. See *drop*.—*Fancy stocks*. See *fancy*.—*Holy-water stock*, a vessel for holy water; a holy-water stoup. See *water*.—*Live stock*. See def. 22.—*Lock, stock, and barrel*. One of his legs, ending in a *stogy* boot, was braced out in front of him. *The Century*, XXXVI. 83.

II. n.; pl. stogies (-giz). 1. A rough, heavy shoe.—2. A long, coarse cigar.

[Colloq. in all uses.]

stoic (stō'ik), *a.* and *n.* [Formerly also *stoick*; = *F. stoique* = *Sp. stóico* = *Pg. estoico* = *It. stoico*, < *L. stoicus*, < *Gr. στωικός*, pertaining to a porch or portico, specifically pertaining to that called *Ἐρῶ Πικτήν*, 'the Painted Porch' in the Agora at Athens, and to the school of philosophy founded by Zeno, who frequented this porch.] **I. a.** [*cap.*] Pertaining to the Stoics, or to their teaching: as, a *Stoic* philosopher; the *Stoic* doctrine; hence, manifesting indifference to pleasure or pain (compare *stoical*).

II. n. 1. [*cap.*] A disciple of the philosopher Zeno, who founded a sect about 308 B. C. He taught that men should be free from passion, unmoved by joy or grief, and submit without complaint to the unavoidable necessity by which all things are governed. The Stoics are proverbially known for the sternness and austerity of their ethical doctrines, and for the influence which their tenets exercised over some of the noblest spirits of antiquity, especially among the Romans. Their system appears to have been an attempt to reconcile a theological pantheism and a materialist psychology with a logic which seeks the foundations of knowledge in the representations or perceptions of the senses, and a morality which claims as its first principle the absolute freedom of the human will. The Stoics teach that whatever is real is matter; matter and force are the two ultimate principles; matter is of itself motionless and unformed, though capable of receiving all motions and all forms. Force is the active, moving, and molding principle, and is inseparably joined with matter; the working forces in the universe is God, whose existence as a wise thinking being is proved by the beauty and adaptation of the world. The supreme end of life, or the highest good, is virtue—that is, a life conformed to nature, the agreement of human conduct with the all-controlling law of nature, or of the human with the divine will; not contemplation, but action, is the supreme problem for man; virtue is sufficient for happiness, but happiness or pleasure should never be made the end of human endeavor. The wise man alone attains to the complete performance of his duty; he is without passion, although not without feeling; he is not indulgent, but just toward himself and others; he alone is free; he is king and lord, and is inferior in inner worth to no other rational being, not even to Zeus himself.

Certain philosophers of the Epicureans and of the *Stoicks* encountered him. *Acts* xvii. 18.

Hence—2. A person not easily excited; one who appears or professes to be indifferent to pleasure or pain: one who exhibits calm fortitude.

Flint-hearted *Stoics*, you, whose marble eyes Contemn a wrinkle, and whose souls despise To follow nature's too affected fashion.

Quarles, Emblems, II. 4.

School of the Stoics, the Porch. **stoical** (stō'ī-kāl), *a.* [*< stoic + -al*.] Of, pertaining to, or characteristic of the Stoics; hence, manifesting or maintaining indifference to pleasure or pain; exhibiting or proceeding from calm fortitude: as, *stoical* indifference.

It is a common imputation to Seneca that, though he declaimed with so much strength of reason, and a *stoical* contempt of riches and power, he was at the same time one of the richest and most powerful men in Rome.

Steele, Tatler, No. 170.

Stoical ethics. See *Stoic*, n. 1. **stoically** (stō'ī-kāl-ī), *adv.* In the manner of the Stoics, or of a stoic; without apparent feeling or sensibility; with indifference to pleasure or pain; with calm fortitude.

stoicalness (stō'ī-kāl-nes), *n.* The state of being stoical; indifference to pleasure or pain; calm fortitude.

stoicheiology (stōi-kī-ol'ō-jī), *n.* [Also *stoichiology*, and more prop. *stæchiology*; < *Gr. στοιχείων*, a small post, also a first principle (dim. of *στοίχος*, a row, rank, < *στειχέω*, go in line or order: see *stich*), + *-λογία*, < *λέγω*, speak: see *-ology*.] A division of a science which treats of the nature of the different kinds of objects that science deals with, but not of the manner in which they are associated with one another; the doctrine of elements.

The conditions of mere thinking are given in certain elementary requisites; and that part of logic which analyzes and considers these may be called its *stoicheiology*, or doctrine of elements. . . . Logical *stoicheiology*, or the doctrine conversant about the elementary requisites of mere thought. . . . In its *stoicheiology*, or doctrine of elements, logic considers the conditions of possible thought.

Sir W. Hamilton, Logic, iv., xiv.

stoicheometrical (stōi'kī-ō-met'ri-kal), *a.* [Also *stæchiometrical*; < *stoicheiometry + -ic-al*.] Pertaining to stoicheiometry.

stoicheiometry (stōi-kī-om'e-trī), *n.* [Also *stæchiometry*; < *Gr. στοιχείων*, a first principle, +

μέτρον, a measure: see *meter*¹.] The science of calculating the quantities of chemical elements involved in chemical reactions or processes.

Stoicant, *n.* [ME. *stoicien*; as *Stoic + -ian*.] A Stoic. *Chaucer*, *Boethius*, v. meter 4.

stoicism (stō'ī-sizm), *n.* [= *F. stoïcisme*; as *stoic + -ism*.] 1. [*cap.*] The opinions and maxims of the Stoics; also, the conduct recommended by the Stoics.—2. A real or pretended indifference to pleasure or pain; the bearing of pain without betraying feeling; calm fortitude.

He [Nuncomar] had just parted from those who were most nearly connected with him. Their cries and contortions had appalled the European ministers of justice, but had not produced the smallest effect on the iron stoicism of the prisoner. *Macaulay*, *Warren Hastings*.

= *Syn. 2. Insensibility, Impassibility, etc.* See *apathy*. **stoicity** (stō-is'ī-tī), *n.* [*< stoic + -ity*.] Stoicalness; stoical indifference. *B. Jonson*, *Epicoene*, i. 1.

stoit (stōit), *v. i.* [A dial. var. of *stot*².] 1. To walk in a staggering way; totter; stumble on any object. [Scotch.].—2. To leap from the water, as certain fish. *Day*. [Prov. Eng.]

stoiter (stōi'ter), *v. i.* [A dial. var. of *stotter*.] Same as *stoit*.

stoke¹, *v. t.* and *i.* [*< ME. stoken*, < *OF. estoquer* (= *It. *stoccare*), stab, thrust, < *estoc*, a rapier, stock: see *stock*², *stoccade*.] To pierce; stick; thrust.

Ne short sword for to stoke with point bytynge. *Chaucer, Knight's Tale*, I. 1683.

stoke² (stōk), *v.*; pret. and pp. *stoked*, ppr. *stoking*. [*< stoker*, taken as an E. noun, < **stoke + -er*¹, but appar. < *D. stoker*, < *stoken*, kindle a fire, incite, instigate, < *MD. stock*, *D. stok*, a stick, stock, rapier: see *stock*¹. Cf. *stoke*¹.] **I. trans.** To poke, stir up, and maintain the fire in (a furnace, especially one used with a boiler for the generation of steam for an engine); supply with fuel; trim and maintain combustion in.

Much skill is needed to stoke the furnace of a steam-boiler successfully; and one stoker will often be able to keep the steam well up when another of equal strength and diligence will fall altogether.

Brande and Cox, Dict. Sci., Lit., and Art.

Cold stoking, in *glass-manuf.*, the process of lowering the temperature of the oven until the glass attains the tough fluid consistency necessary for blowing.

II. intrans. To attend to and supply a furnace with fuel; act as a stoker or fireman.

stoke-hole (stōk'hōl), *n.* The compartment of a steamer in which the furnace-fires are worked: in the United States called *fire-room*.

stoker (stō'kēr), *n.* [*< D. stoker*, one who kindles or sets on fire, < *stoken*, kindle a fire, stir a fire, < *stok*, a stock, stiek (hence a poker for a fire): see *stock*¹, and cf. *stoke*².] 1. One who attends to and maintains suitable combustion in a furnace, especially a furnace used in generating steam, as on a locomotive or steamship; a fireman.—2. A poker. [Rare.]—**Mechanical stoker**, an automatic device for feeding fuel to a furnace, and for keeping the grate free from ashes and clinkers. Many such machines have been invented. Endless aprons or chains, or revolving toothed cylinders, are common feeders, distributing the coal to the grate in definite quantity as needed, while shaking grates, revolving grate-bars, and special bars called *picker-bars*, with teeth working in the air-spaces of the grate, are employed for the discharge of ashes and cinders.

Stokesia (stō-kē'sī-ā), *n.* [NL. (L'Heritier, 1788), named after Dr. Jonathan Stokes (1755-1831), a British botanist.] A genus of composite plants, of the tribe *Vernoniaceæ*, subtribe *Euvroniææ*, and series *Stilpnopappææ*. It is characterized by large stalked heads of blue flowers, with smooth three- or four-angled achenes and a pappus of four or five long bristles. The corollas, unlike the tubular type otherwise prevalent in the tribe, are flattened above the middle and somewhat ligulate, and toward the outside of the head, by their increased size and deeply five-parted border, they suggest the tribe *Cichoriaceæ*. The only species, *S. cyanæa*, is a native of the southern United States near the Gulf of Mexico, a rare plant of wet pine-barrens. It is an erect shrub, clad above with loose wool and alternate clasping leaves, and bearing petioled leaves below, which are entire or spiny-fringed. The handsome blue flowers form large terminal heads which are purplish in the

bud, resemble those of the China aster, and are grown in large quantities for the London market, under the name of *Stokes's aster*.

stola (stō'li), *n.*; pl. *stolæ* (-lō). [L.: see *stole*².] An ample outer tunic or dress worn by Roman women over the under-tunic or chemise: it fell as low as the ankles or feet, and was gathered in around the waist by a girdle. It was a characteristic garment of the Roman matrons, as the toga was of the men, and divorced women and courtesans were not permitted to wear it. See *cut* in preceding column.

stole¹ (stōl). Preterit and obsolete past participle of *steal*¹.

stole² (stōl), *n.* [*< ME. stole*, *stool*, < *OF. estole*, *F. étole* = *Sp. Pg. estola* = *It. stola*, < *L. stola*, a stola, robe, stole, < *Gr. στήλη*, a long robe; orig., in a gen. sense, dress, equipment, sacerdotal vestment or vestments; < *στέλλω*, set, array, despatch: see *stell*.] 1. A stola, or any garment of similar nature.

Forsoth the fadir seyde to his seruauhtis, Soone bryngye ze forth the first *stole*, and clothe ze him.

Wyclif, Luke xv. 22.

Behind, four priests, in sable *stole*, Sung requiem for the warrior's soul.

Scott, L. of L. M., v. 30.

2. In the Roman Catholic, Oriental, and Anglican churches, an ecclesiastical vestment, consisting of a narrow strip of silk or other material, worn over the shoulders (by deacons over one shoulder) and hanging down in front to the knees or below them. It is widened and fringed at the ends, and usually has a cross embroidered on it at the middle and at each extremity. Stoles are worn of different colors, according to the ecclesiastical season. When celebrating the eucharist a priest wears his stole crossed upon the breast and secured by the girdle at other times simply pendent from the shoulders. A bishop, on account of his pectoral cross, wears it pendent even when celebrating. A deacon wears it over the left shoulder and tied on the right side. In the Greek Church the stole has been worn since early times in two different forms, the deacon's (*orarium*) and the priest's (*epitrichelion*). Originally the stole was of linen, and probably was a napkin or cloth indicative of ministrating at the altar and at agape. The pall or omophorion is of entirely distinct origin. See *orarium*.

Forth comth the preest with *stole* aboute his nekke, And bad hire be lyke to Sarra and Rebecke In wysdom and in trouthe of marlage.

Chaucer, Merchant's Tale, I. 459.

3. A chorister's surplice or cotta: an occasional erroneous use.

Six little singing-boys—dear little souls— In nice clean faces, and nice white stoles.

Barham, Ingoldsby Legends, I. 210.

4. In *her.*, usually, a bearing representing a scarf with straight and parallel sides, fringed at each end.—**Groom of the stole**, the first lord of the bed-chamber in the household of an English king.—**Order of the Golden Stole**, a Venetian order, the order of which was a stole of cloth of gold worn over the robes. It disappeared with the independence of the republic of Venice.—**Stole-fee**, a fee paid to a priest for religious or ecclesiastical service, as for marriages, christenings, and funerals.

stole³ (stōl), *n.* Same as *stolon*.

stole⁴, *n.* An obsolete form of *stool*.

stoled (stōld), *a.* [*< stole*² + *-ed*².] Wearing a stole. *G. Fletcher*, *Christ's Triumph After Death*.

stolen (stō'ln), *p. a.* [Pp. of *steal*¹.] Obtained or acquired by stealth or theft: as, *stolen* goods.

Stolen waters are sweet.

Prov. ix. 17.

Stolephoridae (stol-e-for'ī-dē), *n. pl.* [NL., < *Stolephorus + -idae*.] A family of malacopterygian fishes, typified by the genus *Stolephorus*; the anchovies. The body is oblong or elongate; the snout is produced forward; the mouth is very large and inferior; the maxillaries are very narrow, and project backward; the dorsal fin is submedian and short; the anal fin is rather long; the pectorals are normal; and the ventrals are abdominal, but further advanced than usual, and of moderate size. There is no lateral line, but along the sides is generally developed a broad silvery band, to which the typical genus owes its name. The species are mostly of small size, rarely exceeding 6 inches, and often less. About 70 are known, some inhabiting almost all tropical and temperate seas. *Engraulididae* is a synonym.

stolephoroid (stō-lef'ō-roid), *n.* and *a.* [*< Stolephorus + -oid*.] **I. n.** A fish of the family *Stolephoridae*.

II. a. Of, or having characters of, the *Stolephoridae*.

Stolephorus (stō-lef'ō-rus), *n.* [NL. (Lacépède, 1803), < *Gr. στήλη*, a stole, + *φόρεω* = *E. bear*¹.] A genus of fishes, related to the herrings, but with a produced snout, and a broad silvery band which has been compared to the white stole or band worn by priests, typical of the family *Stolephoridae* (or *Engraulididae*). The common anchovy is *S. encrasicolus*. There are several others, as *S. broueni*, from Cape Cod to Brazil, abounding southward; *S. ringens*, from Vancouver Island to Peru, a large anchovy; *S. delicatissimus* and *S. compressus*, of the Californian and Mexican coasts, the latter locally known as *sprat* (see *sprat*²,

Roman Woman Clad in the Stola (over which is draped the palla).

2 (c). This genus has been oftener called *Engraulis*. See cut under *anchovy*.

stolid (stol'id), *a.* [= Sp. *estólido* = Pg. *estolido* = It. *stólido*, < L. *stolidus*, unmovable, slow, dull, stupid; prob. akin to Gr. *στερεός*.] Heavy; dull; stupid; not easily moved; lacking in or destitute of susceptibility; denoting dullness or impassiveness: as, a *stolid* person; a *stolid* appearance.

But the *stolid* calm of the Indian alone Remains where the trace of emotion has been. Whittier, Mogg Megone, i.

= Syn. Doltish, wooden.
stolidity (stō-lid'i-ti), *n.* [= It. *stolidità*, < L. *stoliditas* (-s), dullness, stupidity, < L. *stolidus*, dull, stupid; see *stolid*.] The state or character of being stolid; dullness; stupidity.

These certainly are the fools in the text, indolent, intractable fools, whose *stolidity* can baffle all arguments, and be proof against demonstration itself.

Bentley, Sermons, i.

= Syn. See *stolid*.
stolidly (stol'id-li), *adv.* In a stolid manner: as, to gaze *stolidly* at one. Bailey.

stolidness (stol'id-nes), *n.* Stolidity.
stolo (stō'lō), *n.*; pl. *stolones* (stō-lō'nēz). [L.: see *stolon*.] In *zool.*, a stolon.—**Stolo prolifer**, the proliferating stolon of some animals, as certain ascidians; a germ-stock. See *stolon*, 2 (c).

stolon (stō'lōn), *n.* [NL., < L. *stolo* (-n-), a shoot, branch, sucker.] 1. In *bot.*: (a) In phanerogams, a reclined or prostrate branch which strikes root at the tip, developing a new plant.

Carex vulgaria, var. *stolonifera*, showing the stolons.

A very slender naked stolon with a bud at the end constitutes a runner, as of the strawberry. See also cut under *Solidago*. (b) In mosses, a shoot running along or under the ground, and eventually rising into the air and producing fully leafed shoots. Goebel.—2. In *zool.*, some proliferated part or structure, likened to the stolon of a plant, connecting different parts or persons of a compound or complex organism, and usually giving rise to new zooids by the process of budding. See cuts under *Campanularia* and *Willsia*. (a) A process of protoplasm between the different compartments of a multicellular foraminifer. (b) The prominent, adherent, or creeping basal section of the stock of some social infusorians. (c) One of the prolongations of the cenosarc of some actinozoans. (d) The second stage of the embryo of some hydrozoans. (e) The germ-stock or prolongation of the tunic of some compound ascidians, as a *salp*; a *stolo* prolifer. See cuts under *Salpa* and *Cyathozoid*.

Also *stole*.

stolonate (stō'lōn-āt), *a.* [< *stolon* + -ate.] In *zool.*, giving rise to or provided with a stolon or stolons; originating in a stolon; stoloniferous.

stoloniferous (stō-lō-nif'e-rus), *a.* [< L. *stolo* (-n-), a shoot, sucker, + *ferre*, bear, carry; see -ferous.] Producing or bearing stolons; proliferating, as an ascidian or a hydroid; stolonate.

stolzite (stol'zit), *n.* [Named after Dr. Stolz of Teplitz in Bohemia.] Native lead tungstate, a mineral occurring in tetragonal crystals of a green, brown, or red color, and resinous or subadamantine luster. Sometimes called *scheelite*.

stoma (stō'mä), *n.*; pl. *stomata* (-mä-tä). [NL., < Gr. *στόμα* (*stomat-*), pl. *στόματα*, the mouth, a mouth, opening, entrance or outlet, a chasm, cleft, etc., the face, front, fore part, etc.; = Zend *staman*, mouth. Cf. *stomach*, from the same source.] 1. In *zool.*, a mouth or ingestive opening; an oral orifice; an ostium or ostiole: chiefly used of small or simple apertures, as a cytostome; hence, also, a small opening of any kind through which something may pass in or out; a pore. Specifically—(a) An opening of

a lymphatic vessel; a lymphatic pore or orifice, as an interstice between the cells of a serous membrane. (b) The outer opening of a trachea or air-tube of an insect; a spiracle or breathing-hole. (c) A branchial pore of an ascidian or acranial vertebrate.

2. In *bot.*, a minute orifice or slit in the epidermis of leaves, etc., which opens directly into air-cavities or intercellular spaces that pervade the interior, and through which free ingress and egress of air take place; a breathing-pore. The apparatus of the stoma consists usually of a pair of cells (there are several in the *Equisetaceae*, *Hepaticae*, etc.), called *guard-cells* or *guardian-cells*, between the opposed concave sides of which lies the slit or opening, which extends through the whole height of the epidermis and permits free communication between the intercellular spaces and the external air. According to Van Tieghem, the stomata are always open in sunlight and closed in darkness. These cells are strongly thickened on the upper and under walls of their opposed faces, while elsewhere their walls are relatively thin. The opening and closing of a stoma depend upon the difference in thickness of the parts of the walls. When the turgescence of the guard-cells increases, they curve more strongly, and consequently the cleft widens; but with decreased turgescence the cleft becomes narrower. See also cut under *Iris*.

3. In Swedenborg's philosophy, a cubical figure with hollowed surfaces, being the figure of the interstices of spheres arranged in what Swedenborg calls the fixed quadrilateral pyramidal position, supposed to be that natural to the spherical particles of water.

1. *Strabanthus Sabiniensis*. 2. *Codium variegatum*. 3. *Limncharis Plumieri*. a, Stomata. (Magnified.)

stomacace (stō-mak'ā-sē), *n.* [NL., < L. *stomacace*, < Gr. *στομακή*, a disease of the mouth, scurvy of the gums, < *στόμα*, mouth, + *κάκη*, badness, < *κακός*, bad.] Ulcerous stomatitis. See *stomatitis*.

stomach (stum'ak), *n.* [Now conformed terminally to the L. spelling, but pron. according to its ME. origin; early mod. E. *stomack*, *stomacke*, *stomak*, *stomake*; < ME. *stomak*, *stomake*, *stomoke*, < OF. *estomac*, *estomach*, F. *estomac* = Pr. *estomach* = Sp. *estómago* = Pg. *estomago* = It. *stomaco*, the stomach, < L. *stomachus*, the throat, gullet, also the stomach, fig. taste, liking, also distaste, dislike, irritation, chagrin, < Gr. *στόμαχος*, the throat, gullet, the orifice of the stomach, hence also the stomach, lit. (as shown also in other uses, the neck of the bladder or of the uterus, etc.) a mouth or opening, < *στόμα*, mouth, opening; see *stoma*.] 1†. The throat; the gullet; the mouth.

Spitful tongues in cankered stomachs placed. Raleigh. (Imp. Dict.)

2. A more or less sac-like part of the body where food is digested. In the lowest animals any part of the sarcode or protoplasmic substance of the body is capable of digesting food, and forms during the process a temporary stomach, as in an amoeba. In many infusorial animalcules special vacuoles containing food are formed. These are inconstant both in number and in position, whence Ehrenberg's name, *Polygastrica*, for these organisms. In the highest protozoans, which have a definite oral or ingestive area, there is likewise a more or less fixed digestive tract, constituting a stomach. A few of the metazoans have no true digestion, and consequently no stomach; such are the parenchymatous or anenterous worms, which imbibe or soak in nutriment already elaborated in the tissues of the host of which they are parasites. But the vast majority of animals above the protozoans have an intestinal digestive tract the whole or a part of which may properly be called a stomach. In most of these, again, a definite stomach exists as a specialized, usually dilated, part of the alimentary canal, in which food is subjected to a certain degree of digestion subsequent to mastication and insalivation and prior to further digestive changes which go on in the intestine. Among vertebrates more than one section of the alimentary canal is called a stomach, and many vertebrates have more than one. Thus, in birds there are a true glandular stomach, the *proventriculus*, in which the esophagus ends, and a muscular or grinding stomach, the gizzard or *gigerium*. In mammals the stomach always extends from the end of the gullet to the beginning of the gut. It is of extremely variable size and shape. Kinds of mammalian stomachs sometimes distinguished are the simple, as in man, the carnivores, etc.; the complex or plurilocular stomach, as in various marsupials, rodents, some monkeys, etc.; and the compound or pluripartite. The last is confined to the ruminants. (See *Ruminantia*.) In man the stomach is the most dilated and most distensible part of the alimentary canal. It occupies parts of the left hypochondriac and epigastric regions of the abdomen, immediately within the abdominal walls, below the diaphragm and partly under the liver, to the right of the spleen, and above the transverse colon. In form it is irregularly conoidal, and curved upon itself. When moderately distended, it is about 12 inches long and 4 wide; it weighs 3 or 4 ounces. But the size, shape, and hence the anatomical relations,

vary greatly in different individuals and in different states of distention. It begins where the gullet ends, at the esophageal or cardiac orifice, and ends at the pyloric orifice, where the duodenum begins. From the cardiac orifice the stomach bulges to the left in a great cul-de-sac, the fundus cardiacus, or cardiac end, in contact with the spleen, and from this greatest caliber the organ lessens in diameter with a sweep to the right. The lesser curvature or short border of the stomach, between the cardiac and pyloric orifices, is uppermost, and is connected with the liver by the lesser or gastrophatic omentum. The greater curvature or long border of the stomach is opposite the other, between the same two points, and gives attachment to the great or gastrosolic omentum. These two curvatures separate the anterior and posterior surfaces. The stomach is held in place by folds of peritoneum, the gastrosolic, gastrophatic, gastrosplenic, and gastroprenic omenta, the last of which gives it most fixity. The arteries of the stomach are the gastric (a branch from the celiac axis), the pyloric and right gastro-epiploic branches of the hepatic, the left gastro-epiploic, and short branches from the splenic artery. The veins end in the splenic, anterior mesenteric, and portal veins. The numerous lymphatics consist of a deep set and a superficial set. The nerves are the terminal branches of both pneumogastrica and many branches from the sympathetic system. The coats of the stomach are four—serous, muscular, submucous, and mucous. The serous layer is the peritoneum, which covers the whole organ on both its surfaces, and is reflected away from it along each of its curvatures. The muscular coat includes three sets of fibers—longitudinal, circular, and oblique, the last chiefly limited to the cardia. The submucous coat is simply the connective tissue between the muscular layer and the mucous membrane lining the stomach. This mucous membrane is the so-called "coat" of the stomach. It is thick, pinkish, reddish, or brownish, with a soft velvety surface, thrown into longitudinal folds or rugæ when the organ is contracted. Studding the surface of the mucous membrane are numberless depressions or alveoli of polygonal tending to hexagonal form, $\frac{2}{3}$ to $\frac{1}{16}$ of an inch in diameter; these are the enlarged mouths of the tubular gastric glands, which secrete the gastric juice by the action of which gastric digestion is effected. Two kinds of these follicles are distinguished by their microscopic structure—the pyloric and the cardiac. The former are found chiefly at and near the pyloric end, the latter most typical at the cardiac, and there are intermediate forms in intermediate regions. The epithelium lining the mucous membrane and its alveoli is of the kind called *columnar*. Besides the four coats above described, a fifth, a layer of involuntary muscular fibers between the mucous membrane and the submucous layer, is distinguished as the *muscularis mucosæ*. The digestive activity of the stomach is intermittent, and depends upon the stimulus which the presence of food occasions. The muscular arrangement is such that food is continually rolled about, so that every part of the mass is submitted to the action of the gastric juice. In the stomach the proteids are converted into albumins and peptones by the pepsin, milk is curdled by the renet-ferment, the gelatiniferous tissues are dissolved, and other less important changes are effected. See also cuts under *alimentary*, *Asteroidea*, *Appendicularia*, *Dibranchiata*, *Dolichode*, *intestine*, *peritoneum*, *Plumatella*, *pluteus*, *Protula*, *Pulmonata*, *Pycnogonida*, *Ruminantia*, *Salpa*, *Tragus*, and *Tunicata*.

Human Stomach and Beginning of Intestine, laid open to show rugæ. a, esophagus or gullet; b, cardiac (left) dilatation of stomach; c, lesser curvature of stomach, opposite which is the (unlettered) greater curvature; d, pylorus, at right extremity of stomach; e, biliary or hepatic duct; f, gall bladder, whose duct, the cystic duct, forms with the hepatic duct the ductus communis choledochus, or common bile-duct; g, pancreatic duct, opening into the last; h, i, duodenum, or beginning of the small intestine.

3. The digestive person or alimentary zooid of a compound polyp. See *gasterozoid*.—4. In most insects of the orders *Lepidoptera*, *Diptera*, and some *Hymenoptera*, a bladder-like expansion of the esophagus, which can be dilated at the will of the insect; the sucking-stomach, by means of which the nectar of flowers or other liquid is sucked up, as water is drawn into a syringe. In mandibulate insects the inguivies or crop takes the place of the sucking-stomach, and nearly all insects have two true stomachs, called *proventriculus* and *ventriculus*.

5. Appetite; desire or relish for food: as, to have a good *stomach* for one's meals.

The body is as so redy and penyble To wake, that my *stomak* is destroyed.

Chaucer, Summoner's Tale, l. 139.

Pray, seat you, lords; we'll bear you company, But with small *stomach* to taste any food.

Beau. and Fl. (?), Faithful Friends, iii. l.

I'll make as bold with your meat; for the trot has got me a good *stomach*.

Cotton, in Walton's Angler, ii. 234.

In some countries, where men and women have good travelling *stomachs*, they begin with porridge, then they fall to capon, or so forth, but if capon come short of filling their bellies, to their porridge again, 'tis their only course.

Webster and Dekker, Northward Hoe, l. i.

Hence—6. Relish; taste; inclination; liking: as, to have no *stomach* for controversy.

He also haith tolde me moche off *hys stomake* and tendre faver that he owythe to yow. Paston Letters, III. 160.

Finding that the citizens had apparently no *stomach* for the fight, he removed his trophies, and took his departure. Motley, Dutch Republic, II. 68.

7. Disposition. (a) Spirit; temper; heart.

Though I bee not worthe to receive any favor at the handes of your maistership, yet is your excellent herte and noble *stomake* worthe to shewe favour.

Udall, in Ellis's Lit. Letters, p. 4.

This was no small Magnanimity in the King, that he was able to pull down the high *Stomachs* of the Prelates in that time.

Baker, Chronicles, p. 50.

(b) Compassion; pity.

Nere myn extorcounn I myghte nat lyven,
Nor of awiche japes wol I nat be shryven,
Stomak ne consciencia ne knowe I noon.

Chaucer, Friar's Tale, l. 143.

(c) Courage; spirit.

For in them, as men of stowter *stomaches*, bolder spirittes, and manlyr courages then handycraftes men and plowmen be, doth consiste the whole powre, strength, and puissaunce of oure army, when we muste fight in battayle.

Sir T. More, Utopia, tr. by Robinson, p. 39.

(d) Pride; haughtiness; conceit.

He was a man
Of an unbouded *stomach*, ever ranking
Himself with princes.

Shak., Hen. VIII., iv. 2. 34.

(e) Spleen; anger; cholera; resentment; anliness.

From that time King Richard, mooved in *stomacke* against King Philip, never shewed any gentle countenance of peace & amitie.

Hakuyt's Voyages, II. 23.

Many learned men have written, with much djuersitie for the matter, and therefore with great contrariete and some *stomacke* amongst them selues.

Ascham, The Scholemaster, p. 123.

Which might teach these times not suddenly to condemn all things that are sharply spoken, or vehemently written, as proceeding out of *stomach*, virulence, and ill nature.

Milton, Church-Government, ii., Int.

Circulating stomach, one of the temporary food-vacuoles of an infusorian or other protozoan, which moves about with a kind of cyclois. See *Polygastrica*.—**Frigidity of the stomach**, a state of gastric debility formerly considered to depend on sexual excesses.—**Fullness of the stomach**, a feeling of weight or distention in the epigastric region.—**Glandular stomach**, see *proventriculus*.—**Hypogenesia of the stomach**, unnatural smallness of the stomach, seen in some children.—**Masticatory stomach**, see *masticatory*.—**Muscular stomach**, see *muscular* and *gizzard*.—**Pit of the stomach**, the depression just below the sternum: same as *epigastrum*, 1. Also called *infrasternal fossa*, *scrobiculus cordis*, and *anticardium*.—**Proud stomach**, a haughty disposition. Compare def. 7.

Truths whilk are as unwelcome to a *proud stomach* as wet clover to a cow's.

Scott, Pirate, xviii.

Rugæ of the stomach, folds of the mucous membrane, present when the organ is contracted, and extending for the most part in a longitudinal direction. See cut in def. 2.—**Sour stomach**, that condition of the stomach which causes acid eructations.—**Sucking-stomach**. See def. 4.—**To stay the stomach**. See *stay* 2.

stomach (stum'ak), *v.* [= OF. *estomaquer* = Sp. Pg. *estomagar* = It. *stomacare*, disgust, refl. feel disgust, < L. *stomachari*, feel disgust, be angry, < *stomachus*, distaste, dislike, stomach; see *stomach*, *n.*] **I.** *trans.* 1. To encourage; hearten.

When he had *stomached* them by the Holy Ghost to shoot forth his word without fear, he went forward with them by his grace, conquering in them the prince of this world.

Bp. Bale, Select Works (Parker Soc.), p. 313.

2. To hate; resent; remember or regard with anger or resentment.

If that any *stomach* this my deed,
Alphonius can revenge thy wrong with speed.

Greene, Alphonius, iii.

A plague on them all for me! . . . O, I do *stomach* them hugely.

B. Jonson, Every Man in his Humour, iii. 2.

3. To put up with; bear without open resentment or opposition: as, to *stomach* an affront.

"The priests talk," said he, "of absolution in such terms that laymen can not *stomach* it."

Mulley, Dutch Republic, I. 76.

4. To turn the stomach of; disgust. [Rare.]

It is not because the restaurants are very dirty—if you wipe your plate and glass carefully before using them, they need not *stomach* you.

Howells, Venetian Life, vi.

II.† intrans. To be or become angry.

What one among them commonly doth not *stomach* at such contradiction?

Hooker.

stomachal (stum'ak-al), *a.* and *n.* [= F. *stomacal* = Sp. Pg. *estomacal* = It. *stomacale*, < NL. **stomachalis*, < L. *stomachus*, stomach; see *stomach*.] **I.** *a.* 1. Of or pertaining to the stomach; gastric: as, *stomachal* tubes.

The body-wall, which encloses the *stomachal* cavity.

Gegenbaur, Comp. Anat. (trans.), p. 92.

2. Relating to the stomach, or to a region of the body which contains the stomach; gastric; epigastric; abdominal; ventral: as, the *stomachal* part of a crab's carapace.—**3.** Remedial of a disordered stomach; peptic or digestive; cordial; stomachic.—**Stomachal teeth**, sharp, horny processes of the lining of the proventriculus, and sometimes of other parts of the alimentary canal, found in many insects and crustaceans, and serving for the comminution of food.

II. *n.* A stomachic.

stomach-animalist (stum'ak-an'i-malz), *n. pl.* The *Infusoria*. See *Polygastrica*. *Oken*.

stomach-brush (stum'ak-brush), *n.* A brush designed to be introduced into the stomach, by way of the esophagus, to stimulate secretion.

stomach-cough (stum'ak-kôf), *n.* A form of reflex cough excited by irritation of the stomach or small intestine.

stomacher (stum'ak-er), *n.* [*< stomach, v., + -er*.] 1. One who stomachs, in any sense of the word.—2. A stomachic; an appetizer.

In Sir Kenelm Digby's "Choice and Experimental Receipts in Physick and Chirurgery" (London, 1675) I find a preparation of herbs for external application with this heading: "To strengthen the stomach use the following *stomacher*."

N. and Q., 7th ser., IV. 173.

3. A part of the dress covering the front of the body, generally forming the lower part of the bodice in front and usually projecting down into the skirt or lapping over it—the name being given to the whole front piece covering the pit of the stomach and the breast. In some fashions the stomacher was richly embroidered, and ornamented with jewels, as in Europe in the sixteenth century.

Less fashionable ladies, between 1615 and 1625, discarded the tight and pointed *stomacher* and farthingale, and wore, over an easy jerkin and ample petticoat, a loose gown open in front, made high to meet the ruff.

Encyc. Brit., VI. 473.

4. A plaque or brooch, usually large, the name being derived from that part of the dress upon which the brooch was worn. *J. B. Atkinson*, Art Jour. (1867), p. 203.

stomachful (stum'ak-fûl), *a.* [Early mod. E. also *stomackfull*; < *stomach* + *-ful*.] Full of stomach or wilfulness; proud; spirited; wilful; perverso; stubborn; sturdy.

From all those Tartars he hath had an Army of an hundred and twenty thousand excellent, swift, *stomackfull* Tartarian horse.

Capt. John Smith, True Travels, I. 39.

Nay, if I had but any body to stand by me, I am as *stomachful* as another.

Wycherley, Plain Dealer, iii. 1.

stomachfully (stum'ak-fûl-i), *adv.* In a stomachful, or perverso or wilful, manner; stubbornly; perversely. *Bp. Hall*, The Golden Calf.

stomachfulness (stum'ak-fûl-nes), *n.* Stubbornness; perverseness; wilfulness.

Pride, *stomachfulness*, headiness—avall but little.

Granger, On Eccles. (1621), p. 248.

stomach-grief (stum'ak-grêf), *n.* Anger.

Stomacke grief is when we will take the matter as hot as a toste. We neede no examples for this matter, hot men have to many.

Sir T. Wilson, Art of Rhetoric.

stomachic (stô-mak'ik), *a.* and *n.* [= F. *stomachique* = Sp. *estomático* = Pg. *estomachico* = It. *stomachico*, < L. *stomachus*, < Gr. *στομαχικός*, pertaining to the stomach, < *στόμαχος*, the stomach; see *stomach*.] **I.** *a.* Of or pertaining to the stomach. (a) Stomachal; gastric: as, *stomachic* vessels or nerves. (b) Specifically, sharpening the appetite, and stimulating gastric digestion. See *stomachal*, 3.

He [Boaswell] was . . . gluttonously fond of whatever would yield him a little soiscement, were it only of a *stomachic* character.

Carlyle, Boswell's Johnson.

Stomachic balsam, a mixture of balsam of Peru with oil of nutmeg and other volatile oils, as those of wormwood, cloves, mace, peppermint, orange-peel, and amber, made up in different proportions.—**Stomachic calculus**, a concretion, usually containing hair, found in the stomach, particularly of lower animals. See *bezoar*.—**Stomachic fever**, gastric fever. See *fever* 1.

II. *n.* A medicine which sharpens the appetite, and is supposed to stimulate digestion, as the bitter tonics; a stomachal.

stomachical (stô-mak'ik-al), *a.* [*< stomachic + -al*.] Same as *stomachic*. *Wiseman*, Surgery, i. 18.

stomaching (stum'ak-ing), *n.* [Verbal *n.* of *stomach*, *v.*] Resentment. *Shak.*, *A.* and *C.*, ii. 2. 9.

stomachless (stum'ak-less), *a.* [Early mod. E. *stomacklesse*; < *stomach* + *-less*.] Lacking stomach; having no appetite. *Bp. Hall*, Balm of Gilead, ii. § 6.

stomachous (stum'ak-us), *a.* [*< L. stomachosus*, angry, choleric, < *stomachus*, distaste, dislike; see *stomach*.] Resentful; sullen; obstinate.

Young blood is hot; youth hasty; ingenuity open; abuse impatient; cholera *stomachous*.

G. Harvey, Four Letters.

stomach-piece (stum'ak-pēs), *n.* In *ship-carp.*, same as *apron*, 3.

stomach-plaster (stum'ak-plās'tèr), *n.* See *plaster*.

stomach-pump (stum'ak-pump), *n.* A small pump or syringe used in medical practice for the purpose of emptying the stomach or of introducing liquids into it. It resembles the common syringe, except that it has two apertures near the end, instead of one, in which the valves open different ways, so as

to constitute a sucking and a forcing passage. When the object is to empty the stomach, the pump is worked while its sucking orifice is in connection with a flexible tube passed into the stomach; and the extracted matter escapes by the forcing orifice. When, on the contrary, the object is to force a liquid into the stomach, the tube is connected with the forcing orifice, by which the action of the pump is reversed. It is now not much used, the stomach being emptied, when necessary, by the stomach-tube working as a siphon.

stomach-qualmed (stum'ak-kwâmd), *a.* Same as *stomach-sick*. *Shak.*, Cymbeline, iii. 4. 193.

stomach-sick (stum'ak-sik), *a.* Nauseated; qualmish; hence, having an aversion.

Receivng some hurt in his stomach by drinking those cold waters, he proued *stomach-sick* to his expedition also.

Purchas, Pilgrimage, p. 289.

stomach-staggers (stum'ak-stag'êrz), *n.* A disease in horses, depending on a paralytic affection of the stomach. The animal so affected dozes in the stable, resting his head in the manger; on awaking, or being aroused, he falls to eating, and continues to eat voraciously, death from apoplexy or repletion often resulting.

stomach-sweetbread (stum'ak-swê't'bred), *n.* The pancreas of the calf, as used for food: distinguished from the *throat-sweetbread*, or thymus gland of the same animal.

stomach-timber (stum'ak-tim'bêr), *n.* Same as *belly-timber*. [Slang.]

As Prior tells, a clever poet, . . .
The main strength of ev'ry member
Depends upon the *stomach timber*.

Combe, Dr. Syntax's Tours, xxxiii.

stomach-tooth (stum'ak-tôth), *n.* A lower canine milk-tooth of infants: so called because there is often gastric disturbance at the time of its appearance.

stomach-tube (stum'ak-tûb), *n.* A long flexible tube to be introduced into the stomach, through the gullet, as for washing out the stomach.

stomach-worm (stum'ak-wêrm), *n.* A common intestinal roundworm, *Ascaris lumbricoides*, sometimes found in the human stomach.

stomachy (stum'ak-i), *a.* [*< stomach + -y*.] Proud; haughty; irascible; easily offended. *Halliwel*. [Prov. Eng.]

stomack, **stomak**, **stomake**, *n.* Obsolete spellings of *stomach*.

stomapod (stô-ma-pod), *a.* and *n.* Same as *stomatopod*.

Stomatopoda (stô-ma-pô-dâ), *n. pl.* [NL., < Gr. *στόμα*, mouth, + *ποδός* (pod-) = E. *foot*.] Same as *Stomatopoda*. *Latreille*, 1817.

stomatopodiform (stô-ma-pôd'i-fôrm), *a.* [*< NL. Stomatopoda + L. forma*, form.] Resembling or shaped like a stomatopod, especially of the genus *Squilla*. Applied in entomology to certain elongate, somewhat flattened larvae which have the abdomen wider than the thorax, long antennae, and six legs, the anterior pair being large and raptorial. In aquatic species the body is furnished with lateral false gills. The larvae of *Ephemera* are examples of this form.

stomatopodous (stô-ma-pô-dus), *a.* [*< stomapod + -ous*.] Same as *stomatopod*.

stomata, *n.* Plural of *stoma*.

stomatal (stô-ma-tal), *a.* [*< NL. stoma(t-) + -al*.] In *bot.* and *zool.*, relating or belonging to stomata.

stomate (stô-mât), *a.* and *n.* [*< NL. *stomatus* for **stomatatus*, < *stoma* (*stomat-*), a stoma; see *stoma*.] **I.** *a.* Having a stoma or stomata; stomatous.

II. *n.* A stoma.

stomatia, *n.* Plural of *stomatium*.

stomatic (stô-mat'ik), *a.* and *n.* [= It. *stomatico*, < Gr. *στοματικός*, of or pertaining to the mouth, < *στόμα* (-), mouth; see *stoma*.] **I.** *a.* In *zool.* and *bot.*, of or pertaining to a stoma or stomata; oral.

II. *n.* A medicine for diseases of the mouth.

stomatiferous (stô-ma-tif'e-rus), *a.* [*< NL. stoma(t-) + L. ferre*, bear, carry; see *-ferous*.] Bearing or provided with stomata; stomatophorous.

stomatitis (stô-ma-ti'tis), *n.* [NL., < Gr. *στόμα* (-), mouth, + *-itis*.] Inflammation of the interior of the mouth, including the mucous membrane of the lips, gums, tongue, cheeks, and palate.—**Aphthous stomatitis**, inflammation of the mucous membrane of the mouth-cavity, consisting in the formation of small superficial ulcers. Also called *aphtha*, *canker sore*, *mouth*, *follicular* or *vesicular stomatitis*.—**Catarrhal stomatitis**, a simple local or general inflammation of the mucous membrane of the mouth-cavity. Also called *oral catarrh*, *erythema of the mouth*, and *erythematous*, *simple*, and *superficial stomatitis*.—**Gangrenous stomatitis**. See *nomia*.—**Mercurial stomatitis**, an inflammation of the mucous membrane of the mouth, with ulceration, caused by mercurial poisoning.—**Parasitic stomatitis**, inflammation of the mouth due to or complicated with the growth on the mucous membrane of *Oridium albicans*. Also called *thrush*, *pseudomembranous stomatitis*.

—Ulcerous stomatitis, inflammation of the mucous membrane of the mouth-cavity, usually unilateral, resulting in the formation of multiple ulcers. Also called *stomatitis phlegmonosa stomatitis*, and *putrid sore mouth*.

stomatium (stō-mā-tō'ō-dā), *n.*; pl. *stomatia* (-ā). [NL., dim. of *stoma*: see *stoma*.]

Stomatoda (stō-mā-tō'ō-dā), *n. pl.* [NL., < Gr. *στόμα* (-τ-), mouth, + *είδος*, form.] Dujardin's name for the ciliate infusorians, regarded by him as the only animalcules with distinct stomata, or oral apertures: distinguished from *Astomata*, or the supposed mouthless flagellate infusorians.

stomatodæum (stō-mā-tō-dē'um), *n.*; pl. *stomatodæum* (-ā). [NL.: see *stomodæum*.] Same as *stomodæum*. [Rare.]

The *stomatodæum*: a sac-like involution of the epidermis shutting against the mesenteron, spacious, and well marked on account of its dense pigmentation.

Huxley and Martin, Elementary Biology, p. 171.

stomatode (stō-mā-tōd), *a.* and *n.* [< Gr. *στόμα* (-τ-), mouth, + *είδος*, form.] **I.** *a.* Having a stoma or cytostome, as an infusorian; stomatophorous; or of pertaining to the *Stomatoda*.

As regards the classification of the Protozoa, a rough and useful division is into mouth-bearing or "stomatode" Protozoa, in which there is a distinct mouth, and mouthless or "astomatous" Protozoa.

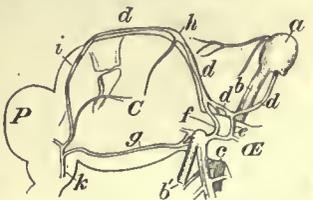

H. A. Nicholson.

II. *n.* A member of the *Stomatoda*.

stomatodendron (stō-mā-tō-den'dron), *n.*; pl. *stomatodendra* (-drā). [NL., < Gr. *στόμα* (-τ-), mouth, + *δένδρον*, a tree.] One of the dendritic branches of the *Rhizostomidae*, ending in minute polypites. *Encyc. Dict.*

stomatodynia (stō-mā-tō-din'i-ā), *n.* [NL., < Gr. *στόμα* (-τ-), mouth, + *δύσπη*, pain.] Pain in the mouth.

stomatogastric (stō-mā-tō-gas'trik), *a.* [< Gr. *στόμα* (-τ-), mouth, + *γαστήρ*, stomach: see *gastric*.] Of or pertaining to the mouth and stomach: applied to the set or system of visceral nerves which ramify upon the alimentary canal of many invertebrates. See figure and description.

Stomatogastric and other Visceral Nerves of Crayfish (*Atacus fluviatilis*).

The Crayfish possesses a remarkably well-developed system of visceral or stomatogastric nerves.

Huxley, Anat. [Invert., p. 236.]

stomatological (stō-mā-tō-loj'i-kal), *a.* [< *stomatology* + *-ic*.] Pertaining to stomatology.

stomatologist (stō-mā-tōl'ō-jist), *n.* [< *stomatology* + *-ist*.] One versed in stomatology.

stomatology (stō-mā-tōl'ō-jī), *n.* [< Gr. *στόμα* (-τ-), mouth, + *λογία*, < *λέγειν*, speak: see *-ology*.] The sum of scientific knowledge concerning the mouth.

stomatomorphous (stō-mā-tō-mōr'fus), *a.* [< Gr. *στόμα* (-τ-), mouth, + *μορφή*, form.] In bot., mouth-shaped.

stomatonecrosis (stō-mā-tō-nek-rō'sis), *n.* [NL., < Gr. *στόμα* (-τ-), mouth, + *νεκρωσις*, deadness: see *necrosis*.] Gangrenous stomatitis. See *stomatitis* and *noma*.

Stomatophora (stō-mā-tōf'ō-rā), *n. pl.* [NL., neut. pl. of *stomatophorus*: see *stomatophorous*.] Protozoa which are provided with a mouth or its equivalent: a higher series of protozoans: same as *Infusoria*, 2: opposed to *Lipostomata*.

stomatophorous (stō-mā-tōf'ō-rus), *a.* [NL. *stomatophorus*, < Gr. *στόμα* (-τ-), mouth, + *φέρω* = E. bear¹.] Having a mouth or stoma; or of pertaining to the *Stomatophora*; not lipostomatous.

stomatoplastic (stō-mā-tō-plas'tik), *a.* [< *stomatoplasty* + *-ic*.] Pertaining to stomatoplasty.

stomatoplasty (stō-mā-tō-plas-ti), *n.* [< Gr. *στόμα* (-τ-), mouth, + *πλαστικός*, verbal adj. of *πλάσσειν*, form, mold.] Plastic surgery of the mouth.

stomatopod (stō-mā-tō-pod), *a.* and *n.* [< NL. *stomatopus* (-pod), < Gr. *στόμα* (-τ-), mouth, + *πούς* (pod-) = E. foot.] **I.** *a.* Having some of the legs close by the mouth, as a mantis-shrimp; or of pertaining to the *Stomatopoda*. Also *stomatopodous*, *stomatopodus*.

II. *n.* A member of the *Stomatopoda*, in any sense.

Also *stomatopod*.

Stomatopoda (stō-mā-top'ō-dā), *n. pl.* [NL., neut. pl. of *stomatopus* (-pod-): see *stomatopod*.] An order of malacostracous podophthalmic crustaceans, to which various limits have been assigned. (a) As constituted by Latreille in 1817, in the form *Stomatopoda*, the second order of *Crustacea*, the so-called sea-mantes, or gastrurs, divided into two families, *Unipeltata* and *Bipeltata*, of which only the former are properly stomatopodous, the other being the so-called glass-crabs (*Phyllosoma*), or larval forms of other crustaceans. Hence—(b) An artificial order of the higher crustaceans, under which are included not only the *Squillidae* or *Stomatopoda* proper, but also the *Myidae* or opossum-shrimps, and related forms, the *Luciferidae*, etc. (c) Restricted by Huxley to the family *Squillidae*. See cuts under *mantis-shrimp* and *Squillidae*.

Squilla, Gonodactylus, and Coronis appear to me to differ so widely and in such important structural peculiarities, not only from the Podophthalmia proper, but from all other Crustacea, as to require arrangement in a separate group, for which the title of *Stomatopoda* may well be retained.

Huxley, Anat. Invert., p. 317.

stomatopodous (stō-mā-top'ō-dus), *a.* [< *stomatopod* + *-ous*.] Same as *stomatopod*.

Stomatopora (stō-mā-top'ō-rā), *n.* [NL. (Brown, 1835), < Gr. *στόμα* (-τ-), mouth, + *πόρος*, pore: see *porē*.] Same as *Aulopora*.

stomatopoid (stō-mā-top'ō-roïd), *a.* [< *Stomatopora* + *-oid*.] Pertaining to or characteristic of a coral of the genus *Stomatopora*. *Geological Jour.*, XLV. iii. 566.

Stomatopterophora (stō-mā-top-te-rof'ō-rā), *n. pl.* [NL., < Gr. *στόμα* (-τ-), mouth, + *πτερόν*, feather, + *φέρω* = E. bear¹.] In J. E. Gray's classification (1821), the fourth class of mollusks, divided into two orders, *Pterobranchia* and *Dactylobranchia*; the *Pteropoda* or pteropods.

stomatoprhagia (stō-mā-tō-rā'ji-ā), *n.* [NL., < Gr. *στόμα* (-τ-), mouth, + *ραγία*, < *ρήγνυμι*, break, burst.] Hemorrhage from the mouth.

stomatoscope (stō-mā-tō-skōp), *n.* [< Gr. *στόμα* (-τ-), mouth, + *σκοπεῖν*, view.] Any instrument for keeping the mouth open so as to permit the parts within to be inspected. *Dunglison*.

stomatotheca (stō-mā-tō-thē'kā), *n.*; pl. *stomatothecæ* (-sē). [NL., < Gr. *στόμα* (-τ-), mouth, + *θήκη*, box, chest.] In entom., the mouth-case, or that part of the integument of a pupa which covers the mouth.

stomatous (stō-mā-tus), *a.* [< Gr. *στόμα* (-τ-), mouth, + *-ous*.] Provided with stomata; stomatophorous; stomate.

Stomias (stō-mi-as), *n.* [NL. (Cuvier, 1817), < Gr. *στόμα*, mouth.] A genus of deep-sea fishes, typical of the family *Stomiidae*, having a long compressed body with delicate deciduous scales, a row of phosphorescent or luminous spots along each side, and a rayed dorsal opposite the anal fin: so called from the large and deep mouth, armed with a formidable array of teeth. *S. ferax* is found from Greenland to Cape Cod. Specimens are taken at various depths from 450 to 1,800 fathoms.

Stomiidae (stō-mi-at'i-dē), *n. pl.* [NL., < *Stomias* (see *stomioid*) + *-idae*.] A family of physostomous fishes, typified by the genus *Stomias*. They are deep-sea Atlantic fishes, of 5 or 6 species and 3 genera, divided into 2 subfamilies, according to the presence or absence of an adipose fin.

stomioid (stō-mi-g-toid), *a.* and *n.* [< *Stomias* (assumed stem *Stomiat-*).] **I.** *a.* Resembling a fish of the genus *Stomias*; or of pertaining to the *Stomiidae*.

II. *n.* Any fish of the family *Stomiidae*.

stomodæal (stō-mō-dē'al), *a.* Same as *stomodæal*.

stomodæum (stō-mō-dē'um), *n.*; pl. *stomodæa* (-ā). [NL., < Gr. *στόμα*, mouth, + *δαίσιος*, by the way, < *δός*, way.] An anterior part of the alimentary canal or digestive tract, being so much of the whole enteric tube as is formed at the oral end by an ingrowth of the ectoderm: correlated with *proctodæum*, which is derived from the ectoderm at the aboral end, both being distinguished from *enteron* proper, which is of endodermal origin.

stomodeal (stō-mō-dē'al), *a.* [< *stomodæum* + *-al*.] Pertaining to or having the character of a stomodæum. Also spelled *stomodæal*.

Stomoxyidae (stō-mok-si'i-dē), *n. pl.* [NL., < *Stomoxyis* + *-idae*.] A family of brachycerous dipterous insects, typified by the genus *Stomoxyis*, often merged in the *Muscidae*. It contains such genera as *Stomoxyis*, *Hæmatobia*, and *Glossina*, and includes some well-known biting flies, as the horn-fly, stable-fly, and tsetse-fly. Also *Stomoxiidae* (Meigen, 1824) and *Stomoxiidae* (Westwood, 1840), and, as a subfamily of *Muscidae*, *Stomoxyinæ* or *Stomoxiinæ*.

Stomoxyis (stō-mok'sis), *n.* [NL. (Geoffroy, 1764), < Gr. *στόμα*, mouth, + *ὄξυς*, sharp.] A notable genus of biting flies, typical of the family

Stomoxyidae, or merged with the *Muscidae*. They are gray, of medium size, and resemble the common house-fly in appearance. The mouth-parts are developed into a horny proboscis. *S. calcitrans*, common to Europe and North America, is a familiar example. See *stable-fly*, 1.

stomp¹ (stomp), *n.* A dialectal form of *stamp*; specifically, in coal-mining, one of the plugs of wood driven into the roof of the level, to which are fastened the "lines" serving to direct the miner in his proper course; they may also be used as bench-marks. *Gresley*. [Midland coal-field, Eng.]

stomp², *n.* and *v.* An obsolete form of *stump*.

stompers (stom'pērz), *n. pl.* A dialectal form of *stampers*. See *stamp*, 3.

stonage (stō'nāj), *n.* [< *stone* + *-age*.] A collection or heap of stones. *Halliwel*.

Would not everybody say to him, We know the stonage at Gilgal? *Leetie*. (*Nares*.)

stond (stond), *v.* and *n.* An obsolete or dialectal form of *stand*.

stondent. An obsolete past participle of *stand*.

stone (stōn), *n.* and *a.* [Also E. dial. *stean*, *steen*, Sc. *stane*, *stain*; < ME. *stoon*, *ston*, *stan*, < AS. *stān* = OS. *stēn* = OFries. *stēn* = D. *steen* = MLG. *stēn*, LG. *steen* = OHG. MHG. G. *stein* = Icel. *steinn* = Sw. Dan. *sten* = Goth. *stains*, a stone; prob. akin to OBulg. *stīna* = Russ. *stīna*, a wall, and to Gr. *στία*, *στίον*, a stone. Hence *steen*¹, *steen*².] **I.** *n.* 1. A piece of rock of small or moderate size. The name *rock* is given to the aggregation of mineral matter of which the earth's crust is made up. A small piece or fragment of this rock is generally called a *stone*, and to this a qualifying term is frequently added: as, *cobble-stone* or *gravel-stone*. See *rock* 1.

Lo, heere be *stoony*s hsd y-wrougte, *Makes hereof bread*.
Hymns to Virgin, etc. (E. E. T. S.), p. 43.
Are there no *stones* in heaven
But what serve for the thunder?
Shak., *Othello*, v. 2. 234.

He is not a man, but a block, a very *stone*.
Burton, *Anat. of Mel.*, p. 450.

2. The hard material of which rock consists: in contradistinction to *metal*, *wood*, etc.

Al hem to-dryven ase *ston* doth the glas.
Flemish Insurrection (Child's *Ballads*, VI. 270).

He made a harp of her breast-bone, . . .
Whose sounds would melt a heart of *stone*.
The Cruel Sister (Child's *Ballads*, II. 236).

That we might see our own work out, and watch
The sandy footprint harden into *stone*.

Tennyson, *Princess*, III.

3. A piece of rock of a determined size, shape, or quality, or used for a defined purpose: as, a *grindstone*; a *hearthstone*; an *altar-stone*. Specifically—(a) A gun-flint.

About seaun of the clocke marched forward the light
pieces of ordnance, with *stone* and powder.

Holinshed, *Chron.*, III. 947.

(b) A gravestone; a monument or memorial tablet.

You shall shine more bright in these contents
Than unwept *stone* besmeared with sluttish time.

Shak., *Sonnets*, IV.

(c) A millstone. (d) In printing, an imposing-stone. (e) In glass-manuf., a flattening-stone.

4. A precious stone; a gem. See *precious*.

Wedges of gold, great anchors, heaps of pearl,
Inestimable *stones*, unvalued jewels.

Shak., *Rich.*, III., l. 4. 27.

5. A small, hard, rounded object resembling a stone or pebble: as, a *hail-stone*; a *gall-stone*; an *ear-stone*. Specifically—(a) A calculous concretion in the kidney or urinary bladder or gall-bladder, etc.; hence, the disease arising from a calculus. (b) A testicle: generally in the plural. [Vulgar.] (c) The nut of a drupe or stone-fruit, or the hard covering inclosing the kernel, and itself inclosed by the pulpy pericarp, as in the peach, cherry, or plum. See *drupe* and *endocarp* (with cuts).

(d) A hard, compact mass; a lump or nugget.

Marvellous great *stones* of yron.
Berners, tr. of *Froissart's Chron.*, I. 493.

6. The glass of a mirror; a mirror of crystal.

Lend me a looking-glass;
If that her breath will mist or stain the *stone*,
Why, then she lives.

Shak., *Lear*, v. 3. 262.

7. A common measure of weight in use throughout the northwest and central countries of Europe, but varying much in different countries. The English Imperial standard stone is 14 pounds avoirdupois, and is commonly used in England in giving the weight of a man, but other values are in common use, varying with the article weighed: thus, the stone of butchers' meat or fish is 8 pounds, of cheese 16 pounds, of glass 5 pounds, of slum 13½ pounds, of hemp usually 32 pounds, though a statute of George II. made it 16 pounds, and one of Henry VIII. 20 pounds; of lead 12 pounds, though the statute *de ponderibus* makes it 15 pounds of 25 "shillings" each, equal to 14½ pounds avoirdupois. There were in the early part of the nineteenth century many local stones in use in England, but in the United States this unit is unknown. The stone of 14 pounds is not recognized in the statute *de ponderibus*, and first appears as a weight for wool. The old arithmetics call 14 pounds half a quarter,

and either do not mention the stone, or define it as Spounds. The only legal stone in Great Britain now is that of 14 pounds.

And scade ye me word how mech more yn value yn a soon a hall I syle my wolle. *Paston Letters*, I. 155.
He was not a ghost, my visitor, but solid flesh and bone; He wore a Palo Aito hat, his weight was twenty stone.
O. W. Holmes, *Nux Postconatica*.

Alençon stone, pure rock-crystal cut in roae or brilliant form.—**Amazonian** or **Amazon stone**. See *Amazonian* 2.—**Arkansas stone**, a fine-grain whetstone found in Arkansas, and used to sharpen surgical and dental instruments.—**Armenian stone**. See *Armenian*.—**Artificial stone**, a material prepared for decorative and building purposes by consolidating sand with the aid of some chemical. The best-known and most extensively used artificial stone is Ransone's, which is made by mixing sand with silicate of soda in a pug-mill, so as to form a plastic substance, which is then rolled or pressed into any desired form. The articles as thus prepared are then immersed in a solution of calcium chloride, when double decomposition takes place, a calcium silicate being formed which firmly cements the particles of sand together, while the sodium chloride, the other product of the decomposition, is afterward removed by washing. This material has been somewhat extensively used in England and elsewhere. Other processes akin to this, but in which different chemicals were used, have also been patented in the United States, but the materials thus produced have not met with any extensive sale. Beton or concrete has also been employed as a building material, to take the place of stone or brick, especially the "béton-Colignet," which is extensively used in and near Paris and elsewhere. Beton and concrete, which are mixtures of sand, gravel, stone chippings, fragments of brick, etc., with common or hydraulic mortar or cement, are also frequently, but not correctly, designated *artificial stone*.—**Ayr stone**, a stone used for polishing marble and surfacing metals. The harder varieties are used as whetstones. Also called *water of Ayr*, *Scotch stone*, and *smoke-stone*.—**Bath stone**, a rock used extensively for building purposes in England, and especially near Bath (whence its name). It is a limestone, having an oolitic structure, and belonging to the Inferior Oolite, which lies directly upon the Lias, the lowest division of the Jurassic of Continental and American geologists. Also called *Bath oolite*.—**Beer stone**, a hard sandy chalk stratum of small thickness, occurring westward of Seaton in Devonshire, England. It forms a part of the Lower Chalk, and contains *Inoceramus mytiloides*. This series of beds, not having a thickness of more than 10 feet, is only of local importance, but it has been quarried as a building-stone for many hundred years, and parts of Exeter Cathedral are built of it.—**Bologna stone**, or **Bolognian stone**, a variety of barite, or barium sulphate, found in roundish masses, composed of radiating fibers, first discovered near Bologna. It is phosphorescent in the dark after being heated to ignition, powdered, and exposed to the sun's light for some time.—**Bristol stone**, rock-crystal, or Bristol diamond, small round crystals of quartz, found in the Clifton limestone, near the city of Bristol in England.—**Caen stone**, the French equivalent of the English Bath oolite. It is a cream-colored building-stone, of excellent quality, got near Caen in Normandy. Although soft in the quarry, it is of fine texture and hardens by exposure, so as to become extremely durable. Winchester and Canterbury cathedrals, Henry VII.'s chapel at Westminster, and many churches are built of it. It is still frequently used in England.—**Cambay stones**. See *cornelian*.—**Centurial stones**. See *centurial*.—**Ceylon stones**, a dark-green, brown, or black spinel from Ceylon, also called *ceylonite*; the name is also given to other minerals or gems from Ceylon.—**Channel-stone**. See *channel*.—**Charnwood Forest stone**, an oolite found only in Charnwood Forest in Leicestershire, England. It is one of the best substitutes for the Turkey oolite, and is much used to give a fine edge to knives and other tools.—**Cornish stone**. Same as *china-stone*, 2.

Cornish stone is used for almost all English wares, both in the body and the glaze. *Spens' Encyc. Manuf.*, p. 1560.
Crab stones. Same as *crab's eyes* (which see, under *crab*). See also *crabstone*.—**Crape stone**, a trade-name for onyx of which the surface is cut in imitation of crape and colored a lusterless black. A similar article is made from artificial silicious compounds cast in molds.—**Cut stone**, hewn stone, or work in hewn stone; ashler.—**Deaf as a stone**. See *deaf*.—**Dimension stone**, ashler.—**Drafted stone**, ashler stone having a chisel-draft around the face, the part inside the draft being left rough.—**Heracleean stone**. See *Heracleean*.—**Hewn stone**, blocks of stone with faces dressed to shape by the hammer.—**Holy stone**, a stone used in magical rites, whether as a magic mirror or show-stone, or as a sort of amulet.—**Infernal ledger**, **lithographic**, **Lydian stone**. See the adjectives.—**Maltese stone**, a limestone of a delicate brown cream-color, very compact, and almost as soft as chalk. The natives of the island of Malta turn and carve it into various ornamental objects.—**Memorial**, **meteoric**, **Moabite stone**. See the adjectives.—**Mocha stone** [formerly also *Moco stone*; also *Mocha-pebble*]; so called from Mocha in Arabia, where the stone is plentiful, a variety of dendritic agate, containing dark outlines of arborization, like vegetable filaments, due to the presence of metallic oxides, as of manganese and iron; moss-agate.—**Philosopher's stone**. See *elixir*, 1.—**Portland stone**, in England, a rock belonging to the Portlandian series; so named from the Isle of Portland, where it is typically developed. The Portlandian is a part of the Jurassic series, and lies between the Purbeckian, the highest member of that series, and the Kimmeridgian. The Portland group, or Portlandian, consists of two divisions, the Portland stone and the Portland sand; the former has several subdivisions, to which local names are attached, such as *curf*, *base-see*, and *whit-see*. The Portland stone, which is a nearly pure carbonate of lime, is an important building-stone in England, and was extensively used by Inigo Jones and Sir Christopher Wren, in important public buildings, especially in St. Paul's Cathedral.—**Precious stone**. See *precious*.—**Protean stone**. See *Protean*.—**Quarry-faced stone**, cut stone of which the face is left rough as it comes from the quarry, as distinguished from *tooled*, *hammer-faced*, *pitch-faced stone*, etc.—**Rocking stone**. See *rock* 2.—**Rosetta stone**, a stele or

tablet of black basalt, found in 1799 near Rosetta, a town of Egypt, on the delta of the Nile, by M. Boussard, a French officer of engineers. This stone bears a trilingual inscription, a decree of Ptolemy V. (Epiphanes) in Greek and Egyptian hieroglyphic and demotic. The inscription was deciphered chiefly by Champollion, and afforded the key to the interpretation of Egyptian hieroglyphics. The monument is now in the British Museum.—**Rough-pointed stone**. See *rough* 1.—**Rubbed stone**, stone-work of which the surface is cut straight with the stone-saw, and afterward smoothed by rubbing with grit or sandstone.—**Samian stone**. See *Samian*.—**Saracen's or Sarsen's stone**. See *Saracen*.—**Scotch stone**. Same as *Ayr stone*.—**Shipman's stone**. See *shipman*.—**Sonorous stone**. See *sonorous*.—**Standing stone**. See *standing*.—**Stick and stone**. See *stick* 3.—**Stone cancer**. Same as *scirrhous cancer* (which see, under *scirrhous*).—**Stons of the second class**. See *elixir*, 1.—**Stones of sulphur**. See *sulphur*.—**To leave no stone unturned**, to do everything that can be done; use all practicable means to effect an object; spare no exertions.

New crimes invented, left unturn'd no stone
To make my guilt appear, and hide his own.
Dryden, *Aeneid*, II. 133.

To mark with a white stone, to mark as particularly fortunate, favored, or esteemed. The phrase arose from the custom among the Romans of marking their lucky days on the calendar with a white stone (as a piece of chalk), while unlucky days were marked with charcoal. *Breker*. = *Syn.* 1 and 2. See *rock* 1.

II. a. 1. Made of stone: as, a stone house; a stone wall.

The lion on your old stone gales
Is not more cool to you than I.
Tennyson, *Lady Clara Vere de Vere*.

2. Made of stoneware: as, a stone jar; a stone mug.

Now mistress Gilpin (careful soul!)
Had two stone bottles found,
To hold the liquor that she loved,
And keep it safe and sound.
Couper, *John Gilpin*.

Stone age. See *archaeological ages*, under *age*.—**Stone ax**, an ax-head or hatchet-head made of hard stone. Such axes are found, belonging to prehistoric epochs, and have also been in use down to the present time among savage tribes in different parts of the world. Compare *stone-axe*.—**Stone brick**. See *brick* 2.—**Stone jug**. See *jug* 1, 2.—**Stone ocher**. See *ocher*.

stone (stōn), *v. t.*; pret. and pp. *stoned*, ppr. *stoning*. [*ME. stonen*, *stamen* (in earlier use *stelenen*, whence mod. E. dial. *stecn*), < *AS. stēnan* = *OHG. steinōn*, *MHG. steinen* = *Sw. stena* = *Dan. stene* = *Goth. stainjan* (cf. *D. steinigen* = *G. steinigen*), pelt with stones, stone; from the noun.] 1. To throw stones at; pelt with stones.

With stones men shulde hir stryke and stone hir to deth.
Piers Plowman (B), xli. 77.

Francis himself was stoned to death.
R. W. Dixon, *Hist. Church of Eng.*, xv.

2. To make like stone; harden. [Rare.]

O perjur'd woman! thou dost stone my heart.
Shak., *Othello*, v. 2. 63.

3. To free from stones, as fruit.

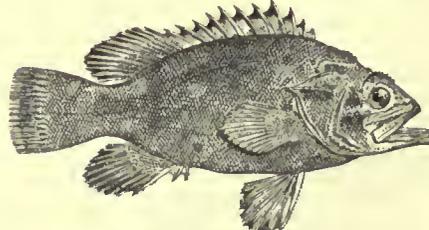

She picked from Polly's very hand the raisins which the good woman was stoning for the most awfully sacred election cake.
H. B. Stowe, *Oldtown*, p. 270.

4. To provide or fit with stones, as by lining, walling, or facing: as, to stone a well or a road.—5. In *leather-manuf.*, to work (the leather) with a stock-stone to reduce it to uniform thickness, stretch it, and make it smooth-grained.

stone-ax (stōn'aks), *n.* [*ME. *stonax*, < *AS. stānæx*, < *stān*, stone, + *æx*, ax.] An ax or a hammer with two somewhat obtuse edges, used in hewing stone.

stone-basil (stōn'baz'il), *n.* Same as *basil-weed*.

stone-bass (stōn'bās), *n.* A fish of the family *Serranidae*, *Polyprion cernium*, or another of the same genus. It is distinguished by the development of a strong longitudinal bony ridge on the operculum, and the

Stone-bass (*Polyprion cernium*).

serration of the spine of the anal and ventral fins. It inhabits moderately deep water in the Mediterranean and neighboring Atlantic. (Also called *wreck-fish* and *cernier*.) The corresponding stone-bass of Pacific waters is a very similar though distinct species, *P. oxygenius* (originally *oxygenios*). See *Polyprion*.

stone-bird (stōn'bērd), *n.* 1. The vinous grosbeak, or moro.—2. The stone-snipe, or greater yellowlegs. See cut under *yellowlegs*.

stone-biter (stōn'bi'tēr), *n.* The common wolf-fish. See cut under *Anarrhichas*.

stone-blind (stōn'blīnd'), *a.* [= *Icel. steinblindr* = *Sw. Dan. sten-blind*; as *stone* + *blind*.] Blind as a stone; wholly blind, either literally or figuratively.

I thought I saw everything, and was stone-blind all the while.
George Eliot, *Mr. Gilfil*, xviii.

stone-blue (stōn'blū), *n.* A compound of indigo and starch or whitening.

stone-boat (stōn'bōt), *n.* A drag or sled without runners, used for moving stones; also, a wagon-platform hung below the axles, used for the same purpose. [U. S.]

stonebock (stōn'bok), *n.* Same as *steenbok*.

stone-boilers (stōn'boi'lērz), *n. pl.* A tribe or race of men who practise stone-boiling.

The Australians, at least in modern times, must be counted as *stone-boilers*.

E. B. Tylor, *Early Hist. Mankind*, ix.

stone-boiling (stōn'boi'ling), *n.* The act or process of making water boil by putting hot stones in it.

The art of boiling, as commonly known to us, may have been developed through this intermediate process, which I propose to call *stone-boiling*.

E. B. Tylor, *Early Hist. Mankind*, ix.

stone-borer (stōn'bōr'ēr), *n.* A mollusk that bores stones; a lithodromus, lithophagous, or saxicavous bivalve. See cuts under *accessory*, *date-shell*, *Glycymeris*, and *pidcock*.

stone-bow (stōn'bō), *n.* [*ME. stonbowe*; < *stone* + *bow* 2.] A weapon somewhat resembling a crossbow, for shooting stones; a catapult; also, a sort of toy.

O, for a stone-bow, to hit him in the eye!
Shak., *T. N.*, II. 5. 51.

Item, six stone bowes that shoot lead pellets.
Hakluyt's Voyages, I. 363.

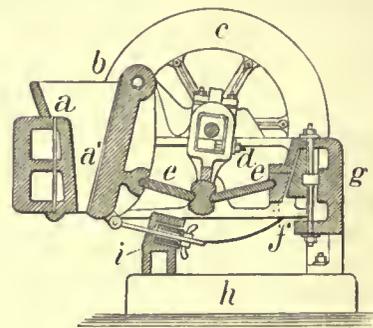

Children will shortly take him for a wall,
And set their stone-bows in his forehead.
Beau. and Fl., King and No King, v. 1.

stone-bramble (stōn'brām'bl), *n.* Same as *roebuck-berry*.

stone-brash (stōn'brash), *n.* In *agri.*, a subsoil composed of shattered rock or stone.

stonebreak (stōn'brāk), *n.* The meadow-saxifrage, *Saxifraga granulata*: so called from the virtue, according to the doctrine of signatures, of its pebble-like bulbs against calculus. The name is also a general equivalent of saxifrage.

stone-breaker (stōn'brāk'ēr), *n.* One who or that which breaks stones; specifically, a ma-

Stone-breaker.

a, stationary jaw; *a'*, oscillating jaw; *b*, hopper; *c*, fly-wheel; *d*, short pitman connecting crank-wrist with toggles; *e*, *e'*, toggles; *f*, frame, strengthened at *g*, where the thrust of the toggles is received; *h*, base of machine; *i*, rubber spring which withdraws the lower end of the jaw *a'*.

chine for pounding or crushing stone; an ore-mill; a stone-crusher.

stone-bruise (stōn'brōz), *n.* A bruise caused by a stone; especially, a painful and persistent bruise on the sole of the foot, commonly in the middle of the ball of the foot, due to walking barefooted; also, a bruise produced on the hand, as by ball-playing. [Local, U. S.]

stonebuck (stōn'buk), *n.* [*ME. *stonbukke*, < *AS. stānbucca*, the ibex, < *stān*, stone, rock, + *bucca*, buck. In mod. use, tr. *D. steenbok*, *G. steinbock*: see *steenbok*.] The steenbok.

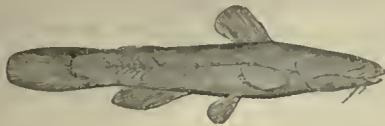

stone-butter (stōn'but'ēr), *n.* A sort of alum.

stone-canal (stōn'ka-nal'), *n.* In echinoderms, the duct leading from the madreporic plate to the circular canal: so called because it ordinarily has calcareous substances in its walls. Also *sand-canal*. *Gegenbaur*, *Comp. Anat.* (trans.), p. 220.

stone-cast (stōn'kást), *n.* The distance which a stone may be thrown by the hand; a stone's cast; a stone's throw.

About a stone-cast from the wall
A sluice with blacken'd waters slept.
Tennyson, *Mariana*.

stonecat (stōn'kat), *n.* A catfish of the genus *Noturus*, as *N. flavus*, common in many parts of the United States. *N. flavus* is one of the largest, sometimes exceeding a foot in length. *N. insignis* is an-

other, nearly as large, found in the Middle and Southern States. There are several more, a few inches long, all of fresh waters of the same country.

stone-centipede (stōn'sen'ti-ped), *n.* A centipede of the family *Lithobiidae*.

stonechacker (stōn'chak'ēr), *n.* Same as *stonechat*.

stonechat (stōn'chat), *n.* One of several different Old World chats, belonging to the genera *Saxicola* and (especially) *Pratincola*; a kind of bushchat: applied to three different English birds, and extended, as a book-name, to several others of the above genera. (a) Improperly, the wheatear, *Saxicola oenanthe*, and some other species of the restricted genus *Saxicola*. See cut under *wheatear*. [In this sense chiefly Scotch and American, the wheatear being the only bird of the kind which straggles to America.] (b) Improperly, the whin-bushchat or whinchat, *Pratincola rubetra*. [Eng.] (c) The black-headed bushchat, *Pratincola rubicola*, a common bird of Great Britain and

other parts of Europe. The true stonechat is about 5 inches long, the wing 2½, the tail scarcely 2. The male in full plumage has the head and most of the back black, the feathers of the back mostly edged with sandy brown; the upper tail-coverts white, varied with black and brown; the wings and tail blackish-brown, the former with a large white area on the covert and inner secondaries; the sides of the neck and breast white; the rest of the under parts rufous-brown; the bill and feet black; and the eyes brown. It nests on the ground, and lays four to six bluish-green eggs clouded and spotted with reddish-brown. Also called *chickstone*, *stonechacker*, *stonechatter*, *stoneclink*, *stonesmich*, *stonesmitch*, or *stonesmickle*, and *stonesmith*.

The *Stonechat* closely resembles the *Whinchat*, . . . a circumstance which has caused much confusion; . . . for in almost all parts of England the *Whinchat*, by far the commonest species, popularly does duty for the *Stonechat*, and in many parts of Scotland the *Wheatear* is universally known by that name. See *Bohm*, *Hist. Brit. Birds*, I. 317.

stonechatter (stōn'chat'ēr), *n.* Same as *stonechat*.

stone-climber (stōn'kli'mēr), *n.* The dobson or hellgrammite. See cut under *sprawler*. [Local, U. S.]

stoneclink (stōn'klingk), *n.* Same as *stonechat*.

stone-clover (stōn'klō'vēr), *n.* The rabbit-foot or hare's-foot clover, *Trifolium arvense*, a low slender branching species with very silky heads, thence also called *puss-clover*. It is an Old World plant naturalized in America.

stone-coal (stōn'kōl), *n.* [= *G. steinkohle*; as *stone + coal*.] Mineral coal, or coal dug from the earth, as distinguished from charcoal: generally applied in England to any particularly hard variety of coal, and especially to that called in the United States *anthracite*. See *coal*.

stone-cold (stōn'kōld'), *a.* Cold as a stone. *Fletcher and Shirley*, *Night-Walker*, iv. 4.

stone-color (stōn'kul'ōr), *n.* The color of stone; a grayish color.

stone-colored (stōn'kul'ōrd'), *a.* Of the usual color of a large mass of stone, a cold bluish gray.

stone-coral (stōn'kor'al), *n.* Massive coral, as distinguished from branching coral, or tree-coral; hard, sclerodermatous or lithocoralline coral, as distinguished from sclerobasic coral. Most corals are of this character, and are hexacoralline (not, however, the red coral of commerce, which is related to the sea-fans and other octocorallines).

stonecrab (stōn'krab), *n.* 1. Any crab of the family *Homotidae*.—2. A European crab, *Li-*

thodes maia.—3. A large, stout, edible crab of the Atlantic coast of the United States, *Menippe*

Stonecrab (*Menippe mercenaria*).

mercenaria.—4. The dobson or hellgrammite. See cut under *sprawler*. [Local, U. S.]

stone-crawfish (stōn'krâ'fish), *n.* A crawfish of Europe, specified as *Astacus torrentium*, in distinction from the common crawfish of that country, *A. fluviatilis*.

stone-cray (stōn'krâ), *n.* A distemper in hawks. *Imp. Dict.*

stone-cricket (stōn'krik'et), *n.* One of the wingless forms of the orthopterous family *Locustidae*, living under or among stones and in dark places, and popularly confounded with true crickets (which belong to the orthopterous family *Gryllidae* or *Achetidae*). There are many species, of various parts of the world, some simply called *crickets*, and others *cave-crickets*. The commonest American stone-cricket belongs to the genus *Ceuthophilus*, as *C. maculatus*, etc. See *cave-cricket*, and cut under *Hadenocerus*.

stonecrop (stōn'krop), *n.* [*ME. stoncrop*, < *AS. stāncrop*, *stonecrop*, < *stān*, *stone*, + *crop*, the top or head of a plant, a sprout, a bunch or cluster of flowers: see *stone* and *crop*.] The wall-pepper, *Sedum acre*: so called as frequently growing upon walls and rocks. It is native throughout Europe and Asiatic Russia, and somewhat employed in ornamental gardening; in America called *moss*, *mossy stonecrop*, etc., from its creeping and matting stems beset with small sessile leaves. The flowers are bright-yellow in small terminal cymes. The name is also extended to other species of similar habit, especially *S. ternatum*, and not seldom to the whole genus.—*Ditch-stonecrop*, a plant of the genus *Penthorum*, chiefly the American *P. sedoides*, a weed-like plant with yellowish-green flowers, common in ditches and wet places.—*Great stonecrop*, an old designation of the kidneywort, *Cotyledon Umbilicus*, also of *Sedum album*.—*Mossy stonecrop*. See *def.*

stone-crush (stōn'krush), *n.* A sore on the foot caused by a bruise from a stone. [Local.]

stone-crusher (stōn'krush'ēr), *n.* A mill or machine for crushing or grinding stone or ores for use on roads, etc.; an ore-crusher; an ore-mill; a stone-breaker (which see).

stone-curlew (stōn'kēr'lū), *n.* 1. The stone-plover or thick-knee, *Edicnemus crepitans*. See cut under *Edicnemus*.—2. The whimbrel, *Numenius phaeopus*.—3. In the southern United States, the willet, *Symphemia semipalmata*: a misnomer. *Audubon*.

stone-cutter (stōn'kut'ēr), *n.* 1. One whose occupation it is to hew or cut stones for building, ornamental, or other purposes.—2. A machine for shaping or facing stones.

stone-cutting (stōn'kut'ing), *n.* The business of cutting or hewing stones for walls, monuments, etc.

stoned (stōnd), *a.* [*< stone + -ed*.] Having or containing stones, in any sense.

Of stoned fruits I have met with three good sorts: viz, Cherries, plums, and peaches.

stone-dead (stōn'ded'), *a.* [*< ME. standeed*, *standed* (= *Sw. Dan. stendöd*); < *stone + dead*.] Dead as a stone; lifeless.

The Geant was by Gaffray don bore,
So discomité, standede, and all cold.
Rom. of Partenay (E. E. T. S.), i. 3121.

He cannot be so stupid, or stone-dead.
B. Jonson, *Volpone*, l. 1.

stone-deaf (stōn'def'), *a.* Deaf as a stone; totally deaf.

stone-devil (stōn'dev'l), *n.* The dobson or hellgrammite. See cut under *sprawler*. [Virginia.]

stone-dresser (stōn'dres'ēr), *n.* 1. One who tools, smooths, and shapes stone for building purposes. *Simmonds*.—2. One of a variety of power-machines for dressing, polishing, and finishing marbles, slates, and other building-stones.

stone-dumb (stōn'dum'), *a.* Perfectly dumb. *The Century*, XXXV. 622. [Rare.]

stone-eater (stōn'ō'tēr), *n.* Same as *stone-borer*.

stone-engraving (stōn'en-grā'ving), *n.* The art of engraving on stone. See *lithography*, *etching*, *gem-engraving*.

stone-falcon (stōn'fā'kn), *n.* See *falcon*, and cut under *merlin*.

stone-fern (stōn'fēr), *n.* A European fern, *Asplenium Ceterach*: so called from its habit of growing on rocks and stone walls.

stone-fish (stōn'fish), *n.* The shanny. *Parnell*. [Local, Seoteli.]

stone-fly (stōn'fli), *n.* A pseudoneuropterous insect of the family *Perlidae*: so called because the larval forms abound under the stones of streams. (See cut under *Perla*.) *P. bicaudata*, whose larva is much used by anglers, is an example.

stone-fruit (stōn'fröt), *n.* [= *D. steenvrucht* = *G. steinfrucht* = *Sw. stenfrukt* = *Dan. stenfrugt*; as *stone + fruit*.] In *bot.*, a drupe; a fruit whose seeds are covered with a hard shell enveloped in a pulp, as the peach, cherry, and plum. See *drupe*.

Bring with you the kernels of peares and apples, and the stones of such stonefruits as you shall find there.
Hakluyt's Voyages, I. 489.

stonegale (stōn'gāl), *n.* Same as *staniel*.

stone-gall (stōn'gāl), *n.* [*< stone + gall*.] A roundish mass of clay often occurring in variegated sandstone.

stone-gall (stōn'gāl), *n.* Same as *staniel*.

stone-gatherer (stōn'gath'ēr-ēr), *n.* A horse-machine for picking up loose stones from the ground. It consists of a receiving-box with a toothed wheel and a traveling apron, or a fork with curved teeth, and a lever for emptying it into the box when loaded.

stone-gray (stōn'grā), *n.* A dark somewhat brownish-gray color.

stone-grig (stōn'grig), *n.* The pride or mud-lamprey, *Ammocetes branchialis*.

stone-hammer (stōn'ham'ēr), *n.* A hammer for breaking or rough-dressing stones.

stone-hard (stōn'hård), *a.* 1. Hard as a stone; unfeeling. *Shak.*, *Rich. III.*, iv. 4. 227.—2. Firm; fast.

Steken the gates ston-harde wyth stalworth barrez.
Alliterative Poems (ed. Morris), li. 884.

stone-harmonicon (stōn'här-mon'i-kon), *n.* Same as *lapidicon* and *rock-harmonicon*.

stone-hatch (stōn'hach), *n.* The ring-plover, *Agialites hiaticula*: so called from nesting on shingle. See cut under *Agialites*. *Yarrell*. [Prov. Eng.]

stone-hawk (stōn'håk), *n.* Same as *stone-falcon*.

stone-head (stōn'hed), *n.* The bed-rock; the solid rock underlying the superficial detritus. [Eng.]

stone-hearted (stōn'här'hed), *a.* Same as *stony-hearted*.

Weepe, ye stone-hearted men! Oh, read and pittie!
W. Browne, *Britannia's Pastorals*, li. 1.

stone-hore (stōn'hör), *n.* The common stonecrop, *Sedum acre*; also, *S. reflexum*. *Britten and Holland*.

stone-horse (stōn'hōrs), *n.* A stallion. [Obsolete or provincial.]

My grandfathers great stone-hors, flinging up his head,
and jerking out his left legge.
Marston, *Antonio and Mellida*, II., l. 3.

stone-leek (stōn'lēk), *n.* Same as *cibol*, 2.

stone-lichen (stōn'li'ken), *n.* A lichen growing upon stones or rocks, as species of *Parmelia*, *Umbilicaria*, etc. See *lichen*.

stone-lily (stōn'li'li), *n.* A fossil erinoid; a crinite or enerinite, of a form suggesting a lily on its stem. Also called *lily-enerinite*. *A. Geikie*, *Geol. Sketches*, i.

stone-liverwort (stōn'liv'ēr-wért), *n.* The plant *Marchantia polymorpha*.

stone-lobster (stōn'lob'stēr), *n.* See *lobster*. [Local, U. S.]

stone-lugger (stōn'lug'ēr), *n.* 1. A catostomid fish of the United States, *Catostomus* or *Hypentelium nigricans*; the hog-sucker or hog-molly. Also called *stone-roller* and *stone-toter*.

—2. A cyprinoid fish of the United States, *Camptostoma anomatum*, or some other member of that genus. It is 6 or 8 inches long; in the males in spring some of the parts become fiery-red, and the head and often the whole body is studded with large rounded tubercles. It is herbivorous, and abounds in deep still places in streams from New York to Mexico. Also *stone-roller*. See cut under *Camptostoma*.

stoneman (stōn'man), *n.* [*< stone + dial. man*, a heap of stones, < *W. maen*, a stone. Cf. *dol-*

men.] A pile of rocks roughly laid together, usually on a prominent mountain-peak or ridge, and intended to serve either as a landmark or as a record of a visit; a cairn.

stoner† (stō'nēr), *a.* [Var. of *stonen*.] Consisting or made of stone. [Scotch.]

The West Port is of *stonen* work, and mair decorated with architecture and the policy of bigging.

Scott, *Fortunes of Nigel*, II.

stone-roller (stōn'rō'lēr), *n.* Same as *stone-lugger*.

stone-root (stōn'rōt), *n.* See *horse-balm* and *heal-all*.

stone-rue (stōn'rō), *n.* The fern *Asplenium Ruta-muraria*. [Eng.]

stone-runner (stōn'rūn'ēr), *n.* Same as *stone-plover*, 2 (b). [Prov. Eng.]

stone-saw (stōn'sā), *n.* A tool or a sawing-machine for cutting marble, millstones, and building-stones into slabs, disks, columns, and blocks, either from the live rock in the quarry or in a stone-yard. The most simple form of machine is a flat blade of iron strained tight in a saw-frame, and reciprocated by means of suitable mechanism. The cutting is done by particles of sand continually applied to the saw by means of a stream of water. Stone-saws of this type are usually arranged in gangs, the frame supporting

a number of saws, and being suspended by chains over the block to be cut, the spaces between the blades regulating the thickness of the slabs. Circular saws have also been used to cut thin slabs of stone into narrow pieces by the agency of wet sand. An improvement on this method is the use of circular saws armed with black diamonds or carbon-points. The saw is placed in a frame resembling an iron-planer, the saw-arbor having a vertical motion; and the block of stone, dogged to a traversing table, is fed to the saw as the cut is made. Diamond stone-cutting machines have also been made in the form of reciprocating saws. In one new stone-sawing machine, called a *channeling-machine*, used to cut out large blocks and columns in a quarry, a circular saw having carbon-points is employed, the power being applied by means of gearing to the edge of the saw instead of at the arbor. Another form of quarrying stone-saw consists of an endless band of twisted wire rope passing in a horizontal direction over large pulleys, like a band-saw, and employing wet sand as the cutting-material.

stone's-cast (stōnz'kást), *n.* Same as *stone-cast*.

stoneseed (stōn'sēd), *n.* A plant of the genus *Lithospermum*, particularly the gromwell, *L. officinale* and *L. arvense*. The name, as also that of the genus, refers to the hardness of the seeds.

Stonesfield slate. See *slate*².

stone-shot (stōn'shot), *n.* The distance a stone can be thrown, either from a cannon or from a sling.

He show'd a tent

A *stone-shot* off. *Tennyson*, *Princess*, v.

stone-shower (stōn'shou'ēr), *n.* A fall of aërolites; a meteoric shower.

stonemickle (stōn'smik'li), *n.* Same as *stonechat* (c). Also *stonemich*, *stonemitch*, *stonemill*.

stone-snipe (stōn'snip), *n.* 1. The greater tell-tale, greater yellowshanks, or long-legged tattler, *Totanus melanoleucus*, a common North American bird of the family *Scelopacidae*. The length is from 13 to 14 inches, the extent 24; the bill is 2 or more inches long, the tarsus 24. The legs are chrome-yellow; the bill is greenish-black. The upper parts are dusky, speckled with whitish; the under parts are white, streaked on the jugulum, marked on the sides, flanks, and axillars with dusky bars and arrow-heads. The tail is barred with blackish and white. The stone-snipe inhabits North America at large, breeding in high latitudes, and is chiefly seen in the United States during the migrations and in winter. It is a noisy and restless denizen of marshes, bays, and estuaries. See *cut* under *yellowlegs*. 2. Same as *stone-plover*, 1. *Encyc. Dict.*

stone-sponge (stōn'spunj), *n.* A lithistidan sponge: so called from the hardness. See *Lithistida*.

stone-squarer (stōn'skwār'ēr), *n.* One who forms stones into square shapes; a stone-cutter.

And Solomon's builders and Hiram's builders did hew them, and the *stonesquarers* [the Gebalites, R. V.]

1 *Kl* v. 18.

stone-still (stōn'stil'), *a.* [*<* ME. *ston-stille*; *<* *stone* + *still*¹.] Still as a stone; absolutely motionless, silent, etc. *Sir Gawayne and the Green Knight* (E. E. T. S.), I. 242.

stone-sturgeon (stōn'stēr'jōn), *n.* Same as *lake-sturgeon*.

stone-sucker (stōn'suk'ēr), *n.* The lamprey; a petromyzont. [Local, Eng.]

stone-thrush (stōn'thrush), *n.* The mistle-thrush. [Prov. Eng.]

stone-toter (stōn'tō'tēr), *n.* 1. Same as *stone-lugger*, 1. Also *toter*. — 2. A cyprinoid fish, *Esoglossum maxillingua*: a cut-lips. [Local, U. S., in both senses.]

stone-walling (stōn'wā'ling), *n.* 1. The process of walling with stone; hence, walls built of stone. *Encyc. Brit.*, II. x. 388. — 2. Parliamentary obstruction by talking against time, raising technical objections, etc. [Australia.]

He is great at *stone-walling* tactics, and can talk against time by the hour.

Mrs. Campbell Praed, *The Head Station*, p. 35.

stoneware (stōn'wār), *n.* Potters' ware made from clay of very silicious nature, or a composition of clay and flint. The clay is beaten in water and purified, and the flint is calcined, ground, and suspended in water, and then mixed (in various proportions for various wares) with the clay. The mixture is then dried in a kiln until it is sufficiently solid to be kneaded, and is then beaten and tempered before being molded into shape. When fired it is not porous, like common pottery, but vitrified through its whole substance in consequence of the great amount of silica contained in the prepared clay. Vessels of stoneware are generally glazed by means of common salt. The salt, being thrown into the furnace, is volatilized by heat, becomes attached to the surface of the ware, and is decomposed, the muristic acid flying off and leaving the soda behind it to form a fine thin glaze on the ware, which resists ordinary acids. The old German stoneware had often a vitreous glaze. See *grès de Flandres*, under *grès*, and *Cologne ware*, under *ware*².

stoneweed (stōn'wēd), *n.* 1. Same as *stoneseed*. — 2. The doorweed, *Polygonum aviculare*. *Britten and Holland*. [Prov. Eng.]

stonework (stōn'wērk), *n.* Work consisting of stone; masons' work of stone.—**Broken-range**

stonework. See *range*, *n.*—**Crandalled stonework**. See *crandall*.—**Random, range, etc., stonework**. See the qualifying words.

stone-works (stōn'wērks), *n. sing. and pl.* 1. A stone-cutting establishment.— 2. An establishment for the making of stoneware. *Jewitt*.

stonewort (stōn'wōrt), *n.* [*<* *stone* + *wort*¹.] 1. A plant of the genus *Chara*: so called from the calcareous deposits which frequently occur on the stems.— 2. Sometimes, the stone-parsley, *Sison Amomum*.

stone-yard (stōn'yārd), *n.* A yard or inclosure in which stone-cutters are employed.

stong (stong), *n.* [A var. of *stang*¹.] An instrument with which eels are commonly taken. *Richardson*. [Lincolnshire, Eng.]

stonify† (stō'nī-fī), *v. t.*; pret. and pp. *stonified*, pp. *stonifying*. [*<* *stone* + *-ify*.] To make stony; petrify. [Rare.]

stool-ball (stöl'bál), *n.* An outdoor game of the sixteenth and seventeenth centuries, generally played by women alone, but sometimes in company with men. See second quotation.

Daugh. Will you go with me?
Wooc. What shall we do there, wench?
Daugh. Why, play at stool-ball.
Fletcher (and another), Two Noble Kinsmen, v. 2.

Stool-Ball. This game, so often mentioned in old writers, is still played in almost every village in Sussex, and is for ladies and girls exactly what cricket is to men. Two pieces of board 18 inches by 12 are fixed to two sticks from 3 to 4 feet high, according to the age of the players. These sticks are stuck in the ground sloping a little backwards, and from 10 to 15 yards apart. The players take sides, generally eight to ten each. . . . The bowler pitches the ball at the board, which in fact is the wicket. If he hits it the player is out. The same is the case if the ball is caught; and the running out, stamping, &c., are exactly like cricket. *N. and Q.*, 3d ser., XI. 457.

stool-end (stöl'end), *n.* In *mining*, a part of rock left unworked for the purpose of supporting the rest.

stool-pigeon (stöl'pij'on), *n.* **1.** A pigeon fastened to a stool, and used as a decoy.

The *Stool-Pigeon*, also, as familiar to English ears as to ours, exists here—and even in the Eastern States—still in both its primary signification and its figurative extension. In the former it means the pigeon, with its eyes stitched up, fastened on a stool, which can be moved up and down by the hidden fowler, an action which causes the bird to flutter anxiously. This attracts the passing flocks of wild pigeons, which alight and are caught by a net, which may be sprung over them. *De Vere, Americanisms*, p. 210.

Hence—**2.** A person employed as a decoy: as, a *stool-pigeon* for a gambling-house: such a fellow is generally a "rook" who pretends to be a "pigeon." See *pigeon*, 2, and *rook*¹, 3.

stoom (stöm), *n.* and *v.* Same as *stum*.

stoop¹ (stöp), *v.* [Formerly and still dial. *stoup*; < ME. *stoupen, stoupen, stupen*, < AS. *stūpian* = MD. *stuppen* = Icel. *stūpa* (very rare), *stoup*, = Norw. *stupa*, fall, drop, = Sw. *stupa*, dial. *stjupa*, fall, drop, tr. lower, incline, tilt; akin to *steep*¹: see *steep*¹, and cf. *steep*². The reg. mod. form from AS. *stūpian* is *stoup* (pron. *stoup*), as in dialectal use. The retention of or reversion to the orig. AS. vowel-sound *ō* occurs also in *room* (< AS. *rūm*) (and in *wound* (as pron. *wönd*), < AS. *wund*.)] **I. intrans.** **1.** To bend; bow; incline; especially, of persons, to lower the body by bending forward and downward.

He hit on his heime with a heavy sword,
That grent him full gretty, gert hym to stoupe.

Shak., Hen. V., v. 2. 168.

Tall trees *stooping* or soaring in the most picturesque variety.
George Eliot, Felix Holt, xxiii.

3. To come down; descend.

The cloud may stoop from heaven and take the shape,
With fold to fold, of mountain or of cape.
Tennyson, Princess, vi. (song).

4. Specifically, to swoop upon prey or quarry, as a hawk; pounce.

As I am a gentleman,
I'll meet next cocking, and bring a haggard with me
That stoops as free as lightning.

Toonk's (?) Albumazar, iii. 5.

Here stands my dove; stoop at her if you dare.
B. Jonson, Alchemist, v. 3.

5. To condescend; deign: especially expressing a lowering of the moral self, and generally followed by an infinitive or the preposition *to*.

Is Religion a beggarly and contemptible thing, that it doth not become the greatness of your minds to stoop to take any notice of it?
Stillingfleet, Sermons, I. v.

Frederic, indeed, stooped for a time even to use the language of adulation. *Macaulay, Frederic the Great*.

6. To yield; submit; succumb.

Thus hath the Field and the Church stooped to Mahomet.
Purchas, Pilgrimage, p. 242.

I will make thee stoop, thou abject.
B. Jonson, Every Man out of his Humour, v. 3.

II. trans. **1.** To bend downward; bow.

Myself . . .
Have stoop'd my neck under your injuries.
Shak., Rich. II., iii. 1. 19.

She stooped her by the runner's side.
Scott, Marmion, vi. 30.

2. To incline; tilt: as, to stoop a eask. *Halliwel*. [Prov. Eng.]—**3.** To bring or take down; lower, as a flag or a sail.

Nor, with that Consul Join'd, Vespasian could prevail
In thirty several fights, nor make them stoop their sail.
Drayton, Polyolbion, viii. 212.

4. To put down; abase; submit; subject.

I will stoop and humble my intents
To your well-practised wise directions.
Shak., 2 Hen. IV., v. 2. 120.

5. To cast down; prostrate; overthrow; overcome.

You have found my spirit; try it now, and teach me
To stoop whole kingdoms.
Fletcher, Humorous Lieutenant, i. 1.

6†. To swoop or pounce down upon.

The hawk that first stooped my pheasant is killed by the spaniel that first sprang all of our side.
Webster and Dekker, Northward Hoe, v. 1.

7. To steep; macerate. [Prov. Eng.]

stoop¹ (stöp), *n.* [*< stoop*¹, *v.*] **1.** The act of stooping or bending down; hence, a habitual bend of the back or shoulders: as, to walk with a stoop.

Now observe the stoops,
The bendings, and the falls.
B. Jonson, Sejanus, i. 1.

His clumsy figure, which a great stoop in his shoulders, and a ludicrous habit he had of thrusting his head forward, by no means redeemed.

Dickens, Martin Chuzzlewit, ii.

2. The darting down of a bird on its prey; a swoop; a pounce.

Once a kite, hovering over the garden, made a stoop at me.
Swift, Gulliver's Travels, ii. 5.

Hence—**3†.** That which stoops or swoops; a hawk. [Rare.]

You glorious martyrs, yon illustrious stoops,
That once were cloister'd in your fleshy coats.
Quarles, Emblems, v. 10.

4. A descent from superiority, dignity, or power; a condescension, concession, or submission: as, a politic stoop.

Can any loyal subject see
With patience such a stoop from sovereignty?
Dryden.

To give the stoop, to stoop; submit; yield.

O that a king should give the stoop to such as these.
Ep. Hacket, Abp. Williams, ii. 186. (Davies.)

stoop², **stoup**² (stöp, stoup), *n.* [*< ME. stop, stope*, appar. a var. (due to confusion with the related ME. *stoppe*, < AS. *stoppa*: see *stop*²) of **stepe*, **steap*, < AS. *steap*, a cup, = MD. *stoup*, a cup, vessel, D. *stoup*, a measure of about two quarts, = MLG. *stöp*, a cup, vessel, also a measure, LG. *stoup*, a measure, = OHG. *stouf, stouph*, MHG. *stouf*, G. *stouf*, a cup, = Icel. *stoupa*, a cup, = Sw. *stop* (< D. or LG.), a measure of about three pints; also in dim. form, MHG. *stübchen*, G. *stübchen*, a gallon, measure; prob. ult. identical with Icel. *stoupa*, a lump (orig. meaning something cast), hence a vessel of metal, etc., from the verb represented by Icel. *steypa* = Sw. *stōpa* = Dan. *stōbe*, cast (metals), pour out (liquids), E. *steep*: see *steep*². The spelling *stoup* is partly Sc., and in the Sc. pron. *stoup* is prob. of Icel. origin.] **1.** A drinking-vessel; a beaker; a flagon; a tankard; a pitcher.

Fetch me a stoupe of liquor.
Shak. (Iofio 1623), Hamlet, v. 1. 68.

Hence—2. Liquor for drinking, especially wine, considered as the contents of a stoop: as, he tossed off his *stoop*.

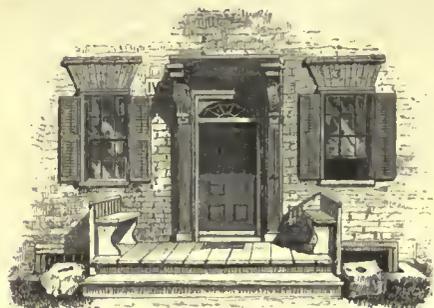

He took his rouse with *stoups* of Rhenish wine. *Marlowe, Doctor Faustus*, [iii. 4.]

3. A basin for holy water, usually placed in a niche or against the wall or a pillar at the entrance of Roman Catholic churches; also used in private houses. In the Greek Church it is called a *colymbion* or *hagiasmateron*. In this sense usually written *stoup*. Sometimes also called by the French name *bénitier*, and formerly *holy-water stock*, *holy-water stone*.

LG. *stoppen*, stuff, cram, = OHG. *stoffōn*, *stoppōn*, MHG. G. *stopfen*, *stoppen* = Icel. Sw. *stoppa* = Dan. *stoppe*, stop. (a) According to the usual view, = OF. *estouper*, F. *étouper* = OSp. *estopar* = It. *stoppure*, stop up with tow, < LL. *stupare*, *stuppare*, stop up with tow, eram, stop, < L. *stupa*, *stippa* = Gr. *στύπη*, *στύππη*, coarse part of flax, hards, oakum, tow: see *stupa*, *stuppe¹*. (b) But this explanation, which suits phonetically, is on grounds of meaning somewhat doubtful; it does not appear from the early instances of the verb that the sense 'stop with tow,' 'stuff,' is the original. The similarity with the L. and Rom. forms may be accidental, and the Teut. verb may be different (though mingled with the other), and connected with OHG. *stophōn*, MHG. *stuppen*, *stipfen*, pierce, and so ult. with E. *stump*. Cf. *stuff*, *v.*, derived, through the F., from the same Teut. source.] I. *trans.* 1. To close up, as a hole, passage, or cavity, by filling, stuffing, plugging, or otherwise obstructing; block up; choke: as, to *stop* a vent or a channel.

Ther is an eddre thet is y-hote lne latin aspis, thet is of zuiche kende thet hi *stoppeth* thet on eare mid erthe, and thet other mid hare tayle, thet hi ne yhere thane charmere. *Ayenbite of Inycyt* (E. E. T. S.), p. 257.

Imperious Caesar, dead, and burnd to clay, Might *stop* a hole to keep the wind away. *Shak., Hamlet*, v. 1. 237.

Mountains of ice, that *stop* the imagined way, Beyond Petsora eastward, to the rich Cathaian coast. *Milton, P. L.*, x. 291.

2. To make close or tight; close with or as with a compressible substance, or a lid or stopper: as, to *stop* a bottle with a cork; hence, to stanch.

The eldest and wisest at Geball were that mended and *stopped* thy shippes. *Bible of 1551, Ezek. xxvii. 9.*

Have by some surgeon, Shylock, on your charge, To *stop* his wounds, lest he do bleed to death. *Shak., M. of V.*, iv. 1. 258.

Children yet Unborn will *stop* their ears when thou art nam'd. *Beau. and Fl., Laws of Candy*, v. 1.

This place [a Maronite convent] is famous for excellent wine, which they preserve, as they do in all these parts, in large earthen jars, close *stopped* down with clay. *Pococke, Description of the East*, II. l. 103.

3. To shut up; inclose; confine.

Forthi yf combe ronke of hony weep, Three dayes *stopped* up atle home hem [bees] keep. *Palladius, Husbandrie* (E. E. T. S.), p. 133.

Whatever spirit . . . leaves the fair at large Shall feel sharp vengeance soon o'take his aim, Be *stop'd* in vials, or transfix'd with pins. *Pope, R. of the L.*, II. 126.

4. To hinder from progress or procedure; cause to cease moving, going, acting, working, or the like; impede; check; head off; arrest: as, to *stop* a ear; to *stop* a ball; to *stop* a clock; to *stop* a thief.

"How dare you *stop* my errand?" he says; "My orders you must obey." *Child Noryce* (Child's Ballads, II. 41).

Did they exert themselves to help onward the great movement of the human race, or to *stop* it? *Macaulay, Sir J. Mackintosh*.

5. To hold back, as from a specified course, purpose, end, or the like; restrain; hinder: followed by *from* (obsolete or dialectal *of*).

No man shall *stop* me of this boasting. 2 Cor. xi. 10. Thus does he poison, kill, and slay, . . . Yet *stops* me o' my lawfu' prey. *Burns, Death and Dr. Hornbook*.

6. To prevent the continuance of; suppress; extinguish; bring to an end: as, to *stop* a leak.

The putten here honde upon his mouthe, and *stoppen* his Brethe, and so thet sleue him. *Maudeville, Travels*, p. 201.

If there be any love to my deservings Borne by her virtuous self, I cannot *stop* it. *Beau. and Fl., Knight of Burning Peatle*, i. 1.

7. To check or arrest by anticipation.

The grief . . . that *stops* his awayer. *Shak., Lucrece*, l. 1664.

Every bold sinner, when about to engage in the commission of any known sin, should . . . *stop* the execution of his purpose with this question: Do I believe that God has denounced death to such a practice, or do I not? *South. (Johnson)*.

8. To keep back; withhold.

Do you mean to *stop* any of William's wages, about the sack he lost the other day at Hincley fair? *Shak., 2 Hen. IV.*, v. 1. 24.

Nor stops, for one bad cork, his butler's pay.

Pope, *Imit. of Horace*, II. ii. 63.

9. To cease from; discontinue; bring to a stop.

When the crickets *stopped* their cry,
When the owls *stopped* a term,
You heard music; that was I.

Browning, *Serenade at the Villa*.

10. In musical instruments: (a) Of the lute and viol classes, to press (a string) with the finger so as to shorten its vibrating length, and thus raise the pitch of the tone produced from it. (b) Of the wind group generally, to close (a finger-hole in the tube) so as to change the nodes of the vibrating column of air, and thus alter the pitch of the tone. (c) Of wind-instruments of the trumpet class, to insert the hand into (the bell) so as to shorten the length of the vibrating column of air, and thus to raise the pitch of the tone.—11. *Naut.*, to make fast with a small line: as, to *stop* a line to a harpoon-staff.—12. To put the stops, or marks of punctuation, in; point, as a written composition; punctuate.

If his sentences were properly *stopped*.

Landor, (*Imp. Dict.*)

13. In masonry, plastering, etc., to point or dress over (an imperfect or damaged place in a wall) by covering it with cement or plaster.—14. In hort., same as *top*.

After the end of July it is not advisable to continue the topping—technically *stopping*—of the young shoots.

Encyc. Brit., XII. 254.

15. To ward off; parry. [Pugilistic slang.]—A *stopping oyster*. See *oyster*.—*Stopping the glass*. See *glass*.—To *stop* a gap. See *gap*.—To *stop* a line. See *line*.—To *stop* down a lens, in *photog.*, etc., to reduce the amount of light admitted through a lens by using stops or diaphragms. See *stop*, n., 12.—To *stop* off. (a) In *foundry*, to fill in (a part of a mold) with sand to prevent metal from running into that part when the casting is made. The form of the casting can frequently be thus changed without the expense of altering a pattern or making a new pattern. (b) To galvanoplastic operations, to apply a varnish to (parts of a plate or object), to prevent the deposit of metal upon the varnished parts during immersion in the gilding or electroplating solution.—To *stop* one's mouth, to silence one; especially, to silence one by a sop or bribe.

Let repentance *stop* your mouth;

Learn to redeem your fault.

Ford, *Lover's Melancholy*, iv. 1.

If you would have her silent, *stop* her mouth with that ring.

Wyckerley, *Gentleman Dancing-Master*, v. 1.

To *stop* out. (a) In the arts, to protect (a surface, etc.) from chemical or other action by covering with a coating: as, in photography, to cover with paint, paper, etc., as parts of a negative which are not to be printed; in electrotyping, to cover with wax, as parts of the black-leaded mold, to prevent the deposit of copper on those parts; in etching, to cover with a varnish or other resisting composition, as parts of a plate which are not to be bitten by the acid. (b) *Theat.*, to cover (some of the teeth) with black wax, so as to make them invisible.—*Syn.* 1 and 4. To interrupt, block, blockade, barricade, intercept, end.—9. To suspend, intermit.

II. *intrans.* 1. To check one's self; leave off; desist; stay; halt; come to a stand or stop, as in walking, speaking, or any other action or procedure.

Why *stops* my lord? shall I not hear my task?

Shak., 3 *Hen. VI.*, iii. 2. 52.

Terence . . . always judiciously *stops* short before he comes to the downright pathetic.

Goldsmith, *Sentimental Comedy*.

No rattling wheels *stop* short before these games.

Cowper, *Task*, iv. 144.

2. To discontinue; come to an end; cease to be: as, the noise *stopped*; an annuity *stops*.—

3. To make a halt or a stay of longer or shorter duration; tarry; remain.

We . . . went about half a mile to the east of Tortura, not designing to *stop* there.

Pococke, *Description of the East*, II. 1. 60.

Mr. Brontë and old Tabby went to bed. . . . But Charlotte . . . *stopped* up . . . till her weak eyes failed to read or to sew.

Mrs. Gaskell, *Charlotte Brontë*, II. 121.

"I would rather *stop* abed," said I; "what have I to do with fighting?"

R. D. Blackmore, *Lorna Doone*, lxiv.

I've been up country some weeks, *stopping* with my mother.

S. O. Jewett, *Decephen*, p. 17.

4. To intercept, ward off, or parry a blow. [Pugilistic slang.]

Don't *stop* with your head too frequently.

A. L. Gordon, *In Utrumque Paratus*.

To *stop* off or over, to make a brief or incidental stay at some point in the course of a journey; lie off or over: also used as a noun or an adjective: as, a *stop-over* check; the ticket allows a *stop-off* in Chicago. [Colloq.]—To *stop* out, to stay out all night, as in the streets, or away from one's proper lodging-place.

Mr. Hall, at Bow-street, only says, "Poor boy, let him go." But it's only when we've done nothing but *stop* out that he says that.

Mayhew, *London Labour and London Poor*, II. 563.

stop¹ (stop), *n.* [*< stop, v.*] 1. The act of stopping, in any sense. (a) A filling or closing up.

A breach that craves a quick expedient *stop*!

Shak., 2 *Hen. VI.*, iii. 1. 288.

(b) An impeding or hindering; obstruction; stoppage.

What's he? One sent,

I feare, from my dead mother, to make *stop*
Of our intended voyage. *Brome*, *Antipodes*, i. 7.

(c) A pause; a stand; a halt.

When he took leave now, he made a hundred *stops*,

Desir'd an hour, but half an hour, a minute.

Fletcher, *Humorous Lieutenant*, iii. 1.

Mrs. Crambles advancing with that stage walk which consists of a stride and a *stop* alternately.

Dickens, *Nicholas Nickleby*, xv.

(d) Termination; ending.

How kingdoms sprung, and how they made their *stop*,
I well observed. *J. Beaumont*, *Psyche*, ii. 49.

(e) A stay; a tarrying.

Coming to the Corner above Bethlehem Gate, [we] made a *stop* there, in order to expect the return of our Messenger. *Maunderell*, *Aleppo to Jerusalem*, p. 67.

2†. A state of hesitation or uncertainty; a standstill.

At which sudden question, Martius was a little at a *stop*.

Bacon, *Holy War*.

3. That which stops or hinders; especially, an obstacle or impediment; specifically, a weir.

He that is used to go forward, and findeth a *stop*, falleth out of his own favour. *Bacon*, *Empris* (ed. 1887).

What they called *stops* . . . were in effect weirs or kiddes.

Sir J. Hawkins, in *Walton's Complete Angler*, p. 274, note.

4. In musical instruments: (a) Of the lute and viol classes, a pressure on a string so as to shorten its vibrating length, and raise the pitch of its tone. (b) Of wind-instruments, the closing of a finger-hole in the tube so as to alter the pitch of its tone. (c) Of wind-instruments of the trumpet class, the inserting of the hand into the bell so as to raise the pitch of the tone.—5. Any lever or similar device for thus stopping a string or finger-hole.

His jesting spirit, which is now crept into a lute-string and now governed by *stops*. *Shak.*, *Much Ado*, iii. 2. 62.

In every instrument are all tunes to him that has the skill to find out the *stops*. *Brome*, *Spargus Garden*, iii. 4.

6. In an organ, a graduated set of pipes of the same kind, and giving tones of the same quality. A *complete stop* has at least one pipe for each digital of the keyboard to which it belongs; if a stop has less, it is called a *partial stop*; if more, it is called a *compound stop* or *mixture-stop*. The number of pipes constituting a stop varies according to the compass of the keyboard to which it belongs, the usual number being now sixty-one for manual keyboards, and either twenty-seven or thirty for pedal keyboards, while mixture-stops have between twice and five times as many. Stops are variously classified, as follows: (a) As to general quality of tone, the principal qualities recognized being the *organ-tone* (as in the open diapason, the octave, the fifteenth, etc.), the *flute-tone* (as in the bourdon, the stopped diapason, the melodia, the flute, etc.), the *string-tone* (as in the viol da gamba, the violina, the dulcians, etc.), and the *reed-tone* (as in the oboe, the clarinet, the trumpet, etc.). The first three groups are also called *flue-stops*, and the last *reed-stops*, from the construction of their pipes (see *pipe*, 2). (b) As to the pitch of the tones relative to the digitals used, the two classes being *foundation-* and *mutation-stops*, of which the former give tones exactly corresponding to the normal pitch of the digitals, while the latter give tones distant from that pitch by some fixed interval, like one, two, or three octaves, or even a twelfth. Foundation-stops are usually called *eight-foot stops*, because the length of an open pipe sounding the second C below middle C is approximately eight feet; while for an analogous reason mutation-stops sounding an octave below the normal pitch of the digitals are called *sixteen-foot stops*; those sounding the octave above, *four-foot stops*; those sounding the second octave above, *two-foot stops*, etc. The specific names of stops are not only numerous, but often vary without sufficient reason. Some names have a merely technical significance, as *diapason*, *principal*, etc.; some indicate the instrument which they are intended to imitate, as *flute*, *trumpet*, *violinello*, etc.; while others mark the extent of the mutation produced, as *octave*, *twelfth*, *quint*, etc. Each partial organ has its own stops, which can be sounded only by means of the digitals of its own keyboard. The pipes of a stop are usually arranged in a transverse row on the wind-chest, the order of disposition, or *plantation*, varying somewhat. Under them, and between the upper and middle boards of the chest, is a movable strip of wood called a *slider*, which (together with both these boards) is perforated with holes corresponding to the plantation of the pipes. The position of the slider is controlled through a system of levers by a handle near the keyboard called a *register*, *stop-knob*, or *stop*. When this handle is pulled out or drawn, the holes of the slider are coincident with those of the two boards, so that the air can pass freely from the pallets into the pipes; when the handle is pushed in, the holes of the slider are not coincident with those of the two boards, and communication between the pallets and the pipes is cut off. In the one case the stop is said to be "on," in the other "off." When the slider controlling the use of the upper pipes of a stop is separated from that controlling the lower, the stop is called *divided*. Since the handles controlling the use of the pipes or stops proper are made of the same general shape as those controlling various mechanical appliances, like couplers, the former are also called *sounding* or *speaking stops*, in distinction from the latter, or *mechanical stops*. Stops whose quality or power of tone is decidedly individual, so as to fit them for the performance of solo melodies, are called *solo stops*. See *organ*, *reed-organ*, *pipe*, etc.

The pathetic *stop* of Petrarch's poetical organ was one he could pull out at pleasure.

Lowell, *Among my Books*, 1st ser., p. 368.

7. Same as *stop-knob*.—8. *pl.* In the harpichord, handles controlling levers by which the position of the jacks could be varied so as to alter the force or quality of the tones produced.—9. A mark to indicate a stop or pause in reading; a mark of punctuation.

I can write fast and fair.

Most true orthography, and observe my *stops*.

Middleton, *More Dissemblers besides Women*, iii. 2.

Who walked so slowly, talked in such a hurry,
And with such wild contempt for *stops* and Lindley Murray!

C. S. Calverley, *Isabel*.

10. In *joinery*, one of the pieces of wood nailed on the frame of a door to form the recess or rebate into which the door shuts.—11. *Naut.*: (a) A projection at the head of a lower mast, supporting the trestletrees. (b) A bit of small line used to lash or fasten anything temporarily: as, hammock-stops, awning-stops.—12. In *optics*, a perforated diaphragm inserted between the two combinations of a double lens, or placed in front of a single lens, to intercept the extreme rays that disturb the perfection of the image. The practical effect of the stop is to increase the depth of the focus and sharpness of definition, but to diminish the illumination in the exact ratio of the diameter of the stop to that of the lens, and hence, in photography, to increase correspondingly the necessary time of exposure.

Microscopes, in which, whatever be the size of the lens itself, the greater portion of its surface is rendered inoperative by a *stop*.

W. B. Carpenter, *Microsc.*, § 10.

13. In *bookbinding*, a small circular finishing-tool used by bookbinders to stop a line or fillet at its intersection with another line.—14. In *lace-manuf.* (in the application of the Jacquard attachment described under *loom*, 2, to a lace-frame), a point at which the different sets of warp-threads are concentrated or brought to a sort of focus, and which in the design of a pattern is taken as a basis for measurement in determining the distances the respective threads in the set must be moved to form the desired pattern. The movements of the mechanism are adjusted in accordance with these measurements.—15. In *phonetics*, an alphabetic sound involving a complete closure of the mouth-organs; a mute; a check.—16. The concavity of the profile of a dog's face, specially marked in the bulldog and pug.—17. In *fencing*, the action whereby a fencer, instead of parrying a blow and then thrusting, allows a careless opponent to run on his sword-point. He may hasten the stop by extending the sword-arm. (See *stop-thrust*.) The stop is discouraged in fencing as a game, since much use of it shortens the passages, and destroys combinations of feints, disengagements, coupés, etc.—**Double stop**. See *single stop*.—**Full stop**. (a) A period. (b) In *lute-playing*: (1) A chord followed by a pause. (2) A chord in producing which all the strings are stopped by the fingers.—**Geneva stop**. See *Geneva movement*, under *movement*.—**Half-stop**, in an organ, a stop which contains half, or about half, the full number of stops.—**Harmonic stop**. See *harmonic*.—**Incomplete or imperfect stop**. See *incomplete*.—**Open stop**, in organ-building, a stop whose pipes are open at the upper end.—**Pedal stop**. See *pedal*.—**Service stop**, in *railroading*, a stop made by a railway-train, in the regular way and at stations designated by the regulation schedule, as distinguished from an *emergency stop*.—**Single stop**, in *ship-building*, the scoring down of the carlines between the beams, by which means a carline is prevented from sinking any lower than its intended position. The double stop is generally used for deeper carlines than the single stop.—**To hunt upon the stop**, to hunt with or like a stop-hound—that is, slowly and with frequent pauses; hence, to be lukewarm.

If any [Christian] *stop* a little forward, do not the rest hunt upon the stop?

Rev. S. Ward, *Sermons*, p. 91.

To *put* a *stop* to, to cause to stop, temporarily or permanently; break off; end.—*Syn.* 1. *Stop*, *Cessation*, *Stay*, *Suspension*, *Intermission*, *Pause*, *Rest*. These words may denote the failure or interruption of forward motion or of activity. *Stop* is an energetic word, but the most general: it is opposed to *going forward* or *going on*; *cessation* may be temporary or final, and is opposed to *continuance*; a *stay* is a stop viewed as a lingering or delay: as, a short stay in the place; or, as a legal term, simply a *stop*: as, a stay of proceedings; *suspension* is a complete but presumably temporary stop: as, a suspension of work or pay; *intermission* is a strictly temporary stop; *pause* is a brief stop, in full expectation of going on; *rest* is a stop for refreshment from weariness.

stop² (stop), *n.* [*< ME. stoppe*, *< AS. stoppa*, a bucket or pail; see *stop*².] A bucket; a pail; a small well-bucket; a milk-pail. *Halliwel*. [Prov. Eng.]

stop³, *n.* A Middle English form of *stopp*².

stop-cock (stop'kok), *n.* A faucet with a valve of some form, operated by a handle: used to open or close a pipe or passage for water, gas, etc. Such cocks are sometimes made self-closing, to prevent waste.

stop-collar (stop'kol'är), *n.* In *mach.*, an adjustable collar which can be placed and held

by a set-screw on a shaft or rod as a stop or gage to limit the motion of a movable part sliding on the rod or shaft, as a fitting on the main shaft on which the carriage of a typewriter slides, and adjustments in many other machines.

stop-cylinder (stop'sil'in-dér), *n.* In printing. See *cylinder-press* and *printing-machine*.

stop-drill (stop'dril), *n.* A form of drill made with a solid shoulder, or admitting of the attachment of a collar by a side-screw, to limit the depth of penetration of the tool.

stope¹ (stóp), *n.* [ME. **stope* = MD. *stoepe*, etc., a step; or a var. of *stape*, *stap*, a step (cf. *stopen*, *stope*, *stapen*, pp. of *stappen*): see *step*, and cf. *stoop*.] An excavation made in a mine to remove the ore which has been rendered accessible by the shafts and drifts. These are, to a certain extent, permanent constructions, being carefully supported by the necessary timbering and left open for passage, while the stopes are only supported so far as may be necessary for the safety of the mine, and are more or less completely filled up with the attle or refuse rock left behind after the ore has been picked out and sent to the surface.

stope¹ (stóp), *v. t. and i.*; pret. and pp. *stoped*, ppr. *stopping*. [Cf. *stope*¹, *n.*] In mining, to remove the contents of a vein. The stopping is done after a vein or lode has been laid open by means of the necessary shafts and drifts. See *stopping*.

stope² (stóp), *n.* An obsolete form of *stoop*².

stope³, **stopen**. Middle English forms of *stapen*, past participle of *step*.

stop-finger (stop'fing'gér), *n.* Same as *faller-wire*, 2.

stop-gap (stop'gap), *n. and a.* [Cf. *stop*¹, *v.*, + obj. *gap*.] 1. *n.* That which fills a gap or hiatus, or, figuratively, that which serves as an expedient in an emergency.

I declare off; you shall not make a *stop-gap* of me.

Foote, The Cozeners, l. 1.

A good deal of conversation which is . . . introduced as a *stop-gap*. Proc. Eng. Soc. Psych. Research, XVII. 450.

II. *a.* Filling a gap or pause, as in the course of talk.

The "well's" and "ah's," "don't-you-know's," and other *stop-gap* interjections.

Proc. Amer. Soc. Psych. Research, I. 312.

stop-gate (stop'gät), *n.* A gate used to divide a canal into sections, so that in case of a break in an embankment in one section the water can be shut off from flowing into it from other sections.

stop-hound (stop'hound), *n.* A dog trained to hunt slowly, stopping at the huntsman's signal. Davies (under *stop*).

Sir Roger, being at present too old for fox-hunting, to keep himself in action, has disposed of his beagles and got a pack of *stop-hounds*. Budyell, Spectator, No. 116.

stopping (stóp'ping), *n.* [Verbal *n.* of *stope*¹, *v.*] In mining, the act of excavating mineral ground to remove the ore after this has been rendered accessible by the necessary preliminary excavations—namely, sinking one or more shafts or winzes and running drifts.—**Overhand stopping**, a method of working out the contents of a vein by advancing from below upward, the miner being thus always helped by gravity. It is the method most commonly employed. That part of the material thrown down which is worth saving is raised to the surface, and the refuse rock (attle or dead) resting on the attles remains in the excavation, helping to support the walls of the mine, and giving the miner a place on which to stand.—**Underhand stopping**, excavating the ore by working from above downward. In underhand stopping everything loosened by blasting has to be lifted up to be got out of the way. The advantage of this method is that in case the ore is very valuable, less of it need be lost by its getting so mixed with the attle that it cannot be picked out.

stop-knob (stop'nob), *n.* In organ-building, the handle by which the player controls the position of the slider belonging to a particular stop, or set of pipes. When the knob is drawn out, the pipes are ready to be sounded by the keys. The name of the stop is commonly written on the knob. Also called *register* and *stop*. See out under *reed-organ*.

stopless (stop'les), *a.* [Cf. *stop*¹ + *-less*.] Not to be stopped or checked. [Rare.]

Making a civil and staid senate rude

And stopless as a running multitude.

Sir W. Davenant, On King Charles the Second's Return.

stop-motion (stop'mó'shqn), *n.* In mech., a device for automatically arresting the motion of an engine or a machine, when from any cause it is necessary to stop suddenly to prevent injury to the machine or material. Stop-motion mechanisms are applied to looms, spinning, roving, and drawing-machines, winding-machines, elevators, knitting-machines, and engines. They are divided into two classes: those operated by some mechanical means, as a weighted arm resting on the thread of a loom, where the breakage of the thread causes the arm to fall; and those actuated by electricity, in which the fall of an arm closes a circuit, and by means of a magnet sets in motion some mechanical device for arresting the motion. In most ma-

chines the usual method is the shifting of the belt that moves the machine. In engines the stoppage and fall of the governor closes the steam-valve. Electrical stop-motion appliances, not self-acting, are sometimes used; in case of a break-down the use of a push-button releases a weight that by suitable mechanism shuts off steam from the engine.—**Fork-and-grid stop-motion**, in a power-loom, a stop-motion in which a grid on the batten acts in connection with a fork, which when the web-thread breaks causes a lever to drop and stops the loom.

stop-net (stop'net), *n.* An addition to the main net in seine-fishing. Encyc. Brit., IX. 254.

stop-order (stop'ór'dér), *n.* In stock-broking, an order given by a person to his broker to sell or buy a specified stock when the price reaches a specified figure.

stop-over (stop'ó'vèr), *n. and a.* See *to stop off* or *over*, under *stop*¹, *v. i.*

stoppage (stop'áj), *n.* [Cf. *stop*¹ + *-age*.] 1. The act of stopping, in any sense, or the state of being stopped; especially, a stopping of motion or procedure.

His majesty, . . . finding unexpected stoppage, tells you he now looks for a present proceed in his affairs. Court and Times of Charles I., l. 344.

2. A deduction made from pay or allowances to repay advances, etc.—**Stoppage in transit** or **in transitu**, in law, the act of a seller of goods who has sent them on their way to the buyer, in reclaiming them before they have come into the actual possession or control of the buyer, and terminating or suspending performance of the sale: a right allowed in case of discovering the buyer to be insolvent.

stopper, *n.* [ME., < AS. *stoppa*, a vessel: see *stopp*².] A pail or bucket. Prompt. Parv., p. 477; Halliwell.

stopped (stopt), *p. a.* 1. In playing musical instruments, noting the effect produced by stopping in any of the senses described under *stop*¹, *v. t.*, 10.—2. In an organ, having the upper end plugged: said of a pipe: opposed to *open*. The tone produced by a stopped pipe is an octave lower than that produced by an open pipe of the same length.—**Stopped diapason**, in organ-building. See *diapason* (e).—**Stopped note**. See *note*¹.

stoppel¹, *n.* An obsolete form of *stoppel*.

stoppel², *n.* Same as *estoppel*.

Abstemions, stoppels, inhibitions.

Marston, Scourge of Villanie, vii. 87.

stopper (stop'ér), *n.* [Cf. *stop*¹ + *-er*.] 1. One who or that which stops or plugs. (a) One who fills up holes or openings.

The ancients of Gehal and the wise men thereof were in thee thy calkers [margin: *stoppers* of chinks].

Ezek. xxvii. 9.

(b) That which closes or fills up (an opening, etc.), as a plug, a bung, or a cork; especially, such an article for the mouth of a fruit-jar, decanter, or vial, when made of the same material as the vessel itself, and having no special name, as *cork*, *bung*, etc.; a stopple; specifically, a device for closing bottles for aerated water. See out under *siphon-bottle*. (c) A convenient utensil made of wood, bone, ivory, or the like, formerly used to compress or pack some loose or flocculent substance into small compass.

I sold little bone "tobacco-stoppers"—they're seldom asked for now; *stoppers* is quite out of fashion.

Mayhew, London Labour and London Poor, I. 490.

(d) One who or that which brings to a stop or stand; specifically, one of the players in tennis, foot-ball, and other games, who stops the balls. Halliwell. (e) *Naut.*, a piece of rope secured at one end to a bolt or the like, used to check the motion of another rope or of a cable. Stoppers for cables are of various construction, such as an iron clamp with a lever or screw, a claw of iron with a rope attached, etc. (f) In an organ, a wooden plug inserted in the tops of certain kinds of pipes, as in those of the stopped diapason, flute, bourdon, etc., whence they are called *stopped pipes*. Such pipes are tuned by means of the stopper. (g) In a vehicle, a bar of wood with iron points pivoted to the body, and allowed to trail on the ground behind to serve as a stop or brake in ascending steep grades. Such a device is used, for instance, on ice-carts plying on hilly streets, where stoppages are frequent.

2. The upper pad or principal callosity of the sole of a dog's foot.

The leg, or bones below the knee [of the greyhound], should be of good size, the stopper (or upper pad) well united to it, and firm in texture.

Dogs of Great Britain and America, p. 45.

3. A small tree of one of four species of the genus *Eugenia* occurring in Florida. Of the species *E. buxifolia* is the gurgoon or Spanish stopper, *E. monticola* is the white stopper, and *E. procerca* is the red stopper. The last is somewhat abundant, and has a very heavy, hard, strong, and close-grained wood of a light yellowish-brown color, likely to be valuable for cabinet-making and coarse engraving. The remaining species so called is *E. longipes*, a rare tree bearing a small red fruit with the flavor of cranberries. All except the last are found also in the West Indies. Sargent.—**Cat-head stopper**. See *cat-head*.—**Spanish stopper**. See *def. 3.* (See also *fighting-stopper*.)

stopper (stop'ér), *v. t.* [Cf. *stopper*, *n.*] 1. To close or secure with a stopple: as, *stopped* bottles.—2. To fit with a stopple or stopples.

The mouth of the vessel to be *stopped* is ground by an iron cone fixed to a lathe.

H. J. Powell, Glass-making, p. 73.

3. *Naut.*, to secure with a stopper or stoppers.—**To stopper a cable**, to put stoppers on a cable to prevent it from running out of the ship when riding at anchor.

stopper-bolt (stop'ér-bólt), *n.* *Naut.*, a large ring-bolt driven into the deck before the main hatch, etc., for securing the stoppers.

stopper-hole (stop'ér-hól), *n.* In iron-puddling, a hole in the door of the furnace through which the metal is stirred. See out under *puddling-furnace*.

stopper-knot (stop'ér-not), *n.* A knot in the end of a rope-stopper made by double-walling the strands.

stopping (stop'ing), *n.* [Verbal *n.* of *stop*¹, *v.*] 1. The act of one who or that which stops, in any sense. Specifically—(a) The process of filling cracks or fissures, as in an oil-painting, with a composition preparatory to restoring; also, the material used in the process.

The *stopping*, as this mixture [of size and whiting] is called, is pressed into the cracks by means of a palette-knife.

Workshop Receipts, 2d ser., p. 127.

(b) In *etching*. See *to stop out* (a), under *stop*¹, *v. t.* (c) The act or process of altering the pitch of the tones of a musical instrument in any of the ways described under *stop*¹, *v. t.*, 10.

2. Something that stops. Specifically—(a) In mining, any solid wall or brattice built across a passage in a mine, to shut out the air from the goaves, or to limit it to certain passages, or to keep the gas confined, or for any other purpose. (b) In *dental surg.*, material for filling cavities in teeth. (c) In *farriery*, a ball or pad for stuffing the space in a horse's foot within the inner edge of the shoe.—**Double stopping**, in *viol-playing*, the act or process of producing tones simultaneously from two stopped strings.

stopping-brush (stop'ing-brush), *n.* 1. In *hat-making*, a brush used to sprinkle boiling water upon the napping and the hat-body to assist in uniting them.—2. In *etching*, a camel's-hair brush used in stopping out parts of etched plates.

stopping-coat (stop'ing-kót), *n.* The covering of resistant material applied to any part of an object about to be exposed to the action of an acid or other agent, in order to protect that part from such action.

stopping-knife (stop'ing-níf), *n.* A knife used in stopping, as a glaziers' putty-knife.

stop-plank (stop'plangk), *n.* One of the planks employed to form a sort of dam in some hydraulic works. They generally occupy vertical grooves in the wing walls of a lock or weir, to hold back water in case of temporary disorder of the lock-gates.

stop-plate (stop'plát), *n.* An end-bearing for the axle in a railroad journal-box, designed to resist end-play of the axle.

stopple¹ (stop'pl), *n.* [Cf. ME. *stoppel*, *stoppell*, *stoppell*; < *stop* + *-el*, now *-le*, a noun-formative indicating the instrument (as also in *whittle*, *swingle*, etc.).] 1. That which stops or closes the mouth of a vessel; a stopper: as, a glass *stopple*; a cork *stopple*.

Item, j. litill botell, with j. cheyne and j. stopell, welyng xxxviii. unces.

Paston Letters, I. 472.

Who knows, when he openeth the stopple, what may be in the bottle?

B. Jonson, Bartholomew Fair, ii. 1.

2. A plug sometimes inserted in certain finger-holes of a flute or flageolet to accommodate its scale to some unusual series.

stopple¹ (stop'pl), *v. t.*; pret. and pp. *stoppled*, ppr. *stopping*. [Cf. *stopple*¹, *n.*] To stop or close with a stopple.

His hours of study clos'd at last,
And finish'd his concise repeat,
Stopp'd his cruise, replac'd his book
With his customary nook.

Cowper, Moralizer Corrected.

stopple² (stop'pl), *n.* [Cf. ME. *stopyll*, *stouple*; a more orig. form of *stubble*: see *stubble*.] Stubble. [Obsolete or prov. Eng.]

And theru haubert and ys coler, that nere nothyng souple,
He smot of ys heved as lytzlyche as yt were a lute *stouple*.

Robert of Gloucester, p. 223.

stop-ridge (stop'rij), *n.* A band slightly elevated upon the surface of a blade or a similar part of an implement, intended to stop and hold it in the proper place, as in the handle. In stone celts the presence of such a stop-ridge marks a certain class or category.

stop-rod (stop'rod), *n.* In *weaving*, the rod which extends longitudinally under the batten of a loom, forming a part of the stop-motion, and which raises a catch that, if not raised, engages mechanism which immediately stops the loom. Every time the shuttle enters the shuttle-box fairly it acts upon a stop-finger to cause the stop-rod to lift the catch; but, if the shuttle is stopped in its course through the shed, the catch is not raised, the loom is stopped, and the warp, which would otherwise be broken by the impact of the reed against the shuttle while in the shed, is thus saved.

stop-ship (stop'ship), *n.* [*< stop¹, v., + obj. ship;* a translation of the Gr. *ἐχέμια*, the remora: see *Echeneis*, and cf. *mora*, *remora*.] The fish remora.

O Stop-ship, . . . tell us where thou dost thine Anchors hide;
Whence thou resistest Sails, Owers, Wind, and Tide.

Sylvester, tr. of Du Bartas's Weeks, l. 5.

stop-thrust (stop'thrust), *n.* In fencing, a slight thrust at one's opponent, instead of a parry, made after he has begun to lunge forward in an attack. The stop-thrust goes over by delicate gradations into the time-thrust, but is not considered by fencers a fine blow like the time-thrust.

stop-valve (stop'valv), *n.* 1. In hydraul., a valve which closes a pipe against the passage of fluid. It is usually a disk which occupies a chamber above the pipe when the passageway through the latter is open, and is driven down by a screw to stop the aperture.

2. In steam-engines, a valve fitted to the steam-pipes, where they leave the several boilers, in such a way that any boiler may be shut off from the others and from the engines.

stop-watch (stop'woch), *n.* A watch which records small fractions of a second, and in which the hands can be stopped at any instant, so as to mark the exact time at which some event occurs: chiefly used in timing races.

He suspended his voice in the epilogue a dozen times, three seconds and three fifths by a stop-watch, my lord, each time.

Sterne, *Tristram Shandy*, iii. 12.

stop-water (stop'wâ'ter), *n.* [*< stop¹, v., + obj. water.*] 1. Naut., a drag.—2. A plug of soft wood driven tightly into a hole at the joint of a scarf, the expansion of which, when immersed, prevents water from working up through the scarf and behind the bottom planking. In building iron ships a piece of canvas soaked in red lead is used to make water-tight joints where caulking is difficult.

stop-wheel (stop'hwêl), *n.* See *Geneva movement*, under *movement*.

stop-work (stop'wêrk), *n.* A device attached to the barrel of a watch, musical box, etc., to prevent overwinding.

stor¹, *a.* A Middle English form of *stoor¹*.

stor², *n.* [*ME.*, *< AS. stôr*, incense, storax (= *W. ystor*, resin, rosin), *< L. storax*, storax: see *storax*.] Incense.

The *Stor* signefed Gode werkes, for ase se smech of the *store* wanne hit is i-do into the nerée and goth upward to the heuene and to Gode warde Swo amunlet si gode biddinge to gode of the herte of the gods cristenemanne.

Old Eng. Misc. (ed. Morris), p. 28.

storable (stôr'a-bl), *à.* [*< stor³ + -able.*] Capable of being stored. *R. S. Ball*, *Exper. Mechanics*, p. 262.

storage (stôr'aj), *n.* [*< stor³ + -age.*] 1. The act of storing, in any sense; specifically, the keeping of goods in a store, warehouse, or other place of deposit.—2. The price charged or paid for keeping goods in a storehouse.—**Cold storage**, storage in refrigerating chambers or other places artificially cooled, as for the preservation of articles liable to be damaged by heat.—**Storage battery**. See *battery*.—**Storage magazine**. Same as *magazine*, 1 (*a*).—**Storage warehouse**. See *warehouse*.

storage-bellows (stôr'aj-bel'ôz), *n.* See *organ¹*, 6.

storax (stô'raks), *n.* [= *F. storax*, *styrax*, *< L. storax*, *styrax*, *< Gr. στρίπαξ*, a sweet-smelling resin so called, also a tree producing it.] 1. A solid resin resembling benzoin, with the fragrance of vanilla, formerly obtained from a small tree, *Styrax officinalis*, of Asia Minor and Syria. It was in use from ancient times down to the close of the last century, but has disappeared from the market, the trees having been mostly reduced to bushes by excessive lopping.

This, that, and ev'ry thicket doth tranapire
More sweet than storax from the hallowed fire.

Herrick, Apparition of his Mistress.

2. The tree yielding storax, or some other tree or shrub of the same genus. Among the American species, *Styrax Californica* is a handsome Californian shrub. See cut in next column.—**Liquid storax**, a balsam known from ancient times with the true storax, obtained by boiling and pressing from the inner bark of the Oriental sweet-gum tree, *Liquidambar orientalis*, itself also called *liquidambar*. It is a semi-fluid adhesive substance with the properties of a stimulant expectorant, but now scarcely used in Western practice except as a constituent in the compound tincture of benzoin (resembling friars' balsam: see *benzoin*), and as an application for itch. It has long been used in making incense and fumigating preparations, and also enters into perfumery. Its chief markets are China and India. A similar balsam is obtained, chiefly in Burma, from *Altingia excelsa*, known (together with the last) in East Indian commerce as *rose-maloes*, *rasamala*, etc. In Formosa and southern China a dry terebinthinous resin of the same character is derived from *Liquidambar Formosana* (a species recently identified). An American liquidambar, or liquid storax, or a substitute for it, is procured as natural exudation or by incision from the bark

To blackeat grain, and into store convey'd.

Milton, *P. L.*, vi. 515.

Hence — 4. A place where goods are kept for sale by either wholesale or retail; a shop: as, a book-store; a dry-goods store. See note under *shop¹*, 2. [*U. S.* and *British colonies*.]

Stores, as the shops are called.
Capt. B. Hall, *Travels in N. A.*, I. 8.

Bill of stores. See *bill³*.—**Bonded store**. See *bonded*.—**Cooperative store**. See *cooperative*.—**Fancy store**. See *fancy*.—**General-order store**, a customs warehouse in which goods are stored temporarily, as unclaimed, or arriving in advance of invoice or transportation papers, or through other like cause of detention. Such goods are obtainable only on a general order.—**General store**, a store or shop where goods of all ordinary kinds are kept for sale; especially, such a store in a country village or at cross-roads.—**In store**, laid up; on hand; ready to be produced: as, we know not what the future has in store for us.

I have an hour's talk in store for you.

Shak., *J. C.*, ii. 2. 121.

Marine ordnance, public stores. See the qualifying words.—**Sea-stores**, provisions and supplies on shipboard for use at sea. Compare *ship-stores*.—**Ship-stores**, provisions and supplies for use on board ships at sea or in port: such supplies are sealed, as non-dutiable, by the customs officers.—**Small stores**, in a man-of-war, a general term embracing tinware, tobacco, soap, razors, brushes, thread, needles, etc., issued and charged to the men by the paymaster.—**Subsistence stores**. See *subsistence*.—**To set store by**. See *set¹, v. t.*.—**To tell no store off**, to make no account of; set no store by.

I ne telle of laxatyve no store,
For they ben venymous, I woot it weel;
I hem diffe, I love hem never a deel.

Chaucer, *Nun's Priest's Tale*, l. 334.

II. *a.* 1†. Hoarded; laid up: as, store linen; store fruit.

Of this treasure . . . the gold was accumulate, and store treasure; . . . but the silver is still growing.

Bacon, *Holy War*.

2. Containing stores; set apart for receiving stores or supplies. Compare *store-city*.—3. Obtained at a store or shop; purchased or purchasable at a shop or store: as, store clothes; store teeth (humorously used for false teeth). This word in rural or frontier use is commonly opposed to *home-made*, and implies preference: as, stylish store curtains; in town use it is usually opposed to *made to order*, and implies disparagement: as, clumsy store boots. [*Collog.*, U. S.]—**Store casemate**. Same as *barrack casemate* (which see, under *barrack*).—**Store cattle**, lean cattle bought for fattening by squatters who find that they have more grass than the natural increase of their herd require. [*Australia*.]

Oh, we are not fit for anything but store cattle: we are all blady grass.

Mrs. Campbell Praed, *Head Station*, p. 74.

Store pay, payment for country produce, labor, etc., by goods from a store, in lieu of cash; barter. [*Rural*, U. S.]

See, a girl has just arrived with a pot of butter to trade off for store pay. She wants to exchange a yard of calico, a quarter of tea, . . . and a bottle of rum.

Capt. Priel's Adventures, p. 54. (*Bartlett*.)

2. Adorned with scenes from a story, or from history, executed by means of sculpture, painting, weaving, needlework, or other art: as, *storied* tapestries.

Storied windows, richly dight,
Casting a dim religious light.

Milton, Il Penseroso, l. 159.

Can storied urn, or animated bust,
Back to its mansion call the fleeting breath?

Gray, Elegy.

storied² (stō'rid), *a.* [Formerly also *storeyed*; < *story*² + *-ed*.] Having stories or stages: as, a four-storied building.

storier (stō'ri-ēr), *n.* [*story*¹ + *-er*.] A relater of stories; a story-teller; a historian.

The honeyed rhythm of this melodious storier.

J. Rogers Rees, Poetry of the Period (Bookworm, p. 65).

storify¹ (stō'ri-fi), *v. t.* [*story*¹ + *L. facere*, make, do: see *-fy*.] To make or tell stories about.

storify² (stō'ri-fi), *v. t.*; pret. and pp. *storified*, ppr. *storifying*. [*story*² + *L. facere*, make, do: see *-fy*.] To range, as beehives over and under one another, in the form of stories. *Phin*, Diet. Apiculture, p. 67. [Rare.]

storilogist (stō-ri-ol'ō-jist), *n.* [*storilog-y* + *-ist*.] A student or expounder of popular tales and legends; one who is versed in folk-lore. [Recent.]

The resuscitation of the roe from its bones will recall to storilogists similar incidents in European and especially Scandinavian and Icelandic folk-lore.

N. and Q., 7th ser., I. 484, note.

storiology (stō-ri-ol'ō-ji), *n.* [*E.* *story*¹ + *Gr.* *-λογία*, < *λέγειν*, speak: see *-ology*.] The science of folk-lore; the study of popular tales and legends. [Recent.]

For Chaucer's direct source, it might be well worth while for students of comparative storiology who have leisure . . . to examine these and similar monkish collections of exempla [of the thirteenth century].

N. and Q., 7th ser., I. 485.

stork (stōrk), *n.* [*ME.* *stork*, < *AS.* *store* = *D. MLG.* *LG.* *stork* = *OHG.* *storch*, MHG. *G.* *storch* (also *OHG.* *stork*, MHG. *G.* dial. *stork*) = *Icel.* *storkr* = *Sw. Dan.* *stork*, a stork; cf. *OBulg.* *strūkū*, *Bulg.* *strūk*, *shtrūk* = *Serv.* *shtrk* = *OKuss.* *sterkū*, *Russ.* *sterkhū* = *Lith.* *starkus* = *Lett.* *stārks* = *Hung.* *eszterag* = *Albanian* *sterkjok*, a stork. The relation of the Teut. to the Slav. and other forms is undetermined. Cf. *Gr.* *τόρυος*, a vulture, *τόρυος ὑπόβορσις*, a swan.] A large altricial grallatorial bird, of the family *Ciconiidae* and especially of the subfamily *Ciconiinae* (which see for technical characters). The stork is related to the herons, spoonbills, and ibises, but not very closely to the cranes. There are several species, found in nearly all temperate and tropical regions. They are tall and stately birds, equalling the cranes and larger herons in stature, but are readily distinguished by many technical characters. Storks are wading birds, frequenting the vicinity of water; but some of them become semi-domesticated, and often nest on buildings. Their fidelity and amiability are traditional. They feed chiefly on reptiles (as snakes and lizards), amphibians (as frogs), fishes, mollusks, and worms, but also sometimes capture small quadrupeds and birds. The best-known species is the common white stork of Europe, *Ciconia alba*; when adult, it is pure-white with black-tipped wings and reddish bill and feet: it is about 3½ feet long, and stands 4 feet high. The black stork of the same country is *C. nigra*, a rarer species. Various birds of different countries, technically storks, are known by other names, as *adjutant*, *marabou*, *maguari*, *jabiru*, *shell-bird*, and *wood-bird*. See these words, and cuts under *adjutant-bird*, *Ciconiidae*, *Grallæ*, *jabiru*, *openbill*, *Pelargomorphæ*, *simbil*, and *Tantalus*.—**Black-necked stork**, *Xenorhynchus australis*, of India and Australia, related to the American jabiru and African saddle-billed stork, the three being often placed in the genus *Mycteria*.—**Black stork**. See def.—**Episcopal stork**, *Dissoura episcopius*. See cut under *Pelargomorphæ*.—**Giant stork**, the adjutant-bird.—**Hair-crested stork**, *Leptoptilus (Cranopelagus) javanicus*, a small and quite distinct species of marabou, related to the adjutant, found in parts of India, Java, Sumatra, etc.—**Maguari stork**, *Euaenura maguari*. stork-billed (stōrk'bild), *a.* Having a bill like a stork's, as a kingfisher of the genus *Pelargopsis*. See cut under *Pelargopsis*.

stork's-bill (stōrks'bil), *n.* 1. A plant of the genus *Erodium*, particularly the heron's-bill, *E. cicutarium* (also called *hemlock stork's-bill*), a low bushy herb with pinnate leaves, a mostly Old World plant, abundantly naturalized in many parts of the United States, perhaps indigenous in the west. See *alfilerilla*.—2. A plant of the related genus *Pelargonium*, which includes the geraniums, etc., of gardens.

Flowering Plant of Stork's-bill (*Erodium cicutarium*). a, one of the carpels.

storm (stōrm), *n.* [*ME.* *storm*, < *AS.* *storm*, *storm*, = *OS.* *MD.* *D.* *MLG.* *LG.* *storm* = *OHG.* *MHG.* *G.* *sturm* = *Icel.* *stormr* = *Sw. Dan.* *storm* (not in Goth.; cf. *It.* *stormo*, a fight, *It.* dial. *sturm* = *Pr.* *estorn* = *OF.* *estour*, *estor*, *estur* (> *E.* *stour*³, a tumult, *stir*) = *Ir. Gael.* *stoirm* = *Bret.* *stourm*, a storm, all < Teut.]; perhaps, with formative *-m*, from the root of *stir*¹ (√ *stur*, √ *stor*) or of *L.* *sternere*, strew: see *stir*¹, *strew*.]

1. A disturbance of the normal condition of the atmosphere, manifesting itself by winds of unusual direction or force, or by rain (often with lightning and thunder), snow, or hail, or by several of these phenomena in combination; a tempest: also used with reference to precipitation only, as in *hail-storm*, *thunder-storm*, *snow-storm*. A storm is usually associated with an area of low pressure, and its intensity or violence depends upon the steepness of the density-gradients which produce it. The terms *area of low pressure*, *cyclone*, *cyclonic storm*, and *storm* are often used interchangeably. In *area of low pressure* the primary reference is to the state of the barometer, in *cyclone* it is to the gyratory character of the atmospheric circulation, and in *storm* to the disturbance of the weather: but each term is extended to include the whole of the attendant phenomena.

And there arose a great storm of wind. Mark iv. 37.

Poor naked wretches, wheresoe'er you are,
That bide the pelting of this pitiless storm.

Shak., Lear, III. 4. 29.

2. Specifically—(a) Technically, in nautical use, a wind of force 11 on the Beaufort scale, being that in which a man-of-war could carry only storm-staysails.

The wind suddenly shifted in a heavy rain squall from SSE. to W., and increased to a storm; at 12 noon the barometer read lowest, and the wind was blowing a storm.

Monthly Weather Review (1887), p. 40.

(b) A fall of snow. (c) A prolonged frost. [Prov. Eng.] Hence, figuratively—3. A tempestuous fight or descent of objects fiercely hurled: as, a storm of missiles.

No drizzling shower.

But rattling storm of arrows barb'd with fire.

Milton, P. L., VI. 546.

4. A violent disturbance or agitation of human society; a civil, political, or domestic commotion; a tumult; a clamor.

I will stir up in England some black storm

Shall blow ten thousand souls to heaven or hell.

Shak., 2 Hen. VI., III. 1. 349.

5. A destructive or overwhelming calamity; extremity of adversity or disaster.

Having passed many bitter brunts and blasts of vengeance, they dread no storms of Fortune.

Spenser, Shep. Cal., February, Embleme.

An old man, broken with the storms of state.

Shak., Hen. VIII., IV. 2. 21.

6. A vehement or passionate outbreak, as of some emotion, or of the expression of such emotion: as, a storm of indignation; a storm of applause; a storm of hisses.

Mark'd you not how her sister

Began to scold and raise up such a storm?

Shak., T. of the S., I. 1. 177.

Her bosom shaken with a sudden storm of sighs.

Tennyson, Locksley Hall.

7. *Milit.*, a violent assault on a fortified place or strong position; a dashing attempt by troops to capture a fortified place, as by scaling the walls or forcing the gates.

How by storm the walls were won,

Or how the victor sacked and burnt the town.

Dryden.

Cyclonic storm, one that accompanies or is caused by a cyclone.—**Electric storm**. See *electric*.—**Eye of a storm**, the calm region at the center of a violent cyclonic storm, where the clouds clear away and blue sky appears—occurring mostly in the tropics, but also experienced more or less perfectly in higher latitudes. This phenomenon is due to the circumstance that the winds immediately bordering the central area blow circularly around it, leaving a region of calm. The centrifugal force of the wind intensifies the diminution of pressure, and develops a tendency toward a gently descending current from above, and a consequent clearing of the sky.—**High-area storm**, a storm associated with an area of high pressure.—**Low-area storm**. Same as *cyclonic storm*.—**Magnetic, revolving, etc., storm**. See the adjectives.—**Storm and stress** (a translation of the German *Sturm und Drang*, alluding to a drama by Klinger, "Sturm und Drang"), a name given to a period in German literary history (about 1770 to 1790) influenced by a group of younger writers whose works were characterized by passion and reaction from the old methods; hence, a proverbial phrase for unrest or agitation.—**To take by storm**. (a) *Milit.*, to carry by assault. See def. 7.

The recollection of the victory of Roanoke imparted to the Federals that assurance which is a great element of success; they knew that a battery could be taken by storm.

Comte de Paris, Civil War in America (trans.), I. 587.

(b) To captivate or carry away by surprising or delighting: as, the new singer has taken the town by storm.—**Wind-storm**, a storm with heavy wind, without precipitation.—**Syn.** 1. *Tempest*, etc. See *wind*².

storm (stôrm), *v.* [*<* ME. *stormen*, *sturmen*. *<* AS. *styrman* = D. MLG. LG. *stormen* = OHG. *sturman*, MHG. G. *stürmen* = Icel. *styrma* = Sw. *storma* = Dan. *storme*, storm; cf. It. *stormire*, make a noise, *stormeggiare*, ring the storm-bell, throng together; from the noun.]
1. *intrans.* 1. To blow with great force; also, to rain, hail, snow, or sleet, especially with violence: used impersonally: as, it *storms*.—
2. To fume; scold; rage; be in a violent agitation or passion; raise a tempest.

The Delphin then, discharging Land (at last),
 Storms with himselfe for hauling made such haste.
Sylvester, tr. of *Dn Bartas's Weeks*, i. 5.

When . . . I see a gentleman lose his money with ac-
 cidentally, I recognise in him all the great qualities of a philo-
 sopher. If he *storms* and invokes the gods, I lament that he is not placed at the head of a regiment.
Steele, *Guardian*, No. 174.

3. To move with violence; rush angrily or im-
 petuously: as, he *stormed* about the room.

Bobby Wick *stormed* through the tents of his Company.
R. Kipling, *Only a Subaltern*.

II. *trans.* To attack and attempt to take pos-
 session of, as by scaling walls or forcing gates or breaches; assault: as, to *storm* a fortified town: often used figuratively.

With eager warmth they fight, ambitious all
 Who first shall *storm* the breach, or mount the wall.
Addison, *To the King*.

storm-area (stôrm'ā'rē-ä), *n.* The area cov-
 ered by a storm; the region within the closed
 isobars surrounding a center of low pressure.
 In the United States this region is generally an oval
 whose length is, on the average, nearly twice its width.
 Its longest diameter may be turned in any azimuth, but
 is most frequently directed to a point between north and
 north 60° east. Over the ocean storm-areas are generally
 nearly circular.

storm-beat, storm-beaten (stôrm'bēt, -bē'tn),
a. Beaten or damaged by storms.

storm-belt (stôrm'bēlt), *n.* A belt of maximum
 storm-frequency. On charts containing a large num-
 ber of storm-tracks the paths are found to be mostly di-
 vided into several well-defined groups whose local form
 natural storm-belts. In the United States three storm-
 belts are distinguished: (1) that of storms which appear
 in the northwest British provinces, advance eastward to
 the lake region, and thence down the St. Lawrence valley;
 (2) that of storms which originate in the southwest near
 the Gulf of Mexico, and move northeastward to the lakes;
 (3) that of the West India hurricanes, which first move
 westerly, and then northeastward along the Atlantic coast.
 Over Europe three storm-belts may be distinguished: one
 lying across the northern Mediterranean, one across the
 North Sea and the Baltic, and one northeast and south-
 west off the coast of Norway and the British Isles. Also
 called *storm-zone*.

storm-bird (stôrm'bērd), *n.* 1. A petrel; one
 of the birds of the family *Procellariidae*, includ-
 ing the albatrosses, fulmars, etc., as well as
 those to which the name *petrel* is more com-
 monly applied; specifically, the stormy petrel.
 See cut under *petrel*.—2. A bird that indicates
 or seems to foretell bad weather by its cries or
 other actions, as a storm-cock. Compare *rain-
 bird*.

storm-bound (stôrm'bound), *a.* Confined or
 delayed by storms; relating to hindrance by
 storms: as, we were *storm-bound* in port.

Weeks of *storm-bound* inactivity.
Carlyle, *To John Carlyle*, Feb. 11, 1830.

storm-card (stôrm'kârd), *n.* A transparent
 card containing lines to represent the wind-
 directions in all quarters of a cyclonic storm:
 devised by Reid as an aid to seamen in avoid-
 ing dangerous storms. When the card is drawn to
 suitable scale, and placed over the position of a vessel on
 a chart, so that the observed wind-direction and the same
 wind-direction on the card are brought into coincidence,
 the bearing of the center of the card from the point of
 observation indicates the direction of the center of the
 storm. Knowing the direction of the storm-center, its
 probable path can be laid down with considerable pre-
 cision, and the best course for the vessel may then be de-
 termined. It is now known that a storm-card cannot uni-
 versally be used to discover the bearing of a storm-center,
 for the angle between the wind and the radius varies in
 different latitudes, and is different at different distances
 from the center. Also called *storm-circle*, *storm-compass*.

storm-center (stôrm'sen'tēr), *n.* The position
 of lowest pressure in a cyclonic storm. In the
 typical case the wind throughout the storm-area blows
 spirally inward toward the storm-center, changing from a
 radial to an approximately circular path, and increasing
 in force as the center is approached. The center itself
 is an area of comparative calm, accompanied by a partial
 or complete clearing away of the clouds, and a mild tem-
 perature. (See *eye of a storm*, under *storm*.) Violent ocean
 storms frequently exemplify this typical description; but
 in land storms, which present irregularities of all kinds,
 these conditions are in general only partially realized.

storm-circle (stôrm'sēr'kl), *n.* Same as *storm-
 card*.

storm-cloud (stôrm'kloud), *n.* A cloud that
 brings or threatens storm.

storm-cock (stôrm'kok), *n.* 1. The fieldfare,
Turdus pilaris; also, the mistlethrush, *T. viscivorus*.

Its song . . . it [the missel] begins . . . very early in
 the spring, often with the new year, in blowing showery
 weather, which makes the inhabitants of Hampshire call
 it the *storm-cock*. *Pennant*, *Brit. Zool.* (ed. 1770), I, 302.

2. The green woodpecker, *Geococcyx viridis*.
 [Prov. Eng. in all uses.]

storm-compass (stôrm'kum'pas), *n.* Same as
storm-card.

storm-cone (stôrm'kōn), *n.* A cone consisting
 of tarred canvas extended on a frame 3 feet
 high and 3 feet wide at the base, used either
 alone or along with the drum as a storm-signal.
 See cut under *storm-signal*. [Eng.]

storm-current (stôrm'kur'ent), *n.* A surface
 sea-current produced by the force of the wind
 in a storm. Such a current frequently outruns its gen-
 erating storm, and affords the first announcement thereof
 on a distant shore by increasing there the intensity of the
 usual current or by changing its set.

storm-door (stôrm'dōr), *n.* An outer or addi-
 tional door for protection against inclement
 weather: in general used temporarily, for the
 winter only.

storm-drum (stôrm'drum), *n.* A cylinder of
 tarred canvas extended on a hoop 3 feet high
 and 3 feet wide, hoisted in conjunction with the
 cone as a storm-signal. See *storm-signal*. [Eng.]

stormer (stôrm'mēr), *n.* [*<* *storm* + *-er*.] One
 who storms; specifically (*milit.*), a member of
 an assaulting party.

storm-finch (stôrm'finch), *n.* See *finch*¹, and
 cut under *petrel*.

storm-flag (stôrm'flag), *n.* See *storm-signal*.

stormful (stôrm'fūl), *a.* [*<* *storm* + *-ful*.]
 Abounding with storms.

They know what spirit brews the *stormful* day.
Collins, *Ode on the Popular Superstitions of the Highlands*.

stormfulness (stôrm'fūl-nes), *n.* The state of
 being stormful; stormy character or condition.
Coleridge.

storm-glass (stôrm'glās), *n.* A hermetically
 sealed tube containing an alcoholic solution of
 camphor, together with crystals of nitrate of pot-
 ash and ammonium chlorid: so named because
 an increase in the amount of the precipitate was
 supposed to indicate the approach of stormy
 weather. The changes in the amount of the precipitate
 are due solely to variations of temperature, and the instru-
 ment is simply a chemical thermometer.

storm-house (stôrm'hous), *n.* A temporary
 shelter for men employed in constructing or
 guarding railroads, or other works in exposed
 situations.

stormily (stôr'mi-li), *adv.* In a stormy man-
 ner; tempestuously.

storminess (stôr'mi-nes), *n.* The state of being
 stormy, or of being agitated or visited by vio-
 lent winds; tempestuousness; impetuousness;
 violence.

storming-party (stôr'ming-pär'ti), *n.* *Milit.*,
 the party to whom is assigned the duty of mak-
 ing the first assault in storming an enemy's
 works.

storm-kite (stôrm'kīt), *n.* A device, on the
 principle of a kite, for carrying a rope from a
 ship to the shore in a storm.

stormless (stôrm'les), *a.* [*<* *storm* + *-less*.]
 Free from storms; without storm.

Our waking thoughts
 Suffer a *stormless* shipwreck in the pools
 Of sullen slumber. *Tennyson*, *Harold*, v. 1.

storm-pane (stôrm'pān), *n.* An extra square
 of glass fitted in a frame provided with clamps,
 used to fit over a window in an exposed build-
 ing, as a lighthouse, in case of breakage.

storm-path (stôrm'pāth), *n.* Same as *storm-
 track*.

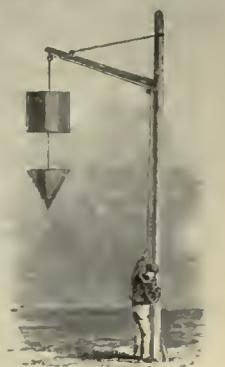

storm-pavement (stôrm'pāv'mēnt), *n.* In *hy-
 draul. engin.*, a sloping stone pavement lining
 the sea-face of a pier or breakwater. *E. H.*
Knight.

storm-petrel (stôrm'pet'rel), *n.* A small black-
 ish petrel, belonging to the genus *Procellaria*
 as now restricted, or to one of a few closely
 related genera, as *Oceanites*, *Cymochorea*, and
Halocypitena. The three best-known storm-petrels are
Procellaria pelagica, *Cymochorea leucorhoa*, and *Oceanites*
oceanicus. All are also called *Mother Carey's chickens*.
 See cut under *petrel*. The form *stormy petrel* is also com-
 mon.

storm-proof (stôrm'prōf), *a.* Proof against
 storms or stress of weather.

storm-sail (stôrm'sāl), *n.* A sail made of very
 stout canvas, of smaller size than the corre-
 sponding sail in ordinary use, set in squally
 or heavy weather.

storm-signal (stôrm'sig'nal), *n.* A signal dis-
 played on sea-coasts and lake-shores for indi-
 cating the expected prevalence of high winds
 or storms. For this pur-
 pose flags and lanterns are
 used in the United States, and
 a cone and drum in Great
 Britain. In the practice of
 the United States Weather
 Bureau, a red flag with black
 center is displayed by day
 when a violent storm is ex-
 pected, and an additional
 pennant indicates the quad-
 rant of the probable wind-di-
 rection, as follows: red pen-
 nant above flag, northeasterly
 winds; red pennant below
 flag, southeasterly winds;
 white pennant above flag,
 northwesterly winds; white
 pennant below flag, south-
 westerly winds. By night, a
 red light indicates easterly
 winds, and a white light
 above a red light indicates
 westerly winds. In the Brit-
 ish system the inverted cone
 indicates a south gale, the
 upright cone a north gale,
 while the addition of the drum
 indicates that the winds are
 expected to be of marked violence. See *weather-signal*.

English Storm-signal, indicat-
 ing dangerous winds from the
 south.

storm-stay (stôrm'stā), *n.* A stay on which a
 storm-sail is set.

storm-stayed (stôrm'stād), *a.* Prevented from
 proceeding on, or interrupted in the course of,
 a journey or voyage by storms or stress of
 weather.

storm-stone (stôrm'stōn), *n.* Same as *thunder-
 bolt*.

storm-tossed (stôrm'tost), *a.* Tossed about by
 storm or tempest: as, a *storm-tossed* bark;
 hence, agitated by conflicting passions or emo-
 tions: as, his *storm-tossed* spirit is at rest.

storm-track (stôrm'trak), *n.* The path trav-
 eled by the center of a cyclonic storm. North
 of the parallel of 30° storm-tracks almost invariably pur-
 sue an easterly course, having generally a northerly in-
 clination. Within the tropics storm-tracks almost invari-
 ably tend westerly, generally with an inclination toward
 the pole; they have rarely, if ever, been traced nearer to
 the equator than 6°. Continuous storm-tracks are some-
 times traced across North America, the Atlantic ocean,
 and Europe; but in general less than 12 per cent. of the
 storms leaving America reach the European coast.

storm-wind (stôrm'wind), *n.* The wind or
 blast of a storm or tempest; a hurricane; also,
 a wind that brings a storm.

Then comes, with an awful roar,
 Gathering and sounding on,
 The *storm-wind* from Labrador,
 The wild Euroclydon,
 The *storm-wind*!
Longfellow, *Midnight Mass*.

storm-window (stôrm'win'dō), *n.* 1. An outer
 window to protect the inner from inclemency
 of the weather.—2. A window raised from the
 roof and slated above and on each side.

stormy (stôr'mi), *a.* [*<* ME. *stormic*, *<* AS. *stor-
 mig* (= D. Sw. *stormig* = MHG. *sturmig*, G. *stür-
 mig*), *<* *storm*, storm: see *storm*.] 1. Charac-
 terized by storm or tempest, or by high winds;
 tempestuous; boisterous: as, a *stormy* season.

No cloudy show of *stormy* blustering weather
 Doth yet in his fair welkin once appear.
Shak., *Lucrece*, l. 115.

His trumpet has often been heard by the neighbors,
 of a *stormy* night, mingling with the howling of the blast.
Irving, *Knickerbocker*, p. 448.

2. Characterized by violent disturbances or
 contentions; agitated; turbulent.

For love is yet the moste *stormy* lyf,
 Right of himself, that ever was begonne.
Chaucer, *Troilus*, ll. 778.

His [Warren Hastings's] administration, so eventful and
stormy, closed in almost perfect quiet.
Macaulay, *Warren Hastings*.

3. Violent; passionate; easily roused to anger
 or strife.

The lives of all your loving complices
 Lean on your health; the which, if you give o'er
 To *stormy* passion, must perforce decay.
Shak., *2 Hen. IV.*, l. 1. 165.

The *stormy* chiefs of a desert but extensive domain.
Scott.

4. Associated with storms, as seen in them or
 supposed to presage them: specifically, in or-
 nithology, noting certain petrels.—**Stormy pet-
 rel.** Same as *storm-petrel*. = *Syn. 1.* Windy, gusty, squally,
 blustering. See *wind*².

storm-zone (stôrm'zōn), *n.* Same as *storm-belt*.

The regions between 40° and 70° latitude are the great
storm zones of the world.
R. Hinman, *Eclectic Physical Geography*, p. 94.

stornello (stôr-nel'lō), *n.*; pl. *stornelli* (-li). [It.]
 A form of Italian folk-song, usually improvised
 and either sentimental or satirical.

The Tuscan and Umbrian *stornello* is much shorter (than the *rispetto*), consisting, indeed, of a hemistich naming some natural object which suggests the motive of the little poem. *Encyc. Brit.*, XIX. 272.

Storthing (stör'ting), *n.* [*Dan. Norw. storthing* (= *Icel. stórthing*), great or high court, parliament, < *stor* (= *Sw. stor* = *Icel. stórr* = *AS. stór*, > *E. stoor*), great, & *thing* = *Sw. ting* = *Icel. thing*, assembly, meeting; = *AS. thing*: see *thing*².] The national parliament of Norway. It is composed of 114 members, who are chosen by indirect election. The Storthing is convened every year, and divides itself into an upper house (*Lagthing*) and a lower house (*Odelsting*). The former is composed of one fourth, and the latter of three fourths of the members. See *Lagthing* and *Odelsting*.

storvent. Preterit plural and past participle of Middle English *steren*, die. See *starre*.

story¹ (stó'ri), *n.*; pl. *stories* (-riz). [*ME. storie, stoye* (cf. *It. storia*, < *LL. storia*), an aphetic form of *istoric, historie*, history: see *history*.] 1. A connected account or narration, oral or written, of events of the past; history.

The private virtue of *Story* is verity.

Howell, Vocall Forrest, Pref.

She was well versed in the Greek and Roman *story*, and was not unskilled in that of France and England.

Swift, Death of Stella.

There's themes enough in Caledonian *story*

Would show the tragic muse in a' her glory.

Burns, Prologue for Mr. Sutherland's Benefit.

2. An account of an event or incident; a relation; a recital: as, *stories* of bravery.

A cred man, to lere the [teach thee]

. . . of gode Friday the *storye*.

Piers Plowman (B), xiii. 447.

And tell sad *stories* of the death of kings;

How some have been deposed, some slain in war.

Shak., Rich. II., lii. 2. 156.

To make short of a long *story*, . . . I have been bred up from childhood with great expectations.

Dickens, Martin Chuzzlewit, vi.

3. In *lit.*, a narrative, either true or fictitious, in prose or verse; a tale, written in a more or less imaginative style, of that which has happened or is supposed to have happened; specifically, a fictitious tale, shorter and less elaborate than a novel; a short romance; a folk-tale.

Call up him that left half-told

The *story* of Cambuscan held,

Of Camball and of Algarsife,

And who had Canse to wife.

Milton, Il Penseroso, l. 110.

Voltaire has a curious essay to show that most of our best modern *stories* and plots originally belonged to the eastern nations.

L. D'Israeli, Curios. of Lit., l. 174.

4. The facts or events in a given case considered in their sequence, whether related or not; the experience or career of an individual: as, the *story* of a foundling; his is a sad *story*.

Weep with me, all you that read

This little *story*.

B. Jonson, Epitaph on Salsthiel Pavy.

There was not a grave in the church-yard but had its *story*.

Lovell, Among my Books, 2d ser., p. 206.

5. An anecdote: as, a speech abounding in good *stories*.

I will go yet further, and affirm that the success of a *story* very often depends upon the make of the body, and formation of the features, of him who relates it.

Steele, Guardian, No. 42.

Sometimes I recorded a *story*, a jest, or a pun for consideration.

O. W. Holmes, The Atlantic, LXVI. 666.

6. A report; an account; a statement; anything told: often used slightly: as, according to his *story*, he did wonders.

Fal. You confess, then, you picked my pocket?

Prince. It appears so by the *story*.

Shak., I Hen. IV., lii. 3. 191.

All for a slanderous *story*, that cost me many a tear.

Tennyson, The Grandmother.

7. A falsehood; a lie; a fib. [*Colloq. and euphemistic.*]

I wrote the lines; . . . owned them; he told *stories*.

(Signed) Thomas Ingoldsbay.

Barham, Ingoldsbay Legends, l. 116, note.

8. The plot or intrigue of a novel or drama: as, many persons read a novel, or are interested in a play, only for the *story*.

It is thought clever to write a novel with no *story* at all, or at least with a very dull one.

R. L. Stevenson, A Gossip on Romance.

9†. A scene from history, legend, or romance, depicted by means of painting, sculpture, needlework, or other art of design.

The walls also of all the body of the Chirche, from the pylers to the Roof, be poyntyd with *stories* from the begynnyng of the world.

Torkington, Diarie of Eng. Travell, p. 49.

To erect greates Chapells, . . . to paint faire *stories*, and to make rich ornaments.

Guevara, Letters (tr. by Hellowes, 1577), p. 341.

There's his chamber, . . . 'tis painted about with the *story* of the Prodigal, fresh and new.

Shak., M. W. of W., iv. 5. 8.

Blind story, a pointless tale.—To be in a or one *story*†, to be in the same *story*†, to agree in testimony; give the same account.

So I find they are all in a *story*.

Sheridan, The Duenna, li. 3.

=*Syn.* 1. *Relation, Narration*, etc. (see *account*); record, chronicle, annals.—2. *Anecdote, Story*. See *anecdote*.—3. Tale, fiction, fable, tradition, legend.—4. *Memoir, life, biography*.

story¹ (stó'ri), *v.*; pret. and pp. *storied*, ppr. *storying*. [*CF. story*¹, *n.* Cf. *history*, *n.*] **I. trans.** 1. To tell or describe in historical relation; make the subject of a narrative, tale, or legend; relate.

Pigmies (those diminutive people, or sort of apes or satyrs, so much resembling the little men *storied* under that name).

Evelyn, True Religion, l. 261.

What the sage poets, taught by the heavenly Muse,

Storied of old in high immortal verse,

Of dire chimeras, and enchanted Isles.

Milton, Comus, l. 516.

2. To ornament with sculptured or painted scenes from history or legend. Compare *storied*².

II. intrans. To relate; narrate.

Cupid, if *storying* Legends tell aright,

Once framed a rich Elixir of Delight.

Coleridge, Composition of a Kiss.

story² (stó'ri), *n.* [Sometimes *storey*, early mod. *E. storie, stourie*; < *ME. story*, prob. < *OF. *estoree*, a building, a thing built, < *estoree*, fem. pp. of *estorer*, build, < *L. instaurare*, erect, build, etc.: see *store*³, *v.*] 1†. A building; an edifice.

Hil [they] bygonne her heye tounes strengthly [strengthen] vaste aboute,

Her castles & *stories*, that hil myghte be ynne in doute [danger].

Rob. of Gloucester, p. 181.

2. A stage or floor of a building; hence, a subdivision of the height of a house; a set of rooms on the same level or floor. A *story* comprehends the distance from one floor to another: as, a *story* of nine, twelve, or sixteen feet elevation.

which they put off their clothes.

Purchas, *Pilgrimage*, p. 617.

3. A closed or partly closed vessel or receiver
in which fuel is burned, the radiated heat be-
ing utilized for warming a room or for cooking.
Stoves are made of cast-iron and sheet-iron, and also of
earthenware in the form of tiles cemented together, of
plaster held together by a frame of wire, or the like, and
of masonry solidly put together. The stoves of tiles, mas-
sive, etc., radiate less heat than iron stoves, but when
heated remain hot for a long time. Stoves are divided into
the two main classes of cooking-stoves and warming-stoves,
and are also classified according to the fuel used, as wood-
stoves, gas-stoves, etc. There are many varieties, named
according to their use, as the car-stove, camp-stove, foot-
stove, tinnen's stove, etc., or according to some attach-
ment, as a water-back stove. Warming-stoves range from

the open fireplace or Franklin stove to magazine and base-burning fireplaces and heaters for warming more than one room, which are more properly furnaces. The word was first used in English in this sense as applied to foot-stoves. See *foot-stove*, *oil-stove*, *gas-stove*.

The sempstress speeds to Change with red-tipt nose;
The Belgian *store* beneath her footstool glows.
Gay, *Trivia*, ii. 338.

4. In *ceram.*, a pottery-kiln.—5. In a furnace, the oven in which the blast is heated.—6. The name is now given (a) to any open stove with or without doors that open widely, and with andirons or a grate similar to those of an ordinary fireplace; (b) to a kind of fireplace with back and sides of ironwork and some arrangement for heating the air in chambers which communicate with the room.—**Norwegian stove.** A chamber the walls of which are made as perfect non-conductors of heat as possible, used for cooking by enabling a pot or saucepan full of boiling water, placed in it, to retain its heat for a great length of time, thus stewing the meat, etc., which it may contain. The same chamber may be used as a refrigerator, as it keeps ice unmelting for a long time.—**Rotary stove.** See *rotary oven*, under *oven*.

straggler (strag'lër), *n.* [*Gr.* *straggle* + *-er*¹.] 1. One who straggles or strays away, as from his fellows or from the direct or proper course; one who lags behind or becomes separated in any way from his companions, as from a body of troops on the march.

This manner of speech is termed the figure of digression by the Latines, following the Greeke original; we also call him the *straggler*, by allusion to the souldier that marches out of his array. *Puttenham*, *Arte of Eng. Poesie*, p. 195.

The first *stragglers* of a battalion of rocks, guarding a sort of pass, beyond which the beck rushed down a waterfall. *Charlotte Brontë*, *Jane Eyre*, xxiv.

2. Specifically, in *ornith.*, a stray, or strayed bird, out of its usual range, or off its regular migration. The stragglers are the casual or accidental visitants in any avifauna. In the nature of the case they are never numerous as regards individuals; but the list of what are technically called *stragglers* in any region or locality usually becomes, in the course of time, a long one, so far as species are concerned. Thus, in the avifauna of the District of Columbia, the stragglers are about as many species as the regular visitants of either summer or winter, or the permanent residents of the year round, though fewer than the spring and autumn migrants.

3. One who roams or wanders about at random, or without settled direction or object; a wanderer; a vagabond; especially, a wandering, shiftless fellow; a tramp.

Let's whelp these *stragglers* o'er the seas again. *Shak.*, *Rich.* III., v. 3. 327.

Bottles missing are supposed to be half stolen by *stragglers* and other servants. *Swift*, *Advice to Servants* (Butler).

2. Without bend or deviation, like a string tightly stretched; not crooked or curved; right; in *geom.*, lying, as a line, evenly between its points. This is Euclid's definition. The principal characteristic of a straight line is that it is completely determined, if unlimited, by any two points taken upon it, or if limited, by its two extremities. The idea of measurement does not enter into the idea of a straight line, and it is unnecessary to introduce that idea into the definition, as is done when it is said (after Legendre) to be the shortest distance between two points.

He that knoweth what is *straight* doth even thereby discern what is crooked, because the absence of straightness in bodies capable thereof is crookedness. *Hooker*, *Eccles. Polity*, I. 8.

There is no mee such Cesars; other of them may have crook'd noses, but to owe such *straight* arms, none. *Shak.*, *Cymbeline*, III. 1. 38.

Be pleased to let thy Holy Spirit lead me in the *straight* paths of sanctity, without deflections to either hand. *Jer. Taylor*, *Works* (ed. 1885), I. 86.

3. Without interruption or break; direct.

Forth-with declarid to hys peple all, And to thys cite his peple gan cal, Wher-vnto that had an enyn *straight* way. *Rom. of Partenay* (E. E. T. S.), I. 1308.

With *straight* air—that is, with the pressure from the main reservoir, or the air-pump, going directly to the brake cylinder—the engineer can apply the brakes to all the wheels of his train simultaneously. *Scribner's Mag.*, VI. 333.

4. Direct; authoritative; sure; reliable: as, a *straight* tip. [Slang.]—5. Upright; marked by adherence to truth and fairness; fair; honorable: as, a man *straight* in all his dealings. [Colloq.]—6. Proceeding or acting with directness; keeping true to the course. [Colloq.]

He shows himself to be a man of wide reading, a pretty *straight* thinker, and a lively and independent critic. *The Nation*, Dec. 6, 1883, p. 459.

7. Free from disorder or irregularity; in order: as, his accounts are not quite *straight*.

Finally, being belted, curled, and set *straight*, he descended upon the drawing-room. *Thackeray*, *Pendennis*, VII.

He told her that she needn't mind the place being not quite *straight*, he had only come up for a few hours—he should be busy in the stable. *H. James, Jr.*, *The Century*, XXXVI. 218.

8. Unqualified; unreserved; out-and-out: as, a *straight* Democrat (that is, one who supports the entire platform and policy of his party).—9. Unmixed; undiluted; neat. [Slang.]

Disseipating their rare and precious cash on "whisky *straight*" in the ever-recurring bar-rooms. *Fortnightly Rev.*, N. S., XXXIX. 76.

10. East and west; along an east and west line: used of the position of the body in Christian burial.

First Clo. Is she to be buried in Christian burial that willfully seeks her own salvation?

Sec. Clo. I tell thee she is; and therefore make her grave straight; the crowner hath sat on her, and finds it Christian burial. *Shak., Hamlet, v. 1. 4.*

11. In *poker*, consisting of a sequence; forming a straight: as, a *straight* hand; a *straight* flush.—A *straight* face, an unamiling face; a sober, unamused expression: as, he could with difficulty keep a *straight* face. [Colloq.]—*Long straight*. See *long* 1.—*Straight* accents, the long marks over the vowels, as *ā, ē, ī, ō, ū, ŷ*.—*Straight* angle. See *angle* 3, 1.—*Straight* arch, in *arch*, a form of arch spanning an aperture in which the intrados is represented by straight lines which meet in a point at the top and comprise two sides of a triangle.—*Straight* ends and walls, a system of working coal, somewhat similar to "board and pillar." [North Wales].—*Straight* flush. See *flush* 9.—*Straight* intestine, bowel, or gut, the rectum. See cuts under *alimentary*, *intestine*, and *peritoneum*.—*Straight* sheer. See *sheer* 3, 1.—*Straight* sinus, ticket, tubule, etc. See the nouns.

II. *n.* 1. The condition of being straight, or free from curvature or crookedness of any kind: as, to be out of the *straight*. [Colloq.]—2. A straight part or direction: as, the *straight* of a piece of timber.—3. In *poker*, a sequence of cards, generally five in number, or a hand containing such a sequence.

straight¹ (strāt), *adv.* [*< ME. streight, streyght, streyghte, etc.; < straight*¹, *a.*] 1. In a straight line; without swerving or deviating from the direct course; directly.

Straight aforn hym a fair feid gan behold.
Rom. of Partenay (E. E. T. S.), 1. 4661.

Floating *straight*, obedient to the stream.
Shak., C. of E., 1. 1. 87.

2. At once; immediately; directly; straightway.

And went *streyghte* into the flospytall, and refreshed va with mete and drynke, and rested va there an houre or .ij. bycause of our wachte the nyght byfore.
Sir R. Guyforde, Pylgrymage, p. 28.

Shew him an enemy, his pain's forgot *straight*.
Fleicher, Humorous Lieutenant, 1. 1.

straight¹ (strāt), *v. t.* [*< straight*¹, *a.*] To make straight; straighten. [Rare.]

The dead gypsy, in the mean time, set about arranging the dead body, composing its limbs, and *straighting* the arms by its side.
Scott, Guy Mannering, xxvii.

straight², *a. and n.* An obsolete spelling of *strait*¹.

straightaway (strāt'ā-wā'), *a.* Straight forward, without turn or curve: as, a *straightaway* course in a yacht- or horse-race.

At the Ascot, where I was last Thursday, the course is a *straightaway* one. *T. C. Crawford, English Life, p. 23.*

straight-billed (strāt'bīld), *a.* Having the bill straight, as a bird; retrostral.

straight-cut (strāt'kut), *a.* Cut in a straight manner: applied to fine grades of cut smoking tobacco. The leaves are flattened out, packed compactly, and cut lengthwise, long fibers being thus obtained that present a beautiful silky appearance.

straight-edge (strāt'ej), *n.* A bar having one edge, at least, as straight as possible, to be used as a fiducial line in drawing and testing straight lines. Such instruments when of the greatest accuracy are somewhat costly. Common straight-edges for ruling ordinary lines, testing the surface of millstones, brickwork and stonework, etc., are made of wood, and range from a slip of wood one foot long to planks cut in the form of a truss and ten or more feet in length. See cut under *plumb-rule*.

straighten¹ (strāt'n), *v.* [*< straight*¹ + *-en*¹.] *I. trans.* To make straight, in any sense; specifically, to reduce from a crooked to a straight form.

A crooked stick is not *straightened*, unless it be bent as far on the clean contrary side.

Hooker, Eccles. Polity, iv. 8.

To **straighten** the sheer. See *sheer* 3.

II. *intrans.* To become straight; assume a straight form.

straightener², *v. t.* See *straiten*.

straightening-block (strāt'ning-blok), *n.* An anvil used in straightening buckled saws. *E. H. Knight.*

straightening-machine (strāt'ning-mā-shēn'), *n.* In *metal-work*, any machine for removing a twist, bend, buckle, or kink from rails, rods, plates, straps, tubes, or wire.

straightforth (strāt'fōrth'), *adv.* [Early mod. *E.* *straight forth*; *< straight*¹ + *forth*¹.] Directly; straightway.

She smote the ground, the which *straight forth* did yield A fruitful Ulvve tree.
Spenser, Mulopotmos, 1. 325.

straightforward (strāt'fōr'wārd), *adv.* [Also *straightforwards*, formerly also *straightforward*; *< straight*¹ + *forward*¹.] Directly forward; right ahead.

Look not on this side or that side, or behind you as Lot's wife did, but *straightforwards* on the end.

J. Bradford, Letters (Parker Soc., 1853), II. 211.

straightforward (strāt'fōr'wārd), *a.* [*< straight-forward, adv.*] 1. Direct; leading directly forward or onward.

Midway upon the journey of our life I found myself within a forest dark, For the *straightforward* pathway had been lost.
Longfellow, tr. of Dante's Inferno, i. 3.

2. Characterized by uprightness, honesty, or frankness; honest; frank; open; without deviation or prevarication: as, a *straightforward* course; a *straightforward* person, character, or answer.

In prose he wrote as he conversed and as he preached, using the plain *straightforward* language of common life.
Southey, Bunyan, p. 40.

straightforwardly (strāt'fōr'wārd-li), *adv.* In a straightforward manner. *Athenæum*, No. 3258, p. 451.

straightforwardness (strāt'fōr'wārd-nes), *n.* Straightforward character or conduct; undeviating rectitude: as, a man of remarkable *straightforwardness*.

straight-hearted, *a.* See *strait-hearted*.

straight-horn (strāt'hōrn), *a.* A fossil cephalopod of the family *Orthoceras*, some of which were 12 or 15 feet long; an orthoceras. *P. P. Carpenter.*

straight-joint (strāt'joint), *a.* Noting a floor the boards of which are so laid that the joints form a continuous line throughout the length.

straightly¹ (strāt'li), *adv.* [*< straight*¹ + *-ly*².] In a straight line; not crookedly; directly: as, to run *straightly* on. *Imp. Dict.*

straightly², *adv.* An obsolete spelling of *straitly*.

straightness (strāt'nes), *n.* The property or state of being straight.

straight-out (strāt'out), *a. and n.* *I. a.* Out-and-out; straight: as, *straight-out* Republicans.

II. *n.* In *U. S. politics*, one who votes a straight or strictly party ticket; a thorough partizan.

Other *straight-outs*, as they call themselves, . . . cannot take Grant and the Republicans.
The Nation, Aug. 22, 1872, p. 113

straight-pight (strāt'pīt), *a.* [*< straight*¹ + *pight*.] Straight-fixed; erect.

Straight-pight Minerva. *Shak., Cymbeline, v. 5. 164.*

straight-ribbed (strāt'ribd), *a.* In *bot.*, having the lateral ribs straight, as leaves of *Castanea*, palms, etc.

straightway (strāt'wā), *adv.* [*< ME. streightwey*; *< straight*¹ + *way*¹.] Immediately; forthwith; without loss of time; without delay.

Thei hilde her *streightwey* toward north wales to a Citee that longed to the kyng Trädly-nanthe.
Merrin (E. E. T. S.), iii. 558.

And *straightway* the damsel arose and walked.
Mark v. 42.

straightways (strāt'wāz), *adv.* [*< straightway* + *adv. gen. -s.*] Straightway.

None of the three could win a palm of ground but the other two would *straightways* balance it.
Bacon, Empire (ed. 1887).

straight-winged (strāt'wingd), *a.* In *entom.*, having straight wings; orthopterous.

strai¹, *n.* A Scotch spelling of *strake*².

strai², *v. t.* A Scotch form of *stroke*².

strail, *n.* [*< ME. strayle, < AS. strægil, *strægil*, contr. *stræl*, a bed-cover, carpet, rug, = *OF. stragule*, a mantle, coverlet, *< L. stragulum*, a spread, covering, coverlet, blanket, carpet, rug, also *stragula*, a covering, blanket; neut. and fem. respectively of *stragulus*, serving for spreading or covering, *< sternere*, pp. *stratus*, spread, strew: see *stratum*.] A covering; a coverlet. *Prompt. Parv.*, p. 478.

strain¹ (strān), *v.* [Early mod. *E.* also *strayne*; *< ME. straynen, strainen, streynen, straynen, < OF. streindre, estraindre, straindre, F. êtreindre* = *Pr. estrenher, estreigner* = *It. strignere, stringere, stringere, < L. stringere*, pp. *strictus*, draw tight; akin to *Gr. σπαγγός*, twisted, *σπαγγίζειν*, press out, *Lith. stregti*, become stiff, freeze, *AS. streccan*, stretch, etc.: see *stretch, straight*¹. From *L. stringere* are also ult. *E. constrain, distraint, restrain, stringent, strait*¹, *strict*, etc.] *I. trans.* 1†. To draw out; stretch; extend, especially with effort or care.

And if thi vynes footes IV ascende,
Thenne armes IV is goode forth forto streyne.
Palladius, Husbandrie (E. E. T. S.), p. 70.

All their actions, voyces, and gestures, both in charging and retiring, were so *strained* to the height of their qualitie and nature that the strangeness thereof made it seeme very delightfull.
Capt. John Smith, Works, 1. 136.

2†. To draw tight; tighten; make taut.

To the pyller, lorde, also,
With a rope men bownd the too,
Hard drawe and *streynyd* faate.
Holy Kood (E. E. T. S.), p. 181.

Sir Mungo, who watched his victim with the delighted yet wary eye of an experienced angler, became now aware that, if he *strained* the line on him too tightly, there was every risk of his breaking hold.

Scott, Fortunes of Nigel, xv.

3†. To confine; restrain; imprison.

There the steede in stodee *strained* in bondes.
Alisaunder of Macedoine (E. E. T. S.), 1. 1157.

4. To stretch to the utmost tension; put to the stretch; exert: as, to *strain* every nerve to accomplish something.

He sweats,
Strains his young nerves, and puts himself in posture
That acts my words. *Shak., Cymbeline, lii. 3. 94.*

5. To stretch beyond measure; push beyond the proper extent or limit; carry too far.

He *strained* the Constitution, but he conquered the Lords.
N. A. Rev., CXLII. 593.

6. To impair, weaken, or injure by stretching or overtasking; harm by subjection to too great stress or exertion; hence, to sprain.

Hold, air, hold, pray use this whistle for me,
I dare not *straine* my selfe to wuide it I,
The Doctors tell me it will spend my aprils.
Brome, Sparagus Garden, iv. 7.

Prudes decay'd about may tack,
Strain their necks with looking back. *Swift.*

7. To force; constrain.

Whether that Goddes worthy forwetyng
*Streyne*th me needely for to don a thing.
Chaucer, Nun's Priest's Tale, 1. 422.

The quality of mercy is not *strain'd*.
Shak., M. of V., iv. 1. 184.

His mirth
Is forc'd and *strain'd*.
Sir J. Denham, The Sophy. (Latham.)

8. To urge; press.

Note if your lady *strain* his entertainment
With any strong or vehement importunity.
Shak., Othello, iii. 3. 250.

9. To press; squeeze; hence, to hug; embrace.

He that nyght in armes wold hire *streyne*
Harder than ever Paris did Eleyne.
Chaucer, Merchant's Tale, 1. 509.

I would have *strain'd* him with a strict embrace.
Dryden, tr. of Ovid's Metamorph., x. 407.

10. To press through a filter or colander; separate extraneous or coarser matters from (a liquid) by causing it to pass through a filter or colander; purify from extraneous matter by filtration; filter: as, to *strain* milk.—11. To separate or remove by the use of a filter or colander: with *out*. See phrase under *v. t.*, below.

Ye blind guides, which *strain out* the gnat, and swallow the camel.
Mat. xxiii. 24 [R. V.]

12†. To force out by straining.

I at each sad *strain* will *strain* a tear.
Shak., Lucrece, 1. 1131.

13. To deform, as a solid body or structure.—To **strain** a point. See *point*¹.—To **strain** courtesy, to use ceremony; stand too much upon form or ceremony; insist on the precedence of others; hang back through excess of courtesy or civility.

My business was great; and in such a case as mine a man may *strain* courtesy.
Shak., R. and J., ii. 4. 55.

Strain not courtesies with a noble enemy.

Lamb, Two Races of Men.

II. *intrans.* 1. To exert one's self; make violent efforts; strive.

To build his fortune I will *strain* a little.
Shak., T. of A., 1. 1. 143.

What
Has made thy life so vile that thou shouldst *strain*
To forfeit it to me? *J. Beaumont, Payche, ii. 105.*

2. To urge; press.

Nay, Sir, indeed the fault is yours most extreamly now. Pray, sir, forbear to *strain* beyond a womans patience.
Brome, Northern Laas, iii. 8.

3. To stretch strugglingly; stretch with effort.

This parlor looked out on the dark courtyard, in which there grew two or three poplars, *straining* upward to the light.
Mrs. Gaskell, Sylvia's Lovers, iii.

No sound, no sight as far as eye could *strain*.
Browning, Child's Roland.

4. To undergo distortions under force, as a ship in a high sea.

A ship is said to *strain* if in launching, or when working in a heavy sea, the different parts of it experience relative motions.
Sir W. Thomson, in Phil. Trans., CXLVI. 481.

The ship ran
Straining, heeled o'er, through seas all changed and wan.
William Morris, Earthly Paradise, III. 10.

5. To drip; ooze; filter; drain; flow; issue: as, water *straining* through sand becomes pure.

Then, in the deserts dry and barren sand,
From flinty flocks doth plentifully Rivera strain.
Sylvester, tr. of Du Bartas's Triumph of Faith, iii. 18.

To strain at, to strive after; endeavor to reach or obtain.

I do not strain at the position.
Shak., T. and C., iii. 3. 112.

To strain at a gnat, a typographical error found in the authorized version (Stat. xxiii. 24) for strain out a gnat, the phrase found in Tyndale's and Coverdale's and other versions. See def. 11, above, and quotation there.

strain¹ (strān), *n.* [*< strain¹, v.* In some uses (def. 7), cf. strain².] 1†. Stretch; extent; pitch.

If it did infect my blood with joy,
Or swell my thoughts to any strain of pride.
Shak., 2 Hen. IV., iv. 5. 171.

May our Minerva
Answer your hopes, unto their largest strain!
B. Jonson, Every Man out of his Humour, Ind.

2. Stretching or deforming force or pressure; violence. [This use of the word, while permissible in literature, is incorrect in mechanics. The strain is not the force, but the deformation produced by the force.]

A difference of taste in jokes is a great strain on the affections.
George Eliot, Daniel Deronda, xv.

3. Tense or constrained state or condition; tension; great effort.

A dismal wedding! every ear at strain
Some sign of things that were to be to gain.
William Morris, Earthly Paradise, II. 314.

Whether any poet . . . has exerted a greater variety of powers with less strain and less ostentation. *Landor*.

4. In *mech.*, a definite change in the shape or size of a solid body setting up an elastic resistance, or stress, or exceeding the limit of elasticity. The deformation of a fluid is not commonly called a strain. The word, which had previously been ill-defined, was made a scientific and precise term in this sense by Rankine in 1850. Thomson and Tait, in their "Treatise on Natural Philosophy," extend the term to deformations of liquid masses, and even of groups of points; and Tait subsequently extends it to any geometrical figure, so that it becomes a synonym of *deformation*.

Fresnel made the very striking discovery that glass and other simply refracting bodies are rendered doubly refracting when in a state of strain. To this Brewster added the observation that the requisite strain might be produced by unequal heating instead of by mechanical stress.
Tait, Light, § 292.

In this paper the word strain will be used to denote the change of volume and figure constituting the deviation of a molecule of a solid from that condition which it preserves when free from the action of external forces.
Rankine, Axes of Elasticity (1855).

A strain is any definite alteration of form or dimensions experienced by a solid. . . . If a stone, a beam, or a mass of metal in a building, or in a piece of framework, becomes condensed or dilated in any direction, or bent, or twisted, or distorted in any way, it is said to experience a strain.
W. Thomson, Mathematical Theory of Elasticity (1856).

5. A stretching of the muscles or tendons, giving rise to subsequent pain and stiffness; sprain; wrench; twist.—6. A permanent deformation or injury of a solid structure.—7. Stretch; flight or burst, as of imagination, eloquence, or song. Specifically—(a) A poem; a song; a lay.

All unworthy of thy nobler strain.
Scott, L. of the L., I., Int.

(b) Tune; melody.
I was all ear,
And took in strains that might create a soul
Under the ribs of death. *Milton*, Comus, i. 561.

In sweet Italian strains our Shepherds sing.
Congreve, Opening of the Queen's Theatre, Epil.

(c) In a stricter sense, in *music*, a section of a piece which is more or less complete in itself. In written music the strains are often marked by double bars.

An Cynthia had but seen me dance a strain, or do but one trick, I had been kept in court.
B. Jonson, Cynthia's Revels, iv. 1.

(d) Tone; key; style or manner of speech or conduct.

The third [sort] is of such as take too high a strain at the first.
Bacon, Youth and Age (ed. 1887).

That sermon is in a strain which I believe has not been heard in this kingdom.
Burke, Rev. in France.

(e) Mood; disposition.

Henry . . . said, "I am come, young ladies, in a very moralizing strain, to observe that our pleasures in this world are always to be paid for."
Jane Austen, Northanger Abbey, xxvi.

Axes of a homogeneous strain, three straight lines of particles perpendicular to one another both before and after the strain.—**Composition of strains**. See *composition of displacements*, under *composition*.—**Concurrent stress and strain**. See *concurrent*.—**Homogeneous or uniform strain**, a strain which leaves every straight line of particles straight, and every pair of parallel lines parallel.—**Longitudinal strain**. See *longitudinal*.—**Normal plane of a homogeneous strain**, one of three planes each containing two of the three axes. There is generally only one such system of planes through each point of the body.—**Orthogonal strain**. (a) Relatively to a stress, a strain which neither does nor uses work by virtue of that stress. (b) Relatively to another strain, a strain orthogonal to a stress perfectly concurrent to the other strain.—

Principal strain. Same as *principal strain-type* (which see, under *strain-type*).—**Pure strain**, a homogeneous strain which does not rotate any axis of the strain.—**Simple strain**, any one of a number of strains conceived as independent components of other strains which they are employed to define. The phrase *simple strain* has no definite meaning, but *simple longitudinal strain*, *simple tangential strain*, *simple shearing strain*, etc., mean such strains existing not as components merely, but as resultants. Thus, if a bar is elongated without any transverse contraction or expansion, there is a *simple longitudinal strain* in the direction of the elongation. A *simple tangential strain* is a homogeneous strain in which all the particles are displaced parallel to one plane.—**Strain-ellipsoid**. See *ellipsoid*.—**To heave a strain**. See *heave*.—**Type of a strain**. See *type*.

strain² (strān), *n.* [An altered form, due appar. to confusion with strain¹, 7, of what would be reg. *streen*; < ME. *streen*, *streue*, *stren*, earlier *streon*, *istreon*, race, stock, generation, < AS. *gestreón*, *gestrión*, gain, wealth (= OS. *gistriuni*, = OHG. *gistriuni*, gain, property, wealth, business); appar. confused in ME. with the related noun, ME. *strend*, *strynd*, *strund*, < AS. *strjnd*, race, stock; < *strecónan*, *strjnan* = OHG. *strinanan*, beget, *gestreónan*, get, acquire.] 1. Race; stock; generation; descent; hence, family blood; quality or line as regards breeding; breed; a race or breed; a variety, especially an artificial variety, of a domestic animal. *Strain* indicates the least recognizable variation from a given stock, or the ultimate modification to which an animal has been subjected. But since such variation usually proceeds by insensible degrees, the significance of *strain* grades into that of *breed*, *race*, or *variety*.

Bountee comth al of Ood, nat of the streen
Of which they been engendered and ybore.
Chaucer, Clerk's Tale, I. 101.

O, if thou wert the noblest of thy strain,
Young man, thou couldst not die more honourable.
Shak., J. C., v. 1. 50.

The ears of a cat vary in shape, and certain strains, in England, inherit a pencil-like tuft of hairs, above a quarter of an inch in length, on the tips of their ears.
Darwin, Var. of Animals and Plants, I.

2. Hereditary or natural disposition; turn; tendency; character.

Sir, you have shown to-day your valliant strain.
Shak., Lear, v. 3. 40.

And here I shall not restrain righteousness to the particular virtue of justice, but enlarge it according to the genius and strain of the book of the Proverbs. *Tillotson*.

3. Sort; kind; style.

Let man learn a prudence of a higher strain.
Emerson, Essays, 1st ser., p. 214.

4. Trace; streak.

With all his merit there was a strain of weakness in his character.
Bancroft, Hist. Const., II. 6.

5. The shoot of a tree. *Halliwel* (under *strene*). [Prov. Eng.]—6†. The track of a deer.

When they haue shot a Deere by land, they follow him like blood-hounds by the blood, and *straine*, and oftentimes so take them. *Capt. John Smith*, Works, I. 134.

strain³† (strān), *v. t.* [An aphetic form of *disstrain*.] To distract.

When my lord refused to pay the two shillings, Mr. Knightly charged the constable to strain two shillings' worth of goods. *Court and Times of Charles I.*, I. 56.

strainable (strā'nā-bli), *a.* [Early mod. E. *streinable*, *streynable*; < strain¹ + *-able*.] 1†. Constraining; compelling; violent.

This yere the Duke of Burgon, . . . with his xii. M. men, was drynen in to England, with a fere streynable wynde, in ther selynge towardes Spayn.
Arnold's Chron. (1502), p. xliii.

2. Capable of being strained.

strainably† (strā'nā-bli), *adv.* [Early mod. E. *streinable*; < strainable + *-ly*.] Violently; fiercely.

The wind . . . droue the flame so streinable amongst the tents and cabins of the Saxona, that the fire . . . increased the feare amongst the souldiours wonderfullie.
Holinshed, Hist. Scotland, p. 95.

strained¹ (strānd), *p. a.* [*< strain¹ + -ed*.] Forced; carried beyond proper limits: as, a strained interpretation of a law.

strained² (strānd), *a.* [*< strain² + -ed*.] Of this or that strain or breed, as an animal.

strainer (strā'nēr), *n.* [*< ME. streynour*, *strenyore*; < strain¹ + *-er*.] 1. One who or that which strains.—2. A stretcher or tightener: as, a strainer for wire fences.—3. Any utensil for separating small solid particles from the liquid that contains them, either to preserve the solid objects or to clarify the liquid, or for both purposes.

Item, j. dressyng knyfe, j. fyre schowie, ij. treys, j. streynour.
Paston Letters, I. 490.

4. In carriage-building: (a) A reinforcing strip or button at the back of a panel. (b) Canvas glued to the back of a panel to prevent warping or cracking. Also called *stretcher*.—**Strainer of Hippocrates**. Same as *Hippocrates's sleeve* (which see, under *sleeve*).

strainer-vine (strā'nēr-vīn), *n.* The sponge-gourd, *Luffa acutangula*, and other species: so called from the use of the fibrous network contained in its fruit for straining palm-wine.

straining (strā'ning), *n.* [Verbal *n.* of strain¹, *v.*] In *saddlery*, leather, canvas, or other fabric drawn over a saddle to form a base for the seating. It is put on the saddle with a tool called a *straining-fork*, the fabric having first been stretched on a machine called a *straining-reef*. Also called *straining-leather*.—**Cross-straining**, canvas or webbing drawn transversely over the first straining.

straining-beam (strā'ning-bēm), *n.* In a queen-post roof, a horizontal beam uniting the tops of the two queen-posts, and acting as a tie-rod to resist the thrust of the roof; a straining-piece. If a similar beam is placed on the main tie-rod, between the bases of the posts, it is called a *straining-sill*.

straining-leather (strā'ning-leTH'ēr), *n.* In *saddlery*, same as *straining*.

straining-piece (strā'ning-pēs), *n.* Same as *straining-beam*.

straining-sill (strā'ning-sil), *n.* See *straining-beam*.

strain-normal (strā'nōr'māl), *n.* A normal of a homogeneous strain.

strain-sheet (strā'nshēt), *n.* In *bridge-building*, a skeleton drawing of a truss or other part of a bridge, with the calculated or computed greatest strain to which it will be subjected annotated at the side of each member. In making the actual working-drawings, the respective members are drawn to a size sufficient to sustain the stresses so marked on the sheet multiplied by a certain predetermined "factor of safety." Also called *stress-sheet*.

strait† (strānt), *n.* [*< OF. estraint*, *estraindre*, fem. of *estraint*, F. *étraint*, pp. of *OF. estraintre*, F. *étréindre*, strain: see strain¹, *v.*, and cf. *restrain*, *constrain*.] A violent stretching or tension; a strain; pressure; constraint.

Upon his iron collar griped fast,
That with the *atrain* his wesand nigh he braut.
Spenser, F. Q., V. ii. 14.

strain-type (strān'tip), *n.* The type of a strain.—**Principal strain-type**, one of six strain-types such that, when the homogeneous elastic solid to which they belong is homogeneously strained in any way, the potential energy of the elasticity is expressed by the sum of the products of the squares of the components of the strain expressed in terms of these strain-types, each multiplied by a determinate coefficient.

strait¹ (strāt), *a.* and *n.* [Early mod. E. also *straight*, *streight*, *strei*, etc.; < ME. *strait*, *strayt*, *strait*, *streit*, *streite*, also sometimes *straight*, < OF. *estreit*, *estrait* (F. *étroit*), narrow, strict (as a noun, a narrow passage of water), = Pr. *estreit* = Sp. *estrecho* = Pg. *estrito* = It. *stretto*, narrow, strict, < L. *strictus*, pp. of *stringere*, draw tight: see strain¹, *stringent*. Cf. *strict*, which is a doublet of *strait*, the one being directly from the L., the other through OF. and ME. The word *strait*¹, formerly also spelled *straight*, has been more or less confused with the diff. word *strait*¹, which was sometimes spelled *strait*.] I. a. 1. Narrow; having little breadth or width.

strangle (strang'gl), *n.* [*ME. strangle*; < *strangle, v.*] 1†. Strangulation. *Chaucer.*—
2. *pl.* An infectious catarrh of the upper air-passages, especially the nasal cavity, of the horse, ass, and mule, associated with suppuration of the submaxillary and other lymphatic glands. The disease usually attacks young animals. Enfeebled health, exposure, and neglect are predisposing causes. It may appear as an epizootic in large stables. The mortality is from 2 to 3 per cent. The disease begins with fever and a serous discharge from the nose, which later becomes viscid. At the same time a swelling appears under the jaws, indicating inflammation and suppuration of the submaxillary glands. The disease ordinarily lasts several weeks. Complications may, however, appear. The throat and neighboring lymphatics may become involved and the infection extend to various parts of the system, giving rise to pyemia. Specific bacteria (*streptococci*) have been found in the suppurating glands.

strangleable (strang'gl-ə-bl), *a.* [*strangle + -able*.] Capable of being strangled. [*Rare*.]

I own, I am glad that the capital stranger should in his turn be strangleable, and now and then strangled.

strategist (strat'ĕ-jist), *n.* [= *F. stratégiste*; as *strateg-y* + *-ist*.] One skilled in strategy.

He [Milton] was a *strategist* rather than a drill-sergeant in verse, capable, beyond any other English poet, of putting great masses through the most complicated evolutions without clash or confusion, but he was not curlous that every foot should be at the same angle.

Lowell, Among my Books, 2d ser., p. 286.

strategus (stra-tĕ'gus), *n.* [< *L. strategus*, < *Gr. στρατηγός*, the commander of an army, a general: see *strategy*.] 1. Pl. *strategi* (-jĭ). A military commander in ancient Greece: as, *Darius* was *strategus* of the Achaean League.—2. [cap.] [NL. (Hope, 1837).] In *entom.*, a genus of large American scaraboid beetles, whose males usually have three prothoracic horns. They are mainly tropical and subtropical, but *S. anteus* extends north to Massachusetts.—3. [cap.] [NL.] A genus of mollusks.

strategy (strat'ĕ-ji), *n.* [< OF. *strategie*, *F. stratégie* = *Sp. estrategia* = *It. strategia*, *strategie* (cf. *L. strategia*, a government, province), < *Gr. στρατηγία*, the office or dignity of a commander, generalship, a pretorship, government, province, < *στρατηγός*, the leader or commander of an army, a general, a governor, pretor, consul, < *στράτος*, an army, host, soldiery (prop. an encamped army, lit. 'scattered, spread') (= *L. stratus*, scattered, spread), < *σπορνήναι* = *L. sternere* (pp. *stratus*), scatter, spread, strew: see *stratum*], + *ἀγέιν*, lead (see *agent*).] 1. The science of combining and employing the means which the different branches of the art of war afford, for the purpose of forming projects of operations and of directing great military movements; the art of moving troops so as to be enabled either to dispense with a battle or to deliver one with the greatest advantage and with the most decisive results; generalship. In strategy three things demand especial consideration: (1) the *base of operations*, or line from which an army commences its advance upon an enemy; (2) the *objective*, or objective point, the point which it aims to possess, or the object which it strives to attain; (3) the *line of operations*, or that line which an army must pass over to attain its objective point. When an army assumes a strictly defensive attitude, the base of operations becomes the *line of defense*, and in a retrograde movement the line of operations becomes the *line of retreat*. *Strategic points* are the points of operations of an army—namely, points whose occupation secures an undoubted advantage to the army holding them for offensive and defensive purposes, and points which it is the chief object of an army to attain. The *theater of operations* comprises the territory to be invaded or defended by an army. It includes the *base of operations*, the *objective point*, the *front of operations*, the *lines of operation*, the *lines of communication* which connect the several lines of operations, *obstacles*, natural or artificial, *lines of retreat*, and places of refuge. The *front of operations* is the length of the line in advance of the base of operations covered or occupied by an army.

2. The use of artifice, finesse, or stratagem for the carrying out of any project.

strath (strath), *n.* [< Gael. *srath* = *Ir. srath*, *sratha* = *W. ystrad*, a valley; perhaps connected with *street*, ult. < *L. strata*: see *street*.] In Scotland, a valley of considerable size, often having a river running through it and giving it its distinctive appellation: as, *Strathspey* (the valley of the Spey), *Strathearn* (the valley of the Earn), and *Strathmore* (the great valley).

strathspey (strath-spā'), *n.* [So called from *Strathspey* in Scotland.] 1. A Scotch dance, invented early in the eighteenth century, resembling the reel, but slower, and marked by numerous sudden jerks.

While youths and maids the light *strathspey*
So nimbly danced, with Highland glee!

Scott, Glenfinlas.

2. Music for such a dance or in its rhythm, which is duple, moderately rapid, and abounding in the rhythmic or metric figure called the *Scotch snap* or *catch* (which see, under *Scotch*), or its converse.

stratulate (strā-tik'ū-lāt), *a.* [< NL. **stratulus*, < **straticulum*, dim. of *stratum*, a layer: see *stratum*.] Arranged in thin layers, as a banded agate.

stratification (strat'i-fi-kā'shon), *n.* [= *F. stratification* = *Sp. estratificación* = *It. stratificazione*; as *stratify* + *-ation*.] 1. The act of stratifying, or the state of being stratified; formation or arrangement in layers.

It was formerly the practice in England, as it still is on the Continent, to tan by the process of *stratification*, for which purpose a bed of bark is made upon the bottom of the pit; upon this is laid the hide, then bark, then a hide, and so on until the pit is full.

Encyc. Brit., XIV. 385.

2. Specifically, in *geol.*, deposition in beds or strata; the mode of occurrence of those rocks which have been laid down or spread over the surface by water. The most important indication and result of stratification is that the rock separates more or less easily along the planes separating the beds or strata. Each stratification-plane marks a change in the character of the deposit, or a shorter or longer period during which deposition was suspended. Often one stratum is succeeded by another of quite different character, showing a change in the existing conditions. Sometimes, however, a rock is distinctly stratified, but each stratum separates easily into much thinner layers, closely resembling one another in petrographic character: this is generally called *lamination*.

In some cases the apparent stratification seems to be of the nature of an imperfect cleavage, there having been a certain amount of rearrangement of the particles of the rock parallel to the plane of deposition. See cuts under *Artemian* and *erosion*.

3. In *physiol.*, the thickening of a cell-wall by the deposition of successive thin layers of formed material; also, the arrangement of the layers so deposited.

It is now known that *stratification* is due to a subsequent change in the amount of water of organization present in particular parts of the [cell]-wall. *Bessey, Botany, p. 33.*

4. In *elect.*, the appearance presented by an electric discharge, or a series of rapid discharges, in a rarefied gas, light and dark bands or striae being produced.

stratified (strat'i-fid), *p. a.* Arranged or disposed in layers or strata: as, *stratified rocks*. See cut under *erosion*.—**Stratified cartilage**, ordinary white fibrocartilage.—**Stratified epithelium**. See *epithelium*.—**Stratified thallus**, in lichens, a thallus in which the gonidia, or algal cells, are disposed in one or more layers, thus producing stratification. See *heteromeros*, (c) (2).

stratiform (strat'i-fōrm), *a.* [< NL. *stratum*, a layer, + *forma*, form.] Forming or formed into a layer or lamella; embedded as a stratum or layer; stratified: specifically used in the anatomy of a form of cartilage.—**Stratiform cartilage** or *fibrocartilage*, a layer of cartilage embedded in a groove of bone along which the tendon of a muscle plays: referring not to a special kind of cartilage, but to the particular form in which it is arranged. The cartilage lining the bicipital groove of the humerus, on which the tendon of the long head of the biceps glides, is an example.

stratify (strat'i-fi), *v. t.*; pret. and pp. *stratified*, ppr. *stratifying*. [= *F. stratifier* = *It. stratificare*, < NL. *stratum*, a layer, + *L. facere*, make, do.] To form into a layer or layers, as substances in the earth; lay or arrange in strata.

stratigrapher (strā-tig'ra-fēr), *n.* [< *stratigraph-y* + *-er*.] One who devotes himself to the study of stratigraphical geology. *Nature, XLIII. 142.*

stratigraphic (strat-i-graf'ik), *a.* [< *stratigraph-y* + *-ic*.] Having to do with the order of succession, mode of occurrence, and general geological character of the series of stratified rocks of which the earth's crust is largely composed.

stratigraphical (strat-i-graf'ik-al), *a.* [< *stratigraphic* + *-al*.] Same as *stratigraphic*.

stratigraphically (strat-i-graf'ik-al-i), *adv.* In a stratigraphic manner; as regards stratigraphy, or the disposition of strata.

stratigraphist (strā-tig'ra-fist), *n.* [< *stratigraph-y* + *-ist*.] One who studies stratigraphy; a stratigrapher. *Nature, XXXVIII. 506.*

stratigraphy (strā-tig'ra-fi), *n.* [< NL. *stratum*, a layer, + *Gr. γράφω*, < *γράφω*, write.] In *geol.*, order and position of the stratified groups; all that part of geological science which is not specially theoretical or paleontological; general descriptive geology.

Stratiomyia (strat'i-ō-mī'i-ā), *n.* [NL. (Macquart, 1838), orig. *Stratiomyis* (Geoffroy, 1764), also *Stratiomya* (Schiner, 1868), *Stratiomis* (Schelling, 1803), *Stratiomyis* (J. E. Gray, 1832); irreg. < *Gr. στρατιώτης*, a soldier, + *μύια*, a fly.] The typical genus of the family *Stratiomyidae*. They are medium-sized or rather large flies of dark color with light spots or stripes. The larvae live in mud or damp sand, and the flies are found upon umbelliferous and other flowers growing near water. About 40 species are known in North America, and about 20 in Europe. They are sometimes called *chamæleon-flies*, from the name of one species, *S. chamæleon*.

Stratiomyidæ (strat'i-ō-mī'i-dē), *n. pl.* [NL. (Leach, 1819, as *Stratiomyidæ*), < *Stratiomyia* + *-idæ*.] A family of true flies, belonging to the brachycerous *Diptera* and to the section *Notacantha*. It is a large and wide-spread family; about 200 species occur in North America. They vary much in size and color, and have a large hemispherical head, flattened or convex abdomen, and tibiae usually without spurs. They are mostly flower-flies, and are often found upon vegetation in damp places.

Stratiotæ (strat-i-ō'tē-ē), *n. pl.* [NL. (Link, 1829), < *Stratiotes* + *-æ*.] A tribe of monocotyledonous plants, of the order *Hydrocharidæ* and series *Glycydræ*. It is characterized by a very short stem bearing crowded sessile submerged leaves and usually also long-petioled floating leaves, by peduncled spathes, and by one-celled ovaries apuriously six-celled by intrusion of the lobed placenta. It includes five genera, of which *Stratiotes* is the type. (See also *Hydrocharia*.) The others are mostly tropical plants of fresh water, with ovate-oblong or broadly cordate floating leaves and ribbed or winged spathes.

Stratiotes (strat-i-ō'tēz), *n.* [NL. (in def. 1 (Linnaeus, 1737) so called from the sword-like leaves), < *Gr. στρατιώτης*, *στράτιος*, an Egyptian water-plant, by some said to have been the water-lettuce, *Pistia Stratiotes*; lit. 'river-sol-

dier; *στρατιώτης*, a soldier; *στρατιά*, an army, *στρατός*, an army; see *strategy*. Cf. *stradiot*, *estradiot*.] 1. A genus of water-plants, of the order *Hydrocharitaceae*, type of the tribe *Stratioteae*. It is without floating leaves, unlike the rest of its tribe, and is characterized by spathe of two leaves which in the male include the base of a long pedicel bearing two or more flowers with from 11 to 15 stamens each. The female flowers are solitary and short-pedicelled, with numerous linear staminodes, 6 slender two-cleft styles, and a beaked ovary becoming in fruit ovoid and acuminate, externally fleshy, and exserted from its spathe on a recurved pedicel. The only species, *S. aloides*, the water-soldier, is a native of Europe and Siberia, and resembles a small aloe. It is a perennial submerged aquatic, with somewhat fleshy crowded sword-shaped leaves, which are acute, sessile, and sharply serrate. The flowers are borne above the surface of the water; each perianth consists of three calyx-like segments and three much larger wavy crisped white petals. Old names are *knightswort*, *crab's-claw*, and *water-bengreen*.

2. In *entom.*, a genus of South American carabid beetles. *Putzys*, 1846.

strato-cirrus (strā-tō-sir'us), *n.* [NL., < *stratus* + *cirrus*.] A cloud very like cirro-stratus, but more compact in structure, and formed at a lower altitude. *Abereromy*.

stratocracy (strā-tok'ra-si), *n.* [*Gr.* *στρατός*, an army, + *κρατία*, *κράτειν*, rule.] A military government; government by force of arms.

Enough exists to show that the form of polity [according to Plato's system] would be a martial aristocracy, a qualified stratocracy. *De Quincey*, *Plato*.

strato-cumulus (strā-tō-kū'mū-lus), *n.* [NL., < *stratus* + *cumulus*.] A stratum of low cloud consisting of separate irregular masses; a cloud of the layer type, but not sufficiently uniform to be pure stratus. Also called *cumulo-stratus*.

stratographic (strat-ō-graf'ik), *a.* [*Gr.* *στρατογραφία* + *-ic*.] Pertaining to stratography.

stratographical (strat-ō-graf'ik-al), *a.* [*Gr.* *στρατογραφία* + *-al*.] Same as stratographic.

stratographically (strat-ō-graf'ik-al-i), *adv.* In a stratographic manner.

stratography (strā-tog'ra-fi), *n.* [*Gr.* *στρατός*, an army, + *γραφία*, *γράφειν*, write.] Description of armies or what belongs to an army.

A great commander by land and by sea, he [Raleigh] was critical in all the arts of stratography, and delights to illustrate them on every occasion. *I. D'Israeli*, *Amen. of Lit.*, II. 278.

Stratonic (strā-ton'ik), *a.* Same as *Stratonical*.

Stratonical (strā-ton'ik-al), *a.* [*Gr.* *στρατονική* (see def.) + *-ical*.] Pertaining to Strato or Straton of Lampsacus, called "the physicist," the third head of the Peripatetic school of philosophy, over which he presided from 288 to 270 B. C. He was a thorough materialist, and held that every particle of matter has a plastic and seminal power, and that the world is formed by natural development.—**Stratonical atheism**, a form of evolutionism which replaces the absolute chance of the Epicureans by a sort of life which is regarded as an intrinsic attribute of matter.

There is, indeed, another form of atheism, . . . we for distinction sake shall call *Stratonical*, such as, being too modest and shamefaced to fetch all things from the fortuitous motion of atoms, would therefore allow to the several parts of matter a certain kind of natural (though not animal) perception, such as is devoid of reflexive consciousness, together with a plastic power whereby they may be able artificially and methodically to form and frame themselves to the best advantage of their respective capabilities—something like to Aristotle's Nature, but that it hath no dependence at all upon any higher mind or deity. *Cudworth*, *Intellectual System*, II. § 3.

stratopelite (strā-tō'pē-it), *n.* [*NL.* *stratum*, a layer; second element uncertain.] A hydrous silicate of manganese, of uncertain composition, derived from the alteration of rhodonite.

stratose (strā'tōs), *a.* [*NL.* **stratosus*, < *stratum*, a layer; see *stratum*.] In bot., stratified; arranged in more or less clearly defined layers. *Farlow*, *Marine Algæ*, p. 51.

stratotic (strā-tot'ik), *a.* [*Irreg.* < *Gr.* *στρατός*, an army, + *-itic*; or erroneously for **stratiotic*, < *Gr.* *στρατιωτικός*, of or pertaining to a soldier, < *στρατιώτης*, a soldier; see *Stratiotes*.] Warlike; military. [*Rare.*] *Imp. Diet.*

stratum (strā'tum), *n.*; pl. *strata* (-tā). [*NL.*, < *L.* *stratum*, a spread for a bed, a coverlet, quilt, blanket, a pillow, bolster, a bed, also pavement, prop. neut. of *stratus* (= *Gr.* *στρατός*, an army), pp. of *sternere*, = *Gr.* *σπορηνίνα*, spread, extend. Cf. *strew*.] A layer of material, formed either naturally or artificially. Specifically—(a) In *geol.*, same as *bed*. See *bed*, § (c), and *stratification*, also cut under *Artesian*. (b) In *zool.* and *anat.*, a layer of tissue, as a membrane, etc.; a lamina or lamella; especially, one of several similar or superposed layers specified by a qualifying word; used with either English or Latin context.—**Condial stratum**. See *condial*.—**Rise of strata**, in *geol.* See *dip*, n., 4 (a).—**Secondary strata**, in *geol.*, the Mesozoic strata.—**Stratum bacillosum**. Same as *rod-and-cone layer of the retina* (see *rod*, under *retina*).—**Stratum cinereum**, a layer of gray matter in the nates, lying just beneath the stratum zonale, with few and small

ganglion-cells.—**Stratum corneum**, the outer layer of the epidermis, above the stratum granulosum. See *cut* under *skin*.—**Stratum cylindrorum**. Same as *stratum bacillosum*.—**Stratum gelatinosum**, a layer of gray matter of the olfactory bulb, consisting of fusiform or pyramidal gray nerve-cells in a fine mesh of white nerve-fiber.—**Stratum glomerulosum**, a layer of gray matter of the olfactory bulb, consisting of nodulated masses containing small nuclear cells, among which is a convoluted olfactory nerve-fiber.—**Stratum granulosum**, the thin stratum next above the stratum spinosum of the epidermis, consisting of cells rendered granular by minute globules of ceratohyalin. It is wanting over the lips and under the nails, and gives the white color to the skin. See *cut* under *skin*.—**Stratum lacunosum**, a layer of the hippocampus major, next above the stratum radiatum, characterized by the open reticulated nature of the neuropils.—**Stratum lucidum**, the lowest layer of the stratum corneum of the epidermis. See *cut* under *skin*.—**Stratum opticum**, the layer in the upper quadrigeminal body which lies below the stratum cinereum, composed of longitudinal white fibers interspersed with ganglion-cells.—**Stratum radiatum**, a layer of the hippocampus major, striated at right angles to its surface by the processes of the large pyramidal cells which lie along its inner border.—**Stratum spinosum**, the lowest layer of the epidermis, next to the corium, formed of prickle-cells, and limited above by the stratum granulosum. Also called *rete mucosum*, *rete Malpighii* or *Malpighi*, and *stratum Malpighii* or *Malpighi*. See *cut* under *skin*.—**Stratum zonale**, a superficial stratum of white nerve-fibers.

stratus (strā'tus), *n.* [NL., < *L.* *stratus*, a spread for a bed, a coverlet, < *sternere*, pp. *stratus*, spread, extend; see *stratum*.] A continuous horizontal sheet of cloud, generally of uniform thickness. It is essentially a fine-weather cloud, and is characteristic of areas of high pressure. In the evening and morning of fine days it frequently appears as a low foggy canopy overspreading the whole or a part of the sky, and disappears as the heat of the day increases. All low detached clouds which look like lifted fog and are not consolidated into definite form are stratus. It is the lowest of the clouds. Abbreviated *s.* See *cut* under *cloud*.

All cloud which lies as a thin flat sheet must either be pure stratus or contain the word stratus in combination.

Abereromy, *Weather*, p. 71.

straucht, straight¹ (strācht), *a.* and *v.* Obsolete or dialectal (Scotch) forms of *straight*¹.

straight² (strā't), *a.* [By aphesis from *distraught*. Cf. *stract*.] Distraught.

So as being now *straught* of mind, desperate, and a veris foole, he goeth, etc. *R. Scot*, *Witchcraft*, L 8 b. (*Nares*.)

straughte, straight³. Obsolete forms of the preterit and past participle of *stretch*.

stravagant, *a.* [= *It.* *stravagante*; an aphetic form of *extravagant*.] Extravagant; profuse.

stravaig (strā-vā'g), *v. i.* [Also *stravaig*; prop. **stravague*, < *OF.* *estracavager* = *OE.* *stravagare*, < *ML.* *extravagari*, wander out or beyond; see *extravagant*. Cf. *stravagant*.] To stroll; wander; go about idly. [*Scotch and Irish.*]

What did ye come here for? To go prancing down to the shore and back from the shore—and *stravagging* about the place? *W. Black*, in *Far Lochaber*, vii.

stravaiger (strā-vā'gēr), *n.* [*Gr.* *στραβαίγ* + *-er*.] One who wanders about idly; a stroller; a wanderer. [*Scotch and Irish.*]

straw¹ (strā), *n.* and *a.* [= *Se.* *strac*; < *ME.* *straw*, *strau*, *stra*, *stre*, *strec*, < *AS.* **stredāc*, **stred*, **stredō* (found independently only in the form *stredū* (appar. pl.)) in two glosses, otherwise only in comp. *streduberie*, etc.: see *strawberry*] = *OS.* *strō* = *OFries.* *strē* = *MD.* *stroo*, *stroy*, *D.* *stroo* = *MLG.* *strō*, *L.G.* *stro* = *OHG.* *strō*, *MHG.* *strou*, *strō* (*straw*, *strouc*, *strōc*), *G.* *stroh* = *Icel.* *strā* = *Sw.* *strā* = *Dan.* *straa*, straw; appar. 'that which is scattered about' (if so, it must have been orig. applied to the broken stalks of grain after threshing, the simple sense 'stalk' being then later), from the root of *strew* (dial. *straw*): see *strew*, *straw*²; cf. *L.* *stramen*, straw, < *sternere*, pp. *stratus*, *strew* (see *strand*³, *stramage*, *strammel*, *stratum*).] **I. n.** 1. The stalk or stem of certain species of grain, pulse, etc., chiefly of wheat, rye, oats, barley, buckwheat, and pease, cut or broken off (and usually dry); also, a piece of such a stem.

When shepherds pipe on oaten straws. *Shak.*, *L. L. L.*, v. 2. 913.

2. Such stalks collectively, especially after drying and threshing; as, a load of *straw*. In this sense a collective without plural.

Ne how the fyr was conched first with stree, And thanne with drye stokkes cloven a thre. *Chaucer*, *Knight's Tale*, l. 2075.

3. Figuratively, anything proverbially worthless; the least possible thing.

For thy sword and thy bow I care not a straw, Nor all thine arrows to boot. *Robin Hood and the Tanner* (Child's Ballads, V. 225).
Love, like despair, catches at straws. *Scott*, *Quentin Durward*, xxxv.

4. [In allusion to the proverb, "A straw shows which way the wind blows."] A slight fact,

taken as an instance in proof of a tendency.—5. A clay pipe, especially a long one. [*Colloq.*]

—6. Same as *straw-needle*.—7. In *entom.*, a stick-insect; a walking-stick.—**Dunstable straw**, wheat-straw used for bonnet-plats. The middle part of the straw above the last joint is selected. It is cut into lengths of about 10 inches, which are then split by a machine into slips of the requisite width. *Whole Dunstable* signifies a plat that is formed of seven entire straws, while a *patent Dunstable* consists of fourteen split straws. *Simmonds*.—**Face of straw**, a sham; a mere effigy.

Off drops the Vizor, and a Face of Straw appears. *Roger North*, *Examen*, III. viii. § 6.

In the straw, lying-in, as a mother; in childbed. Our English plain Proverb de Puerperis, "they are in the straw," shows Feather-Beds to be of no ancient use among the common sort of our nation.

Fuller, *Worthies*, Lincolnshire, II. 263. (*Davies*.)
Jack of straw. Same as *jackstraw*, I.—**Leghorn straw**. See *leghorn*.—**Man of straw**. See *man*.—**Pad in the straw**. See *pad*.—**To break a straw**, to quarrel. *Udall*, tr. of *Apophtegms* of Erasmus, p. 68.—**To draw straws**, to give indications of alepceia.

Lady Anso. I'm sure 'tis time for honest folks to be a-bed.

Miss. Indeed my eyes draw straws. *Swift*, *Polite Conversation*, lii.

To lay a straw, to pause and make a note. *Holland*, tr. of *Camden*, p. 141.

II. a. 1. Made or composed of straw: as, a *straw hat*.—2. Sham; fictitious; useless: as, a *straw bid*. Compare *straw bail*, under *bail*², 5.—**Straw bond**. See *bond*.—**Straw bonnet**, a bonnet made of woven or plaited straw. See *straw hat*, *Dunstable straw* (above), and *leghorn*.—**Straw hat**, a hat made of straw either woven together in one piece or, as is more common, plaited into a narrow braid which is wound spirally, the separate turns being sewed together where the edges touch. Hats for men and bonnets for women are included under the general term.—**Straw mosaic**, *rope*, etc. See the nouns.—**Straw vote**, a vote taken without previous notice, in a casual gathering or otherwise. See *I*, 4.

straw¹ (strā), *v. t.* [*Gr.* *στραύω*, n.] To furnish or bind with straw; apply straw to.—**Strawed seal**, a seal containing a straw, a blade of grass, or a rush, or several of these, embedded in the wax, often around it as a border, or tied in fastening the seal to the document. Such additions to the ordinary seal were often made in the fourteenth and fifteenth centuries; but whether the purpose was to strengthen or protect the wax or to preserve a fragment of the clod delivered in making livery of seizin seems to be matter of conjecture.

straw² (strā), *v. t.* An obsolete or dialectal form of *strew*. *Ex.* xxxii. 20.

She *strawed* the roses on the ground, Threw her mantle on the brier.

Lord John (Child's Ballads, I. 135).

strawberry (strā'ber'i), *n.*; pl. *strawberries* (-iz). [*ME.* *strawbery*, *strauberi*, *strabery*, *straberi*, *strebery*, *streberi*, *streber*, also (in comp.) *strawbyry*, *strobery*, < *AS.* *streduberie*, *streduberige*, also contracted *stredberie*, *stredberige*, *stredberge*, also *stredwberge*, *streuberie*, late *AS.* *strāberie* (in comp.), strawberry (also called *eorthberie*, *G.* *erdbeere*, 'earth-berry'), < **stredāc*, straw, + *berie*, berry; see *straw*¹ and *berry*.] The first element, lit. 'straw,' is very rare in *AS.* use, and its exact application here is uncertain. It may be taken in the sense of 'a long stem,' referring to the runners of the plant, or it may allude to an old habit of stringing the berries on a straw. The word is often erroneously explained as a corruption of a supposed **strayberry*, or even as referring to the common use of straw or hay about the plants to keep the earth from soiling the berries. No corresponding name appears in the other languages. Cf. *strawberry-wise*.] The fruit of any of the species of the genus *Fragaria*, or the plant itself. The plants are stemless, propagating by slender runners (whence they are often called *strawberry-vines*), with trifoliate leaves, and scapes a few inches high, bearing mostly white-petaled flowers in small cymes, followed by the "berry," which consists of an enlarged fleshy receptacle, colored scarlet or other shade of red, bearing the achenes on its exterior. About six natural species are recognized, though these are so variable as to make it possible that they all belong to one multiform species. *F. vesca* is common throughout the northern Old World and northward in North America. It includes the alpine strawberry, hantboy, and wood-strawberry (see below), was probably the first cultivated, and is the source of many artificial varieties, including the perpetuals. The Virginia or scarlet strawberry, *F. virginiana*, is common eastward in North America, and in the more robust variety *Illinoensis* extends perhaps to Oregon. The achenes, which in *F. vesca* are superficial, are in this species sunk in pits. It was the source of the famous Hovey's seedling, produced near Boston about 1840, and later of Wilson's Albany (or simply Wilson's), whose production marked an epoch in American strawberry-culture. In Chili and along the Pacific coast from San Francisco to Alaska grows the Chili strawberry, *F. chilensis*, a low stout densely hairy plant with thick leaves and large flowers, which has been the source of valuable hybrids in France and England. The Indian strawberry, *F. indica*, peculiar in its yellow petals and tasteless fruit, is only of ornamental value. The strawberry was not cultivated by the ancients; its culture in Europe began probably to the fifteenth or sixteenth century. It is now grown in great quantities in Europe

and North America for its delicious aubacid fruit, which is used fresh for dessert, and also canned or made into jam, and affords a syrup for flavoring drinks, ices, creams, etc. The varieties, which are mainly or wholly from the first three species above named, are numerous and constantly changing. See cuts under *fragellum* and *Fragaria*.

The strawberry grows underneath the nettle.

Shak., *Hen. V.*, l. 1. 60.

Dr. Boteler said, of strawberries, "Doubtless God could have made a better berry, but doubtless God never did." *L. Walton*, *Complete Angler* (ed. Bohn), p. 158.

Alpine strawberry, a European form of *Fragaria vesca*, sometimes distinguished as *F. collina*.—**Ananas strawberry**. Same as *pine-strawberry*.—**Barren strawberry**, in England, *Potentilla Fragariastrum*, resembling the strawberry in its trifoliate leaves and white flowers; in America, *Waldsteinia fragarioides*, having the leaves three-parted, but the flowers yellow. Neither has fleshy fruit.

—**Bog-strawberry**, the marsh-fivefinger, *Potentilla palustris*. *Britten and Holland*. (Prov. Eng.)—**Carolina strawberry**, a misnomer of the pine-strawberry, once thought to have come from Carolina.

—**Chili strawberry**. See def. and *pine-strawberry*.—**Crushed strawberry**, a crimson-red color of considerably reduced luminosity and somewhat reduced chroma. A color disk of 38 parts pure red, 7 parts artificial ultramarine, 43 parts velvet-black, and 7 parts white shows a crushed strawberry.

—**Hautboy strawberry**. See *hautboy*, 2.—**Pine-strawberry**, a variety of the Chili strawberry (see def. above), so called from its pineapple flavor. Also *Ananas strawberry*. See *Carolina strawberry*. [Eng.]—**Scarlet strawberry**, specifically, the Virginia strawberry. [Eng.]—**Strawberry-crown borer**, a curculionid beetle, *Tyloderma*

(c) One of three geometrids, *Petrophora truncata*, *Nematocampa filamentaria*, and *Angerona crocatoria*, whose larvae feed on the foliage. (d) The ameread dagger, *Acronycta obtusula*.

strawberry-pear

(strá'ber-i-pär), *n.*

The fruit of a cactaceous plant, *Cereus triangularis*, of the West Indies, etc., or the plant itself. This plant has three-angled branches which climb by rooting. The fruit is aubacid, pleasant, and cooling, and is said to be the best-flavored afforded by any plant of the order.

strawberry-perch

(strá'ber-i-pèrch), *n.*

The grass-bass.

strawberry-plant

(strá'ber-i-plant), *n.*

1. See *strawberry*.—

2. Same as *strawberry-shrub*.

strawberry-roan

(strá'ber-i-rön), *a.* See *roan* 1.

strawberry-shrub

(strá'ber-i-shrub), *n.* The sweet shrub, *Calycanthus floridus* and other species. See *Calycanthus*.

strawberry-tomato

(strá'ber-i-tô-mä'tô), *n.*

The winter-cherry, *Physalis Alkekengi*. The berry, inclosed within an inflated calyx, resembles a cherry or a very small tomato in appearance. Also called *husk-tomato*.

strawberry-tree

(strá'ber-i-trê), *n.* [*<* ME. *strawbery-tre*; *<* *strawberry* + *tree*.] 1†.

The strawberry-plant. See the quotation under *strawberry-wise*.—

2. A handsome evergreen shrub or bushy tree, *Arbutus Unedo*, native in southern Europe. The scarlet granulated fruit at a distance resembles a strawberry, but is dry and lacking in flavor, though sometimes eaten. In Spain a sugar and a spirit are extracted from it. The flowers appear in autumn, when also the fruit, which ripens only the second season, is present. The name is extended to the other species of the genus. See cut under *Arbutus*, 3.

strawberry-vine

(strá'ber-i-vin), *n.* See *strawberry*.

strawberry-wiset

[*<* ME. *strawbery wyse*, *strawbery wyse*, *strobbery wyse*, *strebriwise*, *<* AS. *stræberie-wise*, *stredberie-wise*, later *stræberiewise*, *strawberry-plant*, *<* *stredwberic*, *strawberry*, + *wise*, here appar. a particular use of *wise*, way, manner, wise: see *strawberry* and *wise* 2.] The strawberry-plant.

Strawberry wyse (strawberrytre, K. *strawbe[ry] wyse*, H. *strawbery wyse*, S). *Fragua*. *Prompt. Paro.*, p. 478.

strawberry-worm

(strá'ber-i-wèrm), *n.* The worm, grub, or caterpillar of any insect which injures the strawberry; especially, the larva of the strawberry saw-fly, *Emphytus maculatus*, more fully called *strawberry false-worm*. See cut under *Emphytus*. [U. S.]

strawboard

(strá'börd), *n.* A thick and coarse hard-rolled fabric of yellow paper or cardboard made of straw: largely used by makers of cheap paper boxes.

straw-buff

(strá'buf), *n.* Straw-color of very low chroma, as in Manila paper.

straw-built

(strá'bilt), *a.* Built or constructed of straw. *Milton*, P. L., l. 773.

straw-cat

(strá'kat), *n.* The pampas-cat.

straw-coat

(strá'köt), *n.* Same as *paillasse*, 2.

straw-color

(strá'kul'ör), *a.* and *n.* I. *a.* Straw-colored; stramineous.

Your straw-colour beard. *Shak.*, M. N. D., l. 2. 95.

II. n.

An extremely luminous, very cool yellow color, of somewhat reduced chroma, recalling the color of yellow straw, but cooler in hue. There is a wide range of chroma in colors called by this name.

straw-colored

(strá'kul'örd), *a.* Pale light-yellow, like dry straw; corn-colored; stramineous: as, the *straw-colored* bat, *Natalus albiventris*.

straw-cotton

(strá'kot'n), *n.* A cotton thread made for the manufacture of hats and other articles of straw.

straw-cutter

(strá'kut'ér), *n.* In *agri.*, any machine for cutting straw and hay into short pieces suitable for feed for cattle.

streamful (strēm'fūl), *a.* [< *stream* + *-ful*.] Full of streams or currents.

Like a ship despoiled of her sails,
Shov'd by the wind against the *streamful* tide.

Drayton, *Legend of Pierce Gaveston*, st. 105.

stream-gold (strēm'göld), *n.* See the quotation.

The gold of alluvial districts, called *stream-gold* or *placer-gold*, occurs, as well as alluvial tin, among the debris of the more ancient rocks. Ure, *Dict.*, III. 298.

stream-ice (strēm'is), *n.* Pieces of drift or bay ice forming a ridge and following the line of current.

At 4 A. M. a seemingly close pack was seen to the eastward, but later it developed into *stream-ice* of small extent.

A. W. Greeley, *Arctic Service*, p. 67.

streaminess (strēm'ni-nes), *n.* The quality or state of being streamy.

I give the case of a star-group which is certainly not the most remarkable for *streaminess*.

R. A. Proctor, *Universe of Stars* (2d ed., 1878), p. 22.

streaming (strēm'ing), *n.* [Verbal *n.* of *stream*, *v.*] 1. In *tin-mining*, the washing of tin ore from the detritus with which it is associated. The now almost entirely exhausted deposits of detrital tin ore in Cornwall and Devon were called *streams*, because they occur chiefly in or near the bottoms of the valleys and adjacent to the present streams, or in the manner of deposits formed by streams, analogous to the channels of the Californian and the gutters of the Australian miners; the miners were themselves called *streamers*; the localities where streaming was carried on, *stream-works*; and the ore obtained, *stream-tin*.

2. In *biol.*, the peculiar flowing motion of the particles of protoplasm in an amoeba or other rhizopod, by which the form of the animalcule changes or pseudopods are protruded; also, the similar circulation or rotation of the protoplasm of some plant-cells. See *protoplasm*, and *rotation of protoplasm* (under *rotation*).

streaming (strēm'ing), *p. a.* In *her.*, issuing, as rays of light: as, rays *streaming* from the dexter chief.

With tribute silver to his service run.

Sylvester, *tr. of Du Bartas's Weeks*, ii. The Captains.

stream-tin (strēm'tin), *n.* In *mining*, tin ore, or oxid of tin, obtained in streaming (which see).

stream-wheel (strēm'hwēl), *n.* An undershot wheel, or current-wheel.

stream-works (strēm'wērks), *n. sing. and pl.* In *mining*, a locality where the detrital deposits are washed in order to procure the valuable metal or ore which they may contain; alluvial washings, or surface mining. The words *stream-works* and *stream* (*v. l.*) are rarely, if ever, used except with reference to the separation of tin ore from detrital deposits.

streamwort (strēm'wört), *n.* A plant of Lindley's order *Haloragacæ*. [Rare.]

streamy (strēm'mi), *a.* [Early mod. E. also *streamy*; < *stream* + *-y*.] 1. Abounding in streams. (a) Full of running water or of springs.

(However *streamy*), now adust and dry,
Deny'd the Goddess Water.

Prior, *First Hymn of Callimachus*.

(b) Full of or emitting streaming rays of light.

In *streamy* sparkles, kindling all the skies,
From pole to pole the trail of glory flies.

Pope, *Iliad*, xiii. 321.

Cf. *stray*¹, *stray*².] 1†. A paved road; a highway.

This grand-child, great as he [Mulumtus], those four proud *Streets* begun

That each way cross this *Isle*, and bounds did them allow.

Drayton, *Polyolbion*, viii. 74.

There were at that time [fifth year after the Conquest] in England four great roads, . . . of which two ran lengthways through the island, and two crossed it, . . . *Waifinge-strete*, *Fosse*, *Hilkenilde-strete*, and *Erminge-strete*.

Guest, *Origines Celticae*, II. 218.

2. A public way or road, whether paved or unpaved, in a village, town, or city, ordinarily including a sidewalk or sidewalks and a roadway, and having houses or town lots on one or both sides; a main way, in distinction from a lane or alley: as, a fashionable *street*; a *street* of shops. Abbreviated *St.*, *st.* Compare *road*, 3. Strictly, the word excludes the houses, which are on the street; but in a very common use it includes the land and houses, which are then *in* the street: as, a house *in* High Street. In *law*, *street* sometimes includes as much of the surface, and as much of the space above and of the soil or depth beneath, as may be needed for the ordinary works which the local authorities may decide to execute on or in a street, including sidewalks.

Up *Fish Street*! down Saint Magnus' Corner!
Shak., 2 *Hen. VI.*, iv. 8. 1.

3. The way for vehicles, between the curbs, as distinguished from the sidewalks: as, to walk in the *street*.—4. Hence, a path or passageway inclosed between continuous lines of objects; a track; a lane.

It seemed to bee, as it were, a continued *street* of shippes.

Purchas, *Pilgrimage*, p. 435.

I was ushered through an actual *street* of servitors.

Disraeli, *Vivian Grey*, iii. 8.

5†. A path; a way.

Than makest thou his pees with his sovereignty,
And bringest him out of the crooked *streete*.

Chaucer, *A. B. C.*, l. 70.

While I ran by the most secret *streete*,

Eschewing still the common haunted track.

Surrey, *Æneid*, ii. 975.

6. The inhabitants of a street collectively. [Colloq.]

All the whole *street* will hate us, and the world
Point me out cruel. Middleton, *Chaste Maid*, v. 2.

Grub Street. See *Grub-street*.—**Lombard Street.** See *Lombard*², 1.—**Queer Street.** See *queer*¹.—**Street Arab.** See *Arab*, 2.—**Street broker.** See *broker*.—**The street,** a street (as Wall Street in New York) or locality where merchants or stock-brokers congregate for business; the commercial exchange: as, it is rumored on *the street*.

Common places whither marchauntes resort as to the burse or *streete*. Peter Martyr (tr. in *Eden's First Books* [on America, ed. Arber, p. 186]).

To have the key of the *street*. See *key*¹.—To *spin street-yarn*. See *spin*.—Syn. 2. *Road*, etc. See *way*.

"No to say it 'a our best dwelling," he added, turning to Bucklaw, "but just a *strength* for the Lord of Ravenswood to flee until."

Scott, Bride of Lammermoor, vii.

10. In colors, the relative property possessed by a pigment of imparting a color to and modifying the shade of any other pigment to which it is added. Thus, one pound of lampblack added to 100 pounds of white lead produces a dark-gray shade, but one pound of ivory-black added in the same way would have little effect on the white.

11. In the *fine arts*, boldness of conception or treatment.

Carracci's *strength*, Correggio's softer line.

Pope, Epistle to Jervas, l. 37.

12. In *soap-making*. See the quotation.

A peculiar phenomenon may be remarked in the cooling [of a little of the soap placed on a glass plate], which affords a good criterion of the quality of the soap. When there is formed around the little patch an opaque zone, a fraction of an inch broad, this is supposed to indicate complete saponification, and is called the *strength*; when it is absent, the soap is said to want its *strength*. When this zone soon vanishes after being distinctly seen, the soap is said to have *false strength*.

Ure, Dict., III. 852.

On the strength (*milit. and naval*), on the muster-rolls. [Colloq.]

The colonel had put the widow woman on the *strength*; she was no longer an unrecognized waif, but had her regimental position.

Arch. Forbes, in Eng. Illust. Mag., VI. 525.

On or upon the strength of, in reliance upon the value of; on the faith of; as, to do something on the *strength* of another's promise.

In a streperous eruption it [the bay or laurel] riseth against fire.
Sir T. Browne, Vulg. Err., II. 6.

strepotome (strep'ō-tōm), *n.* [*< Gr. στρέπω, twist, turn, + -τομή, < τέμνω, τμήν, cut.*] A corkscrew-like needle used in an operation for the radical cure of inguinal hernia.

Streptores (strep-i-tō-rēs), *n. pl.* [NL., pl. of **strepitor*, *< L. strepere, make a noise*: see *strepent*.] A group of inessorial birds, established by Blyth in 1849 for those Cuvierian *Passerine* which are non-passerine, and primarily divided into *Syndactyli*, *Zygodaectyli*, and *Heterodaectyli*. See these words.

strepitose (strep-i-tō'sō), *adv.* [It., *< strepito, noise, < L. strepitus, noise*: see *strepitous*.] In music, in an impetuous, boisterous, noisy manner.

strepitous (strep'i-tus), *a.* [*< L. strepitus, noise, < strepere, make a noise*: see *strepent*.] Noisy.

strepsicere (strep'si-sēr), *n.* [*< strepsiceros.*] An antelope with twisted horns; a strepsiceros.

strepsiceros (strep-sis'ē-rus), *n.* [NL., *< L. strepsiceros*, *< Gr. *στρεψικερος, an animal with twisted horns, called by the Africans addax.*] 1. Some antelope with twisted horns, as the koodoo; originally, perhaps, the addax.—2. [cap.] [NL. (Hamilton Smith, 1827).] A genus of antelopes with twisted or spiral horns. The only species now left in the genus is *S. kudu*, the koodoo. See cut under *koodoo*.

Strepsilas (strep'si-las), *n.* [NL. (Illiger, 1811), *< Gr. στρέψιλος, a turning round, < στρέφειν (aor. στρέψαι), twist, turn, + λᾶς, λάας, a stone.*] The typical genus of a subfamily *Strepsilainæ*; the turnstones. The bill is short, constricted at the base, tapering to a sharp point, with ascending gonyx longer than the mandibular rami, short and broad nasal fossae, and short shallow grooves in the under mandible. The legs are short and stout, with the tarsus scutellate in front and reticulate on the sides and back, and four toes, cleft to the base. There are 2 species—*S. interpres*, the common turnstone, and *S. melanoccephalus* of the North Pacific, the black-headed turnstone, perhaps only a variety of the other. The genus was also called *Cinctus*, *Arenaria*, and *Morinella*. See cuts under *Pressirostres* and *turnstone*.

strepsipter (strep-sip'tēr), *n.* [*< NL. Strepsiptera.*] A member of the *Strepsiptera*.

Strepsiptera (strep-sip'te-rā), *n. pl.* [NL., neut. pl. of **strepsipterus*: see *strepsipterous*.] 1. An order of insects, named by Kirby in 1833 from the twisted wings, synonymous with *Rhipiptera* of Latreille, and corresponding to the family *Stylopidae*. The fore wings are mere twisted filaments or pseudelytra; the hind wings are expansive and fan-shaped; the females are wingless. The strepsipters are parasitic on hymenopterous insects, especially bees and wasps. They are now regarded as anomalous *Coleoptera* degraded by parasitism. See cut under *Stylops*.

2. In Gegenbaur's system of classification, a family of neuropterous insects, forming with *Phryganida* the suborder *Trichoptera*.

strepsipteral (strep-sip'te-ral), *a.* [*< strepsipter-ous + -al.*] Same as *strepsipterous*.

strepsipteran (strep-sip'te-ran), *n. and a.* [*< NL. Strepsiptera + -an.*] 1. *n.* A strepsipter. 2. *a.* Same as *strepsipterous*.

strepsipterous (strep-sip'te-rus), *a.* [*< NL. *strepsipterus, < Gr. στρέψω (aor. στρέψαι), twist, turn, + πτερόν, a wing.*] Having twisted front wings, as a stylops; of or pertaining to the *Strepsiptera*; rhipipterous. Also *strepsipteran*, *strepsipteral*. See cut under *Stylops*.

strepsirrhinal, **strepsirrhinal** (strep-si-rī-nal), *a.* [*< strepsirrhine + -al.*] Same as *strepsirrhine*.

strepsirrhine, **strepsirrhine** (strep'si-rin), *a. and n.* [*< NL. *strepsirrhinus, < Gr. στρέφω (aor. στρέψαι), turn, twist, + ρίς (βιν-), nose.*] 1. *a.* Having twisted or curved nostrils, as a lemur; of or pertaining to the *Strepsirrhini*; neither catarrhine nor platyrrhine, as a primate. Also *strepsorhine*.

2. *n.* Any lemur or prosimian; a member of the *Strepsirrhini*.

Strepsirrhini, **Strepsirrhini** (strep-si-rī-nī), *n. pl.* [NL. (Geoffroy): see *strepsirrhine*.] The lemuroid mammals, or lemurs: so called from the twisted nostrils, in distinction from *Catarrhini* and *Platyrrhini*. In these animals the nostrils are at the corners of the snout, and somewhat comma-shaped, as is usual in mammals, instead of having the more human character of those of the higher *Primates*. The term is exactly synonymous with *Prosimiæ* or *Lemuroidea*, excepting that in early usages of all three of these names of lemurs the so-called flying-lemurs (*Galeopithecidae*) were wrongly included, these being insectivorous and not primate mammals, now always excluded from the strepsirrhines. Also *Strepsirrhina*, *Strepsirrhina*, and *Strepsorhina*.

Streptanthus (strep-tan'thus), *n.* [NL. (Nuttall, 1825), so called from the greatly twisted claws of the petals; *< Gr. στρεπτός, twisted (< στρέφω, twist, turn), + ἄθος, flower.*] A genus of polypetalous plants, of the order *Cruciferae* and tribe *Arabidæ*, distinguished from the type-genus *Arabis* by a calyx commonly of large size, longer and sometimes connate stamens, and petals usually borne on a twisted claw. There are about 16 species, natives of North America, and chiefly of the western United States. They are smooth annuals or perennials, with entire or lyrate leaves and commonly bractless flowers, which are purple or sometimes white or yellow, and in some species pendulous. *S. obtusifolius*, a pink-flowered species, has been called *Arkansas cabbage*.

streptobacteria (strep'tō-bak-tē-ri-ā), *n. pl.* [NL., *< Gr. στρεπτός, twisted, + NL. bacterium.*] A supposed bacterium, consisting of a chain of short rod-formed bacteria linked together. Ziegler, Pathol. Anat. (trans.), i. 185.

Streptocarpus (strep-tō-kār'pus), *n.* [NL. (Lindley, 1828), so called from the spirally twisted fruit; *< Gr. στρεπτός, twisted, + καρπός, fruit.*] A genus of gamopetalous plants, of the order *Gesneraceæ*, tribe *Cyrtandreeæ*, and subtribe *Didymocarpeæ*. It is characterized by flowers with an elongated corolla-tube which is much enlarged above, and contains two perfect stamens and a linear ovary imperfectly four-celled by the protrusion of lobed placenta densely covered on their margins with ovules, and becoming a spirally twisted capsule which is linear and terete and splits into valves coherent at the base and apex. There are about 19 species, natives of South Africa and of Madagascar. They are woolly or downy herbs, chiefly with spreading radical leaves or with a single leaf (a persistent cotyledon), sometimes with a stem bearing opposite leaves. The handsome flowers are mostly pale purple or blue; they form a many-flowered cyme, or are borne few or singly upon their peduncle. *S. Damiæ*, a remarkable species from the Transvaal mountains, is cultivated for its peculiar solitary grayish-green leaf, prostrate on the ground and over 3 feet long, with thick fleshy veins and clothed beneath with close reddish down, and for its bright-red tubular decurved flowers, of which there are sometimes over one hundred on a scape at once. Several other species are in cultivation under glass, especially *S. Watsoni*, a hybrid with several large leaves and rich crimson flowers, and *S. Rexii*, with blue flowers. They are known as *Cape primroses*.

streptococchia, **streptococchiaemia** (strep'tō-ko-kē'mi-ā), *n.* [NL., *< streptococci + Gr. αἷμα, blood.*] The presence of streptococci in the blood.

streptococci (strep-tō-kok'si), *n. pl.* [NL., *< Gr. στρεπτός, twisted, + κόκκος, a berry.*] A chain of micrococci linked together, occurring in some specific diseases. Ziegler, Pathol. Anat. (trans.), i. 185.

Streptoneura (strep-tō-nū-rā), *n. pl.* [NL., neut. pl. of *streptoneurus*: see *streptoneurous*.] A branch of anisopleurous *Gastropoda*, in which the long loop of visceral nerves embracing the intestine is caught and twisted into a figure-of-8 by the torsion which the animal undergoes in its development. The *Streptoneura* are divided into two orders, *Zygobranchia* and *Azygobranchia*. They include all the anisopleurous gastropods except the opisthobranchs and pulmonifers. The nearest synonym is *Prosobranchiata*.

streptoneural (strep-tō-nū-ral), *a.* [*< streptoneurous + -al.*] Same as *streptoneurous*.

streptoneurous (strep-tō-nū-rus), *a.* [*< NL. *streptoneurus, < Gr. στρεπτός, twisted, + νείρον, a nerve.*] Having twisted (visceral) nerves; specifically, pertaining to the *Streptoneura*, or having their characters.

Streptopus (strep'tō-pus), *n.* [NL. (F. A. Michaux, 1803), so called from the abruptly bent flower-stalk; *< Gr. στρεπτός, twisted, + ποίος = E. foot.*] A genus of monocotyledonous plants, of the order *Liliaceæ* and tribe *Polygonatæ*. It is characterized by nodding solitary or twin axillary flowers, divided into six more or less spreading segments, with a filiform or columnar style which is three-cleft at the apex. There are 4 species, natives of Europe, North America, and temperate parts of Asia. They are rather delicate plants, from a short and densely fiber-bearing or a creeping root-stock, with a simple or sparingly branched stem, bearing numerous ovate or lanceolate alternate sessile or clasping leaves. The small rose-colored or whitish flowers hang upon slender recurved or reflexed peduncles, followed by small roundish berries with numerous pale oblong or curved striate seeds. They are known by the name *twisted-stalk*, translating the genus name. *S. complexifolius* is found in Europe, and, together with *S. roseus*, in northern North America, and southward in the mountains.

streptospondylian (strep'tō-spon-dil'i-an), *a.* Same as *streptospondylous*.

streptospondylous (strep-tō-spon'di-lus), *a.* [*< NL. *streptospondylus, < Gr. στρεπτός, twisted + σπόνδυλος, σπόνδυλος, a vertebra.*] Having the character of the vertebral articulations reversed, or supposed to be so, as in the genus *Streptospondylus*.

Streptospondylus (strep-tō-spon'di-lus), *n.* [NL. (Meyer): see *streptospondylous*.] A genus of fossil crocodiles, founded on remains represented by the vertebrae of the Wealden and Oolitic formations. It was originally placed among the opisthocœlian *Crocodylia*, subsequently among the amphicoœlian. The genus agrees with such forms as *Teleosaurus*, which have the external nares terminal, and is placed by Huxley in the family *Teleosauriæ*.

streptostylic (strep-tō-stī'lik), *a.* [*< NL. streptostylicus, < Gr. στρεπτός, twisted, + στυλος, a pillar.*] Having the quadrate bone freely articulated with the skull, as in ophidian and saurian reptiles; not mouimostylic; of or pertaining to the *Streptostylia*.

Streptostylia (strep-tō-stil'i-kā), *n. pl.* [NL., neut. pl. of *streptostylicus*: see *streptostylic*.] Streptostylic reptiles, a prime division of ordinary reptiles (as snakes and lizards), having an articulated quadrate bone and a pair of extraocular copulatory organs: opposed to *Monimostylia*. They were divided into *Ophi-*

dia and *Sauria* (including *Amphibana*). *Staninus*, 1856.

Streptothrix (strep'tō-thriks), *n.* [NL. (F. Cohn), < Gr. στρεπτός, twisted, + θρίξ, the hair.] A genus standing probably intermediate between the bacteria and the fungi proper. It comprises very minute, colorless, branching filaments, growing in interfacing masses like the mycelium of fungi. *S. foersteri* was found by Cohn in the concretions of the lacrymal canals of the eye.

stress¹ (stres), *v. t.* [OF. *estrecier*, *estressier*, *estrechier*, *estroyssier*, etc., straiten, contract, < ML. as if **strictiare*, < L. *strictus*, pp. of *stringere*, draw together, compress: see *stringent*, *strain*¹, *strict*. Cf. *distress*.] 1. To straiten; constrain; press; urge; hamper. [Rare.]

If the magistrate be so *stressed* that he cannot protect those that are pious and peaceable, the Lord help.

Waterhouse, Apol. for Learning, p. 155. (*Latham*.)

2. In *mech.*, to subject to a stress.

The theory of elastic solids . . . shows that when a solid is *stressed* the state of stress is completely determined when the amount and direction of the three principal stresses are known. *Thomson and Tait*, Nat. Phil., § 632.

3. To lay the stress, emphasis, or accent on; emphasize.

If he had eased his heart in *stressing* the first ayllable, it was only temporary relief.

G. Meredith, *The Egoist*, xviii.

stress¹ (stres), *n.* [< *stress*¹, *v.*] 1. Constraining, urging, or impelling force; constraining power or influence; pressure; urgency; violence.

By *stress* of weather driven,
At last they landed. *Dryden*, *Æneid*, i. 503.

2. In *mech.*, an elastic force, whether in equilibrium with an external force or not; the force called into play by a strain. This word was introduced into mechanics by Rankine in 1855. In the following year Sir William Thomson used the word as synonymous with *pressure*, or an external force balanced by elastic forces. The terminology has been further confused by the use of Rankine's word *strain*, by Thomson and others, as a synonym for *deformation*. The words *stress* and *strain* are needed in the senses originally given to them by Rankine; while they both have familiar equivalents to which they have been wrested. At present, some writers use them in one way and some in the other.

In this paper the word *strain* will be used to denote the change of volume and figure constituting the deviation of a molecule of a solid from that condition which it preserves when free from the action of external forces; and the word *stress* will be used to denote the force, or combination of forces, which such a molecule exerts in tending to recover its free condition, and which, for a state of equilibrium, is equal and opposite to the combination of external forces applied to it.

Rankine, *Area of Elasticity*, § 2.

A *stress* is an equilibrating application of force to a body. . . . It will be seen that I have deviated slightly from Mr. Rankine's definition of the word *stress*, as I have applied it to the direct action experienced by a body from the matter around it, and not, as proposed by him, to the elastic reaction of the body equal and opposite to that action.

Thomson, *Phil. Trans.*, CLXVI. 487.

3. Stretch; strain; effort.

Though the faculties of the mind are improved by exercise, yet they must not be put to a *stress* beyond their strength. *Locke*, *Conduct of the Understanding*, xxviii.

4. Weight; importance; special force or significance; emphasis.

Consider how great a *stress* he laid upon this duty. . . . and how earnestly he recommended it. *Ep. Artbury*.

This, on which the great *stress* of the business depends. *Locke*. (*Johnson*.)

So rare the sweep, so nice the art,
That lays no *stress* on any part.

Lovell, *Appledore*.

5. The relative loudness with which certain syllables or parts of syllables are pronounced; emphasis in utterance; accent; ictus. In elocution, *initial*, *opening*, or *radical stress* is stress or emphasis at the beginning; *medial* or *median stress* is that in the middle; and *close*, *final*, or *vanishing stress* is stress at the end of a vowel-sound. The union of initial and final is *compound stress*, that of all three stresses is *thorough stress*.—*Anticlastic stress*. See *anticlastic*.—*Axis of a stress*, one of three mutually perpendicular lines meeting at any point of a body in which a given stress tends to produce only elongation or contraction, without any tangential action.—*Center of stress*. See *center*.—*Close stress*. See def. 5.—*Composition of stresses*. See *composition of displacements*, under *composition*.—*Compound stress*. See def. 5.—*Concurrent stress and strain*. See *concurrent*.—*Final stress*. See def. 5.—*Homogeneous stress*. In *mech.*, a stress which affects alike all similar and similarly turned portions of matter within the boundary within which the stress is said to be homogeneous.—*Initial stress*. See def. 5.—*Lateral stress*. See *lateral*.—*Medial, median stress*. See def. 5.—*Normal stress*, a stress such that its tendency to change the relative positions of two parts of a solid always acts along the normals to the surface separating those parts. Such a stress consists of three extensive or compressive stresses along three rectangular axes.—*Orthogonal stress*. (a) Relatively to a homogeneous strain, a stress which neither increases nor diminishes the work of producing that strain. (b) Relatively to another stress, a stress

orthogonal to a strain perfectly concurrent with the other stress.—*Perfectly concurrent stress*. (a) Relatively to another stress, a stress equal to that other multiplied by a real number. (b) Relatively to an infinitesimal homogeneous strain, a stress such that, if the strain be so compounded with a rotation as to produce a pure strain, the motions of the particles upon the surface of a sphere relatively to its center represent in magnitude and direction the components of the stress.—*Principal tension of a stress*, a component of the stress along one of its axes.—*Radical stress*. See def. 5.—*Shearing stress*, a stress tending to produce a shear.—*Storm and stress*. See *storm*.—*Synclastic stress*, a stress upon a plate tending to give it a positive curvature.—*Tangential stress*, a stress such that its tendency to change the relative positions of two parts of a solid always acts along the tangents to the surface separating those parts. Such a stress consists of three shearing stresses having orthogonal axes.—*The principal axes of stress*. See *axis*.—*Thorough stress*. See def. 5.—*Type of a stress*. See *type*.—*Vanishing stress*, an increasing loudness toward the end of a vowel-sound, producing the effect of a jerk. See def. 5.—*Syn. 5. Accent*, etc. See *emphasis*.

stress² (stres), *n.* [< *stress*¹, *v.* In part an aphetic form of *distress*, *q. v.*] 1. Distress; difficulty; extremity; pinch. [Obsolete or archaic.]

And help the pure that ar in *stress*
Opprest and heret mercyles.
Lauder, *Dewtie of Kyngis* (E. E. T. S.), i. 469.

The agony and *stress*
Of pitying love. *Whittier*, *The Two Rabbits*.

2. In *law*: (a) The act of distraining; distress. (b) A former mode of taking up indictments for circuit courts.

stress-diagram (stres'di'g-gram), *n.* See *diagram*.

stressless (stres'les), *a.* [< *stress*¹ + *-less*.] Without stress; specifically, unaccented. *Encyc. Brit.*, XVIII. 788.

stress-sheet (stres'shēt), *n.* In *bridge-building*, same as *strain-sheet*.

stretch (strech), *v.* [< ME. *strecchen* (also unassibilated *strecken*, whence mod. E. dial. *streek*, *streak*, var. *strake*) (pret. *straughte*, *straght*, *strahte*, *strechte*, **straichte*, *streigte*, *streichte*, *strecht*, pp. *straught*, *straugt*, *streight*, *streigt*, *streicht*), < AS. *streccean* (pret. *strehete*, pp. *strehit*) = OFries. *strekka* = D. *strekken* = MLG. *strecken* = OHG. *strecchen*, MHG. G. *strecken* = Sw. *sträcka* = Dan. *strække*, draw out, stretch; connected with the adj. AS. *strec*, *strec*, strong, violent (lit. stretched?), = MHG. *strac* (*strack-*), G. *strack*, straight; √ *strak*, perhaps orig. √ **srak*, a var. of √ *rak* in *retch*², *reck*, *reach*¹; otherwise akin to L. *stringere*, pp. *strictus*, draw tight (see *stringent*, *strain*¹, *strait*¹), and to Gr. *σπαγγός*, twisted tight. Hence *straight*¹, orig. pp. of *stretch*. Connection with *string*, *strong*¹, etc., is uncertain.] I. *trans.* 1†. To draw (out); pull (out).

But atert vp stithly, *straught* out a swerde.
Destruction of Troy (E. E. T. S.), i. 1240.

2. To draw out to full length; extend; expand; spread: as, to *stretch* one's self; to *stretch* the wings; to *stretch* one's legs; hence, sometimes, to tighten; make tense or taut.

Redli, of gear rzt arm that ouer rome *streyt*,
I se wel the signifaunce.
William of Palerne (E. E. T. S.), i. 2957.

I have *stretched* my legs up Tottenham Hill to overtake you.
I. Walton, *Complete Angler*, p. 43.

3. To extend, or cause to reach or extend, lengthwise, or between specified points: as, to *stretch* a rope from one point to another.

My wings shall be
Stretch'd out no further then from thee to thee.
Quarles, *Emblems*, iii. 12.

Phoenicia is *stretched* by some . . . euen to Egypt, all alongst that Sea-coast. *Purchas*, *Pilgrimage*, p. 95.

A clothes-line with some clothes on it . . . is *stretched* between the trunks of some stunted willows.
Ruskin, *Elements of Drawing*, iii.

4. To draw out or extend in any direction by the application of force; draw out by tensile stress: as, to *stretch* cloth; to *stretch* a rubber band beyond its strength.

My business and that of my wife is to *stretch* new boots for millionaires. *Harper's Mag.*, LXXVIII. 623.

5. To distend or expand forcibly or violently; strain by the exercise of force; subject to stress, literally or figuratively.

Come, *stretch* thy chest, and let thy eyes spout blood.
Shak., T. and C., iv. 5. 10.

They that *stretch* his Infallibility further do they know not what.
Selden, *Table-Talk*, p. 86.

6. To extend or strain too far; impair by straining; do violence to; exaggerate: as, to *stretch* the truth.—7†. To exert; strain.

Till my veins
And sinews crack, I'll *stretch* my utmost strength.
Beau. and Fl. (f), *Faithful Friends*, iii. 3.

Stretching their best abilities to express their lous.

Quoted in *Capt. John Smith's Works*, i. 182.

8. To reach or hold out; put forth; extend.

He drough oute a letter that was wrapped in a cloth of silke, and *straught* it to the kyng.

Merlin (E. E. T. S.), iii. 669.

Stretch thine hand unto the poor. *Ecclesi.* vii. 32.

9. To cause to lie or fall extended at full length: as, to *stretch* an opponent on the ground by a blow.—10. To hang. [Slang.]

The night before Larry was *stretched*.
R. Burroves, in *Prout's Reliques*, p. 267.

To *stretch* a point. Same as to *strain* a point (which see, under *point*¹).

II. *intrans.* 1. To extend; reach; be continuous over a distance; be drawn out in length or in breadth, or both; spread.

Twenty fadme of brede the armea *straughte*.
Chaucer, *Knight's Tale*, i. 2058.

The town *stretcheth* along the bottoome of the haven, backt on the West with a rocky mountain.
Sandys, *Travels*, p. 10.

2. To be extended or to bear extension without breaking, as elastic substances; attain greater length: literally or figuratively.

The inner membrane. . . because it would *stretch* and yield, remained unbroken. *Boyle*.

The terms . . . must be very elastic if they would *stretch* widely enough to include all the poems.
O. W. Holmes, *Emerson*, xiv.

3. To go beyond the truth; exaggerate. [Colloq.]

What an ally do we find to the credit of the most probable event that is reported by one who uses to *stretch*!
Government of the Tongue.

4. *Naut.*, to sail by the wind under all sail.—

5. To make violent efforts in running.—*Stretching convulsions*, tetanic convulsions which, acting through the extensor muscles, straighten the limbs.—*Stretch out!* an order to a boat's crew to pull hard.

stretch (strech), *n.* [< *stretch*, *v.*] 1. A stretching or straining, especially a stretching or straining beyond measure: as, a *stretch* of authority.

A great and suddsin *stretch* or contention.
Ray, *Works of Creation*, p. 287.

It is only by a *stretch* of language that we can be said to desire that which is inconceivable.
W. K. Clifford, *Lectures*, I. 229.

2. A state of tension; strain: as, to be on the *stretch*.

These put a lawful authority upon the *stretch*, to the abuse of power, under the colour of prerogative.
Sir R. L'Enclave.

3. Reach; extent; scope.

At all her *stretch* her little wings she spread.
Dryden, tr. of *Ovid's Metamorph.*, *Ceyx* and *Alyone*, l. 482.

This is the utmost *stretch* that Nature can,
And all beyond is fulsome, false, and vain.

Granville, *Unnatural Flights in Poetry*.

It strains my faculties to their highest *stretch*.

Swift, *Tale of a Tub*, ix.

4. A long tract; an extended or continued surface or area, relatively narrow; a reach; distance; sweep: as, a long *stretch* of country road; a great *stretch* of grassy land; a *stretch* of moorland.

The grass, here and there, is for great *stretches* as smooth and level as a carpet.

II. James, Jr., *Trans. Sketches*, p. 147.

5. One of the two straight sides of a race-course, as distinguished from the bend or curve at each end. The *home-stretch* is that part of the course which the contestant goes over after passing the last curve just before completing the race.

6. *Naut.*, the reach or extent of progress on one tack; a tack.—7. In *weaving*: (a) The plot of ground on which a weaver stretches his warp. (b) The length of spun-yarn between the spindles and roller-beam, which is wound upon the spindles each time the carriage is run toward the roller-beam. Also called *draw*. *Spens' Encyc. Manuf.*, i. 760.—8. A single continued effort; one uninterrupted sitting, diet, shift, turn, or the like: as, to work ten hours at a *stretch*.

She could not entertain the child long on a *stretch*.
Bulwer, *Night and Morning*, ii. 8.

But all of them left me a week at a *stretch* to attend the county fair.
The Century, XXVIII. 655.

9. A year's imprisonment or punishment. [Thieves' slang.]—10. Course; direction: as, the *stretch* of seams of coal.—11. Stride; bound, as of a running animal. *Gay*.

stretcher (strech'ér), *n.* [< *stretch* + *-er*¹.] 1. One who or that which stretches or expands. Specifically—(a) A tool for stretching the fingers of leather gloves, that they may be put on more easily. (b) In *shoemaking*, same as *shoe-stretcher*. (c) A frame, composed of four pieces of wood, upon which painters' canvas is drawn

tight. By driving small wedges in at the angles the tension is increased. (d) One of the rods in an umbrella attached at one end to one of the ribs, and at the other to the tube sliding upon the handle. (e) In a vehicle, a jointed rod which when extended expands the carriage-bow, and thus spreads the hood or cover. (f) A short piece of wood placed in the clew of a hammock to extend it.

2. In *masonry*, a brick or stone laid horizontally with its length in the direction of the face of the wall, as distinguished from a *header*, which is laid lengthwise across the thickness of the wall, so that its small head or end is seen in the external face of the wall. See *cut under inbond*.—3. One of the cylindrical rails between the legs of a chair; a round. *E. H. Knight*.—4. In *cabinet-making*, a low shelf serving as a brace or stay to the legs of a table, and roomy enough to hold a vase, a basket of flowers, or other ornament.—5. In *carp.*, a tie-timber in a frame.—6. *Naut.*, a narrow piece of plank placed across a boat for the rowers to set their feet against; also, a cross-piece placed between a boat's sides to keep them apart when the boat is hoisted up and gripped.—7. A light, simple litter, without inclosure or top, upon which a dead body or a wounded person can be carried: so called because generally composed of canvas stretched on a frame, or because the body is stretched out upon it. Such frames, covered with canvas, are often used as beds, as in camping.—8. A flat board on which corpses are stretched or laid out preparatory to coffining.—9. In *angling*: (a) The leader at the extreme end of the line. (b) The tail-fly; the fly that is fastened to the cast called the *stretcher*; a *stretcher-fly*. (a) Narrowly; closely; carefully: as, the matter is to be strictly investigated. (b) Exactly; with nice or rigorous accuracy, exactness, or precision: as, strictly speaking, all men are not equal.

Horace hath but more strictly spoke our thoughts.
B. Jonson, Poetaster, v. 1.

(c) Positively; definitely; stringently.

Charge him strictly
Not to proceed, but wait my farther pleasure.
Dryden, Spanish Friar, iii. 3.

(d) Rigorously; severely; without remission or indulgence; with close adherence to rule.

I wish those of my blood that do offend
Should be more strictly punish'd than my foes.
Beau. and Fl., Woman-Hater, iv. 1.

(e) Exclusively; out-and-out; thoroughly.

Coruwall . . . was a strictly British land, with a British nomenclature, and a British speech which lingered on into the last century.
E. A. Freeman, Amer. Lects., p. 149.

strictness (strikt'nes), n. The state or quality of being strict, in any sense.

stricture (strikt'chur), n. [= *F. stricture* = *It. strettura*, < *L. strictura*, a contraction, < *stringere*, draw tight, contract: see *strict*. Cf. *straiture*.] 1. A drawing tight; contraction; compression; binding.

Christ . . . came to knit the bonds of government faster by the stricture of more religions ties.
Jer. Taylor, Works (ed. 1835), I. 267.

strictured (strikt'churd), a. [*< stricture + -ed*]. Affected with stricture: as, a strictured duct.

strid. A preterit (obsolete) and past participle of *stride*.

striddle (strid'1), v.; pret. and pp. *striddled*, ppr. *striddling*. [Freq. of *stride*. Cf. *straddle*.] To straddle. [Prov. Eng.]

stride (strid), v.; pret. *strode* (formerly also *strid*), pp. *stridden* or *strid*, ppr. *striding*. [*< ME. striden* (pret. *strode*, *strood*, *strade*), < *AS. stridan* (pret. *strād*, pp. *striden*), *stride*, = *MD. striden*, *D. striden* = *MLG. striden* (pret. *streed*), *stride*, *strive*, = *OHG. strītan*, *MHG. strīten*, *G. streiten* = *Dan. stride*, *strive*, *contend*; also in weak form, *OS. strīthian* = *OFries. strīda* = *Icel. strīða* = *Sw. strida*, *strive*; orig. appar. *contend*, hence, in a particular use, go hastily, take long steps. Hence the comp. *bestride* and freq. *striddle*, also *straddle*, *bestraddle*; and, through *OF.*, *strive* and *strife*.] I. *intrans.* 1. To walk with long steps; step.

There was no Greke so grym, ne of so gret wille,
Durst abate on the buernes, ne to bonke stride;
Ne afforae hym with fight to lerne out of ship.
Destruction of Troy (E. E. T. S.), l. 5637.

Hell trembled as he strode.
Milton, P. L., ll. 676.

2. To stand with the feet far apart; straddle. Because th' acute, and the rect-Angles too,
Stride not so wide as obtuse Angles doo.
Sylvester, tr. of Du Bartas's Weeks, ll. The Columes.

The arches, striding o'er the new-born stream.
Burns, Verses Written in Kenmore Inn.

Striding level, a spirit-level the frame of which carries at its two extremities inverted Y's below, so that it may be placed upon two concentric cylinders and straddle any small intervening projections. The striding level is a necessary adjunct of the transit-instrument when this is used for determining time, and is used in many leveling-instruments.

II. *trans.* 1. To pass over at a step: as, to stride a ditch.

Another, like an Embrian's sturdy Spouse,
Strides all the Space her Petticoat allows.
Congreve, tr. of Ovid's Art of Love, III.

2. To sit astride on; bestride; straddle; ride upon.

And pity, like a naked new-horn babe,
Striding the blast.
Shak., Macbeth, l. 7. 22.

stride (strid), n. [*< stride, v.*] 1. A step, especially one that is long, measured, or pompous; a wide stretch of the legs in walking.

Simplicity flies away, and iniquity comes at long strides upon us.
Sir T. Browne, Urn-Burial, Ded.

Her voice theatrically loud,
And masculine her stride.
Pope, Imit. of Earl of Dorset.

A lofty bridge, stepping from cliff to cliff with a single stride.
Longfellow, Hyperion, ll. 2.

2. The space measured or the ground covered by a long step, or between putting down one foot and raising the other.

Between them both was but a little stride,
That did the house of Richesae from hell-mouth divide.
Spenser, F. Q., II. vii. 24.

strident (stri'dent), a. [= *F. strident* = *Sp. Pg. estridente* = *It. stridente*, < *L. stridentis* (pp. of *stridere*, give a harsh, shrill, or whistling sound, creak.) Creaking; harsh; grating.

"Brava! brava!" old Steyne's strident voice was heard roaring over all the rest.
Thackeray, Vanity Fair, II.

stridently (stri'dent-li), adv. Creakingly; harshly; gratingly.

stridor (stri'dor), n. [*L.*, < *stridere*, give a harsh, shrill, or whistling sound, creak: see *strident*.] A harsh, creaking noise.—*Stridor dentium*, grinding of the teeth: a common symptom during sleep in children affected with worms or other intestinal irritation. It occurs also in fever as a symptom of irritation of the brain.

stridulant (strid'ū-lant), a. [*< NL.* as if **stridulan(t)-s*, ppr. of **stridulare*: see *stridulate*.] Strident or stridulous, as an insect; capable of stridulating; specifically, of or pertaining to the *Stridulantiæ*.

Stridulantiæ (strid'ū-lan'shi-ā), n. pl. [*NL.* (Burmeister, 1835): see *stridulant*.] A group of hemipterous insects, including various forms which have the faculty of stridulating; specifically, the cicadas. See *Cicadidæ*.

stridulate (strid'ū-lāt), v. i.; pret. and pp. *stridulated*, ppr. *stridulating*. [*< NL.* as if **stridulatus*, pp. of **stridulare*, < *L. stridulus*, giving a shrill sound, creaking: see *stridulous*.] To make a stridulous noise, as an insect; effect stridulation, as the cicada; grate, scrape, or creak with the organs of stridulation; shrill; chirr.

stridulating-organ (strid'ū-lā-ting-ōr-gan), n. In *entom.*, a finely wrinkled or file-like surface

or plate, frequently having a pearly luster, by friction of which against another surface brought into contact with it a creaking sound is produced. These organs are variously situated on the wings, clytra, legs, abdomen, thorax, and even the head.

stridulation (strid'ū-lā'shon), n. [*< stridulate + -ion*.] The act, process, or function of stridulating; the power of so doing; or the thin, harsh, creaking noise thus produced; a shrilling. Stridulation is effected by rubbing together hard or rough parts of the body, often specially modified in various ways for that purpose, being thus not vocalization or phonation. It is highly characteristic of many homopterous insects, as the cicada; of many orthopterous insects, as various locusts or grasshoppers; and of some coleopterous insects, or beetles. It rarely occurs in lepidopterous insects, but has been observed in some butterflies and moths, and also in a few spiders, as of the genus *Theridion*. Those homopterous insects in which it is specially marked are named *Stridulantiæ*.

stridulator (strid'ū-lā-tor), n. [*< stridulate + -or*.] An insect which stridulates, shrills, or chirrs; that which is stridulatory.

stridulatory (strid'ū-lā-tō-ri), a. [*< stridulate + -ory*.] Pertaining to stridulators or stridulation; stridulant or stridulous; shrill or shrilling; chirring.

stridulous (strid'ū-lus), a. [*< L. stridulus*, creaking, rattling, hissing, < *stridere*, creak: see *strident*.] Making a small harsh sound; having a thin, squeaky sound; squeaky; creaking.

To make them [the old men] garrulous, as grasshoppers are stridulous.
Chapman, Iliad, III., Commentary.

Stridulous angina. Same as *laryngismus stridulus* (which see, under *laryngismus*).

strife, v. t. A Middle English form of *strew*.

strife (strif), n. [*< ME. strif*, < *OF. estrif*, < *Icel. strith*, *strife*, contention, pain, grief, = *Sw. Dan. strid*, combat, contention, = *OS. OFries. strid* = *D. strijd* = *OHG. MHG. strit*, *G. streit*, *strife*, = *OL. stlis* (gen. *stlit-*), *L. lis* (*lit-*), *strife*, litigation (see *litigate*); from the verb, *Icel. strīða*, *strive*, *contend*, etc.: see *stride*. Cf. *strive*.] 1. A striving or effort to do one's best; earnest attempt or endeavor.

With strife to please you, day exceeding day.
Shak., All's Well, Epil.

2. Emulative contention or rivalry; active struggle for superiority; emulation.

Weep with equal strife
Who should weep most.
Shak., Lucrece, l. 1791.

Thus gods contend (noble strife,
Worthy the heavenly mind)
Who most should do to soften anxious life.
Congreve, To the Earl of Godolphin.

3. Antagonistic contention; contention characterized by anger or enmity; discord; conflict; quarrel: as, *strife* of the elements.

Sith for me ye fight, to me this grace
Both yield, to stay your deadly strife a space.
Spenser, F. Q., II. vi. 33.

Twenty of them fought in this black strife.
Shak., R. and J., III. 1. 183.

To take strife, to enter into conflict.

For which he took with Rome and Cesar strif.
Chaucer, Good Women, l. 695.

=Syn. 2 and 3. *Strife, Contention*. These words agree in being very general, in having a good sense possible, and in seeming elevated or poetical when applied to the organized quarrels of war or to anything more than oral disputes. *Strife* is the stronger. *Contention* often indicates the more continued and methodical effort, and hence is more often the word for rivalry in effort to possess something. Such a rivalry, when definite in form and limited in time, is a *contest*: as, the *contests* of the Greek games. A *contention* that is forcible, violent, exhausting, or attended with real or figurative convulsions or contortions, is a *struggle*. See *battle*, *encounter*.

strifeful (strif'fūl), a. [*< strife + -ful*.] Full of strife; contentious; discordant.

But strifeful mind and diverse qualitee
Drew them in partes, and each made others foe.
Spenser, F. Q., II. II. 13.

strig (strig), n. [Origin obscure.] 1. The footstalk of a flower, leaf, or fruit. *Ure*, *Dict.*, I. 302.—2. The tang of a sword-blade. See *tang*.

strig (strig), v. t.; pret. and pp. *strigged*, ppr. *strigging*. [*< strig, n.*] To remove the foot-stalk from: as, to *strig* currants.

striga (strī'gā), n.; pl. *strigæ* (-jē). [*NL.*, < *L. striga*, a swath, furrow, < *stringere*, draw tight, contract: see *strict*.] 1. In *bot.*, a sharp-pointed appressed bristle or hair-like scale, constituting a species of pubescence in plants.—2. In *zool.*, a streak or stripe; a stria.—3. In *arch.*, a flute of a column.

strigate (strī'gāt), a. [*< NL. *strigatus*, < *L. striga*, a furrow: see *striga*.] In *entom.*, same as *strigose*.

Striges (strī'jēz), n. pl. [*NL.*, < *L. strix* (*strig-*), an owl.] The owls, or *Strigidæ* in a broad

sense, as a suborder of *Raptores*; the nocturnal birds of prey. The physiognomy is peculiar by reason of the lateral expansion, lengthwise contraction, and diploic thickening of the skull, which is often asymmetrical. The eyes look forward, not laterally as in other birds, and are set in a peculiar disk of radiated feathers more or less completely formed, the feathers of the front being antrorse and adpressed, hiding the base of the bill. This is the facial disk, of which some radiating feathers of peculiar shape and texture constitute a ruff. The eyes are very large, with a peculiarly shaped eyeball, the cornea being protuberant, and with the sclerotic presenting a figure somewhat like a short acorn in its cup; the iris is capable of great movement, dilating and contracting the pupil more than is usual in birds. The ear-parts are very large, often unlike on opposite sides of the head, and provided with a movable external flap, the operculum, sometimes of great extent. The tufts of feathers, or so-called "ears," of many owls are the corallines or plumicorns. The bill is peculiar in that the nostrils open at the edge of the cere rather than in its substance, and the tomia are never toothed. There are four toes, of which the outer is versatile and shorter than the inner, with three of its joints together shorter than the fourth joint. The claws are all long, sharp, and curved, and the middle one is sometimes pectinate. The feathers lack aftershfts, and the plumage is peculiarly soft and bleached, conferring a noiseless flight. The birds have no ambiens muscle, one pair of intrinsic sphyngal muscles, a nude oil-gland, long clubbed caeca, short intestines, moderately muscular gizzard, capacious gullet without special crop, a peculiar structure of the tarsometatarsi and shoulder-joint, a macerated and double-notched or entire sternum, basipterygoid processes, and spongy meso- and lacrymals. The suborder is divided into two families, *Strigidae* and *Aluconidae*. *Nyctarapages* is a synonym. See cuts under *barn-owl*, *bruceate*, *Bubo*, *hawk-owl*, *Otus*, *Nyctala*, *owl*, *snow-owl*, and *Strix*.

Strigidae (strij'i-dē), *n. pl.* [NL., < *Strix* (*Strig-*) + *-idae*.] The owls as a family of strigine or nocturnal birds of prey of the order *Raptores*: used in three senses. (a) Same as *Striges*, including all owls. (b) Same as *Aluconidae*, including only the barn-owls. (c) Including all owls excepting the *Aluconidae*. In this sense the distinctive characters are the furculum not ankylosed to the double-notched or fenestrated sternum, the middle claw not pectinate, and the facial disk incomplete or not triangular.

strigil (strij'il), *n.* [*L. strigilis* (= Gr. *στλεγγίς*), a scraper, < *stringere*, draw tight, contract, touch, graze, stroke: see *stricil*.] 1. An instrument of metal, ivory, or horn, used by the ancients for scraping the skin at the bath and in the gymnasium; a flesh-scraper. See cut under *Lysippus*.—2†. A flesh-brush, or a glove of hair-cloth, rough toweling, or other article used for stimulating the skin by rubbing.

You are treated after the eastern manner, washing with hot and cold water, with oyles, and being rubbed with a kind of *strigil* of seal's-skin, put on the operator's hand like a glove. *Evelyn*, *Diary*, June, 1645.

strigilate (strij'i-lāt), *a.* [*L. strigilatus*, < *strigilis*, *q. v.*] In *entom.*, noting the front leg of a bee when it is furnished with a strigilis.

strigilis (strij'i-lis), *n.*; *pl. strigiles* (-lěz). [NL., < *L. strigilis*, a scraper: see *strigil*.] An organ on the first tarsal joint of a bee's fore leg, used to curry or clean the antennae; a curry-comb: so called on account of the fringe of stiff hairs. At the end of the tibia is a movable spur, and on this spur an expanded membrane, the velum, which can be brought into contact with the strigilis, forming a circular orifice. The bee lays the antenna in the hollow of the strigilis, presses the velum of the spur upon it, and draws the antenna through the aperture thus formed.

strigilose (strij'i-lōs), *a.* [Also, erroneously, *strigillose*; *dim. of strigose*.] In *bot.*, minutely strigose.

strigine (strij'in), *a.* [*L. strix* (*strig-*) + *-ine*.] Owl-like; related to or resembling an owl. (a) Of or pertaining to the *Striges*, or *Strigidae* in a broad sense. (b) In a narrow sense, belonging to the *Strigidae* (c); distinguished from *Alucine*.

strigment (strig'ment), *n.* [*L. strigmentum*, that which is scraped off, a scraping, < *stringere*, draw tight, contract, graze, stroke: see *strigil*.] Scraping; that which is scraped off.

Brassavolus and many other, beside the *strigments* and sudorous adhesions from men's hands, acknowledge that nothing proceedeth from gold in the usual decoction thereof. *Sir T. Browne*, *Vulg. Err.*, ii. 5.

Strigopidae (stri-gop'i-dē), *n. pl.* [NL. (Bonaparte, 1849), < *Strigops* + *-idae*.] The *Strigopidae* regarded as a family apart from *Pittidae*.

Strigopinae (strig-ō-pi'nē), *n. pl.* [NL., < *Strigops* + *-inae*.] The owl-parrots; a subfamily of *Pittidae*, or the only subfamily of *Strigopidae*, represented by the genus *Strigops*. Also *Stringopinae*. *O. Finsch*.

Strigops (stri'gops), *n.* [NL. (G. R. Gray, 1845); also *Strigopsis*; also *Stringops* and *Stringopsis* (Van der Hoeven, 1856); < *Strix* (*Strig-*), a screech-owl, + Gr. *ὤψ*, eye, face.] A genus of *Pittidae*, or made type of a family *Strigopidae*, containing the kakapo, or nocturnal flightless parrot of New Zealand, *S. habroptilus*; the owl-parrots: so called from the owl-like physiognomy. The sternal keel and the furculum are defective,

and the birds have not the power of flight. See cut under *owl-parrot*.

strigose (stri'gōs), *a.* [*NL. strigosus*, < *striga*, *q. v.*] 1. In *bot.*, rough with strige; beset with sharp-pointed and adpressed straight and stiff hairs or bristles: as, a *strigose* leaf or stem.—2. In *entom.*, streaked, or finely fluted; having fine, close parallel ridges or points, like the surface of a file. Also *strigate*.

strigosus (stri'gus), *a.* [*NL. strigosus*: see *strigose*.] Same as *strigose*.

3. The line or cord of a bow.

The beat bow that the yeman browthe
Roben set on a string.
Robin Hood and the Potter (Child's Ballads, V, 27).

4. In musical instruments, a tightly stretched cord or wire by the vibration of which tones are produced. The materials most used are gut, as in instruments of the lute and viol families, and brass or steel, as in the mandolin, the zither, and the pianoforte, though silk is also used. Silk strings are usually, and metal strings sometimes, wound with light silver wire to increase their weight; and such strings are often called *silver strings*. The pitch of the tone produced depends on the density, tension, and vibrating length of the string. The vibration is produced either by plucking or twanging with the finger, by a plectrum, or by a jack, as in the lute and harp families generally, and in the harpsichord; by the friction of a bow, as in the viol family; by a stream of air, as in the uolian harp; or by the blow of a hammer, as in the dulcimer and the pianoforte. The strings are named either by the letters of the tones to which they are tuned, or by numbers. The smallest string of several representatives of the lute and viol families is often called the *chanterelle*, because commonly used for the principal melody or cantus. The tuning of strings is effected usually by means of tuning-pins or pegs, which in lutes and viols are placed in the head of the instrument, but in harps, zithers, and pianofortes in one side or rim of the frame. Not only has each instrument had a varying number of strings in different countries and at different periods, but the accordatura, or system of pitches, to which they are tuned has also varied. The vibrating length of the strings in instruments of the lute and viol families may be diminished, and the pitch of their tones raised, by pressing them with the fingers of the left hand against the finger-board. The exact places for such shortening or "stopping" are sometimes marked by frets, as in the guitar and also in the zither. The modern harp is provided with a mechanism for raising the pitch of certain acts of strings one or two semitones by means of pedals.

Of instrumentes of stringes in acord
Herde I so pleye a ravysing awetnesae.
Chaucer, Parliament of Fowls, l. 197.

Ye'll take a lock o' my yellow hair,
Ye'll make a string to your fiddle there.

1. In *anat.*: The sustentacular tissue or substance of a part or organ, usually of connective tissue.—2. In *bot.*: (a) In fungi, a variously shaped more or less continuous layer of cellular tissue, in which perithecia or other organs of fructification are immersed. Sometimes called *receptacle*. See cut under *ergot*. (b) In vegetable physiology, the solid matter remaining after all the fluid has been expressed from protoplasm. *Goodale*.—**Cancer stroma**, the interlocking connective-tissue framework containing the alveoli of cancer-cells.—**Intertubular stroma**, the connective-tissue framework which supports the tubules of the kidney, and which contains the blood-vessels, lymphatics, nerves, etc.—**Stroma fibrin**, fibrin formed from the stroma of the blood-corpuscles.—**Stroma of red blood-corpuscles**, that part of those corpuscles which remains after the hemoglobin is removed.—**Stroma of the ovary**, the connective tissue of the ovary. Formerly the ova were supposed to originate in this stroma. They are, however, derived from the investing cell-layer or germ-epithelium of the ovary, from which multitudinous cells, some of them to become ova, penetrate the stroma.

Stromateidæ (strō-mä-tē'i-dē), *n. pl.* [NL., < *Stromateus* + *-idæ*.] A family of acanthopterygian fishes, typified by the genus *Stromateus*, related to the scombroids and carangoids.

They have large denticerous or saciform gill-rakers on the last branchial arch, extending into the esophagus; a single long dorsal fin with a few spines in front; and the ventrals, when present, generally under the pectorals, but in the typical forms more or less reduced, or absent. They are small fishes of most warm seas, of about 6 genera and 25 species, divided into *Stromateinæ* and *Centrolophinae*. Also *Stromateina*, as a division of *Scombridae*.

stromateine (strō-mat'ē-in), *a. and n.* [*Stromateus* + *-ine*.] 1. *a.* Of, or having characters of, the *Stromateidæ*.

II. *n.* A fish of the family *Stromateidæ*.

stromateoid (strō-mat'ē-oid), *a. and n.* [*Stromateus* + *-oid*.] Same as *stromateine*.

Stromateoides (strō'mä-tē-oi'dēz), *n.* [NL. (Bleeker, 1857), < *Stromateus* + Gr. *είδος*, form.] A genus of stromateoid fishes, with restricted branchial apertures. *S. sinensis* is the white and *S. cinereus* the gray pomfret. See cut under *pomfret*.

Stromateus (strō-mat'ē-us), *n.* [NL. (Linnaeus, 1748), < Gr. *στρομαρεΐς*, a coverlet, a bag for bed-clothes (in pl. patchwork), a kind of fish, < *στρομα* (*stroma*), a coverlet or spread (in allusion to the color of the typical species, supposed to resemble that of a spread or carpet): see *stroma*.] The typical genus of the family *Stromateidæ*, in which the ventral fins are lost in the adult, the caudal peduncle is not keeled, and the gill-membranes are free from the isthmus. There are a number of species, of tropical to warm temperate seas. One of the best-known is *S. triacanthus* of the Atlantic coast of the United States, variously called *butter-fish*, *harvest-fish*, and *dollar-fish*. (See cut under *butter-fish*.) A very similar species is *S. alepidotus*; another is *S. minutus* of the Californian coast, highly esteemed as a food-fish, known in the markets of San Francisco as the *pompano*. See *pompano*, 2.

stromatic¹ (strō-mat'ik), *a.* [*stroma*(-t) + *-ic*.] In *anat.*, *physiol.*, and *bot.*, of the nature of a stroma; resembling a stroma; stromatous.

stromatic² (strō-mat'ik), *a.* [*Gr. Στρόμαρα*, a false reading for *Στρομαρεΐς*, i. e. 'patchwork,' 'miscellaneous,' the title of a work by Clement of Alexandria; pl. of *στρομαρεΐς*, a coverlet: see *Stromateus*.] Miscellaneous; composed of different kinds. [Rare.]

stromatiform (strō'mä-ti-fōrm), *a.* [*NL. stroma*(-t), *q. v.*, + L. *forma*, form.] In *bot.*, having the form of a stroma.

Stromatopora (strō-mä-top'ō-rä), *n.* [NL. (De Blainville, 1830), < Gr. *στρομα*(-t), a covering, + *πόρος*, pore.] 1. The typical genus of *Stromatoporidae*.—2. [*l. c.*] A member of this genus.

Stromatoporidae (strō'mä-tō-pōr'i-dē), *n. pl.* [NL., < *Stromatopora* + *-idæ*.] A family of hydrocoralline corals, typified by the genus *Stromatopora*. They are all of Paleozoic age. Also *Stromatoporoidea*.

stromatoporoid (strō-mä-top'ō-roid), *a. and n.* [*Stromatopora* + *-oid*.] 1. *a.* Pertaining to the *Stromatoporidae*, or having their characters.

II. *n.* A member of the *Stromatoporidae*.

stromatous (strō'mä-tus), *a.* [*stroma*(-t) + *-ous*.] 1. Of or pertaining to stroma.—2. In *bot.*, bearing or producing a stroma.

stromb (strom), *n.* [*NL. Strombus*.] A conch of the family *Strombidae*, and especially of the genus *Strombus*; a wing-shell; a fountain-shell. The best-known stromb is *S. gigas*, whose delicate pink shell is used for cameo-cutting, and also ground up in the manufacture of some fine kinds of porcelain, for which purposes it is said that 300,000 were imported into England in one year from the Bahamas. Another well-known species is *S. pugilis*, so called from the red, as if bloody, mouth. See also cut under *wing-shell*.

A Wing-shell or Stromb (*Strombus pugilis*).

Strombidae (strom'bi-dē), *n. pl.* [NL., < *Strombus* + *-idæ*.] A family of tænioglossate siphonostomatous pectinibranchiate gastropods, typified by the genus *Strombus*; the strombs or wing-shells. The animal has an elongate annulated muzzle. The eyes are highly developed, at the ends of thick elongated peduncles, from which the inner sides of the tentacles, when present, originate. The foot is compressed, rather small, and adapted for leaping. The shell is mostly obovate, with a rather short conic spire and an elongate and narrow aperture; a horny claw-like operculum, serrated along the outer margin, is generally developed. Numerous species live in tropical seas, and some of them attain a large size. The largest is *Strombus gigas*, the giant conch of the West India, much used for cameos, and also as an ornament, especially around fountains, whence it is known as the *fountain-shell*. The family is divided into *Strombinae* and *Seraphitinae*. See cuts under *Rostellaria*, *scorpion-shell*, and *stromb*.

Strombidium (strom-bid'i-um), *n.* [NL. (Claparède and Laehmann, 1859), < *Strombus* + Gr. dim. *-ίδιον*.] A genus of peritrichous ciliate infusorians, of the family *Halteriidae*. These interesting animalcules inhabit both salt and fresh water, and, though there are no springing-hairs, they are noted for such activity and energy of movement that their examination is difficult. They are free-swimming, of globose or turbinate form, with eccentric terminal oral aperture associated with a spiral wreath of erect cirri; the endoplasm and contractile vacuole are conspicuous. Numerous species are described.

strombiform (strom'bi-fōrm), *a.* [*NL. Strombus* + L. *forma*, form.] Shaped like a wing-shell; having the form of a stromb; belonging or related to the *Strombidae*.

strombine (strom'bin), *a. and n.* [*Strombus* + *-ine*.] 1. *a.* Of, or having characters of, the *Strombidae*; stromboid.

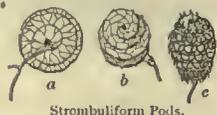

II. *n.* A stromboid; a gastropod of the family *Strombidae*.

strombite (strom'bit), *n.* [*stromb* + *-ite*.] A fossil stromb, or some similar shell.

stromboid (strom'boïd), *a. and n.* [*stromb* + *-oid*.] 1. *a.* Resembling a stromb; pertaining or related to the *Strombidae*; strombiform.

II. *n.* A strombine.

strombuliform (strom'bū-li-fōrm), *a.* [*NL. Strombulus*, dim. of **strombus*, a top (see *Strombus*), + L. *forma*, form.] 1. In *geol.*, formed like a top.—2.

Strombuliform Pods. a. Of *Medicago orbiculata*. b. Of *Medicago apiculata*. c. Of *Medicago ciliaris*.

In *bot.*, twisted or coiled into the form of a screw or helix, as the legumes of the screw-bean, some species of *Medicago*, etc.

Strombus (strom'bus), *n.* [NL. (Linnaeus, 1758), < L. *strombus*, a kind of spiral snail, < Gr. *στρομβος*, a top, a pine-cone, a snail, anything twisted or whorled, < *στρέφω*, twist, turn: see *strobile*.] The typical genus of *Strombidae*, formerly conterminous with the family, now restricted to such species as the West Indian giant stromb, *S. gigas*; the wing-shells, fountain-shells, or strombs. They are active, predatory, and carnivorous marine shells, much used for ornamental purposes. Also called *Gallus*. See cut at *stromb*.

stromeyerine (strō'mi-ēr-in), *n.* [As *stromeyer*(ite) + *-ine*.] Same as *stromeyerite*.

stromeyerite (strō'mi-ēr-it), *n.* [Named after Fr. *Stromeyer*, a German chemist and mineralogist (died 1835).] A sulphid of silver and copper occurring in crystals near chalcocite in form, also massive. It has a dark steel-gray color and metallic luster.

strommell, *n.* An obsolete form of *strammel*.

strand¹, *n.* An obsolete form of *strand*¹.

strong¹ (strōng), *a.* [Sc. *strang*; < ME. *strong*, *stronge*, *strang* (compar. *strenger*, *strengere*), < AS. *strang*, *strong* (compar. *strengra*, *strængra*), *strong*, mighty, = OS. *strang* = MD. *strenge*, *strengh*, D. *strengh* = MLG. LG. *strenge* = OHG. *strang*, *strangi*, *strengi*, MHG. *strenge*, G. *strengh*, hard, rigid, severe, strict, = Icel. *strangr* = Sw. *strång* = Dan. *stræng*, *strong*; connections uncertain; perhaps related to *string*. Cf. L. *stringere*, draw tight (see *stringent*, *strain*¹, *strict*); Gr. *σπαγγός*, tightly twisted, *σπαγγάλη*, a halter, etc. (see *strangle*). No connection with *stark*¹. Hence *strength*, *strengthen*, etc.] 1. Possessing, exerting, or imparting force or energy, physical or moral, in a general sense; powerful; forcible; effective; capable; able to do or to suffer.

Ther-fore worschlp god, bothe olde and zong,
To be in body and soule yliche stronge.

Babees Book (E. E. T. S.), p. 304.

What can be strong enough to resist those charms which neither innocency, nor wisdom, nor power are sufficient security against?

Stillingfleet, *Sermons*, II. lii.

Know how sublime a thing it is
To suffer and be strong.

Longfellow, *Light of Stars*.

When a man is able to rise above himself, only then he becomes truly strong. *J. F. Clarke*, *Self-Culture*, p. 368.

2. Having vital force or capability; able to act effectively; endowed with physical vigor; used absolutely, physically powerful; robust; muscular: as, a strong body; a strong hand or arm.

And he was a moche knyght, and a stronge oute of measure.

Martin (E. E. T. S.), ii. 164.

Out of the easter came forth meat, and out of the strong came forth sweetness.

Judges xlv. 14.

Of two persons who have had, the one the education of a gentleman, the other that of a common sailor, the first may be the stronger, at the same time that the other is the harder. *Bentham*, *Introduct.* to *Principles of Morals*, vi. 9.

3. Having means for exerting or resisting force; provided with adequate instrumentalities; pow-

erful in resources or in constituent parts: as, a *strong* king or kingdom; a *strong* army; a *strong* corporation or mercantile house.

When the kyoge Brangore was come to Eastrangora, his *stronge* place, . . . he dide it stuffe with knyghtes and viltalle. *Merlin* (E. E. T. S.), II. 247.

He grewe *stronge*, and in shorte space got to himselfe a greate name. *Spenser*, State of Ireland.

At last, nigh tird, a castle *strong* we fand,
The utmost border of my native land.
Fairfax, tr. of Tasso's Godfrey of Boulogne, IV. 55.

4. Having or consisting of a large number, absolutely or relatively; numerically forcible or well provided: usually implying also some special element of strength in some or all of the units composing the number: as, a *strong* detachment of troops; a *strong* political party.

Hym thoughte he was nat able for to speede,
For she was *strong* of freendes.

Chaucer, Doctor's Tale, l. 135.

5. Of specified numerical force; having so many constituent members: applied to armies, and sometimes to other bodies of men, or to animals. First demand of him how many horse the duke is *strong*.

Shak., All's Well, IV. 3. 149.

The rebels at Drumclog were eight or nine thousand *strong*.

Swift, Mem. of Capt. Creighton.

6. Exerting or capable of characteristic force; powerful in the kind or mode of action implied; specifically, forcible or efficient: as, a *strong* painter or actor; a *strong* voice; *strong* eyes.

His mother was a witch, and one so *strong*
That could control the moon, make flow and ebb.

Shak., Tempest, v. 1. 269.

I was *stronger* in prophecy than in criticism.

Dryden.

A solitary shriek, the bubbling cry
Of some *strong* swimmer in his agony,

Byron, Don Juan, II. 53.

7. Vigorous in exercise or operation; acting in a firm or determined manner; not feeble or vacillating: used of the mind or any of its faculties: as, a *strong*-minded person; a *strong* intellect, memory, judgment, etc.

Divert *strong* minds to the course of altering things.
Shak., Sonnets, cxv.

8. Possessing moral or mental force; firm in character, knowledge, conviction, influence, or the like; not easily turned, resisted, or refuted: as, a *strong* candidate; a *strong* reasoner.

Pray that ye may be *strong* in honesty,
As in the use of arms.

Fletcher (and another), False One, IV. 3.

They were very diligent, plain, and serious; *strong* in Scripture, and bold in profession.

Penn., Rise and Progress of Quakers, I.

He wants to show the party that he too can be a "*Strong Man*" on a pinch.

The Nation, XXX. 1.

9. Marked by force or vigor of performance; done, executed, produced, or uttered energetically; effected by earnest action or effort; strenuous; stressful; urgent.

Anthony wored with *strong* business
The Erie of Faborugh.

When he had offered up prayers and supplications with *strong* crying and tears.

Heb. v. 7.

The ears of the people they have therefore filled with *strong* clamour.

Hooker, Eccles. Polity, IV. 4.

10. Marked by force of action or movement; vigorously impelled or sent forth; impetuous; violent; vehement: as, a *strong* wind; *strong* tides; *strong* breathing.

Il Collatine, thine honour lay in me,
From me by *strong* assault it is bereft.

Shak., Lucrece, I. 835.

When they came to the great river, they were carried over by one Ludham, . . . the stream being very *strong*.

Winthrop, in New England's Memorial, p. 170, note.

11. Firm in substance or texture; capable of resisting physical force; not weak; not easily broken, rent, or destroyed: said of material things.

His bones are as *strong* pieces of brass.

Job xl. 18.

The graven flowers that breathe the sword
Make not the blade less *strong*.

Whittier, My Psalm.

12. Solid.

Ye . . . are become such as have need of milk, and not of *strong* meat [solid food, R. V.].

Heb. v. 12.

13. Firmly fixed or constituted; having inherent force or validity; hard to affect or overcome; sound; stable; settled: as, a *strong* constitution or organization (of body, mind, government, etc.); *strong* arguments, reasons, or evidence; to take a *strong* hold, or get a *strong* advantage; a *strong* project.

In the fear of the Lord is *strong* confidence.

The prophecies of better thinga.

Whittier, Astraea at the Capitol.

15. Intense or thorough in quality; having a high degree of the proper specific character; not mild, weak, dull, insipid, or ineffective: as, *strong* drink; *strong* tea; a *strong* infusion; *strong* lights and shadows; a *strong* color.

So is it fulle of Dragones, of Serpentes, and of other venymous Beastes that no man dar not passe, but zif it be *strong* Wyntre.

Manderlyle, Travels, p. 266.

This is *strong* physic, signior,
And never will agree with my weak body.

Fletcher (and another), Love's Cure, III. 2.

By mixing such powders we are not to expect *strong* and full white, such as is that of paper.

Newton, Opticks, I. II. 5.

16. Intense or intensified in degree; existing in great amount or force; forcibly impressive to feeling or sensation: used of either active or passive qualities: as, *strong* love or devotion; a *strong* flavor or scent.

In it possible . . . you should fall into so *strong* a liking with old Sir Rowland's youngest son?

Shak., As you Like it, I. 3. 28.

Nor was her heart so small

That one *strong* passion should engross it all.

Crabbe, Works, IV. 83.

17. Forcibly offensive in quality; repellent to sense or sensation; ill-tasting or ill-smelling; rank; rancid; tainted.

They say poor sailors have *strong* breaths; they shall know we have strong arms too.

Shak., Cor., I. 1. 61.

18. In *com.*, specifically, firm; favorable to gain; steadily good or advancing; active; profitable: as, a *strong* market; *strong* prices; to do a *strong* business.—19. In *gram.*, inflected—(a) as a verb, by a change of the radical vowel instead of by regular syllabic addition: opposed to *weak*: thus, *find* (*found*), *spake* (*spoke* or *spoke*, *spoken*), *strike* (*struck*, *stricken*), and *swim* (*swam*, *swum*) are *strong* verbs; (b) as a noun or an adjective, with fuller retention of older case-distinctions: thus, German *Buch* is called of *strong* declension, and *Held* of *weak*. *Strong* and *weak* are purely fanciful terms, introduced by J. Grimm; they belong properly to Germanic words alone, but are occasionally applied to similar phenomena in other languages also.

20. In *photog.*, same as *dense*, 3.—*Strong arm* or *hand*, figuratively, great power or force; forcible or violent means; overpowering vigor; the force of arms: as, to overcome opposition with a *strong arm*; "a *strong hand*," Ex. vi. 1.

It was their meaning to take what they needed by *strong-hand*.

Raleigh.

Strong box, a strongly made case or chest for the preservation of money and other things of great value in small compass.—*Strong double refraction*, in *optics*. See *refraction*, 1.—*Strong drink*, election, place. See the nouns.—*Strong faints*. See *faint*, 2.—*Strong room*, a fire-proof and burglar-proof apartment in which to keep valuables.—*Strong water*. (a) Distilled spirit of any sort: generally in the plural: as, a draught of *strong waters*.

In the time of our fast, two of our landmen pierced a rundlet of *strong water*, and stole some of it.

Winthrop, Hist. New England, I. 4.

(b) Aqua fortis, or some other strong biting acid.

Metals themselves do receive in readily *strong waters*; and *strong waters* do readily pierce into metals and stones; and . . . [some] *strong waters* will touch upon gold, that will not touch upon silver.

Bacon, Nat. Hist., § 800.

=*Syn.* 2. *Sturdy*, *Stout*, etc. (see *robust*); hardy, sinewy.—3. Potent.—11. Tenuous, tough.—13. Impregnable.—14. Vivid.—15. Pungent, sharp.

*strong*¹ (*stróng*), *adv.* [*ME.* *strong*, *stronge*; *< strong*¹, *a.*] Strongly; very; exceedingly. [Obsolete except in the slang phrase below.]

I will to-morowe go to an Abbey, and feyne me *stronge* slke.

Merlin (E. E. T. S.), I. 52.

To go or come it *strong*, to do a thing with energy and perseverance. [Slang.]

*strong*². An obsolete past participle of *string*.

Spenser, Virgil's Gnat, I. 16.

strong-back (*stróng'bak*), *n.* *Naut.*: (a) A piece of wood or iron over the windlass, to trice the chain up to when the windlass is to be used for any purpose. (b) A spar across boat-davits, to which the boat is secured at sea.

strongbark (*stróng'bärk*), *n.* A tree or shrub of the boraginaceous genus *Bouyeria*, which belongs to the West Indies and tropical America. One species, *B. Havanaensis*, which extends into Florida, is a small tree or shrub with a hard, fine, and beautiful wood of a brown color streaked with orange; the larger trees, however, are hollow and defective.

strong-barred[†] (*stróng'bärdl*), *a.* Strongly barred; tightly fastened. *Shak.*, K. John, II. 1. 370.

strong-based[†] (*stróng'bäst*), *a.* Strongly or firmly based. *Shak.*, Tempest, v. 1. 46.

strong-besieged[†] (*stróng'bē-séjld'*), *a.* Strongly besieged. *Shak.*, Lucrece, I. 1429.

strong-bonded[†] (*stróng'bön'ded*), *a.* Strongly bound or secured; made strongly binding. *Shak.*, Lover's Complaint, I. 279. [Rare.]

strong-fixed[†] (*stróng'fíkt*), *a.* Strongly fixed; firmly established. *Shak.*, I Hen. VI., II. 5. 102.

stronghand[†] (*stróng'hánd'*), *n.* Violence; force; power: a contraction of the phrase by the *strong hand*. See *strong arm* or *hand*, under *strong*.

stronghold (*stróng'höld*), *n.* A fastness; a fort; a fortified place; a place or position of security: often used figuratively, and formerly as two words.

David took the *strong hold* of Zion.

2 Sam. v. 7.

strong-knit (*stróng'nít*), *a.* Strongly or well knit; firmly joined or compacted.

For strokes received, and many blows repaid,
Have robb'd my *strong-knit* sinews of their strength.

Shak., I Hen. VI., II. 3. 4.

strongle (*stróng'gl*), *n.* A strongyle. *T. S. Cobbold*.

strongly (*stróng'li*), *adv.* [*ME.* *strongly*, *strongely*, *strongliche*, *strangliche*; *< AS.* *strang-lic*, *strong*, *< stranglic*, *strong*, *< strang*, *strong*; see *strong*¹ and *-ly*².] In a strong manner, in any sense of the word *strong*.

That Cyter [Cassay] is *strongliche* enhabyted with peple, in so moche that in on House men maken 10 Housholdea.

Manderlyle, Travels, p. 209.

Fly, fly; delay

Doth oft the *strongliest* founded Plots betray.

J. Beaumont, Psyche, I. 44.

strongman's-weed (*stróng'manz-wéd*), *n.* See *Petiveria*.

strong-minded (*stróng'mín'ded*), *a.* 1. Having a strong or vigorous mind.—2. Not in accordance with the female character or manners; unfeminine: applied ironically to women claiming the privileges and opportunities of men.

strong-mindedness (*stróng'mín'ded-nes*), *n.* The character or quality of being strong-minded, especially as used of women.

strong-tempered[†] (*stróng'tem'pérd*), *a.* Made strong by tempering; strongly tempered. *Shak.*, Venus and Adonis, I. 111.

strongylate (*strón'ji-lát*), *a.* [*< strongyle* + *-ate*¹.] Having the character of a strongyle, as a sponge-spicule; simply spicular, with blunt ends. *Sollas*.

strongyle (*strón'jil*), *n.* [*< NL.* *strongylus* (see *Strongylus*), *< Gr.* *στρογγύλος*, round, spherical, *< σπάγγειν*, draw tight; see *strangle*.] 1. A spicule of the monaxon biradiate type, with each end rounded off; a strongylate sponge-spicule. It is simply a rhabdus whose two ends are blunt instead of sharp. A strongyle blunt at one end and sharp at the other becomes a strongyloxea. *Sollas*.

2. In *Ferres*, a nematode or threadworm of the genus *Strongylus* in a broad sense; a strongylid. There are many species. See *Strongylidæ*.

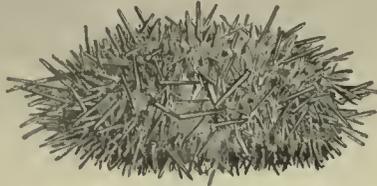

Strongylia (*strón-jil'i-ä*), *n. pl.* [*NL.*, *< Gr.* *στρογγύλος*, round, spherical; see *strongyle*.] A suborder of chilognath myriapods, with manducatory mouth, and sexual organs opening in the anterior part of the body. It includes the families *Polyxenidæ*, *Polydesmidæ*, *Iulidæ*, and *Lysiopteralidæ*. *H. C. Wood*, 1865.

strongylid (*strón'ji-lid*), *a.* and *n.* Same as *strongyloid*.

Strongylidæ (*strón-jil'i-dō*), *n. pl.* [*NL.*, *< Strongylus* + *-idæ*.] A family of endoparasitic nematoid worms, typified by the genus *Strongylus*, and containing about 10 other genera. They are formidable parasites, sometimes attaining a length of 3 feet, though usually much smaller than this. They are cylindrical, and more or less elongated and filiform; the mouth is oval, circular, or triangular, and armed or unarmed; and the tail of the male is furnished with a bursa or pouch, or a pair of membranous lobes, and usually a pair of protruding spicules. The female is commonly larger than the male. *Strongylus bronchialis* is the lung-strongyle of man; the female is an inch long, the male half that size. *S. armatus* infests the horse; *S. micrurus* and *S. contortus* are found in ruminants, as cattle and sheep. *Eustrongylus gigas* is the giant strongyle of the kidney, the largest known endoparasite of this kind, the male being about a foot long, the female a yard or more. *Strongylus quadridentatus* or *Sclerostoma duodenale* infests the human intestine, and a similar strongyle, *Syngamus tracheolis*, causes the gapes in poultry, occurring in great numbers in the air-passages.

Strongylocentrotus (*strón'ji-lō-sen-trō'tus*), *n.* [*NL.* (Brandt), *< Gr.* *στρογγύλος*, round,

spherical, + κεντροτός, < κέντρον, point, center: see center¹.] A genus of regular sea-urchins,

Common New England Sea-urchin (*Strongylocentrotus drobachensis*).

of the family Echinidae. One of the commonest and best-known sea-urchins of the Atlantic coast of the United States is *S. drobachensis*.

strongyloid (stron'ji-loid), *a.* and *n.* [*< strongyle + -oid.*] *I. a.* Like a strongyle; related to the genus *Strongylus*; belonging to the *Strongylidae*.

II. n. A strongyle, or some similar nematoid.

strongyloxea (stron-ji-lok'sē-ā), *n.*; pl. *strongyloxeae* (-ē). [NL., < Gr. στρογγύλος, round, + ὄξίς, sharp.] A strongyle blunt at one end and sharp at the other; a strongyloxeate sponge-spicule. *Encyc. Brit.*, XXII, 417.

strongyloxeate (stron-ji-lok'sē-āt), *a.* [As *strongyloxea + -ate*.] Blunt at one end and sharp at the other, as a sponge-spicule of the rhabdus type; having the character of a strongyloxea. *Sollas*.

Strongylus (stron'ji-lus), *n.* [NL., < Gr. στρογγύλος, round, spherical, < *στράγγω, draw tight, squeeze: see *strangle*.] *1.* The typical genus of the family *Strongylidae*. Müller, 1780.—*2.* [*l. c.*; pl. *strongyli* (-ī).] In sponges, a strongyle.

strontia (stron'shi-ā), *n.* [NL. (Klaproth), < *strontium*, *q. v.*] The monoxid of strontium, SrO, an alkaline earth which when pure is an infusible grayish-white powder having an acrid burning taste. It is soluble in water with evolution of heat, slaking into a hydrate, Sr(OH)₂, which is quite soluble and deposits from its solution crystals of the hydrate containing eight molecules of water of crystallization. The hydrate has a strong alkaline reaction, and is more caustic than lime, but less so than the alkalis. Strontia does not occur native, but is prepared by igniting the carbonate, the mineral strontianite.

strontian (stron'shi-an), *n.* and *a.* [*< strontium + -an.*] *I. n.* Native strontium carbonate; strontianite; hence, also, strontia, and sometimes strontium. [Indefinite and rare.]

II. a. Pertaining to or containing strontia or strontium.—**Strontian yellow**, a color formed by adding potassium chromate to a solution of a strontium salt.

strontianiferous (stron'shi-an-īf'ē-rus), *a.* [*< strontian + -iferous.*] Containing strontian. *Philos. Mag.*, 5th ser., XXV, 238.

strontianite (stron'shi-an-īt), *n.* [*< strontian + -ite*.] Native strontium carbonate, a mineral that occurs massive, fibrous, stellated, and rarely in orthorhombic crystals resembling those of aragonite in form. It varies in color from white to yellow and pale green. It was first discovered in the lead-mines of Strontian, in Argyllshire, Scotland.

strontic (stron'tik), *a.* [*< strontia + -ic.*] Same as *strontitic*.

strontites (stron-ti'tēz), *n.* [NL., < *strontium* + *-ites*.] Same as *strontia*: so named by Dr. Hope, who first obtained this earth from strontianite, or native carbonate of strontium.

strontitic (stron-ti'tik), *a.* [*< NL. strontium + -ic.*] Pertaining to or derived from strontia or strontium.

strontium (stron'shi-um), *n.* [NL., < *Strontian*, in Argyllshire, Scotland.] Chemical symbol, Sr; atomic weight, 87.37; specific gravity, 2.54. A dark-yellow metal, less lustrous than barium, malleable, and fusible at a red heat. When heated in air, it burns with a bright flame to the oxid. It decomposes water at ordinary temperatures, evolving hydrogen, and uniting with the oxygen of the water to form the oxid strontia. It does not occur native. The chief strontium minerals are the carbonate (strontianite) and the sulphate (celestine). Strontium also occurs as a silicate in the mineral brewsterite. It has been detected in the waters of various mineral springs, as well as in seawater, and in the ashes of some marine plants. Salts of strontium are chiefly used in pyrotechny, imparting an intense red color to flames.

strook (strūk), *n.* An old preterit of *strike*. *Pope*, *Iliad*, xxi, 498.

stroot (strūt), *v.* An obsolete or dialectal form of *strut*¹.

strop (strop), *n.* [The older and more correct form of *strap*; < ME. *strop*, *strophe*, < AS. *stropp* (= D. *strop*, etc.), < L. *stroppus*, *struppus*, a strap: see *strap*.] *1.* Same as *strap*. Specifi-

cally—*2.* A strap or strip of leather, thick canvas, or other flexible material, suitably prepared for smoothing the edge of a razor drawn over it while it is attached by one end and held in the hand by the other; hence also, by extension, a two-sided or four-sided piece of wood, with a handle and a casing, having strips of leather of differing surfaces affixed to two sides, and the two other sides, when (as more commonly) present, covered with coarser and finer emery or other abrasive powder for use in honing a razor.—*3.* *Naut.*, same as *strap*, *1 (a)*.—*4.* In *rope-making*, a rope with an eye at each end, used in twisting strands.

strop (strop), *v. t.*; pret. and pp. *stropped*, ppr. *stropping*. [*< strop, n.*] To sharpen on or as if on a strop or strap.

Scarce are the gray-haired sires who *strop* their razors on the family Bible, and doze in the chimney-corner. *C. D. Warner*, *Backlog Studies*, p. 2.

strobe (strōp), *n.* A dialectal form of *strap*.
strophanthin (strō-fan'thin), *n.* [*< Strophanthus + -in*.] An active poisonous principle, said to be neither an alkaloid nor a glucoside, found in the seeds of *Strophanthus hispidus*.

Strophanthus (strō-fan'thus), *n.* [NL. (A. P. de Candolle, 1801), so called from the twisted and tailed lobes of the corolla; < Gr. στρόφος, a twisted band, a cord (< στρέφω, turn, twist), + ἄθος, flower.] A genus of gamopetalous plants, of the order *Apocynaceae*, tribe *Echitidae*, and subtribe *Nerieae*. It is characterized by a glandular calyx; a funnel-shaped corolla with five tailed lobes and an ample throat, bearing about ten scales within, and including the long taper-pointed anthers; and an ovary of two distinct carpels, ripening into divergent follicles with seeds tailed at one end and extended at the other into a long plumose beak. There are about 20 species, natives of Asia and tropical Africa, with one, *S. Capensis*, in South Africa. They are small trees or shrubs or often climbers, either smooth or hairy, with opposite feather-veined leaves, and terminal cymes of handsome flowers which are either white, yellowish, orange, red, or purple. The seeds of several species or varieties in Africa yield arrow-poison: in western Africa *S. hispidus* affords the léne poison (see *poison of Pahonias, nuder poison*), in eastern Africa *S. Kombe* the kombe poison, and some species between Zanzibar and Somal-land the wanika poison. But *S. Kombe* is suspected to be a variety of *S. hispidus*, and the third species is probably the same. Since 1878 these seeds have excited great medical interest as a medium for the treatment of heart-disease, but their investigation is not complete. (See *strophanthin*.) Several species are cultivated under the name *twisted-flower*.

strophe (strō'fē), *n.* [*< NL. strophe*, < L. *strophā*, < Gr. στρόφη, a turning round, a recurring metrical system, the movement of a chorus while turning in one direction in the dance, the accompanying rhythmical (musical and metrical) composition, < στρέφω, turn, twist.] *1.* In *anc. pros.*: (a) A system the metrical form of which is repeated once or oftener in the course of a poem; also, a stanza in modern poetry. In a narrower sense—(b) The former of two metrically corresponding systems, as distinguished from the latter or *antistrophe*. (c) The fourth part of the parabasis and first part of the epirrhematic syzygy. It is hymnic in character, as opposed to the scopic tone of the epirrhema.—*2.* In *bot.*, one of the spirals formed in the development of leaves. [Rare or obsolete.]—**Asclepiadean strophe**. See *Asclepiadean*.

strophic (strof'ik), *a.* [*< Gr. στροφικός*, of or pertaining to a strophe, < στρόφη, a strophe: see *strophe*.] Of or pertaining to a strophe or strophes; constituting strophes; consisting of strophes: as, *strophic* composition; *strophic* poems.

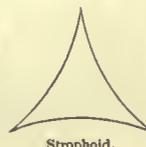

strophical (strof'i-kal), *a.* [*< strophic + -al.*] Same as *strophic*. *Athenæum*, No. 3300, p. 123.

strophiate (strof'i-ō-lāt), *a.* [*< strophiole + -ate*.] In *bot.*, bearing or furnished with a strophiole or something that resembles it.

strophiolated (strof'i-ō-lā-ted), *a.* [*< strophiole + -ed*.] Same as *strophiate*.

strophiole (strof'i-ōl), *n.* [*< L. strophiolium*, a small wreath or chaplet, dim. of *strophium*, < Gr. στρόφιον, a band, a breast-band, dim. of στρόφος, a twisted band, a braid, a cord, < στρέφω, twist, turn.] In *bot.*, an appendage produced from the hilum of certain seeds, of the same origin as a true aril, but less developed. Sometimes used interchangeably with *caruncle*, from which it clearly differs.

strophoid (strof'oid), *n.* [*< F. strophoïde*, < Gr. στρόφος, a twisted band, a cord.] *1.* A nodal plane cubic curve which is the locus of a focus of a conic whose directrix and two tangents are given.—*2.* A

Strophoid.

curve which is the locus of intersections of two lines rotating uniformly with commensurable velocities. See also *substrophoid*.—**Right strophoid**, a strophoid symmetrical with respect to the line through the two centers of rotation.

Strophostyles (strof-ō-sti'lēz), *n.* [NL. (Elliott, 1824), so called from the incurved style; < Gr. στρόφος, a twisted band, a cord, + στήλος, a pillar.] A genus of leguminous plants, of the tribe *Phaseoleae*. It is distinguished from the related genus *Phaseolus*, in which it was formerly included, by capitate flowers with the keel and included style and stamens incurved but not spirally colled, and followed by a commonly terete and straight pod with its scurfy or smooth seeds quadrate or oblong, not reniform. About 17 species have been described, but some of them insufficiently, natives largely of North America, including Mexico and the West Indies, also occurring in Peru, India, and China. They are tangled vines with prostrate or climbing stems, usually retrorsely hairy, bearing pinnate leaves of three leaflets, and usually long-stalked purplish clusters of a few sessile flowers. Two species, known as *wild bean*, both called *Phaseolus helvolus* by various authors, extend along the Atlantic coast northward to Long Island or further, of which *S. peduncularis* (*Phaseolus umbellatus*) is a slender twiner of sandy fields, and *S. angulosa* (*P. diversifolius*) a commonly trailing plant extending west to Minnesota, and to Missouri, where on river-bottoms a high-climbing variety sometimes reaches 30 feet. Another species, *S. pauciflorus*, occurs in the southern and western United States. See *Phaseolus*.

strophulus (strof'ū-lus), *n.* [NL., dim. of **strophus*, < Gr. στρόφος, a twisted band, a cord: see *strophiole*.] A papular eruption upon the skin, peculiar to infants, exhibiting a variety of forms, known popularly as *red-gum*, *white-gum*, *tooth-rash*, etc.

strosser† (stros'ēr), *n.* [A var. of *trossers*, which is a variant of *trousers*: see *trousers*.] Same as *trossers*.

You rode like a kern of Ireland, your French hose off, and in your strait *strossers*. *Shak.*, *Hen. V.*, III, 7, 57.

Sets his son a-horseback in cloth-of-gold breeches, while he himself goes to the devil a-foot in a pair of old *strossers*! *Middleton*, *No Wit Like a Woman's*, II, 1.

stroud¹ (stroud), *n.* [Also *strowd*; origin obscure.] A senseless or silly song. *Jamieson*. [Scotch.]

stroud² (stroud), *n.* [Also *strowd*; origin obscure.] *1.* Same as *strouging*.—*2.* A blanket made of strouging.

Be pleased to give to the son of the Plankasha king these two *strouds* to clothe him. *Journal of Capt. Treat* (1752), p. 52. (*Bartlett*.)

strouging (strou'ding), *n.* [*< stroud*¹ + *-ing*.] Coarse warm cloth; a kind of blanketing used in trading with North American Indians.

Hazelnuts enough to barter at the nearest store for a few yards of blue *strouging* such as the Indians use. *The Century*, XXXIII, 33.

stroup (stroup), *n.* [Also *strop*; < ME. *stroupe*, *stroupe*, < Sw. *strupe*, the throat, gullet, = Norw. *strupe*, the throat, gullet, an orifice, = Dan. *strube*, the throat, gullet; cf. Icel. *strjúpi*, the trunk of the human body with the head cut off.] *1.* The trachea or windpipe. [Obsolete and prov. Eng.]

He smote him in the helm, bakward he bare his *stroupe*. *Langtoft's Chronicle*, p. 190. (*Hallivell*.)

2. A spout (of a tea-kettle, etc.). [Scotch.]

strout, *v.* An obsolete or provincial variant of *strut*¹. *Bacon*.

strove (strōv), *v. t.* Preterit of *strive*.

strow (strō), *v. t.*; pret. *strowed*, pp. *strowed* or *strown*, ppr. *strowing*. An archaic form of *strew*.

strow, *a.* [Cf. *strow*, *strew*.] Loose; scattered. [Rare and dubious.]

Nay, where the grass,
Too *strow* for fodder, and too rank for food,
Would generate more fatal maladies. *Lady Alimony*, D 4 b. (*Nares*.)

strowd¹ (stroud), *n.* See *stroud*¹.

strowd², *n.* See *stroud*².

strowl, *v. i.* An old spelling of *stroll*.

strown (strōn), *a.* A past participle of *strow*.

strowpet, *n.* See *strow*.

stroy, *v. t.* [ME. *stroyen*, by aphesis from *destroyen*: see *destroy*.] To destroy. *Middleton*.

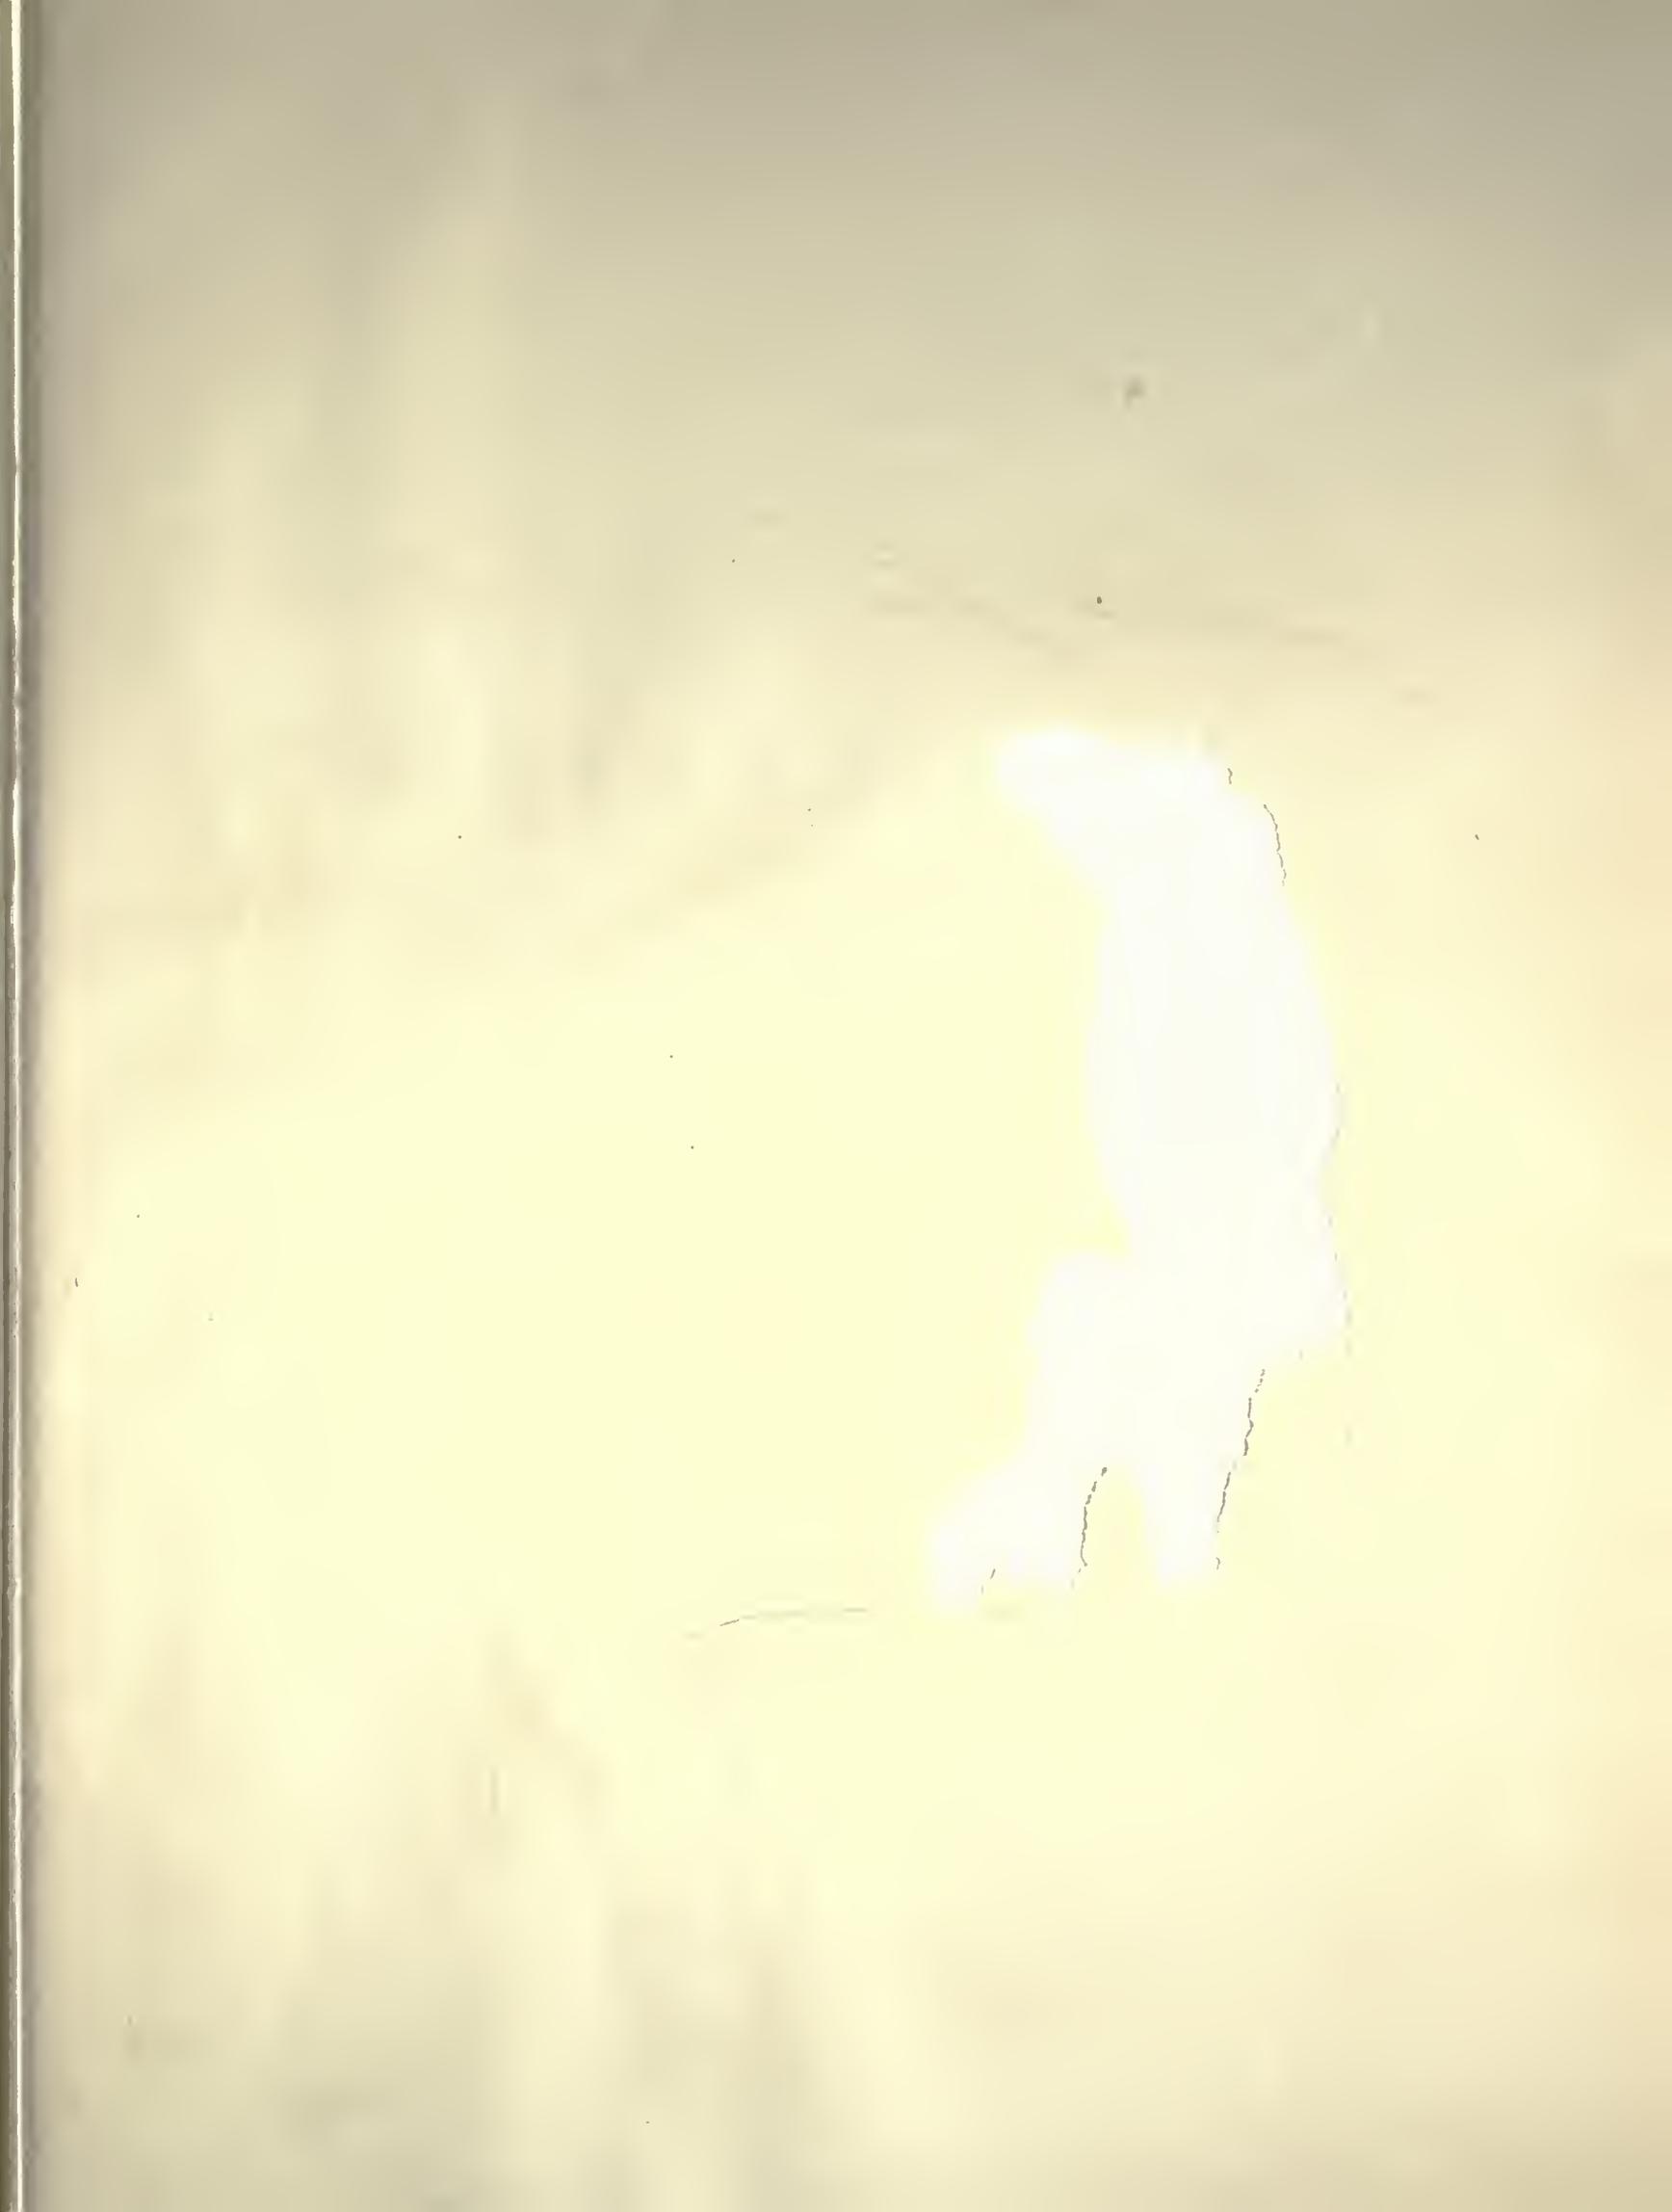

stroyt, *n.* [ME., < *stroy*, *v.*] Destruction.
stroyall† (stroi'āl), *n.* [*< stroy*, *v.*, + *obj. all.*] One who destroys or wastes recklessly; a waster.

A giddy brain master, and *stroyall* his knave,
Brings ruling to ruin, and thrift to her grave. *Tusser*, *Good Husbandly Lessons*.

stroyer† (stroi'ēr), *n.* [*< ME. stroyere*, by aphesis from *destroyer*.] A destroyer.

The drake, *stroyers* of his owena kynde. *Chaucer*, *Parliament of Fowls*, l. 360.

KEY TO PRONUNCIATION.

a as in fat, man, pang.
 ā as in fate, mane, dale.
 ā as in far, father, guard.
 ā as in fall, talk, naught.
 ā as in ask, fast, ant.
 ā as in fare, hair, bear.
 e as in met, pen, bleas.
 ē as in mete, meet, meat.
 ē as in her, fern, heard.
 i as in pin, it, biscuit.
 ē as in pine, light, file.
 o as in not, on, frog.
 o as in note, poke, floor.
 ō as in move, spoon, room.
 ō as in nor, song, off.
 u as in tub, son, blood.
 ū as in mute, acute, few (also new, tube, duty: see Preface, pp. ix, x).
 ũ as in pull, book, could.

ü German ü, French u.
 oi as in oil, joint, boy.
 ou as in pound, proud, now.

A single dot under a vowel in an unaccented syllable indicates its abbreviation and lightening, without absolute loss of its distinctive quality. See Preface, p. xi. Thus:

ā as in prelate, courage, captain.
 ē as in ablegate, episcopal.
 ō as in abrogate, enlogy, democrat.
 ũ as in singular, education.

A double dot under a vowel in an unaccented syllable indicates that, even in the mouths of the best speakers, its sound is variable to, and in ordinary utterance actually becomes, the short u-sound (of but, pun, etc.). See Preface, p. xi. Thus:

ā as in errant, republican.
 ā as in prudent, difference.
 ā as in charity, density.
 ā as in valor, actor, idiot.
 ā as in Persia, peninsula.
 ā as in *the* book.
 ũ as in nature, feature.

A mark (~) under the consonants t, d, s, z indicates that they in like manner are variable to ch, j, sh, zh. Thus:

t̃ as in nature, adventure.
 d̃ as in arduous, education.
 s̃ as in leisure.
 z̃ as in seizure.

th as in thin.
 th as in then.
 ch as in German ach, Scotch loch.
 h French nasalizing n, as in ton, en.

ly (in French words) French liquid (mou-
 illé) l.
 ' denotes a primary, " a secondary accent.
 (A secondary accent is not marked if at its regular interval of two syllables from the primary, or from another secondary.)

SIGNS.

< read from; i. e., derived from.
 > read whence; i. e., from which is derived.
 + read and; l. c., compounded with, or with suffix.
 = read cognate with; l. e., etymologically parallel with.
 √ read root.
 * read theoretical or alleged; i. e., theoretically assumed, or asserted but unverified, form.
 † read obsolete.
